PRINTERS TO THE UNIVERSITY.

PREFACE.

This work is intended to supply a great and long acknowledged want. A growing demand has arisen in this country and the United States for information on all matters directly and indirectly connected with Music, owing to the great spread of concerts, musical publications, private practice, and interest in the subject, and to the immense improvement in the general position of music which has taken place since the commencement of the present century. Music is now performed, studied, and listened to by a much larger number of persons, and in a more serious spirit, than was the case at any previous period of our history. It is rapidly becoming an essential branch of education; the newest works of continental musicians are eagerly welcomed here very soon after their appearance abroad, and a strong desire is felt by a large, important, and increasing section of the public to know something of the structure and peculiarities of the music which they hear and play, of the nature and history of the instruments on which it is performed, of the biographies and characteristics of its composers—in a word of all such particulars as may throw light on the rise, progress, and present condition of an Art which is at once so prominent and so eminently progressive.

This desire it is the object of the Dictionary of Music and Musicians to meet. It is designed for the use of Professional musicians and Amateurs alike. It contains definitions of Musical Terms; explanations of the forms in which Musical Works are constructed, and of the methods by which they are elaborated, as well as of the origin, structure, and successive modifications of Instruments; histories and descriptions of Societies and Institutions; notices of the composition, production, and contents of important works; lists of the principal published collections; biographies of representative composers, singers, players, and patrons of music—all the points, in short, immediate and remote, on which those interested in the Art, and alive to its many and far-reaching associations, can desire to be informed.

The limit of the history has been fixed at A. D. 1450, as the most remote date to which the rise of modern music can be carried back. Thus mere archæology has been avoided, while the connection between the mediæval systems and the wonderful modern art to which they gave rise has been insisted on and brought out wherever possible. While the subjects have been treated thoroughly and in a manner not unworthy the attention of the professional musician, the style has been anxiously divested of technicality, and the musical illustrations have been taken, in most cases, from classical works likely to be familiar to the amateur, or within his reach.

The articles are based as far as possible on independent sources, and on the actual research of the writers, and it is hoped that in many cases

fresh subjects have been treated, new and interesting information given, and some ancient mistakes corrected. As instances of the kind of subjects embraced and the general mode of treatment adopted, reference may be made to the larger biographies—especially that of Haydn, which is crowded with new facts; to the articles on Auber, Berlioz, Bodenschatz, Bull, Cristofori, David, Farinelli, Finck, Froberger, Galitzin, Gibbons, Hasse; on Additional Accompaniments, Agrémens, Arpeggio, Arrangement, Fingering, Form, and Harmony; on Académie de Musique, Bachgesellschaft, Breitkopf and Härtel, Bassoon, Carmagnole, Choral Symphony, Conservatoire, Concerts, Concert Spirituel, Copyright, Drum, English Opera, Fidelio, Grand Prix de Rome, Handel and Haydn Society, Handel Festivals and Commemorations, Harpsichord, Harmonica, Hexachord, and many others. The engraved illustrations have been specially prepared for the work, and will speak for themselves.

In an English dictionary it has been thought right to treat English music and musicians with special care, and to give their biographies and achievements with some minuteness of detail. On this point thanks are due to Colonel Joseph Lemuel Chester for much accurate information which it would have been almost impossible to obtain elsewhere, and which he has afforded in every case with the greatest kindness and promptitude.

Every means has been taken to procure an adequate treatment of the various topics, and to bring the information down as near as possible to the day of publication. Notwithstanding the Editor's desire, however, omissions and errors have occurred. These will be rectified in an Appendix on the publication of the final volume.

The limits of the work have necessarily excluded disquisitions on Acoustics, Anatomy, Mechanics, and other branches of science connected with the main subject, which though highly important are not absolutely requisite in a book concerned with practical music. In the case of Acoustics, sufficient references are given to the best works to enable the student to pursue the enquiry for himself, outside the Dictionary. Similarly all investigations into the music of barbarous nations have been avoided, unless they have some direct bearing on European music.

The Editor gladly takes this early opportunity to express his deep obligations to the writers of the various articles. Their names are in themselves a guarantee for the value of their contributions; but the lively interest which they have shown in the work and the care they have taken in the preparation of their articles, often involving much time, and laborious, disinterested research, demand his warm acknowledgment.

A

DICTIONARY

OF

MUSIC AND MUSICIANS.

A.

A. The name of the sixth degree of the natural scale of C. The reason of its being applied to the sixth instead of the first degree will be found explained in the article ALPHABET. It represents the same note in English or German, and in French and Italian is called *La*.

A is the note given (usually by the oboe, or by the organ if there be one) for the orchestra to tune to, and it is also the note to which French and German tuning-forks are set, the English being usually tuned to C.

In all stringed instruments one of the strings is tuned to A; in the violin it is the second string, in the viola and violoncello the first, and in the contrabasso generally the third. A is also the key in which one of the clarinets in the orchestra is set. In German the keys of A major and A minor are occasionally expressed by A♯ and A♭. [F. T.]

AARON (correctly ARON), PIETRO, born at Florence in the latter part of the 15th century. A monk of the order of Jerusalem, and devoted to the study of counterpoint. His various works on the history and science of music (for a list of which see Becker, 'Musik Literatur,' Leipsic, 1836) were printed at Venice and Milan. By Pope Leo X he was admitted into the Roman Chapel, and distinguished in various ways. In or about 1516 Aaron founded a school of music at Rome, which obtained much reputation. He became a canon of Rimini, and died in 1533. [C. F. P.]

ABACO, EVARISTO FELICE DALL', born at Verona, and renowned as performer and composer on the violin; in 1726 concert-meister in the band of the Kurfürst Max Emanuel of Bavaria. Died in 1740. Compositions of his for church and chamber were printed at Amsterdam. [C. F. P.]

A BATTUTA (Ital., 'with the beat'). An indication, mostly used in recitatives, where after the free declamation of the singer the strict time is resumed. It is thus equivalent to A TEMPO.

ABBATINI, ANTONIO MARIA, was born at Tiferno, or at Castello (Baini), in 1595 or 1605, and died in 1677. Was successively Maestro di Cappella at the Lateran, the Church of the Gesù, and San Lorenzo in Damaso, and three times held the like office at Maria Maggiore; was also, for a time, maestro at the church of Loreto. Was offered by Pope Urban VIII the task of rewriting the Hymnal; but refused to supersede the music of Palestrina by any of his own. His published works consist of four books of Psalms and three books of Masses, some Antifone for twenty-four voices (Mascardi, Rome, 1630–1638, and 1677), and five books of Mottetti (Grignani, Rome, 1635). He is named by ALLACCI as the composer of an opera 'Del male in bene.' The greater part of his productions remain unprinted. Some academical lectures by him, of much note in their time, mentioned by Padre Martini, do not seem to have been preserved. He assisted KIRCHER in his 'Musurgia.' [E. H. P.]

ABBÉ, PHILIPPE PIERRE DE ST. SEVIN and PIERRE DE ST. SEVIN, two brothers, violoncellists, were music-masters of the parish church of Agen early in the last century. It seems doubtful whether they were actually ordained priests, or merely in consequence of their office had to wear the ecclesiastical dress. From this circumstance however they received the name of Abbé l'ainé—or simply l'Abbé—and l'Abbé cadet, respectively. They gave up their connection with the church and went to Paris, where they obtained engagements at the Grand Opéra. They were both excellent players, but the younger brother seems

to have been the more celebrated of the two, and to have been specially remarkable for his beautiful tone. It is said to have been owing in great measure to the impression produced by his playing that the viola di gamba more and more fell into disuse and the violoncello was more extensively introduced. (Batistin.) [T. P. H.]

ABBEY, JOHN, a distinguished organ-builder; was born at Whilton, a Northamptonshire village, Dec. 22, 1785. In his youth he was employed in the factory of Davis, and subsequently in that of Russell, both organ-builders of repute in their day. In 1826 Abbey went to Paris, on the invitation of Sebastian Erard, the celebrated harp and pianoforte maker, to work upon an organ which Erard had designed, and which he sent to the Exhibition of the Productions of National Industry in 1827, and also to build an organ for the Convent of the Legion of Honour, at St. Denis. He also built an organ from Erard's design for the chapel of the Tuileries, which, however, had only a short existence, being destroyed in the Revolution of 1830. Having established himself as an organ-builder in Paris, Abbey became extensively employed in the construction, renovation, and enlargement of organs in France and elsewhere. Amongst others he built choir organs for accompanying voices for the cathedrals of Rheims, Nantes, Versailles, and Evreux, and for the churches of St. Eustache, St. Nicholas des Champs, St. Elizabeth, St. Medard, St. Etienne du Mont, and St. Thomas Aquinas, in Paris; and large organs for the cathedrals of Rochelle, Rennes, Viviers, Tulle, Chalons-sur-Marne, Bayeux, and Amiens, and for churches, convents, and chapels at St. Denis, Orleans, Caen, Chalons, Picpus, and Versailles. He repaired and enlarged organs in the cathedrals of Mende, Moulins, Rheims, Evreux, and Nevers, and in the churches of St. Etienne du Mont, St. Philippe du Roule, The Assumption, and St. Louis de Antin in Paris. He also built many organs for Chili and South America. In 1831 Abbey was employed, at the instance of Meyerbeer (who had introduced the instrument into the score of his opera 'Robert le Diable,' then about to be produced), to build an organ for the Grand Opera at Paris, which instrument continued to be used there until it was destroyed, with the theatre, by fire in 1873. Abbey was the first who introduced into French organs the English mechanism and the bellows invented by Cummins. His example was speedily followed by the French builders, and from that period may be dated the improvements in organ building which have raised the French builders to their present eminence. His work was well finished, and generally satisfactory. He died at Versailles, Feb. 19, 1859. He left two sons, E. and J. Abbey, who now carry on the business of organ-builders in Versailles. [W. H. H.]

ABBREVIATIONS. The abbreviations employed in music are of two kinds, namely, the abridgment of terms relating to musical expression, and the true musical abbreviations by the help of which certain passages, chords, etc., may be written in a curtailed form, to the greater convenience of both composer and performer.

Abbreviations of the first kind need receive no special consideration here; they consist for the most part of the initial letter or first syllable of the word employed—as for instance, *p.* for piano, *cresc.* for crescendo, *ob.* for oboe, *cello* for violoncello, *fag.* for bassoon (fagotto), *timp.* for drums (timpani); and their meaning is everywhere sufficiently obvious. Those of musical passages are indicated by signs, as follows.

The continued repetition of a note or chord is expressed by a stroke or strokes across the stem, or above or below the note if it be a semibreve (Ex. 1), the number of strokes denoting the subdivision of the written note into quavers, semiquavers, etc., unless the word *tremolo* or *tremolando* is added, in which case the repetition is as rapid as possible, without regard to the exact number of notes played. On bowed instruments the rapid reiteration of a single note is easy, but in pianoforte music an octave or chord becomes necessary to produce a *tremolo*, the manner of writing and performing which is shown in Ex. 2.

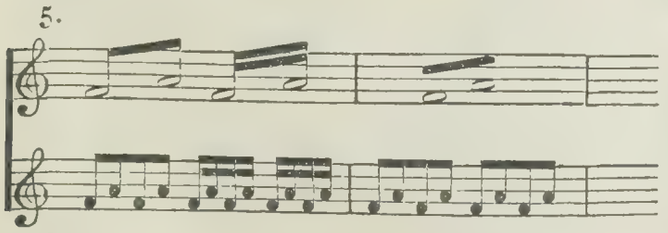
In the abbreviation expressed by strokes, as above, the passage to be abbreviated can of course contain no note of greater length than a quaver, but it is possible also to divide a long note into crotchets, by means of dots placed over it, as in Ex. 3. This is however seldom done, as the saving of space is inconsiderable. When a long note has to be repeated in the form of triplets or groups of six, the figure 3 or 6 is usually placed over it in addition to the stroke across the stem, and the note is sometimes, though not necessarily, written dotted (Ex. 4).

3.

4.

The repetition of a group of two notes is abbreviated by two white notes (minims or semibreves) connected by the number of strokes ordinarily used to express quavers, semiquavers, etc., according to the rate of movement intended (Ex. 5). The duration of the whole passage should be at least a minim, since if a crotchet were treated in this manner it would present the appearance of two quavers or semiquavers, and would be unintelligible. Nevertheless, a group of demisemiquavers amounting altogether to the value of a crotchet is sometimes found abbreviated as in Ex. 6, the figure 8 being placed above the notes to show that the value of the whole group is that of a crotchet, and not a quaver. Such abbreviations, though perhaps useful in certain cases, are generally to be avoided as ambiguous. It will be observed that a passage lasting for the value of one minim requires two minims to express it, on account of the group consisting of two notes.

5.



6.

A group of three, four, or more notes is abbreviated by the repetition of the cross strokes without the notes as many times as the group has to be repeated (Ex. 7); or the notes forming the group are written as a chord, with the necessary number of strokes across the stem (Ex. 8). In this case the word *simili* or *segue* is added, to show that the order of notes in the first group (which must be written out in full) is to be repeated, and to prevent the possibility of mistaking the effect intended for that indicated in Ex. 1 and 2.

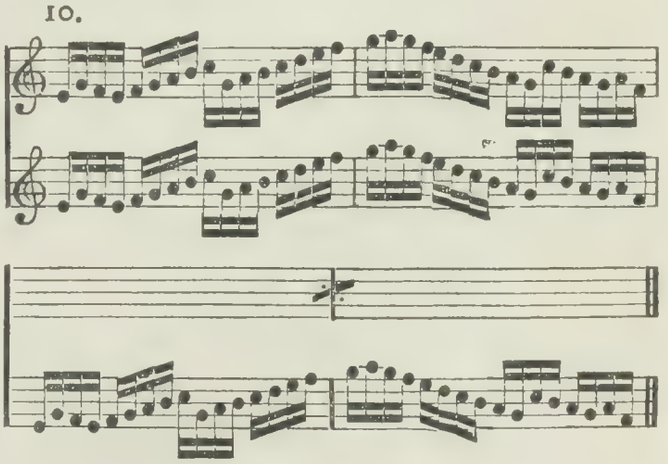
7.

8.

Another sign of abbreviation of a group consists of an oblique line with two dots, one on each side (Ex. 9); this serves to indicate the repetition of a group of any number of notes of any length, and even of a passage composed of several groups, provided such passage is not more than two bars in length (Ex. 10).

9.

10.



A more usual method of abbreviating the repetition of a passage of the length of the above is to write over it the word *bis* (twice), or in some cases *ter* (three times), or to enclose it between the dots of an ordinary repeat .

Passages intended to be played in octaves are often written as single notes with the words *con ottavi* or *con 8vi* placed above or below them,

according as the upper or lower octave is to be added (Ex. 11). The word *8va* (or sometimes *8va alta* or *8va bassa*) written above a passage does not add octaves, but merely transposes the passage an octave higher or lower: so also in clarinet music the word *chalumeau* is used to signify that the passage is to be played an octave lower than written (Ex. 12). All these alterations, which can scarcely be considered abbreviations except that they spare the use of ledger-lines, are counteracted, and the passage restored to its usual position, by the use of the word *loco*, or in clarinet music by *clarinette*.

11. *Con 8vi.*

12. *8va..... loco* *8va bassa.* *loco*

Chalumeau.....Clar.

In orchestral music it often happens that certain of the instruments play in unison; when this is the case the parts are sometimes not all written in the score, but the lines belonging to one or more of the instruments are left blank, and the words *coi violini* or *col basso*, etc., are added, to indicate that the instruments in question have to play in unison with the violins or basses, as the case may be, or when two instruments of the same kind, such as first and second violins, have to play in unison, the word *unisono* or *col primo* is placed instead of the notes in the line belonging to the second.—Where two parts are written on one staff in a score the sign '*a* 2' denotes that both play the same notes; and '*a* 1' that the second of the two is resting.—The indication '*a* 3' '*a* 4' at the head of fugues indicates the number of parts or voices in which the fugue is written.

An abbreviation which is often very troublesome to the conductor occurs in manuscript scores, when a considerable part of the composition is repeated without alteration, and the corresponding number of bars are left vacant, with the remark *come sopra* (as above). This is not met with in printed scores.

There are also abbreviations relating to the theory of music, some of which are of great value. In figured bass, for instance, the various chords are expressed by figures, and the authors of several modern theoretical works have invented or availed themselves of various methods of shortly expressing the different chords and intervals. Thus we find major chords expressed by large Roman numerals, and minor chords by small ones, the particular number employed denoting the degree of the scale upon which the chord is based. Gottfried Weber represents an interval by a number with one or two dots before it to express minor or diminished, and one or two after it for major or augmented, and André makes use of a triangle, △, to express a common chord, and a square, □, for a chord of the seventh, the inversions being indicated by one, two, or three small vertical lines across their base, and the classification into major, minor, diminished, or augmented by the numbers 1, 2, 3, or 4, placed in the centre. [F. T.]

ABEILLE, Joh. Chr. Ludwig, born at Bayreuth Feb. 20, 1761, composer, pianist, and organist. Studied at Stuttgart, and in 1782 became a member of the private band of the Duke of Würtemberg. On Zumsteeg's death in 1802 he succeeded him as concert-meister, and was shortly afterwards made organist in the court chapel and director of the official music. In 1832, having completed a period of fifty years' faithful service, he received the royal gold medal and a pension, shortly after which he died, in his seventy-first year. Abeille's concertos and trios for the harpsichord were much esteemed, but his vocal compositions were his best works. Amongst them are several collections of songs (e.g. 'Eight Lieder,' Breitkopf and Härtel) which are remarkable for simple natural grace, and a touching vein of melody. Some of these still survive in music-schools. His Ash-Wednesday hymn for four voices, and his operettas of 'Amor und Psyche,' 'Peter und Annchen,' were well known in their day, and were published, in pianoforte score, by Breitkopf and Härtel. [C. F. P.]

ABEL, Clamor Henrich, born in Westphalia about the middle of the 17th century, chamber-musician to the court of Hanover. His work 'Erstlinge Musikalischer Blumen' appeared first in three vols. (Frankfort, 1674, 1676, and 1677), afterwards united under the title 'Drei opera musica' (Brunswick, 1687). [M. C. C.]

ABEL, Karl Friedrich, one of the most famous viol-da-gamba players, born at Cöthen in 1725. He was brought up at the Thomas-school at Leipsic under Sebastian Bach. In 1748 he obtained a post under Hasse in the court band at Dresden, where he remained ten years. In 1759 he visited London, and gave his first concert on April 5 at the 'great room in Dean-street, Soho,' when, in addition to the viol-da-gamba, he performed 'a concerto upon the harpsichord, and a piece composed on purpose for an instrument newly-invented in London, and called the pentachord,' the whole of the pieces in the programme

being of his own composition. His facility was remarkable: he is reported to have performed more than once on the horn, as well as on 'new instruments never heard in public before.' From the year 1765 however he confined himself to the viol-da-gamba. He was appointed chamber-musician to Queen Charlotte, with a salary of £200 a-year. On the arrival of John Christian Bach, in the autumn of 1762, Abel joined him; they lived together, and jointly conducted Mrs. Cornelys' subscription concerts. The first of their series took place in Carlisle-house, Soho-square, on January 23, 1765, and they were maintained for many years. The Hanover-square Rooms were opened on Feb. 1, 1775, by one of these concerts. Haydn's Symphonies were first performed in England at them, and Wilhelm Cramer the violinist, father of J. B. Cramer, made his first appearance there. After Bach's death on Jan. 1, 1782, the concerts were continued by Abel, but with indifferent success. In 1783 he returned to Germany, taking Paris on the way back, where he appears to have begun that indulgence in drink which eventually caused his death. In 1785 we find him again in London, engaged in the newly established 'Professional Concerts,' and in the 'Subscription Concerts' of Mr. Salomon and Mme. Mara at the Pantheon. At this time his compositions were much performed, and he himself still played often in public. His last appearance was at Mrs. Billington's concert on May 21, 1787, shortly after which, on June 20, he died, after a lethargy or sleep of three days' duration. His death was much spoken of in the papers. Abel's symphonies, overtures, quartetts, concertos, and sonatas were greatly esteemed, and many of them were published by Bremner of London and Hummel of Berlin. The most favourite were 'A fifth set of six overtures, op. 14' (Bremner), and 'Six sonatas, op. 18.' Abel's playing was most remarkable in slow movements. 'On the viol-da-gamba,' says the 'European Magazine,' 1784, p. 366, 'he is truly excellent, and no modern has been heard to play an Adagio with greater taste and feeling.' Burney's testimony is to the same effect, and he adds that 'his musical science and taste were so complete that he became the umpire in all musical controversy, and was consulted like an oracle.' He was accustomed to call his instrument 'the king of instruments,' and to say of himself that there was 'one God and one Abel.' Among his pupils both in singing and composition were J. B. Cramer, Graeff, and Brigida Giorgi (Signora Banti). His friend Gainsborough painted a three-quarter-length portrait of Abel playing on the viol-da-gamba, distinguished by its careful execution, beauty of colouring, and deep expression. It was bequeathed by Miss Gainsborough to Mr. Briggs, and was sold in London in 1866. Gainsborough also exhibited a whole-length of Abel at the Royal Academy in 1777, and a very powerful portrait of him by Robineau is to be found at Hampton Court. [C. F. P.]

ABEL, Leopold August, born at Cöthen 1720, death unknown; elder brother of the preceding, violinist, and pupil of Benda. He played in the orchestra of the theatre at Brunswick, and was successively conductor of the court band to the Prince of Schwarzburg-Sondershausen (1758), the Margrave of Schwedt (1766), and the Duke of Schwerin. He composed six violin concertos mentioned in Böhme's catalogue, but never rose to the reputation of his brother. [M. C. C.]

ABELL, John, a celebrated alto singer and performer on the lute, was born about 1660, and probably educated in the choir of the Chapel Royal, of which establishment he was sworn a 'gentleman extraordinary' in 1679. He was greatly patronised by royalty, and between the years 1679 and 1688 received 'bounty money' amounting to no less than £740. (See 'Moneys received and paid for secret services of Charles II and James II'—Camd. Soc.). Charles II sent him to Italy to study, and after his return Evelyn thus describes meeting him: 'Jan. 24, 1682-3. After supper came in the famous treble, Mr. Abel, newly returned from Italy. I never heard a more excellent voice, and would have sworn it had been a woman's, it was so high and so well and skilfully managed, being accompanied by Signor Francisco on the harpsichord.' He remained in the service of the chapel until the Revolution of 1688, when he was dismissed for his supposed leaning to the Romish religion. After this he travelled abroad, visiting France, Germany, Holland, and Poland, leading a vagrant sort of life, and depending for his support upon his voice and lute. About the latter end of the reign of Queen Anne, Abell returned to England, and occupied a prominent position on the stage. Congreve, in a letter dated 'Lond. Decem. 10, 1700,' says 'Abell is here: has a cold at present, and is always whimsical, so that when he will sing or not upon the stage are things very disputable, but he certainly sings beyond all creatures upon earth, and I have heard him very often both abroad and since he came over.' (*Literary Relics*, 1792, p. 322).

In 1701 Abell published two works, 'A Collection of Songs in Several Languages,' which he dedicated to William III, and 'A collection of Songs in English.' The latter contains a very curious poem of some length, addressed to 'All lovers of Musick,' in which he describes some of his doings on the continent. His death is not recorded, but it was after 1716, when he gave a concert at Stationers' Hall. (Hawkins, *Hist.*; *Cheque-Book Chap. Roy.*, etc.). [E. F. R.]

ABOS, Geronimo, born at Malta in the beginning of the 18th century, died at Naples about 1786, a composer of the Neapolitan school, and pupil of Leo and Durante. He was a teacher in the Conservatrio of 'La Pietà' at Naples, and trained many eminent singers, of whom Aprile was the most famous. He visited Rome, Venice, Turin, and, in 1756, London, where he held the post of maestro al cembalo at the opera. His operas are 'La Pupilla e 'l Tutore,' 'La Serva Padrona,' and 'L'Ifigenia in Aulide' (Naples),

'L'Artaserse' (Venice, 1746), 'L'Adriano' (Rome, 1750), 'Tito Manlio,' and 'Creso' (London, 1756 and 1758). His church music includes seven Masses, two Kyries, and several Litanies to the Virgin, preserved in manuscript in Naples, Rome, Vienna, and the Conservatoire in Paris. The style of his composition somewhat resembles that of Jomelli. [M. C. C.]

ABRAMS, The Misses Henrietta, Theodosia, and Eliza, were three sisters, vocalists. Henrietta, the eldest, was a pupil of Dr. Arne, and first appeared in public at Drury Lane theatre, in her master's musical piece, 'May Day,' on Oct. 28, 1775. She and her sister Theodosia sang at the opening of the Concert of Ancient Music in 1776. Henrietta possessed a soprano, and Theodosia a contralto voice of excellent quality. The youngest sister, Eliza, was accustomed to join with her sisters in the pieces which were sung at the Ladies' Catch and Glee Concerts. The elder two sang at the Commemoration of Handel, in Westminster Abbey, in 1784, and at the principal London concerts for several years afterwards, when they retired into private life. They both attained to an advanced age; Theodosia (then Mrs. Garrow) was living in 1834. Henrietta Abrams composed several pleasing songs, two of which, 'The Orphan's Prayer' and 'Crazy Jane,' aided by the expressive singing of her sister, Theodosia, became very popular. She published, in 1787, 'A Collection of Songs,' and 'A Collection of Scotch Songs harmonized for three voices,' besides other pieces at later dates. [W. H. H.]

ABT, Franz, born at Eilenburg in Prussian Saxony, Dec. 22, 1819. His father was a clergyman, and Franz, though destined to the same profession, received a sound musical education, and was allowed to pursue both objects at the Thomas-School and University of Leipsic. On his father's death he relinquished the church as a profession and adopted music entirely. His first residence was at Zürich (1841), where he acted as capellmeister, occupying himself more especially with men's voices, both as composer and conductor of several societies. In 1852 he entered the staff of the Hof-theater at Brunswick, where since 1855 he has filled the post of leading capellmeister.

Abt is well known by his numerous songs for one or more voices, which betray an easy fluency of invention, couched in pleasing popular forms, but without pretence to depth or individuality. Many of his songs, as for instance 'When the swallows,' were at one time universally sung, and have obtained a more or less permanent place in the popular repertory. Abt is a member of a group of composers, embracing his contemporaries Truhn, Kücken, Gumbert, and others, who stand aloof from the main course taken by the German Lied as it left the hands of Schubert, Schumann, and Franz, — which aims at the true and living expression of inward emotion. In reference to this the composers in question are somewhat in the background; but it cannot be denied that in many dilettante circles Abt is a prime favourite for his elegance and easy intelligibility. His greatest successes in Germany and Switzerland have been obtained in part-songs for men's voices, an overgrown branch of composition unfortunately devoted to the pursuit of the mere superficial enjoyment of sweet sounds, and to a great extent identified with his name.

The list of Abt's compositions is enormous, and contains more than 400 works, consisting chiefly of 'Lieder' of the most various kinds for one, two, or three solo voices, as well as for chorus, both female and mixed, and, as already mentioned, especially for men's voices. Of the solo 'Lieder,' a collection of the less-known ones has been published by Peters under the title of 'Abt-Album.' The part-songs are to be found in many collections. In the early part of his life Abt composed much for the pianoforte, chiefly pieces of light *salon* character. These have never had the same popularity with his vocal works, and are now virtually forgotten. [A. M.]

ABYNGDON, Henry. An English ecclesiastic and musician. He succeeded John Bernard as subcentor of Wells on Nov. 24, 1447, and held that post till his death on Sept. 1, 1497, when he was succeeded by Robert Wydewe. (Beckynton's and Oliver King's registers at Wells.) In addition to the succentorship at Wells Abyngdon held the office of 'Master of the Song' of the Chapel Royal in London, to which he was appointed in May 1465 at an annual salary of forty marks, confirmed to him by a subsequent Act of Parliament in 1473-4. (Rimbault, 'Cheque-book of Chapel Royal,' p. 4.) He was also made Master of St. Catherine's Hospital, Bristol, in 1478. (Collinson, ii. 283.) Two Latin epitaphs on Abyngdon by Sir Thomas More have been preserved (Cayley's 'Life of More,' i. 317), of which the English epitaph quoted by Rimbault from Stonyhurst is an adaptation. In these he himself is styled 'nobilis,' and his office in London 'cantor,' and he is said to have been pre-eminent both as a singer and an organist:—

'Millibus in mille cantor fuit optimus ille,
Praeter et haec ista fuit optimus orgaquenista.'

More's friendship is evidence of Abyngdon's ability and goodness, but the acquaintance can only have been slight, as More was but seventeen when Abyngdon died. None of his works are known. [G.]

ACADEMIE DE MUSIQUE. This institution, which, following the frequently changed political conditions of France since 1791, has been called in turn *Royale*, *Nationale*, and *Impériale*, has already entered its third century. In 1669 royal letters patent were granted by Louis XIV to the Abbé Perrin, Robert Cambert, and the Marquis de Sourdéac, for the establishment of an Académie wherein to present in public 'operas and dramas with music, and in French verse,' after the manner of those of Italy, for the space of twelve years. Nearly a century prior

to this, in 1570, similar privileges had been accorded by Charles IX to a Venetian, C. A. de Baif, in respect to an academy 'de poesie et de musique,' but its scheme does not appear to have included dramatic representation. In any case it failed utterly. The establishment of the existing institution was however also preceded, and therefore facilitated, by a series of performances in Italian by Italian artists, beginning in 1584 and continued with little interruption till 1652, and by rarer though not less important ones by French artists, beginning from 1625, when 'Akébar, roi du Mogol,' was produced in the palace of the bishop of Carpentras. This has frequently been spoken of as the earliest veritable French opera; but that title is more justly due to the 'Pastorale en musique' of CAMBERT—the subject of which was given to the Abbé Perrin by the Cardinal Legate of Innocent X—first performed at Issy in 1659. Two years after, Cambert followed this opera by 'Ariane,' and in the following year by 'Adonis.' The Académie was opened in 1671 with an opera by the same master, 'Pomone,' which attained an enormous success; having been repeated, apparently to the exclusion of every other work, for eight months successively. The 'strength' of the company engaged in its performance presents an interesting contrast with that of the existing grand opera, and even of similar establishments of far less pretension. The troupe consisted of five male and four female principal performers, fifteen chorus-singers, and an orchestra numbering thirteen! The career of the Académie under these its first entrepreneurs was brought to an end by the jealousy of an Italian musician then rising in court favour, J. BAPTISTE LULLY, who, through his influence with Mme. de Montespan, succeeded in obtaining for himself the privileges which had been accorded to Perrin and Cambert. The latter, the master-spirit of the enterprise thus wrecked, notwithstanding his hospitable reception by our Charles II, died in London shortly afterwards, at the age of forty-nine, of disappointment and home-sickness. By this disreputable proceeding Lully made himself master of the situation, remaining to the time of his death, in 1687, the autocrat of the French lyric drama. In the course of these fourteen years he produced, in concert with the poet QUINAULT, no fewer than twenty grand operas, besides other works. The number, success, and, more than all, the merit, of these entitle Lully to be regarded as the founder of the school of which Meyerbeer may claim to have proved the most distinguished alumnus; though, as we have seen, its foundation had been facilitated for him by the labours of others. In the course of his autocracy, Lully developed considerably musical form in its application to dramatic effect, and added considerably to the resources of the orchestra; though, in comparison with those of more recent times, he left them still very meagre. He is said to have first obtained permission, though in spite of great opposition, for the appearance of women on the stage; but as the troupe of his predecessor Cambert included four, his claim to their first introduction there needs qualification. Probably he got prohibition which had ceased to be operative exchanged for avowed sanction. The status of the theatrical performer at this epoch would seem to have been higher than it has ever been since; seeing that, by a special court order, even nobles were allowed, without prejudice to their rank, to appear as singers and dancers before audiences who paid for admission to their performances. What it was somewhat later may be gathered from the fact that, not to mention innumerable less distinguished instances, Christian burial was refused (1673) to Molière and (1730) to Adrienne Le Couvreur. Lully's scale of payment to authors, having regard to the value of money in his time, was liberal. The composer of a new opera received for each of the first ten representations 100 livres (about £4 sterling), and for each of the following twenty representations, 50 livres. After this the work became the property of the Académie. The theatre was opened for operatic performance three times a week throughout the year. On great festivals concerts of sacred music were given. The composers contemporary with Lully (many of them his pupils) could only obtain access to the Académie by conforming to his style and working on his principles. Some few of these however, whose impatience of the Lullian despotism deprived them of all chance of a hearing within its walls, turned their talents to account in the service of the vagrant troupes of the Foire Saint-Germain; and with such success as to alarm Lully both for his authority and his receipts. He obtained an order (*more suo*) for the suppression of this already dangerous rivalry, which however proved itself far too supple for legislative manipulation. The 'vagrants' met each new ordonnance with a new evasion, and that of which they were the first practitioners, and the frequenters of the Foire the first patrons, subsequently grew into the most delightful, because the most truly natural, of all French art products, the Opéra Comique. The school of composition established by Lully did not die with its founder; nor for many years was any serious violation of his canons permitted by his adopted countrymen. Charpentier (1634–1702), a composer formed in the school of Carissimi, was unsuccessful in finding favour for the style of his master: Campra (1660–1744) was somewhat less so; while Marais, Desmarets, Lacoste, and Monteclair were gradually enabled to give more force, variety and character to orchestration. The last of these (1666–1737) first introduced the three-stringed double-bass, on which he himself was a performer, into the orchestra. But a condition of an art on the whole so stagnant as this was sure eventually to become insupportable, if not to the public, to the few who at all times, consciously or unconsciously, direct or confirm its inclinations. Their impatience found expression in the Abbé Raguenet's 'Paralléle des Italiens et des Francais,

en ce qui regarde la musique et les opera' (1704), one of a considerable number of essays which assisted in preparing the way for a new style, should a composer present himself of sufficient genius, culture and courage, to introduce it. Such an one at length did present himself in JEAN PHILIPPE RAMEAU, whose arrival in Paris in 1721, at the somewhat mature age of forty-two, forms an epoch in the history not merely of French opera but of European music. In the face of much opposition this sturdy Burgundian succeeded first in obtaining a hearing from and eventually in winning the favour—though never to the same extent as Lully the affections—of the French people. Between 1737 and 1760, irrespective of other work, he set to music no less than twenty-four dramas, the majority of them grand operas. The production of these at the Académie he personally superintended; and some idea of his activity and influence as a director may be gathered from the fact that in 1750, fourteen years before the close of his career, the number of performers engaged at the Académie had risen to 149; a number doubtless to some extent rendered necessary by the increased craving of the public ear for intensity, but more by the varieties of musical effect of which he himself had been the inventor. In 1763 the theatre of the Palais Royal, built by Lemercier, so long resonant with the strains of Lully and Rameau, was destroyed by fire. The ten years which connected the death of Rameau with the arrival in Paris of GLUCK were marked by the production of no work of more than secondary rank. On April 19, 1774, the 'Iphigénie en Aulide' of this master was heard for the first time. The production of this work was followed by that of a series of others from the same hand, one and all characterised by a direct application of musical form and colour to dramatic expression before unknown to the French or any other theatre. The arrival in Paris shortly after of the admirable PICCINNI brought Gluck into relation with a master who, while not unworthy to cope with him as a musician, was undoubtedly his inferior as a diplomatist. Between these two great composers the parts of the typical '*rusé* Italian' and the 'simple-minded German' were interchanged. The latter left no means untried to mar the success of the former, for whose genius he openly professed, and probably felt, high admiration; and in the famous war of the Gluckists and Piccinnists—whose musical knowledge for the most part was in inverse ratio to their literary skill—the victory which fell eventually to the former was the result no less of every species of chicanery on the part of Gluck than of genius especially adapted to captivate a people always more competent to appreciate dramatic than musical genius. In 1781 the second Palais Royal theatre, like its predecessor, was burnt to the ground. The Académie, for many weeks without a home, at length took temporary refuge in the Salles des Menus-Plaisirs. Meanwhile the architect Lenoir completed the Salle de la Porte Saint-Martin in the short space of three months. The result of this extravagant speed was that, after the first performance, said to have been attended (*gratis*) by 10,000 persons, the walls were found to have 'settled' two inches to the right and fifteen lignes to the left. In 1784 an Ecole Royale de Chant et de Declamation, afterwards developed into the Conservatoire, was grafted on to the Académie. In 1787 the Académie troupe is said to have consisted of 250 persons—an increase of 100 on that of Rameau. The unfortunate Louis XVI took great interest in the Académie, and even gave much personal attention to its regulation. He reduced the working expenses by nearly one-half; not at the cost of the working members, but by the abolition of sinecures and other incumbrances on its income. In 1784 he established prizes for libretti, and in 1787 issued several well-considered ordonnances for the regulation of the establishment. But from 1789 the thoughts of the ill-starred king were exclusively occupied by more weighty and more difficult subjects. On April 20, 1791, the royal family attended the Académie for the last time. The opera was the 'Castor et Pollux' of Rameau. Shortly after this the 'protection,' or exclusive right of performance of grand opera, was withdrawn from the Académie and the *liberté des théatres* proclaimed. Hitherto the names of the artists concerned in the Académie performances had never been published. This rule was violated for the first time in the *affiche* announcing 'L'Offrande à la Liberté,' an opera-ballet by Gardel and Gossec. The history of the Académie during the next few years is a part of the history of the French Revolution, and could only be made intelligible by details out of all proportion with our space. The sociétaires, as public officers, were largely occupied in lending the charms of their voices and instruments—the only charms of which they were receptive—to 'Fêtes de la Raison,' 'Sans-Culottides,' and more lately 'Hymnes à l'Etre Suprème,' alike unmeaning, indecent, or blasphemous. In many of these the talents of the illustrious Cherubini, who had taken up his residence in Paris in 1788, were employed. The chronological 'Notice' of his compositions, which he himself drew up (Paris, 1845), contains the titles of a large number of productions of this class—'Hymne à la Fraternité,' 'Chant pour le Dix Août,' 'Le Salpêtre Républicain,' and the like. In 1794 the Académie was transferred to the Rue de Richelieu, a locality (the site of the Hôtel Louvois) chosen it was said by Henriot, convinced of 'the inutility of books,' in the hope that an establishment so liable to conflagration as a theatre might lead to the destruction of the Bibliothêque Nationale contiguous to it! In its new abode the Académie took a new name—Théatre des Arts. Here for the first time the pit was provided with seats. In the four or five years following this removal, the habitués of the Académie became weary of a repertoire having constant ultimate reference to *liberté*, *fraternité*, or *egalité*. The old operas, subjected always to

democratic purification, were again heard. In 1799 Gluck's 'Armide' was revived. During the consulate no new works of importance were brought forward at the Théatre des Arts, eventually the scene of two conspiracies against the First Consul, which, had they been successful, would have altered seriously the subsequent history of Europe. On the occasion of the first of these the 'Horaces' of Porta, and on that of the second the 'Creation' of Haydn were performed, the latter for the first time in Paris. During the ten years which follow 1804 French opera was much developed through the labours both of foreign and of native composers; among the former, Spontini, Rodolphe Kreutzer, and Cherubini; among the latter Lesueur and Catel. Among the most important of their works were 'Les Bardes' of Lesueur and 'La Vestale' of Spontini—the latter an enormous success won despite bitter and long-continued opposition. To Spontini, on account of it, was awarded the prize of 10,000 francs, decreed at Aix-la-Chapelle by Napoleon for the best opera produced at the Académie (now) Imperiale. In 1814 the allies occupied Paris, and the Emperor of Russia and the King of Prussia assisted at a performance of 'La Vestale' on April 1. On May 17 following 'Œdipe à Colone' and a Ballet de Circonstance were played before Louis XVIII. On April 18, 1815, Napoleon witnessed another performance of 'La Vestale,' and on July 9 of the same year the same opera was again performed before Louis XVIII, the Emperor of Austria, and the King of Prussia. The assassination of the Duc de Berri on the evening of Feb. 13, 1820, interrupted for several months the performances of the Académie. The act and its consequences were attended by every conceivable circumstance that could add to their ghastliness. The dying victim, who could not be removed from the theatre, lay, surrounded by his weeping family, separated only by a thin partition from an audience, unconscious of course of the tragedy in progress behind the scenes, convulsed with laughter at the antics of Polichinelle! The last sacraments of the church were administered to the duke on condition—exacted, it may be presumed, by the clergy in attendance—that the building in which these horrors were being enacted should be forthwith demolished. On May 3, 1821, the Académie troupe resumed its performances in the Salle Favart, with an Opéra de Circonstance, the combined work of Berton, Boieldieu, Kreutzer, Cherubini, and Paer, in honour of the infant Duc de Bourdeaux. In the next year the Académie was again transferred—this time to the Rue Le Peletier, the salle of which was destined to be for many succeeding years its home, and the scene of even greater glories than any it had yet known. About this time a change of taste in music, mainly attributable to a well-known critic, Castil-Blaze, showed itself among the opera habitués of Paris. French adaptations of the German and Italian operas of Mozart, Rossini, Meyerbeer, and even Weber, were produced in rapid succession and received with great favour. The 'Freischütz' of the last great master was performed at the Odéon 387 times in succession. The inevitable result soon followed. The foreign composers who had so effectually served the Académie indirectly, were called upon to serve it directly. The career of Mozart, alas! had many years before come to an untimely end, and that of Weber was about to prove scarcely more extended. But Rossini and Meyerbeer, though already renowned and experienced, had not yet reached the age when it is impossible or even very difficult to enter on a new career. They became and remained French composers. Meanwhile HÉROLD, AUBER, and other native musicians, had made themselves known by works of more than promise; and the services of a body of operatic composers, foreign and French, unprecedented in number and ability, were made to contribute at the same time to the pleasure of a single city and the prosperity of a single institution. By a fortunate coincidence too, there flourished during this period a playwright, Augustin Eugène Scribe, who, despite his *style impossible*, must be regarded as the greatest master the theatre has known of that most difficult and thankless of literary products, the libretto. The two years immediately preceding and the eighteen following the revolution of July form the period during which the Académie attained its highest excellence and success. Not to speak of a large number of works which in other times might have deserved special mention, this period includes the composition and production of the 'Comte Ory' and the 'Guillaume Tell' of Rossini, the 'Muette' of Auber, the 'Robert le Diable' and 'Huguenots' of Meyerbeer, the 'Juive' and 'Charles VI' of Halévy, the 'Favorite' of Donizetti, and the 'Benvenuto Cellini' of Berlioz. These works were performed almost exclusively by native artists, whose excellence has especial claims on our admiration from the fact that, fifty years before, singing as an art can scarcely be said to have existed in France. Writing from Paris in 1778, Mozart says—'And then the singers!—but they do not deserve the name; for they do not sing, but scream and bawl with all their might through their noses and their throats.' With the times, like many other things, French singing had certainly changed in 1830. Transitory as is the reputation of the average vocalist, the names of Cinti-Damoureau, Falcon, Nourrit, Levasseur, and the later Duprez, are as little likely to be forgotten as those of the admirable masters of whose works they were the first interpreters. Since 1848 the lyric dramas produced at the Académie hold no place besides those of earlier date. Few of them—this is the best of tests—have been performed with any success, or even at all, out of France. The 'Prophète' of Meyerbeer and the 'Vêpres Siciliennes' of Verdi present all but the only exceptions; and the composition of the former of these belongs to an earlier epoch. In 1861, when the second empire was, or seemed to be,

at its zenith, the foundations were laid in Paris of a new Académie, designed on a scale, as respects magnitude and luxury, unprecedented in any age or country. Its progress, from the first slow, was altogether stopped by the Franco-German war and the political changes accompanying it. The theatre in the Rue Le Peletier having meanwhile, after the manner of theatres, been burnt to the ground, and the works of the new one resumed, the Académie, installed in its latest home, once more opened its doors to the public on Jan. 5, 1875. In some respects the new theatre is probably the most commodious yet erected, but the *salle* is said to be deficient in sonority.

Since the foundation of the Académie in 1669, its relations with the Government, though frequently changed, have never been altogether interrupted. The interference of the state with the entrepreneur has been less frequent or authoritative at one time than at another; but he has always been responsible to a 'department.' Before and up to the Revolution the ultimate operatic authority was the King's Chamberlain; under the Empire the Steward of the Imperial Household; under the Restoration the King's Chamberlain again; under Louis Phillippe the Minister of Fine Art; and under Napoleon III (after the manner of his uncle) the Steward of the Imperial Household again. The arbitrary rule of one of these officers, Marshal Vaillant, brought the working of the Académie to a complete standstill, and the Emperor was compelled to restore its supervision to the Minister of Fine Art. From the foundation of the Académie to the present time its actual management has changed hands, in the course of two centuries, nearly fifty times, though many managers have held office more than once; giving an average of only four years to each term of management. In the present year (1875) the entrepreneur, subject to the Minister of Fine Art, is M. Halanzier, who receives from the state a yearly allowance (*subvention*) of £32,000, the principal conditions of the enjoyment of which are that he shall maintain an efficient staff, open his theatre four times a week, and give favourable consideration to new works by native composers.

The facts in this article are drawn from the following works, amongst others:—'Histoire de la Musique dramatique en France,' Gustave Chouquet, 1873; 'Histoire de la Musique en France,' Ch. Poisot, 1860; 'Notice des Manuscrits autographes de la Musique composée par Cherubini,' 1845; Koch's 'Musikalisches Lexicon,' edited by von Dommer; 'Critique et littérature musicales,' Scudo, 1859; 'Mémoires pour servir a l'histoire de la Revolution opérée dans la Musique par M. le Chevalier Gluck,' 1781. [J. H.]

ACADEMY OF ANCIENT MUSIC. This association was formed about the year 1710 at the Crown and Anchor Tavern in the Strand, by a body of distinguished instrumentalists, professional and amateur, including the Earl of Abercorn, Mr. Henry Needler, Mr. Mulso, and other gentlemen, for the study and practice of vocal and instrumental works, and an important feature in the scheme was the formation of a library of printed and MS. music. The Academy met with the utmost success under the direction of Dr. Pepusch, the gentlemen and boys of St. Paul's Cathedral and the Chapel Royal taking part in the performances. In 1828 Dr. Maurice Greene left the Academy and established a rival institution at the Devil Tavern, Temple Bar, but this only existed for a few years, and the old Academy continued its work, with Mr. Needler as leader of the orchestra, among the members of which was the Earl of Abercorn. In the season of 1731-2 the Academy performed Handel's 'Esther,' the members appearing dressed in character, and its success is said to have led Handel to consider the desirability of establishing oratorio performances at Covent Garden. In 1734 there was a second secession from the Academy, Mr. Gates retiring and taking with him the children of the Chapel Royal. After passing through one season without any treble voices the Academy issued invitations to parents to place their children under the instruction of Dr. Pepusch, one of the conditions being that they should sing at the concerts. A subscription list was also opened to provide the necessary funds, and among those who supported the Academy were Handel and Geminiani, the latter of whom frequently played at its concerts. The death of Dr. Pepusch in 1752 was a serious loss to the institution, but the doctor bequeathed to it the most valuable portion of his library. The Academy closed its career in 1792 under the conduct of Dr. Arnold, who had been appointed its director in the year 1789. [C. M.]

ACADEMY OF MUSIC, NEW YORK. This is not an academy in the European sense of the word, but is the name of a large building employed for the performance of operas and concerts, opened in 1854, burnt down in 1866, re-opened in Feb. 1867. The chief public institution in New York for teaching music is the NEW YORK CONSERVATORY OF MUSIC.

A CAPELLA, or ALLA CAPELLA (Ital., 'in the church style'), is used in three senses, (1) as showing that the piece is for voices without accompaniment; or (2) where instruments are employed, that these accompany the voices only in unisons or octaves and have no independent parts; or (3) as a time indication, in which case it is equivalent to ALLA BREVE.

A CAPRICCIO (Ital.). 'At the caprice' or pleasure of the performer, both as regards time and expression.

ACCADEMIA, an institution which flourished all over Italy in the 16th and 17th centuries, and, speaking generally, was founded for promoting the progress of science, literature, and art. Il Quadrio ('Storia e Ragione,' i. 48–112) gives an account of all the Italian academies from the earliest times, and the mere alphabetical list would fill several pages. Even from his volumi-

nous work but little beyond the names and mottoes of these institutions, the dates of their foundation, and their general objects can be ascertained. A detailed history of their endowments and separate objects would require an examination into the archives of each particular city, and it is doubtful whether such an examination would supply full information or repay it when supplied. Nor is it an easy task to separate those institutions which had music for their especial object.

The 'Accademie,' even those especially devoted to music, do not come under the same category as the CONSERVATORIOS. The latter were schools founded and endowed for the sole purpose of giving instruction in music. The Academies were either public institutions maintained by the state, or private societies founded by individuals to further the general movement in favour of science, literature, and the fine arts. This they did in various ways, either by public instructions and criticisms, facilitating the printing of standard works on music, illustrating them with fresh notes, or by composing new ones; and every week the Academicians would assemble to compare their studies and show proofs of their industry. The study of one science or art would often help to illustrate the other. By the end of the 16th century poetry had become so closely allied to music in the drama that an academy could hardly have one of these arts for its object without including the others also, while many, like the 'Alterati' at Florence, the 'Intrepidi' at Ferrara, the 'Intronati' and the 'Rozzi' at Siena, devoted their energies to promoting the successful combination of the two arts in theatrical representation.

As far as regards science, the study of mathematical proportions was found to throw light upon the theory and the practice of music, when the Greek writers upon music came to be translated and studied in Italy in the 16th and 17th centuries. Take for example the mathematical demonstrations of Galileo in his 'Trattato del Suon,' the writings of the great Florentine theorist, Giambattista Doni (a member of the literary academy 'Della Crusca'), and Tartini's 'Trattato di Musica.' From the 15th to the 18th century the passion for academical institutions was so vehement in Italy that there was scarcely a town which could not boast at least one, while the larger cities contained several. At first they went by the name of their founder, as that of 'Pomponio Leto' at Rome, or 'Del Pontano' at Naples. But as they increased and multiplied this did not suffice, and each chose a special name either with reference to its particular object or from mere caprice. Hence arose a number of elaborate designations indicative either of praise or blame, 'Degli Infiammati,' 'Dei Solleciti,' 'Degl' Intrepidi,' etc. Each of these societies had moreover a device bearing a metaphorical relation to its name and object. These were looked upon as important, and were as highly esteemed as the crests and coats of arms of the old nobility.

Selecting, as far as possible, the academies which had the cultivation of music for their special object, we find that the earliest in Italy were those of Bologna and Milan, founded, the former in 1482, the latter in 1484. In the 16th and 17th centuries Bologna had no less than six societies for public instruction in music, Cesena and Ferrara one each, Florence five, Padua and Salerno one each, Siena four, entirely for musical dramatic representations, Verona one, founded by Alberto Lavezzola—a combination of two rival institutions which in 1543 became united—Vicenza two, also founded entirely for musical representation.

At this period there appear to have been no particular academy for music either at Milan, Rome, Naples, or Venice, though the science was probably included in the general studies of the various academies which flourished in those cities, while it could be specially and closely studied in the famous Neapolitan and Venetian Conservatorios (see CONSERVATORIO) or under the great masters of the Pontifical and other Chapels at Rome.

The 'Accademie' were all more or less short-lived, and that of the 'Filarmonici' (at Bologna) is the only one which Burney ('Musical Tour,' 1773), mentions as still extant. According to the 'Report on Musical Education' of 1866, the only institutions for public and gratuitous instruction now existing in Italy are:—

(1) The Royal Musical Institute of Florence, founded 1860,
(2) The 'Reale Conservatorio di Musica' at Milan, founded by Napoleon, 1808, and still flourishing, according to the latest report of 1873.
(3) The Royal Neapolitan College, which has taken the place of her four Conservatorios.

It is difficult to determine how far the musical life of Italy was affected by these Accademie and Conservatorios; certainly the genius of Palestrina, Stradella, or Cherubini, can no more be attributed to them than that of Dante to the Schools; while the Accademia della Crusca might lacerate the heart of Tasso by picking to pieces a poem which not one of her Academicians could have produced. Yet, on the other hand, it may be urged that lovers of music owe much to such institutions when their members are capable of discerning the bright light of genius and cheering it during its existence, besides being ready to impart the information which is required for the general purposes of musical science. (See BOLOGNA, CONSERVATORIO, FERRARA, FLORENCE, LOMBARDY, MILAN, NAPLES, PADUA, ROME, SALERNO, SIENA, VENICE, VERONA, VICENZA).

The name 'Accademia' is, or was, also given in Italy to a private concert. Burney says in his 'Musical Tour': 'The first I went to was composed entirely of dilettanti. Il Padrone, or the master of the house, played the first violin, and had a very powerful band; there were

twelve or fourteen performers, among whom were several good violins; there were likewise two German flutes, a violoncello, and small double bass; they executed, reasonably well, several of our [J. C.] Bach's symphonies, different from those printed in England: all the music here is in MS. . . . . Upon the whole, this concert was much upon a level with our own private concerts among gentlemen in England.' ('Tour,' ii. 94-95). From Italy the use of the word spread to Germany. 'Besuche er mich nicht mehr,' said Beethoven on a memorable occasion, 'keine Akademie!' [C. M. P.]

ACCELERANDO (Ital.). Gradually quickening the time. In the finale to his quartett in A minor (op. 132) Beethoven is not satisfied with the Italian, but has added above it 'immer geschwinder.' [E. P.]

ACCENT. As in spoken language certain words and syllables receive more emphasis than others, so in music there are always some notes which are to be rendered comparatively prominent; and this prominence is termed 'accent.' In order that music may produce a satisfactory effect upon the mind, it is necessary that this accent (as in poetry) should for the most part recur at regular intervals. Again, as in poetry we find different varieties of metre, so in music we meet with various kinds of time; i. e. the accent may occur either on every second beat, or isochronous period, or on every third beat. The former is called common time, and corresponds to the iambic or trochaic metres; e. g.

'Away! nor let me loiter in my song,'

or

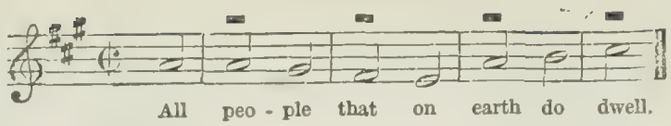
'Fare thee well! and if for ever.'

When the accent recurs on every third beat, the time is called triple, and is analogous to the anapaestic metre; e. g.

'The Assyrian came down like the wolf on the fold.'

As a general rule the position of the accent is indicated by bars drawn across the stave. Since the accents recur at regular intervals it follows of course that each bar contains either the same number of notes or the same total value, and occupies exactly the same time in performance, unless some express direction is given to the contrary. In every bar the first note is that on which (unless otherwise indicated) the strongest accent is to be placed. By the older theorists the accented part of the bar was called by the Greek word *thesis*, i. e. the *putting down*, or 'down beat,' and the unaccented part was similarly named *arsis*, i. e. the *lifting*, or 'up beat.' In quick common and triple time there is but one accent in a bar; but in slower time, whether common or triple, there are two—a stronger accent on the first beat of the bar, and a weaker one on the third. This will be seen from the following examples, in which the strong accents are marked by a thick stroke (▬) over the notes, and the weak ones by a thinner (–).

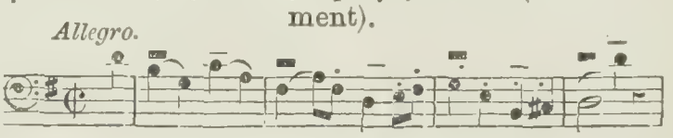
1. 100th Psalm.



2. Beethoven, Eroica Symphony (Scherzo).

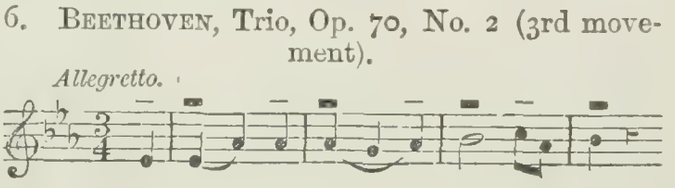
3. Beethoven, Symphony in C minor (Finale).

4. Haydn, Quartett, Op. 76, No. 1 (1st movement).

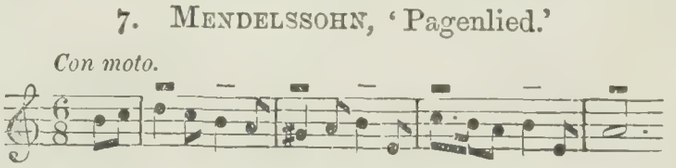


5. Mozart, Symphony in Eb.

6. Beethoven, Trio, Op. 70, No. 2 (3rd movement).



7. Mendelssohn, 'Pagenlied.'



The above seven examples show the position of the accents in the varieties of time most commonly in use. The first, having only two notes in each bar, can contain but one accent. In the second and third the time is too rapid to allow of the subsidiary accent; but in the remaining four both strong and weak accents will be plainly distinguishable when the music is performed.

It will be observed that in all these examples the strong accent is on the first note of the bar. It has been already said that this is its regular position; still it is by no means invariable. Just as in poetry the accent is sometimes thrown

backward or forward a syllable, as for instance in the line

'Stop! for thy tread is on an Empire's dust,'

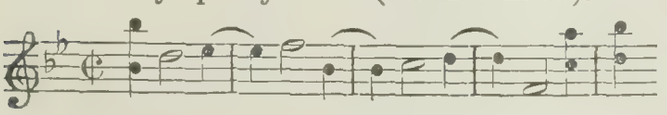
where the first syllable instead of the second receives the accent, so in music, though with much more frequency, we find the accent transferred from the first to some other beat in the bar. Whenever this is done it is always clearly indicated. This may be done in various ways. Sometimes two notes are united by a slur, showing that the former of the two bears the accent, in addition to which a *sf* is not infrequently added; e.g.

8. HAYDN, Quartett, Op. 54, No. 2 (1st movement).

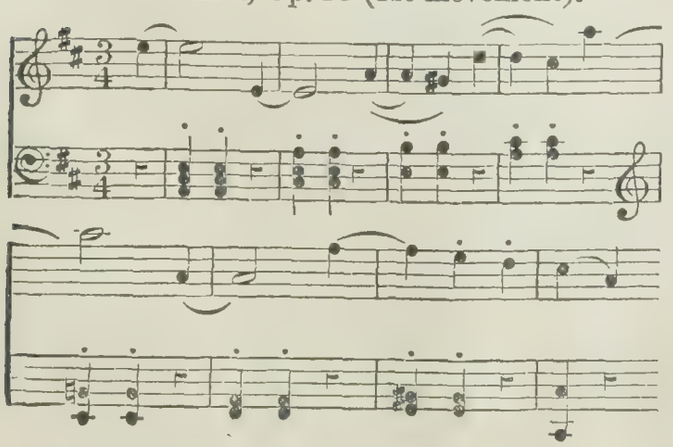
9. BEETHOVEN, Sonata, Op. 27, No. 1 (Finale).

In the former of these examples the phrasing marked for the second and third bars shows that the accent in these is to fall on the second and fourth crotchets instead of on the first and third. In Ex. 9 the alteration is even more strongly marked by the *sf* on what would naturally be the unaccented quavers. Another very frequent method of changing the position of the accent is by means of SYNCOPATION. This was a favourite device with Beethoven, and has since been adopted with success by Schumann, and other modern composers. The two following examples from Beethoven will illustrate this:

10. Symphony in B♭ (1st movement).



11. Sonata, Op. 28 (1st movement).

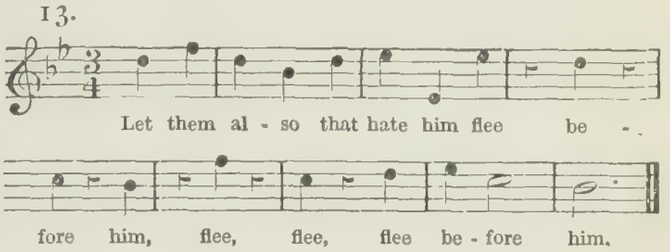


In the following example,

12. SCHUMANN, Phantasiestücke, Op. 12, No. 4,

will be noticed not merely a reversal of the accent, as in the extracts from Beethoven previously given, but also in the last three bars an effect requiring further explanation. This is the displacing of the accents in such a way as to convey to the mind an impression of an alteration of the time. In the above passage the last three bars sound as if they were written in 2–4 instead of in 3–4 time. This effect, frequently used in modern music, is nevertheless at least as old as the time of Handel. A remarkable example of it is to be found in the second movement of his Chandos anthem 'Let God arise.'

13.



As instances of this device in the works of later composers may be quoted the following:

14. BEETHOVEN, Eroica Symphony (1st movement).

15. WEBER, Sonata in C (Menuetto).

In both these passages the accent occurring on every second instead of on every third beat, produces in the mind the full effect of common time. It is in quick movements that this modification of the accent is most often found; that it may nevertheless be very effectively employed in slower music will be seen from the following example, from the Andante of Mozart's 'Jupiter' Symphony, in which, to save space, only the upper part and the bass are given. It will be noticed that the extract also illustrates the syncopation above referred to.

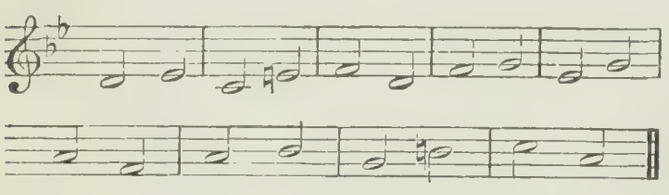
16.

A nearly analogous effect—the displacing of the accents of 6–8 time to make it sound like a bar of 3–4 time is also sometimes to be met with; e. g. in the Andante of Mozart's Symphony in G minor—

17.

The reverse process—making a passage in common time sound as if it were in triple—is much less frequently employed. An example which is too long for quotation may be seen in the first movement of Clementi's Sonata in C, op. 36, No. 3. Beethoven also does the same thing in the first movement of his symphony in B flat.

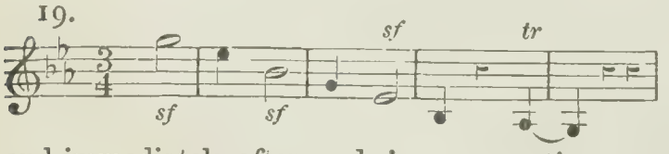
18.



Though no marks of phrasing are given here, as in some of the examples previously quoted, it is obvious from the form of the passage, which consists of a sequence of phrases of three minims each, that the feeling of triple time is conveyed to the hearer. In this contradiction of the natural accent lies the main charm of the passage.

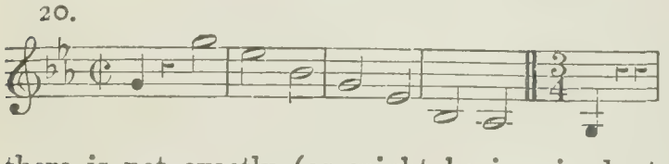
In the well-known passage in the scherzo of the 'Eroica' symphony, where the unison for the strings appears first in triple time

19.



and immediately afterwards in common time

20.



there is not exactly (as might be imagined at first sight) a change of accent; because the bars are of the same length in both quotations, and each contain but one accent, which in the first extract comes on the second instead of the first beat. The difference between the two passages, apart from the *sf* in the first, consists in the fact that in the former each accent is divided into three and in the latter into two parts. The change is not in the frequency with which the accents recur, but in the subdivision of the bar.

Another displacement of accent is sometimes found in modern compositions, bearing some resemblance to those already noticed. It consists in so arranging the accents in triple time as to make two bars sound like one bar of double the length; e. g. two bars of 3–8 like one of 3–4, or two of 3–4 like one of 3–2. Here again the credit of the first invention is due to Handel, as will be seen from the following extract from his opera of 'Rodrigo.'

21.

When forty years later Handel used this theme for his duet in 'Susanna,' 'To my chaste Susanna's praise,' he altered the notation and wrote the movement in 3–4 time.

Of the modern employment of this artifice the following examples will suffice:—

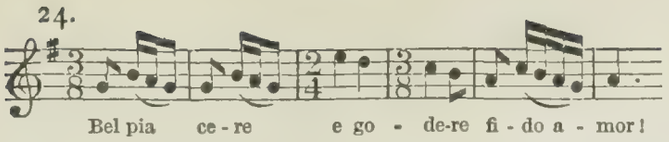
22. SCHUMANN, P. F. Concerto (Finale).

23. BRAHMS, 'Schicksalslied.'

At first sight the second of these examples seems very like the extract from Handel's 'Let God arise.' The resemblance however is merely external, as Brahms's passage is constructed on a sequence of three notes, giving the effect of 3–2 time, while Handel's produces the feeling of common time.

It will be seen from the above extracts what almost boundless resources are placed at the disposal of the composer by this power of varying the position of the accent. It would be easy to quote at least twice as many passages illustrating this point; but it must suffice to have given a few representative extracts showing some of the effects most commonly employed. Before leaving this part of the subject a few examples should be given of what may be termed the curiosities of accent. These consist chiefly of unusual alternations of triple and common-time accents. In all probability this peculiar alternation was first used by Handel in the following passage from his opera of 'Agrippina.'

24.



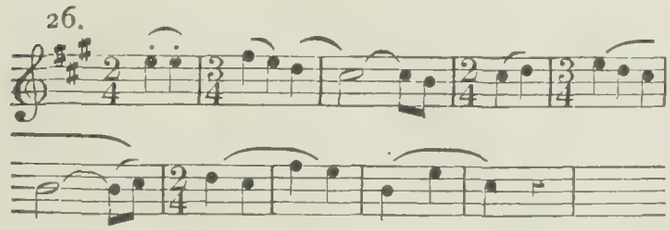
In the continuation of the song, of which the opening bars are given here, the alternations of common and triple time become more frequent. In the rare cases in which bars of 3–4 and 2–4 time alternate, they are sometimes written in 5–4 time, the accent coming on the first and fourth beats. An example of this time is found in the third act of Wagner's 'Tristan und Isolde,' in which the composer has marked the secondary accent by a dotted bar.

25.

A similar example, developed at greater length, may be seen in the tenor air in the second act of Boieldieu's 'La Dame Blanche.'

One of the most interesting experiments in mixed accents that has yet been tried is to be found in Liszt's oratorio 'Christus.' In the pastorale for orchestra entitled 'Hirtengesang an der Krippe' the following subject plays an important part.

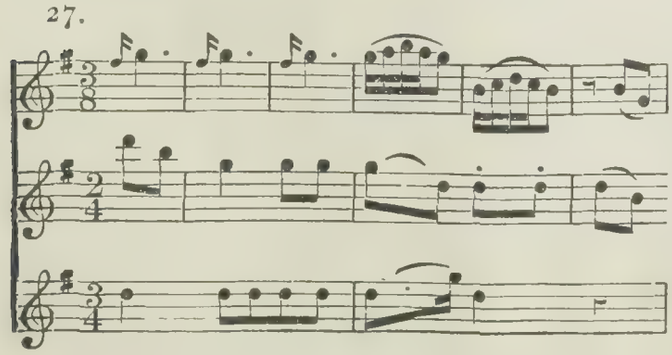
26.



It is impossible to reduce this passage to any known rhythm; but when the first feeling of strangeness is past there is a peculiar and quaint charm about the music which no other combination would have produced. Such examples as those last quoted are however given merely as curiosities, and are in no way to be recommended as models for imitation.

Besides the alternation of various accents, it is also possible to combine them simultaneously. The following extract from the first finale of 'Don Giovanni' is not only one of the best-known but one of the most successful experiments in this direction.

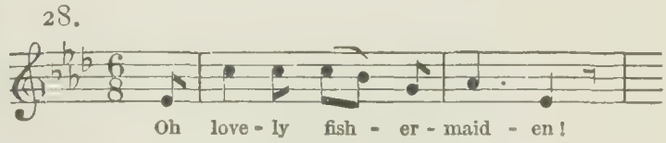
27.



In the above quotation the first line gives a quick waltz in 3-8 time with only one accent in the bar, this accent falling with each beat of the second and third lines. The contredanse in 2-4 time and the minuet in 3-4 have each two accents in the bar, a strong and a weak one, as explained above. The crotchet being of the same length in both, it will be seen that the strong accents only occur at the same time in both parts on every sixth beat, at every second bar of the minuet, and at each third bar of the contredanse. A somewhat similar combination of different accents will be found in the slow movement of Spohr's symphony 'Die Weihe der Töne.'

All the accents hitherto noticed belong to the class called by some writers on music *grammatical* or *metrical*; and are more or less inherent in the very nature of music. There is however another point of view from which accent may be regarded—that which is sometimes called the *oratorical* accent. By this is meant the adaptation in vocal music of the notes to the words, of the sound to the sense. We are not speaking here of the giving a suitable expression to the text; because though this must in some measure depend upon the accent, it is only in a secondary degree connected with it. What is intended is rather the making the accents of the music correspond with those of the words. A single example will make this clear. The following phrase

28.



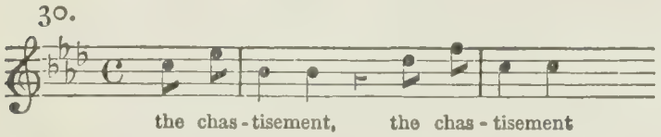
is the commencement of a well-known song from the 'Schwanengesang' by Schubert. The line contains seven syllables, but it is evident that it is not every line of the same length to which the music could be adapted. For instance, if we try to sing to the same phrase the words 'Swiftly from the mountain's brow,' which contain exactly the same number of syllables, it will be found impossible, because the accented syllables of the text will come on the unaccented notes of the music, and *vice versâ*. Such mistakes as these are of course never to be found in good music, yet even the greatest composers are sometimes not sufficiently attentive to the accentuation of the words which they set to music. For instance, in the following passage from 'Freischütz,' Weber has, by means of syncopation and a sforzando, thrown a strong

accent on the second syllable of the words 'Augen,' 'taugen,' and 'holden,' all of which (as those who know German will be aware) are accented on the first syllable.

29.

The charm of the music makes the hearer overlook the absurdity of the mispronunciation; but it none the less exists, and is referred to not in depreciation of Weber, but as by no means a solitary instance of the want of attention which even the greatest masters have sometimes given to this point. Two short examples of a somewhat similar character are here given from Handel's 'Messiah' and 'Deborah.'

30.

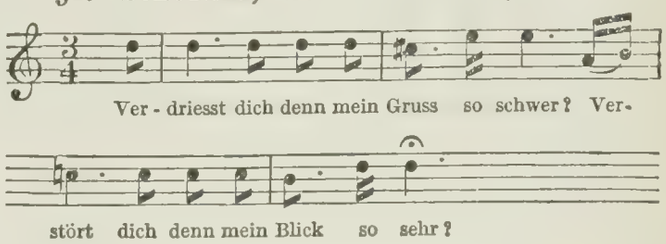


31.

In the former of these extracts the accent on the second syllable of the word 'chastisement' may not improbably have been caused by Handel's imperfect acquaintance with our language; but in the chorus from 'Deborah,' in which the pronunciation of the last word according to the musical accents will be vĭctŏriōus, it is simply the result of indifference or inattention, as is shown by the fact that in other parts of the same piece the word is set correctly.

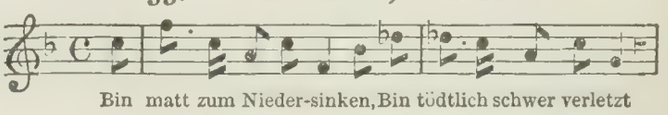
Closely connected with the present subject, and therefore appropriately to be treated here, is that of Inflexion. Just as in speaking we not only accent certain words, but raise the voice in uttering them, so in vocal music, especially in that depicting emotion, the rising and falling of the melody should correspond as far as possible to the rising and falling of the voice in the correct and intelligent reading of the text. It is particularly in the setting of recitative that opportunity is afforded for this, and such well-known examples as Handel's 'Thy rebuke hath broken his heart' in the 'Messiah,' or 'Deeper and deeper still' in 'Jephtha,' or the great recitative of Donna Anna in the first act of 'Don Giovanni' may be studied with advantage by those who would learn how inflexion may be combined with accent as a means of musical expression. But, though peculiarly adapted to recitative, it is also frequently met with in songs. Two extracts from Schubert are here given. In asking a question we naturally raise the voice at the end of the sentence; and the following quotation will furnish an example of what may be called the interrogatory accent.

32. SCHUBERT, 'Schöne Müllerin,' No. 8.



The passage next to be quoted illustrates what may rather be termed the declamatory accent.

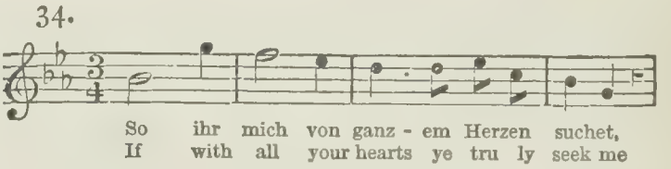
33. 'Winterreise,' No. 21.



The word 'matt' is here the emphatic word of the line; but the truthful expression of the music is the result less of its being set on the accented part of the bar than of the rising inflexion upon the word, which gives it the character of a cry of anguish. That this is the case will be seen at once if C is substituted for F. The accent is unchanged, but all the force of the passage is gone.

What has just been said leads naturally to the last point on which it is needful to touch—the great importance of attention to the accents and inflexions in translating the words of vocal music from one language to another. It is generally difficult, often quite impossible, to preserve them entirely; and this is the reason why no good music can ever produce its full effect when sung in a language other than that to which it was composed. Perhaps few better translations exist than that of the German text to which Mendelssohn composed his 'Elijah'; yet even here passages may be quoted in which the composer's meaning is unavoidably sacrificed, as for example the following—

34.



Here the different construction of the English and German languages made it impossible to preserve in the translation the emphasis on the word 'mich' at the beginning of the second bar. The adapter was forced to substitute another accented word, and he has done so with much tact; but the exact force of Mendelssohn's idea is lost. In this and many similar cases all that is possible is an approximation to the composer's idea; the more nearly this can be attained, the less the music will suffer.

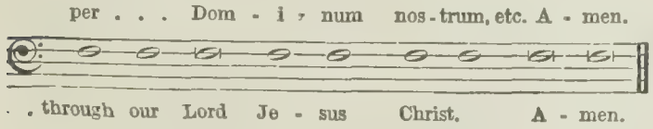
The word 'rhythm' is sometimes inaccurately used as synonymous with accent. The former properly refers not to the beats within a bar but to the recurrence of regular periods containing

the same number of bars and therefore of accents. [E. P.]

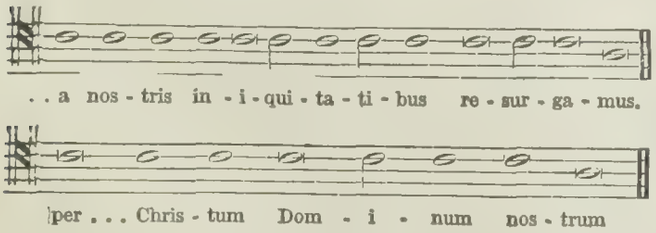
ACCENTS. Certain intonations of the voice used in reciting various portions of the liturgical services of the Church. The Ecclesiastical Accent is the simplest portion of the ancient PLAINSONG. Accents or marks, sometimes called *pneums*, for the regulation of recitation and singing were in use among the ancient Greeks and Hebrews, and are still used in the synagogues of the Jews. They are the earliest forms of notes used in the Christian Church, and it was not till the 11th and 12th centuries that they began to be superseded by the more definite notation first invented by Guido Aretino, a Benedictine monk of Pomposa in Tuscany, about 1028. Accents may be regarded as the reduction, under musical laws, of the ordinary accents of spoken language, for the avoidance of confusion and cacophony in the union of many voices; as also for the better hearing of any single voice, either in the open air, or in buildings too large to be easily filled by any one person reciting in the perpetually changing tones of ordinary speech. They may also be considered as the impersonal utterance of the language of corporate authority, as distinguished from the oratorical emphasis of individual elocution.

Precise directions are given, in the ritual books of the Church, as to the accents to be used in the various portions of the sacred offices and liturgy. Thus the Prayer Accent or *Cantus Collectarum* is either Ferial—an uninterrupted monotone, or Festal—a monotone with an occasional change of note as at (*a*), styled the *punctum principale*, and at (*b*) called the *semi-punctum*. The following examples are taken from Guidetti's 'Directorium Chori,' compiled in the 16th century under the direction of Palestrina (ed. 1624); the English version is from Marbeck.

1. The Ordinary Week-day Accent for Prayers ('Tonus orationum ferialis').[1]

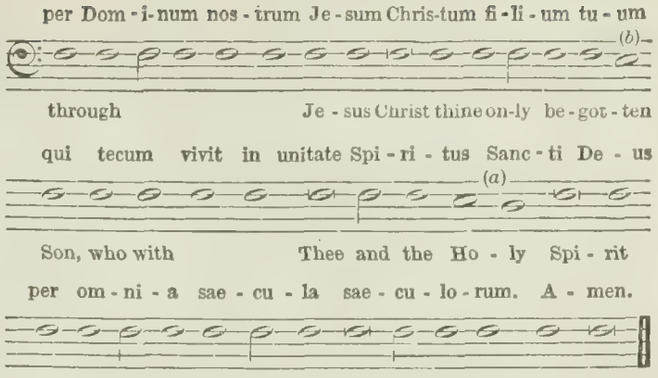


2. The following Ferial Accent (Tonus ferialis) is used at the end of certain prayers.

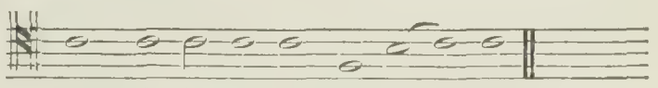


3. The Festival Accents for Prayers ('Tonus orationum festivus').

[1] The breves and semibreves in the above examples represent the old black notes of the same name (■ and ◆) which answered to the long and short times of syllables in prosody (– and ⏑): a more prolonged sound was indicated by the *long* (thus ⌐ or ⚑)

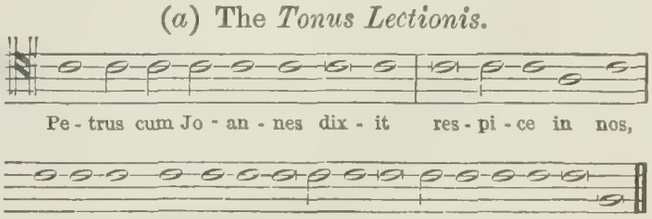


4. In the ancient Sarum use there was the fall of a perfect fifth, called the grave accent, at the close of a prayer, with a modification of the Amen, thus—

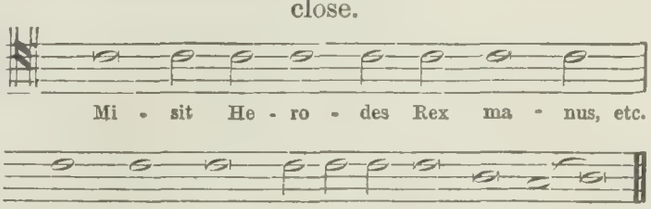


5. There are also the accents for reciting the Holy Scriptures, viz. the *Cantus* or *Tonus lectionis*, or ordinary reading chant; the *Tonus Capituli* for the office lessons; the *Cantus Prophetarum* or *Prophetiae*, for reading the Prophets or other books not Gospels or Epistles; the *Cantus Epistolae* and *Evangelii* for the Epistles and Gospels; as well as other accents for special verses and responses, of great variety and beauty, which may be best learnt from the noted service-books themselves. The following examples will show their general character. The responses are for the most part sung in unison—but some of them have been harmonised for several centuries, and such as are most known in the English Church are generally sung with vocal, and sometimes with organ harmonies. These harmonies have, however, in too many cases, obscured the accents themselves, and destroyed their essential characteristics. In Tallis's well-known 'Responses' the accents being given to the tenor are, in actual use, entirely lost in the accompanying treble.[2]

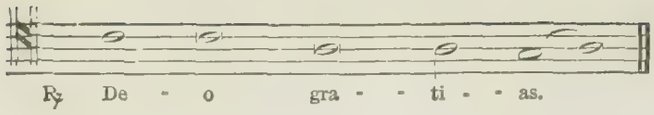
(*a*) The *Tonus Lectionis.*



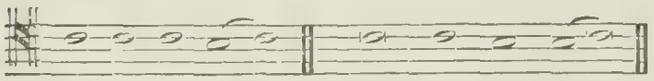
(*b*) *Tonus Capituli.* Monotonic except at the close.



[2] For a rearrangement of these, with a view to restore the proper supremacy of the accents themselves, see Appendix I. to 'Accompanying Harmonies to the Rev. T. Helmore's Brief Directory of Plainsong', and for the rule of their proper formation, see the 'S. Mark's Chant Book,' p. 61.

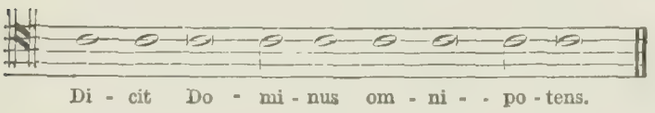


(*c*) The *Accent of Interrogation.*



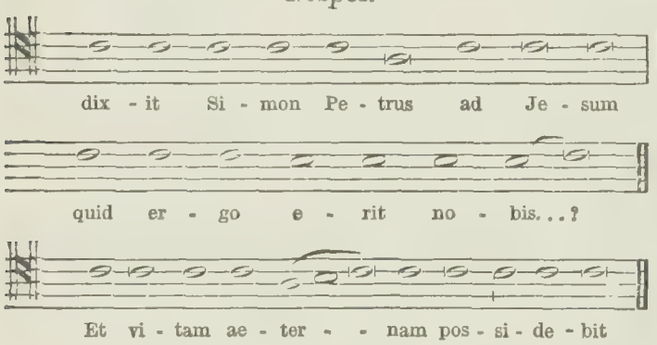
(*d*) The *Tonus Prophetiae.*

ending on the reciting note; and differing, in this respect only, from the *Tonus Lectionis.*



(*e*) The *Tonus Epistolae,* Accent for the Epistle. Monotonic except that the Accent of Interrogation is used when a question is asked.

(*f*) The *Tonus Evangelii,* or Accent for the Gospel.



6. The Sarum use was in some parts of the service more varied than the Roman, as given above from Guidetti. But the general rules were not widely different, and, from a review of the whole subject, it may be stated briefly that there are some seven ecclesiastical accents, viz. (1) The monotonic; (2) The semitonic (3) The medial  ; (4) The accent of a final fourth  ;

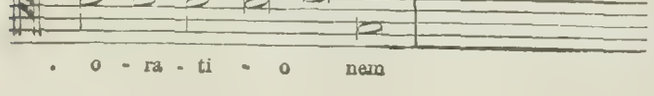
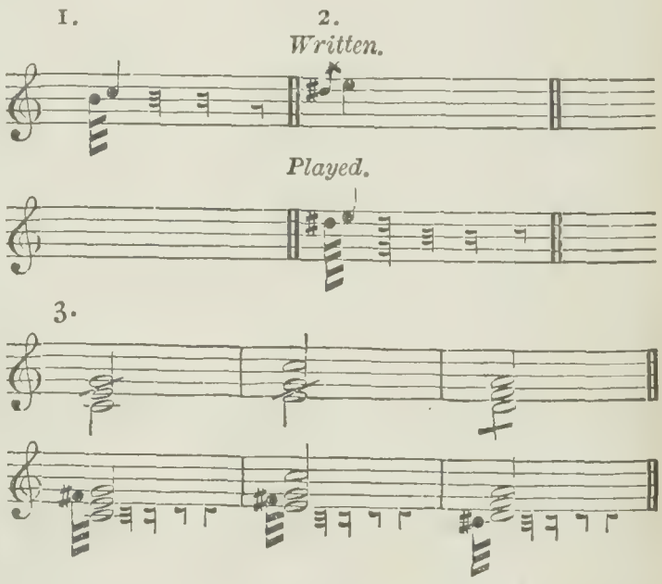
(5) The grave  ; of this there is a variation used in Rome, thus,



ending with the fall of a major sixth. It does not appear to be prescribed in any Gregorian Treatise or Directorium, but is well known to musical travellers, and is mentioned by Mendelssohn in his letter from Rome, 1831, to Zelter, on the music of the Holy Week; (6) The interrogative, before explained; (7) The acute  , used specially for monosyllabic and Hebrew words, when otherwise the medial accent would be employed. These, including the semipunctum, and with the addition of the punctum principale, and perhaps a few other varieties, constitute the first and simplest portion of that voluminous PLAINTUNE from which Marbeck selected the notes set to the English Prayer-book, and which was ordered by Queen Elizabeth's famous Injunctions to be used in every part of the Divine Service of the Reformed Church of England. [T. H.]

ACCIACCATURA. (Ital. from *acciacare,* to crush, to pound; Ger. *Zusammenschlag*; Fr. *Pincé etouffé.*) A now nearly obsolete description of ornament, available only on keyed instruments, in which an essential note of a melody is struck at the same moment with the note immediately below it, the latter being instantly released, and the principal note sustained alone (Ex. 1). It is generally indicated by a small note with an oblique stroke across the stem (Ex. 2), or when used in chords by a line across the chord itself (Ex. 3).



Its use is now confined exclusively to the organ, where it is of great service in giving the effect of an accent, or sforzando, to either single notes or chords.

The term Acciacatura is now very generally applied to another closely allied form of ornament, the short appoggiatura (see that word). [F. T.]

ACCIDENTALS. The signs of chromatic alteration, employed in music to show that the notes to which they are applied have to be raised or lowered a semitone or a tone. They are five in number, the sharp (♯) (Fr. *dièse,* Ger. *Kreuz*) and double sharp (×) (Fr. *double-dièse,* Ger.

Doppelkreuz), which being placed before a note raise it respectively a semitone or a tone; the flat (♭) (Fr. *bémol*, Ger. *Be*) and double-flat (𝄫) (Fr. *double-bémol*, Ger. *Doppelbe*), which cause the note to be lowered to the same extent; and the natural (♮) (Fr. *bécarre*, Ger. *Quadrat*), which is applied to an already chromatically altered note in order to restore it to its original position.

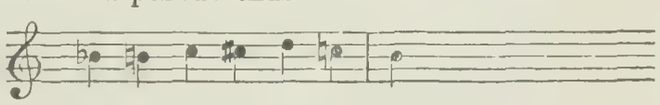
In modern music the signs are placed at the beginning of the composition, immediately after the clef, when they affect every note of the same name throughout the piece; and they are also employed singly in the course of the piece, in which case they only affect the note to which they are applied and any succeeding note on the same line or space within the same bar. Strictly speaking, only those which occur in the course of a composition are accidentals, the sharps or flats placed after the clef being known as the SIGNATURE, but as their action is the same wherever placed it will not be necessary to make any distinction here.

The invention of accidentals dates from the division of the scale into hexachords, an arrangement usually attributed to Guido d'Arezzo (A.D. 1025) but probably in reality of later date.[1] These hexachords, of which there were seven, were short scales of six notes each, formed out of a complete scale extending from G, the first line of the bass stave, to E, the fourth space of the treble, and commencing on each successive G, C, and F, excepting of course the highest C of all, which being the last note but two, could not begin a hexachord. The chief characteristic of the hexachord was that the semitone fell between the third and fourth notes; with the hexachords of G and C this was the case naturally, but in singing the hexachord of F it was found necessary to introduce a new B, half a tone lower than the original, in order that the semitone might fall in the right place. This new note, the invention of which laid the foundation of all modern chromatic alterations, was called *B molle* (Fr. *Bémol*, Ital. *Bemolle*, still in use), and the hexachord to which it belonged and the plainsong in which it occurred were termed respectively *hexachordum molle* and *cantus mollis*, while the hexachord of G, which retained the original B, was known as *hexachordum durum*, and the melody employing it as *cantus durus*.

For the sake of distinction in writing (for modern notation was not yet invented, and musical sounds were generally expressed by letters), the unaltered higher B was written of a square form, after the fashion of a black letter 𝔟, from which circumstance it received the name *B quadratum* (Fr. *Bé quarre*, *Bé carré*, Ital. *Be quadro*, Ger. *Quadrat*, still in use), while the new lower B was written as a Roman b and called *B rotundum* (Fr. *B rond*, Ital. *B rotondo*). The square B, slightly altered in shape, has become the ♮ and the round B the ♭ of modern music, and they have in course of time come to be applied to all the other notes. The inconvenience, as it at that time appeared, of having two different kinds of B's led the German musicians to introduce a new letter, H, which however, probably on account of its similarity of shape, was given to the square B, while the original designation of B was made over to the newly-invented round B. This distinction, anomalous as it is, remains in force in Germany at the present day.

The sign for chromatically raising a note, the sharp, is of later date, and is said to have been invented by Josquin de Pres (1450–1521). It was originally written as a square B crossed out or cancelled, to show that the note to which it was applied was to be raised instead of lowered,[2] and was called *B cancellatum* (latticed or cancelled B).

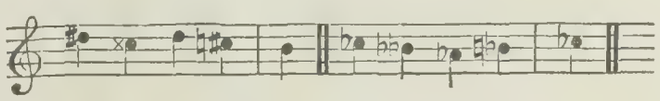
Modern music requires double transposition signs, which raise or lower the note a whole tone. These are the double flat, written 𝄫, (or sometimes in old music a large ♭ or a Greek β), and the double sharp, written 𝄪, ⁂, ⋕, or more commonly x. The double sharp and double flat are never employed in the signature, and the only case in which the natural is so placed occurs when in the course of the composition it becomes necessary to change the signature to one with fewer flats or sharps, in order to avoid the use of too many accidentals. In this case the omitted sharps or flats are indicated in the new signature by naturals. The proper use of the natural is to annul the effect of an already used sharp or flat, and it has thus a double nature, since it can either raise or lower a note according as it is used to cancel a flat or a sharp. Some of the earlier composers appear to have objected to this ambiguity, and to obviate it they employed the natural to counteract a flat only, using the flat to express in all cases the lowering of a note, even when it had previously been sharpened: thus



would be written

This method of writing merely substitutes a greater equivocalness for a less, and is only mentioned here as a fact, the knowledge of which is necessary for the correct interpretation of some of the older compositions.

After a double sharp or flat the cancelling signs are ♮♯ and ♮♭, which reduce the note to a single sharp or flat (for it very rarely happens that a double sharp or double flat is followed at once by a natural); for example—



[1] Guido himself never speaks of hexachords in his writings, but on the contrary says that there are seven sounds in the scale. (See Fétis, 'Biographie Universelle des Musiciens,' art. Guido.)

[2] Some writers contend that the four cross lines of the sharp were intended to represent the four commas of the chromatic semitone, but this appears to be a fanciful derivation, unsupported by proof.

When a note which is sharpened in the signature becomes altered in the course of the composition to a flat, or *vice versa*, the alteration is sometimes expressed by the sign ♮♭ or ♮♯, the object of the natural being to cancel the signature, while the following flat or sharp indicates the further alteration, as in Schubert's 'Impromptu,' Op. 90, No. 2, bars 4 and 164; this is, however, not usual, nor is it necessary, as a single sharp or flat fully answers the purpose. (See Beethoven, Trio, op. 97, bar 35).

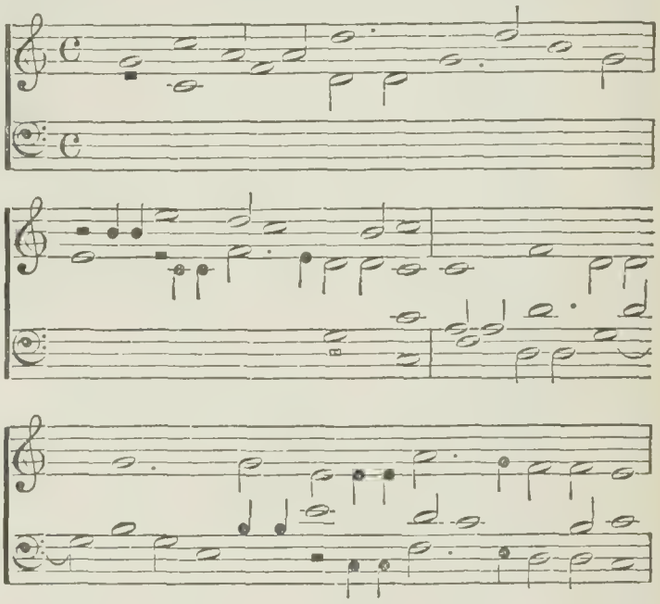
Until about the beginning of the 17th century the accidentals occurring during a composition were often not marked, the singers or players being supposed to be sufficiently educated to supply them for themselves. In the signature only the first flat, B♭, was ever marked, and indeed we find numerous examples of a similar irregularity as late as Bach and Handel, who sometimes wrote in G minor with one flat, in C minor with two, and so on. Thus Handel's Suite in E containing the 'Harmonious Blacksmith' was originally written with three sharps, and is so published in Arnold's edition of Handel's works, No. 128; and the trio in 'Acis and Galatea,' 'The flocks shall leave the mountains,' though in C minor, is written with two flats in the signature and the third marked throughout as an accidental. In the same way the sharp seventh in minor compositions, although an essential note of the scale, is not placed in the signature, but is written as an accidental.

In French the chromatic alterations are expressed by the words *dièse* (sharp) and *bémol* (flat) affixed to the syllables by which the notes are usually called; for example, E♭ is called *mi-bémol*, G♯ *sol-dièse*, etc. and in Italian the equivalents *diesis* and *bemolle* are similarly employed, but in German the raising of a note is expressed by the syllable *is* and the lowering by *es* joined to the letter which represents the note, thus G♯ is called *Gis*, G♭ *Ges*, and so on with all except B♭ and B♮, which have their own distinctive names of B and H. Some writers have lately used the syllable *Hes* for B♭ for the sake of uniformity, an amendment which appears to possess some advantages, though it would be more reasonable to restore to the present H its original name of B, and to employ the syllables *Bis* and *Bes* for B sharp and B flat. [F. T.]

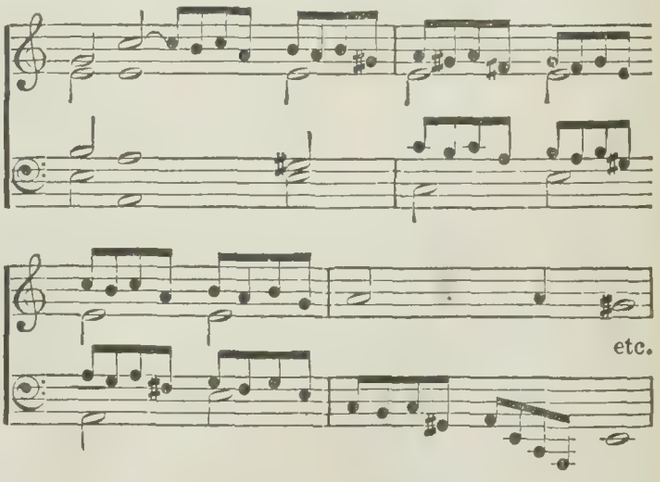
ACCOMPANIMENT. This term is applied to any subsidiary part or parts, whether vocal or instrumental, that are added to a melody, or to a musical composition in a greater number of parts, with a view to the enrichment of its general effect; and also, in the case of vocal compositions, to support and sustain the voices.

An accompaniment may be either 'Ad libitum' or 'Obligato.' It is said to be Ad libitum when, although capable of increasing the relief and variety, it is yet not essential to the complete rendering of the music. It is said to be Obligato when, on the contrary, it forms an integral part of the composition.

Among the earliest specimens of instrumental accompaniment that have descended to us, may be mentioned the organ parts to some of the services and anthems by English composers of the middle of the 16th century. These consist for the most part of a condensation of the voice parts into two staves; forming what would now be termed a 'short score.' These therefore are Ad libitum accompaniments. The following are the opening bars of 'Rejoyce in the Lorde allwayes,' by John Redford (*about* 1543):—

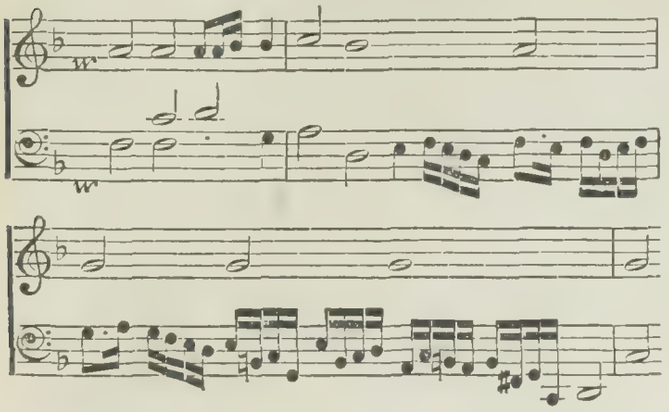


Before speaking of Obligato accompaniment it is necessary to notice the remarkable instrumental versions of some of the early church services and anthems, as those by Tallis, Gibbons, Amner, etc. which are still to be met with in some of the old organ and other MS. music books. These versions are so full of runs, trills, beats, and matters of that kind, and are so opposed in feeling to the quiet solidity and sober dignity of the vocal parts, that even if written by the same hand, which is scarcely credible, it is impossible that the former can ever have been designed to be used as an accompaniment to the latter. For example, the instrumental passage corresponding with the vocal setting of the words 'Thine honourable, true, and only Son,' in the Te Deum of Tallis (died 1585) stands thus in the old copies in question:—

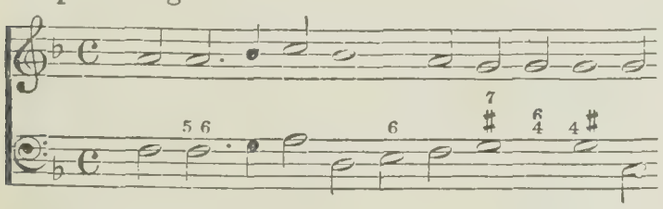


while that of the phrase to the words 'The noble army of martyrs praise Thee,' in the well-

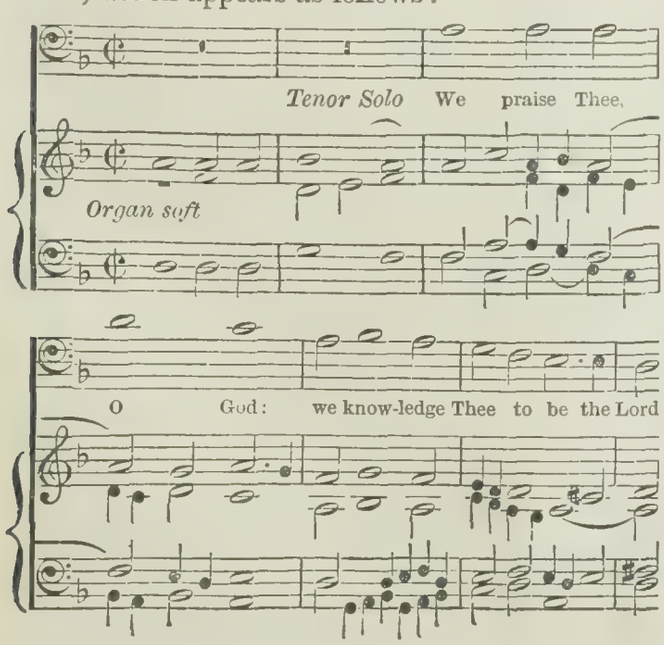
known Te Deum in F of Gibbons (1583-1625), appears in this shape :—



The headings or 'Indexing' of these versions stand as follows, and are very suggestive :—'Tallis in D, organ part varied'; 'Te Deum, Mr. Tallis, with Variations for the Organ'; 'Gibbons in F, Morning, with Variations'; 'Te Deum, Mr. Orlando Gibbons, in F fa ut, varied for the Organ'; and so forth. There is little doubt therefore that the versions under notice were not intended as accompaniments at all, but were variations or adaptations like the popular 'Transcriptions' of the present day, and made for separate use, that use being doubtless as voluntaries. This explanation of the matter receives confirmation from the fact that a second old and more legitimate organ part of those services is also extant, for which no ostensible use would have existed, if not to accompany the voices. Compare the following extract from Gibbons's Te Deum ('The noble army of Martyrs') with the preceding.

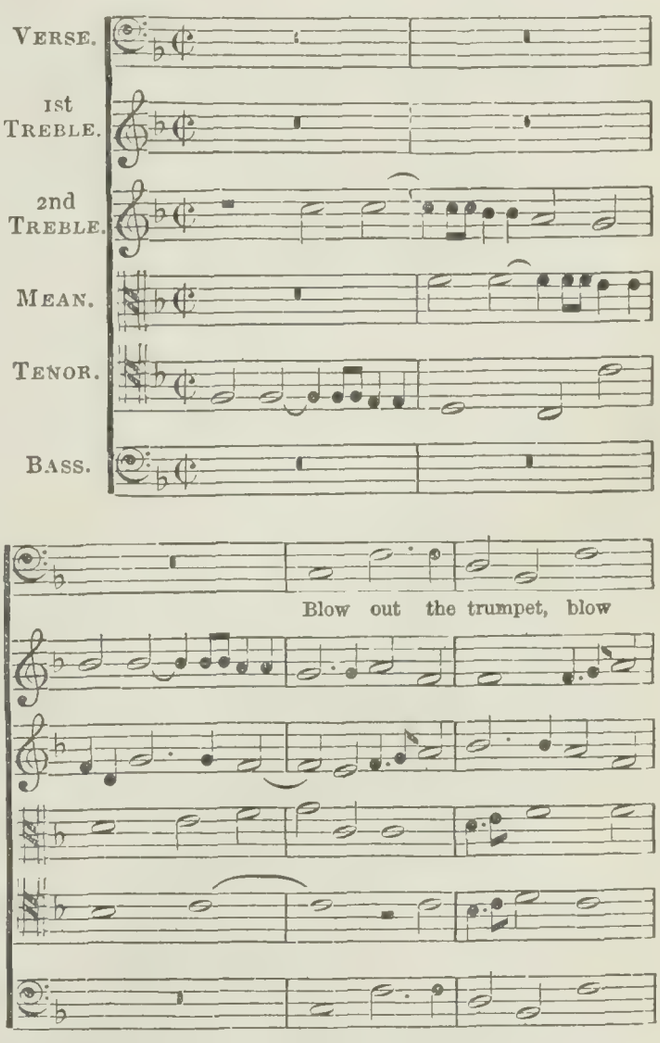


An early specimen of a short piece of 'obligato' organ accompaniment is presented by the opening phrase of Orlando Gibbons's Te Deum in D minor, which appears as follows :—



The early organ parts contained very few if any directions as to the *amount* of organ tone to be used by way of accompaniment. Indeed the organs were not capable of affording much variety. Even the most complete instruments of Tallis's time, and for nearly a century afterwards, seem to have consisted only of a very limited 'choir' and 'great' organs, sometimes also called 'little' and 'great' from the comparative size of the external separate cases that enclosed them; and occasionally 'soft,' as in the preceding extract, and 'loud' organs in reference to the comparative strength of their tone.

Other instruments were used besides the organ in the accompaniment of church music. Dr. Rimbault, in the introduction to 'A Collection of Anthems by Composers of the Madrigalian Era,' edited by him for the Musical Antiquarian Society in 1845, distinctly states that 'all verse or solo anthems anterior to the Restoration were accompanied with viols, the organ being only used in the full parts;' and the contents of the volume consist entirely of anthems that illustrate how this was done. From the first anthem in that collection, 'Blow out the trumpet,' by M. Este (about 1600), the following example is taken —the five lower staves being instruments :—



The resources for varied organ accompaniment were somewhat extended in the 17th century through the introduction, by Father Smith and Renatus Harris, of a few stops, until then unknown in this country; and also by the

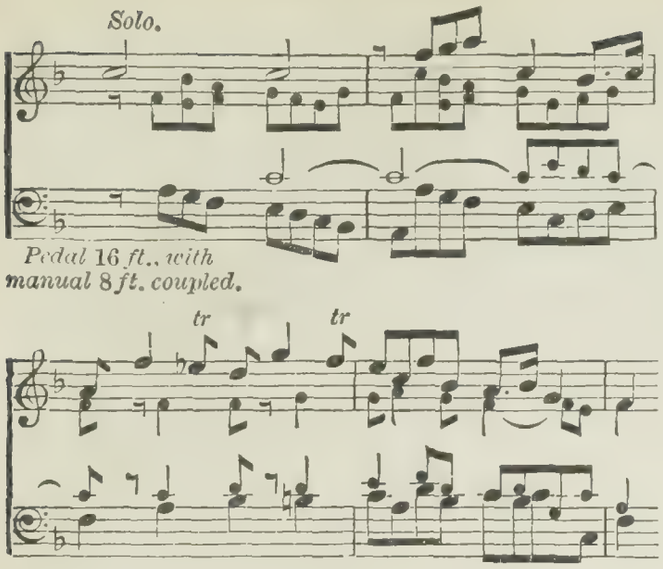
insertion of an additional short manual organ called the Echo; but no details have descended to us as to whether these new acquisitions were turned to much account. The organ accompaniments had in fact ceased to be written with the former fullness, and had gradually assumed simply an outline form. That result was the consequence of the discovery and gradual introduction of a system by which the harmonies were indicated by means of *figures*, a short-hand method of writing which afterwards became well known by the name of *Thorough Bass*. The 'short-score' accompaniments—which had previously been generally written, and the counterparts of which are now invariably inserted beneath the vocal scores of the modern reprints of the old full services and anthems—were discontinued; and the scores of all choral movements published during the 18th and the commencement of the present century, were for the most part furnished with a figured bass only by way of written accompaniment. The custom of indicating the harmonies of the accompaniment in outline, and leaving the performer to interpret them in any of the many various ways of which they were susceptible, was followed in secular music as well as in sacred; and was observed at least from the date of the publication of Purcell's 'Orpheus Britannicus,' in 1697, down to the time of the production of the English ballad operas towards the latter part of the last century.

In committing to paper the accompaniments to the 'solos' and 'verses' of the anthems written during the period just indicated, a figured bass was generally all that was associated with the voice part; but in the symphonies or 'ritornels' a treble part was not unfrequently supplied, usually in single notes only, for the right hand, and a figured bass for the left. Occasionally also a direction was given for the use of a particular organ register, or a combination of them; as 'cornet stop,' 'bassoon stop,' 'trumpet or hautboy stop,' 'two diapasons, left hand,' 'stop diapason and flute'; and in a few instances the particular manual to be used was named, as 'eccho,' 'swelling organ,' etc.

Although the English organs had been so much improved in the volume and variety of their tone that the employment of other instruments gradually fell into disuse, yet even the best of them were far from being in a state of convenient completeness. Until nearly the end of the 18th century English organs were without pedals of any kind, and when these were added they were for fifty years made to the wrong compass. There was no independent pedal organ worthy of the name; no sixteen-feet stops on the manuals; the swell was of incomplete range; and mechanical means, in the shape of composition-pedals for changing the combination of stops were almost entirely unknown; so that the means for giving a good instrumental rendering of the *suggested* accompaniments to the English anthems really only dates back about thirty years.

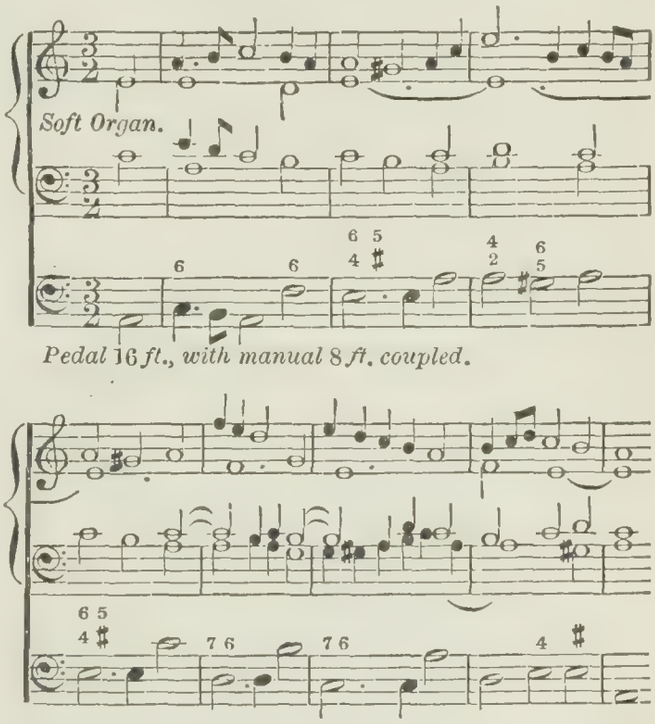
The best mode of accompanying a single voice in compositions of the kind under consideration was fully illustrated by Handel in the slightly instrumented songs of his oratorios, combined with his own way of reducing his thorough-bass figuring of the same into musical sounds. Most musical readers will readily recall many songs so scored. The tradition as to Handel's method of supplying the intermediate harmonies has been handed down to our own time in the following way. The late Sir George Smart, at the time of the Handel festival in Westminster Abbey in 1784, was a youthful chorister of the Chapel Royal of eight years of age; and it fell to his lot to turn over the leaves of the scores of the music for Joah Bates, who, besides officiating as conductor, presided at the organ. In the songs Bates frequently supplied chords of two or three notes from the figures on a soft-toned unison-stop. The boy looked first at the book, then at the conductor's fingers, and seemed somewhat puzzled, which being perceived by Bates, he said, 'my little fellow, you seem rather curious to discover my authority for the chords I have just been playing;' to which observation young Smart cautiously replied, 'well, I don't see the notes in the score;' whereupon Mr. Bates added, 'very true, but Handel himself used constantly to supply the harmonies in precisely the same way I have just been doing, as I have myself frequently witnessed.'

Acting on this tradition, received from the lips of the late Sir George Smart, the writer of the present article, when presiding occasionally, for many years, at the organ at the concerts given by Mr. Hullah's Upper Singing Schools in St. Martin's Hall, frequently supplied a few simple inner parts; and as in after conversations with Mr. Hullah as well as with some of the leading instrumental artists of the orchestra, he learnt that the effect was good, he was led to conclude that such insertions were in accordance with Handel's intention. Acting on this conviction he frequently applied Handel's perfect manner of accompanying a sacred song, to anthem solos; for its exact representation was quite practicable on most new or modernised English organs. Of this fact one short illustration must suffice. The introductory symphony to the alto solo by Dr. Boyce (1710-1779) to the words beginning 'One thing have I desired of the Lord' is, in the original, written in two parts only, namely, a solo for the right hand, and a moving bass in single notes for the left; no harmony being given, nor even figures denoting any. By taking the melody on a solo stop, the bass on the pedals (sixteen feet) with the manual (eight feet) coupled, giving the bass in octaves, to represent the orchestral violoncellos and double basses, the left hand is left at liberty to supply inner harmony parts. These latter are printed in small notes in the next and all following examples. In this manner a well-balanced and complete effect is secured, such as was not possible on any organ in England in Dr. Boyce's own day.

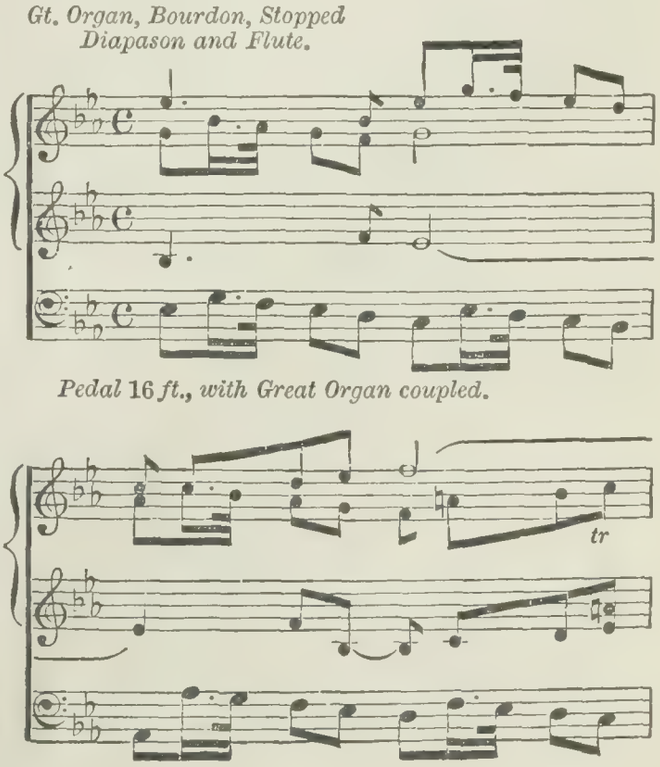


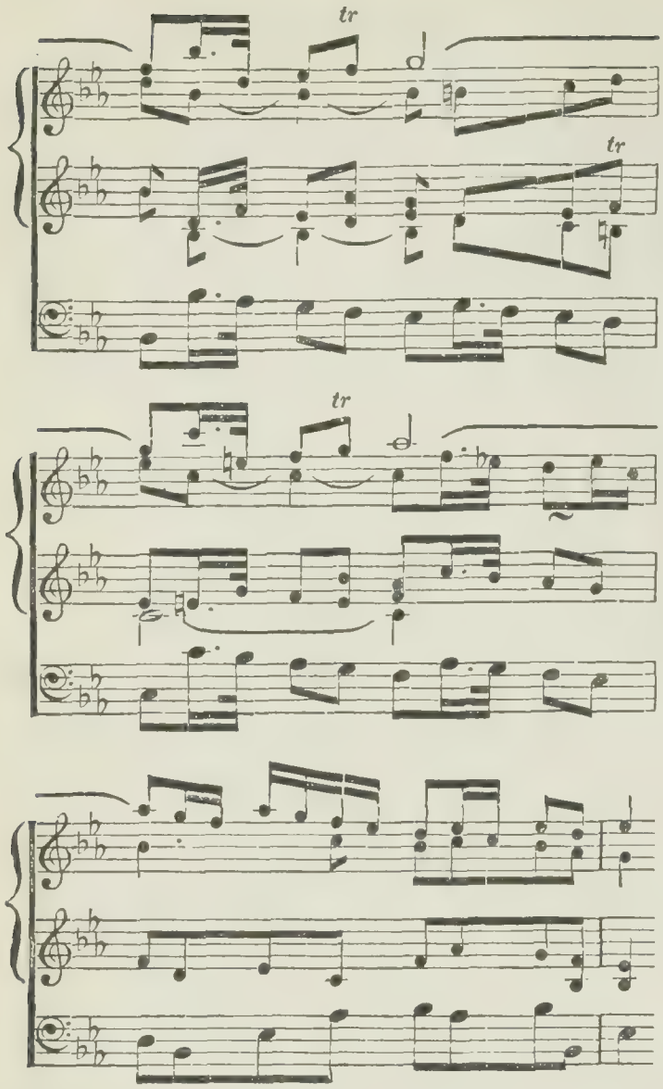
Notice may here be taken of a custom that has prevailed for many years in the manner of supplying the indicated harmonies to many of Handel's recitatives. Handel recognised two wholly distinct methods of sustaining the voice in such pieces. Sometimes he supported it by means of an accompaniment chiefly for bow instruments; while at other times he provided only a skeleton score, as already described. In the four connected recitatives in the 'Messiah,' beginning with 'There were shepherds,' Handel alternated the two manners, employing each twice; and Bach, in his 'Matthew Passion Music,' makes the same distinction between the ordinary recitatives and those of our Lord. It became the custom in England in the early part of the present century to play the harmonies of the *figured* recitatives not on a keyed instrument, but on a violoncello. When or under what circumstances the substitution was made, it is not easy now to ascertain; but if it was part of Handel's design to treat the tone-quality of the smaller bow instruments as one of his sources of relief and musical contrast, as seems to have been the case, the use of a deeper toned instrument of the same kind in lieu of the organ would seem rather to have interfered with that design. It is not improbable that the custom may have taken its rise at some provincial music meeting, where either there was no organ, or where the organist was not acquainted with the traditionary manner of accompanying; and that some expert violoncellist in the orchestra at the time supplied the harmonies in the way that afterwards became the customary manner.

But to continue our notice of the accompaniments to the old anthem music. A prevalent custom with the 18th-century composers was to write, by way of introductory symphony, a bass part of marked character, with a direction to the effect that it was to be played on the 'loud organ, two diapasons, left hand'; and to indicate by figures a right-hand part, to be played on the 'soft organ,' of course in close harmony. By playing such a bass on the pedals (sixteen feet) with the great manual coupled thereto, not only is the bass part enriched by being played in octaves, but the two hands are left free for the interpretation of the figures in fuller and more extended harmony. The following example of this form of accompaniment occurs as the commencement of the bass solo to the words 'Thou art about my path and about my bed,' by Dr. Croft (1677 to 1727).



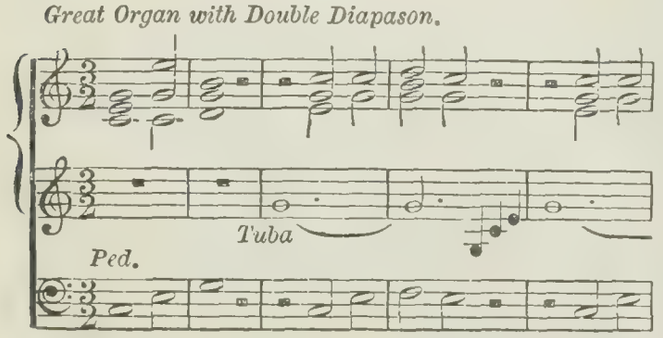
Sometimes the symphony to a solo, if of an arioso character, can be very agreeably given out on a combination of stops, sounding the unison, octave, and sub-octave, of the notes played, as the stopped diapason, flute, and bourdon on the great organ; the pedal bass, as before consisting of a light-toned sixteen-feet stop with the manual coupled. Dr. Greene's (died 1755) alto solo to the words 'Among the gods there is none like Thee, O Lord,' is in a style that affords a favourable opportunity for this kind of organ treatment.

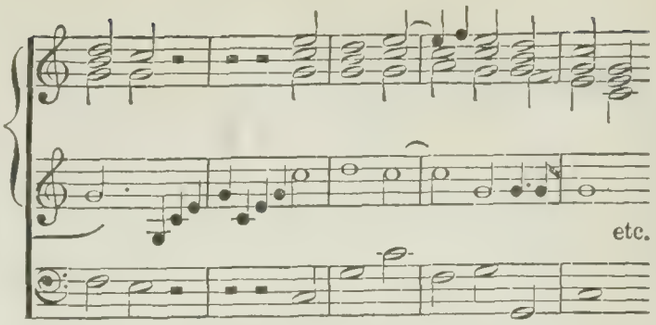




The foregoing examples illustrate the manner in which English anthem solos and their symphonies, presenting as they do such varied *outline*, may be accompanied and filled up. But in the choral parts of anthems equally appropriate instrumental effects can also frequently be introduced, by reason of the improvements that have been made in English organs within the last thirty years. The introduction of the *tuba* on a fourth manual has been an accession of great importance in this respect. Take for illustration the chorus by Kent (1700–1776), 'Thou, O Lord, art our Father, our Redeemer,' the climax of which is, in the original, rather awkwardly broken up into short fragmentary portions by rests, but which can now be appropriately and advantageously united by a few intermediate jubilant notes in some such manner as the following :—

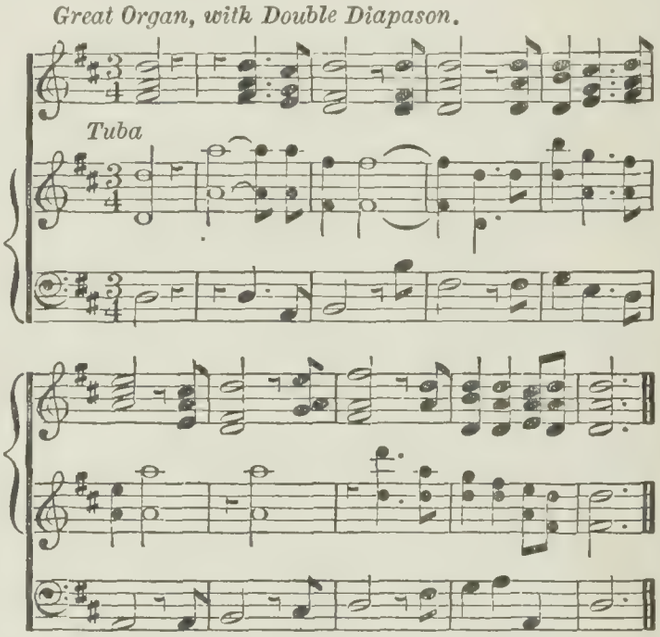
Great Organ with Double Diapason.





Again, in Dr. Greene's anthem, 'God is our hope and strength,' occurs a short chorus, 'O behold the works of the Lord,' which, after a short trio, is repeated, in precisely the same form as that in which it previously appears. According to the modern rules of musical construction and development it would be considered desirable to add some fresh feature on the repetition, to enhance the effect. This can now be supplied in this way, or in some other analogous to it.

Great Organ, with Double Diapason.



The organ part to Dr. Arnold's collection of Cathedral Music, published in 1790, consists chiefly of treble and bass, with figures; so does that to the Cathedral Music of Dr. Dupuis, printed a few years later. Vincent Novello's organ part to Dr. Boyce's Cathedral Music, issued about five-and-twenty years ago, on the contrary, was arranged almost as exclusively in 'short score.' Thus after a period of three centuries, and after experiment and much experience, organ accompaniments, in the case of full choral pieces, came to be written down on precisely the same principle on which they were prepared at the commencement of that period.

Illustrations showing the way of interpreting figured basses could be continued to almost any extent, but those already given will probably be sufficient to indicate what may be done in the way of accompaniment, when the organ will permit, and when the effects of the modern orchestra are allowed to exercise some influence.

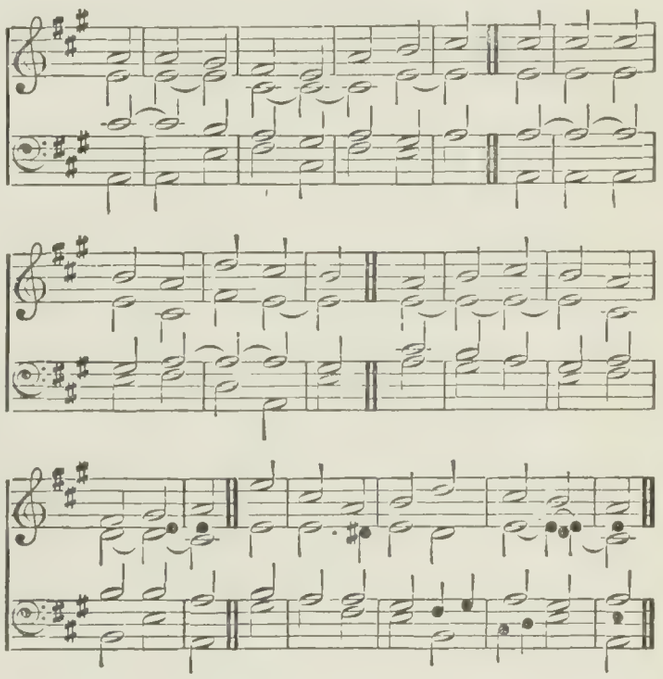
Chants frequently offer much opportunity for

variety and relief in the way of accompaniment. The so-called Gregorian chants being originally written without harmony—at any rate in the modern acceptation of the term—the accompanyist is left at liberty to supply such as his taste and musical resources suggest. The English chants, on the other hand, were written with vocal harmony from the first; and to them much agreeable change can be imparted either by altering the position of the harmonies, or by forming fresh melodic figures on the original harmonic progressions. When sung in unison, as is now not unfrequently the case, wholly fresh harmonies can be supplied to the English chants, as in the case of the Gregorian. Treated in this manner they are as susceptible of great variety and agreeable contrast as are the older chants.

In accompanying English psalm tunes it is usual to make use of somewhat fuller harmony than that which is represented by the four written voice-parts. The rules of musical composition, as well as one's own musical instinct, frequently require that certain notes, when combined with others in a particular manner, should be followed by others in certain fixed progressions; and these progressions, so natural and good in themselves, occasionally lead to a succeeding chord or chords being presented in 'incomplete harmony' in the four vocal parts. In such cases it is the custom for the accompanyist to supply the omitted elements of the harmony; a process known by the term 'filling in.' Mendelssohn's Organ Sonatas, Nos. 5 and 6, each of which opens with a chorale, afford good examples of how the usual parts may be supplemented with advantage. The incomplete harmonies are to be met with most frequently in the last one or two chords of the clauses of a tune; the omitted note being generally the interval of a fifth above the bass note of the last chord; which harmony note, as essential to its correct introduction, sometimes requires the octave to the preceding bass note to be introduced, as at the end of the third clause of the example below; or to be retained if already present, as at the end of the fourth clause. An accompaniment which is to direct and sustain the voices of a congregation should be marked and decided in character, without being disjointed or broken. This combination of distinctness with continuity is greatly influenced by the manner in which the *repetition* notes are treated. Repetition notes appear with greater or less frequency in one or other of the vocal parts of nearly all psalm tunes, as exhibited in the example below. Those that occur in the melody should not be combined, but on the contrary should generally speaking be repeated with great distinctness. As such notes present no melodic movement, but only rhythmic progress, congregations have on that account a tendency to *wait* to hear the step from a note to its iteration announced before they proceed; so that if the repetition note be not clearly defined, hesitation among the voices is apt to arise, and the strict time is lost. The following example will sound very tame and undecided if all the repetition notes at the commencement of the first and second clauses be held on.

A very little will suffice to steady and connect the organ tone; a single note frequently being sufficient for the purpose, and that even in an inner part, as indicated by the binds in the following example. A repetition note in the bass part may freely be iterated on the pedal, particularly if there should be a tendency among the voices to drag or proceed with indecision.

Old Hundredth tune.



The important subject of additional accompaniments to works already possessing orchestral parts, with the view of supplying the want of an organ, or obtaining the increased effects of the modern orchestra, is treated under the head of ADDITIONAL ACCOMPANIMENTS. [E. J. H.]

ACCORDION (Ger. *Handharmonika*, also *Ziehharmonika*). A portable instrument of the free-reed species, invented at Vienna by Damian, in the year 1829. It consists of a small pair of hand-bellows, to one side of which is affixed a key-board, containing, according to the size of the instrument, from five to fifty keys. These keys open valves admitting the wind to metal reeds, the latter being so arranged that each key sounds two notes, the one in expanding, the other in compressing the bellows. The right hand is placed over the key-board, while the left works the bellows, on the lower side of which are usually to be found two keys which admit wind to other reeds furnishing a simple harmony —mostly the chords of the tonic and dominant. It will be seen that the capabilities of the instrument are extremely limited, as it can only be played in one key, and even in that one imperfectly; it is, in fact, but little more than a toy. It was originally an extension of the 'mouth-harmonica'—a toy constructed on a similar principle, in which the reeds were set in vibration by blowing through holes with the mouth, instead of by a key-board. This latter instrument is also known as the ÆOLINA. [E. P.]

ACIS AND GALATEA. A 'masque,' or 'serenata,' or 'pastoral opera,' composed by Handel at Cannons, probably in 1720 (date is wanting on autograph); and performed there probably in 1721. Words by Gay, with additions by Pope, Hughes, and Dryden. Re-scored by Mozart for Van Swieten, Nov. 1788. Put on the stage at Drury Lane by Macready, Feb. 5, 1842.—'Aci, Galatea, e Polifemo,' an entirely different work, was composed in Italy in 1708-9.

ACT. A section of a drama having a completeness and often a climax of its own. Though the word Act has no representative in Greek, the division indicated by it was not unknown to the ancient theatre, where the intervention of the chorus stopped the action as completely as the fall of the curtain in the modern. The 'Plutus' of Aristophanes, the earliest Greek play from which the chorus was extruded, has come down to us without breaks or divisions of any kind; practically, therefore, it is 'in one act.' Whether the earlier essays of Roman dramatists were divided into acts by themselves is uncertain. The canon of Horace, that a drama should consist of neither more or less than five acts ('Epist. ad Pisones,' 189), was doubtless drawn from previous experience and practice.

The number of acts into which the modern drama is divided, though of course largely dependent on the subject, is governed by many considerations unknown to the ancient, in which 'the unities' of place as well as of time and action was strictly observed. With us the locality generally changes with each act, frequently with each scene. For this change the convenience of the mechanist and even of the scene-shifter has to be consulted. In the musical drama other considerations beside these add to the difficulties of laying out the action; such as variety and contrast of musical effect, and the physical capabilities of the performers, whose vocal exertions must not be continued too long without interruption. It is not surprising therefore that operas, even of the same class, present examples of every kind of division. French 'grand opéra' consists still generally, as in the days when Quinault and Lully worked together, of five acts; French 'opéra comique' of three, and often one only. The Italians and Germans have adopted every number of acts, perhaps most often three. In performance the division into acts made by the author or composer is frequently changed. Mozart's 'Nozze di Figaro,' originally in four acts, is now generally played in two; and Meyerbeer's 'Huguenots,' originally in five, in four.

The curtain let down between the acts of a drama is called in the theatre 'the act drop.'

Handel (Schoelcher, 288, etc.) applies the word to oratorios, and it is used by J. S. Bach in a manner probably unique. He heads his cantata 'Gottes Zeit ist das allerbeste Zeit' with the words 'Actus Tragicus.' It is what would be called among ourselves a funeral anthem. [J. H.]

ACTION (Fr. *Le Mécanique*; Ital. *Mecanica*; Ger. *Mechanismus, Mechanik*), the mechanical contrivance by means of which the impulse of the player's finger is transmitted to the strings of a pianoforte, to the metal tongue (free reed) of a harmonium, or by the finger or foot to the column of air in an organ-pipe. In the harp the action, governed by the player's foot upon the pedals, effects a change of key of a semitone or whole tone at will. In the pianoforte the action assumes special importance from the capability this instrument has to express gradations of tone; and as the player's performance can never be quite consciously controlled—more or less of it being automatic—we are, through the faithful correspondence of the action with the touch, placed in direct relation with the very individuality of the player. It is this blending of conscious and unconscious expression of which the pianoforte action is the medium that produces upon us the artistic impression. There have been important variations in the construction of pianoforte actions that have had even geographical definition, as the English, the German action, or have been named from structural difference, as the grasshopper, the check, the repetition action. In the organ and harmonium, as in the old harpsichord and spinet, the action bears a less important part, since the degree of loudness or softness of tone in those instruments is not affected by the touch. For history and description of the different actions see CLAVICHORD, HARMONIUM, HARP, HARPSICHORD, ORGAN, and PIANOFORTE. [A. J. H.]

ACUTENESS. A musical sound is said to be more *acute* as the vibrations which produce it are more rapid. It is said to be more *grave* as the vibrations are slower. Thus of the two notes

the former of which is produced by 512 vibrations per second, and the latter by 256, the former is called the more acute, the latter the more grave. The application of these terms is not easy to account for. 'Acute' means sharp in the sense of a pointed or cutting instrument, and 'grave' means heavy; but there is no direct connection between the impression produced by rapid vibrations on the ear and a sharp edge, nor between the effect of slow vibrations and the force of gravitation; neither are these terms consistent, for one is not the antithesis to the other. To be correct, either the slow vibration-sound should be called 'blunt,' or the quick one 'light.' The terms however are as old as the Greeks, for we find them applied in the same way by Aristides Quintilianus, who uses *ὀξύς* to denote the quick vibrating sounds, and *βαρύς* to denote the slow ones, and they have been transmitted through the Latin *acer* and *gravis* down to our day. Other figurative terms are similarly applied. 'Sharp,' for example, is clearly synonymous with 'acute,' both in derivation and application; but 'flat' has no analogy with grave or heavy. It is a more correct antithesis to acute or sharp, for one can fancy a blunt edge to be in some degree

flattened, and a blunt needle would, under the microscope, undoubtedly show a flat surface at its end.

There are however two other words still more generally used. These are 'high' and 'low'; the former denoting greater, the latter less, rapidity of vibration. The application of these is the most puzzling of all, as there is no imaginable connection between any number of vibrations per second, and any degree of elevation above the earth's surface. It is very customary to use the figure of elevation to express an idea of magnitude or superiority, as high prices, high pressure, elevation of character, and so on; and if the vibration-numbers corresponding to any note had been a matter of general knowledge in early ages, we might have assumed that the terms had been chosen on this principle. But the vibration-numbers are quite a modern discovery, not even yet generally believed in by practical men: and unfortunately such relations of sound as do address themselves to the eye point entirely the other way; for, as already stated, the grave sounds convey most strongly the idea of magnitude, and therefore by analogy these ought to have been called high rather than low.

The ancients appear to have imagined that the acute sounds of the voice were produced from the higher parts of the throat, and the grave ones from lower parts.[1] And this has been supposed by some writers to have been the origin of the terms; but the idea is incorrect and far-fetched, and can hardly be considered a justification.

As soon as anything approaching the form of musical notation by the *position* of marks or points came into use, the terms high and low were naturally seized upon to guide such positions. Thus our musical notation has come into being, and thus the connection between high notes and quick vibrations has become so firmly implanted in our minds, that it is exceedingly difficult to bring ourselves to the appreciation of the truth that the connexion is only imaginary, and has no foundation in the natural fitness of things. [W. P.]

ADAGIETTO (Ital., diminutive of Adagio). (1) a short adagio (e. g. Raff's Suite in C). (2) As a time indication, somewhat less slow than adagio.

ADAGIO (Ital. *ad agio*, 'at ease,' 'leisurely'). (1) A time-indication. It is unfortunate that great differences of opinion prevail among musicians as to the comparative speed of the terms used to denote slow time. According to the older authorities adagio was the slowest of all time, then came grave, and then largo. This is the order given by Clementi. In some more modern works however, largo is the slowest, grave being second and adagio third; while others again give the order thus—grave, adagio, largo. It is therefore impossible to give any absolute rule on the subject; it will be sufficient to define adagio in general terms as 'very slow.' The exact pace at which any particular piece of music thus designated is to be taken will either be indicated by the metronome, or, if this has not been done, can be for the most part determined with sufficient accuracy from the character of the music itself. (2) The word is used as the name of a piece of music, either an independent piece (as in the case of Mozart's Adagio in B minor for piano, or Schubert's posthumous Adagio in E), or as one of the movements of a symphony, quartett, sonata, etc. When thus employed, the word not only shows that the music is in very slow time, but also indicates its general character. This is mostly of a soft, tender, elegiac tone, as distinguished from the largo, in which (as the name implies) there is more breadth and dignity. The adagio also is generally of a more florid character, and contains more embellishments and figurated passages than the largo. The distinction between the two will be clearly seen by comparing the adagios in Beethoven's sonatas, op. 2, Nos. 1, 3, and op. 13, with his largos in the sonatas op. 2, No. 2 and op. 7. (3) It was formerly used as a general term for a slow movement—'No modern has been heard to play an Adagio with greater taste and feeling than Abel.' Thus in the autograph of Haydn's Symphony in D (Salomon, No. 6), at the end of the first movement, we find 'Segue Adagio,' though the next movement is an Andante. [E. P.]

ADAM, Adolphe Charles, born in Paris July 24, 1803, was the son of Louis Adam, a well-known musician and pianoforte-player at the Conservatoire. Although thus intimately connected with the art of music he strenuously resisted the early and strong desire of his son to follow the same calling. Adolphe was sent to an ordinary day-school and was refused all musical instruction, which he himself tried to supply by private studies, carried on in secret and without guidance or encouragement. This struggle between father and son lasted for a long time. At last the quiet persistence of the young man overcame the prejudices of paternal obstinacy. In his sixteenth year he was allowed to enter the Conservatoire, but only as an amateur, and on condition of his promising solemnly never to write for the stage, an engagement naturally disregarded by him at a later period. His first master was Benoist, and his instrument the organ, a choice truly surprising in the future composer of 'La jolie fille de Gand' and 'Le Postillon de Longjumeau.' His relations however to the 'queen of instruments' were by no means of an elevated or even lasting kind. Unabashed by the great traditions of Frescobaldi, Bach, or Handel, he began to thrum little tunes of his own on the organ, which however he soon abandoned for its miniature counterpart the harmonium. Adam's first success indeed was due to his clever improvisations on that instrument in fashionable drawing-rooms. It was perhaps owing to his want of early training that even at a more advanced period he was unable to read music at sight. The way in which he at last acquired the sense of intuitive hearing, so indispensable for

[1] See passage from Aristides Quintilianus, quoted in Smith's Harmonics, p. 2.

the musical composer, is pleasantly described by Adam himself in the autobiographical sketch of his life. 'Soon after my admission to the Conservatoire,' he says, 'I was asked by a schoolfellow older than myself[1] to give a lesson at his solfeggio class, he being otherwise engaged. I went to take his place with sublime self-assertion, and although totally unable to read a ballad I somehow managed to acquit myself creditably, so creditably indeed that another solfeggio class was assigned to me. Thus I learnt reading music by teaching others how to do it.' We are also told of his studying counterpoint under Eler and Reicha, which however, to judge by the results, cannot have amounted to much. The only master to whom Adam owed not only an advance of his musical knowledge but to some extent the insight into his own talent, was that most sweet and most brilliant star of modern French opera, Boieldieu. He had been appointed professor of composition at the Conservatoire in 1821, and Adam was amongst his first and most favourite pupils. The intimacy which soon sprang up between the teacher and the taught has been pleasantly described by Adam in his posthumous little volume 'Derniers souvenirs d'un musicien.' It was owing to this friendship that Adam was able to connect his name with a work vastly superior to his own powers, Boieldieu's 'Dame Blanche,' of which he composed or rather combined the overture. By Boieldieu's advice and example also our composer's talent was led to its most congenial sphere of action, the comic opera. Adam's first connections with the stage were of the humblest kind. In order to acquire theatrical experience he is said to have accepted the appointment of supernumerary triangle at the Gymnase, from which post he soon advanced to that of accompanyist at the same theatre. His first independent attempt at dramatic composition was the one-act operetta of 'Pierre et Catherine,' brought out at the Opéra Comique in 1829. It was followed the next year by the three-act opera 'Danilowa.' Both were favourably received, and, encouraged by his success, Adam began to compose a number of operatic works with a rapidity and ease of productiveness frequently fatal to his higher aspirations. We subjoin a list of the more important of these works, with the dates of their first performances: 'Le Chalet,' 1834; 'Le Postillon de Longjumeau,' 1835 (Adam's best and most successful work); 'Le Brasseur de Preston,' 1838; 'Le Roi d' Yvetot,' 1842; 'Cagliostro,' 1844; 'Richard en Palestine,' same year; also the ballets of 'Faust,' 1832 (written for London); 'La jolie fille de Gand,' 1839; and 'Giselle,' 1841. Our remarks on the remaining facts of Adam's biography can be condensed into few words. In 1847 he started, at his own expense and responsibility, a new operatic theatre called Théâtre National, and destined to bring the works of young aspiring composers before the public. These laudable efforts were interrupted by the outbreak of the Revolution in the February of the ensuing year. The theatre had to close, Adam having sunk in the enterprise all his earnings, and having moreover incurred a considerable debt, to discharge which he henceforth, like Sir Walter Scott, considered the chief task of his life. This task he accomplished in the course of five years, during which time, besides producing several operas, he occupied himself in writing criticisms and *feuilletons* for the newspapers. His contributions to the 'Constitutionel,' 'Assemblée Nationale,' and 'Gazette Musicale,' were much appreciated by the public. Although a critic he succeeded in making no enemies. Some of his sketches, since collected, are amusing and well though not brilliantly written. In 1844 he was elected Member of the Institute; in 1849 Professor of Composition at the Conservatoire. He died suddenly in 1856. His reputation during his lifetime was not limited to his own country. He wrote operas and ballads for London, Berlin, and St. Petersburg, which capitals he also visited personally. His deservedly most popular opera, as we said before, is the 'Postillon de Longjumeau,' still frequently performed in France and Germany. In the latter country it owes its lasting success chiefly to the astonishing vocal feats of Herr Wachtel, whose own life seems strangely foreshadowed by the skilful and amusing libretto.

Adam attempted three kinds of dramatic composition, viz. the grand opera, in which he utterly failed, the ballet, in which he produced some of the most charming melodies choreagraphic music has to show, and the comic opera, the one and only real domain of his talent. As the most successful of his works in these respective branches of art we mention 'Richard en Palestine,' 'Giselle,' and the 'Postillon de Longjumeau.' Adam's position in the history of music, and more especially of comic opera, may be briefly described as that of the successor and imitator of Boieldieu. His early style is essentially founded on the works of that master. With him he shares, although in a lesser degree, the flowing melodiousness and rhythmical piquancy of his style, the precision of declamatory phrasing, and the charming effects of a graceful though sketchy instrumentation. When inspired by the sweet simplicity of the French popular song, Adam has occasionally effects of tenderest pathos; in other places, as for instance in the duet between the terrified accomplices in the last act of the 'Postillon,' his rollicking humour shows to great advantage. At the same time it cannot be denied that his works mark the decline of French national art. His melodies are frequently trivial to absolute vulgarity; the structure of his concerted pieces is of the flimsiest kind; dance-rhythms prevail to an immoderate extent: all this no less than the choice of *hasardē* subjects seems to indicate the gradual decline from the serene heights of Boieldieu's humour to the miry slough which has swamped that sweetest growth of French national art, the comic opera, and the murky surface of which reflects the features of Beethoven's countryman, Jacques Offenbach. It is a fact of ominous significance that Adam

[1] Halévy, the composer of the 'Juive.'

regarded with interest, and gave his journalistic aid to, the theatrical creation of that enterprising composer—the 'Bouffes Parisiens.' [F. H.]

ADAM, Louis, born at Miettershelz in Alsace, 1758, died in Paris 1848; a pianist of the first rank; appeared in Paris when only seventeen as the composer of two symphonies-concertantes for the harp, piano, and violin, the first of their kind, which were performed at the Concerts Spirituels. Having acquired a reputation for teaching, in 1797 he was appointed professor at the Conservatoire, a post he retained forty-five years, training many eminent pupils, of whom the most celebrated are Kalkbrenner, Hérold, father and son, Chaulieu, Henri le Moine, and Mme. Renaud d'Allen, and last, though not least, his own more famous son, Adolphe Charles.

Adam was a remarkable example of what may be done by self-culture, as he had scarcely any professional training, and not only taught himself the harp and violin, and the art of composition, but formed his excellent style as a pianist by careful study of the works of the Bachs, Handel, Scarlatti, Schobert, and later of Clementi and Mozart. His 'Méthode de doigté' (Paris, 1798) and 'Méthode Nouvelle pour le Piano' (1802), have passed through many editions. [M. C. C.]

ADAMBERGER, Valentin. Singer, born at Munich July 6, 1743. Remarkable for his splendid tenor voice and admirable method. He was taught singing by Valesi, and at his instance went to Italy, where he met with great success under the Italianised name of Adamonti. He was recalled to Vienna by the Emperor Joseph, and made his first appearance in German opera at the Hof-und-National-Theater there on Aug. 21, 1780. In the interim however he had visited London, where he sang in Sacchini's 'Creso' at the King's Theatre in 1777. In 1789 he entered the Imperial Chapel. Later in life he became renowned as a teacher of singing. It was for him that Mozart composed the part of Belmonte in the 'Seraglio,' as well as the fine airs 'Per pietà,' 'Aura che intorno,' and 'A te, fra tante affanni' (Davidde Penitente). He also appeared in the 'Schauspiel-Director' of the same master. In 1782 he married Anna Maria, daughter of Jacquet the actor, herself a noted actress. She died 1804. His daughter Antoine, also a player, a woman of much talent and amiability, was betrothed to Körner the poet, but their union was prevented by his death in action, Aug. 26, 1813, after which, 1817, she married Jos. Arneth, trustee to the imperial cabinet of antiquities. Fétis and others give Adamberger's name Joseph, and his death as on June 7, 1803—both incorrect. He died in Vienna, Aug. 24, 1804, aged sixty-four. Mozart's letters contain frequent references to him, and always of an affectionate and intimate character. Through all the difficulties and vicissitudes of theatrical life, nothing occurred to interrupt their intercourse, though evidence is not wanting that Adamberger's temper was none of the best. Mozart took his advice on musical matters, and on one occasion names him as a man 'of whom Germany may well be proud.' [C.F.P.]

ADAMI DA BOLSENA, Andrea. Born at Bolsena, 1663. On the recommendation of Cardinal Ottoboni (Corelli's patron) he was appointed master of the Pope's chapel, and acting professor of music. While in this post Adami wrote 'Osservazioni per ben regolare il Coro dei Cantori della Capella Ponteficia,' etc., (Rome, 1711), which is in reality a history of the Papal chapel, with twelve portraits and memoirs of the principal singers. He died, July 22, 1742, much esteemed both as a man and a musician. [C. F. P.]

ADAMS, Thomas, was born Sept. 5, 1785. He commenced the study of music, under Dr. Busby, at eleven years of age. In 1802 he obtained the appointment of organist of Carlisle Chapel, Lambeth, which he held until 1814, in which year (on March 22) he was elected, after a competition in playing with twenty-eight other candidates, organist of the church of St. Paul's, Deptford. On the erection of the church of St. George, Camberwell, in 1824, Adams was chosen as its organist, and on the opening of the church (March 26, 1824), an anthem for five voices, 'O how amiable are Thy dwellings,' composed by him for the occasion, was performed. In 1833 he was appointed organist of the then newly re-built church of St. Dunstan-in-the West, Fleet Street, which post he held, conjointly with that of Camberwell, until his death. From their commencement Adams for many years superintended the annual evening performances on the Apollonicon, a large chamber-organ of peculiar construction (containing both keys and barrels), and of great power, built by Flight and Robson, and first exhibited by them at their manufactory in St. Martin's Lane in 1817. For a period of upwards of a quarter of a century Adams occupied a very prominent position as a performer on the organ. Excelling in both the strict and free styles, he possessed a remarkable faculty for extemporising. His services were in constant requisition by the organ-builders to exhibit the qualities of their newly built organs, prior to their removal from the factories to their places of destination. On such occasions the factories were crowded by professors and amateurs, anxious of witnessing the performances, and Adams played from ten to twelve pieces of the most varied kind, including two or three extemporaneous effusions, not only with great effect, but often with remarkable exhibition of contrapuntal skill, and in a manner which enraptured his hearers. Even in so small a field as the interludes then customary between the verses of a psalm tune, he would exhibit this talent to an extraordinary degree. Adams was a composer for, as well as a performer on, his instrument. He published many organ pieces, fugues, and voluntaries, besides ninety interludes, and several variations on popular themes. He also published numerous variations for the pianoforte, and many vocal pieces, consisting of short

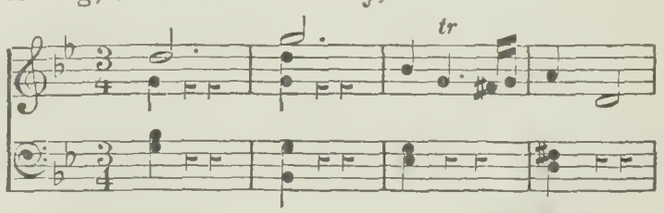
anthems, hymns, and sacred songs. Besides his published works, Adams composed several other pieces of various descriptions, which yet remain in manuscript. He died Sept. 15, 1858. His youngest son, Edgar Adams, follows the profession of his father, and holds the appointment of organist of the church of St. Lawrence, Jewry, near Guildhall. [W. H. H.]

ADCOCK, James, a native of Eton, Bucks, was born in 1778. In 1786 he became a chorister in St. George's Chapel, Windsor, under William Webb (and afterwards under Dr. Aylward), and in Eton College Chapel under William Sexton. In 1797 he was appointed lay clerk in St. George's Chapel, and in 1799 obtained a similar appointment at Eton. He soon afterwards resigned those places and went to Cambridge, where he was admitted a member of the choirs of Trinity, St. John's, and King's Colleges. He afterwards became master of the choristers of King's College. He died April 30, 1860. Alcock published several glees of his own composition, and 'The Rudiments of Singing,' with about thirty solfeggi to assist persons wishing to sing at sight. [W. H. H.]

ADDISON, John, the son of an ingenious village mechanic, at an early age displayed a taste for music, and learned to play upon several instruments. Having, about 1793, married Miss Willems, a niece of Reinhold, the bass singer, a lady possessed of a fine voice and considerable taste, he conceived the idea of pursuing music as a profession. Soon after her marriage Mrs. Addison made a successful appearance at Vauxhall Gardens. Addison then went with his wife to Liverpool, where he entered on his professional career as a performer on the double bass, an instrument to which, as an orchestral player, he afterwards confined himself. From Liverpool they went to Dublin, where Addison soon became director of the amateur orchestra of the private theatre, and, from having to arrange the music, improved himself in composition. After fulfilling other engagements in Liverpool and Dublin, Mr. and Mrs. Addison came to London, where, on Sept. 17, 1796, the latter appeared at Covent Garden Theatre as Rosetta in 'Love in a Village,' and afterwards performed other characters. In 1797 they went to Bath, where Mrs. Addison studied under Rauzzini. After a three years' engagement in Dublin, they proceeded to Manchester, where Addison was induced to abandon the musical profession and embark in the cotton manufacture. In this, however, he was unsuccessful, and soon resumed his profession. After a brief sojourn in the provinces he returned to London, and engaged with Michael Kelly as manager of his music business. He was also engaged at the Italian Opera and the Ancient and Vocal Concerts as a double bass player. In 1805 he made himself known as a composer, by the music to Skeffington's 'Sleeping Beauty.' He afterwards composed several pieces for the Lyceum, and composed and adapted others for Covent Garden Theatre. On March 3, 1815, a short sacred musical drama entitled 'Elijah raising the Widow's Son,' adapted by Addison to music by Winter, was produced at Drury Lane Theatre in the series of Lenten oratorios, under the direction of Sir George Smart. Addison next employed himself as a teacher of singing, and in that capacity instructed many singers who maintained very creditable positions in their profession; amongst others, James Pyne, Pearman, Leoni Lee, and Thomas Millar. He died at an advanced age, on Jan. 30, 1844. His principal dramatic compositions are 'The Sleeping Beauty,' 1805; 'The Russian Impostor,' 1809; 'My Aunt,' 1813; 'Two Words,' 1816; 'Free and Easy,' 1816; 'My Uncle,' 1817; 'Robinet the Bandit,' 'Rose d'Amour,' an adaptation of Boieldieu's opera of that name, 1818. He was one of the six composers who contributed the music to Charles Dibdin the younger's opera, 'The Farmer's Wife,' in 1814. [W. H. H.]

ADDITIONAL ACCOMPANIMENTS. In the published scores of the older masters, especially Bach and Handel, much is to be met with which if performed exactly as printed will fail altogether to realise the intentions of the composer. This arises partly from the difference in the composition of our modern orchestras as compared with those employed a century and a half ago; partly also from the fact that it was formerly the custom to write out in many cases little more than a skeleton of the music, leaving the details to be filled in at performance from the 'figured bass.' The parts for the organ or harpsichord were never written out in full except when these instruments had an important solo part; and even then it was frequently the custom only to write the upper part and the bass, leaving the harmonies to be supplied from the figures by the player. Thus, for instance, the first solo for the organ in Handel's Organ Concerto in G minor No. 1, is thus written in the score :—

It is evident from the figures here given that the passage is intended to be played in the following, or some similar way,



and that a performer who confined himself to the printed notes would not give the effect which Handel designed. Similar instances may be found in nearly all the works of Bach and Handel, in many of which nothing whatever but a figured bass is given as a clue to the form of accompaniment. At the time at which these works were written the art of playing from a figured

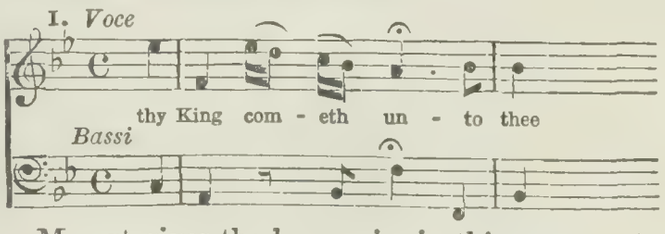
bass was so generally studied that any good musician would be able to reproduce, at least approximately, the intentions of the composer from such indications as the score supplied. But when, owing to the growth of the modern orchestra, the increased importance given to the instrumental portion of the music, and the resultant custom which has prevailed from the time of Haydn down to our own day of writing out in full all parts which were *obbligato*—i. e. necessary to the completeness of the music—the art of playing from a figured bass ceased to be commonly practised, it was no longer possible for whoever presided at the organ or piano at a performance to complete the score in a satisfactory manner. Hence arose the necessity for additional accompaniments, in which the parts which the composer has merely indicated are given in full, instead of their being left to the discretion (or indiscretion, as the case might be) of the performer.

2. There are two methods of writing additional accompaniments. The first is to write merely a part for the organ, as Mendelssohn has done with so much taste and reserve in his edition of 'Israel in Egypt,' published for the London Handel Society. There is more than one reason, however, for doubting whether even his accompaniment would succeed in bringing out the true intentions of the composer. In the first place, our modern orchestras and choruses are so much larger than those mostly to be heard in the time of Bach and Handel, that the effect of the combination with the organ must necessarily be different. An organ part filling up the harmony played by some twenty or twenty-four violins in unison (as in many of Handel's songs) and supported by perhaps twelve to sixteen bass instruments will sound very different if there is only half that number of strings. Besides, our modern organs often differ hardly less from those of the last century than our modern orchestras. But there is another and more weighty reason for doubting the advisability of supplementing the score by such an organ part. In the collection of Handel's conducting-scores, purchased some twenty years since by M. Schoelcher, is a copy of 'Saul' which contains full directions in Handel's own writing for the employment of the organ, reprinted in the edition of the German Handel Society;[1] from which it clearly appears that it was nowhere used to fill up the harmony in the accompaniment of the songs. This must therefore have been given to the harpsichord, an instrument no longer in use, and which, if it were, would not combine well with our modern orchestra. It is therefore evident that such an organ part as Mendelssohn has written for the songs in 'Israel,' appropriate as it is in itself, is not what the composer intended.

3. The method more frequently and also more successfully adopted is to fill up the harmonies with other instruments—in fact to rewrite the score. Among the earliest examples of this mode of treatment are Mozart's additional accompaniments to Handel's 'Messiah,' 'Alexander's Feast,' 'Acis and Galatea,' and 'Ode for St. Cecilia's Day.' These works were arranged for Baron van Swieten, for the purpose of performances where no organ was available. What was the nature of Mozart's additions will be seen presently; meanwhile it may be remarked in passing, that they have always been considered models of the way in which such a task should be performed. Many other musicians have followed Mozart's example with more or less success, among the chief being Ignaz Franz Mosel, who published editions of 'Samson,' 'Jephtha,' 'Belshazzar,' etc., in which not only additional instrumentation was introduced, but utterly unjustifiable alterations were made in the works themselves, a movement from one oratorio being sometimes transferred to another; Mendelssohn, who (in early life) rescored the 'Dettingen Te Deum,' and 'Acis and Galatea'; Dr. Ferdinand Hiller, Professor G. A. Macfarren, Sir Michael Costa, Mr. Arthur Sullivan, and last (and probably best of all) Robert Franz. This eminent musician has devoted special attention to this branch of his art; and for a complete exposition of the system on which he works we refer our readers to his 'Offener Brief an Eduard Hanslick,' etc. (Leipzig, Leuckart, 1871). Franz has published additional accompaniments to Bach's 'Passion according to St. Matthew,' 'Magnificat,' and several 'Kirchencantaten,' and to Handel's 'L'Allegro' and 'Jubilate.'

4. The first, and perhaps the most important case in which additions are needed to the older scores is that which so frequently occurs when no instrumental accompaniment is given excepting a figured bass. This is in Handel's songs continually to be met with, especially in cadences, and a few examples follow of the various way in which the harmonies can be filled up.

At the end of the air 'Rejoice greatly' in the 'Messiah,' Handel writes thus,—



Mozart gives the harmonies in this passage to the stringed quartett, as follows:—

[1] See also Chrysander's 'Jahrbücher für Musikalische Wissenschaft,' Band I, which contains a long article on this subject.

Sometimes in similar passages the accompaniments are given to a few wind instruments with charming effect, as in the following examples by Mozart. For the sake of comparison we shall in each instance give the score in its original state before quoting it with the additional parts. Our first example is from the close of the song 'What passion,' in the 'Ode for St. Cecilia's Day.'

In the first of the foregoing quotations (No. 4) it will be seen that Mozart has simply added in the flute and bassoon the harmony which Handel no doubt played on the harpsichord. In the next (No. 6), from 'He was despised,' the harmony is a little fuller.

In all the above examples the treatment of the harmony is as simple as possible. When similar passages occur in Bach's works, however, they require a more polyphonic method of treatment, as is proved by Franz in his pamphlet above referred to. A short extract from the 'Passion according to Matthew' will show in what way his music can be advantageously treated.

Voce

dir ge - bäh - ren treu - er Je - su

Bassi

The figures here give the clue to the harmony, but if simple chords were used to fill it up, as in the preceding extracts, they would, in Franz's words, 'fall as heavy as lead among Bach's parts, and find no support among the constantly moving basses.' Franz therefore adopts the polyphonic method, and completes the score as follows:—

Viol. 1

Viol. 2

Viola

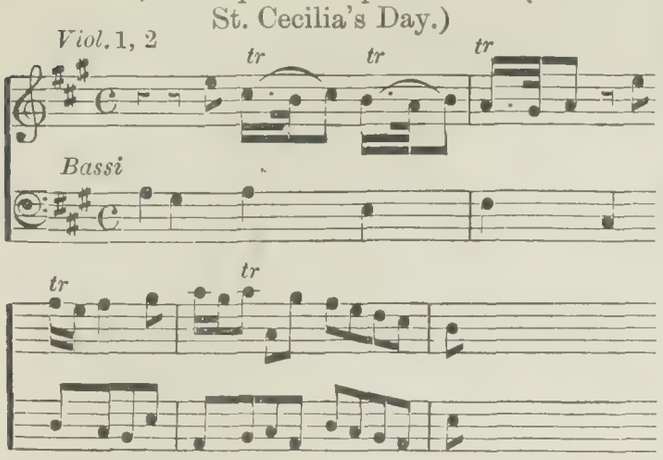
Voce

dir ge - bäh - ren treu - er Je - su

Bassi

Somewhat resembling the examples given above is the case so often to be found both in Bach and Handel in which only the melody and the bass are given in the score. There is hardly one of Handel's oratorios which does not contain several songs accompanied only by violins in unison and basses; while Bach very frequently accompanies his airs with one solo instrument, either wind or stringed, and the basses. In such cases it is sometimes sufficient merely to add an inner part; at other times a somewhat fuller score is more effective. The following quotations will furnish examples of both methods.

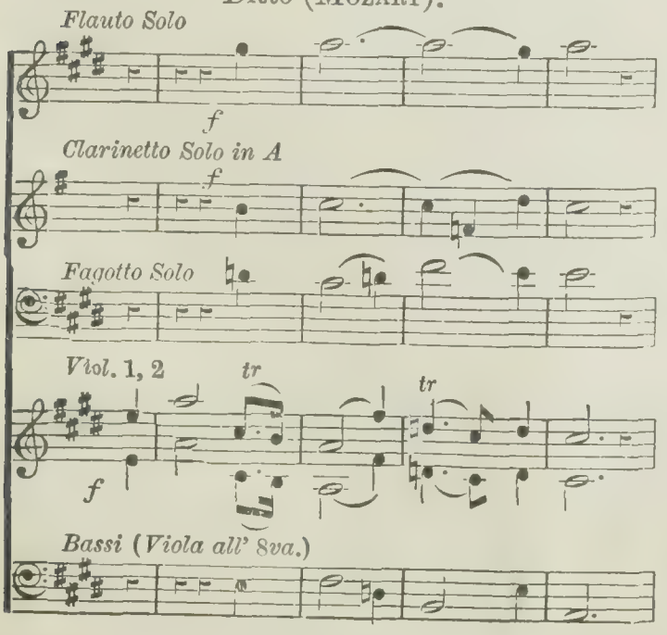
HANDEL, 'Sharp violins proclaim.' (Ode for St. Cecilia's Day.)



Ditto (MOZART).

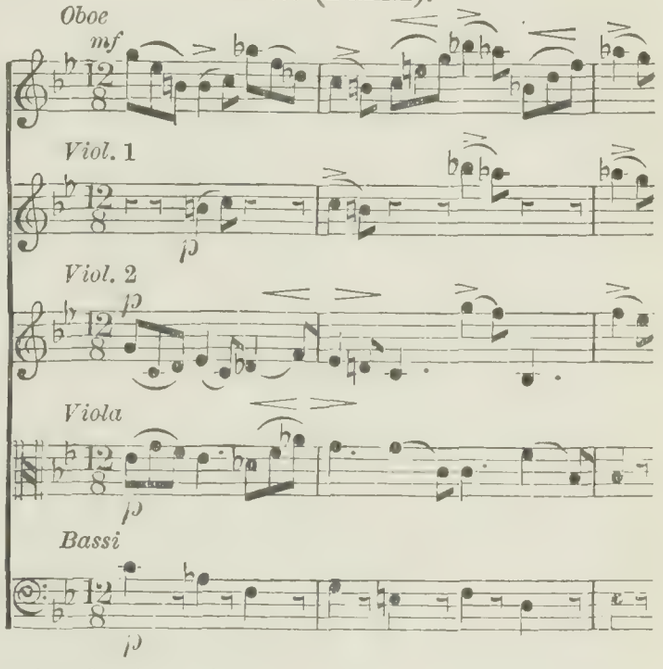
HANDEL, 'I know that my Redeemer liveth.' (Messiah.)

Ditto (MOZART).



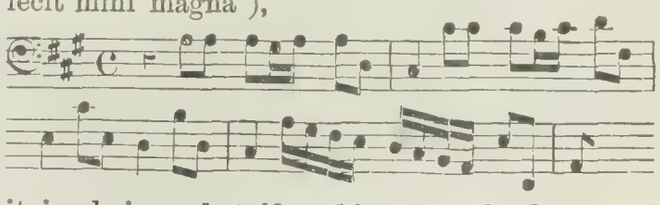
BACH, 'Ich hatte viel Bekümmerniss.'

Ditto (FRANZ).



In the first of these extracts nothing is added but a viola part; in the second Mozart has doubled the first violins by the second in the lower octave, and assigned a full harmony to the three solo wind instruments, while in the third Franz has added the string quartett to the solo oboe, and again treated the parts in that polyphonic style which experience has taught him is alone suitable for the fitting interpretation of Bach's ideas.

5. In all the cases hitherto treated, the melody being given as well as the bass, the task of the editor is comparatively easy. It is otherwise however when (as is sometimes found with Handel, and still more frequently with Bach) nothing whatever is given excepting a bass, especially if, as often happens, this bass is not even figured. In the following quotation, for example, taken from Bach's 'Magnificat' ('Quia fecit mihi magna'),



it is obvious that if nothing but the bass part be played, a mere caricature of the composer's intentions will be the result. Here there are no figures in the score to indicate even the outline of the harmony. The difficulties presented by such passages as these have been overcome in the most masterly manner by Robert Franz, who fills up the score thus—

By comparing the added parts (which, to save space, are given only in compressed score) with the original bass, it will be seen that they are all founded on suggestions thrown out, so to speak, by Bach himself, on ideas indicated in the bass, and it is in obtaining unity of design by the scientific employment of Bach's own material that Franz shows himself so well fitted for his self-imposed labour. It has been already said that Bach requires more polyphonic treatment of the parts than Handel. The following extract from Franz's score of 'L'Allegro' ('Come, but keep thy wonted state') will show the different method in which he fills up a figured bass in Handel's music. The original stands thus—

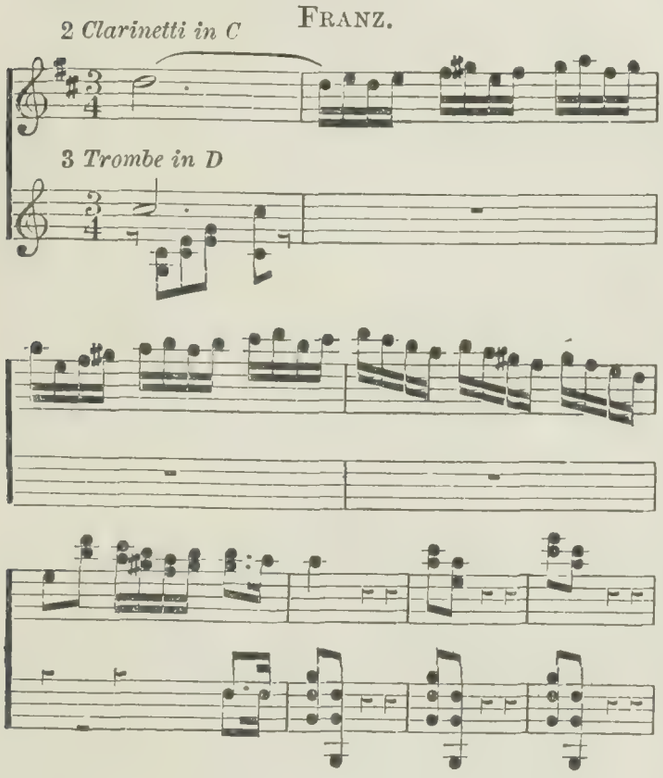
which Franz completes in this manner—

Here it will be seen there is no attempt at imitative writing. Nothing is done beyond harmonising Handel's bass in four parts. The harmonies are given to clarinets and bassoons in order that the first entry of the strings, which takes place in the third bar, may produce the contrast of tone-colour designed by the composer.

6. It is quite impossible within the limits of such an article as the present to deal exhaustively with the subject in hand; enough has, it is hoped, been said to indicate in a general manner some of the various ways of filling up the orchestration from a figured bass. This however, though perhaps the most important, is by no means the only case in which additional accompaniments are required or introduced. It was mentioned above that the composition of the orchestra in the days of Bach and Handel was very different from that of our own time. This is more especially the case with Bach, who employs in his scores many instruments now altogether fallen into disuse. Such are the viola d'amore, the viola da gamba, the oboe d'amore, the oboe da caccia (which he sometimes calls the 'taille'), and several others. In adapting these works for performance, it is necessary to substitute for these obsolete instruments as far as possible their modern equivalents. Besides this, both Handel and Bach wrote for the trumpets passages which on the instruments at present employed in our orchestras are simply impossible. Bach frequently, and Handel occasionally, writes the trumpet parts up to C in alt, and both require from the players rapid passages in high notes, the execution of which, even where possible, is extremely uncertain. Thus, in probably the best-known piece of sacred music in the world, the Hallelujah chorus in the 'Messiah,' Handel has written D in alt for the first trumpet, while Bach in the 'Cum Sancto Spiritu' of his great Mass in B minor has even taken the instrument one note higher, the whole first trumpet part as it stands being absolutely unplayable. In such cases as these it becomes necessary to re-write the trumpet parts, giving the higher notes to some other instrument. This is what Franz has done in his editions of Bach's 'Magnificat' and 'Pfingsten-Cantate,' in which he has used two clarinets in C to reinforce and assist the trumpet parts. The key of both pieces being D, the clarinets in A would be those usually employed; the C clarinets are here used instead, because their tone, though less rich, is more piercing, and therefore approximates more closely to that of the high notes of the trumpet. One example from the opening chorus of the 'Magnificat' will show how the arrangement is effected. Bach's trumpet parts and their equivalents in Franz's score will alone be quoted.

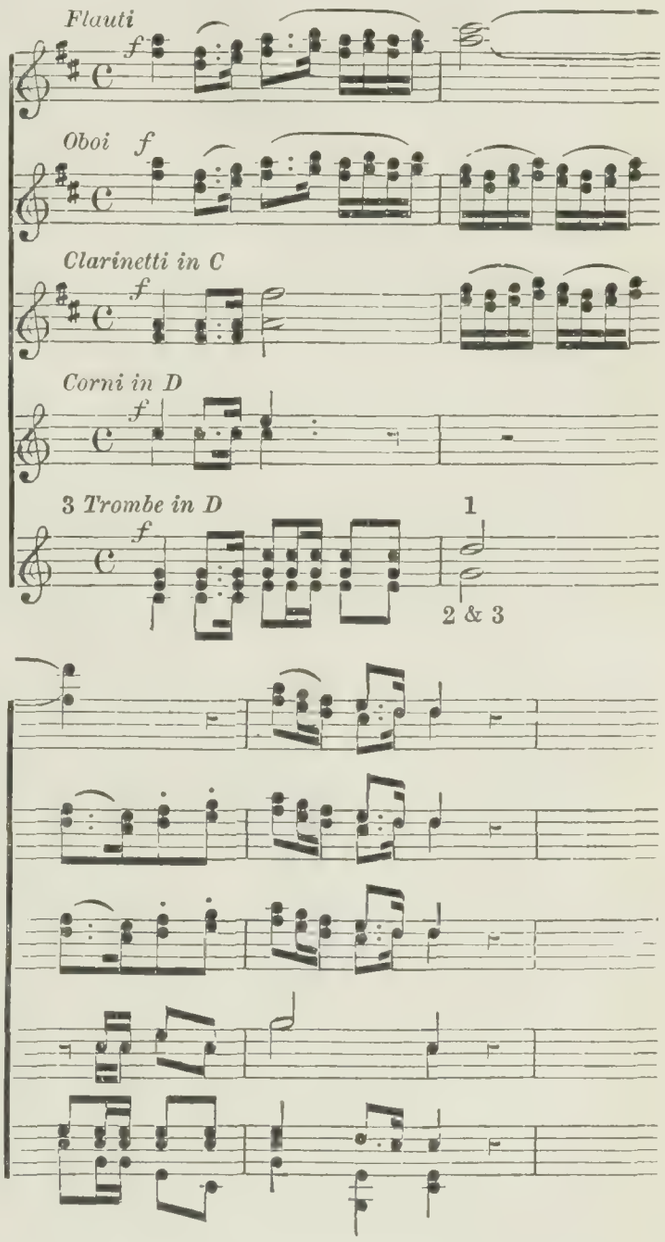
BACH.

FRANZ.



It is to be regretted that the same amount of reverence for the author's intentions shown in the above arrangement has not always been evinced even by great musicians in dealing with the scores of others. Mozart, in his arrangement of the 'Messiah,' thought fit to re-write the song 'The trumpet shall sound,' though whatever obstacle it may have presented to his trumpeter it has been often proved by Mr. Thomas Harper and others that Handel's trumpet part, though difficult, is certainly not impossible. Mendelssohn, in his score of the 'Dettingen Te Deum,' has altered (and we venture to think entirely spoilt) several of the very characteristic trumpet parts which form so prominent a feature of the work. As one example out of several that might be quoted, we give the opening symphony of the chorus 'To thee Cherubin.' Handel writes

These trumpet parts are assuredly not easy; still they are practicable. Mendelssohn however alters the whole passage thus:—



and, still worse, when the symphony is repeated in the original by oboes and bassoons, the arranger gives it to the full wind band with trumpets and drums, entirely disregarding the ideas of the composer. The chief objection to be urged against such a method of procedure as the above—so unlike Mendelssohn's usual reverence and modesty[1]—is not that the instrumentation is changed or added to, but that the form and character of the passage itself is altered. Every arrangement must stand or fall upon its own merits; but it will be generally admitted that however allowable it may be, nay more, however necessary it frequently is, to change the dress in which ideas are presented to us, the ideas themselves should be left without modification.

7. Besides the cases already referred to, passages are frequently to be found, especially in

[1] The Te Deum and Acis were instrumented by Mendelssohn as an exercise for Zelter. The date on the MS. of Acis is January 1829. He mentions them in a letter to Devrient in 1833, speaking of his additions to the Te Deum as 'interpolations of a very arbitrary kind, mistakes as I now consider them, which I am anxious to correct.' It is a thousand pities that the work should have been published.

the works of Bach, in which, though no obsolete instruments are employed, and though everything is perfectly practicable, the effect, if played as written, will in our modern orchestras altogether differ from that designed by the composer. From a letter written by Bach in 1730[1] we know exactly the strength of the band for which he wrote. Besides the wind instruments, it contained only two or at most three first and as many second violins, two first and two second violas, two violoncellos and one double-bass, thirteen strings in all. Against so small a force the solo passages for the wind instruments would stand out with a prominence which in our modern orchestras, often containing from fifty to sixty strings, would no longer exist; and as all the parts in Bach's music are almost invariably of equal importance, it follows that the wind parts must be strengthened if the balance of tone is to be preserved. This is especially the case in the choruses. It would be impossible, without quoting an entire page of one of Bach's scores, to give an extract clearly showing this point. Those who are familiar with his works will recall many passages of the kind. One of the best known, as well as one of the most striking examples is in the short chorus 'Lass ihn kreuzigen' in the 'Passion according to Matthew.' Here an important counterpoint is given to the flutes above the voices and stringed instruments. With a very small band and chorus this counterpoint would doubtless be heard, but with our large vocal and instrumental forces it must inevitably be lost altogether. Franz, in his edition of the 'Passion,' has reinforced the flutes by the upper notes of the clarinets, which possess a great similarity of tone, and at the same time by their more incisive quality make themselves distinctly heard above the other instruments.

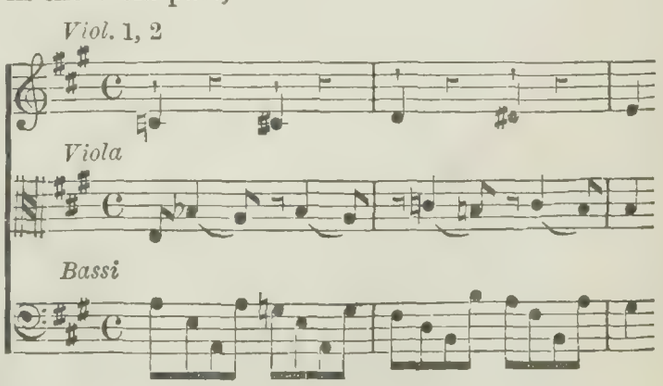
8. In Handel's orchestra the organ was almost invariably used in the choruses to support the voices, and give fullness and richness to the general body of tone. Hence in Mozart's arrangements, which were written for performance without an organ, he has supplied the place of that instrument by additional wind parts. In many of the choruses of the 'Messiah' (e.g. 'And the glory of the Lord,' 'Behold the Lamb of God,' 'But thanks be to God,' etc.) the wind instruments simply fill in the harmony as it may fairly be conjectured the organ would do. Moreover, our ears are so accustomed to a rich and sonorous instrumentation, that this music if played only with strings and oboes, or sometimes with strings alone, would sound so thin as to be distasteful. Hence no reasonable objection can be made to the filling up of the harmony, if it be done with taste and contain nothing inconsistent with the spirit of the original.

9. There yet remains to notice one of the most interesting points connected with our present subject. It not seldom happens that in additional accompaniments new matter is introduced for

[1] See Bitter, 'Johann Sebastian Bach,' ii. 15-22.

which no warrant can be found in the original. Sometimes the composer's idea is modified, sometimes it is added to. Mozart's scores of Handel are full of examples of this kind; on the other hand Franz, the most conscientious of arrangers, seldom allows himself the least liberty in this respect. It is impossible to lay down any absolute rule in this matter; the only test is success. Few people, for instance, would object to the wonderfully beautiful wind parts which Mozart has added to 'The people that walked in darkness,' though it must be admitted that they are by no means Handelian in character. It is, so to speak, Mozart's gloss or commentary on Handel's music; and one can almost fancy that could Handel himself have heard it he would have pardoned the liberty taken with his music for the sake of the charming effect of the additions. So again with the trumpets and drums which Mozart has introduced in the song 'Why do the nations.' No doubt Handel could have used them had he been so disposed; but it was not the custom of his age to employ them in the accompaniments to songs, and here again the excellence of the effect is its justification. On the same ground may be defended the giving of Handel's violin part to a flute in the air 'How beautiful are the feet,' though it is equally impossible to approve of the change Mozart has made in the air and chorus 'The trumpet's loud clangour' in the 'Ode to St. Cecilia's Day,' in which he has given a great portion of the important trumpet part (which is imperatively called for by the words) to the flute and oboe in unison! The passages above referred to from the 'Messiah' are so well known as to render quotation superfluous; but two less familiar examples of happily introduced additional matter from the 'Ode to St. Cecilia's Day' will be interesting. In the first of these,

from the song 'Sharp violins proclaim,' it will be seen that Handel has written merely violins and basses. The dissonances which Mozart has added in the viola part,



are of the most excellent effect, well suited

moreover to the character of the song which treats of 'jealous pangs and desperation.' Our last extract will be from the song 'What passion cannot music raise and quell?' in which Mozart has added pizzicato chords for the strings above the obligato part for the violoncello.

HANDEL.

MOZART.

10. It has been said already that additional accompaniments must in all cases be judged upon their own merits. The question is not whether but how they should be written. Their necessity in many cases has been shown above; and they will probably continue to be written to the end of time. While however it is impossible to lay down any absolute law as to what may and what may not be done in this respect, there are two general principles which may be given as the conclusion of the whole matter. First, that all additions to a score merely for the sake of increasing the noise are absolutely indefensible. At many operatic performances, Mozart's 'Don Giovanni' and 'Figaro' are given with copious additional accompaniments for trombones; and a conductor has even been known to reinforce the score of Weber's overture to 'Euryanthe,' which already contains the full complement of brass, with two cornets and an ophicleide. All such procedures are utterly inartistic, and cannot be too strongly condemned. And lastly, no one who writes additional accompaniments has any right whatever to tamper with the original text, either by adding, cutting out, or largely modifying passages. By all means let such additions be made as are needed to adapt the music to our modern requirements, but let the changes be such as to bring out more clearly, not to obscure or alter the thought of the composer. These additions moreover should be in unison with the spirit, as well as the letter of the original. To hear, as is sometimes to be heard, Handel's music scored after the fashion of Verdi's grand operas shows an equal want of artistic feeling and of common sense on the part of the arranger. Those additional accompaniments will always best fulfil their object in which most reverence is shown for the author's original intentions. [E. P.]

A DEUX MAINS (Fr.). 'For two hands.' A term applied to music for one performer on the piano, as contradistinguished from A QUATRE MAINS, etc.

ADLGASSER, ANTON CAJETAN. Born 1728 at Inzell in Bavaria. After being a pupil of Eberlin's, he was sent to Italy by the Archbishop of Salzburg, and recalled thence to the post of organist to the cathedral and cembalist to the court at Salzburg, where he died Dec. 21, 1777, from an apoplectic stroke while at the organ. Adlgasser was noted both as organ player and contrapuntist. His works remain mostly in MS. The principal of them are a requiem, a litany, and a salve regina. [C. F. P.]

AD LIBITUM (Lat.). At the pleasure of the performer, as regards time and expression. In the case of arrangements—'with violin or flute ad libitum'—it signifies that the solo instrument may be left out or exchanged at pleasure.

ADLUNG, JACOB, born at Bindersleben, Erfurt, Jan. 14, 1699; a theologian, scholar, and musician. His taste for music came late; the clavier, organ, and theory, he learned from Christian Reichardt the organist, who though not a musician of the first rank was truly devoted to his art. After the death of Buttstett in 1727 Adlung received his post as organist of the Evangelical church, where he was soon known for his masterly playing, and in 1741 became professor at the Rathsgymnasium of Erfurt. In 1736 his house and all his possessions were burnt, but the undaunted man was not discouraged. He taught both music and language, wrote largely and well on music, and even constructed instruments with his own hands; and thus made a successful resistance to adverse fortune till his death, July 5, 1762. Three of his works are of lasting value in musical literature: (1) 'Anleitung zur musik. Gelahrtheit,' with a preface by Joh. Ernst Bach (Erfurt, 1758); a 2nd edition, issued after his death, by J. A. HILLER (Leipsic, 1783). (2) 'Musica mechanica Organœdi,' etc. (Berlin, 1768), a treatise in two volumes on the structure, use, and maintenance of the organ and clavi-cymbalum. This contains additions by J. F. AGRICOLA and J. L. Albrecht, a translation by the former of a treatise on the organ by BEDOS DE CELLES, and an autobiography of Adlung. (3) 'Musikalisches Siebengestirn' (Berlin, 1768). (See Hiller's Lebensb. ber. Musikgelehrten.) [C. F. P.]

ADOLFATI, ANDREA, born in Venice 1711, date and place of death unknown; was a pupil of Galuppi, conductor of the music in the church

of Santa Maria della Salute in Venice, and in that of the Annunciation at Genoa, the latter from about 1750 till his death. His principal operas are 'L'Artaserse,' 'L'Arianna,' 'Adriano in Siria,' and 'La Gloria ed il Piacere,' the first produced in Rome in 1742, the three last in Genoa in 1750–1752. He left also sacred compositions, chiefly Psalms. 'Arianna' is said to contain an air in the measure of five beats to the bar. [M. C. C.]

ADRIEN, or ANDRIEN, Martin Joseph, called Adrien l'Ainé, born at Liége 1766; a bass singer, taking alternate parts with Chéron at the opera in Paris from 1785 to 1804; afterwards choirmaster at the opera. In March 1822 he succeeded Laîné as professor of declamation at the École Royale de Musique, and died in the following November, a victim to the exaggerated system of declamation then in vogue. His voice was harsh, and his method of singing bad, but he had merit as an actor. He composed the 'Hymne à la Victoire' on the evacuation of the French territory in 1795, and the hymn to the martyrs for liberty.

His brother (name unknown) was born at Liége 1767; published five collections of songs (Paris, 1790-1802), and was for a short time choirmaster at the Théatre Feydeau.

Another brother, Ferdinand, was a teacher of singing in Paris, choir-master of the opera (1799–1801) and composer of songs. [M. C. C.]

A DUE (Ital., 'In two parts'), or A 2. This expression is used in two exactly opposite ways in orchestral scores. For the wind instruments, for which two parts are usually written on the same stave, it indicates that the two play in unison; for the strings, on the other hand, it shows that the whole mass, which usually plays in unison, is to be divided into two equal parts, the one taking the upper and the other the lower notes. In practice there is never any difficulty in seeing which meaning is intended. [E. P.]

AELSTERS, Georges Jacques, born of a musical family at Ghent, 1770, died there 1849; carilloneur of that town from 1788 to 1839; for fifty years director of the music at the church of St. Martin, and composer of much church music still performed in Flanders, especially a 'Miserere.'

AENGSTLICH (Germ. 'fearfully'). A word which calls for notice here only on account of its use by Beethoven at the head of the recitative in his Missa Solennis, 'Agnus Dei, qui tollis peccata mundi, miserere nobis.' In this most dramatic and emotional part of his great work Beethoven seems to realise the 'prayer for internal and external peace' which he gives as a motto to the entire 'Dona': the fierce blasts of the trumpets alternating with the supplications of the voices bring before us the enemy at the very gates. As in the case of Accelerando Beethoven has accompanied the German word with its Italian equivalent *tramidamente*.

ÆOLIAN HARP. (Fr. *La Harpe Æolienne*; Ital. *Arpa d'Eolo*; Ger. *Aeolsharfe Windharfe*.) The name is from Aeolus the god of the wind. The instrument, of which the inventor is unknown, would appear to owe its origin to the monochord, a string stretched upon two bridges over a soundboard. The string happening to be at a low tension and exposed to a current of air would divide into various aliquot parts according to the varying strength of the current, and thus give the harmonics or overtones we hear in the music of this instrument. Had the principle of the Æolian harp never been discovered, we should in these days of telegraphy have found it out, as it is of frequent occurrence to hear musical sounds from telegraph wires which become audible through the posts which elevate the wires, and assume the function of soundboards. Once recognised on a monochord, it would be a simple process to increase the number of strings, which, tuned in unison, would be differently affected in relation to the current of air by position, and thus give different vibrating segments, forming consonant or dissonant chords as the pressure of wind might determine. That musical sounds could be produced by unaided wind has been long known in the East. According to tradition King David's harp (*kinnor*) sounded at midnight when suspended over his couch in the north wind; and in an old Hindu poem, quoted by Sir William Jones, the *vina*, or lute of the country is said to have produced tones, proceeding by musical intervals, by the impulse of the breeze. In the present day the Chinese have kites with vibrating strings, and the Malays have a curious Æolian instrument, a rough bamboo cane of considerable height, perforated with holes and stuck in the ground. This is entirely a wind contrivance, but they have another of split bamboo for strings. (C. Engel, 'Musical Instruments,' 1874, p. 200.) St. Dunstan of Canterbury is said to have hung his harp so that the wind might pass through the strings, causing them to sound, and to have been accused of sorcery in consequence. This was in the 10th century. It was not until the 17th we meet with the Æolian harp itself. Kircher (1602–1680) first wrote about it. He speaks of it in his 'Musurgia Universalis' as being a new instrument and easy to construct, and as being the admiration of every one. He describes the sounds as not resembling those of a stringed or of a wind instrument, but partaking of the qualities of both. This is quite true, and applies to any stretched string the sound of which is made continuous by any other agency than that of a bow, and not dying away as we usually hear the tones of pianofortes, harps, and guitars. Thomson, in the 'Castle of Indolence,' in well-known lines, describes the Æolian harp, but except one phrase, 'such sweet, such sad, such solemn airs divine,' misses the elegiac note that distinguishes the instrument. Matthew Young, bishop of Clonfert, in his 'Enquiry into the Principal Phenomena of Sounds and Musical Strings' (1784), gives full particulars of it, and

offers a theory of its generation of sound. It also gained attention in Germany about the same time, through a description of it in the 'Göttingen Pocket Calendar' for 1792. H. C. Koch, a German, appears to have bestowed the most attention upon the effects obtainable by varying the construction and stringing of the Æolian harp; but it is of little importance whether the tone be a little louder or a little softer, the impression to be derived from the instrument is as attainable from one of simple build as from double harps, or from one with weighted (spun) strings added.

An Æolian harp is usually about three feet long, five inches broad, and three inches deep; of pine wood, with beech ends for insertion of the tuning- and hitch-pins, and with two narrow bridges of hard wood over which a dozen catgut strings are stretched. These are tuned in the most exact unison possible, or the beats caused by their difference would be disagreeable. The direction sometimes attached to tune by intervals of fourths and fifths is only misleading. The tension should be low; in other words, the strings be rather slack, the fundamental note not being noticeable when the instrument sounds. There are usually two soundholes in the soundboard. The ends are raised above the strings about an inch, and support another pine board, between which and the soundboard the draught of air is directed. To hear the Æolian harp it should be placed across a window sufficiently opened to admit of its introduction, and situated obliquely to the direction of the wind. The evening time is the best, as the feelings are then more attuned to the chords we are to listen to. The modifications of tone, increasing and decreasing in a manner inimitable by voices or instruments, are perfectly enchanting. An instrument producing chords by the wind alone, without our interference, stimulates the fancy, and is in itself an attractive phenomenon. The sounds are so pure and perfectly in tune, that no tuning we might accomplish could rival it. For we have here not tempered intervals but the natural tones of the strings, the half or octave, the third or interval of the twelfth, and so on, in an arithmetical progression, up to the sixth division, the whole vibrating length being taken as the first—we are listening to full and perfect harmony. But the next, the seventh, still in consonance with the lowest note, in effect not unlike the dull sad minor sixth, but still more mournful, is to our ears transcendental, as our musical system does not know it: and it would be too much out of tune with other intervals consonant to the key-note for admission to our scales. We are impressed with it as by a wail—in the words of Coleridge a 'sweet upbraiding,' ('The Æolian Harp,' *Poems*, i. 190)—to be followed as the wind-pressure increases by more and more angry notes as we mount to those dissonances in the next higher octave, especially the eleventh and thirteenth overtones that alternate and seem to shriek and howl until the abating gust of wind suffers the lower beautiful harmonies to predominate again. The mind finds in this return a choral echo as of some devotional antiphon, at least this has been the writer's experience, and not the mingling of violins, flutes, harps, and chromatic sequences by which some have described it. The Æolian harp is nature's music; man's music is an art, implying selection. He chooses intervals to construct his scales with, and avoids ratios that do not coincide with his instinctive feeling or intention. [A. J. H.]

ÆOLIAN MODE. The Æolians, who migrated from Greece to Asia Minor in the 12th century B.C., have the credit of improving the system of the Greek music by the addition of another TETRACHORD. Very great uncertainty obscures this subject; indeed from the earliest records we can find, it would seem that from time to time the Greek modes experienced those changes, regarded by some as deteriorations, by others (probably) as improvements, to which all living art is necessarily subject. Whether they owed their original impressiveness to the varieties of their intervals, or to some kind of prosodaic time peculiar to each, or to the combination of both, we read the following eulogy on their native energy, and also a lament over their too general neglect, in a quotation cited by Dr. Burney from Heraclides of Pontus, a contemporary of Plato and Aristotle (about 335 B.C.). Describing what he then styled the three most ancient modes, he says, 'the *Dorian* is grave and magnificent, neither too diffusive, gay, nor varied; but severe and vehement. The *Æolian* is grand and pompous, though sometimes soothing, as it is used for the breaking of horses, and the reception of guests; and it has likewise an air of simplicity and confidence, suitable to pleasure, love, and good cheer. Lastly, the *Ionian* is neither brilliant nor effeminate, but rough and austere; with some degree however of elevation, force, and energy. But in these times, since the corruption of manners has subverted everything, the true, original, and specific qualities peculiar to each mode are lost.' (Dissertation on the Music of the Ancients, 4to., p. 60). But there is no doubt that whatever may have been the nature of the Greek modes, we have their counterparts and, as it were, their living descendants in the ECCLESIASTICAL MODES which still bear their names, and are, most likely, if not the same, yet the legitimate inheritors of their peculiar lineaments; nor to fit audience in the present day are they found destitute of their parents' varied and attractive characteristics.

The authentic Æolian mode—or, as it is often called, the Hyper-Æolian—as we now know it, is the ninth of the church modes, scales, or tones, as they are variously called. Its notes range thus—as in the modern minor scale, though without any accidentals in ascending:—

1. *The Hyper-Æolian Mode.* Authentic.

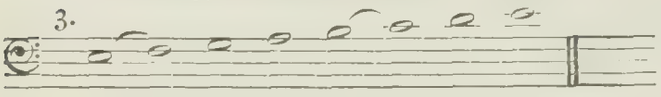
and its melodies are contained within the octave from A to A. The division of the scale is 'harmonic,' i.e. the diapente (A to E) is below the diatessaron (E to A). Thus the final is A, and the dominant E.

2.

Its plagal mode is called the Hypo-Æolian, and has the 'arithmetical' division, i.e. the diatessaron below the diapente. Here the final is A, and the dominant C:—

The Hypo-Æolian Mode. Plagal.

3.



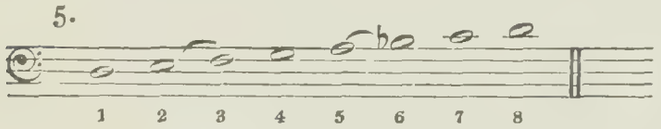
with its diatessaron and diapente:—

4.

The melodies in the Hypo-Æolian mode range from the fourth below to the fifth above the final A. The dominant is C in this plagal mode, according to the rule that 'the dominants of the plagal modes are always the third below the dominants of the relative authentic, unless this third happens to be B, when the nearest sound C is substituted for it,' as appears, for example, in the eighth mode.

The pitch of the authentic Æolian scale being higher than is convenient for many voices led to its being often transposed a fifth lower by the use of the B flat. The scale will thus begin on D, and the semitones (as in our modern minor scales) will fall in the same places as before, viz. between the second and third, and fifth and sixth notes of the scale.

5.



In this position the Æolian mode is apt to be confounded with the Dorian, or first mode, with which, when thus transposed, it corresponds, except in the upper tetrachord, the semitone of which in the Dorian mode falls between the sixth and seventh notes of the scale. The transposed final is D, and the dominant A, as in the first mode, but the semitones fall (as in the untransposed position) between the second and third of the scale (E and F), and between the fifth and sixth (A and B ♭).

The service-books contain hymns, antiphons, etc., which, though belonging originally to this Æolian mode, are sometimes ascribed to the two Dorian modes; and the scale of the Hypo-Dorian is the same as that of the Hyper-Æolian, but an octave lower, and having of course its own plagal character and treatment, and thus differing from the authentic Hyper-Æolian.

Examples of the Æolian mode may be found in the chorales 'Puer natus in Bethlehem,' No. 12, and 'Herzliebster Jesu,' No. 111, of Bach's '371 Choralgesänge.' The latter is from the St. John Passion. Mozart's Requiem may be said almost to begin and end with the Æolian scale, for the 'Te decet hymnus' and 'Lux Æterna' which form so prominent a feature in the first and last movements are given in the melody of the 'Tonus Peregrinus,' which is founded directly on this scale.

It may be well to state here that from the earliest date of any kind of counterpoint the ancient tones have been harmonised both in the organ accompaniment, and, for some portions of the divine service, in vocal parts; and although, from the vast quantity of Gregorian music used in the antiphonars, psalters, hymnaries, etc., of the Western churches, it is found expedient to use vocal unisons (or octaves) with organ accompaniment in all ordinary services, yet the psalm tones have for centuries been sung in the Sistine Chapel (where there is no organ nor other instrument) with vocal harmonies in three parts, to which Baini added a fourth part for the soprano. Gafforius arranged them in the 15th century, and the style of vocal accompaniment called FAUX-BOURDON, in which he set them, had grown up gradually and very generally in the churches, most probably from the first invention and subsequent improvements of the organ. Some intimations of this are contained in the 'Micrologus' of Guido Aretino, written in the latter part of the 11th century. [T. H.]

ÆOLINA. A small and simple 'free reed' instrument, invented about 1829 by Messrs. Wheatstone. It consisted of a few free reeds, which were fixed into a metal plate and blown by the mouth. As each reed was furnished with a separate aperture for supplying the wind, a simple melody could of course be played by moving the instrument backwards and forwards before the mouth. Its value for artistic purposes was *nil*; its only interest is a historical one, as being one of the earliest attempts to make practical use of the discovery of the free reed. The æolina may be regarded as the first germ of the ACCORDION and CONCERTINA. [E. P.]

ÆOLODION, or ÆOLODICON (also called in Germany *Windharmonika*), a keyed wind-instrument resembling the harmonium, the tone of which was produced from steel springs. It had a compass of six octaves, and its tone was similar to that of the harmonium. There is some controversy as to its original inventor; most authorities attribute it to J. T. Eschenbach of Hamburg, who is said to have first made it in 1800. Various improvements were subsequently made by other mechanicians, among whom may be named Schmidt of Presburg, Voit of Schweinfurt, Sebastian Müller (1826), and F. Sturm of Suhl (1833). The instrument is now entirely superseded by the harmonium. A modification of the æolodion was the ÆOLSKLAVIER, invented about 1825 by Schortmann of Buttelstädt, in which the reeds or springs which

produced the sound were made of wood instead of metal, by which the quality of tone was made softer and sweeter. The instrument appears to have been soon forgotten. A further modification was the ÆOLOMELODICON or CHORALEON, constructed by Brunner at Warsaw, about the year 1825, from the design of Professor Hoffmann in that city. It differed from the æolodion in the fact that brass tubes were affixed to the reeds, much as in the reed-stops of an organ. The instrument was of great power, and was probably intended as a substitute for the organ in small churches, especially in the accompaniment of chorals, whence its second name choraleon. It has taken no permanent place in musical history. In the ÆOLOPANTALON, invented about the year 1830, by Dlugosz of Warsaw, the æolomelodicon was combined with a pianoforte, so arranged that the player could make use of either instrument separately or both together. A somewhat similar plan has been occasionally tried with the piano and harmonium, but without great success. [E. P.]

AERTS, EGIDIUS, born at Boom, 1822, died at Brussels, 1853; an eminent flutist and composer, studied under Lahon in the Conservatoire at Brussels. From 1837 to 1840 he travelled professionally through France and Italy, and on his return to Brussels studied composition under Fétis. In 1847 was appointed professor of the flute at the Conservatoire, and first flute at the Theatre. He composed symphonies and overtures, as well as concertos and other music for the flute. [M. C. C.]

AFFETTUOSO (Ital.), or CON AFFETTO, 'with feeling.' This word is most commonly found in such combinations as 'andante affettuoso' or 'allegro affettuoso,' though it is occasionally placed alone at the beginning of a movement, in which case a somewhat slow time is intended. It is frequently placed (like 'espressivo' 'cantabile,' etc.) over a single passage, when it refers merely to that particular phrase and not to the entire movement. The German expressions 'Innig,' 'Mit innigem Ausdruck,' to be met with in Schumann and other modern German composers are equivalent to 'Affettuoso.' [E. P.]

AFFILARD, MICHEL L', a tenor singer in the choir of Louis XIV from 1683 to 1708, with a salary of 900 livres. His work on singing at sight, 'Principes très faciles,' etc., in which the time of the airs is regulated by a pendulum,—precursor of the metronome—passed through seven editions (Paris, 1691; Amsterdam, 1717.)

AFRANIO, lived in the beginning of the 16th century, a canon of Ferrara, and reputed inventor of the bassoon, on the ground of a wind instrument of his called Phagotum, which is mentioned, and figured in two woodcuts, at p. 179 of the 'Introductio in Chaldaicam linguam' of Albonesi (Pavia, 1539), a work dedicated by the author to his uncle Afranio. The instrument sufficiently resembles the modern bassoon or fagotto to make good Afranio's right; but the book does not appear to contain any account of it.

AFZELIUS, ARVID AUGUST, born 1785, a Swedish pastor and archæologist; edited conjointly with Geijer a collection of Swedish national melodies, 'Svenska Folkvisor,' 3 vols. (Stockholm, 1814–16, continued by Arwidsson), and wrote the historical notes to another collection, 'Afsked af Svenska Folksharpan' (Stockholm, 1848).

AGAZZARI, AGOSTINO, was a cadet of a noble family of Siena, and born on Dec. 2, 1578. He passed the first years of his professional life in the service of the Emperor Matthias. After a time he came to Rome, where he was chosen Maestro di Cappella at the German College (before 1603) at the church of S. Apollinaris,[1] and subsequently at the Seminario Romano. An intimacy grew up between him and the well-known Viadana, of Mantua, and he was one of the earliest adopters of the figured bass. In the preface to his third volume of 'Motetti' (Zanetti, Rome, 1606), he gives some instructions for its employment. In 1630 he returned to Siena, and became Maestro of its cathedral, a post which he retained till his death, probably in 1640. Agazzari was a member of the Academy of the *Armonici Intronati.* His publications are numerous, and consist of Madrigals, Motetts, Psalms, Magnificats, Litanies, etc., republished in numerous editions at Rome, Milan, Venice, Antwerp, Frankfort, and elsewhere. His one substantive contribution to the scientific literature of music is a little work of only sixteen quarto pages, entitled 'La Musica Ecclesiastica, dove si contiene la vera diffinizione della Musica come Scienza non più veduta e sua nobilta' (Siena, 1638); the object of which is to determine how church music should best conform itself to the Resolution of the Council of Trent. Palestrina, however, had worked at a clearer practical solution of that problem than any which the speculations of a scientific theorist could possibly evolve. On the authority of Pitoni, a pastoral drama, entitled 'Eumelio,' has been ascribed to Agazzari. It was undoubtedly performed at Amelia, and printed by Domenico Domenici at Roncilione in 1614 (Allacci, 'Dramaturgia'); but no author's name is affixed either to music or libretto.

A short motett by Agazzari is given by Proske in the 'Musica divina' (Lib. Motettorum, No. lxv). [E. H. P.]

AGITATO (Ital.), also CON AGITAZIONE, 'agitated,' 'restless.' This adjective is mostly combined with 'allegro' or 'presto' to describe the character of a movement. In the somewhat rare cases in which it occurs without any other time-indication (e g. Mendelssohn's 'Lieder ohne Worte,' Book i., No. 5, 'Piano agitato') a rather rapid time is indicated.

AGNESI, MARIA TERESA, born at Milan, 1724; sister of the renowned scholar, Maria Gaetana Agnesi; a celebrated pianist of her

[1] Baini alone mentions this second appointment; but he is probably right.

time, composed four operas, 'Sofonisbe,' 'Ciro in Armenia,' 'Nitocri,' and 'Insubria consolata' (1771), several cantatas, and many pianoforte concertos and sonatas, well known in Germany. [M. C. C.]

AGOSTINI, Ludovico, born 1534 at Ferrara. In holy orders, and both poet and composer. Became chapel-master to Alfonso II, Duke of Este, and died Sept. 20, 1590. A collection of his masses, motetts, and madrigals, appeared shortly before his death.

AGOSTINI, Paolo, an Italian composer, who stands out in relief from too many of his contemporary countrymen. He was born at Vallerano in 1593, and was a pupil, at Rome, of Bernardino Nanini, whose daughter he married. After being organist of S. Maria in Trastevere, and Maestro di Cappello at S. Lorenzo in Damaso, he succeeded Ugolini as Maestro at the Vatican Chapel, in 1629. Unhappily for his art, he died a few months after his preferment, in the 36th year of his age.

Pitoni, who would seem to be nothing if not inaccurate, has a story to the effect that Agostini owed his appointment at the Vatican to an unanswered challenge to a musical encounter, which he sent to Ugolini, who had been his fellow-pupil under Nanini; the Chapter conceived that, if their Maestro shunned a professional duello with Agostini, he ought to give up his place to him. But this is hardly probable, and Baini, with unnecessary perseverance, exposes its improbability. A more pleasant anecdote is that Urban VIII happened to enter the Basilica at the moment when a work of Agostini's, for forty-eight voices, after the fashion then in vogue, was being performed by the choir. The Pope stopped to hear it out; and, at its conclusion, rose and bowed pointedly to its composer, to mark his sense of its beauty.

The extant published works of Agostini consist of two volumes of Psalms for four and eight voices (printed by Soldi, Rome, 1619); two volumes of Magnificats for one, two, and three voices (Ibid., 1620); and five volumes of Masses for eight and twelve voices, published (Robletti, Rome) in 1624, 1625, 1626, 1627, and 1628 respectively. He was one of the first to employ large numbers of voices in several choirs. Ingenuity and elegance are his prevailing characteristics; but that he could and did rise beyond these, is proved by an 'Agnus Dei' for eight voices in canon, which was published by P. Martini in his 'Saggio di Contrappunto Fugato,' and which is allowed to be a masterpiece. The fame, however, of Agostini rests upon his unpublished pieces, which form the great bulk of his productions. They are preserved partly in the Corsini Library, and partly in the Collection of the Vatican.[1] A motett by Agostini is given in Proske's 'Musica Divina' (Liber Motettorum, No. lxx.) [E. H. P.]

AGRELL, Johann, born at Löth in Sweden; studied at Linköping and Upsal. Appointed court musician at Cassel in 1723, and in 1746 conductor at Nuremberg, where he died, 1767. He left nine published works (Nuremberg), concertos, sonatas, etc., and many more in manuscript.

AGREMENS (Fr., properly *Agrémens du Chant* or *de Musique*; Ger. *Manieren*; Eng. *Graces*). Certain ornaments introduced into vocal or instrumental melody, indicated either by signs, or by small notes, and performed according to certain rules.

Various forms of agrémens have been from time to time invented by different composers, and many of them have again fallen into disuse, but the earliest seem to have been the invention of Chambonnières, a celebrated French organist of the time of Louis XIV (1670), and they were probably introduced into Germany by Muffat, organist at Passau in 1695, who in his youth had studied in Paris. The proper employment of the agrémens in French music—which, according to Rousseau (Dictionnaire de Musique, 1768) were necessary 'pour couvrir un peu la fadeur du chant français'—was at first taught in Paris by special professors of the 'gout du chant,' but no definite rules for their application were laid down until Emanuel Bach treated them very fully in his 'Versuch über die wahre Art das Clavier zu spielen,' in 1752. In this he speaks of the great value of the agrémens:—'they serve to connect the notes, they enliven them, and when necessary give them a special emphasis, . . . they help to elucidate the character of the music; whether it be sad, cheerful, or otherwise, they always contribute their share to the effect, . . . an indifferent composition may be improved by their aid, while without them even the best melody may appear empty and meaningless.' At the same time he warns against their too frequent use, and says they should be as the ornaments with which the finest building may be overladen, or the spices with which the best dish may be spoilt.

The agrémens according to Emanuel Bach are the Bebung,[2] Vorschlag, Triller, Doppelschlag, Mordent, Anschlag, Schleifer, Schneller, and Brechung (Ex. 1).

1. *Bebung.* *Vorschlag.* *Triller.*

[1] Paolo Agostini must not be confounded with the earlier and inferior Ludovico Agostini of Ferrara, who, having lived for fifty-six years, and having been Maestro at the Cathedral of his native town, died in 1590, and left certain masses, madrigals, and motetti behind him: nor with Pietro Simoni Agostini, a Roman, who lived during the latter half of the 17th century, and was the author of some published cantatas, and of 'Il Ratto delle Sabine,' an opera performed in Venice in 1860.

[2] The Bebung (Fr. 'balancement'; Ital. 'tremolo') cannot be executed on the modern pianoforte. It consisted in giving to the key of the clavichord a certain trembling pressure, which produced a kind of pulsation of the sound, without any intervals of silence. On stringed instruments a similar effect is obtained by a rocking movement of the finger without raising it from the string.

In addition to these, Marpurg treats of the Nachschlag (Ex. 2), which Emanuel Bach does not recognise, or at least calls 'ugly, although extraordinarily in fashion,' but which is largely employed by modern composers.

The principal agrémens of French music were the Appogiature, Trille, and Accent, which resembled respectively the Vorschlag, Triller and Nachschlag described above, and in addition the Mordant—which appears to have differed from the Mordent of German music, and to have been a kind of interrupted trill,—the Coulé, Port de voix,[1] Port de voix jetté, and the Cadence pleine ou brisée[2] (Ex. 3).

The agrémens or graces peculiar to old English music differed considerably from the above, and have now become obsolete. They are described in an instruction-book for the violin, called the Division Violist, by Christopher Simpson, published in 1659, and are divided into two classes, the 'smooth and shaked graces.' The smooth graces are only adapted to stringed instruments, as they are to be executed by sliding the finger along the string; they include the Plain-beat or Rise, the Backfall, the Double Backfall, the Elevation, the Cadent, and the Springer, which 'concludes the Sound of a Note more acute, by clapping down another Finger just at the expiring of it.' The effect of this other finger upon the violin would be to raise the pitch of the last note but one (the upper of the two written notes) so that the Springer would resemble the French *Accent*. The 'shaked graces' are the Shaked Beat, Backfall, Elevation, and Cadent, which are similar to the plain graces with the addition of a shake, and lastly the Double Relish, of which no explanation in words is attempted, but an example in notes given as below (Ex. 4).

[1] The term 'Port de voix,' which ought properly to signify the carrying of the voice with extreme smoothness from one note to another (Ital. 'portamento di voce'), has been very generally applied to the appoggiatura.

[2] The Doppelschlag (Eng. 'Turn') was often called Cadence by the French writers of the time of Couperin (1700); and indeed Sebastian Bach uses the word in this sense in his 'Clavier-Büchlein' (1720).

The agrémens used in modern music or in the performance of the works of the great masters are the acciacatura, appoggiatura, arpeggio, mordent, nachschlag, shake or trill, slide, and turn, each of which will be fully described in its own place. [F. T.]

AGRICOLA, Alexander, a composer of great celebrity living at the end of the 15th century and beginning of the 16th. Crespel's lament on the death of Ockenheim mentions Agricola as a fellow-pupil in the school of that master; and the dates of his published works, together with an interesting epitaph printed in a collection of motetts published at Wittenberg in 1538, furnish us with materials for briefly sketching his life. The words of the epitaph, which bears the title 'Epitaphium Alex. Agricolae Symphoniastae regis Castaliae Philippi,' are as follows:—

'Musica quid defles? Periit mea aura decusque.
Estne Alexander? Is meus Agricola.
Dic age qualis erat? Clarus vocum manuumque.
Quis locus hunc rapuit? Valdoletanus ager.
Quis Belgam hunc traxit? Magnus rex ipse Philippus.
Quo morbo interiit? Febre furente obiit.
Aetas quae fuerat? Jam sexagesimus annus.
Sol ubi tunc stabat? Virginio capite.'

The question 'Quis Belgam hunc traxit?' seems to imply that Agricola was not a native of that country, though Fétis claims him as a Belgian on the strength of this very sentence, which he renders 'Who brought him *from* Belgium?' He was however certainly educated there, and lived the greater part of his life in the Netherlands. At an early age he distinguished himself both as a singer and performer. His fame soon spread to distant countries, and the great printer Petrucci published some of his works at Venice in 1503. He entered the service of Philip, duke of Austria and sovereign of the Netherlands, and followed him to Castile in 1506. There Agricola remained until his death, at the age of 60 (about the year 1530), of acute fever, in the territory of Valladolid. Amongst Agricola's known works the most important are two motetts for three voices from the collection entitled 'Motetti XXXIII' (Venice, Petrucci, 1502); eight four-part songs from the collection 'Canti cento cinquanta' (Venice, Petrucci, 1503); and a volume of five masses 'Misse Alex. Agricolae' (Venice, Petrucci, 1505). It is not improbable that a large number of his compositions may still be contained in the libraries of Spain. [J.R.S.-B.]

AGRICOLA, Georg Ludwig, born Oct. 25, 1643, at Grossen-Furra in Thuringia, where his father was clergyman; brought up at Eisenach and Gotha and the universities of Wittenberg and Leipsic; kapellmeister at Gotha in 1670. He composed 'Musikalische Nebenstunden' for two violins, two violas, and bass; religious hymns and madrigals; sonatas and preludes, 'auf franzosische Art,' etc., etc. He died at Gotha in Feb. 1676 at the age of thirty-three, full of promise, but without accomplishing a style for himself. [F. G.]

AGRICOLA, Johann, born at Nuremberg about 1570, professor of music in the Gymnasium at Erfurt in 1611, and composer of three collections of motetts (Nuremberg, 1601–1611).

AGRICOLA, Johann Friedrich, born Jan. 4, 1720, at Dobitschen, Altenburg, Saxony. His father was a judge, and his mother, Maria Magdalen Manke, from Giebrichenstein near Halle, was a friend of the great Handel. He began to learn music in his fifth year under a certain Martini. In 1738 he entered the University of Leipsic when Gottsched was Professor of Rhetoric. But though he went through the regular course of 'humanities' he also studied music under Sebastian Bach, with whom he worked hard for three years. After this he resided at Dresden and Berlin, and studied the dramatic style under Graun and Hasse. In 1749 he published two pamphlets on French and Italian taste in music under the pseudonym of Olibrio. In the following year a cantata of his, 'Il Filosofo convinto in amore,' was performed before Frederic the Great, and made such an impression on the king as to induce him to confer on Agricola the post of Hof-componist. He had an equal success with a second cantata, 'La Ricamatrice.' Agricola then married Signora Molteni, prima donna of the Berlin opera, and composed various operas for Dresden and Berlin, as well as much music for the Church and many arrangements of the king's melodies. After the death of Graun (Aug. 8, 1759) he was made director of the royal chapel; but without the title of 'kapellmeister.' There he remained till his death in 1774—Nov. 12 (Forkel) or Dec. 1 (Schneider, Hist. of Berlin Opera). Agricola's compositions had no permanent success, nor were any printed excepting a psalm and some chorals. He had the reputation of being the best organ-player in Berlin, and a good teacher of singing. He translated with much skill Tosi's 'Opinioni de' Cantori,' and made some additions of value to Adlung's 'Musica mechanica organœdi.' [F. G.]

AGRICOLA, Martin, whose German name, as he himself tells us, was Sohr, or Sore, was born about 1500 at Sorall in Lower Silesia. In 1524 we find him teacher and cantor in the first Protestant school at Magdeburg, and he remained there till his death, June 10, 1556. The assertion of his biographer Caspar that Agricola reached the age of seventy has misled all following writers as to the date of his birth. In his 'Musica instrumentalis deudsch,' which, notwithstanding its polyglott title is written in German, he states that he had no 'activum præceptorem' for music, but learned the art by himself while constantly occupied as a schoolmaster. That work is remarkable not only for its musical ability but for its German style, which has all the force and flavour of the writings of his contemporary Luther himself. Agricola's chief protector and friend was Rhaw, the senator of

Wittenberg, renowned in his own day as a printer of music. This excellent man printed many of Agricola's works, of which the following may be named amongst others:—'Ein kurtz deutsche Musica,' 1528; 'Musica instrumentalis deudsch,' 1529, '32, '45; 'Musica figuralis deudsch,' 1532; 'Von den Proportionibus'; 'Rudimenta Musices,' 1539. The list of the rest will be found in Draudius' 'Bibliotheca Classica,' p. 1650; Walther's 'Lexicon'; Marpurg's 'Beiträge,' vol. v; Forkel's 'Literature,' and Gerber's 'Dictionary.' Mattheson in his 'Ephorus' (p. 124) praises him for having been the first to abolish the 'ancient tablature,' and adopt the system of notation which we still employ. But this is inaccurate. All that Agricola proposed was a new 'tablature' for the lute, better than the old one. On the conflict between the old and new notation, Agricola's writings are full of interest, and they must be studied by every one who wishes to have an accurate view of that revolution. But unfortunately they are both rare and costly. [F. G.]

AGRICOLA, Wolfgang Christoph, lived about the middle of the 17th century, composed a 'Fasciculus Musicalis' (Wurzburg and Cologne, 1651), of masses, and 'Fasciculus variarum cantionum,' of motetts.

AGTHE, Carl Christian, born at Hettstädt, 1739; died at Ballenstedt, 1797; organist, composer of six operas, three pianoforte sonatas (Leipsic, 1790), and a collection of Lieder (Dessau, 1782). His son, W. J. Albrecht, born at Ballenstedt, 1790, in 1810 settled at Leipsic, and 1823 at Dresden as teacher of Logier's system, under the approval of C. M. von Weber, and in 1826 founded a similar establishment at Posen. Later he was at Berlin. Kullak is his best-known pupil. [M. C. C.]

AGUADO, Dionisio, born in Madrid, 1784, a remarkable performer on the guitar; received his chief instruction from Garcia the great singer. In 1825 he went to Paris, where he associated with the most eminent artistes of the day, till 1838, when he returned to Madrid, and died there in 1849. His method for the guitar, an excellent work of its kind, passed through three editions in Spain (Madrid, 1825-1843) and one in Paris (1827). He also published 'Colleccion de los Etudios para la guitarra' (Madrid, 1820), 'Colleccion de Andantes,' etc., and other works for his instrument. [M. C. C.]

AGUILERA DE HEREDIA, Sebastian, a monk and Spanish composer at the beginning of the 17th century. His chief work was a collection of Magnificats for four five, six, seven, and eight voices, many of which are still sung in the cathedral of Saragosa, where he directed the music, and at other churches in Spain.

AGUJARI, Lucrezia, a very celebrated singer, who supplies an extraordinary example of the fashion of nicknaming musicians; for, being a natural child of a noble, she was always announced in the playbills and newspapers as *La Bastardina*, or *Bastardella*. She was born at Ferrara in 1743, instructed in a convent by the P. Lambertini, and made her *début* at Florence in 1764. Her triumph was brilliant, and she was eagerly engaged for all the principal towns, where she was enthusiastically received. She did not excel in expression, but in execution she surpassed all rivals. The extent of her register was beyond all comparison. Sacchini said he had heard her sing as high as B♭ in altissimo, and she had two good octaves below: but Mozart himself heard her at Parma in 1770, and says of her[1] that she had 'a lovely voice, a flexible throat, and an incredibly high range. She sang the following notes and passages in my presence:—

Ten years later, in speaking of Mara, he says, 'She has not the good fortune to please me. She does too little to be compared to a Bastardella—though that is her peculiar style—and too much to touch the heart like an Aloysia Weber.'[2] Leopold Mozart says of her, 'She is not handsome nor yet ugly, but has at times a wild look in the eyes, like people who are subject to convulsions, and she is lame in one foot. Her conduct formerly was good; she has, consequently, a good name and reputation.

Agujari made a great sensation in the carnival of 1774 at Milan, in the serious opera of 'Il Tolomeo,' by Colla, and still more in a cantata by the same composer. In 1780 she married

[1] Letter of March 24, 1770. [2] Letter of Nov. 13, 1780.

Colla, who composed for her most of the music she sang. She sang at the Pantheon Concerts for some years, from 1775, receiving a salary at one time of £100 a night for singing two songs, a price which was then simply enormous. She died at Parma, May 18, 1783. [J. M.]

AGUS, Henri, born in 1749, died 1798; composer and professor of solfeggio in the Conservatoire of Paris (1795). His works, which display more learning than genius, consist of trios for strings, two compositions for violoncello, published in London, where he lived for some time, and six duos concertants for two violins, published by Barbieri (Paris) as the op. 37 of Boccherini.

AHLE, Johann Rodolph, church composer, born at Mühlhausen in Thuringia, Dec. 24, 1625; educated at Göttingen and Erfurt. In 1644 he became organist at Erfurt, but soon after settled at his native place, where in 1655 he was appointed member of the senate and afterwards burgomaster. He died in full possession of his powers July 8, 1673. His published compositions include 'Compendium pro tenellis' (1648), a treatise on singing which went through three editions; 'Geistlichen Dialogen,' 'Symphonien, Paduanen, und Balleten'; 'Thuringische Lustgarten,' a collection of church music; 400 'geistlichen Arien,' 'geistlichen Concerte,' and 'Andachten' on all the Sundays and Festivals, etc., etc. He cultivated the simple style of the choral, avoiding polyphonic counterpoint. His tunes were for long very popular, and are still sung in the Protestant churches of Thuringia — amongst others that known as 'Liebster Jesu wir sind hier.' Ahle left a son, Johann Georg, born 1650, who succeeded to his father's musical honours, and was made poet laureate by the Emperor Leopold I. He died Dec. 2, 1706. His hymn tunes were once popular, but are not now in use. [F. G.]

AHLSTROEM, A. J. R., born about 1762; a Swedish composer, organist at the church of St. James, Stockholm, and court accompanyist; composed sonatas for pianoforte (Stockholm, 1783 and 1786), cantatas, and songs, and edited with Boman 'Walda svenska Folkdansar och Folkledar,' a collection of Swedish popular airs, some of which have been sung by Mme. Lind-Goldschmidt. He was also editor for two years of a Swedish musical periodical 'Musikaliskt Tidsfördrif.' [M. C. C.]

AIBLINGER, Johann Caspar, born at Wasserburg in Bavaria, Feb. 23, 1779. His compositions are much esteemed, and performed in the Catholic churches of South Germany. In 1803 he went to Italy, and studied eight years at Vicenza, after which he settled at Venice, where in conjunction with the Abbe Gregorio Trentino he founded the 'Odeon' Institution for the practice of classical works. In 1826 he was recalled to his native country by the king, and appointed kapellmeister of his court music. In 1833 however he returned to Italy, and resided at Bergamo, occupying himself in the collection of ancient classical music, which is now in the Staatsbibliothek at Munich. His whole efforts to the end of his life were directed to the performance of classical vocal music in the All Saints' church at Munich, erected in 1826. His single attempt at dramatic composition was an opera of 'Rodrigo a Chimene,' which was not successful. The bravura airs for Mme. Schechner and for Pellegrini were much liked, but the piece shewed no depth of invention. In church music however he was remarkably happy: his compositions in this department are in the free style of his time, written with great skill, and full of religious feeling, tuneful, agreeable, and easy melody, and exactly suited to small church choirs. They consist of masses, some requiems, graduals, litanies, and psalms, with accompaniments for orchestra and organ, published at Munich, Augsburg, and Paris (Schott). Aiblinger died May 6, 1867. [C. F. P.]

AICHINGER, Gregor. Born about 1565; took holy orders, and entered the service of Freiherr Jacob Fugger at Augsburg as organist. In 1599 he paid a visit of two years to Rome to perfect himself in music. The date of his death is unknown, but it is supposed that he was alive at the time of the publication of one of his works, Dec. 5, 1613. In the preface to his 'Sacrae Cantiones' (Venice, 1590), he praises the music of Gabrieli; and his works also betray the influence of the Venetian school. They are among the best German music of that time, bearing marks of real genius; and are superior to those of his contemporary, the learned Gallus, or Handl. Amongst the most remarkable are a 'Ubi est frater,' and 'Assumpta est Maria,' both for three voices; an 'Adoramus' for four; and an 'Intonuit de cœlo' for six voices, the last printed in the *Florilegium Portense*. A Litany, a Stabat Mater, and various motetts of his are printed in Proske's 'Musica divina.' [F. G.]

AIMON, Pamphile Léopold François, violoncellist and composer, born at L'Isle, near Avignon, 1779; conducted the orchestra of the theatre in Marseilles when only seventeen, that of the Gymnase Dramatique in Paris 1821, and of the Théâtre Français, on the retirement of Baudron, 1822. Of his seven operas only two were performed, the 'Jeux Floraux' (1818), and 'Michel et Christine' (1821), the last with great success. He also composed numerous string quartetts, trios, and duos (Paris and Lyons), and was the author of 'Connaissances préliminaires de L'Harmonie,' and other treatises. [M. C. C.]

AIR (Ital. *aria*; Fr. *air*; Germ. *Arie*, from the Latin *aer*, the lower atmosphere; or *æra*, a given number, an epoch, or period of time). In a general sense air, from the element whose vibration is the cause of music, has come to mean that particular kind of music which is independent of harmony. In common parlance air is rhythmical melody—any melody or kind of melody of which the *feet* are of the same duration, and the *phrases* bear some recognisable

proportion one to another. In the 16th and 17th centuries air represented popularly a cheerful strain. The English word *glee*, now exclusively applied to a particular kind of musical composition, is derived from the A. S. gliggc, in its primitive sense simply *music*. Technically an air is a composition for a single voice or any monophonous instrument, acccompanied by other voices or by instruments. About the beginning of the 17th century many part-songs were written, differing from those of the preceding century in many important particulars, but chiefly in the fact of their interest being thrown into one, generally the upper, part; the other parts being subordinate. These other parts were generally so contrived as to admit of being either sung or played. The first book of Ford's 'Musike of sundrie kinds' (1607) is of this class. Subsequently to its invention, arias were for a considerable time commonly published with the accompaniment only of a 'figured bass.' The aria grande, great or more extended air, has taken a vast variety of forms. These however may be classed under two heads, the aria with 'da capo' and the aria without. The invention of the former and older form has been long attributed to Alessandro Scarlatti (1659-1725); but an aria printed in the present writer's 'Lectures on the Transition Period of Musical History,' shows that it was used as early as 1655, i.e. four years before A. Scarlatti was born, by the Venetian, Francesco Cavalli, a master in whose opera 'Giasone' (1649) the line which divides air from recitative seems to have been marked more distinctly than in any preceding music. The so-called 'aria' of Monteverde and his contemporaries (c. 1600) is hardly distinguishable from their 'musica parlante,' a very slight advance on the 'plain-song' of the middle ages. The aria without 'da capo' is but a more extended and interesting form than that of its predecessor. In the former the first section or division is also the last; a section, always in another key and generally shorter, being interposed between the first and its repetition. In the latter the first section is repeated, often several times, the sections interposed being in different keys from one another as well as from the first, which, on its last repetition, is generally more or less developed into a 'coda.' The aria grande has assumed, under the hands of the great masters of the modern school, a scope and a splendour which raise it to all but symphonic dignity. As specimens of these qualities we may cite Beethoven's 'Ah, perfido,' and Mendelssohn's 'Infelice.' The limits of the human voice forbid, however, save in rare instances, to the aria, however extended, that repetition of the same strains in different though related keys, by which the symphonic 'form' is distinguished from every other. But compositions of this class, especially those interspersed with recitative, though nominally sometimes arie belong rather to the class 'scena.' [J. H.]

AIRY, Sir George Biddell. The present Astronomer Royal, and late President of the Royal Society, the author of one of the latest works on acoustics, 'On Sound and Atmospheric Vibrations,' London 1868. The most important portion of this work is its elaborate mathematical treatment of the theory of atmospheric sound-waves, a subject first discussed by Sir Isaac Newton in the 'Principia.' [W. P.]

A'KEMPIS, Florentino, organist of St. Gudule, at Brussels, about the middle of the 17th century; composed three symphonies (Antwerp, 1644, 1647, and 1649), 'Missae et Motetta' (Antwerp, 1650), and another mass for eight voices.

AKEROYDE, Samuel, a native of Yorkshire, was a very popular and prolific composer of songs in the latter part of the 17th century. Many of his compositions are contained in the following collections of the period: 'D'Urfey's Third Collection of Songs' 1685; 'The Theatre of Musick,' 1685–1687; 'Vinculum Societatis,' 1687; 'Comes Amoris,' 1687–1694; 'The Banquet of Musick,' 1688–1692; 'Thesaurus Musicus,' 1693–1696; and in 'The Gentleman's Journal,' 1692–1694. He was also a contributor to the Third Part of D'Urfey's 'Don Quixote,' 1696. [W. H. H.]

ALA, Giovanni Battista, born at Monza about the middle of the 16th century, died at the age of thirty-two; organist of the Church dei Servitori, in Milan, and composer of canzonets, madrigals, and operas (Milan, 1617, 1625), 'Concerti ecclesiastici' (Milan, 1618, 1621, 1628), and several motetts in the 'Pratum musicum' (Antwerp, 1634).

ALARD, Delphin, eminent violinist. Born at Bayonne, March 8, 1815; shewed at an early age remarkable musical talent, and in 1827 was sent to Paris for his education. At first he was not received as a regular pupil at the Conservatoire, but was merely allowed to attend Habeneck's classes as a listener. He soon however won the second, and a year later the first prize for violin-playing, and from 1831 began to make a great reputation as a performer. In 1843, on Baillot's death, he succeeded that great master as professor at the Conservatoire, which post he still holds (1875). Alard is the foremost representative of the modern French school of violin-playing at Paris, with its characteristic merits and drawbacks. His style is eminently lively, pointed, full of *élan*. He has published a number of concertos and operatic fantasias which, owing to their brilliancy, attained in France considerable popularity, without having much claim to artistic worth. On the other hand, his 'Violin School,' which has been translated into several languages, is a very comprehensive and meritorious work. He also edited a selection of violin-compositions of the most eminent masters of the 18th century, 'Les maîtres classiques du Violon,' etc. (Schott), in 40 parts. [P. D.]

ALBANI, Mathias, a renowned violin-maker, born 1621, at Botzen, was one of Stainer's best pupils. The tone of his violins, which are generally very high in the belly, and have a dark

red, almost brown, varnish, is more remarkable for power than for quality. He died at Botzen in 1673. His son, also named Mathias, was at first a pupil of his father, afterwards of the Amatis at Cremona, and finally settled at Rome. His best violins, which by some connoisseurs are considered hardly inferior to those of the Amatis, are dated at the end of the 17th and beginning of the 18th century. A third Albani, whose Christian name is not known, and who lived during the 17th century at Palermo, also made good violins, which resemble those of the old German makers. [P. D.]

ALBENIZ, Pedro, born in Biscay about 1755, died about 1821; a Spanish monk, conductor of the music at the Cathedral of St. Sebastian, and (1795) at that of Logrono; composed masses, vespers, motetts, and other church music, never published, and a book of solfeggi (St. Sebastian, 1800).

ALBENIZ, Pedro, born at Logrono, 1795, died at Madrid 1855; son of a musician, Mattéo Albeniz, and pupil of Henri Herz and Kalkbrenner; organist from the age of ten at various towns in Spain, and professor of the pianoforte in the Conservatoire at Madrid. He introduced the modern style of pianoforte playing into Spain, and all the eminent pianists of Spain and South America may be said to have been his pupils. He held various high posts at the court, and in 1847 was appointed secretary to the Queen. His works comprise a method for the pianoforte (Madrid, 1840), adopted by the Conservatoire of Madrid, seventy compositions for the pianoforte, and songs. [M. C. C.]

ALBERGATI, Count Pirro Capacelli, of an ancient family in Bologna, lived in the end of the 17th and beginning of the 18th centuries, an amateur, and distinguished composer. His works include the operas 'Gli Amici' (1699), 'Il Principe selvaggio' (1712), the oratorio 'Giobbe' (Bologna, 1688), sacred cantatas, masses, motetts, etc., and compositions for various instruments.

ALBERT, Heinrich, born at Lobenstein, Voigtland, Saxony, June 28, 1604; nephew and apparently pupil of the famous composer Heinrich Schütz. He studied law in Leipsic, and music in Dresden. In 1626 he went to Königsberg, where Stobbæus was at that time kapellmeister. In 1631 he became organist to the old church in that city, and in 1638 married Elizabeth Starke, who is referred to in his poem as 'Philosette.' Of the date of his death nothing certain is known. It is given as June 27, 1657 (by Fétis Oct. 10, 1651). One of his books of 'Arien' (Königsberg, 1654), contains a statement that it was 'edited by the author's widow,' but the same book comprises some poems on the events of the year 1655. It is plain therefore that the date 1654 is an error.

Albert was at once poet, organist and composer. As poet he is one of the representatives of the Königsberg school, with the heads of which he was closely associated.

His church music is confined, according to Winterfeld, to a Te Deum for three voices, published Sept. 12, 1647. He however composed both words and music to many hymns, which are still in private use, e.g. 'Gott des Himmels und der Erden.' These, as well as his secular songs, are found in the eight collections printed for him by Paschen, Mense, and Reussner, under the patronage of the Emperor of Germany, the King of Poland, and the Kurfürst of Brandenburg. These collections sold so rapidly that of some of them several editions were published by the author. Others were surreptitiously issued at Königsberg and Dantzic under the title of 'Poetisch-musikalisches Lustwäldlein,' which Albert energetically resisted. These latter editions, though very numerous, are now exceedingly rare. Their original title is 'Erster (Zweiter, etc.) Theil der Arien etlicher theils geistlicher theils weltlicher, zur Andacht, guten Sitten, keuscher Liebe und Ehrenlust, dienen der Lieder zum singen und spielen gesetzt.'[1] Then followed the dedication, a different one to each part. The second is dedicated to his 'most revered uncle, Heinrich Schütz,' the only existing reference to the relationship between them. Albert's original editions were in folio, but after his death an octavo edition was published in 1657 by A. Profe of Leipsic. In his prefaces Albert lays down the chief principles of the musical art, a circumstance which gives these documents great value, as they belong to a time in which by means of the 'basso continuo' a reform in music was effected, of which we are still feeling the influence. Mattheson, in his 'Ehren-pforte,' rightly assumes that Albert was the author of the 'Tractatus de modo conficiendi Contrapunctam,' which was then in manuscript in the possession of Valentin Hausmann. In the preface to the sixth section of his 'Arien' Albert speaks of the centenary of the Königsberg University, Aug. 28, 1644, and mentions that he had written a 'Comödien-Musik' for that occasion, which was afterwards repeated in the palace of the Kurfürst. Albert was thus, next after H. Schütz, the founder of German opera. Both Schütz's 'Daphne' and Albert's 'Comödien-Musik' appear to be lost, doubtless because they were not published.

Albert's 'Arien' give a lively picture of the time, and of the then influence of music. While the object of the opera as established in Italy was to provide music as a support to the spoken dialogue, so the sacred 'concert' came into existence at the same time in Italy and Germany as a rival to the old motetts, in which the words were thrown too much into the background. But the sacred 'concert' again, being sung only by a small number of voices, necessitated some support for the music, and this was the origin of the 'basso continuo.' Albert was in the best position—knowing Schütz who had been a pupil of Gabrieli in Venice; and on his arrival at Königsberg he underwent a second course of instruction under Stobbæus, from which

[1] Fétis mistakes this title for that of the original edition.

originated the peculiar character of his music, which may be described as the quintessence of all that was in the best taste in Italy and Germany. Owing to the special circumstance that Albert was both a musician and a poet—and no small poet either—he has been rightly called the father of the German 'Lied.' It is rare for a composer to make music to his own poetry, and since the time of Albert and his comrades in the Königsberg school, one example only is found of it—Richard Wagner. But to conclude, Albert's work in German music may be described as a pendant to the contemporary commencement of Italian opera. [F. G.]

ALBERT, PRINCE. Francis Charles Augustus Albert Emmanuel, Prince Consort of Queen Victoria, second son of Ernest Duke of Saxe-Coburg-Saalfeld, was born at Rosenau, Coburg, Aug. 26, 1819, married Feb. 10, 1840, and died Dec. 14, 1861. Music formed a systematic part of the Prince's education (see his own 'Programme of Studies' at thirteen years of age in 'The Early Years,' etc., p. 107). At eighteen he was 'passionately fond' of it, 'had already shown considerable talent as a composer,' and was looked up to by his companions for his practical knowledge of the art (Ib. 143, 173); and there is evidence (Ib. 70) that when quite a child he took more than ordinary interest in it. When at Florence in 1839 he continued his systematic pursuit of it (Ib. 194) and had an intimate acquaintance with pieces at that date not generally known (Ib. 209–211).[1] His organ-playing and singing he kept up after his arrival in England (Martin's 'Life,' 85, 86, Mendelssohn's letter of July 19, 1842), but his true interest in music was shown by his public action in reference to it, and the influence which from the time of his marriage to his death he steadily exerted in favour of the recognition and adoption of the best compositions.

This was shown in many ways. First, by his immediate reorganisation of the Queen's private band from a mere wind-band to a full orchestra (dating from Dec. 24, 1840), and by an immense increase and improvement in its *répertoire*. There is now a peculiar significance in the fact that—to name only a few amongst a host of great works—Schubert's great symphony in C (probably after its rejection by the Philharmonic band, when offered them by Mendelssohn in 1844), Bach's 'Matthew-Passion,' Mendelssohn's 'Athalie' and 'Œdipus,' and Wagner's 'Lohengrin,' were first performed in this country at Windsor Castle and Buckingham Palace. Secondly, by acting in his turn as director of the Ancient Concerts, and choosing, as far as the rules of the society permitted, new music in the programmes; by his choice of pieces for the annual 'command nights' at the Philharmonic, where his programmes were always of the highest class, and included first performances of Mendelssohn's 'Athalie,' Schubert's overture to 'Fierabras,' and Schumann's 'Paradise and the Peri.' Thirdly, by the support which he gave to good music when not officially connected with it: witness his keen interest in Mendelssohn's oratorios, and his presence at Exeter Hall when 'St. Paul' and 'Elijah' were performed by the Sacred Harmonic Society. There can be no doubt that, in the words of a well-known musical amateur, his example and influence had much effect on the performance of choral music in England, and on the production here of much that was of the highest class of musical art.

The Prince's delight in music was no secret to those about him. In the performances at Windsor, says Mr. Theodore Martin, from whose 'Life' (i. App. A) many of the above facts are taken, 'he found a never-failing source of delight. As every year brought a heavier strain upon his thought and energies, his pleasure in them appeared to increase. They seemed to take him into a dream-world, in which the anxieties of life were for the moment forgotten.'

Prince Albert's printed works include 'L'invocazione all' Armonia,' for solos and chorus; a morning service in C and A; anthem, 'Out of the deep;' five collections of 'Lieder und Romanzen,' 29 in all; three canzonets, etc. [G.]

ALBERTAZZI, Emma, the daughter of a music-master named Howson, was born May 1, 1814. Beginning at first with the piano, she soon quitted that instrument, to devote herself to the cultivation of her voice, which gave early promise of excellence. Her first instruction was received from Costa, and scarcely had she mastered the rudiments, when she was brought forward at a concert at the Argyll Rooms. In the next year, 1830, she was engaged at the King's Theatre in several contralto parts, such as Pippo in the 'Gazza Ladra,' and others. Soon afterwards she went to Italy with her father, and got an engagement at Piacenza. It was here that Signor Albertazzi, a lawyer, fell in love with her, and married her before she was seventeen. Celli, the composer, now taught her for about a year; after which she sang, 1832, in Generali's 'Adelina,' at the Canobbiana, and subsequently was engaged for contralto parts at La Scala. There she sang in several operas with Pasta, who gave her valuable advice. She sang next at Madrid, 1833, for two years; and in 1835 at the Italian Opera in Paris. This was the most brilliant part of her career. In 1837 she appeared in London. Madame Albertazzi had an agreeable presence, and a musical voice, not ill-trained; but these advantages were quite destroyed by her lifelessness on the stage—a resigned and automatic indifference, which first wearied and then irritated her audiences. To the end of her career—for she afterwards sang in English Opera at Drury Lane—she remained the same, unintelligent and inanimate. Her voice now began to fail, and she went abroad again, hoping to recover it in the climate of Italy, but without success. She sang at Padua, Milan, and Trieste, and returned in 1846 to London, where she sang

[1] P. 211, *for* 'Nencini' *read* 'Nannini.'

for the last time. She died of consumption, Sept. 1847. [J. M.]

ALBINONI, Tomasso, dramatic composer and violinist. Born at Venice in the latter half of the 17th century. The particulars of his life are entirely unknown. He wrote forty-two operas (the first of which appeared in 1694), which are said to have been successful from the novelty of their style, though a modern French critic describes the ideas as trivial and the music as dry and unsuited to the words. Greater talent is to be seen in his instrumental works, concertos, sonatas, and songs. He was also an excellent performer on the violin. Albinoni's sole interest for modern times resides in the fact that the great Bach selected themes from his works, as he did from those of Corelli and Legrenzi. 'Bach,' says Spitta (i. 423), 'must have been peculiarly partial to Albinoni. Down to a late period of his life he was accustomed to use bass parts of his for practice in thorough-bass, and Gerber relates that he had heard his father (a pupil of Bach's) vary these very basses in his master's style with astonishing beauty and skill.' Two fugues of the great Master's are known to be founded on themes of Albinoni's—both from his 'Opera prima.' One (in A) is to be found at No. 10 of Cahier 13 of Peter's edition of Bach's clavier-works; the other (in F♯ minor) at No. 5 of Cahier 3 of the same edition. For further particulars see Spitta, i. 423–426. [E. H. D.]

ALBONI, Marietta, the most celebrated contralto of the 19th century, was born at Cesena, Romagna, in 1824. Her first instruction was received in her native place; after which she was taught by Mme. Bertoletti, at Bologna, who has taught many other distinguished singers. There she met Rossini, and was so fortunate as to obtain lessons from him: she is said to have been his only pupil. Charmed with her voice and facility, he taught her the principal contralto parts in his operas, with the true traditions. With this great advantage Alboni easily procured an engagement for several years from Merelli, an impresario for several theatres in Italy and Germany. She made her first appearance at La Scala, Milan, 1843, in the part of Maffio Orsini. In spite of her inexperience, her voice and method were brilliant enough to captivate the public. In the same year she sang at Bologna, Brescia, and again at Milan; soon afterwards with equal success at Vienna. In consequence of some misunderstanding about salary she now broke her engagement with Merelli, and suddenly took flight to St. Petersburg. She remained there, however, but a short time; and we find her in 1845 singing at concerts in Hamburg, Leipzig, Dresden, as well as in Bohemia and Hungary. At the carnival of 1847 she sang at Rome in Pacini's 'Saffo,' introducing an air from Rossini's 'Semiramide,' which was enthusiastically applauded, but could not save the opera. In the spring of the same year she came to London, and appeared at Covent Garden, in the height of the 'Jenny Lind fever.' She was indeed a trump card for that establishment against the strong hand of the rival house. The day after her *début* the manager spontaneously raised her salary for the season from £500 to £2000, and her reputation was established. She sang in 'Semiramide' first, and afterwards in 'Lucrezia Borgia'; and in the latter had to sing the 'Brindisi' over and over again, as often as the opera was performed. As Pippo in the 'Gazza Ladra' she had to sing the whole first solo of the duett 'Ebben per mia memoria' three times over. Her appearance at that time was really splendid. Her features were regularly beautiful, though better fitted for comedy than tragedy; and her figure, not so unwieldy as it afterwards became, was not unsuited to the parts she played. Her voice, a rich, deep, true contralto of fully two octaves, from G to G, was as sweet as honey, and perfectly even throughout its range. Her style gave an idea, a recollection, of what the great old school of Italian singing had been, so perfect was her command of her powers. The only reproach to which it was open was a certain shade of indolence and *insouciance*, and a want of fire at times when more energy would have carried her hearers completely away. Some singers have had the talent and knowledge to enable them to vary their *fiorituri*: Alboni never did this. When you had heard a song once from her, perfect as it was, you never heard it again but with the selfsame ornaments and *cadenze*. Her versatility was great,—too great, perhaps, as some critics have said; and it has been asserted that she did serious harm to her voice by the attempt to extend it upwards. This is, however, not clear to all her admirers, since she has returned to her legitimate range. She sang again in London in 1848 at Covent Garden, and in 1849, 1851, 1856, 1857, and 1858 at Her Majesty's Theatre. She appeared at Brussels in 1848, with no less success than in London and Paris. In 1849 she returned to Paris, and sang with equal *éclat* in 'Cenerentola,' 'L'Italiana in Algieri,' and 'La Gazza Ladra.' In the next year she visited Geneva, and made a tour of France, singing even in French at Bourdeaux in the operas 'Charles VI,' 'La Favorite,' 'La Reine de Chypre,' and 'La Fille du Régiment.' On her return to Paris she surpassed the boldness of this experiment by attempting the part of Fidés in the 'Prophète' at the Grand Opera, and with the most brilliant success. She now made a tour in Spain, and next a triumphal progress through America. Of late years, since her marriage with Count A. Pepoli, a gentleman of old Bolognese family, she has lived in Paris, where she has delighted her admirers with most of her old characters as well as some new, and notably in the part of Fidalma in Cimarosa's 'Matrimonio Segreto.' Since the untimely death of her husband she has been heard only in Rossini's 'Mass,' in which she sang in London in 1871, and similar music. [J. M.]

ALBRECHTSBERGER, Johann Georg. Contrapuntist and teacher of sacred music, composer and organist; born Feb. 3, 1736, at Kloster-

neuburg, near Vienna; died at Vienna, March 7, 1809. Seyfried has appended his biography to the complete edition of his works (Vienna, 1826, 1837). Albrechtsberger began life as a chorister at his native town and at Melk. At the latter place he was taken notice of by the Emperor Joseph, then Crown Prince; and on a later occasion, the Emperor passing through Melk renewed the acquaintance, and invited him to apply for the post of court organist on the first vacancy. Meantime Albrechtsberger studied hard under the direction of Emmerling. After being organist for twelve years at Melk, he obtained a similar post at Raab in Hungary, and then at Mariataferl. Here he remained instructor in the family of a Silesian count till he left for Vienna as *Regens Chori* to the Carmelites. In 1772 he was appointed court organist, and twenty years later director of music at St. Stephen's, where he at once commenced his career as a teacher. The number of his pupils was very large. Amongst the most celebrated are Beethoven, Hummel, Weigl, Seyfried, Eybler and Mosel. Nottebohm (Beethoven's 'Studien,' 1873) speaks in the highest terms of the instruction which he gave Beethoven. His compositions are computed by Seyfried as 261, of which only twenty-seven are printed. They are chiefly in possession of Prince Esterhazy Galantha. The finest is a Te Deum, which was not performed till after his death. His great theoretical work (not without defects) is entitled 'Gründliche Anweisung zur Composition,' (Leipsic, 1790; second edition 1818.) An English edition, translated by Sabilla Novello, is published by Novello, Ewer, and Co. [F. G.]

ALBUMBLATT (Germ.; Fr. *Feuillet d'album*). A short piece of music, such as might suitably be written in a musical album. Its form entirely depends upon the taste and fancy of the composer. As good examples of this class of piece may be named Schumann's 'Albumblätter,' op. 124, a collection of twenty short movements in the most varied styles. [E. P.]

ALCESTE, tragic opera in three acts by Gluck, libretto by Calzabigi; first performed at Vienna Dec. 16, 1767, and in Paris (adapted by du Rollet) April 23, 1776. It was the first in which Gluck attempted his new and revolutionary style, and contains the famous 'Epître dédicatoire' expounding his principles. 'Alceste' was revived at Paris in 1861 by Mme. Pauline Viardot.

ALCOCK, John, Mus. Doc. Born at London, April 11, 1715, became at seven years of age a chorister of St. Paul's Cathedral under Charles King. At fourteen he became a pupil of Stanley, the blind organist, who was then, although but sixteen, organist of two London churches, Allhallows, Bread-street, and St. Andrew's, Holborn. In 1735 Alcock became organist of St. Andrew's Church, Plymouth, which place he quitted in 1742, on being chosen organist of St. Lawrence's Church, Reading. In 1749 he was appointed organist, master of the choristers, and lay vicar of Lichfield Cathedral. On June 6, 1755, he took the degree of bachelor of music at Oxford, and in 1761 proceeded to that of doctor. In 1760 he resigned the appointments of organist and master of the choristers of Lichfield, retaining only that of lay vicar. He died at Lichfield in March, 1806, aged 91. During his residence at Plymouth, Alcock published 'Six Suites of Lessons for the Harpsichord' and 'Twelve Songs,' and whilst at Reading he published 'Six Concertos,' and a collection of 'Psalms, Hymns, and Anthems.' In 1753 he published a 'Morning and Evening Service in E minor.' He likewise issued (in 1771) a volume containing 'Twenty-six Anthems,' a 'Burial Service,' etc. He was the composer of a number of glees, a collection of which, under the title of 'Harmonia Festi,' he published about 1790. His glee, 'Hail, ever pleasing Solitude,' gained a prize medal at the Catch Club in 1770. In 1802 Alcock edited a collection of Psalm Tunes, by various authors, arranged for four voices, under the title of 'The Harmony of Sion.' He was also author of a novel entitled 'The Life of Miss Fanny Brown.' Dr. Alcock's son, John Alcock, composed and published at intervals, from 1773 to 1776, a few short anthems. [W. H. H.]

ALCHYMIST, DER, Spohr's eighth opera; libretto by Pfeiffer on a Spanish tale of Washington Irving's; composed between Oct. 1829 and April 1830, and first performed at Cassel on July 28, 1830, the birthday of the Elector.

ALDAY, a family of musicians in France. The father, born at Perpignan, 1737, was a mandoline player, and the two sons violinists. The elder of the two, born 1763, appeared at the Concerts Spirituels, first as a mandoline player, and afterwards as a violinist. His works are numerous, and include a 'Methode de Violon,' which reached several editions. Alday le jeune, born 1764, a pupil of Viotti, was a finer player than his brother, and achieved a great reputation. He played often at the Concerts Spirituels up to 1791, when he came to England, and in 1806 was conductor and teacher of music in Edinburgh. He published three concertos for violin, three sets of duos, airs variés, and trios, all written in a light pleasing style, and very popular in their day, though now forgotten. [M. C. C.]

ALDOVRANDINI, Giuseppe Antonio Vincenzo, born at Bologna about 1665; member of the Philharmonic Academy at Bologna (1695), and conductor of the Duke of Mantua's band; studied under Jacopo Perti. He composed eleven operas (1696-1711)—of which 'Amor torna in cinque et cinquanta,' in the Bologna dialect, was perhaps the most famous—also 'Armonia Sacra' (Bologna, 1701), a collection of motetts, the oratorio 'San Sigismondo' (Bologna, 1704), and other music, sacred and instrumental. [M. C. C.]

ALDRICH, Henry, D.D., was born in 1647, and educated at Westminster School. In due course he passed to Christ Church, Oxford, of which foundation he was afterwards so distinguished a member. He was admitted a student in 1662, and took his degree as Master of Arts in 1669. He then took holy orders, and

was elected to the living of Wem, in Shropshire, but continued to reside in his college and became eminent as a tutor. In February 1681 he was installed a Canon of Christ Church, and in May following he took his degrees as Bachelor and Doctor in Divinity. In 1689 he was installed Dean of Christ Church. He was as remarkable for the zeal with which he discharged the duties of his station as for the urbanity of his manners. His college was his first consideration, and he sought by every means to extend its resources and uphold its reputation. He closed his career Dec. 14, 1710.

Dr. Aldrich was a man of considerable attainments, a good scholar, architect, and musician. He wrote a compendium of logic, which is still used at Oxford, and a number of tracts upon theology, the classics, etc., the titles of which may be seen in Kippis (*Biog. Brit.*). He was also one of the editors of Clarendon's History of the Rebellion. Of his skill in architecture Oxford possesses many specimens; amongst others Peckwater quadrangle at Christ Church, the chapel of Trinity College, and All Saints' church. He cultivated music with ardour and success. 'As dean of a college and a cathedral he regarded it as a duty, as it undoubtedly was in his case a pleasure, to advance the study and progress of church music. His choir was well appointed, and every vicar, clerical as well as lay, gave his daily and efficient aid in it. He contributed also largely to its stock of sacred music; and some of his services and anthems, being preserved in the collections of Boyce and Arnold, are known and sung in every cathedral in the kingdom.' He formed a large musical library, in which the works of the Italian composers, particularly of Palestrina and Carissimi, are prominent features. This he bequeathed to his college, and it is to be regretted that a catalogue has not been printed. Catch-singing was much in fashion in the Dean's time; nor did he himself disdain to contribute his quota towards the stock of social harmony. His catch, 'Hark the Bonny Christ Church Bells,' in which he has made himself and his college the subject of merriment, is well known. He afterwards wrote and used to sing a Greek version of this catch. He was an inveterate smoker, and another of his catches in praise of smoking is so constructed as to allow every singer time for his puff.

Dr. Aldrich's compositions and adaptations for the church are 'A Morning and Evening Service in G' (printed by Boyce); 'A Morning and Evening Service in A' (printed by Arnold); and about fifty anthems, some original, others adaptations from the Italian. Some of these are to be found in the printed collections of Boyce, Arnold, and Page; others in the Ely, the Tudway, and the Christ Church MSS. (Hawkins, *History; Biog. Dict. U. K. S.;* Hayes, *Remarks on Avison, etc.*). [E. F. R.]

ALESSANDRO, Romano, surnamed della Viola from his skill on that instrument, lived in the latter half of the 16th century. In 1560 he was admitted into the choir of the Pope's chapel at Rome. He composed music for his own and other instruments, as well as motetts and songs, among which are a set of 'Canzoni alla Napoletana' for five voices. The MSS. of some of these works are to be seen in the Royal Library at Munich. [E. H. D.]

ALEXANDER BALUS. The thirteenth of Handel's oratorios; composed next after 'Judas Maccabæus.' Words by Dr. Morell, who ought to have known better than write Balus for Balas. First performance, Covent Garden, March 9, 1748. Dates on autograph:—begun June 1, 1747; end of second part, fully scored, June 24, do.; end of third part, fully scored, July 4, do.

ALEXANDER, Johann (or, according to Fétis, Joseph), violoncellist, lived at Duisburg at the end of the last and beginning of the present century. He was distinguished more for the beauty of his tone and the excellence of his style than for any great command over technical difficulties. He wrote a good instruction book for his instrument, 'Anweisung für das Violoncell,' Breitkopf and Härtel, 1801; also variations, potpourris, etc. [T. P. H.]

ALEXANDER'S FEAST. An 'ode' of Handel's to Dryden's words, as arranged and added to by Newburgh Hamilton. Dates on autograph:—end of first part, Jan. 5, 1736; end of second part, Jan. 12, do.; end of Hamilton's additions, Jan. 17, do. First performance, Covent Garden, Feb. 19, do. Re-scored by Mozart for Van Swieten, July, 1790.

ALEXANDRE ORGAN. See American Organ.

AL FINE (Ital.). 'To the end.' This term indicates the repetition of the first part of a movement either from the beginning (*da capo*) or from a sign 𝄋 (*dal segno*) to the place where the word *fine* stands. Frequently instead of the word *fine* the end of the piece is shown by a double-bar with a pause above it, thus .

ALFONSO UND ESTRELLA. An opera by Schubert, in three acts; libretto by F. von Schober. Dates on autograph (Musikverein, Vienna):—end of first act, Sept 20, 1821; end of second act, Oct. 20, 1821; end of third act, Feb. 27, 1822; overture (MS. with Spina), Dec. 1823. First performed at Weimar, June 24, 1854. This overture was played as the prelude to 'Rosamunde' in Dec. 1823, and encored. The opera remains in MS. except the overture (Spina, 1867) and a bass cavatina and tenor air (both Diabelli, 1832).

ALFORD, John, a lutenist in London in the 16th century. He published there in 1568, a translation of Adrien Le Roy's work on the lute (see Le Roy) under the title of 'A Briefe and Easye Instruction to learne the tableture, to conduct and dispose the hande unto the Lute. Englished by J. A.,' with a cut of the lute. [W. H. H.]

ALIANI, Francesco, violoncellist, born at Piacenza. He for a time studied the violin under his father, who was first violin in the orchestra, but afterwards devoted himself to the violoncello under G. Rovelli, of Bergamo. He was appointed first cellist of the theatre at Piacenza, and was celebrated as a teacher of his instrument. He wrote three books of duets for two cellos. [T. P. H.]

ALI BABA, ou les quarante voleurs, an opera of Cherubini's, produced at the Grand Opéra on July 22, 1833 (the seventy-third year of the composer). The music was adapted and re-written from his Koukourgi (1793) to a new libretto by Scribe and Mélesville. The overture was probably quite new. For Mendelssohn's opinion of the opera see his letter of Feb. 7, 1834.

ALIPRANDI, Bernardo, born in Tuscany at the beginning of the 18th century; was composer at the Bavarian court in 1730, and afterwards was appointed director of the orchestra at Munich. He there wrote the operas 'Mithridate' (1738), 'Iphigenie' (1739), 'Semiramide' (1740). Bernardo, a son of the preceding, was first violoncellist about 1780 in the Munich orchestra. He is said to have composed both for the cello and viola di gamba, though Fétis says that he wrote only for the former. [T. P. H.]

ALIZARD, Adolphe Joseph Louis, born in Paris, 1814; a bass singer of some eminence; began his musical career as a pupil of Urhan on the violin; but his master accidentally discovering that he had a remarkably fine voice, persuaded him to abandon his instrument, and to enter the Conservatoire as a pupil of Banderali. His voice was naturally a deep bass, but finding that after singing at the opera in Paris for five years he was still employed in secondary parts, he entered upon a diligent course of practice, by which he gained several notes in the upper register, and was able to take baritone parts. The strain upon his chest however was too great to be maintained without injury, and after several attacks, he died of consumption at Marseilles at the age of thirty-six. [M. C. C.]

ALKAN, Charles Henri Valentin. Born at Paris, 1813; still living (1875). Pianist and composer, chiefly of études and caprices for his instrument. His astounding op. 35 (12 études), op. 39 (12 études), and Trois grandes Études, (1) 'Fantaisie pour la main gauche seul,' (2) 'Introduction et Finale pour la main droit seul,' (3) 'Etude à mouvement semblable et perpetuel pour les deux mains,' have not yet met with the attention on the part of pianoforte *virtuosi* which they merit. They belong to the most modern developement of the *technique* of the instrument, and represent in fact the extreme point which it has reached. Though they cannot stand comparison in point of beauty and absolute musical value with the études of Chopin and Liszt, yet, like those of Anton Rubinstein, which are in some respects akin to them, they have a valid claim to be studied; for they present technical specialities nowhere else to be found, difficulties of a titanic sort, effects peculiar to the instrument carried to the very verge of impossibility. Alkan was admitted to the Conservatoire of Paris in his sixth year (1819) and remained there until 1830, during which term he was successful in several competitions, and left the institution with the first prize in 1826, and honourable mention at the Concours of the Institut in 1831. After a short visit to London in 1833 he settled as a master of the pianoforte at Paris. His published compositions mount up to opus 72, and include two concertos, several sonatas and duos, a trio, a large number of *pièces caractéristiques*, and transcriptions and songs. Amongst these his works for the pianoforte with pedals, known in England as the 'Pedalier grand,' op. 64, 66, 69 and 72, take rank with his études. [E. D.]

ALLA BREVE (Ital.). Originally a species of time in which every bar contained a breve, or four minims; hence its name. In this time, chiefly used in the older church music, the minims, being the unit of measurement, were to be taken fast, somewhat like crotchets in ordinary time. This time was also called *Alla Capella*. Modern alla breve time simply differs from ordinary common time by being always beaten or counted with two minims (and not with four crotchets) in the bar, and therefore is really quick common time. It is indicated in the time-signature by ¢, i.e. the C which is used to show four-crotchet time, with a stroke drawn through it. [E. P.]

ALLACCI, Leone, born in the island of Chios of Greek parents in 1586, went to Rome at nine years of age, and in 1661 became 'custode' of the Vatican Library. He died in 1669, and his name is only worth preserving for his 'Drammaturgia' (Rome, 1666) a catalogue of Italian musical dramas produced up to that year, indispensable for the history of Italian opera. A new edition, carried down to 1755, appeared at Venice in that year. [F. G.]

ALL' ANTICO (Ital.). 'In the ancient style.'

ALLEGRANTI, Madalena, was a pupil of Holtzbauer of Mannheim, and appeared for the first time at Venice in 1771. After singing at other theatres in Italy, she went in 1774 to Germany, where she continued to perform at Mannheim and Ratisbon till the year 1779, when she returned to Venice. She sang there at the theatre of San Samuele during the Carnival, and eventually came to England in 1781. Here she was enthusiastically admired in her first opera, the 'Viaggiatori felici' of Anfossi. Her voice, though thin, was extremely sweet, of extraordinary compass upwards, and so flexible as to lead her to indulge in a flowery style of singing, which had then the merit of considerable novelty. She was also a good actress. But it was soon found that there was a great sameness in her

manner and embellishments, and she became gradually so disregarded, by the end of her second season, that she went to Dresden, where the Elector engaged her at a salary of a thousand ducats. She came a second time to London, many years later, and reappeared in Cimarosa's 'Matrimonio Segreto.' Never was a more pitiable attempt; she had scarcely a thread of voice remaining, nor the power to sing a note in tune: her figure and acting were equally altered for the worse, and after a few nights she was obliged to retire, and quit the stage for ever. She performed in oratorio in 1799. A pretty portrait of Allegranti is engraved by Bartolozzi, after Cosway. [J. M.]

ALLEGRI, Gregorio, a beneficed priest attached to the cathedral of Fermo, and a member of the same family which produced Corregio the painter, was also a musical composer of much distinction. He was born at Rome about the year 1580, and was a pupil of G. M. Nanini. During his residence at Fermo he acted as chorister and composer to the cathedral. Certain Mottetti and Concerti which he published at this time had so great a repute that they attracted the notice of Pope Urban VIII, who appointed him, on Dec. 6, 1629, to a vacancy among the *Cantori* of the Apostolic Chapel. This post he held until his death, in 1652.

His name is most commonly associated with a 'Miserere' for nine voices in two choirs, which is, or was till lately, sung annually in the Pontifical Chapel during the Holy Week, and is held to be one of the most beautiful compositions which have ever been dedicated to the service of the Roman Church. There was a time when it was so much treasured that to copy it was a crime visited with excommunication. Not that its possession was even thus confined to the Sistine Chapel. Dr. Burney got a copy of it.[1] Mozart took down the notes while the choir were singing it, and Choron, the Frenchman, managed to insert it in his 'Collection' of pieces used in Rome during the Holy Week.[2] Leopold I, a great lover of music, sent his ambassador to the Pope with a formal request for a copy of it, which was granted to him. The emperor had the work performed with much ceremony by a highly qualified choir at Vienna. The effect, however, was so disappointing that he conceived himself the victim of a trick upon the part of the copyist, and complained to the Pope that some inferior composition had been palmed off upon him. The fact was that the value of this curious and very delicate work depends almost entirely upon its execution. It is simple almost to the point of apparent insipidity, and it only assumes its true character when sung by the one choir which received and has retained as traditions the original directions of its author. In the Sistine Chapel it has ever commanded the enthusiasm of musicians for a certain indescribable profundity of sadness, and a rhythmical adaptation to the words about which it is woven, but which, in spite of its apparent simplicity, are so difficult to produce that no fraud was necessary to account for the imperial failure at Vienna. The effects of Allegri's 'Miserere' are like the aroma of certain delicate vintages which always perishes in transit; although in Rome, to turn to a metaphor of Baini's, they have never shown a wrinkle of old age.[3]

As the man's music so was the man. Adami of Bolsena says that he was of a singular gentleness and sweetness of soul and habit. His doors were constantly thronged by poor, who sought him as much for the more impalpable sustenance of his kindness as for the more material fruits of his bounty; and his leisure hours were commonly spent among the prisons and pest-houses of Rome. He died at a ripe old age, on Feb. 18, 1562, and was laid in S. Maria in Vallicella, in the burial-place belonging to the Papal Choir.

His published works consist chiefly of two volumes of 'Concertini' and two of 'Motetti,' all printed during his lifetime by Soldi of Rome. Some stray Motetti of his were, however, inserted by Fabio Constantini in a collection intituled, 'Scelta di Motetti di diversi eccellentissimi autori, a due, tre, quattro, e cinque voci.' But the Archives of S. Maria in Vallicella are rich in his manuscripts, as are also the Library of the Collegio Romano and the Collection of the Papal Choir. Kircher too in his 'Musurgia' has transcribed an extract from his instrumental works; and the library of the Abbè Santini contained the scores of various pieces by him, including 'Magnificats,' 'Improperia,' 'Lamentazioni,' and 'Motetti.' A 'Veni Sancte Spiritus' by him for four voices is included in the 'Musica divina' of Proske (Liber Motettorum, No. lx.) [E. H. P.]

ALLEGRO (Ital.) The literal meaning of this word is 'cheerful,' and it is in this sense that it is employed as the title of Milton's well-known poem. In music however it has the signification of 'lively' merely in the sense of quick, and is often combined with other words which would make nonsense with it in its original meaning—e. g. 'allegro agitato e con disperazione' (Clementi, 'Didone abbandonata'). When unaccompanied by any qualifying word 'allegro' indicates a rate of speed nearly intermediate between 'andante' and 'presto.' There is however no other time indication which is so frequently modified by the addition of other words. To quote only some of the more common, 'allegro molto,' 'allegro assai,' 'allegro con brio' (or 'con fuoco'), and 'allegro vivace,' will all indicate a quicker time than a simple allegro; an 'allegro assai,' for instance, is often almost equivalent to a 'presto.' On the other hand, 'allegro ma non troppo,' 'allegro moderato,' or 'allegro maestoso,' will all be somewhat slower. The exact pace of any particular allegro is frequently indicated by the metronome, but even

[1] Most probably through Santarelli the singer.

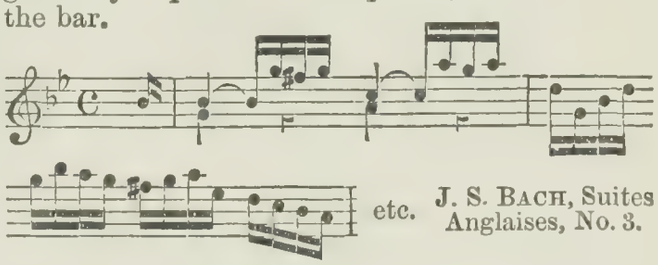
[2] It will be found in the 'Sacred Minstrelsy' of the late Mr. W. Ayrton. (Parker.)

[3] 'Senza aver contratto ruga di vecchiezza.'

this is by no means an infallible guide, as the same movement if played in a large hall and with a great number of performers would require to be taken somewhat slower than in a smaller room or with a smaller band. In this, as with all other time-indications, much must be left to the discretion of the performer or conductor. If he have true musical feeling he cannot go far wrong; if he have not, the most minute directions will hardly keep him right. The word 'allegro' is also used as the name of a piece of music, either a separate piece (e.g. Chopin's 'Allegro de Concert,' op. 46), or as the first movement of a large instrumental composition. In these cases it is generally constructed in certain definite forms, for which see SYMPHONY and SONATA. Beethoven also exceptionally uses the word 'allegro' instead of 'scherzo.' Four instances of this are to be found in his works, viz. in the symphony in C minor, the quartetts in E minor, op. 59, No. 2, and F minor, op 95, and the Sonata quasi Fantasia, op. 27, No. 1. [E. P.]

ALLEGRETTO (Ital.). A diminutive of 'allegro,' and as a time-indication somewhat slower than the latter, and also faster than 'andante.' Like 'allegro' it is frequently combined with other words, e. g. 'allegretto moderato,' 'allegretto vivace,' 'allegretto ma non troppo,' 'allegretto scherzando,' etc., either modifying the pace or describing the character of the music. The word is also used as the name of a movement, and in this sense is especially to be often found in the works of Beethoven, some of whose allegrettos are among his most remarkable compositions. It may be laid down as a rule with regard to Beethoven, that in all cases where the word 'allegretto' stands *alone* at the head of the second or third movement of a work it indicates the character of the music and not merely its pace. A genuine Beethoven allegretto always takes the place either of the andante or scherzo of the work to which it belongs. In the seventh and eighth symphonies, in the quartett in F minor, op. 95, and the piano trio in E flat, op. 70, No. 2, an allegretto is to be found instead of the slow movement; and in the sonatas in F, op. 10, No. 2, and in E, op. 14, No. 1, in the great quartett in F, op. 59, No. 1, and the trio in E flat, op. 70, No. 2, the allegretto takes the place of the scherzo. This use of the word alone as the designation of a particular kind of movement is peculiar to Beethoven. It is worth mentioning that in the case of the allegretto of the seventh symphony, Beethoven, in order that it should not be played too fast, wished it to be marked 'Andante quasi allegretto.' This indication however does not appear in any of the printed scores. In the slow movement of the Pastoral Symphony, Beethoven also at first indicated the time as 'Andante molto moto, *quasi allegretto*,' but subsequently struck out the last two words. [E. P.]

ALLEMANDE. 1. One of the movements of the SUITE, and, as its name implies, of German origin. It is, with the exception of the PRELUDE and the AIR, the only movement of the Suite which has not originated in a dance-form. The allemande is a piece of moderate rapidity—about an allegretto—in common time, and commencing usually with one short note, generally a quaver or semiquaver, at the end of the bar.



J. S. BACH, Suites Anglaises, No. 3.

Sometimes instead of one there are three short notes at the beginning: as in Handel's Suites, Book i, No. 5.

The homophonic rather than the polyphonic style predominates in the music, which frequently consists of a highly figurate melody, with a comparatively simple accompaniment. Suites are occasionally met with which have no allemande (e. g. Bach's Partita in B minor), but where it is introduced it is always, unless preceded by a prelude, the first movement of a suite; and its chief characteristics are the uniform and regular motion of the upper part; the avoidance of strongly marked rhythms or rhythmical figures, such us we meet with in the COURANTE; the absence of all accents on the weak parts of the bar, such as are to be found in the SARABANDE; the general prevalence of homophony, already referred to; and the simple and measured time of the music. The allemande always consists of two parts each of which is repeated. These two parts are usually of the length of 8, 12, or 16 bars; sometimes, though less frequently, of 10. In the earlier allemandes, such as those of Couperin, the second is frequently longer than the first: Bach, however, mostly makes them of the same length.

2. The word is also used as equivalent to the Deutscher Tanz—a dance in triple time, closely resembling the waltz. Specimens of this species of allemande are to be seen in Beethoven's '12 Deutsche Tänze, für Orchester,' the first of which begins thus:—

It has no relation whatever to the allemande spoken of above, being of Swabian origin.

3. The name is also applied to a German national dance of a lively character in 2-4 time, similar to the CONTREDANSE. [E. P.]

ALLGEMEINE MUSIKALISCHE ZEITUNG. See MUSIKALISCHE ZEITUNG.

ALLISON, RICHARD, a teacher of music in London in the reign of Elizabeth, the particulars of whose birth and decease are unknown. His name first occurs as a contributor to T. Este's 'Whole Booke of Psalms,' 1592. A few years later he published on his own account 'The Psalmes of David in Meter,' 1599, a collection of old church tunes harmonised by himself in four parts, with an accompaniment for the 'lute, orpharyon, citterne or base violl,' and important as being one of the earliest to give the melody in the cantus or soprano part—the usual practice being to give it to the tenor. Allison advertises it 'to be solde at his house in the Duke's-place near Alde-gate,' and dedicates it to the Countess of Warwick. It is ushered forth by some complimentary verses by John Dowland, the celebrated performer on the lute, and others. He appears to have been patronised by Sir John Scudamore, to whom he dedicated his collection of part-songs entitled, 'An Houres Recreation in Musicke, apt for Instruments and Voyces,' 1606. This publication contains 'a prayer' set to music, 'for the long preservation of the king and his posteritie,' and 'a thanksgiving for the deliverance of the whole estate from the late conspiracie'—the Gunpowder Plot.

ALLISON, ROBERT, probably a relative of Richard, was a gentleman of the Chapel Royal. After serving in the royal establishment for twenty years he sold his place, Feb. 8, 1609–10, to Humphry Bache. (*Allison's publications;* Camd. Soc. *Cheque-Bk. of Chap. Royal.*) [E. F. R.]

ALL' OTTAVA (Ital.). 'In the octave.' (1) In pianoforte music a passage marked *all' 8va.* (or merely *8va.*) is to be played an octave higher than written, if the sign is placed above the notes, an octave lower if placed below them. In the latter case the more accurate indication *8va. bassa* is frequently employed. The duration of the transposition is shown by a dotted line, and when the notes are again to be played as written, the word *loco* (Ital., 'in its place') is put over (or under) the music. (2) In orchestral scores, especially manuscripts, *all' 8va.* signifies that one instrument plays in octaves with another, either above or below. (3) In playing from a figured bass the term shows that no harmonies are to be employed, and that the upper parts merely double the bass in octaves. In this case it is equivalent to TASTO SOLO. [E. P.]

ALL' UNISONO (Ital., abbreviated *Unis.*). 'In unison.' In orchestral scores this term is used to show that two or more instruments, the parts of which are written upon the same stave, are to play in unison. In modern scores the words *a due, a tre,* etc., are more frequently employed.

ALPENHORN, or ALPHORN, an instrument with a cupped mouthpiece, of wood and bark, used by the mountaineers in Switzerland and many other countries to convey signals and to produce simple melodies. It is nearly straight, and three or more feet in length. Those in the Museum at South Kensington are respectively 7 ft. 5 in. and 7 ft. 11 in. long. There is a Swedish instrument of this kind called *Lure;* another of kindred nature used in the Himalayas; and another by the Indians of South America.

The notes produced are evidently only the open harmonics of the tube, somewhat modified by the material of which it is made, and by the smallness of the bore in relation to its length. The melody is termed 'Ranz des Vaches.' Its principal musical interest is derived from its introduction into the finale of Beethoven's Pastoral Symphony, and Rossini's opera of 'William Tell.' Beethoven employs the ordinary horn alone; but in the overture the long solo, now usually played by the oboe, sometimes by the cor anglais, was originally intended for, and played by, a tenoroon or alto fagotto standing in F, which much more nearly approaches the real tone of the Alpenhorn than the other instruments.

A similar combination of cupped mouthpiece with wooden tube existed in the serpent, and the result was a peculiar covered and tender quality of tone now lost to music, except in so far as it can be traced in some organ reed-stops, with wooden, not metal bells. [W. H. S.]

ALPHABET. The musical alphabet, which serves as the designation of all musical sounds, consists of the seven letters A, B, C, D, E, F, and G, and, in German, H in addition. In the natural scale (i. e. the scale without sharps or flats) the order of these letters is as follows:—C, D, E, F, G, A, B (or, in German, H), C; the cause of this apparently arbitrary arrangement will be best understood from a brief glance at the history of the musical scale.

According to Isidore, bishop of Seville (*circa* 595), the oldest harps had seven strings, and the shepherds' pandean pipes seven reeds,[1] from which it appears probable as well as natural that the ancient scale consisted of seven sounds.

These seven sounds, which served for both voices and instruments, were gradually added to, until, in the time of Aristoxenus (340 B.C.), there were fifteen, extending from A the first space of the bass stave to A the second space in the treble. Each of these sounds had its distinctive name, derived from the position and length of the different strings of the phorminx or lyre, and in order to avoid writing them in full the ancient Greek authors expressed them by certain letters of the alphabet.[2] As however the properties of the notes varied continually with the different modes and so-called mutations, which by this time had been introduced into the musical system, these letters were written in an immense variety of forms, large and small, inverted, turned to the right or left, lying horizontally, accented in many ways, etc., so that, according to Alypius, the most intelligible of the Greek writers who wrote professedly to explain them,

[1] Before the time of Terpander (about 670 B.C.) the Greek lyre is supposed to have had but four strings. Boethius attributes its extension to seven strings to Terpander.

[2] For a full description of the Greek scale see Sir J. Hawkins, 'History of Music,' ch. iv.

the musical signs in use in his day amounted to no fewer than 1240, and it appears probable that even this number was afterwards exceeded.

The Romans, who borrowed the Greek scale, and gave Latin names to each of its fifteen sounds, did not adopt this complicated system, but employed instead the first fifteen letters of their alphabet, A to P, and later still, Gregory the Great, who was chosen pope A.D. 590, discovering that the second half of the scale, H to P, was but a repetition of the first, A to H, abolished the last eight letters and used the first seven over again, expressing the lower octave by capitals and the upper by small letters.[1]

So far the original compass of the Greek scale was preserved, and thus A was naturally applied to the first and at that time lowest note, but about the beginning of the 10th century a new note was introduced, situated one degree below the lowest A, and called (it is difficult to say why) after the Greek letter *gamma*,[2] and written Γ. To this others were from time to time added until the lower C was reached, in the early part of the 16th century, by Lazarino. Thus the modern scale was established, and A, originally the first, became the sixth degree.

In Germany the same system was originally adopted, but when accidentals were invented, and it became customary to sing in certain cases B♭ instead of B♮, the square shape of the natural soon became transformed into the letter H, which was applied to the note B♮ (the original B), while the rounder form of the flat received the name of B, a distinction which remains in force to the present day. (See ACCIDENTALS.) [F. T.]

ALSAGER, THOMAS MASSA, born 1779, died 1846, one of the family of Alsager, of Alsager, Cheshire. He was for many years a proprietor and one of the leading men in the management of 'The Times,' being especially concerned in all that related to music and the collection of mercantile and foreign news. The professionally trained musical critic, added at his suggestion to the staff of 'The Times,' was the first employed on any daily paper. He was the intimate friend of Lamb, the Burneys, Wordsworth, Talfourd, Leigh Hunt, Mendelssohn, Moscheles, and many other celebrities. But what entitles him to mention here was his intense devotion to music, to which he gave all the leisure he could spare from a busy life. His practical ability in music was very great, and it is a fact that he could perform on all the instruments in the orchestra. The frequent private concerts given by the 'Queen-Square Select Society' at his residence in London will long be remembered by his many musical friends, and were the means of introducing to this country many works and foreign musicians. There Sivori for the first time attempted quartett playing, and there on March 28, 1834, took place the first performance in England of Cherubini's 'Requiem,' principal soprano Mrs. H. R. Bishop; first violin M. Spagnoletti. In 1843 the society held a special musical festival in honour of Spohr, who himself led three pieces. One object of the society was to establish a taste for Beethoven's chamber-music, by performing it in the most perfect manner attainable. It was divided into two classes, one called the pianoforte and the other the violin class, and separate evenings were devoted to each kind of composition, special attention being bestowed on those least known to the public. These resulted in the series of chamber concerts given publicly in Harley Street in 1845 and 1846, and called the 'Beethoven Quartett Society,' the whole being due to the enthusiasm, knowledge, and munificence of Mr. Alsager.

ALT. The notes in the octave above the treble stave, beginning with the G, are said to be IN ALT, and those in the next octave IN ALTISSIMO.

ALTENBURG, JOHANN ERNST, a famous trumpet-player, born 1734 at Weissenfels, and son of Johann Caspar, also an excellent master of the same instrument. The father served in several campaigns, and was in action at Malplaquet. After leaving the army he travelled much in Europe, and was admired wherever he came, and so successful that he was able to refuse an offer from Frederic Augustus of Poland to enter his service with a salary of 600 thalers. He died in 1761. His son—more celebrated than the father—after completing his education, adopted the military career, and was a field trumpeter in the army during the Seven Years' War. After the peace of Hubertsburg he became organist at Bitterfeld. He was the author of a book entitled 'Versuch einer Anleitung zur heroischer musikalischen Trompetkunst' (Halle, 1795), which, though poor in style, is so complete in its treatment of the subject, as to be of the greatest interest in relation to trumpet music. [F. G.]

ALTHORN, an instrument of the SAXHORN family, usually standing in E♭ or F. It is exclusively used in military music, and often replaces the French horn, for which however it is a poor substitute as regards tone. It is much easier to learn than the horn, and presents greater facility in rapid melodic passages. The least objectionable way of introducing it into the reed band is to associate a pair of these instruments with two French horns, reserving characteristic holding notes for the latter. In the brass band, where variety of timbre is less attainable, it answers its purpose well, and can better be played on horseback, from its upright bell. The name is also given to the saxhorn in B♭, but this is best distinguished as the BARITONE. The scale and compass of this and the other SAXHORNS are given under that word. [W. H. S.]

ALTO (from the Latin *altus*, high, far removed). The male voice of the highest pitch,

[1] This system of Pope Gregory forms the so-called basis of the German *Tablatur*, in which the octave from the C next below the bass stave to C second space is called the great octave, and is indicated by capitals; the octave next above is known as the small octave, and is expressed by small letters; and all succeeding octaves are called once-marked, twice-marked octaves, etc., and the letters representing them have one, two, or more horizontal lines drawn above them, thus: C D . . . c d . . . c̄ d̄ . . . c̿ d̿ . . . c̿̄ d̿̄ . . . , etc.

[2] The addition of the Γ is by some attributed to Guido d'Arezzo; but he speaks of it in his 'Micrologus' (A.D. 1024) as being already in use.

called also counter-tenor, i.e. *contra*, or against the tenor. In the 16th and early part of the 17th centuries the compass of the alto voice was limited to the notes admissible on the stave which has the C clef on its third line; i.e. to the notes a sixth above and a sixth below 'middle C.' Later however this compass was extended by bringing into use the third register of the voice, or 'falsetto,' a register often strongest with those whose voices are naturally 'bass.' The falsetto counter-tenor, or more properly counter-*alto*, still to be found in cathedral choirs, dates—if musical history is to be read in music—from the restoration of Charles II, who doubtless desired to reproduce at home, approximately at least, a class of voice he had become accustomed to in continental chapels royal and ducal. The so-called counter-tenor parts of Pelham Humphreys his contemporaries and successors, habitually transcend those of their predecessors, from Tallis to Gibbons, by at least a third. The contralto part is properly written on the stave which has C on its second line; it consequently extends to the eighth above middle C and the fourth below. This stave is now obsolete, and the part for which it is fitted is, in England, written either on the alto stave, for which it is too high, or on the treble stave for which it is too low. On the continent the stave which has the C clef on the first line is sometimes used for it. For the female *alto* voice see CONTRALTO. [J. H.]

ALTO is also the Italian term for the TENOR violin, called alto, or alto di viola, as distinguished from basso di viola, because, before the invention, or at least before the general adoption of the violin, it used to take the highest part in compositions for string-instruments, corresponding to the soprano part in vocal music. For further particulars see VIOLA. [P. D.]

ALTRO VOLTO (Ital. 'another turn'), a term in use during the early part of the last century for ENCORE, a word which has now entirely superseded it.

AMATI, a family of celebrated Italian violin-makers, who lived and worked at Cremona, and are generally regarded as the founders of the Cremona school. There is considerable uncertainty as to the different members of the family, which was one of the oldest and noblest of the town.

1. ANDREA, the eldest, appears to have been born some time between 1520 and 1525. Fétis mentions two instruments of Andrea Amati, which are dated 1546 and 1551; one of them a rebec with three strings, the other a viola bastardo, or small violin. There can be no doubt that he was originally a maker of the older viola di gamba, and that only later in life he began to make violins. We do not know whether he was a direct pupil of one of the great Brescia makers, Gaspar da Salo or Maggini. In spite of some similarity his violins certainly differ materially in shape and workmanship from the works of these older masters. Very few authentic instruments of his make are extant, and those are not in good preservation. They retain the stiff upright Brescian soundhole, but in almost every other respect mark a great advance upon the productions of the older school. Andrea worked mostly after a small pattern; the belly and back very high; the varnish of amber colour; the wood, especially that of the belly, most carefully chosen; the scroll beautifully chiselled; the general outline extremely graceful. A few violoncellos and tenors of this master are also known. The tone of his instruments is clear and silvery, but, probably owing to their small size and high elevation, not very powerful. The fourth string is particularly weak. Andrea died probably in 1577.

2. NICOLO, younger brother of Andrea (not to be confounded with Nicolo son of Geronimo) appears to have made basses in preference to violins.

3. ANTONIO, born 1550, and 4. GERONIMO, died 1635, sons of Andrea, worked conjointly very much in their father's style; Geronimo appears to have afterwards made violins of a larger pattern independently of his brother, which however are inferior to those made conjointly with him.

5. NICOLO, born September 3, 1596, died August 12, 1684, son of Geronimo, was the last and doubtless the most eminent of the family. Although he did not materially alter the model adopted by the rest of the Amatis he improved it in many respects. His outline is still more graceful, his varnish of deeper and richer colour, and the proportions, as regards thickness of wood and elevation of back and belly, are better calculated by him than by his predecessors. His instruments have in consequence, besides the clearness and transparency of the older Amatis, greater power and intensity of tone. As a rule he too worked after a small pattern, but he also made some large violins,—the so-called 'Grand Amatis,' which are particularly high-priced—and a great number of beautiful tenors and violoncellos. His instruments enjoyed even during his life-time a great reputation, and it is related that Charles IX of France gave him an order for twelve violins, six tenors, and six violoncellos, for his private band. Andrea Guarneri and the still greater Antonio Stradivari were his pupils. His label runs thus, 'Nicolaus Amati Cremonens. Hieronimi filii Antonii nepos fecit anno 16 —.'

6. GERONIMO, his son, was but an indifferent maker. The violins of the Amati are the link between the Brescia school and those masters who brought the art of violin-making to its greatest perfection, Antonio Stradivari and Josef Guarneri. The tone of Gaspar da Salo's and Maggini's violins is great and powerful, but has a peculiarly veiled character, reminding one of the viola da gamba. In Nicolo Amati's instruments the tone is clearer and more transparent, but comparatively small. It was left to another generation of makers to combine these qualities and to fix upon a model, which after the lapse of nearly a century and a half has

proved itself incapable of even the most trifling improvement. [P. D.]

AMBASSADRICE, L', opera in three acts; libretto by Scribe; music by Auber; first performed at the Opéra Comique, Dec. 21, 1836.

AMBER WITCH, THE, a romantic opera in four acts, by W. V. Wallace; libretto by H. F. Chorley; first produced at Her Majesty's Theatre, Feb. 28, 1861.

AMBROGETTI, Giuseppe, an excellent *buffo*, who appeared in 1807, and at Paris in 1815 in 'Don Giovanni'; and at the opera in London in 1817, where he was very successful. His voice was a bass of no great power, but he was an excellent actor, with a natural vein of humour, though often put into characters unsuited to him as a singer; yet he acted extremely well, and in a manner too horribly true to nature, the part of the mad father in Paer's beautiful opera 'Agnese,' while that of the daughter was sung by Camporese. He remained until the end of the season of 1821, in which his salary was £400. He married Teresa Strinasacchi the singer. The date of his death is not known. He was said to have become a monk in France; but in 1838 he was in Ireland, since which nothing has been heard of him. [J. M.]

AMBROS, August Wilhelm. Born Nov. 17, 1816, at Mauth in Bohemia. By virtue of his 'Geschichte der Musik' (Breslau, Leuckart), the fourth volume of which, covering the epoch of Palestrina, has recently appeared, he must be considered the greatest living German authority on all questions concerning the history of European music from ancient Greece to the present day. In spite of having suffered till past his fiftieth year under that curse of dilletantism, serving two masters—being at the same time a hardworked *employé* in the Austrian Civil Service and an enthusiastic musician and littérateur, pianist, composer, critic and historian—his indomitable pluck and perseverance has enabled him to put forward a formidable array of writings on the history and æsthetics of music, all of which bear the stamp of a rich, highly cultured and very versatile mind. They are as remarkable for their many-sided learning and accuracy as for their lucid arrangement and brilliant diction. Ambros' father, postmaster and gentleman farmer, was a good linguist and excellent mathematician, and his mother, a sister of Kiesewetter, the historian of music, a good pianist of the old school and an accomplished singer. They gave him every chance to acquire the elements of modern culture at the gymnasium and subsequently at the university of Prague; drawing, painting, poetry were not forgotten; music only, which fascinated him above all things, and for instruction in which he passionately longed, was strictly prohibited. It was intended that he should enter the civil service, and music was considered both a dangerous and an undignified pastime. Nevertheless he learnt to play the piano on the sly, and worked hard by himself at books of Counterpoint and Composition. In 1840, after a brilliant career and with the title of *doctor juris*, he left the university and entered the office of the Attorney-General, where he steadily advanced to Referendarius in 1845, Prosecuting Attorney in matters of the press in 1848, &c. Soon after 1850, when he married, his reputation as a writer on musical matters spread beyond the walls of Prague. He answered Hanslick's pamphlet, 'Vom musikalisch Schönen,' in a little volume, 'Die Gränzen der Poesie und der Musik,' which brought down upon him, especially in Vienna, a shower of journalistic abuse, but which procured for him on the other hand the friendship and admiration of many of the foremost German musicians. It was followed by a series of elaborate essays: 'Culturhistorische Bilder aus der Musikleben der Gegenwart,' which were read with avidity and appeared in a second edition (Leipzig, Mathes) in 1865. Thereupon the firm of Leuckart engaged him to begin his 'History of Music,' his life's work. From 1860 to 1864 he was making researches towards it in the Court Library at Vienna, at Venice, Bologna, Florence and Rome. In 1867 he was ransacking the Royal Library at Munich, one of the richest in Europe, and in 1868, 1869, and 1873 was again in Italy extending his quest as far as Naples. The third volume, reaching to Palestrina, was published in 1868. In 1872 and 1874 he published two series of 'Chips from his Workshop,' under the title of 'Bunte Blätter,' being essays on isolated musical and artistic subjects, and written in a sparkling non-technical manner, but full of matter interesting both to professional artists and *dilettanti*. He is now Professor of the History of Music at the university of Prague; and, thanks to the liberality of the Academy of Science at Vienna, is in possession of sufficient means and leisure to continue his great task. He has appeared in public repeatedly as a pianist, and his compositions, Overtures to 'Othello,' and Calderon's 'Magico Prodigioso'; a number of pianoforte pieces, 'Wanderstücke,' 'Kinderstücke,' 'Landschaftsbilder'; numerous songs; a 'Stabat Mater,' two Masses in B flat and A minor, etc., most of which have a strong smack of Schumann, besides proving him to be a practical musician of far more than common attainments, give an additional weight to his criticisms, showing these to stand upon the firm ground of sound technical attainments. He died, June 28, 1876. [E. D.]

AMBROSIAN CHANT. The ecclesiastical mode of saying and singing Divine Service, set in order by St. Ambrose for the cathedral church of Milan about A.D. 384. We have little historical information as to its peculiarities. That it was highly impressive we learn from the well-known passage in St. Augustine's 'Confessions,' book ix. chap. 6.

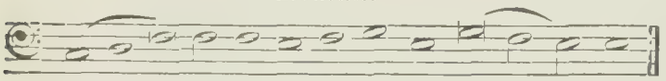
It has been stated without proof, and repeated by writer after writer on the subject, that St. Ambrose took only the four 'authentic' Greek modes, being the first, third, fifth, and seventh of the eight commonly called the Gregorian

Tones, from being all used in the revision of the Roman Antiphonarium by St. Gregory the Great at a subsequent date (A.D. 590). But St. Ambrose's own statement in his letter to his sister St. Marcelina is merely that he wished to take upon himself the task of regulating the tonality and the mode of execution of the hymns, psalms, and antiphons that were sung in the church he had built at Milan. It must be confessed that we really know little or nothing of the system and structure of the Ambrosian melodies, and no existing records show anything essentially different from Gregorian plainsong.

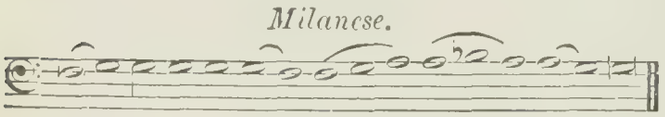
The subject of Byrd's anthem 'Bow Thine ear, O Lord,' originally written to the words 'Ne irascaris domine,'

has always been quoted, since Dr. Crotch published his 'Specimens,' as a portion of the plainsong of St. Ambrose. A comparison of the liturgical text and ritual of Milan and Rome shows a different setting of the musical portions of the mass, as well as many variations in rubrics and in the order and appropriation of various portions to the celebrant and assistants, in the two uses. Thus the 'Gloria in excelsis' precedes the Kyrie in the Milan and follows it in the Roman Mass. The setting of the intonation of this, as taken from the missals of the two, may be here given as a specimen of the differences in the plainsong.

Roman.



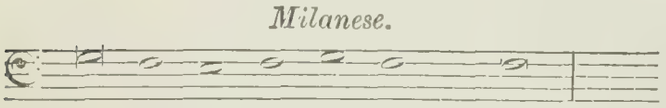
Milanese.



These intonations of the Creed

Roman.

Milanese.



will also serve to show the kind of difference still discernible in the two rites.[1]

But the principal boon bestowed on the Church by St. Ambrose was the beautiful rhythmical hymns with which he enriched the musical service of Milan Cathedral. Many hymns are called Ambrosian because written after his manner; but some ten of the ancient hymns are from his own pen, among which may be mentioned 'Veni Redemptor Gentium' and 'Eterna Christi munera' (Hymnal Noted, Nos. 12, 36).

The entire accent and style of chanting, as regulated by St. Ambrose, was undoubtedly an artistic and cultivated improvement on that of preceding church services, such as would naturally result from the rare combination of piety, zeal, intellect, and poetical and musical power by which he was distinguished. The Ambrosian chant was eventually merged, but certainly not lost, in that vast repertory of plainsong, whether then ancient or modern, which we now call GREGORIAN, from the name of the next great reformer of church music, St. Gregory the Great. [T. H.]

AMEN. This word has been often employed by composers as an opportunity for the display of fugue and counterpoint, just as some of Palestrina's finest music is given to the names of the Hebrew letters, Aleph, Beth, etc., in his 'Lamentationes Jeremiae.' Witness Handel's final chorus in the 'Messiah,' Dr. Cooke's Amen in double augmentation, engraved on his tomb (see AUGMENTATION), another very spirited chorus in the Italian style by the same composer (Hullah's Part Music, No. 6), fine choruses by Leo, Cafaro, Clari, and Bonno in the Fitzwilliam Music, and many others. [G.]

AMERICAN ORGAN. A free-reed instrument similar in its general construction to the HARMONIUM, but with some important differences. In the first place the reeds in the American organ are considerably smaller and more curved and twisted than in the harmonium, and there is a wider space left at the side of the reed for it to vibrate, the result being that the tone is more uniform in power, and that the expression stop when used produces much less effect. The curvature of the reeds also makes the tone softer. In the American organ moreover the wind-channel or cavity under which the vibrators are fixed is always the exact length of the reed, whereas in the harmonium it is varied according to the quality of tone required, being shorter for a more reedy tone and longer for a more fluty one. Another point of difference in the two instruments is that in the harmonium the wind is forced outward through the reeds, whereas in the American organ, by reversing the action of the bellows, it is drawn inwards. The advantages of the American organ as compared with the harmonium are that the blowing is easier, the expression stop not being generally used, and that the tone is of a more organ-like quality, and therefore peculiarly adapted for sacred music; on the other hand, it is inferior in having much less variety of tone, and not nearly so much power of expression. These instruments are sometimes made with two manuals; in the most complete specimens the upper manual is usually furnished with one set of reeds of eight-feet and one of four-feet pitch, and the lower manual with one of eight- and one of

[1] The Roman examples are from a fine quarto Missale Romanum printed at Antwerp in 1598, corresponding with Guidetti's Directorium and the present use. Those for the use of Milan are from a portion of the 'Missale Ambrosianum Caroli Cajetani Cardinalis, novissime impressum, Mediolani,' A.D. 1831, brought from Milan in 1871 by the writer of this article.

sixteen-feet, those on the upper manual being also voiced softer for the purposes of accompaniment. A mechanical coupling action is also provided by which the whole power of the instrument can be obtained from the lower row of keys. Pedals, similar to organ pedals, are also occasionally added and provided with reeds of sixteen- and eight-feet pitch. The names given to the stops vary with different makers; the plan most usually adopted being to call them by the names of the organ stops which they are intended to imitate, e. g. diapason, principal, hautboy, gamba, flute, etc. Two recent improvements in the American organ should be mentioned—the automatic swell, and the vox humana. The former consists of a pneumatic lever which gradually opens shutters placed above the reeds, the lever being set in motion by the pressure of wind from the bellows. The greater the pressure, the wider the shutters open, and when the pressure is decreased they close again by their own weight. In this way an effect is produced somewhat similar, though far inferior, to that of the expression stop on the harmonium. The vox humana is another mechanical contrivance. In this a fan is placed just behind the sound-board of the instrument, and being made to revolve rapidly by means of the pressure of wind, its revolutions meet the waves of sound coming from the reeds, and impart to them a slightly tremulous, or vibrating quality.

The principle of the American organ was first discovered about 1835 by a workman in the factory of M. Alexandre, the most celebrated harmonium-maker of Paris. M. Alexandre constructed a few instruments on this plan, but being dissatisfied with them because of their want of expressive power, he soon ceased to make them. The workman subsequently went to America, carrying his invention with him. The instruments first made in America were known as 'Melodeons,' or 'Melodiums,' and the American organ under its present name, and with various improvements suggested by experience, was first introduced by Messrs. Mason and Hamlin of Boston, about the year 1860. Since that time it has obtained considerable popularity both in America and in this country.

A variety of the American organ was introduced in 1874 by Messrs. Alexandre under the name of the 'Alexandre Organ.' In this instrument, instead of the single channel placed above the reeds there are two, one opening out of the other. The effect of this alteration is to give a quality of tone more nearly resembling that of the flue-stops of an organ. The reeds are also broader and thicker, giving a fuller tone, and being less liable to get out of order. [E. P.]

AMICIS, Anna Lucia de, a very celebrated singer, born at Naples about 1740. She was at first successful only in 'Opera Buffa,' in which she sang in London in 1763, appearing in 'La Cascina,' a pasticcio, given by John Christian Bach, and other similar pieces. Bach, however, thought so highly of her that he wrote for her in serious opera, in which she continued afterwards to perform until she left the stage. Burney says she was the first singer who sang rapid ascending scales staccato, mounting with ease as high as E in altissimo. Her voice and manner of singing were exquisitely polished and sweet; and 'she had not a movement that did not charm the eye, nor a tone but what delighted the ear.' In 1771 she retired, and married a secretary of the King of Naples, named Buonsollazzi. In 1773 she sang in Mozart's early opera, 'Lucio Silla,' at Milan, the principal part of *Giunia*. On this occasion she exerted herself much in behalf of the young composer, who took great pains to please her, and embellished her principal air with new and peculiar passages of extraordinary difficulty. On the night of the first performance the tenor, who was inexperienced, 'being required, during the first air of the prima donna, to make some demonstration of anger towards her, so exaggerated the demands of the situation, that it seemed as if he were about to give her a box on the ear, or to knock her nose off with his fist, and at this the audience began to laugh. Signora de Amicis, in the heat of her singing, not knowing why the public laughed, was surprised; and being unaware of the ridiculous cause, did not sing well the first evening, and an additional reason for this may be found in a feeling of jealousy that the *primo uomo* (Morgnoni), immediately on his appearance on the scene, should be applauded by the Archduchess. This, however, was only the trick of a *musico*; for he had contrived to have it represented to the Archduchess that he would be unable to sing from fear, in order to secure immediate applause and encouragement from the court. But to console de Amicis, she was sent for the next day to court, and had an audience of both their royal highnesses for an hour.'[1] In 1789 she still sang well, though nearly fifty years old. The date of her death is not known. [J. M.]

AMICIS, Domenico de'. This artist, who is not mentioned by any of the biographical dictionaries, sang with Anna de' Amicis in 1763 at London, in 'La Cascina.' It is impossible to say how he was related to that singer; but it is possible that he was her first husband. [J. M.]

AMILIE, OR THE LOVE TEST, a romantic opera in three acts, words by J. T. Haines, music by W. M. Rooke. Produced at Covent Garden Theatre Dec. 2, 1837, and ran for more than twenty nights.

AMNER, John, Organist and Master of the Choristers of Ely Cathedral. He succeeded George Barcroft in 1610, and held the appointments till his death in 1641. He took his degree as Bachelor in Music at Oxford in May 1613. In 1615 he printed his 'Sacred Hymns of 3, 4, 5, and 6 parts, for Voices and Vyols,' dedicated to his 'singular good lord and maister,' the Earl of Bath. He composed much church music. Three services and fifteen anthems are preserved in the books at Ely; and several other specimens of his skill are to be found in MS. else-

[1] Letter of Leopold Mozart.

where. (Dickson's *Cat. of Musical MSS. at Ely;* Rimbault, *Bib. Madrigaliana.*) [E. F. R.]

AMNER, RALPH, the son of John Amner, before mentioned. It appears from the Registers of Ely that he was elected a lay-clerk there in 1604, and was succeeded in 1609 by Michael Este, the well-known composer. Amner was then probably admitted into holy orders, as he is styled 'Vicar,' i.e. Minor Canon. Upon the death of John Amery, a gentleman of the Chapel Royal, July 18, 1623, 'Ralphe Amner, a basse from Winsore, was sworn in his place.' He died at Windsor, March 3, 1663-4. In Hilton's 'Catch that Catch Can,' 1667, is 'a Catch in stead of an Epitaph upon Mr. Ralph Amner of Windsor, commonly called the Bull Speaker, who dyed 1664; the music composed by Dr. William Child.' (*Reg. of Ely; Cheque-Book of Chapel Royal,* Camd. Soc.). [E. F. R.]

AMOREVOLI, ANGELO, born at Venice, Sept. 16, 1716. After appearing at the principal opera-houses in Italy with brilliant success, where he was admired for his fine voice and vocalisation, and the perfection of his shake, he was engaged for the Court Theatre at Dresden. He sang for the Earl of Middlesex at the opera in London in 1741; but returned to Dresden, where he died, Nov. 15, 1798. [J. M.]

ANACKER, AUGUST FRIEDRICH, born Oct. 17, 1790, at Freiberg in Saxony, son of a very poor shoemaker. As a scholar at the Gymnasium his musical faculty soon discovered itself, but his poverty kept him down, and it was not till a prize of 1300 thalers in a lottery fell to his share that he was able to procure a piano and music. The first piece he heard performed was Beethoven's Polonaise in C, and Beethoven became his worship through life. In 1813, after the battle of Leipsic, he went to that university, and acquired the friendship of Schicht, F. Schneider, and others of the best musicians. In 1822 he was made 'cantor' of his native place, and principal music-teacher in the normal school. From that time onwards for thirty years his course was one of ceaseless activity. No one ever worked harder or more successfully to make his office a reality. In 1823 he founded the Singakademie of Freiberg, and in 1830 started a permanent series of first-class subscription concerts; he formed a musical association among the miners of the Berg district, for whom he wrote numerous part-songs; and in short was the life and soul of the music of the place. At the same time he composed a mass of music of all kinds and all dimensions. But his music is nothing remarkable: it is the energy and devotion of the man that will make him remembered. He died at his post on August 21, 1854, full of honour and esteem. The only piece of Anacker's which has probably been printed in England is a 'Miner's Song' (four parts) in the collection called 'Orpheus,' No. 41. [G.]

ANACREON, OU L'AMOUR FUGITIF, an opera-ballet in two acts, the libretto by Mendouze, and the music by Cherubini, produced at the Opera in Paris on Oct. 4, 1803. It is now only known by its magnificent overture.

ANACREONTIC SOCIETY. The meetings of this aristocratic society, established by several noblemen and other wealthy amateurs, were held at the Crown and Anchor Tavern in the Strand towards the close of the last century. The concerts, in which the leading members of the musical profession took part as honorary members, were given fortnightly during the season, and were followed by a supper, after which the president or his deputy sang the constitutional song 'To Anacreon in Heaven.' This was succeeded by songs in every style, and by catches and glees sung by the most eminent vocalists of the day. The privilege of membership was greatly valued, and names were frequently placed on the list for a long period in advance. The society was dissolved in 1786, when Sir Richard Hankey was president, owing, as Parke states in his 'Musical Memoirs,' to the annoyance of the members at a restraint having been placed upon the performance of some comic songs which were considered unfit for the ears of the Duchess of Devonshire, the leader of the *haut-ton* of the day, who was present privately in a box specially fitted up under the orchestra. The members resigned one after another, and shortly afterwards the society was dissolved at a general meeting. [C. M.]

ANALYSIS. The practice now prevalent in England of accompanying the titles and words of the music performed at concerts by an analysis of the music is one of comparatively recent date. The identity of the pieces in the programmes at the end of the last and the beginning of the present century is rarely certain. 'New Grand Overture, Haydn,' or 'Grand Overture, MS., Haydn,' is the usual designation of Haydn's symphonies as they were produced at Salomon's concerts in 1791, '92. The programmes of the Philharmonic Society are at first almost equally vague — 'Symphony, Mozart,' 'Symphony, Beethoven,' 'Symphony, never performed, Beethoven,' is with rare exceptions the style in which the *pièces de resistance* at the Society's concerts are announced. It is not until the fifth season (1817) that the number or the key indicates which works the audience might expect to hear. The next step was to print on the fly-leaf of the programme the words of the vocal pieces, with, in the case of Spohr's 'Weihe der Töne' (Feb. 23, 1835), a translation of Pfeiffer's 'Ode,' or of the 'Pastoral Symphony' (May 11, 1835), some verses from Thomson's 'Seasons,' or at the first performance of the overture to 'Leonora,' No. 1 (due to Mendelssohn), a short account of the origin and dates of the four overtures.

The first attempt to assist amateurs to follow the construction of classical music during its performance which the writer has met with is that of Mr. Thomson, late Professor of Music in the University of Edinburgh, who in the year 1841, and even earlier, added analytical and historical notices of the pieces in the programmes of the concerts of the Professional Society of

Edinburgh. His analyses entered thoroughly into the construction of the overtures and symphonies performed, but did not contain quotations from the music.—The next step appears to have been made by Mr. John Ella when he started the matinées of the Musical Union in 1845. His 'synoptical analysis,' with quotations, has preserved its original form and extent down to the present time.—The same thing was done, but at greater length, by Dr. Wylde in the programme-books of the New Philharmonic Society, which commenced its concerts in 1852. Some of these analyses were accompanied by extracts, and in many cases are of permanent value, such as those of Beethoven's 'Pastoral Symphony,' Mozart's E flat ditto, and the overture to the 'Zauberflöte' (1858). An analysis of the 'Messiah' was issued by the Sacred Harmonic Society in 1853, and was followed by similar dissections of 'The Creation,' Beethoven's Mass in D, 'Israel in Egypt,' the 'Lobgesang,' Mozart's 'Requiem,' and, some years later, 'Naaman.'

As early as 1847 Mr. Hullah had given biographical notices of composers in the book of words of his historical concerts at Exeter Hall. The books of words of the Handel Festival (1857, etc.) contain historical accounts of the works performed. In connection with the early Handel Festivals the late Mr. Chorley published two pamphlets called 'Handel Studies,' containing analyses of the 'Messiah,' the Dettingen 'Te Deum,' and 'Israel in Egypt.'

In 1859 the Monday Popular Concerts were established, and the programmes contained notices of the pieces. On the occasion of Mr. Charles Hallé's Beethoven-recitals two years later full and able analyses of the whole of the sonatas were published, accompanied by copious extracts. These have since been incorporated in the Monday Popular Concert books, with similar analyses of other pieces, the whole forming a body of criticism and analysis which does honour to its author.—Shortly after the foundation of the Saturday Concerts at the Crystal Palace, short remarks were attached to some of the more prominent pieces. These have gradually become more systematic and more analytical, but they are of a very mixed character when compared with those last mentioned.—The same may be said of the remarks which adorned the programmes of Herr Pauer's recitals in 1862, '63, '67, which are half biographical and half critical, but do not attempt to analyse each piece.

In 1869 the Philharmonic Society adopted analytical programmes prepared by Mr. Macfarren, which have been maintained since. Mr. Macfarren also prepares similar notices for the British Orchestral Society; as he did those for the Chamber Concerts of MM. Klindworth, Blagrove, and Daubert in 1861.

In addition to the above, analytical programmes are issued by the Wagner Society, the Reid Concert, the Glasgow and Edinburgh Choral Unions, the Liverpool Philharmonic Society, the Albert Hall Concerts, Mr. Walter Bache, and others. The book of words of Mr. Sullivan's oratorio 'The Light of the World' contains a lengthened analysis of the work number by number.

The practice of analysing pieces of classical music with the view to enable the more or less cultivated amateur to seize the ideas and mode of treatment of the composer, is one which, if carried out with skill and judgment, is surely commendable. The fact that a movement is written on a definite plan or 'form,' and governed by rules more or less rigid, though obvious to the technical musician is news to many an amateur; and yet without understanding such facts it is impossible fully to appreciate the intention or the power of the composer. In following the scheme of the music the hearer adds to the pleasure of the sounds the pleasure of the intellect. In addition to this there are few great pieces of music in which historical or biographical facts as to the origin and progress of the work, key, etc., connecting the music with the personality of the composer, may not be stated so as to add materially to the pleasure and profit of the hearer.

Analytical programmes do not appear to have been yet introduced into the concert-rooms abroad; but elaborate analyses of single works have been made by foreign critics, such as Wagner's of the ninth Symphony (translated and circulated in 1855, when Wagner conducted that Symphony at the Philharmonic), Liszt's of 'Tannhäuser' and 'Lohengrin,' and von Bülow's of Wagner's 'Faust Overture'; and the step from these to illustrated analyses like those used in England will not impossibly soon follow. [G.]

ANALYSIS OF COMPOUND MUSICAL SOUNDS. The separation of such sounds into their component elements, or the determination of the elements they contain. The sounds ordinarily met with in music are not simple and single notes as is commonly supposed, but are usually compounds of several sounds, namely one fundamental one (generally the most powerful) accompanied by higher harmonics, varying in number and strength in different cases. These however blend so completely into one sound that the unaided ear, unless specially trained, fails to distinguish the separate elements of which it is made up. Such a compound sound is intentionally produced artificially with the compound stops of a large organ, and if these are well in tune and well proportioned, it is often difficult to distinguish them separately.

In acoustical investigations it is very desirable to ascertain of what simple sounds a compound one is composed, and this is done by a species of analysis similar to that so common in chemistry. In compound chemical substances the elements are, like the elements of a compound sound, usually undistinguishable by the eye, and the plan is adopted of applying to the substance a *test*, which having a peculiar affinity for some particular element, will make known its presence in the compound. Such a test exists for elemental sounds in what the Germans call *Mittönen*; or *sympathetic resonance.*

Certain bodies will vibrate when certain notes,

corresponding to their vibratory capacity, and those only, are sounding near them, and they therefore test the presence of such notes, whether perceptible or not to the ear. For example, if we wish to find out whether the note is present in a compound sound, we have only to bring within its range a sonorous body, tuned to that note, as for example the second string of a violin, and if that note is present, in sufficient force, the string will be sympathetically set in vibration. We can judge *a priori* by the theoretical laws of harmonics, what notes are or are not likely to be present in a certain compound sound, and by applying tests for each, in this way, the sound may be completely analysed, both (as chemists say) quantitatively and qualitatively, that is, we may not only find what notes are present but also, by proper provision in the test body, what are the relative strengths of each note.

This method of analysis is chiefly due to Helmholtz, the test bodies preferred by him being hollow glass vessels. Each of these has such a capacity that the air it contains will vibrate with a particular note, and by having several of these, tuned to the notes required, the presence of these notes in any compound sound may be ascertained with great facility. [W. P.]

ANCIENT CONCERTS. The Ancient Concerts, or, to give them their formal title, The Concert of Antient Music, were established in 1776 by a committee consisting of the Earls of Sandwich and Exeter, Viscount Dudley and Ward, the Bishop of Durham, Sir Watkin W. Wynn, Bart., Sir R. Jebb, Bart., and Messrs. Morrice and Pelham, who were afterwards joined by Viscount Fitzwilliam and Lord Paget (afterwards Earl of Uxbridge). The performances were also known as 'The King's Concerts.' Mr. Joah Bates, the eminent amateur, was appointed conductor, the band was led by Mr. Hay, and the principal singers were Miss Harrop (afterwards Mrs. Bates), the Misses Abrams, Master Harrison (subsequently a famous tenor), the Rev. Mr. Clarke, Minor Canon of St. Paul's (tenor), Mr. Dyne (counter-tenor), and Mr. Champness (bass). The chief rules of the concerts were that no music composed within the previous twenty years should be performed, and that the directors in rotation should select the programme. Mr. Bates retained the conductorship till the time of his death in 1779, and directed the concerts personally, except for two years, when Dr. Arnold and Mr. Knyvett acted for him. He was succeeded by Mr. Greatorex, who remained in office until his death in 1831, when Mr. Knyvett, who had been the principal alto singer for many years, was chosen to succeed him. The resolution of the directors in 1839 to change the conductor at the choice of the director for each night led to the resignation of Mr. Knyvett, and the post was then offered to Dr. Crotch, who ultimately declined it. Sir George Smart was invited to conduct the first two concerts of 1840, and was succeeded by Mr. (afterwards Sir Henry) Bishop, Mr. Lucas, and Mr. Turle. It was found however that this system did not work well, and in 1843 Sir Henry Bishop was appointed sole conductor. There was also a change in the leadership of the band, Mr. W. Cramer succeeding Mr. Hay in 1780, and being succeeded in his turn by his son François, who filled the post from his father's death in 1805 until 1844, when he retired. Mr. J. D. Loder led the band from 1844 to 1846, in which year Mr. T. Cooke was appointed. Until 1841 it was the custom for the conductor to preside at the organ, but in that year the directors appointed Mr. Charles Lucas as their organist. The band at the time of the establishment of the concerts consisted of sixteen violins, five violas, four cellos, four oboes, four bassoons, two double basses, two trumpets, four horns, one trombone, and drum. At the close of the concerts the orchestra numbered seventeen violins, five violas, five cellos, five double basses, three flutes, two oboes, two clarinets, two bassoons, four horns, three trumpets, three trombones, two drums, one harp, two cymbals, and triangle. The canto chorus at first consisted entirely of boys selected chiefly from the boys of the Chapel Royal and Westminster Abbey, but they afterwards gave place to ladies. The earlier programmes included an overture (usually one of Handel's), two or three concertos by Handel, Martini, Corelli, Avison, or Geminiani, several choruses and solos from Handel's oratorios, and an anthem, glee, or madrigal; but occasionally an entire work, such as the Dettingen 'Te Deum,' was given as the first part of the concert. For many years the programmes were almost exclusively Handelian, varied by songs from Glück, Bach, Purcell, Hasse, and others. After the year 1826 there was greater variety in the schemes, and Mozart's Jupiter Symphony, his Symphonies in D and E flat, the overture to the 'Zauberflöte,' and a selection from his Requiem were included in the programmes for 1826. From that date an orchestral work by Mozart was performed at nearly every concert, although Handel still maintained his supremacy. In 1834 we find Haydn's 'Surprise' symphony, and in 1835 a selection from the 'Creation' and the 'Seasons' in the programmes. In the latter year Beethoven was represented by his 'Prometheus' overture, and during the last ten years of the concerts his symphony in D, overtures to 'Fidelio' and 'Egmont,' a chorus from 'King Stephen,' and other works were given. In 1847, at a concert directed by Prince Albert, Mendelssohn was the solo organist, and played Bach's Prelude and Fugue on the name of 'Bach.' The later programmes were drawn from varied sources, Handel being only represented by one or two items. In 1785 the Royal Family commenced to attend the concerts regularly, and then it was that they were styled 'The King's Concerts.' As a mark of his interest in the performances King George the Third personally wrote out the programmes, and in later years Prince Albert was one of the directors. Among the distinguished artistes who appeared at these concerts were Madame Mara and Mrs. Billington (1785), Signora Storace (1787), Miss Parke, Miss Poole (1792), Messrs.

Harrison and Bartleman (1795). Up to 1795 the concerts were held in the new rooms, Tottenham Street, afterwards known as the Queen's or West London Theatre, but in that year they were removed to the concert-room in the Opera House, and in 1804 to the Hanover Square Rooms. In 1811 Catalani made her first appearance, and two years later Miss Stephens (afterwards Countess of Essex) made her *début* at these concerts. In 1816 Mrs. Salmon was heard, and shortly afterwards Messrs. Braham and Phillips were engaged. In addition to the twelve concerts given every year a thirteenth was added, when 'The Messiah' was performed in aid of the 'Fund for the Support of Decayed Musicians and their Families,' a practice still maintained in the annual performances by the Royal Society of Musicians. In accordance with one of the customs connected with the concerts it was the rule for the director of the day to entertain his brother directors and the conductor at dinner. The library of old masters belonging to the society was after its discontinuance removed to Buckingham Palace. [C. M.]

ANDANTE (Ital., participle of the verb *andare*, 'to go'). Going, moving along at a moderate pace. In modern music this word is chiefly used to designate a rather slow rate of movement; formerly however it was used more generally in its literal sense. Thus in Handel's music we frequently find the indication 'andante allegro,' a contradiction in terms in the modern sense of the words, but by which is simply meant 'moving briskly.' Andante is a quicker rate of movement than larghetto, but on the other hand is slower than allegretto. As with most other time-indications it is frequently modified in meaning by the addition of other words, e. g. 'andante sostenuto' would be a little slower, and 'andante un poco allegretto' or 'andante con moto' a trifle faster, than 'andante' alone. Like adagio, largo, etc., this word is also used as the name of a piece of music (e. g. Beethoven's 'Andante in F') or as the name of a slow movement of a symphony, sonata, etc. [E. P.]

ANDANTINO (Ital.). The diminutive of ANDANTE (q. v.). As 'andante' means literally 'going,' its diminutive must mean 'rather going,' i. e. not going quite so fast; and properly 'andantino' designates a somewhat slower time than andante. Some modern composers however, forgetting the original meaning of the word, and thinking of andante as equivalent with 'slow,' use andantino for 'rather slow,' i. e. somewhat quicker. In which sense the word is intended can only be determined by the character of the music itself. No more striking proof of the uncertainty which prevails in the use of these time-indications can be given than is to be found in the fact that three movements in Mendelssohn's 'Elijah' the first of which, 'If with all your hearts,' is marked 'andante con moto,' the second, 'The Lord hath exalted thee,' merely 'andante,' and the third, 'O rest in the Lord,' 'andantino,' are all in exactly the same time, the metronome indication being in each case ♩ = 72. [E. P.]

ANDER, ALOYS, one of the most famous German tenor singers of recent times; born August 24, 1821, at Libitz in Bohemia. His voice though not powerful was extremely sympathetic in quality. He went to Vienna in the hope that his talents would be recognised there, but it required all the energy and influence of WILD the singer, at that time Ober-Regisseur to the court opera-house before he was allowed to make the experiment of appearing there for the first time (Oct. 22, 1845) as Stradella in the opera of that name, though with no previous experience of the boards whatever. His success was complete, and decided his course for life, and that single night raised him from a simple clerk to the rank of a 'primo tenore assoluto.' Still more remarkable was his success in the 'Prophète,' which was given in Vienna for the first time on Feb. 28, 1850. Meyerbeer interested himself in the rapid progress of Ander, and from that date he became the established favourite of the Vienna public, to whom he remained faithful, notwithstanding tempting offers of engagements elsewhere. His last great part was that of Lohengrin, in which he combined all his extraordinary powers. As an actor he was greatly gifted, and had the advantage of a very attractive appearance. His voice, not strong and somewhat veiled in tone, was in harmony with all his other qualities; his conceptions were full of artistic earnestness, and animated by a noble vein of poetry. His physical strength however was unequal to the excitement of acting, and was impaired by the artificial means which he took to support himself. His last appearance was as Arnold in 'William Tell,' on Sept. 19, 1864; he was then failing, and shortly afterwards totally collapsed. He was taken to the Bath of Wartenberg in Bohemia, where he died on Dec. 11, but was buried in Vienna amid tokens of universal affection. [C. F. P.]

ANDERSON, MRS. LUCY, is the daughter of Mr. John Philpot, a professor of music and music-seller at Bath, where she was born in 1797. Miss Philpot early manifested a love for pianoforte playing, and although she never received any other instruction upon the instrument than some lessons given, at very irregular intervals, by her cousin, Mr. Windsor, of Bath, she soon, by perseverance and observation of the eminent players who occasionally appeared at the Bath concerts, arrived at such a degree of skill as to be able to perform in public at those concerts, which she did with great success, and also to follow music as a profession. Ill health, however, induced her to quit Bath and to come to London, where her success was speedily assured, she soon becoming eminent in her profession. In July 1820 Miss Philpot was married to Mr. George Frederick Anderson, a violinist engaged in all the best orchestras, and subsequently, for many years, master of the Queen's private band. Mrs. Anderson enjoys the distinction of being the first female pianist who played at the Philhar-

monic Society's concerts. She was the instructress on the pianoforte of the Princess, now Queen, Victoria, and of her children. [W. H. H.]

ANDRE, JOHANN, the head of an extensive musical family, was born at Offenbach, A.M. on March 28, 1741. His father was proprietor of a silk factory, and the boy was intended to carry on the business. But the love of music was too strong in him; he began by teaching himself, until in 1761 he happened to encounter an Italian opera company at Frankfort, which added fresh food to his desire. His first comic opera, 'Der Töpfer' (the Potter), was so successful as to induce Goethe to confide to him his operetta of 'Erwin und Elmire,' (1764) which had equal success, as had also some songs produced at the same time. After this André received a call to act as director of the music at the Döbblin Theatre in Berlin, which he obeyed by settling in Berlin with his family, after handing over the factory (to which since 1774 he had added a music printing office) to his younger brother. Here he enjoyed the instruction of Marpurg, and composed a quantity of songs, dramas, and other pieces for the theatre. Not being able however, owing to the distance, to give the necessary attention to the printing-office, he returned to Offenbach at the end of seven years, and resided there in the pursuit of his business and his music till his death on June 18, 1799. Before that date his establishment had issued the large number of 1200 works, and he himself had composed, in addition to many instrumental pieces, some thirty operas and dramas, and a vast number of melodious songs and vocal pieces, many of which became popular, amongst them the still favourite Volkslied 'Bekränzt mit Laub.' Among his operas was one by Bretzner in four acts, 'Belmonte und Constanza, oder die Entführung aus dem Serail,' produced in Berlin on May 26, 1781, and often repeated with applause. Shortly afterwards, on July 12, 1782, appeared Mozart's setting of the same opera, with alterations and additions to the text by Stephanie. A paper war followed between the two librettists, during which André took occasion to speak nobly on the side of Stephanie, notwithstanding his having assisted Mozart in the preparation of an opera which had far surpassed his own. After André's death the business was carried on by his third son, JOHANN ANTON, the most remarkable member of the family. He was born at Offenbach, Oct. 6, 1775, and while almost an infant showed great predilection and talent for music. He was an excellent player both on the violin and piano, and a practised composer before entering at the University of Jena, where he went through the complete course of study. He was thus fully competent on the death of his father in 1799 to assume the control of the business, and indeed to impart to it fresh impulse by allying himself with Senefelder the inventor of lithography, a process which he largely applied to the production of music. In the same year with his father's death he visited Vienna, and acquired from Mozart's widow the entire musical remains of the great composer, an act which spread a veritable halo round the establishment of which he was the head. André published the thematic catalogue which Mozart himself had kept of his works from Feb 9, 1784 to Nov. 15, 1791, as well as a further thematic catalogue of the whole of the autographs of the master which had come into his possession. André was equally versed in the theory and the practice of music; he attempted every branch of composition, from songs to operas and symphonies, with success. Amongst other things he was the author of 'Proverbs,' for four voices (op. 32), an elaborate joke which has recently been the object of much dispute, owing to its having been published in 1869 by Aibl of Munich as a work of Haydn's. As a teacher he could boast of a series of distinguished scholars. His introduction to the violin and his treatise on harmony and counterpoint were both highly esteemed. So also were the two first volumes of his unfinished work on composition. André was dignified with the title of Hofrath, and by the accumulation of musical treasures he converted his house into a perfect pantheon of music. He died on April 8, 1842. An idea of the respect in which he was held may be gained from various mentions of him in Mendelssohn's letters, especially that of July 14, 1836, and a very characteristic account of a visit to him in Hiller's 'Mendelssohn,' chapter i. Of his sons mention may be made of AUGUST, the present proprietor of the establishment, and publisher of the 'Universal-Lexikon der Tonkunst' of Schladebach and Bernsdorf; of JOHANN BAPTIST, pupil of Aloys Schmitt and Kessler, and afterwards of Taubert and Dehn, a resident in Berlin; of JULIUS, who addicted himself to the organ, and was the author of a 'Practical Organ School,' which has gone through several editions, and of various favourite pieces for that instrument, as well as of four hand arrangements of Mozart's works; lastly of KARL AUGUST, who in 1835 undertook the management of the branch establishment opened at Frankfort by his father in 1828, adding to it a manufactory of pianos, and a general musical instrument business. He named his house 'Mozarthaus,' and the pianos manufactured there 'Mozartflügel,' each instrument being ornamented with a portrait of the master from the original painting by Tischbein in his possession. In 1855, on the occasion of the Munich Industrial Exhibition, he published a volume entitled 'Pianoforte making: its history, musical and technical importance ('Der Klavierbau,' etc.). [C. F. P.]

ANDREOLI, GIUSEPPE, a celebrated contrabassist, born at Milan in 1757, died in 1832; member of the orchestra of La Scala and professor of his instrument at the Conservatorio of Milan; also played the harp with success. [T. P. H.]

ANDREOLI. A musical family, not related to the foregoing. EVANGELISTA, the father—born 1810, died June 16, 75—was organist and teacher at Mirandola in Modena. His son, GUGLIEGLMO,

was born there April 22, 1835, and was pupil at the Conservatorio of Milan from 1847 to 53. A pianist of great distinction, remarkable for his soft and delicate touch, pure taste, and power of expression, as well as for great execution. He was well known in London, where he appeared at the Crystal Palace (Dec. 13, 56), the Musical Union (April 27, 58), the New Philharmonic (May 9, 59), and elsewhere. His health was never strong, and he died at Nice 1860. His compositions were unimportant. His brother CARLO was also born at Mirandola, and brought up at the Conservatorio of Milan, where he is now (1875) professor of the piano. He too was favourably known in London, though since 1871 his health has confined him to Italy and the south of France. [G.]

ANDREONI was an Italian singer engaged for the season of 1741 in London. He seems to have had an artificial low soprano or contralto voice, for his name appears to the song 'Let Hymen oft appear' in Handel's 'Allegro,' to which the composer has added in his MS. the words 'un tono più basso in sop^no,' meaning that it must be transposed for him. The song was probably sung by him in Italian, as a translation, beginning 'Se l'Imeneo fra noi verrà,' is added, as also to the song 'And ever against eating cares' ('E contro all' aspre cure'), which is given to the same singer. He had arrived too recently to be able to learn the language in time for the performance. He sang the contralto man's part in Handel's 'Imeneo' the same year, and in 'Deidamia,' that master's last opera. He does not seem to have gone with him, however, to Ireland; nor to have sung again in London. His subsequent history is not known. [J. M.]

ANDREVI, FRANCESCO, born near Lerida in Catalonia of Italian parents in 1785, died at Barcelona in 1844; was successively the director of music in the cathedrals of Valencia, Seville, Bourdeaux (1832 to 1842) where he fled during the civil war, and in the church of Our Lady of Mercy at Barcelona. His sacred compositions were good and numerous, but a 'Nunc Dimittis' and a 'Salve Regina,' printed in Eslava's collection of Spanish church music, 'Lira Sacro-Hispana,' are his only published works. His treatise on Harmony and Counterpoint was translated into French (Paris, 1848). [M. C. C.]

ANERIO, FELICE, an Italian composer of the Roman school, was born about 1560, and, after completing his studies under G. M. Nanini, was made Maestro at the English College. He afterwards took service with Cardinal Aldobrandini, and upon the death of Palestrina was named 'Compositore' to the Papal Chapel, on April 3, 1594. The date of his death is unknown. His printed compositions include the following: three books of 'Sacred Madrigals' for five voices (Gardano, Rome 1585); three books of 'Madrigals'; two books of sacred 'Concerti'; two books of Hymns, Canticles, and Motetti; 'Responsori' for the Holy Week; Litanies, Canzoni, and Motetti. His unpublished works are preserved in the collections of S. Maria in Vallicella, of the Vatican Basilica, and of the Pontifical Chapel. In the library of the Abbè Santini also, there was a considerable number of Anerio's Masses, with Psalms and other pieces. A Mass, a Te Deum, and 12 motets (one for 8 voices) by him, are given in Proske's 'Musica divina.' [E. H. P.]

ANERIO, GIOVANNI FRANCESCO, a younger brother of the preceding, born at Rome about 1567. His first professional engagement was as Maestro di Cappella to Sigismund III, King of Poland. He afterwards served in the same capacity in the cathedral of Verona. Thence he came to Rome to fill the post of musical instructor at the Seminario Romano, and was afterwards Maestro di Cappella at the church of the Madonna de' Monti. Lastly, in 1600, he was made Maestro at the Lateran, where he remained until 1613. He then disappears. He was one of the first Italians who made use of the quaver and its subdivisions. His printed works form a catalogue too long for insertion here. Suffice it to say that they consist of all the usual forms of sacred music, and that they were published (as his brother's were) by Soldi, Gardano, Robletti, etc. Giovanni Anerio had a fancy for decking the frontispieces of his volumes with fantastic titles, such as 'Ghirlanda di sacre Rose,' 'Teatro armonico spirituale,' 'Selva armonica,' 'Diporti musicale,' and the like. He was one of the adapters of Palestrina's mass 'Papæ Marcelli.' (See PALESTRINA). There were scores of several of his masses in the collection of the Abbè Santini. A requiem of his for 4 voices has been recently published by Pustet of Regensburg. [E. H. P.]

ANET, BAPTISTE, a French violinist, pupil of Corelli. After studying for four years under that great master at Rome, he appears to have returned to Paris about 1700, and to have met with the greatest success. There can be little doubt that by his example the principles of the great Italian school of violin-playing were first introduced into France. Probably owing to the jealousy of his French colleagues Anet soon left Paris again, and is said to have spent the rest of his life as conductor of the private band of a nobleman in Poland.

He published three sets of sonatas for the violin. [P. D.]

ANFOSSI, PASQUALE, an operatic composer of the 18th century. Born at Naples in or about 1729. He first studied the violin, but deserted that instrument for composition, and took lessons in harmony from Piccinni, who was then in the zenith of his fame. His two first operas, 'Caio Mario' and 'I Visionari,' the first brought out in Venice, the second in Rome, were failures; but his third, 'L'Incognita persequitata,' made his fortune. Its success was partly owing to the ill-feeling of a musical clique in Rome towards Piccinni, whom they hoped to depreciate by the exaltation of a rival. Anfossi lent himself to their intrigues, and treated his old master and

benefactor with great ingratitude. In his own turn he experienced the fickleness of the Roman public of that day, and quitting, first the capital, and afterwards Italy, brought out a long string of operas in Paris, London, Prague, and Berlin, with varying success. He returned to Italy in 1784, and to Rome itself in 1787. Tiring of the stage, he sought for and obtained the post of Maestro at the Lateran, and held it till his death.

The music of Anfossi was essentially ephemeral; he was the fashion in his day, and for a time eclipsed his betters. But, although a musician of undoubted talent, he was destitute of real creative power, and it is not likely that his reputation will ever be rehabilitated. He composed no less than forty-six operas and one oratorio, besides certain pieces of church-music, some of which are in the collection of the Lateran and others were in that of the Abbè Santini.

Mozart composed two airs for soprano and one for tenor, for insertion in Anfossi's opera of 'Il Curioso indiscreto' on the occasion of its performance at Vienna in 1783, and an arietta for bass for the opera of 'Le Gelosie fortunate' at the same place in 1788. (See Köchel's Catalogue, Nos. 418, 419, 420, 541.) [E. H. P.]

ANGLAISE. The English country-dance (*contredanse*), of lively character, sometimes in 2–4, but sometimes also in 3–4 or 3–8 time. It closely resembles the ECOSSAISE (q. v.), and most probably took its origin from the older form of the French *Rigaudon*. [E. P.]

ANGLEBERT, JEAN HENRY D', chamber-musician to Louis XIV, and author of 'Pièces de Claveçin,' etc. (Paris, 1689), a collection of fugues and of airs, some by Lulli, but mostly original, arranged for the harpsichord. 'Les Folies d'Espagne,' with twenty-two variations, was afterwards similarly treated by Corelli, and has been erroneously supposed to be his composition. [M. C. C.]

ANGRISANI, CARLO, a distinguished basso, born at Reggio, about 1760. After singing at several theatres in Italy, he appeared at Vienna, where, in 1798 and 1799, he published two collections of 'Notturni' for three voices. In 1817 he sang at the King's Theatre in London with Fodor, Pasta, Camporese, Begrez, Naldi, and Ambrogetti. His voice was full, round, and sonorous. [J. M.]

ANIMATO or CON ANIMA (Ital.), 'With spirit.' This direction for performance is seldom to be found in the works of the older masters, who usually employed 'Con spirito' or 'Spiritoso.' Haydn and Mozart rarely if ever use it; Beethoven never once employs at. In the whole of Clementi's sonatas, numbering more than sixty, it is only to be found three times. He uses it in the first allegro of the sonata in D minor, Op. 50, No. 2, and in the rondo of the 'Didone abbandonata,' Op. 50, No. 3. In both these cases passages are simply marked 'Con anima.' The third instance is especially interesting as proving that the term does not necessarily imply a quick tempo. The slow movement of his sonata in E flat, Op. 47, No. 1, is inscribed 'Adagio molto e con anima.' Weber frequently uses the term (see his sonatas in A flat and D minor), Chopin employs it in his 1st Scherzo and his E minor Concerto, and it is also to be met with in Mendelssohn,—e. g. 'Lieder ohne Worte,' Book 5, No. 4, 'Allegro con anima,' symphony of 'Lobgesang' first allegro 'animato' (full score, p. 17). In these and similar cases no quickening of the tempo is necessarily implied; the effect of animation is to be produced by a more decided marking of the rhythmical accents. On the other hand the term is sometimes used as equivalent to 'stretto,' as for instance in the first allegro of Mendelssohn's Scotch Symphony, where the indication 'assai animato' is accompanied by a change in the metronome time from ♩. = 100 to ♩. = 120, or at the close of the great duet in the third act of Auber's 'Haydée,' where the coda is marked only 'animato,' but a quicker time is clearly intended. In this, as in so many similar cases, it is impossible to lay down any absolute rule. A good musician will never be at a loss as to whether the time should be changed or not. [E. P.]

ANIMUCCIA, GIOVANNI, an Italian composer, born at Florence at the end of the 15th or the beginning of the 16th century. He studied music under Claudeo Goudimel, and in 1555 was made Maestro at the Vatican, retaining that post until his death. He died beyond all question in 1571, for, although Poccianti in his 'Catalogus Scriptorum Florentinorum' places his death in 1569, Adami, Pitoni, and Sonzonio all give the date 1571. But better than any such authority are two entries in the Vatican Archives, one of his death in March 1571, and the other of the election of Palestrina in his place in April following. There can be no doubt, although his fame and his work were so soon to be eclipsed by the genius of Palestrina, that his music was a great advance upon the productions of the Flemish school. More than one passage in the dedications of his published pieces show too that he was touched by the same religious spirit of responsibility which filled the soul of Palestrina; and the friendship of Saint Filippo Neri, which they both shared, is alone an indication of that similarity. The saint's admiration of Animuccia may be gauged by his ecstatic declaration that he had seen the soul of his friend fly upwards towards heaven.

Animuccia composed the famous 'Laudi,' which were sung at the Oratorio of S. Filippo after the conclusion of the regular office, and out of the dramatic tone and tendency of which the 'Oratorio' is said to have been developed. Hence he has been called the 'Father of the Oratorio.' It is strange that a form of music which Protestantism has made so completely its own should have been adopted, even to its very name, from the oratory of a Catholic enthusiast in the later ages of the Church's power.

Several volumes of his works, comprising masses, motetti, madrigals, Magnificats, and some of the 'Laudi,' were published in his lifetime by the Dorici and their successors, by

Gardano, and by the successors of Baldo. Martini inserted two of his 'Agnus' in his 'Esemplare'—also reprinted by Choron, 'Principes,' vol. v. But the bulk of his compositions is probably in MS.

Of the rapidity with which he wrote some proof is afforded by an extract quoted both by Baini and Fétis from the Vatican Archives. It is an order to the Paymaster of the Chapter to pay Animuccia twenty-five scudi for fourteen hymns, four motetti, and three masses, all of which are shown in the order itself to have been composed in less than five months. [E. H. P.]

ANIMUCCIA, Paolo, brother of the foregoing, but whether older or younger does not appear. Pitoni, with inaccuracy, takes upon himself to doubt the relationship altogether; but Poccianti, who was their contemporary, distinctly affirms it, speaking of Paolo as, 'Animuccia, laudatissimi Joannis frater.' He was made Maestro at the Lateran on the removal of Rubino to the Vatican in 1550, and held the post till 1552 when he was succeeded by Lupacchini. Pitoni insists that he remained at the Lateran from 1550 to 1555; but the 'Libri Censuali' are against him. Baini, however, hints that it is possible that he may have occupied the post a second time temporarily in 1555, just before the election of Palestrina, and that this may have misled Pitoni. He died, according to Poccianti, at Rome in 1563. He has left but little printed music behind him. Two madrigals of his appear in two separate volumes, one in a book of pieces by Orlando Lasso, and the other in a miscellaneous collection of various authors, and both published by Gardano of Venice in 1559. There is a motet of his in a Collection of Motetti published at Venice in 1568; and Barrè of Milan published some of his motetti in a miscellaneous volume in 1588. According to Fétis the Library of John IV, King of Portugal, contained a collection of Paolo Animuccia's Madrigals in two books intituled 'Il Desiderio, Madrigali a cinque, Lib. 2.' [E. H. P.]

ANNA AMALIA, Duchess of Saxe Weimar, born at Brunswick, Oct. 24, 1739, and learned music from the conductors of the ducal chapel at Weimar. She composed the music in Goethe's melodrama of 'Erwin und Elmire,' a notice of which will be found in the 'Teutscher Mercur,' May, 1776. The duchess was a woman of fine and noble taste, and to her countenance and support is greatly due the excellence of the music in the Weimar theatre about 1770. She died April 12, 1807. [F. G.]

ANNA AMALIA, Princess of Prussia, sister of Frederic the Great, born Nov. 9, 1723, was a pupil of Kirnberger; she is the composer of a cantata by Ramler, 'Der Tod Jesu,' the same which was set to music by Graun. The princess was an able contrapuntist, and her style is full of vigour and energy, as may be seen from a portion of her cantata which is included in Kirnberger's 'Kunst des reinen Sätzes.' She is also said to have played the clavier with great taste and ability. She died at Berlin, March 30, 1787. [F. G.]

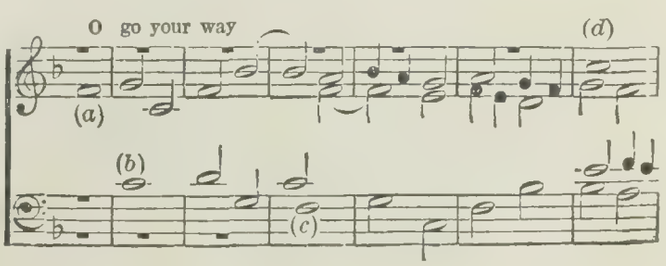
ANNA BOLENA, opera by Donizetti; libretto by Romani; produced at Milan in 1822, in Paris Sept. 1831, and in London.

ANNIBALI, Domenico, an Italian sopranist at the court of Saxony; was engaged by Handel for his opera at London in the autumn of 1736, and made his *début* in 'Arminio.' He appeared next in 'Poro,' introducing three songs, not by Handel, which probably he had brought with him from Italy to display his particular powers—an example frequently followed since his day. He performed in the cantata 'Cecilia, volgi,' and sang the additional song, 'Sei del ciel,' interpolated by Handel between the first and second acts of 'Alexander's Feast.' In 1737 he performed the part of Justin in the same master's opera of that name, and that of Demetrio in his 'Berenice.' After that his name does not appear again. [J. M.]

ANSANI, Giovanni, born at Rome about the middle of the 18th century, was one of the best tenors of Italy. In 1770 he was singing at Copenhagen. About 1780 he came to London, where he at once took the first place; but, being of a most quarrelsome temper, he threw up his engagement on account of squabbles with Roncaglia. He returned the next year with his wife, Maccherini, who did not succeed. He sang at Florence in 1784, at Rome the autumn of the same year, and elsewhere in Italy; and finally retired to Naples at the age of 50, where he devoted himself to teaching singing. He was still alive in 1815. He was a spirited actor, and had a full, finely-toned, and commanding voice. Dr. Burney says it was one of the sweetest yet most powerful tenors he ever heard; to which, according to Gervasoni, he added a very rare truth of intonation, great power of expression, and the most perfect method, both of producing the voice and of vocalisation. His wife had as bad a temper as himself, and they were, therefore, the most inharmonious couple. It is said that, when singing together in Italy, if one were more applauded than the other, the unsuccessful one would hire persons to hiss the more fortunate rival.

Ansani was known also as a composer of duets and trios for soprano and bass, with a basso-continuo. Gerber reports that an Opera of his composition, called 'La Vendetta di Minos,' was performed at Florence in 1791. The date of his death is not known. [J. M.]

ANSWER. An answer in music is, in strict counterpoint, the repetition by one part or instrument of a theme proposed by another. In the following chorus from Handel's 'Utrecht Jubilate'



a and *c* are the theme, and *b* and *d* the successive answers. In Germany the theme and answer are known as *dux* and *comes*, or as *Führer* and *Gefährter*. (See the articles CANON, COUNTERPOINT, and FUGUE.)

The word is used in looser parlance to denote such replies of one portion of a phrase to another, or one instrument to another, as occur in the second subject of the first movement of Beethoven's 'Sinfonia Eroica':—

or throughout the Scherzo of Mendelssohn's 'Scotch Symphony,' or frequently elsewhere.[G.]

ANTHEM (Gr. *Antiphona*; Ital. and Span. *Antifona*; Eng. *Antiphon*). The idea of responsive singing, choir answering to choir, or choir to priest, seems inherent in the term, and was anciently conveyed by it; but this, as a necessary element of its meaning, has disappeared in our modern Anglicised synonym 'anthem.' This word—after undergoing several changes in its Anglo-Saxon and Early-English forms, readily traceable in Chaucer, and those writers who preceded and followed him, and subsequently used by Shakspere, Milton, and others,—has at length acquired a meaning equally distinctive and widely accepted. It now signifies a musical composition, or sacred motet, usually set to verses of the Psalms, or other portions of Scripture, or the Liturgy, and sung as an integral part of public worship. If it be not possible so to trace the word etymologically as to render it 'the flower of song,' as some scholars have wished, yet the anthem itself in an artistic aspect, and when represented by its finest examples, may justly be regarded as the culminating point of the daily ritual-music of our English Church.

Anthems are commonly described as either 'full,' 'verse,' 'solo,' or 'for a double choir'; the two former terms correspond to 'tutti' and 'soli' in current technical phraseology. In his valuable work 'The Choral Service of the Church' Dr. Jebb makes a distinction between 'full anthems, properly so called, which consist of chorus alone, and the full anthem with verses; these verses however, which form a very subordinate part of the compositions, do not consist of solos or duets, but for the most part of four parts, to be sung by one side of the choir. In the verse anthem the solos, duets, and trios, have the prominent place: and in some the chorus is a mere introduction or finale.'

Nothing can be more various in form, extent, and treatment, than the music of 'the anthem' as at present heard in churches and cathedrals. Starting at its birth from a point but little removed from the simplicity of the psalm- or hymn-tune, and advancing through various intermediate gradations of development, it has frequently in its later history attained large dimensions; sometimes combining the most elaborate resources of counterpoint with the symmetry of modern forms, together with separate organ, and occasionally orchestral, accompaniment. In its most developed form the anthem is peculiarly and characteristically an English species of composition, and is perhaps the highest and most individual point which has been reached by English composers.

The recognition of the anthem as a stated part of divine service dates from early in Elizabeth's reign; when were issued the Queen's 'Injunctions,' granting permission for the use of 'a hymn or such like song in churches.' A few years later the word 'anthem' appears in the second edition of Day's choral collection, entitled 'Certain Notes set forth in four and five Parts to be sung at the Morning and Evening Prayer and Communion'; and at the last revision of the Prayer Book in 1662 the word appeared in that rubrick which assigns to the anthem the position it now occupies in Matins and Evensong. Only one year later than the publication of the 'Injunctions' Strype gives probably the earliest record of its actual use, at the Chapel Royal on mid-Lent Sunday, 1560: 'And, Service concluded, a good Anthem was sung.' (The prayers at that time ended with the third collect.) Excepting during the Great Rebellion, when music was banished and organs and choir-books destroyed, the anthem has ever since held its place in choral service. At the present day, so far from there being any prospect of its withdrawal, there seems to exist an increasing love for this special form of sacred art, as well as an earnest desire to invest its performance always, and particularly on festivals, with all attainable completeness and dignity.

Ever since the Reformation anthems have been composed by wellnigh all the eminent masters which this country has produced, from Tye and his contemporaries onwards to Gibbons, Purcell, Boyce, Attwood, and our still-lamented Sterndale Bennett. The history of the anthem accordingly can only be completely told in that of music itself. The following attempt at classification, and references to examples, may serve in some measure to illustrate the subject.

EARLY SCHOOL, 1520–1625.—Tye, Tallis, Byrd, Gibbons. The vagueness of tonality anciently prevalent begins in the music of Tye to exhibit promise of settlement; while in that of Gibbons it almost entirely disappears. Tye's anthem 'I will exalt Thee, O Lord' is remarkable in this respect, as well as for its general clearness and purity of harmony. Of Tallis' style 'I call and cry,' and 'All people that on earth do dwell,' are good examples. 'Bow Thine ear' and 'Sing joyfully,' Byrd, with 'Hosanna,' 'Lift up your heads,' 'O clap your hands together,' and 'Almighty and everlasting God,' Gibbons, are assuredly masterpieces of vocal writing, which can never grow out of date. Most of the anthems of this period are 'full'; 'verse' or 'solo' anthems, however, are at least

as old as the time of Gibbons. Sir F. Ouseley has done good service to the cause of church music and the memory of our 'English Palestrina' by his recent publication of a 'Collection of the Sacred Compositions of Orlando Gibbons.' In this interesting and most valuable work will be found (besides several 'full' anthems, and other matter) not less than twelve 'verse' anthems, some of which have solos; none of these are contained in Boyce's 'Cathedral Music,' and all may probably be reckoned among the earliest known specimens of this kind of anthem. The employment of instruments in churches as an accompaniment to the singers dates as far back as the 4th century, when St. Ambrose introduced them into the cathedral service at Milan. Later on, some rude form of organ began to be used; but only to play the plainsong in unison or octaves with the voices, as is now often done with a serpent or ophicleide in French choirs. It seems to be beyond doubt that the use of some kind of instrumental accompaniment in churches preceded that of the organ. During our 'first period' it would seem that anthems when performed with any addition to the voices of the choir were always accompanied by such bow instruments as then represented the infant orchestra. 'Apt for viols and voices' is a common expression on the title-pages of musical publications of this age. The stringed instrument parts were always in unison with the voices, and had no separate and independent function, except that of filling up the harmony during vocal 'rests,' or occasionally in a few bars of brief symphony. Before the Restoration, according to Dr. Rimbault, 'verses' in the anthems 'were accompanied with viols, the organ being used only in the full parts.' The small organs of this period were commonly portable; a fact which seems to indicate that such instrumental aid as was employed to support the singers was placed in close proximity to them: an arrangement so natural, as well as desirable, that it is surprising to find it ever departed from in the present day.

Second Period, 1650–1720.—Pelham Humphrey, Wise, Blow, Henry Purcell, Croft, Weldon, Jeremiah Clarke. Such great changes in the style and manner of anthem-writing are observable in all that is here indicated, that a new era in the art may be said to have begun. Traceable, in the first instance, to the taste and fancy of Humphrey and his training under Lulli, this was still more largely due to the renowned Purcell, whose powerful genius towers aloft, not only among his contemporaries, but in the annals of all famous men. The compositions of this period are mostly distinguished by novelty of plan and detail, careful and expressive treatment of the text, daring harmonies, and flowing ease in the voice parts; while occasionally the very depths of pathos seem to have been sounded. The following may be mentioned as specimens of the above masters. 'Hear, O heavens' and 'O Lord my God,' Humphrey; 'Prepare ye the way' and 'Awake, awake, put on thy strength,' Wise; 'I was in the Spirit,' and 'I beheld, and lo!' Blow; 'O give thanks,' 'O God, Thou hast cast us out,' and 'O Lord God of Hosts,' Purcell; 'God is gone up,' 'Cry aloud and shout' (from 'O Lord, I will praise Thee'), and 'Hear my prayer, O Lord,' Croft; 'In Thee, O Lord' and 'Hear my crying,' Weldon; and 'I will love Thee' and 'O Lord God of my salvation,' Clarke. While all these pieces are more or less excellent, several of them can only be described in the language of unreserved eulogy. As the 'full' anthem was most in vogue in the former period, so in this the 'verse' and 'solo' anthem grew into favour. It seems to have been reserved for Purcell, himself through life a 'most distinguished singer,' to bring to perfection the airs and graces of the 'solo' anthem.

During this period instrumental music began to assume new and individual importance, and to exercise vast influence upon the general progress of the art. Apart from the frequent employment of instrumental accompaniments by anthem composers, the effect of such additions to the purely vocal element upon their style and manner of writing is clearly traceable from the time of Pelham Humphrey downwards.

Some interesting notices[1] of this important change and of the general performance of anthems in the Chapel Royal may be gleaned from the diaries of Pepys and Evelyn. To quote a few: Pepys, speaking of Christmas Day there in 1662, says, 'The sermon done, a good anthem followed with vialls, and the King came down to receive the Sacrament.' Under the date Nov. 22, 1663, recording his attendance at the chapel, the writer says, 'The anthem was good after sermon, being the fifty-first psalme, made for five voices by one of Captain Cooke's boys, a pretty boy, and they say there are four or five of them that can do as much. And here I first perceived that the King is a little musical, and kept good time with his hand all along the anthem.' Evelyn, on Dec. 21, 1663, mentions his visit to the chapel, and records it in the following important passage:—'One of his Majesty's chaplains preached; after which, instead of the ancient, grave, and solemn wind music accompanying the organ, was introduced a concert of twenty-four violins between every pause, after the French fantastical light way, better suiting a tavern, or playhouse, than a church. This was the *first* time of change, and now we no more heard the cornet which gave life to the organ; that instrument quite left off in which the English were so skilful!'

The development of the simple stringed quartet of Charles the Second's royal band was rapid and important. Purcell himself wrote trumpet parts to his celebrated 'Te Deum,' and in 1755 Boyce added hautboys, bassoons, and drums to the score. Handel's Chandos anthems were variously instrumented; amongst them, in addition to the stringed quartet, are parts for flutes, oboes, bassoons, and trumpets; though all these instruments are not

[1] I am indebted for these to the kindness of my friend Dr. Rimbault.

combined in any single piece. After this, with Haydn and Mozart shining high in the musical firmament, it was but a short and easy step to the complete grand orchestra of Attwood's coronation anthems.

Third Period, 1720-1845.—Greene, Boyce, W. Hayes, Battishill, Attwood, Walmisley. At the beginning of this period the anthem received little accession of absolute novelty; yet, probably owing to the influence of Handel, it found able and worthy cultivators in Greene and several of his successors. 'I will sing of Thy power' and 'O clap your hands,' Greene; 'O give thanks,' and the first movement of 'Turn Thee unto me,' Boyce; with 'O worship the Lord' and 'Praise the Lord, O Jerusalem,' Hayes, are admirable examples of these several authors. To Battishill we owe one work of eminent and expressive beauty: his 'Call to remembrance' seems like a conception of yesterday, so nobly does it combine the chief merits of our best modern church composers with the skill and power of the elder masters. 'Withdraw not Thou' and 'Grant we beseech Thee,' Attwood, with 'Remember, O Lord' and 'O give thanks,' Walmisley, belong almost to the present day. With names so familiar in 'quires and places where they sing' this brief record of notable anthem-writers of the past may be fitly closed.

The number of anthems composed previously to the last hundred years, and scattered among the MS. part-books of cathedral libraries, considerable though it be, represents but imperfectly the productive powers of the old-English school. It is probable that many hundreds of such pieces have been irretrievably *lost*, either by the sacrilegious hand of the spoiler or the culpable neglect of a mean parsimony. Of the seventy-one anthems written by Blow, and sixty by Boyce, as composers to the Chapel Royal, how few remain, or at least are accessible! And, to glance farther back, where are the missing outpourings of the genius of Orlando Gibbons, or the numerous 'composures' of all his fertile predecessors? The principal treasures actually preserved to us are contained, for the most part, in Day's 'Collection,' already mentioned, Barnard's 'Church Music,' the volumes of Tomkins, Purcell, Croft, Greene, and Boyce, the collections of Boyce, Arnold, and Page in print, and of Aldrich, Hawkins, and Tudway in MS., together with that of the twenty-two anthems of the Madrigalian era, edited by Dr. Rimbault for the Musical Antiquarian Society, and Sir F. Ouseley's edition of Gibbons already mentioned.

Foremost among all foreign contributions to our national school of church music must be placed the twelve anthems written by Handel for his princely patron the Duke of Chandos. Standing apart from any similar productions composed on English soil to texts from the English Bible and for the chapel of an English nobleman, these works of England's great adopted son may justly be claimed as part of her rich inheritance of sacred art. Belonging to a class suited for special occasions are the Funeral and Coronation anthems of the same master. These, together with Mendelssohn's stately yet moving psalms and anthems—some of them also composed to English words—may be legitimately adopted as precious additions to our native store of choral music.

Widely different from such genuine compositions are those adaptations, in the first instance from Handel by Bond, and later on from Masses and other works, which have found their way into use in this country. Whether in these, we regard the application of strange words to music first inspired by other and widely different sentiments, or the affront to art involved in thus cutting and hacking the handywork of a deceased master (even in his lightest mood) for the sake of pretty phrases or showy passages—which, however appropriate to their original shape and purpose, are palpably out of keeping in an Anglican service, as well as unsuited to our churches and their simpler executive means—such adaptations are radically bad, and repugnant to all healthy instincts and true principles of feeling and taste. The adaptations of Aldrich in the last and Rimbault and Dyce in the present century from Palestrina and other old continental composers, though not free from objection as such, are not included in the foregoing condemnation.

The eclecticism of existing usage in the selection of anthems is well shown by the contents of a book of words recently put forth for cathedral use. In addition to an extensive array of genuine church anthems of every age and school, from Tye and Tallis to the latest living aspirants, here are plentiful extracts from the oratorios of Handel, Haydn, Spohr, and Mendelssohn; two from Prof. Macfarren's 'St. John the Baptist,' a few of Bach's motets and choruses, several highly objectionable adaptations from Haydn, Mozart, and Beethoven, and lastly some specimens of French taste in 'church music' from the pen of M. Gounod. A wide range of art, truly!

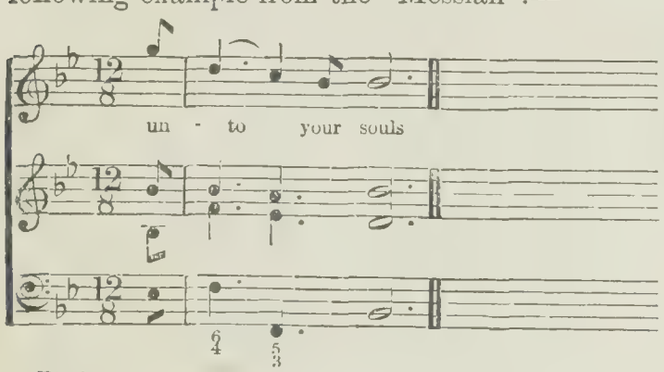
Concerning the choice of the anthem the same clerical and high authority before quoted remarks that 'it ought to be a matter of deliberate and religious study'; and being a 'prescribed part of the service, every notion of ecclesiastical propriety dictates that it should harmonise with some portion of the service of the day.' Dr. Jebb further says that 'at each of the particular seasons of the year it would be well to have a fixed canon as to the anthems from which a selection should invariably be made.' These opinions carry conviction with them, and need no enforcement.

In counterpoint and its concomitants, the great works of former ages will scarcely ever be equalled, still less surpassed. Yet, while the English Church can reckon among her living and productive writers Dr. S. S. Wesley, whose anthems, whether for originality, beauty, or force, would do honour to any school or country, together with the genial and expressive style of

Sir John Goss, and the facile yet masterly art of Sir Frederick Ouseley, not to particularise other well-known names, we may be well content with the present fortune of the anthem, as well as hopeful for its future.

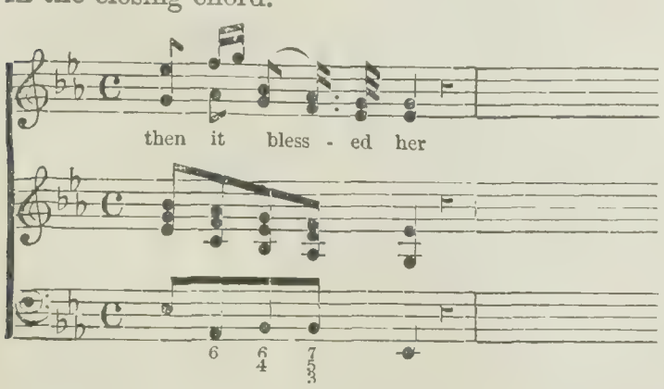
While many fine examples of eight-part writing exist among the anthems of Gibbons, Purcell, and various later composers, it is much to be desired that the plan of writing for two choirs, treated *antiphonally*, were more cultivated among us, than has hitherto been the case. The ample spaces and acoustical properties of our cathedrals and large churches are eminently suited to enhance the effects belonging to such a disposition of voices; while the attendance of trained and self-dependent bodies of singers would ensure all necessary point and firmness of attack in performance. In this direction, and in the employment of an independent *obbligato* accompaniment for organ, orchestra, or both combined, probably lie the most promising paths to 'fresh fields and pastures new' for the rising school of musicians who aspire to distinction as composers of the anthem. [E. G. M.]

ANTICIPATION is when a part of a chord about to follow is introduced beforehand. Thus it has been very customary in a perfect cadence at the end of a strain, to anticipate, before the conclusion of the dominant harmony, one of the notes of the tonic or following chord. This is very common in the old masters, as in the following example from the 'Messiah':—



It is considered a grace of style by modern singers to give the anticipated note with peculiar deliberation and emphasis.

The following passage from Handel's 'Funeral Anthem' contains an anticipation of two notes in the closing chord.



Professor Ouseley ('Harmony,' p. 204) is of opinion that the third note, G, of the first soprano is also a sort of anticipation of the succeeding chord.

Beethoven has many striking examples of anticipation of a quite different and bolder kind. Thus, in a well known passage in the last movement of the C minor Symphony, the basses, first with the drums alone and then with the stringed instruments, anticipate the harmony of the great crash of the Allegro four bars before it breaks in (see the original 8vo score, p. 150).

There is a similar anticipation of four bars at the beginning of the last movement of the Pastoral Symphony.

In the first movement of the 'Sinfonia Eroica, just before the réprise of the principal subject, there is an anticipation of four bars of a melody, still more daring because it is more completely separated from the part anticipated.

This is a musical illustration of the adage, 'Coming events cast their shadows before,' and it is difficult to explain it on any other principle. (See HARMONY.) [W. P.]

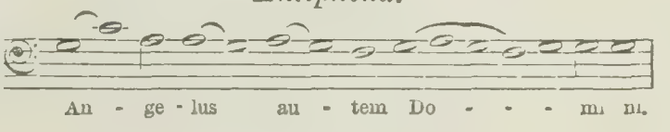
ANTIGONE of Sophocles. Mendelssohn in Sept. 1841 composed music—Introduction and seven numbers (Op. 55)—to Donner's version. First performance at New Palace, Potsdam, Oct. 28, 1841; first public do. at Berlin opera, Nov. 6.

ANTINORI, LUIGI, was born at Bologna about 1697. He was one of the best tenor singers of the beginning of the 18th century, being gifted with a voice of pure and penetrating quality, and having acquired an excellent method of using it. He came to London in 1725 and sang in 'Elisa,' an anonymous opera; and in 'Elpidia,' by Vinci and others, a pasticcio given by Handel, in which Antinori took the place of Borosini, who sang in it at first. In the season of 1726 he appeared in Handel's 'Scipio' and 'Alessandro.' After that season his name does not appear again. [J. M.]

ANTIPHON (from the Greek ἀντιφωνέω, to raise the voice in reply), a short piece of plain-song introduced before a psalm or canticle, to the Tone of which it corresponds, while the words are selected so as specially to illustrate and enforce the evangelical or prophetic meaning of the text.

The following is the antiphon which opens the service of Lauds (corresponding to the English Morning Prayer) on Easter Day, and supplies the evangelical comment on the Psalm which follows it. The same Psalm is sung at the beginning of Lauds every Sunday, but with a different antiphon, suggesting a different application of its contents.

Antiphona.



Psalm 92 (= 93 *Eng. Ps.*)

The connection of the music of the antiphon with that of the psalm is explained by Durandus from the etymology of the term—'because antiphons are as keys and indices according to the modulation and sound of which the following canticle or psalm is sung alternately. For the tone of the whole psalm is taken from the tone of the antiphon.'

Antiphonal or alternate singing, as in the chanting of psalms verse by verse—or by half verses, as heard by Mendelssohn in Rome during the Holy Week (see his Letter of June 16, 1831) —is of very high antiquity. It was characteristic of the Hebrew and early Christian worship, and is mentioned by Philo in the middle of the first century, describing the Therapeutæ (De Vit. Cont.), and has always been more or less practised in the Church.

The French term 'antienne' and the English 'anthem' are derived from antiphon, probably in reference to each of the meanings given above, as an independent piece of music sung from side to side of the choir. [T. H.]

ANTIQUIS, Giovanni d', lived in the second half of the 16th century; director of music in the church of St. Nicholas at Bari in the kingdom of Naples, and author of two collections—'Villanelle alla Napolitana, a tre voci, di diversi musici di Bari' (Venice, 1574), and 'Il primo libro di canzonette a due voci, da diversi autori di Bari' (Venice, 1584)—of the works of local composers, 24 in all, few if any of whom are known elsewhere. The list will be found in Fétis, and a copy of the first of the two collections is in the Munich Library. [M. C. C.]

A PIACERE (Ital.), 'At pleasure.' An indication to the performer to use his discretion as to time. A rallentando is almost always implied.

APOLLONICON. The name given to a large chamber organ of peculiar construction, comprising both keyboards and barrels, erected by Messrs. Flight and Robson, organ-builders, and for many years publicly exhibited by them at their rooms in St. Martin's Lane. Prior to building the Apollonicon, Messrs. Flight and Robson had constructed, under the inspection of Purkis, the organist, a similar but smaller instrument for Viscount Kirkwall, a well-known musical amateur. This instrument, being exhibited at the builders' factory and attracting great attention, induced its fabricators to form the idea of constructing a larger instrument upon the same plan for public exhibition. They accordingly in 1812 commenced the building of the Apollonicon. They were engaged nearly five years in its construction, and expended £10,000 in perfecting it.

The instrument contained about 1900 pipes, the lowest (twenty-four feet in length and twenty-three inches in aperture) sounding GGG, and the highest sounding A in altissimo. There were forty-five stops, several of which gave excellent imitations of the tones of the wind instruments of a complete orchestra, viz. flute, oboe, clarinet, bassoon, trumpet, horn, and trombone. A pair of kettledrums were inclosed within the case, and struck, when required, by curiously contrived machinery. The manuals were five in number, a central one comprising a scale of five octaves, and four others, two on either side of the central one, each having a scale of two octaves. To the central manual were attached a swell and some composition pedals, and also a pedal keyboard of two octaves. The manuals were detached from the body of the organ, so that the players sat with their faces to the audience and their backs to the instrument. The barrels were three in number, each two feet in diameter and eight feet long, and each acting on a distinct division of the instrument. In their revolution they not only admitted the wind to the pipes, but regulated and worked the stops, forming by instantaneous mechanical action all the necessary combinations for producing the various gradations of power. To secure the means of performing pieces of greater length than were usually executed by barrels, spiral barrels were introduced, in which the pins, instead of being arranged in circles, were disposed in spiral lines. The instrument, with the exception of the keyboards, was inclosed in a case twenty feet wide and deep, and twenty-four feet high, the front being divided into three compartments by pilasters of the Doric, surmounted by others of the Ionic order. Between the upper pilasters were three paintings by an artist named Wright, the central one representing Apollo, and the others the Muses Clio and Erato, all somewhat larger than life-size. The mechanical action of the Apollonicon was first exhibited in June 1817, when the barrels performed the overtures to Mozart's 'Clemenza di Tito' and Cherubini's 'Anacreon.' In November following a selection of sacred music was played on the keys by Purkis. The mechanical powers of the instrument were for nearly a quarter of a century exhibited daily, and on Saturday afternoons Purkis performed

selections of music on the keys. The following programme, performed by him in 1830, affords a fair sample of the quality of these selections :— overtures to Mozart's 'Zauberflöte' and Paer's 'Sophonisba' ; divertimento by Purkis on Swiss airs ; the grand scena for soprano from Weber's 'Freischütz' ; songs by Barnett and Phillips ; and movements by Pleyel and Dussek. For some time annual evening performances were given under the superintendence of Thomas Adams.

At various periods additional sets of barrels were provided which performed the following pieces :—the overtures to Mozart's 'Idomeneo,' 'Nozze di Figaro,' and 'Zauberflöte' ; Beethoven's 'Prometheus' ; Webers' 'Freischütz' and 'Oberon' ; and the military movement from Haydn's twelfth symphony. The performance of the overture to 'Oberon' in particular has been recorded as a perfect triumph of mechanical skill and ingenuity, every note of the score being rendered as accurately as though executed by a fine orchestra. The setting of the music on the barrels was entrusted to the younger Flight (the present representative of the firm), who used for the purpose a micrometer of his own invention. About the year 1840, the exhibition of the instrument having become unremunerative, the Apollonicon was taken down and its component parts employed in the construction of other organs. A lengthened technical description, illustrated by engraved figures, of the instrument made for Lord Kirkwall will be found embodied in the article 'Organ' in Rees' Cyclopedia. [W. H. H.]

APPASSIONATA (Ital.), 'Impassioned.' Best known by its use in 'Sonata appassionata' as a title for Beethoven's Op. 57. The title was not his, but was added by Cranz the publisher, or some one else. He himself only uses the term twice—in Sonatas Op. 106 and 111.

APPLICATIO and APPLICATUR are respectively the ancient and modern German terms for Fingering.

APPOGGIATURA. (Ital. from *appoggiare*, to lean upon ; Ger. *Vorschlag*, *Vorhalt* ; Fr. *Port de voix*.) One of the most important of melodic ornaments, much used in both vocal and instrumental compositions. It consists in suspending or delaying a note of a melody by means of a note introduced before it ; the time required for its performance, whether long or short, being always taken from the value of the principal note. It is usually written in the form of a small quaver, semiquaver, or demisemiquaver, either with or without a stroke across the stem (Ex. 1).

The appoggiatura may belong to the same harmony as the principal note (Ex. 2), or it may be one degree above or below it. In the latter case it is a so-called 'auxiliary note' (sometimes called 'transie t' or 'changing' note—*Wechselnote*), and follows the known rule of such notes, that the lower auxiliary note should be only one semitone distant from the principal note, the upper being either a tone or a semitone according to the scale (Ex. 3).

With regard to its length, the appoggiatura is of two kinds, long and short ; the long appoggiatura bears a fixed relation to the length of the principal note, as will be seen presently, but the short one is performed so quickly that the abbreviation of the following note is scarcely perceptible. There is also a difference between the two kinds in the matter of accent ; the long appoggiatura is always made stronger than the principal note, while in the case of the short one the accent falls on the principal note itself (Ex. 4).

On this subject authorities would seem to differ, Leopold Mozart, Hummel, and others holding the view advanced above, while Emanuel Bach, Marpurg, and Agricola give the rule that *all* appoggiaturas should be accented. It is however evident that a note which passes away so quickly as a short appoggiatura can scarcely receive any effective accent, and besides this it is doubtful whether the above-named writers may not have intended the rule to refer exclusively to the long appoggiatura (*Vorhalt*), as they often used the word *Vorschlag* for both kinds indiscriminately. Since then there is no accent on the short appoggiatura, the term itself, which means a note *dwelt upon*, seems inappropriate, and accordingly the word 'acciacatura' has been very generally substituted for it, though properly belonging to another similar kind of ornament. (See ACCIACCATURA.)

The rules relating to the length of the long appoggiatura are three, and are thus given by Türk in his 'Clavierschule' :—'Whenever it is possible to divide the principal note into two equal parts, the appoggiatura receives one half' (Ex. 5). 'When the principal note is dotted the appoggiatura receives two-thirds and the principal note one' (Ex. 6). If the principal note is tied to another shorter note, the appoggiatura receives the whole value of the principal note' (Ex. 7). The third rule is commonly though not invariably followed when the principal note is followed by a rest (Ex. 8).

5. Mozart, Sonata in A minor.

6. Hummel, 'Pianoforte School.'

7. Bach, 'Passionsmusik.'

8. Beethoven, 'Adelaide.'

Exceptions to the above rules are met with as follows :—to the first and second rules in Bach and Mozart, who frequently employed an appoggiatura (called by Marpurg 'der kürzeste Vorhalt') which was worth one third or less of the principal note, but which differed from the short appoggiatura in being accented (Ex. 9). An exception to the second rule occurs whenever its strict observance would occasion a fault in the harmonic progression (Ex. 10), or when it would interfere with the rhythmic regularity of the passage (Ex. 11). Exceptions to the third rule are of still more frequent occurrence; many passages containing a tied note preceded by an appoggiatura would entirely lose their significance if the rule were strictly adhered to. Taste and experience alone can decide where similar exceptions are admissible.

In the works of some of the earlier composers an appoggiatura is occasionally, though very rarely, to be met with, which although placed before a note capable of being halved, yet receives three-fourths of its value. This appoggiatura was usually dotted (Ex. 12).

9. Bach, 'Passionsmusik.'

Mozart, Fantasia in C minor.

10. Bach, 'Suites Françaises.'

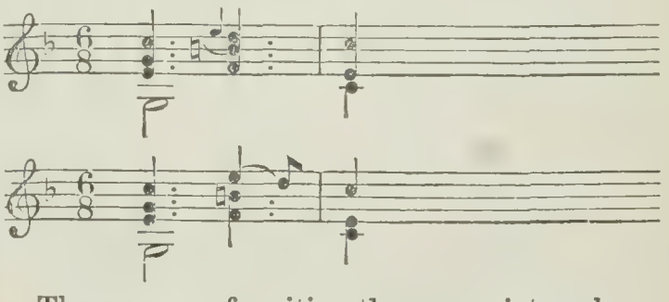
11. Schubert, Rondo, Pianoforte and Violin.

12.

The appoggiatura, whether long or short, is always included in the value of the principal note; if therefore it is applied to a chord it delays only the note to which it belongs, the other notes of the chord being played with it (Ex. 13).

13. Beethoven, Andante in F.

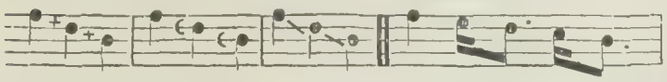
Mozart, Sonata in F.



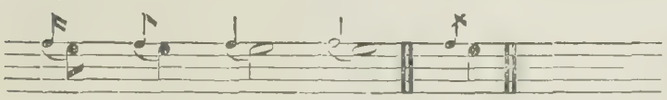
The manner of writing the appoggiatura bears no very definite relation to its performance, and its appearance is unfortunately no sure guide as to its length. In music of the 17th century, at

which period the short appoggiatura appears to have first come into use, it was customary to make use of certain signs (Ex. 14), but as after a time the long appoggiatura was introduced, these were given up in favour of the small note still used. This small note ought always to be written of the exact value which it is to bear, if a long appoggiatura (Ex. 15); or if a short one it should be written as a quaver or semiquaver with a short stroke across the stem in the opposite direction to the hook (Ex. 16).[1]

14. *Written.* *Played.*



15. 16.

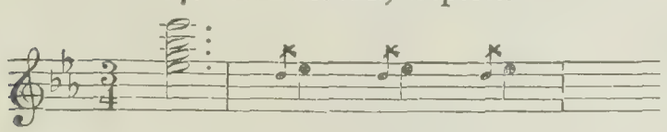


But the earlier writers often wrote the short appoggiatura as a semiquaver or demisemiquaver without the stroke, and in many new editions of old compositions we find the small note printed with the stroke even where it should be played long, while in modern music the semiquaver without the stroke is often met with where the short appoggiatura is obviously intended. In this uncertainty the surest guide is the study of the treatment of the appoggiatura by the great masters in the numerous cases in which they have written it out in notes of the ordinary size (see Beethoven, Bagatelles, Op. 119, No. 4, Bar 2; Mozart, Sonata in C, Hallé's edition, No. 6, Bar 37, &c.), as by analogy we may hope to arrive at some understanding of their intentions respecting it when we find it merely indicated by the small note.

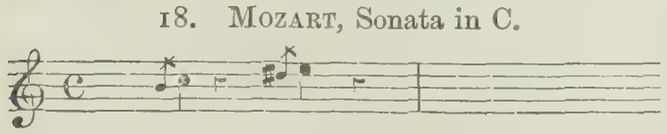
The following series of examples of the conditions under which the several kinds of appoggiatura are most commonly met with, may also be of service in the same direction.

The appoggiatura is short when used before two or more repeated notes (Ex. 17), before detached or staccato notes (Ex. 18), or leaps (Ex. 19), at the commencement of a phrase (Ex. 20), and before groups containing dotted notes in somewhat quick tempo (Ex. 21).

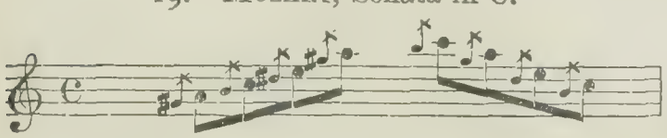
17. Beethoven, Septett.



18. Mozart, Sonata in C.



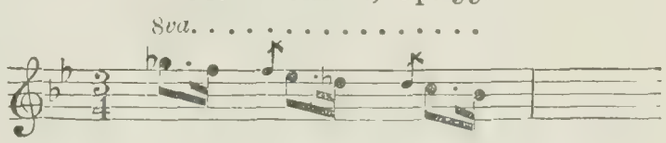
19. Mozart, Sonata in C.



[1] This transverse stroke is probably an imitation of the stroke across the note in the (now obsolete) acciacatura. (See that word.)

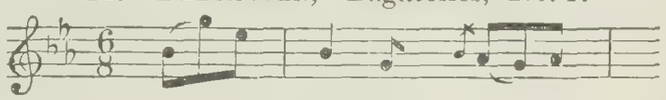
20. Mozart, Sonata in A minor.

21. Hummel, Op. 55.

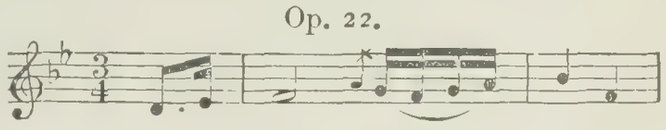


In triplets, or groups of four or more equal notes, the appoggiatura is short (Ex. 22), except in groups of three notes in slow triple time (Ex. 23). The appoggiatura at a distance from its principal note is short (Ex. 24), except sometimes in slow *cantabile* passages (Ex. 25). Appoggiaturas occurring in a melody which ascends or descends by diatonic degrees are *moderately* short (Ex. 26), as are also those which occur in a melody descending by thirds (Ex. 27). Emanuel Bach says of these—'when the appoggiaturas fill up leaps of a third in the melody they are certainly short, but in *adagio* their expression should be smoother, as though representing one of a triplet of quavers rather than a semiquaver.' Türk calls them 'undecided appoggiaturas.'

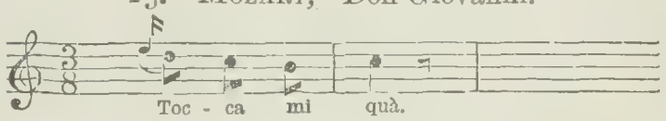
22. Beethoven, 'Bagatelles,' No. 1.



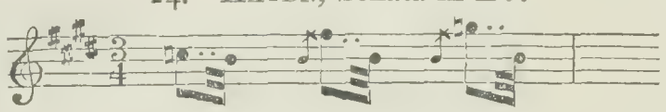
Op. 22.



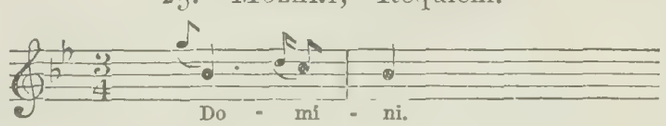
23. Mozart, 'Don Giovanni.'



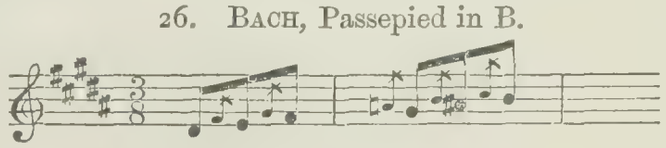
24. Haydn, Sonata in E ♭.



25. Mozart, 'Requiem.'



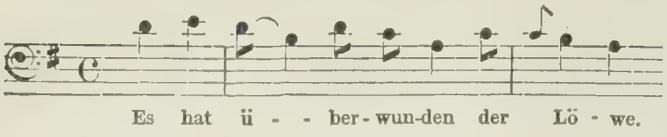
26. Bach, Passepied in B.



27. Mozart, Rondo in D.

In groups of two equal notes the appoggiatura is long if in slow tempo or at the end of a phrase (Ex. 28); if otherwise, short (Ex. 29).

28. GRAUN, 'Der Tod Jesu.'



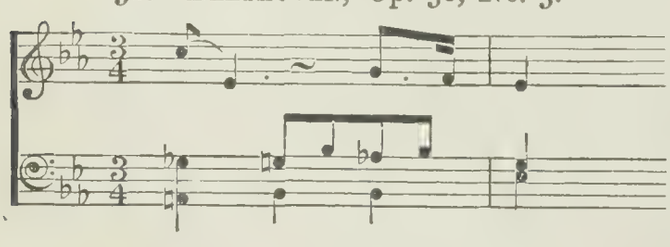
29. HUMMEL, 'Pianoforte School.'

When applied to the last note but one of a final cadence the appoggiatura should, according to Emanuel Bach, be short. But later composers have usually preferred the long appoggiatura under these circumstances, especially when accompanied by the seventh of the chord (Ex. 30), or by a part moving in sixths with it (Ex. 31). Beethoven has even lengthened it beyond the value of the principal note, but in this case it is always written as an ordinary note (Ex. 32). When however, in Haydn, Mozart, and all later composers, the final note of the cadence is *anticipated*, the appoggiatura to the preceding note is short (Ex. 33).

30. MOZART, First Mass.

31. HAYDN, Symphony in Eb.

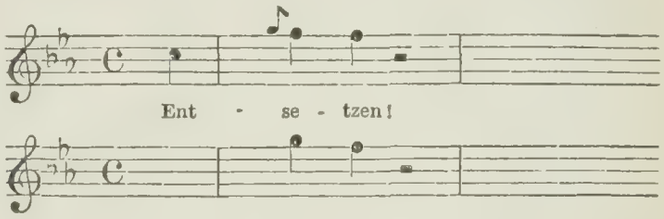
32. BEETHOVEN, Op. 30, No. 3.



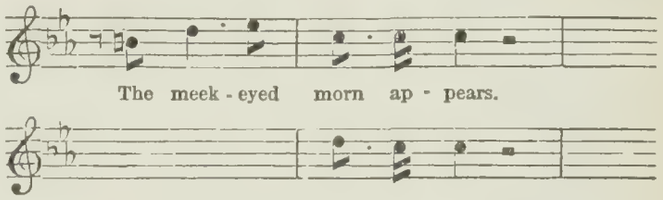
33. MOZART, Sonata in F.

In vocal recitative, at the close of a phrase, or of a section of a phrase, an appoggiatura is often introduced which has the full value of the principal note, and indeed appears in its stead (Ex. 34); such an appoggiatura is often not indicated, but is left to the discretion (or want of discretion) of the singer (Ex. 35). It is more appropriate at the close of the whole recitative than after its component phrases, and is especially so when the melody descends a third or a fourth (Ex. 36).

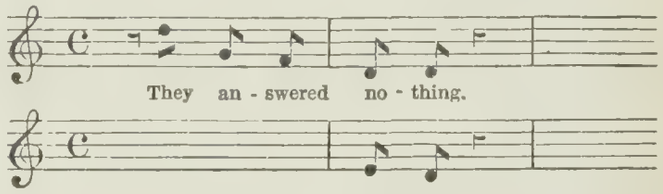
34. WEBER, 'Der Freischütz.'



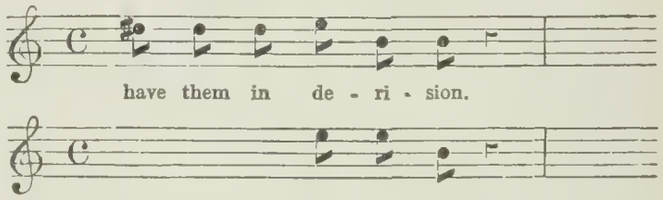
35. HAYDN, 'The Seasons.'



36. BACH, 'Passionsmusik.'



HANDEL, 'Messiah.'



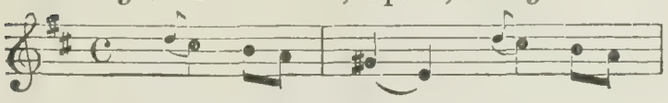
When a trill or other ornament appears in combination with an appoggiatura, the latter is long, and the trill is performed on the principal note or on the appoggiatura, according as it is placed above the one or the other (Ex. 37).

37. HAYDN, Sonata in F. TÜRK.

The proper execution of the appoggiatura seems to be most doubtful in the group in which the note bearing the appoggiatura is followed by two or four notes of half its own value. In the majority of such cases the appoggiatura should be long (Ex. 38), and particularly in smoothly flowing passages in moderate or slow tempo (Ex. 39). But there are numerous exceptions, as for example when the employment of the long appoggiatura would alter the rhythm of the passage

(Ex. 40), or when (according to Türk) only a single example is present (Ex. 41).

38. Beethoven, Op. 10, No. 3.

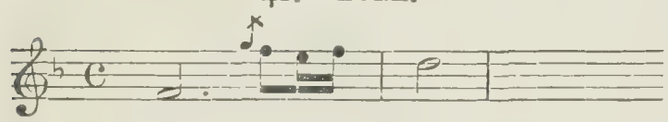


Mozart, Sonata in D.

39. Mozart, Sonata in C, Andante.

40. Weber, 'Der Freischütz.'

41. Türk.

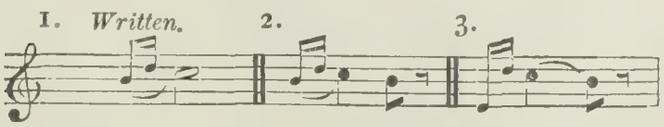


In such cases no definite rule can be given, and the question becomes a matter of taste and feeling. [F. T.]

APPOGGIATURA, DOUBLE. (Ital. *Appoggiatura doppia*; Ger. *Doppelvorschlag*; Fr. *Port de voix double.*) An ornament composed of two short notes preceding a principal note, the one being placed above and the other below it. They are usually written as small semiquavers.

The first of the two may be at any distance from the principal note, but the second is only one degree removed from it. They have no fixed duration, but are generally slower when applied to a long note (Ex. 1) than when the principal note is short (Ex. 2); moreover, the double appoggiatura, in which the first note lies at a distance from the principal note, should always be somewhat slower than that in which both notes are close to it (Ex. 3). In all cases the time required for both notes is subtracted from the value of the principal note.

1. *Written.* 2. 3.



Played.

The double appoggiatura is sometimes, though rarely, met with in an inverted form (Ex. 4), and Emanuel Bach mentions another exceptional kind, in which the first of the two small notes is dotted, and receives the whole accent, while the principal note becomes as short as the second of the two small notes (Ex. 5).

4. 5.

The dotted double appoggiatura, written as above, is of very rare occurrence; but it is frequently found in the works of Mozart, Beethoven, etc., written in notes of ordinary size (Ex. 6).

6. Beethoven, Sonata, Op. 53.

[F. T.]

APRILE, Giuseppe, born at Bisceglia in Apulia, 1738, an eminent soprano singer; was educated at the Conservatorio of 'La Pietà' at Naples, and sang in all the principal theatres of Italy and Germany. Dr. Burney heard him at Naples in 1770 and says that he had a weak and unequal voice, but was perfectly in tune, had an excellent shake, and great taste and expression. He was an excellent teacher of singing, and was one of Cimarosa's masters. He composed songs, but his best work, a system of solfeggi (London and Paris), has passed through many editions and is still valued. It is included in Peters' edition. He was living in Naples in 1792. [M. C. C.]

A PRIMA VISTA (Ital.), 'At first sight.'

A PUNTA D'ARCO (Ital.), 'With the point of the bow' (in violin music).

A QUATRE MAINS (Fr.; Germ. *Zu vier Händen, Vierhändig*; Ital. *a quattro mani*). Music written for two performers upon one pianoforte, and usually so printed that the part for each player occupies the page which is directly opposite to him.

By far the greater proportion of music 'à quatre mains' consists of arrangements of orchestral and vocal compositions and of quartetts, etc. for stringed instruments; indeed, scarcely any composition of importance for any combination of instruments exists which has not been arranged and published in this form, which on account of its comparative facility of performance is calculated to reproduce the characteristic effects of such works more readily and faithfully than arrangements for pianoforte solo.

But besides this, the increase of power and variety obtainable by two performers instead of one offers a legitimate inducement to composers to write original music in this form, and the opportunity has been by no means neglected,

although cultivated to a less extent than might have been expected.

The earliest printed works for the pianoforte à quatre mains of which we have any knowledge were published in Dessau about 1782, under the title 'Drey Sonaten fürs Clavier als Doppelstücke für zwey Personen mit vier Händen von C. H. Müller'; before this however, E. W. Wolf, musical director at Weimar in 1761, had written one or more sonatas for two performers, which were published after his death. So far as is known these were the first compositions of their kind, although the idea of the employment of two performers (but not on one instrument) originated with Sebastian Bach, who wrote three concertos for two pianofortes, or rather harpsichords, three for three, one of which, in D major, is still unpublished, and one for four, all with accompaniment of stringed instruments. But the short compass of the keyboard, which in Bach's time and indeed until about 1770 never exceeded five octaves, was ill adapted to the association of two performers on the same instrument, and it is doubtless on this account that the earlier composers have left so little music of the kind.

Haydn, Mozart, and Beethoven, appear to have had but little inclination for this description of composition. According to Fétis, Haydn wrote but one piece 'à quatre mains,' a divertissement, which was never published, the two sonatas op. 81 and 86 published under his name being spurious. Of the nine pianoforte duets by Mozart the two finest, the Adagio and Allegro in F minor and the Fantasia in F minor, were originally written for a mechanical organ or musical clock in a Vienna exhibition, and were afterwards arranged for piano by an unknown hand. Beethoven left but one sonata, op. 6, three marches, op. 45, and two sets of variations, none of which are of any great importance.

But of all the great composers Schubert has made the fullest use of the original effects possible to music 'à quatre mains,' some of his most genial and effective compositions being in this form, as for instance the 'Grand Duo,' op. 140, and the 'Divertissement Hongroise,' op. 54. In addition to these he wrote fourteen marches, six polonaises, four sets of variations, three rondos, one sonata, one set of dances, and four separate pieces, all, almost without exception, masterpieces of their kind.

Among modern compositions 'a quatre mains,' those of Schumann and Brahms are the most interesting, Mendelssohn having left but one original work of the kind, although he himself arranged some of his orchestral works and also the octett, op. 20, and the variations for pianoforte and violoncello, op. 83, in this form. Besides writing a number of small pieces for two performers, Schumann made a very novel and successful experiment in his 'Spanische Liesbelieder,' op. 138, which consist of ten pieces for four voices, being songs, duets, and a quartett, with pianoforte accompaniment à quatre mains, and an analogous idea has since been carried out by Brahms, who has written two sets of waltzes (Liebeslieder, opp. 52; 65) for pianoforte à quatre mains, with accompaniment of four voices.

Organ music à quatre mains is very rare, although the experiment has been made by Hesse, Höpner, and especially by Julius André, who has written twenty-four pieces for two performers on the organ; but no increased effect appears to be obtainable from such an arrangement which can at all compensate for its practical inconvenience, and the same observation applies to compositions for the pianoforte 'à six mains,' of which a few specimens exist, mostly by Czerny. [F. T.]

ARABESQUE (Germ. *Arabeske*). Originally an architectural term applied to ornamentation in the Arabic style, whence its name. (1) The title has been given, for what reason is not very clear, by Schumann to one of his pianoforte pieces (op. 18), which is written in a form bearing some analogy to that of the rondo, and it has been since occasionally used by other writers for the piano. (2) The word 'Arabesque' is sometimes used by writers on music to express the ornamentation of a theme. Thus Dr. Hans von Bülow, in his edition of Beethoven's sonatas, in a note on the adagio of the sonata in B♭, op. 106, speaks of the ornaments introduced at the return of the first subject as 'diese unvergleichlich seelenvollen Arabesken'—these incomparably expressive Arabesques. [E. P.]

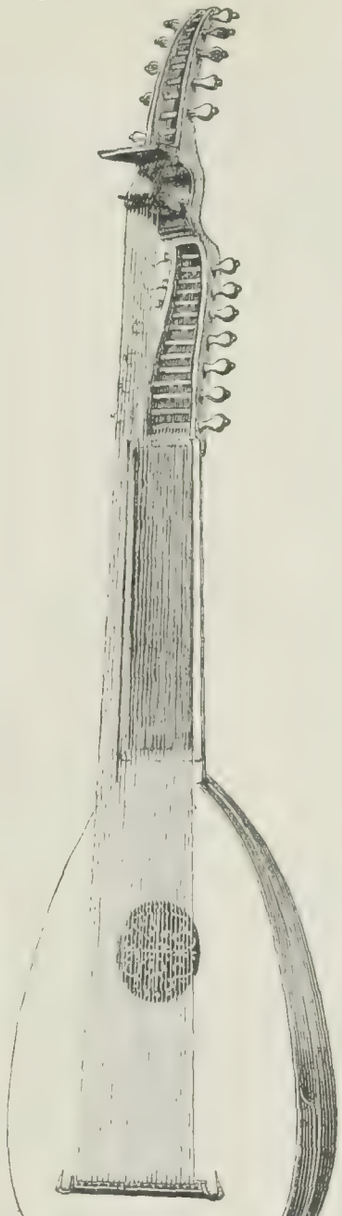
ARAGONI, Signor. This name, with that of Strada, is affixed by Walsh to the cantata 'Cecilia, volgi,' added to the first edition of 'Alexander's Feast.' It is evidently a blunder, being doubtless meant for Annibali, who in fact sang it with Strada, and whose name (Hannibali) appears to the succeeding song, 'Sei del ciel.' [J. M.]

ARANAZ, Pedro, a Spanish priest and composer, born at Soria in Old Castile; was appointed towards the end of the 18th century conductor of the choir in the cathedral at Cuença, and died there in 1825 at a considerable age. His church music, which was good, is to be found at Cuença, in the Escurial, and scattered in various churches of Spain; but Eslava has preserved in his 'Lira Sacro-Hispana' an 'Offertorium' for five voices and a 'Laudate Dominum' for six voices, with strings, horns, and organ. [M. C. C.]

ARBEAU, Thoinot, priest of Langres in France. His real name was Tabourot, of which the above is a kind of anagram. He lived about the end of the 16th century, and was the author of a remarkable book, now of excessive rarity, entitled 'Orchesographie et Traité en forme de dialogue par lequel toutes personnes peuvent facilement apprendre et pratiquer l'honnête exercise des danses' (Langres: Jean de Preys, 1589). It contains a great number of French dance-tunes with words fitted to the melodies, and is of great interest and use in the history of dance music. [F. G.]

ARCADELT, Jacob, one of the most prominent among the distinguished band of Netherland musicians who taught in Italy in the 16th century and saw the fruit of their labours in the foundation of the great Italian school. He was singing-master to the boys at St. Peter's, Rome, during the year 1539, and was admitted to the college of papal singers in 1540. Many masses and motets of Arcadelt are among the manuscripts of the papal chapel, but those of his works which were published during his life in Rome were entirely secular, and consisted chiefly of the famous madrigals which placed him at the head of the so-called "Venetian school" of madrigal writing. Five books of madrigals, each containing forty or fifty separate numbers, were printed in Venice, and many editions of these were published with great rapidity. An excellent copy of the first four books is in the library of the British Museum, and in the same library may be found a few of the many collections of madrigals which contain compositions by Arcadelt. In the year 1555 he entered the service of Cardinal Charles of Lorraine, duke of Guise, and went with him to Paris, where he probably ended his life. In Paris three books of his masses were published in 1557, and other sacred works appear in collections printed since he left Italy. It seems probable therefore that he devoted this second or Parisian period of his life to church composition, but it is as a madrigal writer that his name is most celebrated. Thus Pitoni, in speaking of the first book of madrigals, says that their exceedingly lovely and natural style caused them still to be sung in his time (1657–1743). Burney gives one, 'Il bianca,' in his 'History' (iii. 303); and two to Michel Angelo's words 'Deh dimm' Amor,' and 'Io dico che fra voi,' will be found in Gotti's 'Vita di M.' (1875). An Ave Maria has been edited by Sir Henry Bishop and other English musicians, is quoted by Mr. Hullah in his musical lectures, and has been printed in the 'Musical Times' (No. 183); but the authorship is disputed. A Pater noster for 8 voices is given by Commer, 'Collectio,' viii. 21. [J. R. S.-B.]

ARCHLUTE (Fr. *L'Archiluth*; Ital. *Arciliuto*; Ger. *Erzlaute*). A large theorbo or double-necked lute, large especially in the dimensions of the body, and more than four feet high;—that in the figure is 4 ft. 5 in. over all. The double neck contains two sets of tuning pegs, the lower—in the subjoined example in South Kensington Museum—holding 14, and the upper 10. The strings of catgut or metal were often in pairs, tuned in unison, and comprised a compass of about two octaves from G below the bass clef. The archlute is described by Mersenne ('Harmonie Universelle,' 1636) and Kircher ('Musurgia,' 1650), but not being named in Luscinius (1536) it may be assumed to be of later introduction than that date. It was used in the 17th century in common with the chitarrone and violone (bass viol) for the lowest part in instrumental music and accompaniments, particularly in combination with the clavicembalo for the support of the recitative. Early editions of Corelli's Sonatas had for the bass the violone or arciliuto, and Handel also employed the archlute. The sound-board, pierced with from one to three ornamental soundholes, was of pine, and the vaulted back was built up of strips of pine or cedar glued together. The frets adjusted along the neck to fix the intervals were of wire or catgut, examples differing. A wealth of ornament was bestowed upon the necks and backs of these beautiful instruments, in common with other varieties of the lute and cither. The chitarrone had a smaller body and much longer neck, and differs so much as to require separate description. In the photographs published by the Liceo Comunale di Musica of Bologna, the application of the names archlute and chitarrone is reversed. (See Chitarrone, Lute, Theorbo.)



[A. J. H.]

ARCO, Italian for 'bow.' As a musical term 'arco' or 'col arco' is employed whenever after a pizzicato passage the bow is to be used again. [P. D.]

ARDITI, Luigi, born at Crescentino in Piedmont, July 16, 1825; studied music at the Conservatorio at Milan, and began his career as a violin player. In 1840 he produced an overture, and in the Carnival of 1841 an opera 'I Briganti,' at the Conservatorio. In 1842 he followed these by a second Overture and a 'Sovenir di Donizetti.' He made his début as director of the opera at Vercelli in 1843, and was made honorary member of the Accademia Filarmonica there. In 1846 he left Italy with Bottesini for the Havannah, where he composed and produced an opera 'Il Corsaro.' He made frequent visits to New York, Boston, and Philadelphia, and amongst other things conducted the opera at the opening of the Academy of Music in New York, and produced a new opera of his own 'La Spia' (1856). The same year he left America for Constantinople, and finally settled in London in

58 as conductor to Her Majesty's Theatre, under the successive managements of Lumley, E. T. Smith, and Mapleson. Mr. Lumley has left on record his verdict of Signor Arditi, 'than whom, taking all qualities into account, a more able conductor never reigned in this country' ('Reminiscences,' 447 note). Arditi took an Italian company (Piccolomini, Giuglini, etc.) on an artistic tour to Hamburgh, Berlin, Dresden, etc., and thus became known and liked by the German public. In the winters of 1871 and 1873 he conducted the Italian Opera at St. Petersburgh, and since 1870 has performed the same office each spring at Vienna. His compositions, besides those mentioned above, comprise a 'Commemoration Ode,' performed at the Crystal Palace June 10, 1873. His vocal waltz 'Il Bacio' is a universal favourite. [G.]

ARGYLL ROOMS. At the commencement of the present century there stood in Argyll Street, Oxford Street, a mansion which had been occupied by a Mr. Joliffe. This was taken a few years afterwards by Col. Greville, who altered and added to it, and fitted it up for the meetings of a fashionable association termed the Pic-Nics, who had burlettas, vaudevilles and ballets on a small scale performed there. But the fashionable folk, with their accustomed fickleness, soon deserted the place, and Greville was compelled to seek refuge on the continent, having been obliged to make over 'The Argyll Rooms' (as he had named them) to a Mr. Slade, to whom he was indebted. Slade conducted the business of the rooms for several years, letting them for concerts and other entertainments. During his management one of the events of interest which occurred there was a reading by Mrs. Siddons, on Feb. 10, 1813, of Shakspere's Macbeth, for the benefit of the widow of Andrew Cherry, dramatist and actor. In the same year the rooms acquired greater celebrity by being selected by the then newly-formed Philharmonic Society as their place of performance. In 1818 the western end of the concert room falling within the line required for the formation of Regent Street, Slade was awarded by a jury £23,000 as compensation (a sum considered at the time as exceedingly beyond the real value of the property), and the whole of the old building was removed and new rooms erected on the east side of Regent Street at the north-west corner of Argyll Place. The new building was designed by John Nash, and had all the defects of his manner. On the side next Regent Street was a balcony supported by eight heavy and clumsily designed caryatides. The persons by whom the new rooms were erected were twenty-one of the principal professors of music in London, who had formed themselves into an association for the purpose of printing the best music in the best manner and selling it at a moderate profit. This association was called The Royal Harmonic Institution, and, for the purposes of its trade, occupied the south-western angle of the new building (at the corner of Regent Street and Argyll Place), a circular fronted erection with a domed roof. The great expense incurred in the erection of the building, joined to other untoward events, soon led to the withdrawal of most of the original speculators, at a loss of about £1800 to each, and the place eventually fell into the hands of two of their body, Welsh and Hawes. But differences soon arose between these two, and ultimately Hawes, by the commission of an act of bankruptcy, forced a dissolution of the partnership, and the concern remained in the hands of Welsh alone. During the Philharmonic Society's tenure of the rooms (old and new), a period of about seventeen years, many events of great interest to musicians occurred there. There, on March 6 and April 10, 1820, Spohr appeared, first as violinist and last as conductor (Selbstbiog. ii. 86), when a baton was used for perhaps the first time at an English concert. There also on June 18 following, at his benefit concert, his first wife (Dorette Scheidler) made her only appearance in England (and her last on earth) as a harpist. There, on June 11, 1821, Moscheles made his first appearance in this country. There too Weber, on April 3, 1826, two months before his decease, conducted one of the Philharmonic Society's concerts. And there a still greater musician than either first presented himself before an English audience;—on May 25, 1829, the youthful Mendelssohn conducted, at one of the concerts of the Philharmonic Society, his symphony in C minor, and a month later, at the benefit concert of Drouet, the flautist, on midsummer night, June 24, produced for the first time in England his beautiful overture to 'A Midsummer Night's Dream.' Besides concerts the rooms were let for miscellaneous performances and exhibitions. One of the most attractive of the latter was a French exhibition of dramas performed by puppets, called 'The French Theatre du Petit Lazary,' which was given in 1828 and 1829. In 1829–1830 the rooms were tenanted by a M. Chabert, calling himself 'The Fire King,' who entertained the public by entering a heated oven and cooking a steak in it, swallowing phosphorus, etc. During his tenure of the place, at 10 o'clock in the evening of Feb. 6, 1830, a fire broke out, which in a short time completely destroyed the building. It was re-edified soon afterwards, but never regained its former reputation. The Philharmonic concerts were removed after the fire to the concert-room of the King's Theatre, and thence to the Hanover Square Rooms, and although a few concerts and other entertainments were occasionally given in the Argyll Rooms the place became by degrees deserted by caterers for public amusement and was in the course of a few years converted into shops. [W. H. H.]

ARIA, Italian for AIR.

ARIA DI BRAVURA. The composition and performance of this class of aria began and ended with the last century; the century *par excellence* of great Italian singers, as the word 'singer' was once interpreted. [J. H.]

ARIA PARLANTE. See Arioso.

ARIETTA. Diminutive of Aria. A short air, generally of sprightly character, and having no second part. [J. H.]

ARIOSO. Literally 'airy.' Used substantively, it would seem to mean that kind of air which, partaking both of the character of air and recitative, requires rather to be *said* than *sung*. Mendelssohn's two pieces, 'But the Lord is mindful' and 'Woe unto them that forsake Him' are marked 'Arioso,' and are both of the character indicated. [J. H.]

ARIOSTI, Attilio, a Dominican monk and an operatic composer; was born about the year 1660. Under a papal dispensation he gave up his ecclesiastical profession for that of music, of which he had from his youth been a regular student. His first opera was 'Dafne,' written to the words of Apostolo Zeno. It was brought out at Venice in 1686. Its success was sufficient to determine the direction of his talent, for thenceforth, with the exception of one oratorio and some cantate to be hereafter mentioned, he wrote only for the stage. In 1690 he became either private composer or Maestro di Cappella to the Electress of Brandenburg; and he remained a member of her household until 1716, when, at the invitation of the managers of the Italian opera in London, he came to England. This interval, however, he does not seem to have spent altogether at Berlin. Apparently he had paid one visit at least to Italy, and one to Austria, bringing out his 'Nabucodonosor' at Venice, his 'La più gloriosa fatica d' Ercole' at Bologna, and his 'Amor tra Nemici' at Venice. His first appearance in London was at the representation of Handel's 'Amadis,' at which he played a solo on the then little-known instrument the viole d'amour. In 1720 the directors of the opera made formal engagements for a term with Ariosti, Bononcini and Handel to write operas in turn for the theatre. It was arranged that the first to be produced, which was 'Mucius Scævola,' should be the joint work of the three authors, Ariosti writing the first act. The stipulations of this engagement were rigidly adhered to without the slightest tinge of jealousy or ill-feeling ever having marred the relations of the rival composers. But not the less was it inevitable that the genius of Handel should assert itself, and at the close of the season of 1727 Ariosti and Bononcini were honourably dismissed. Bononcini was subsequently supported by the Marlborough family, but Ariosti, finding himself without a patron, quitted England in 1728, and passed the rest of his life in an obscurity which no biographer has been able to pierce. Fétis says that on the eve of his departure from England he published a volume of Cantate by subscription, and that they realised £1000. It may be hoped that this is a fact, and that the destitution hinted at by other writers was not the absolute condition of his old age.

Ariosti wrote fifteen complete operas, of which the names and dates of publication are as follows:—'Dafne,' 1696; 'Eriphyle,' 1697; 'La Madre dei Maccabei,' 1704; 'La Festa d'Imenei,' 1700; 'Atys,' 1700; 'Nabucodonosor,' 1706; 'La più gloriosa fatica d' Ercole,' 1706; 'Amor tra Nemici, 1708; 'Ciro,' 1721; 'Coriolanus,' 1723; 'Vespasien,' 1724; 'Artaserses,' 1724; 'Dario,' 1725; 'Lucius Verus,' 1726; 'Teuzone,' 1727. To these are to be added the first act of 'Mucius Scævola'; the 'Cantate' above mentioned, published along with some lessons for the viola d'amore, 1728; and his one oratorio 'Radegonda Regina di Francia,' 1693. [E. H. P.]

ARMIDE. One of Gluck's greatest operas, produced (in his sixty-fourth year) on Sept. 23, 1777, at the Académie royale. The libretto is by Quinault, the same which was set by Lulli in 1686. 'Armide' followed 'Alceste' (1776) and preceded 'Iphigenie in Tauris' (1779). Comparing it with 'Alceste,' Gluck himself says, 'The two operas are so different that you will hardly believe them to be by the same composer. . . . I have endeavoured to be more of the painter and the poet and less of the musician, and I confess that I should like to finish my career with this opera. . . . In Armide there is a delicate quality which is wanting in Alceste, for I have discovered the method of making the characters express themselves so that you will know at once whether it is Armida who is speaking or one of her followers.' The overture was originally written 27 years before for 'Telemacco.'

ARMOURER OF NANTES, THE, an opera in three acts, founded on Victor Hugo's 'Mary Tudor'; words by J. V. Bridgman, music by Balfe; produced at Covent Garden, under the Pyne and Harrison management, Feb. 12, 1863.

ARNE, Michael, the son (Burney says the natural son) of Dr. Arne, was born in 1741. He was brought on the stage at an early age by his aunt, Mrs. Cibber, who took great pains in teaching him the part of the Page in Otway's tragedy, 'The Orphan'; and his father was equally assiduous in qualifying him as a singer, and brought him out in that capacity at Marylebone Gardens in 1751. But neither acting nor singing was his vocation. At ten or eleven years of age he had acquired such skill on the harpsichord as to be able to execute, with unusual correctness and rapidity, the lessons of Handel and Scarlatti, and some years later he manifested some ability as a composer. In 'The Flow'ret, a new Collection of English Songs, by Master Arne,' is a song called 'The Highland Laddie,' which attained great popularity, and was in 1755 adapted by Linley to the words 'Ah, sure a pair were never seen,' in Sheridan's opera, 'The Duenna.' In 1763 M. Arne appeared as a dramatic composer with 'The Fairy Tale.' In 1764 he composed, in conjunction with Battishill, the music for the opera of 'Almena,' which was withdrawn after a few nights, not from want of merit in the music, but owing to the dulness of the dialogue. On Nov. 5, 1766,

Arne married Miss Elizabeth Wright, a vocalist of some repute. In 1767 he wrote the music for Garrick's dramatic romance, 'Cymon,' which was highly successful, and is his best work. Soon afterwards he gave up his profession and devoted himself to the study of chemistry, and built a laboratory at Chelsea, where he attempted the discovery of the philosopher's stone. Foiled in his object, and ruined by the expenses, he returned to the pursuit of music, and wrote the music for several dramatic pieces—amongst them O'Keefe's 'Positive Man,' in which is the well-known song, 'Sweet Poll of Plymouth'—and numerous songs for Vauxhall and the other public gardens. In 1779 he was engaged as director of the music at the Dublin Theatre, and in 1784 and subsequent years had the direction of some of the Lenten Oratorios at the London theatres. Michael Arne's dramatic compositions were 'The Fairy Tale,' 1763; 'Hymen,' 1764; 'Almena,' 1764; 'Cymon,' 1767; 'The Fathers,' 1778; 'The Belle's Stratagem,' 1780; 'The Choice of Harlequin,' 1781; 'The Positive Man,' 1712; 'Tristram Shandy,' 1783. He died about 1806. [W. H. H.]

ARNE, Thomas Augustine, Mus. Doc., was the son of an upholsterer in King Street, Covent Garden, where he was born on March 12 or May 28 (the precise date cannot be ascertained), 1710. He was educated at Eton, and being intended by his father for the profession of the law, was on leaving college placed in a solicitor's office for three years. But his love for music predominated, and instead of applying himself to the study of the law, he privately conveyed a spinet to his bedroom, and by muffling the strings with a handkerchief contrived to practice during the night undetected. He took lessons on the violin from Festing, and would occasionally borrow a livery in order to gain admission to the servant's gallery at the opera. He made such progress on the violin as to be able to lead a chamber band at the house of an amateur who gave private concerts. There he was one evening accidentally discovered by his father in the act of playing the first violin. After some fruitless efforts to induce his son to devote himself to the profession for which he had designed him, the father gave up the attempt as hopeless, and permitted the youth to follow the bent of his inclination. Being free to practice openly, Arne soon, by his skill on the violin, charmed the whole family, and finding that his sister, Susanna Maria (who afterwards as Mrs. Cibber became famous as a tragic actress) had an agreeable voice, he gave her such instructions as enabled her to appear in 1732 in Lampe's opera 'Amelia.' Her success was such as to induce her brother to re-set Addison's opera 'Rosamond,' and his composition was produced at Lincoln's Inn Fields Theatre, March 7, 1733, Miss Arne performing the heroine, and her younger brother the page. Soon afterwards Arne got Fielding's 'Tragedy of Tragedies' altered into the 'Opera of Operas,' and, setting it to music 'after the Italian manner,' brought it out at the Haymarket Theatre, his young brother representing the hero, Tom Thumb. In 1734 he set for the same theatre a masque called 'Dido and Æneas,' which was performed (as then customary) with a harlequinade intermixed. In 1736 he composed some music for Aaron Hill's tragedy of 'Zara,' in which his sister made 'her first attempt as an actress.' In 1736 Arne married Cecilia, the eldest daughter of Charles Young, organist of Allhallows, Barking, a pupil of Geminiani and a singer of eminence, who was frequently engaged by Handel for his performances. In 1738 Arne was engaged to compose the music for Dr. Dalton's adaptation of Milton's 'Comus,' which was brought out at Drury Lane Theatre. This work fully established his reputation; its graceful and flowing melodies making an immediate and lasting impression. In 1740 he re-set Congreve's masque 'The Judgment of Paris,' which was performed at Drury Lane. On August 14 in the same year, to celebrate the anniversary of the accession of the House of Hanover, Thomson and Mallet's masque of 'Alfred,' with music by Arne, was performed, for the first time, in a temporary theatre in the garden of Cleifden, Bucks, then the residence of Frederick, Prince of Wales. The work contains some fine songs, but is more especially distinguished by its finale, the famous patriotic song 'Rule Britannia,' a song which will continue to be heard as long as love of country animates the breasts of Englishmen. On Dec. 20, in the same year, Shakspere's 'As You Like It' being performed at Drury Lane Theatre, after having been laid aside for forty years, Arne gave to the world those beautiful settings of the songs 'Under the greenwood tree,' 'Blow, blow, thou winter wind,' and 'When daisies pied,' which seem to have become indissolubly allied to the poetry. After producing some minor pieces Arne went in 1742 with his wife to Dublin, where they remained until 1744. During his stay there he produced, besides his former pieces, his operas 'Britannia' and 'Eliza,' and his musical farce 'Thomas and Sally,' and also gave concerts with great success. On his return he was again engaged as composer at Drury Lane, and on the death of Gordon he succeeded him as leader of the band there. In 1745 Arne was engaged as composer to Vauxhall Gardens, and wrote for Mrs. Arne and Lowe the pastoral dialogue 'Colin and Phœbe,' which proved so successful that it was performed throughout the entire season. He held that engagement for many years, during which he composed for the Gardens, as well as for Ranelagh and Marylebone Gardens, an immense number of songs. On a revival of Shakspere's 'Tempest' in 1746 (at Drury Lane), Arne supplied new music for the masque and the song 'Where the Bee sucks,' a composition of perennial beauty. On March 12, 1755, he made his first essay in oratorio by the production of 'Abel,' in which the simple and beautiful melody known as the Hymn of Eve became exceedingly popular. On July 6, 1759, the University of Oxford created Arne Doctor of Music. In 1762 the Doctor ventured on the bold experiment of

placing before an English audience an opera composed after the Italian manner, with recitative instead of spoken dialogue. For this purpose he selected the 'Artaserse' of Metastasio, which he himself translated into English. Departing to a great extent from his former style he crowded many of the airs with florid divisions, particularly those in the part of Mandane, which he composed for his pupil, Miss Brent. The other singers were Teuducci, Peretti, Beard, Mattocks, and Miss Thomas. The success of the work was decided, and 'Artaxerxes' retained possession of the stage for upwards of three-quarters of a century. The part of Mandane was long considered the touchstone of the powers of a soprano singer. The composer sold the copyright for sixty guineas, an insignificant amount compared with the sums which later composers obtained, but probably as much as the then more limited demand for music justified the publisher in giving. On Feb. 29, 1764, Dr. Arne produced his second oratorio, 'Judith,' at the chapel of the Lock Hospital, in Grosvenor Place, Pimlico, for the benefit of the charity. In 1765 he set Metastasio's opera 'Olimpiade,' in the original language, and had it performed at the King's Theatre in the Haymarket. It was represented however but twice, owing, it has been supposed, to some petty jealousy of an Englishman composing for an Italian theatre. In 1769 Dr. Arne set such portions of the ode, written by Garrick for the Shakspere jubilee at Stratford-on-Avon, as were intended to be sung, and some other incidental music for the same occasion. His last dramatic composition was the music for Mason's 'Caractacus' in 1776. Dr. Arne produced numerous glees, catches, and canons, seven of which obtained prizes at the Catch Club, and instrumental music of various kinds. He died March 5, 1778, and was buried at St. Paul's, Covent Garden. Shortly before his dissolution he sang with his dying breath a Hallelujah. Mrs. Arne survived her husband about seventeen years, dying in 1795. It must not be forgotten that Dr. Arne was the first introducer of female voices into oratorio choruses; which he did at Covent Garden Theatre on Feb. 26, 1773, in a performance of his own 'Judith.' Dr. Arne was author as well as composer of 'The Guardian outwitted,' 'The Rose,' 'The Contest of Beauty and Virtue,' and 'Phœbe at Court,' and the reputed author of 'Don Saverio' and 'The Cooper.' A fine portrait of him by Zoffany is in the possession of the Sacred Harmonic Society.

The following is a list of Dr. Arne's compositions:—

Oratorios: Abel, 1755. Judith, 1764. Operas and other musical pieces: Rosamond, 1733. The Opera of Operas, or Tom Thumb the Great, 1733. Dido and Æneas, 1734. The Fall of Phaeton, 1736. Music in Zara, 1736. Comus, 1738. The Judgment of Paris, 1740. Alfred, 1740. Songs in As You Like It, 1740. Songs in Twelfth Night, 1741. The Blind Beggar of Bethnal Green, 1741. Songs in The Merchant of Venice, 1742. Britannia, 1743. Eliza, 1743, Thomas and Sally, 1743. The Temple of Dulness, 1745. King Pepin's Campaign, 1745. Music in The Tempest, 1746. Neptune and Amphitrite, 1746. Don Saverio, 1749. Dirge in Romeo and Juliet, 1750. The Prophetess, 1759. The Sultan, 1759. Artaxerxes, 1762. Love in a Village (chiefly compiled), 1762. The Birth of Hercules (not acted), 1763. The Guardian outwitted, 1764. Olimpiade (Italian opera), 1765. The Ladies' Frolic, 1770. Additions to Purcell's King Arthur, 1770. The Fairy Prince, 1771. The Cooper, 1772. Choruses in Mason's Elfrida, 1772. The Rose, 1773. The Contest of Beauty and Virtue, 1773. Achilles in Petticoats, 1773. May Day, 1775. Phœbe at Court, 1776. Music in Mason's Caractacus, 1776. Besides these Arne composed many incidental songs, etc. for other plays, as The Tender Husband, The Rehearsal, The Rival Queens, etc. Collections of songs under the following titles: Lyric Harmony, The Agreeable Musical Choice, Summer Amusement, The Winter's Amusements, The Syren, Vocal Melody, 1753, The Vocal Grove, 1774, and nearly twenty books of songs sung at Vauxhall, Ranelagh, and Marylebone Gardens. Glees, Catches, and Canons: thirteen glees, ten catches, and six canons, are printed in Warren's collections. Ode on Shakspere, 1769. Sonatas or lessons for the harpsichord. Organ Concertos. Overtures etc. for the orchestra.

[W. H. H.]

ARNOLD, Johann Gottfried, violoncellist and composer, born in 1773, was the son of the schoolmaster of Niedernhall near Oehringen in Würtemberg. From his earliest childhood he showed such a passion and aptitude for music that his father apprenticed him in his twelfth year to the musical director (Stadtmusikus) of the neighbouring town of Künzelsau. During this time he devoted himself chiefly to the practice of the violoncello, at which, under the influence of a most exacting master, he worked with such diligence as, it is said, permanently to injure his health. In 1789 his term of apprenticeship came to an end, and the following year he took his first regular engagement at Wertheim, where his uncle, Friedrich Adam Arnold, was established as musical director. He continued to study with unabated energy. After making concert tours in Switzerland and Germany, he spent some time at Ratisbon in order to take advantage of the instruction of the able violoncellist Willmann. Making constant improvement, he visited Berlin and Hamburg, at which latter town he had the good fortune to make the acquaintance of Bernard Romberg, whose style and method he studied to great advantage. In 1798 he became attached to the theatre at Frankfort as first violoncellist, where he occupied himself much with composition, and enjoyed a great reputation both as executant and teacher. The career however of this young and talented artist was speedily cut short, for he died of an affection of the lungs in 1806 at the early age of thirty-four. Besides compositions and 'transcriptions' for his own particular instrument, he wrote original pieces for the flute and piano, and made quartet arrangements of various operas, etc. Fétis ('Biographie') gives a list of his compositions, including five concertos for the violoncello; a symphonie concertante for two flutes and orchestra; airs with variations, op. 9 (Bonn); easy pieces for the guitar, etc. [T. P. H.]

ARNOLD, Samuel, Mus. Doc. Born in London, Aug. 10, 1740, and educated in the Chapel Royal under Bernard Gates and Dr. Nares. His progress was so great that before he had attained his twenty-third year Beard engaged him as composer to Covent Garden Theatre, where in 1765 he brought out the opera of 'The Maid of the Mill.' Many of the songs were selected from the works of Bach, Galuppi, Jomelli, and other Italian writers. This opera was one of the first, since the time of Purcell, in which concerted music was employed to carry on the business of the stage, and it was used by Arnold with great cleverness. The success of the work decided the composer's future connection

with the stage, which he cultivated with such diligence and success, that from 1765 to 1802 he produced no less than forty-three operas, musical afterpieces, and pantomimes. His attention was early directed to sacred music, and his first production of this kind was an oratorio called 'The Cure of Saul,' performed in 1767. In the following year he produced 'Abimelech,' and afterwards 'The Resurrection,' and 'The Prodigal Son,' which were performed during several successive seasons under his own direction.

In 1769 Arnold purchased Marylebone Gardens, then a place of fashionable resort, which he rendered more attractive by composing and producing several burlettas, performed by the principal singers of the time. Ultimately, however, he retired from the speculation with considerable loss. (See MARYLEBONE GARDENS.) In 1773 Arnold's oratorio of 'The Prodigal Son' was performed at the installation of Lord North as Chancellor of the University of Oxford. On this occasion Arnold was offered the honorary degree of Doctor in Music, but he preferred taking it in the prescribed mode. It is said that Dr. Hayes, the Professor, returned the candidate's exercise unopened, remarking, 'Sir, it is quite unnecessary to scrutinise an exercise written by the composer of The Prodigal Son.'

Dr. Arnold succeeded Dr. Nares in 1783 as Organist and Composer to the Chapel Royal, for which establishment he wrote several services and anthems. Shortly afterwards he published a continuation of Boyce's 'Cathedral Music,' in four volumes, a new edition of which was issued in 1847 by the writer of the present article. In 1791, in conjunction with Dr. Callcott, he published a work entitled, 'The Psalms of David,' etc. He also published 'An Ode for the Anniversary of the London Hospital.'

In 1786 Dr. Arnold issued proposals for a uniform edition of Handel's works, and the list was headed by George III as a subscriber for twenty-five copies. He met with sufficient encouragement to carry it on to 168 numbers, or about forty volumes, but not enough to enable him to complete his plan, for the edition contains only five out of Handel's forty-three operas. It was about this time that, in conjunction with his friend Callcott, he established the GLEE CLUB; and on the death of Stanley he joined Linley as conductor of the oratorios at Drury Lane, for some time a profitable speculation, but at length opposed by Ashley at Covent Garden, who by converting the so-called oratorio into a medley of light compositions, stimulated the public appetite for novelty, and the more classical performance at the rival theatre was deserted. His last oratorio, 'Elijah,' was produced in 1810, but it met with little success, and was not repeated.

In 1789 Dr. Arnold was appointed Conductor of the ACADEMY OF ANCIENT MUSIC, a noble institution then in its decline; in 1793 he succeeded Dr. Cooke as Organist of Westminster Abbey, and three years later, on the death of Dr. P. Hayes, was requested to conduct the yearly performance at St. Paul's for the benefit of the Sons of the Clergy. About two years afterwards a fall from the steps of his library occasioned a tedious confinement, and probably hastened his death. He died October 22, 1802. His remains were deposited near those of his great predecessors, Purcell, Blow, and Croft, in Westminster Abbey.

Dr. Arnold wrote with great facility and correctness, but the demand upon his powers was too varied and too incessant to allow of his attaining great excellence in any department of his art.

The following is a list of his dramatic compositions:—

Maid of the Mill, 1765. Rosamond, 1767. Portrait, 1770. Mother Shipton, 1770. Son-in-Law, 1779. Summer Amusement, 1779. Fire and Water, 1780. Wedding Night, 1780. Silver Tankard, 1780. Dead Alive, 1781. Castel of Andalusia, 1782. Harlequin Teague, 1782. Gretna Green, 1783. Hunt the Slipper, 1784. Two to One, 1784. Here, There, and Everywhere, 1784. Turk and No Turk, 1785. Siege of Cuzzola, 1785. Inkle and Yarico, 1787. Enraged Musician, 1788. Battle of Hexham, 1789. New Spain, 1790. Basket Maker, 1790. Surrender of Calais, 1791. Harlequin and Faustus, 1793. Children in the Wood, 1793. Auld Robin Gray, 1794. Zorinski, 1795. Mountaineers, 1795. Who Pays the Reckoning, 1795. Love and Money, 1795. Bannian Day, 1796. Shipwreck, 1796. Italian Monk, 1797. False and True, 1798. Throw Physic to the Dogs, 1798. Cambro-Britons, 1728. Obi, or Three-fingered Jack, 1800. Review, 1801. Corsair, 1801. Veteran Tar, 1801. Sixty-Third Letter, 1802. Fairies' Revels, 1802.

The work by which Arnold will be longest remembered is entitled 'Cathedral Music, being a collection in score of the most valuable and useful compositions for that service by the several English masters of the last 200 years; selected and revised by Dr. Samuel Arnold, Organist and Composer to His Majesty's Royal Chapels.' The Preface is dated 480, Strand, Nov. 1, 1790. The contents are as follows:—

VOL. 1.

Patrick, M. and E. Serv. G minor.
Child, M. and E. Serv. E minor.
Do. Full Anth., If the Lord.
Do. F. A. O pray.
Clark, Sanctus.
Kent, F. A. Hearken unto.
Croft, Verse Anth., I will give.
King, F. A. Hear O Lord.
Do. F. A. Rejoice in the Lord.
Do. M. and E. Serv. B flat.
Croft, M. Serv. B minor.
Aldrich, M. and E. Serv. in A.
Do. 2 Chants.
Purcell, Verse A. Blessed are they.
Tallis, F. A. All people.
Goldwin, M. and E. Serv. in F.
Weldon, Solo A. O God Thou hast.
Aldrich, F. A. We have heard.
Goldwin, F. A. Behold my servant.
Aldrich, F. A. Not unto us.
Do. F. A. O praise.

VOL. 2.

Greene, M. and E. Serv. in C.
Do. Solo A. Praise the Lord.
Do. V. A. Like as the hart.
Croft, V. A. Be merciful.
King, M. and E. Serv. in F.
Do. F. A. O pray.
Greene, V. A. O Lord I will.
Do. V. A. I will magnify.
King, M. and E. Serv. in A.
Tudway, V. A. Thou o Lord.
Weldon, F. A. Who can tell.
Greene, V. A., O praise.
Bryan, M. and E. Serv. in G.
Travers, M. Serv. in F.

VOL 3.

Boyce, M. Serv. in A.
Do. Solo A. Lord what is.
Do. F. A. Save me o God.
Chants by Savage, Travers, Nares, Kent.
Boyce, Solo A. Lord teach us.
Tallis, F. A. Hear the voice.
Aldrich, V. A. I am well pleased.
Travers, S. A. Ponder my words.
Nares, M. and E. Serv. in F.
Do. F. A. Blessed is he.
Do. F. A. O Lord grant.
Do. F. A. Try me.
Do. Chant.
Travers, Te Deum in D.
King, M. and E. Serv. in C.
Do. V. A. Wherewithal.
Greene, V. A. Hear my prayer.
Boyce, S. A. Turn Thee.
Do. F. A. Blessing and glory.
King, M. Serv. in A.
Hall and Hine, Te Deum and Jub.
Greene, V. A. O God Thou hast.
Ayrton, Chant.
Travers, V. A. Ascribe.
Aldrich, E. Serv. in F.
Dupuis, Chant.
Boyce, S. A. Ponder my words.
Greene, S. A. O Lord God.

VOL. 4.

The Organ part to the foregoing.

(*Harmonicon* for 1830; *Old Playbills*; *Biog. Dict. U. K. S.*) [E. F. R.]

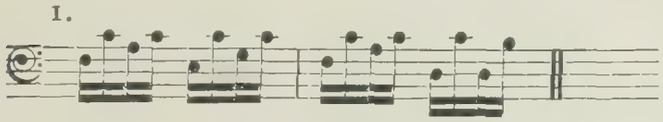
ARNOULD, MADELEINE SOPHIE, a famous actress and singer, and the original Iphigenie in Gluck's opera. Born in Paris, Feb. 14, 1744, in the same room in the Rue de Bethisy in which Admiral Coligny was murdered, Aug. 24, 1572.

The Princess of Modena hearing the child sing in the church of Val de Grâce was so charmed that she recommended her to the royal Intendant of Music. Against the will of her mother, Sophie became a member of the Chapelle Royale, and was taught comedy by Mlle. Hippolyte Clairon, and singing by Mlle. Tel. Mme. de Pompadour hearing her on one occasion was so much struck by the young artist that she characteristically said, 'With such talents you may become a princess.' She made her début on Dec. 15, 1757, and remained on the stage till 1778, the most admired artist of the Paris Opera. In that year she left the boards and retired into private life. Mlle. Arnould was not less renowned for her wit and power of conversation than for her ability as a singer and actor. The 'Arnouldiana' contain a host of her caustic and witty speeches. She died in 1803. [F. G.]

ARPEGGIO (Ital., from *Arpa*, the harp; *Arpeggiare*, to play upon the harp). The employment in vocal or instrumental music of the notes of a chord in succession instead of simultaneously; also, in pianoforte music, the *breaking* or *spreading* of a chord, either upwards or downwards.

The introduction of the arpeggio as an accompaniment to a melody marks an important epoch in the history of pianoforte music. It is said to have been invented about 1730 by Alberti, a Venetian amateur musician, in whose 'VIII Sonate per Cembalo' are found the earliest signs of emancipation from the contrapuntal form of accompaniment exclusively used up to that time. The simple kind of arpeggio employed by him, which is still known as the 'Alberti bass,' (Ex. 1) has since become fully developed, not alone as accompaniment, but also as an essential part of the most brilliant instrumental passages of modern music.

1.



Arpeggio passages such as those alluded to are almost invariably written out in full, but the simple spreading of the notes of a chord (in contradistinction to *concento*, the sounding of all the notes together) is usually indicated by certain signs. According to Türk ('Clavierschule') the signs for the arpeggio, beginning with the lowest note, are as in Ex. 2, those for the descending arpeggio as in Ex. 3. The latter is however only met with in old music; the downward arpeggio, which is but rarely employed in modern music, being now always written in full.

2.

3.

The arpeggio in modern music is usually indicated as in Ex. 4, and occasionally (as for instance in some of Hummel's compositions) by a stroke across the chord (Ex. 5). This is however incorrect, as it may easily be mistaken for the combination of arpeggio with ACCIACATURA, which, according to Emanuel Bach, is to be written and played as in Ex. 6.

4. 5. 6.

In the arpeggio as above, the notes when once sounded are all sustained to the full value of the chord, with the exception only of the foreign note (the acciacatura) in Ex. 6. Sometimes however certain notes are required to be held while the others are released; in this case the chord is written as in Ex. 7.

7.

The arpeggio should, according to the best authorities, *begin* at the moment due to the chord, whether it is indicated by the sign or by small notes, and there can be no doubt that the effect of a chord is weakened and often spoilt by being begun before its time, as is the bad habit of many inexperienced players. Thus the commencement of Mozart's 'Sonata in C' (Ex. 8) should be played as in Ex. 9, and not as in Ex. 10.

8. *Allegro.*

9. 10.

Nevertheless it appears to the writer that there are cases in modern music in which it is advisable to break the rule and allow the *last* note

of the arpeggio to fall upon the beat, as for instance in Mendelssohn's 'Lieder ohne Worte,' Book v. No. 1, where the same note often serves as the last note of an arpeggio and at the same time as an essential note of the melody, and on that account will not bear the delay which would arise if the arpeggio were played according to rule. (See Ex. 11, which could scarcely be played as in Ex. 12).

11.

12.

In music of the time of Bach a sequence of chords is sometimes met with bearing the word 'arpeggio'; in this case the order of breaking the chord, and even the number of times the same chord may be broken, is left to the taste of the performer, as in Bach's 'Sonata for Pianoforte and Violin,' No. 2 (Ex. 13), which is usually played as in Ex. 14.

13. *Violin.*

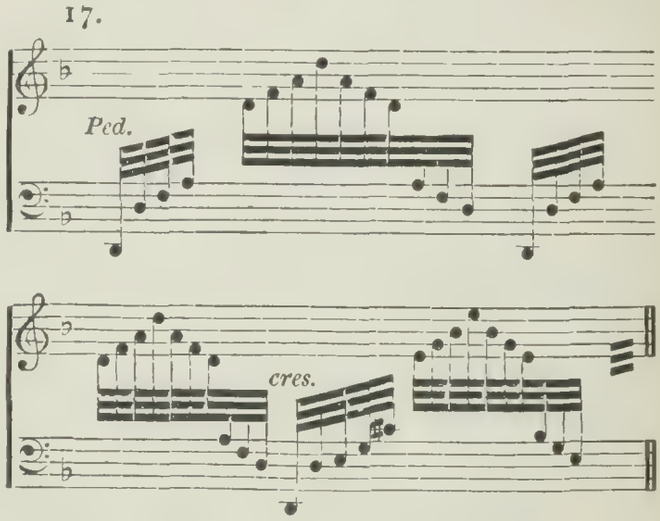
14.

Sometimes the arpeggio of the first chord of a sequence is written out in full, as an indication to the player of the rate of movement to be applied to the whole passage. This is the case in Bach's 'Fantasia Cromatica,' (Ex. 15), which is intended to be played as in Ex. 16. Such indications however need not always be strictly followed, and indeed Mendelssohn, speaking of the passage quoted, says in a letter to his sister: 'I take the liberty to play them (the arpeggios) with every possible *crescendo* and *piano* and *ff.*, with pedal as a matter of course, and the bass notes doubled as well. . . . N.B. Each chord is broken *twice*, and later on only once, as it happens.' (Mendelssohn, 'Briefe,' ii. p. 241). In the same letter he gives as an illustration the passage as in Ex. 17.

15.

16.

17.



When an appoggiatura is applied to an arpeggio chord, it takes its place as one of the notes of the arpeggio, and occasions a delay of the particular note to which it belongs equal to the time required for its performance, whether it be long or short (Ex. 18).

18.

Chords are occasionally met with (especially in Haydn's pianoforte sonatas) which are *partly* arpeggio, one hand having to spread the chord

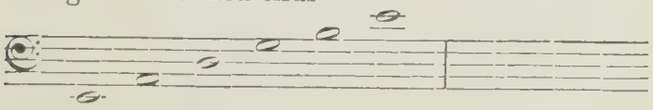
while the other plays the notes all together; the correct rendering of such chords is as follows (Ex. 19).

19.

[F. T.]

ARPEGGIONE, or Guitar Violoncello, a stringed instrument, played with a bow, which was invented by G. Staufer, of Vienna, in 1823, but appears never to have come much into use, and whose very name would probably now be unknown, if it were not for an interesting sonata (in A) for pianoforte and arpeggione by Franz Schubert, written in 1824, and only lately published (Vienna, J. P. Gotthardt).

The arpeggione appears to have been of the size of the viol-da-gamba, or a small violoncello; the shape of the body something like that of the guitar. The finger-board had frets, and the six strings were tuned thus—



An instruction-book for the arpeggione by Vinc. Schuster, the same for whom Schubert wrote his sonata, has been published by A. Diabelli and Co., of Vienna. [P. D.]

ARRANGEMENT, or ADAPTATION, is the musical counterpart of literary translation. Voices or instruments are as languages by which the thoughts or emotions of composers are made known to the world; and the object of arrangement is to make that which was written in one musical language intelligible in another.

The functions of the arranger and translator are similar; for instruments, like languages, are characterised by peculiar idioms and special aptitudes and deficiencies which call for critical ability and knowledge of corresponding modes of expression in dealing with them. But more than all, the most indispensable quality to both is a capacity to understand the work they have to deal with. For it is not enough to put note for note or word for word or even to find corresponding idioms. The meanings and values of words and notes are variable with their relative positions, and the choice of them demands appreciation of the work generally, as well as of the details of the materials of which it is composed. It demands, in fact, a certain correspondence of feeling with the original author in the mind of the arranger or translator. Authors have often been fortunate in having other great authors for their translators, but few have written their own works in more languages than one. Music has had the advantage of not only having arrangements by the greatest masters, but arrangements by them of their own works. Such cases ought to be the highest order of their kind, and if there are any things worth noting in the comparison between arrangements and originals they ought to be found there.

The earliest things which answered the purpose of arrangements were the publications of parts of early operas, such as the recitatives and airs with merely figured bass and occasional indications of a figure or a melody for the accompaniment. In this manner were published operas of Lulli and Handel, and many now forgotten composers for the stage of their time and before; but these are not of a nature to arouse much interest.

The first arrangements which have any great artistic value are Bach's; and as they are many of them of his own works, there is, as has been before observed, especial reason for putting confidence in such conclusions as can be arrived at from the consideration of his mode of procedure. At the time when his attention was first strongly attracted to Italian instrumental music by the principles of form which their composers had originated, and worked with great skill, he arranged sixteen violin concertos of Vivaldi's for the clavier solo, and three of the same and a first movement for the organ. Of the originals of these it appears from Spitta[1] that there is only one to be found for comparison; but, as Spitta observes, from the freedom with which Bach treated his original in this instance it is legitimate to infer his treatment of the others. Vivaldi's existing concerto is in G major, and is the basis of the second in Bach's series—in the same key (Dörffel, 442).[2] In form it is excellent, but its ideas are frequently crude and unsatisfactory, and their treatment is often thin and weak. Bach's object being rather to have good illustrations of beauty of form than substance, he did not hesitate to alter the details of figures, rhythms, and melodies, and even successions of keys, to amplify cadences, and add inner parts, till the whole is transformed into a Bach-commentary on the form-principles of the Italians rather than an arrangement in the ordinary meaning of the term. It is not however an instance to justify arrangers in like freedom, as it is obviously exceptional, and is moreover in marked opposition to Bach's arrangements of his own works.

Some of these are of a nature to induce the expectation that the changes would be considerable; as for instance the arrangement of the prelude to the Solo Violin Sonata in E, as the introduction in D to the Cantata 'Wir danken dir Gott'[3] for obligato organ with accompaniment

[1] Johann Sebastian Bach, von Philipp Spitta, vol. i. p. 410 (Breitkopf, 1873).

[2] This and similar references are to the Thematic Catalogue of Bach's published instrumental works by Alfred Dörffel (Peters, 1867).

[3] Leipzig Bachgesellschaft, Cantata 29 (Vol. v. No. 9).

of strings oboes and trumpets. The original movement consists almost throughout of continually moving semiquavers embracing many thorough violin passages, and certainly does not seem to afford much material to support its changed condition. But a comparison shows that there is no change of material importance in the whole, unless an accompaniment of masterly simplicity can be called a change. There are immaterial alterations of notes here and there for the convenience of the player, and the figure

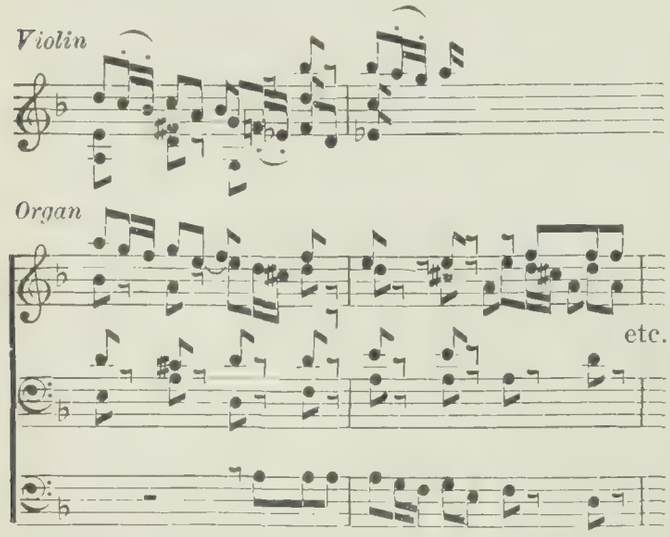
in the violin sonata, is changed into

in the organ arrangement—and so on, for effect, and that is all.

Another instance of a like nature is the arrangement of the fugue from the solo violin sonata in G minor (No. 1) for Organ in D minor (Dörffel, 821). Here the changes are more important though still remarkably slight considering the difference between the violin and the two hands and pedals of an organ.

The most important changes are the following:—

The last half of bar 5 and the first of bar 6 are amplified into a bar and two halves to enable the pedals to come in with the subject in the orthodox manner.



In the same manner two half-bars are inserted in the middle of bar 28, where the pedal comes in a second time with a quotation of the subject not in the original. In bar 16 there is a similar point not in the original, which however makes no change in the harmony.

The further alterations amount to the filling up and wider distribution of the original harmonies, the addition of passing notes and grace notes, and the remodelling of violin passages; of the nature of all which changes the following bar is an admirable instance—

Two other arrangements of Bach's, namely that of the first violin concerto in A minor, and of the second in E major as concertos for the clavier in G minor and D major respectively (Dörffel, 600, 603; 564, 570), are not only interesting in themselves, but become doubly so when compared with Beethoven's arrangement of his violin concerto in D as a pianoforte concerto.[1]

The first essential in these cases was to add a sufficiently important part for the left hand, and the methods adopted afford interesting illustrations of the characteristics of the two great masters themselves as well as of the instruments they wrote for. A portion of this requirement Bach supplies from the string accompaniment, frequently without alteration; but a great deal appears to be new till it is analysed; as, for instance, the independent part given to the left hand in the first movement of the concerto in G minor from the twenty-fifth bar almost to the end, which is as superbly fresh and pointed as it is smooth and natural throughout. On examination this passage—which deserves quotation if it were not too long—proves to be a long variation on the original bass of the accompaniment, and perfectly faithful to its source.

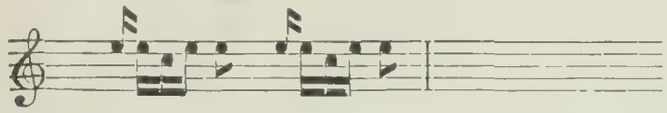
Bach's principle in this and in other cases of like nature is contrapuntal; Beethoven's is the exact contrary almost throughout. He supplies his left hand mainly with unisons and unisons disguised by various devices (which is in conformity with his practice in his two great concertos in G and E flat, in which the use of unisons and disguised unisons for the two hands is very extensive); and where a new accompaniment is inserted it is of the very simplest kind possible, such as

after the cadenza in the first movement; or else it is in simple chords, forming unobtrusive answers to figures and rhythms in the orchestral accompaniment.

[1] Breitkopf's edition of Beethoven, No. 73.

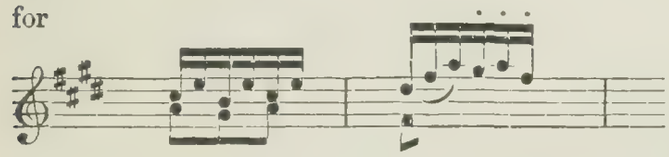
Both masters alter the original violin figures here and there for convenience or effect. Thus Bach, in the last movement of the G minor clavier concerto (Dörffel, 566), puts

for the violin figure



and in the last movement of the D major (Dörffel, 572) puts

for



in the E major violin concerto.

The nature of Beethoven's alterations may be judged of from the following quotation from the last movement, after the cadenza :—

Another typical alteration is after the coda in the first movement, where, in the thirteenth bar from the end, in order to give the left hand something to do, Beethoven anticipates the figure of smoothly flowing semiquavers with which the part of the violin closes, making the two hands alternate till they join in playing the last passage in octaves. In both masters' works there are instances of holding notes being changed into shakes in the arrangements, as in the 7th and 8th bars of the slow movement of the D concerto of Bach, and the 2nd and 5th bars after the first tutti in the last movement of Beethoven's concerto. In both there are instances of simple devices to avoid rapid repetition of notes, which is an easy process on the violin, but an effort on the pianoforte, and consequently produces a different effect. They both amplify arpeggio passages within moderate bounds, both are alike careful to find a precedent for the form of a change when one becomes necessary, and in both the care taken to be faithful to the originals is conspicuous.

The same care is observable in another arrangement of Beethoven's, viz. the Pianoforte Trio[1] made from his second symphony.

The comparison between these is very interesting owing to the unflagging variety of the distribution of the orchestral parts to the three instruments. The pianoforte naturally takes the substance of the work, but not in such a manner as to throw the others into subordination. The strings are used mostly to mark special orchestral points and contrasts, and to take such things as the pianoforte is unfitted for. Their distribution is so free that the violin will sometimes take notes that are in the parts of three or more instruments in a single bar. In other respects the strings are used to reinforce the accompaniment, so that in point of fact the violin in the trio plays more of the second violin part than of the first, and the violoncello of any other instrument from basso to oboe than the part given to it in the symphony.

The changes made are few and only such as are necessitated by technical differences, and are of the same simple kind with those in the concerto, and originating in similar circumstances. Everything in the distribution of the instruments subserves some purpose, and the re-sorting of the details always indicates some definite principle not at variance with the style of the original.

An illustration of the highest order in more modern works is found in the exquisitely artistic arrangement of the 'Midsummer Night's Dream' music for four hands on one pianoforte by Mendelssohn himself.

The step from Beethoven to Mendelssohn embraces a considerable development of the knowledge of the technical and tonal qualities of the pianoforte, as well as of its mechanical improvement as an instrument. This becomes apparent in the different characteristics of Mendelssohn's work, which in matter of detail is much more free than Beethoven's, though quite as faithful in general effect.

At the very beginning of the overture is an instance in point, where that which appears in the score as

is in the pianoforte arrangement given as

the object evidently being to avoid the repetition and the rapid thirds which would mar the lightness and crispness and delicacy of the passage.

In one instance a similar effect is produced by a diametrically contrary process, where Bottom's bray, which in the original is given to strings and clarinets (*a*), is given in the pianoforte arrangement as at (*b*) :—

[1] Breitkopf's edition of Beethoven, No. 90.

It is to be remarked that the arrangement of the overture is written in notes of half the value of those of the orchestral score, with twice the amount in each bar; except the four characteristic wind-chords—tonic, dominant, subdominant, and tonic—which are semibreves, as in the original, whenever they occur; in all the rest semiquavers stand for quavers, quavers for crotchets, crotchets for minims, etc., as may be seen by referring to the above examples. The change may possibly have been made in the hope that the players would be more likely to hit the character of the work when playing from the quicker looking notes; or it may have been a vague idea of conforming to a kind of etiquette noticeable in music, church music affecting the longer looking notes, such as semibreves and minims, while orchestral music has the faster looking notes, such as quavers (overtures to 'Coriolan,' 'Leonore,' 'Fidelio,' 'Jessonda,' etc.), and pianoforte music descends to semiquavers—as though to mark the relative degrees of dignity.

The pianoforte arrangement of the scherzo of the 'Midsummer Night's Dream' abounds with happy devices for avoiding rapid repetitions, and for expressing contrasts of wind and strings, and imitating the effect of many orchestral parts which it would be impossible to put into the arrangement in their entirety. One of the happiest passages in the whole work is the arrangement of the passage on the tonic pedal at the end of this movement.

(*G pedal, pizzicati bassi, and Corni and Trombe on first beat of each bar.*)

Mendelssohn often takes the freedom of slightly altering the details of a quick passage in order to give it greater interest as a pianoforte figure; which seems to be a legitimate development of the theory of the relative idiomatic modes of expression of different instruments, and its adaptation to details.

The method most frequently adopted by him to imitate the effect of the contrast of wind and strings in the same position, is to shift the figure or chords of one of them an octave higher or lower, and to give them respectively to the right and left hands, as in the first part of the music to the first scene of the second act. The continual alternation of the hands in the same position in the Intermezzo after the second act represents the alternation between violins and oboi, and clarinets and flutes.

In the music to the first scene of the third act an important drum roll is represented by a bass shake beginning on the semitone below the principal note, which is much happier than the usual method. In these respects Mendelssohn's principles of arrangement accord with those of Bach and Beethoven, differing only in those respects of treatment of detail which are the result of a more refined sense of the qualities of the pianoforte arising from the long and general cultivation of that instrument.

A still further development in this direction is found in the arrangement by Herr Brahms of his pianoforte quintett in F minor (op. 34) as a sonata for two pianofortes. In this the main object seems to have been to balance the work of the two pianofortes. Sometimes the first pianoforte, and sometimes the second has the original pianoforte part for pages together, and sometimes for a few bars at a time, but whenever the nature of the passages admits of it, the materials are distributed evenly between the two instruments. There are some changes—such as the addition of a bar in two places in the first movement, and the change of an accidental in the last—which must be referred to critical considerations, and have nothing to do with arrangement.

The technical changes in the arrangement are the occasional development of a free inner part out of the materials of the original without further change in the harmonies, the filling up of rhythm-marking chords of the strings, frequent reinforcement of the bass by doubling, and, which is especially noticeable, frequent doubling of both melodies and parts of important figures. It is this latter peculiarity which especially marks the adaptation of certain tendencies of modern pianoforte-playing to arrangement,—the tendency, namely, to double all the parts possible, to fill up chords to the utmost, and to distribute the notes over a wider space, with greater regard to their tonal relations than formerly, and by every means to enlarge the scope and effective power of the instrument, at the same time breaking down all the obstructions and restrictions which the old dogmas of style in playing placed in the way of its development.

Another admirable instance of this kind is the arrangement by Herr Brahms of a gavotte of Gluck's in A; which however in its new form is as much marked by the personality of the arranger as that of the composer—a dangerous precedent for ordinary arrangers.

The most remarkable instance of the adaptation of the resources of modern pianoforte-playing to arrangement, is that by Tausig of Bach's toccata and fugue for the organ in D, 'zum Conzertvortrag frei bearbeitet.' The difficulty in such a case is to keep up the balance of the enlarged scale throughout. Tausig's perfect mastery

of his art has carried him through the ordeal unscathed, from the first bar, where

down to the end, where Bach's

becomes

and the result in the hands of a competent performer is magnificent.

The point which this arrangement has in common with the foregoing classical examples, is its remarkable fidelity to the materials of the original, and the absence of irrelevant matter. The tendency of high class modern arrangements is towards freedom of interpretation; and the comparison of classical arrangements with their originals shows that this is legitimate, up to the point of imitating the idioms of one instrument by the idioms of another, the effects of one by the effects of another. Beyond that lies the danger of marring the balance of the original works by undue enlargement of the scale of particular parts, of obscuring the personality of the original composer, and of caricature,—that pitfall of ill-regulated admiration,—instances of which may be found in modern 'transcriptions,' which are the most extreme advance yet achieved in the direction of freedom of interpretation.

The foregoing is very far from exhausting the varieties of kinds of arrangement; for since these are almost as numerous as the possible interchanges between instruments and combinations of instruments, the only course open is to take typical instances from the best sources to illustrate general principles—and these will be found to apply to all arrangements which lay claim to artistic merit. To take for instance an arrangement of an orchestral work for wind band:—the absent strings will be represented by an increased number of clarinets of different calibres and corni di bassetto, and by the bassoons and increased power of brass. But these cannot answer the purpose fully, for the clarinets cannot take the higher passages of the violin parts, and they will not stand in an equally strong degree of contrast to the rest of the band. Consequently the flutes have to supplement the clarinets in places where they are deficient, and the parts originally belonging to them have to be proportionately modified; and in order to meet the requirements of an effect of contrast, the horns, trombones, etc. for lower parts, have to play a great deal more than in the original, both of melody and accompaniment. The part of the oboes will probably be more similar than any other, though it will need to be modified to retain its relative degree of prominence in the band. On the whole a very general interchange of the parts of the instruments becomes necessary, which is done with due respect to the peculiarities of the different instruments, both as regards passages and relative tone qualities, in such a manner as not to mar the relevancy and balance of parts of the whole work.

Of arrangements of pianoforte works for full orchestra, of which there are a few modern instances, it must be said that they are for the most part unsatisfactory, by reason of the marked difference of quality between pianoforte and orchestral music. It is like trying to spread out a lyric or a ballad over sufficient space to make it look like an epic. Of this kind are the arrangements of Schumann's 'Bilder aus Osten' by Reinecke, and Raff's 'Abends' by himself. Arrangements of pianoforte accompaniments are more justifiable, and Gounod's 'Meditation' on Bach's Prelude in C, Liszt's scoring of the accompaniment to Schubert's hymn 'Die Allmacht,' and his development of an orchestral accompaniment to a Polonaise of Weber's out of the materials of the original, without marring the Weberish personality of the work, are both greatly to the enhancement of the value of the works for concert purposes. The question of the propriety of eking out one work with portions of another entirely independent one—as Liszt has done in the Introduction to his version of this Polonaise—belongs to what may be called the *morale* of arrangement, and need not be touched upon here. Nor can we notice such adaptations as that of Palestrina's 'Missa Papæ Marcelli'—originally written for 6 voices—for 8 and 4, or that by the late Vincent Novello of Wilbye's 3-part madrigals for 5, 6, and 7 voices.

As might be anticipated, there are instances of composers making very considerable alterations in their own works in preparing them for performance under other conditions than those for which they were originally written, such as the arrangement, so-called, by Beethoven himself of his early Octett for wind instruments in Eb (op. 103) as a quintett for strings in the same

key (op. 4) and Mendelssohn's edition of the scherzo from his Octett in E♭ (op. 20) for full orchestra, introduced by him into his symphony in C minor—which are rather new works founded on old materials than arrangements in the ordinary sense of the term. They are moreover exceptions even to the practice of composers themselves, and do not come under the head of the general subject of arrangement. For however unlimited may be the rights of composers to alter their own works, the rights of others are limited to redistribution and variation of detail; and even in detail the alterations can only be legitimate to the degree which is rendered indispensable by radical differences in the instruments, and must be such as are warranted by the quality, proportions, and style of the context.

It may be convenient to close this article with a list of adaptations of their own works by the composers themselves, as far as they can be ascertained:—

1. Bach's arrangements of his own works are numerous. Some of them have already been noticed, but the following is a complete list of those indicated in Dörffel's Thematic Catalogue.

Concerto in F for clavier and two flutes with 4tett acct. (D. 561–3), appears also in G as concerto for violin and two flutes with 5tett acct (D. 1072–4).—Concerto in G minor for clavier with 5tett acct. (D. 564), as concerto in A minor for violin with 4tett acct. (D. 600).—Concerto in D major for clavier with 4tett acct. (D. 570), as concerto for violin in E major with 4tett acct. (D. 603).—The Prelude and Fugue in A minor for clavier solo (D. 400, 401), appears, with much alteration, as 1st and 3rd movements of concerto for clavier, flute, and violin in same key, with 5tett acct. (D. 582, 584). The slow movement of the same concerto, in C (D. 583), is taken from the third organ sonata, where it stands in F (D. 774).—The fugue in G minor for violin solo, from Sonata 1 (D. 610) appears in D minor, arranged for the organ (D. 821).—Sonata 3 for violin solo in A minor (D. 621–4), appears in D minor for clavier solo (D. 108–11).—The prelude in E for violin solo to Sonata 6 (D. 634) is arranged for organ and full orchestra in D, as 'sinfonia' to the Rathswahl cantata 'Wir danken dir, Gott,' No. 29 of the Kirchencantaten of the Bachgesellschaft (vol. v. 1), and the first movement of the 5th Sonata for Violin in C (D. 630) appears as a separate movement for Clavier in G (D. 141).—The first movement of the Concerto in E for Clavier appears in the Introduction to the Cantata 'Gott soll allein'; and the two first movements of the Concerto in D minor appear in the Cantata 'Wir müssen durch viel Trübsal.'

2. Handel was very much in the habit of using up the compositions both of himself and others, sometimes by transplanting them bodily from one work to another—as his own Allelujahs from the Coronation Anthems into 'Deborah,' or Kerl's organ Canzona, which appears nearly note for note as 'Egypt was glad' in 'Israel in Egypt'; and sometimes by conversion, as in the 'Messiah,' where the Choruses 'His yoke' and 'All we' are arranged from two of his own Italian Chamber duets, or in 'Israel in Egypt' where he laid his organ Fugues and an early Magnificat under large contribution. In other parts of 'Israel,' and in the 'Dettingen Te Deum' he used the music of Stradella and Urio with greater or less freedom. But these works come under a different category from those of Bach, and will be better examined under their own heads. More to the present purpose are his adaptations of his Orchestral works, such as the 2nd, 3rd, 4th, and 5th of the 2nd Set of Organ Concertos, which are mere adaptations of the 11th, 10th, 1st, and 6th of the 12 Concerti Grossi (op. 6). No. 1 of the same set of Organ Concertos is partly adapted from the 6th Sonata or Trio (op. 5).

3. Beethoven. The arrangements of the seventh and eighth symphonies for two hands, published by Steiner at the same time with the scores, although not by Beethoven himself, were looked through and corrected by him. He arranged the Grand Fugue for String Quartett (op. 133) as a duet for Piano. No other pianoforte arrangements by him are known; but he is said to have highly approved of those of his symphonies by Mr. Watts. Beethoven however rearranged several of his works for other combinations of instruments than those for which he originally composed them. Op. 1, No. 3, pianoforte trio, arranged as string quintett (op. 104). Op. 4, string quintett (two violins), arranged from the octett for wind instruments (1796), published later as op. 103. Op. 14, No. 1, pianoforte sonata in E, arranged as a string quartett in F. Op. 16, quintett for pianoforte and wind instruments, arranged as a pianoforte string quartett. Op. 20, the Septett, arranged as a trio for pianoforte, clarinet or violin, and cello (op. 38). Op. 36, symphony No. 2, arranged as a pianoforte trio. Op. 61, violin concerto, arranged as pianoforte concerto. The above are all that are certainly by Beethoven. Op. 31, No. 1, Pianoforte Sonata—G, arranged as a string quartett, is allowed by Nottebohm to be probably by the composer. So also were Op. 8, Notturno for String Trio arranged for Pianoforte and Tenor (op. 42), and Op. 25, Serenade for Flute, Violin, and Tenor, arranged for Pianoforte and Flute (op. 41), were looked over and revised by him.

4. Schubert. Arrangement for four hands of overture in C major 'in the Italian style' (op. 170), overture in D major, and overture to 'Rosamunde'; and for two hands of the accompaniments to the Romance and three choruses in the same work. The song 'Der Leidende' (Lief. 50, No. 2), in B minor, is an arrangement for voice and piano of the second trio (in B♭ minor) of the second Entracte of 'Rosamunde.'

5. Mendelssohn. For four hands: the Octett (op. 20); the 'Midsummer's Night's Dream' overture and other music; the 'Hebrides' overture; the overture for military band (op. 24); the andante and variations in B♭ (op. 83 *a*), originally written for two hands. For two hands: the accompaniments to the Hochzeit

des Camacho, and to the 95th Psalm (op. 46). He also arranged the scherzo from the string octett (op. 20) for full orchestra to replace the minuet and trio of his symphony in C minor on the occasion of its performance by the Philharmonic Society, as noticed above.

6. Schumann. For four hands: Overture, scherzo, and finale; Symphony No. 2 (C major); Overture to 'Hermann und Dorothea.' Madame Schumann has arranged the quintett (op. 44) for four hands, and the accompaniments to the opera of 'Genoveva' for two hands.

7. Brahms has arranged Nos. 1, 3, and 6 of his 'Ungarische Tänze,' originally published as piano pieces for four hands, for full orchestra. He has also arranged his piano string quintett (op. 34) as a 'Sonata' for four hands on two pianos, and his two Orchestral Serenades for Piano, à quatre mains. [C. H. H. P.]

ARRIAGA, Juan Crisostomo d', born at Bilbao 1808, a violinist and composer of great promise. When a mere child, without having learnt even the elements of harmony, he wrote a Spanish opera, and at the age of thirteen was sent to the Conservatoire at Paris to study the violin under Baillot and harmony under Fétis. In two years he became a learned contrapuntist, and wrote an 'Et vitam venturi' in eight parts, which Cherubini is said to have pronounced a masterpiece. (Fétis.) On his premature death, of decline, at Marseilles in 1826, this gifted artist left three quatuors for the violin (Paris, 1824) — compositions deserving to be better known—an overture, a symphony, and many other unpublished works. [M. C. C.]

ARRIGONI, Carlo, a lutenist, born at Florence at the beginning of last century, whose only claim to notice is his possible antagonism to Handel. He is said by Fétis and Schoelcher to have been engaged, with Porpora, as composer to the theatre at Lincoln's Inn, which was started as an opposition to Handel in 1734, and to have produced there in that year an opera called 'Fernando' without success; but it is impossible to discover on what this is grounded. That Arrigoni was in London at or about that date is possible, and even probable, since a volume of his 'Cantate da Camera' was published there in 1732; and in Arbuthnot's satire 'Harmony in an Uproar,' the 'King of Arragon' is mentioned amongst Handel's opponents, a name which Burney ('Commemoration') explains to mean Arrigoni. But on the other hand the impression he made must have been very small, and his opera becomes more than doubtful, for the names neither of Arrigoni nor Fernando are found in the histories of Burney or Hawkins, in the MS. Register of Colman, in the newspapers of the period, nor in any other sources to which the writer has had access. It is in accordance with this that Arrigoni is mentioned by Chrysander in connection with Arbuthnot's satire only ('Händel,' ii. 343).

In 1738, taking a leaf out of his great antagonist's book, he produced an oratorio called 'Esther,' at Vienna, after which he appears to have retired to Tuscany, and to have died there about 1743. [G.]

ARSIS and THESIS. Terms used both in music and in prosody. They are derived from the Greek. Arsis is from the verb *αἴρω* (*tollo*, I lift or raise), and marks the elevation of the voice in singing, or the hand in beating time. The depression which follows it is called *θέσις* (*depositio* or *remissio*).

When applied to beating time, arsis indicates the strong beat, and thesis the weak: for the ancients beat time in exactly the reverse way to ours, lifting the hand for the strong beat and letting it fall for the weak, whereas we make the down beat for the strong accents, and raise our hand for the others.

When applied to the voice, a subject, counterpoint, or fugue, are said to be 'per thesin,' when the notes ascend from grave to acute; 'per arsin' when they descend from acute to grave, for here again the ancient application of the ideas of height or depth to music was apparently the reverse of our own.

A fugue 'per arsin et thesin' is the same thing as a fugue 'by inversion,' that is to say, it is a fugue in which the answer to the subject is made by contrary motion. (See Fugue, Canon, Inversion, and Subject). The terms arsis and thesis may be regarded as virtually obsolete, and are practically useless in these days. [F. A. G. O.]

ARTARIA. A well-known music-publishing firm in Vienna, the founders of which were Cesare, Domenico, and Giovanni Artaria, three brothers from Blevio on the Comersee, who settled in Vienna about the end of the year 1750. In 1770 the privilege of the Empress was granted to Carlo, the son of Cesare, and his cousins, to establish an art business in Vienna. To the sale of engravings, maps, and foreign music, was added in 1776 a music printing press, the first in Vienna, from which two years later issued the first publications of the firm of Artaria and Co. At the same time appeared the first of their catalogues of music, since continued from time to time. From the year 1780 a succession of works by Haydn, Mozart, Beethoven, and other composers, were published by the firm, which is in full activity at the present day. A branch house was founded at Mayence in 1793 by the brothers of Pasquale Artaria; this was afterwards extended to Mannheim, in conjunction with the bookselling house of Fontaine, under the name of Domenico Artaria. In 1793 the Vienna firm united with Cappi and Mollo, who however shortly afterwards dissolved the association, and started houses of their own, Cappi again subsequently joining with Tobias Haslinger, and Mollo with Diabelli. In 1802 the business came into the hands of Domenico, a son-in-law of Carlo. Under his management the business reached its climax, and the house was the resort of all the artists of the city. His valuable collection of autographs by Mozart,

Haydn, Beethoven, and other famous composers, was known far and wide, though in course of time in great measure dispersed. Domenico died on July 5, 1842, and the business has been carried on since under the old name by his son August. Haydn was for many years in most intimate relations with Artaria and Co. What they published for Beethoven may be seen in the fullest detail in Nottebohm's catalogue of the works of the great composer. [C. F. P.]

ARTAXERXES, an opera in three acts composed by Dr. Arne, the words translated from Metastasio's 'Artaserse,' probably by Arne himself. Produced at Covent Garden Theatre Feb. 2, 1762, and long a favourite piece on the London boards.

ARTEAGA, Stefano, a learned Jesuit, born about 1750 at Madrid. On the suppression of the order he went to Italy and became a member of the Academy of Padua. He afterwards resided at Bologna, and there made the acquaintance of Padre Martini, at whose instance he investigated the rise and progress of the Italian stage. His work, entitled 'Rivoluzioni del teatro musicale Italiano, dalla suo originè fine al presente,' (two vols., 1783) is of importance in the history of music. A second edition, in three vols., appeared at Venice in 1785. He also left behind him a MS. treatise on the rhythm of the ancients, of which however all traces have disappeared. [F. G.]

ART OF FUGUE, THE (*Die Kunst der Fuge*), a work of Sebastian Bach's, in which the art of fugue and counterpoint is taught, not by rules but in examples. It was written in 1749, the last year of his life, and is therefore the last legacy of his immense genius and experience. The work consists of sixteen fugues—or in Bach's language 'counterpoints'—and four canons, for one pianoforte, and two fugues for two pianofortes, all on one theme

in every variety of treatment; and closes with a fugue on three new subjects, in the same key as before, the third being the name of Bach (according to the German notation):—

This fugue leaves off on a chord of A, and is otherwise obviously unfinished, interrupted, according to Forkel, by the failure of Bach's eyes, and never resumed. On the other hand the writing of the autograph (Berlin Library), though small and cramp, is very clear, and not like the writing of a half-blind man. We learn on the same authority that it was the master's intention to wind up his work with a fugue on four subjects, to be reversed in all the four parts; of this however no trace exists. The Art of Fugue was partly engraved (on copper) before Bach's death, and was published by Marpurg in 1752 at four thalers, with the addition at the end of a Chorale, 'Wenn wir in höchsten Nothen sind,' in four parts in florid counterpoint, which is said to have been dictated by the master to his son-in-law Altnikol very shortly before his departure, and is thus his 'Nunc dimittis.' This chorale, which has no apparent connection with the preceding portion, is in G major; it is omitted in the editions of Nägeli and Peters, but will be found in Becker's 'J. S. Bach's vierstimmige Kirchengesänge' (Leipzig, 1843).

Thirty copies only of the work were printed by Marpurg, and the plates, sixty in number, came into the hands of Emanuel Bach, who on Sept. 14, 1766, in a highly characteristic advertisement, offered them for sale at any reasonable price. What became of them is not known. There are two modern editions—that of Nägeli of Zürich (1803), published at the instigation of C. M. von Weber, a splendid oblong folio, with the fugues engraved both in score and in compressed arrangement; and that of Peters (1839), edited by Czerny. Neither of these has the Chorale; but the latter of the two contains the 'Thema regium' and the 'Ricerca' from the 'Musikalisches Opfer.' An excellent analysis of the work is Hauptmann's 'Erläuterungen,' etc., originally prefixed to Czerny's edition, but to be had separately (Peters, 1841). [G.]

ARTUSI, Giovanni Maria, born at Bologna in the second half of the 16th century, was a canon of San Salvatore, Venice, a learned musician, and a conservative of the staunchest order, whose life was devoted to combatting the innovations of the then 'music of the future.' His 'Arte del contrapunto ridotto in tavole' was published in 1586 and '89 (translated into German by Frost), but his principal works are controversial, 'Delle imperfezioni delle musica moderna,' 1600 and 1603, directed against Monteverde's use of unprepared sevenths and ninths; 'Difesa ragionata della sentenze date di Ghisilino Dankerts'; 'Impresa del Zarlino,' 1604; 'Considerazione Musicali,' 1607. Artusi was active also as a composer; he published 'Canzonette' for four voices, and a 'Cantate Domino' of his will be found in the Vincenti collection dedicated to Schieti. [F. G.]

ARWIDSSON, Adolf Iwar, born in 1791 at Padajoki in Finland; professor of history at the university of Abo from 1817 to 1821, when he was banished by the Russian government for a political article. He retired to Stockholm, and was appointed keeper of the royal library. He edited a most interesting collection of Swedish national songs, 'Svenska Fornsänger,' in 3 vols. (Stockholm, 1834, 1837, and 1842), which forms a continuation of the 'Svenska Folkvisor' of Geijer and Afzelius. [M. C. C.]

ASANTSCHEWSKY, Michel Von, born 1839 at Moscow, since 1839 director of the Conservatoire de Musique at St. Petersburg, one of the most cultivated of living Russian musicians, is remarkable for the delicate finish of diction

and form which characterises his compositions, as well as for the extensive range of his knowledge in musical matters generally. He completed his education in counterpoint and composition under Hauptmann and Richter at Leipsic between the years 1861 and 1864, and lived during some years subsequently, alternately at Paris and at St. Petersburg. He has acquired a reputation among book-collectors as the possessor of one of the finest private libraries of works upon music in Europe. Among his printed compositions the following should be noted: op. 2, Sonata in B minor for pianoforte and violoncello; op. 10, Trio in F sharp minor for piano and strings; op. 12, Fest-Polonaise for two pianofortes; Passatempo for piano *a quatre mains*. [E. D.]

ASCANIO IN ALBA. A 'theatrical serenade' in two acts (overture and twenty-four numbers), composed by Mozart at Milan, Sept. 1771, for the betrothal of the Archduke Ferdinand and Princess Maria of Modena. First performance, Oct. 17, 1771 (Köchel, No. 111).

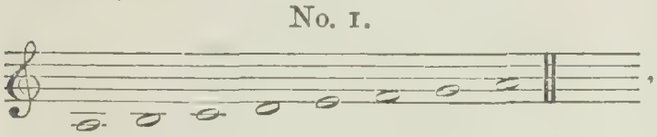
ASCENDING SCALE. It is a peculiarity of the minor scale adopted in modern music, that its form is frequently varied by accidental chromatic alterations, to satisfy what are assumed to be the requirements of the ear; and as these alterations most commonly take place in ascending passages, it is usual, in elementary works, to give different forms of the minor scale, for ascending and descending.

For example, the normal form of the scale of A minor is

and in descending, as here shown, the progressions seem natural and proper.

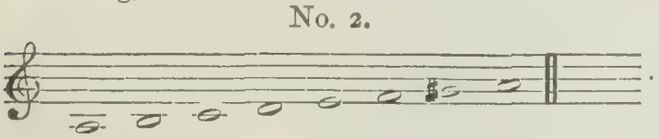
But if the motion take place in the reverse direction, thus—

No. 1.



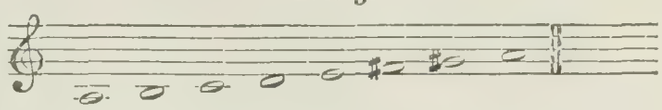
it is said that the succession of the upper notes in approaching the key note A, do not give the idea which ought to correspond to our modern tonality. It is argued that the penultimate note, or seventh, being the *leading* or *sensible* note of the key, ought to be only a semitone distant from it, as is customary in all well-defined keys; and that, in fact, unless this is done, the tonality is not properly determined. This reason has led to the accidental sharpening of the seventh in ascending, thus—

No. 2.



But here there is another thing objected to; namely, the wide interval of three semitones (an augmented second) between the sixth and the seventh, F♮ and G♯, which it is said is abrupt and unnatural, and this has led to the sharpening of the sixth also, thus—

No. 3.



to make the progression more smooth and regular. This is the succession of notes usually given as the *ascending minor scale.*

The first alteration—namely, the sharpening of the leading note—is no doubt required if the perfect modern tonality is to be preserved, for no doubt an ascending passage, thus—

would give rather the impression of the key of C or of F than that of A.

But the necessity for sharpening the *sixth* is by no means so obvious; it may no doubt be smoother, but the interval of the augmented second is one so familiar in modern music, as to form no imperative reason for the change. Hence this rule is frequently disregarded, and the form marked No. 2 is very commonly used, both for ascending and descending.

We may instance the fine unison passage in the last movement of Schumann's Symphony, No. 1:—

where not only does the peculiar rhythm give a most striking original effect to the common succession of notes, but the strong attention drawn to the objectionable augmented interval, shows how effectively genius may set at nought commonplace ideas as to musical propriety. [W. P.]

ASCHER, Joseph, was born in London, 1831, and died there 1869. A fashionable pianist, and composer of drawing-room pieces. He was taught by Moscheles, and followed his master to the Conservatorium at Leipzig. His successful career began in Paris, where he was nominated court pianist to the Empress Eugenie, an honour which appears to convey considerable business advantage in the fashionable world, and is accordingly a coveted title.

His compositions amount to above a hundred *salon* pieces — mazurkas, gallops, nocturnes, études, transcriptions, etc.—well written and effective, of moderate difficulty, and rarely if ever without a certain elegant grace and finish. Among the best are 'La perle du Nord' and 'Dozia,' both mazurkas, and 'Les gouttes d'eau,' an étude. Ascher believed in himself, and in his earlier compositions at least, offered his best; but the dissipated habits he gradually fell into ruined both his health and his taste. [E. D.]

ASHE, Andrew, was born at Lisburn in Ireland, about the year 1759. Before he had completed his ninth year he was sent to England to an academy near Woolwich, where he remained

more than three years, when his father, having experienced a reverse of fortune, was compelled to recall him to Ireland. Luckily for him, as he stood weeping with the letter in his hand, Count Bentinck, a colonel in the army, who was riding by, learning the cause of his grief, wrote to his father offering to take the boy under his protection. Ashe accompanied his patron to Minorca, where, the love for music which he had already shown at school continuing, he received instruction on the violin. He next went with the Count through Spain, Portugal, France, and Germany, and lastly to Holland, where such an education as would qualify him to become his benefactor's confidential agent in the management of his estates, was provided for him. But Ashe's mind was too strongly attracted towards music to suffer him to attend to anything else, and the Count perceiving it permitted him to follow the bent of his inclination. He acquired a general knowledge of several wind-instruments, but evinced the most decided predilection for the flute, the study of which he pursued so assiduously that in the couse of a few years he became the admiration of Holland. Quitting the roof of Count Bentinck he engaged himself as chamber musician at Brussels, first to Lord Torrington, and next to Lord Dillon. About 1778 he obtained the post of principal flute at the opera-house of Brussels. About 1782 he returned to Ireland, where he was engaged at the concerts given at the Rotunda, Dublin. In 1791 Salomon engaged him for the concerts given by him in Hanover Square, at which Haydn was to produce his grand symphonies, and he made his appearance at the second concert, on February 24, 1792, when he played a concerto of his own composition with decided success. He soon became engaged at most of the leading concerts, and on the resignation of Monzani was appointed principal flute at the Italian opera. In 1799 he married Miss Comer, a pupil of Rauzzini, who, as Mrs. Ashe, was for many years the principal singer at the Bath concerts, the direction of which after the death of Rauzzini in 1810, was confided to Ashe. After conducting these concerts with considerable ability for twelve years. Ashe relinquished the direction in 1822, having during the last four years of his management been a considerable loser by them. Mrs. Ashe first appeared at the Concert of Ancient Music in 1807 and also sung in the oratorios. Two of Ashe's daughters, one a harpist and the other a pianist, performed in London in 1821. [W. H. H.]

ASHLEY, JOHN, a performer on the bassoon at the end of the last century. In 1784 he was assistant conductor, under Joah Bates, at the commemoration of Handel in Westminster Abbey, where his name also appears as playing the double bassoon, employed to strengthen the bass of the choruses. In 1795 he undertook the direction of the Lent 'oratorios' at Covent Garden. These performances, which took place on the Wednesdays and Fridays in Lent, were originated by Handel, under whose direction, and afterwards that of Smith and Arnold, they were correctly designated—that is, they consisted of an entire oratorio or musical drama. Under Ashley's management this character was lost, and the performances (with few exceptions) were made up of selections, including every class of music, sacred and secular, 'in most admired disorder.' It was at these oratorios that Braham obtained celebrity by his fine rendering of sacred music. For many years Ashley and his four sons visited different parts of England, giving what they called 'Grand Musical Festivals.' The father and sons performed themselves, and with some popular singer, and a little provincial help, they contrived to interest the public, and to fill their own pockets. On the death of Dr. Boyce, Ashley bought the plates of his 'Cathedral Music,' and the second edition (1788) bears his name as the publisher.

ASHLEY, GENERAL, his eldest son, was a pupil of Giardini and Barthelemon, and a fair performer on the violin, of which instrument he was considered an excellent judge. He was scarcely known out of his father's orchestra. He died in 1818. ASHLEY, CHARLES JANE, born in 1773, was a performer of considerable excellence on the violoncello. In conjunction with his brother, 'the General' (as he was always called), he carried on the oratorios after his father's death. He had great reputation as an accompanyist, and was considered second only to Lindley. He was one of the founders of the GLEE CLUB in 1793, an original member of the Philharmonic Society, and for some years Secretary to the Royal Society of Musicians. Nearly twenty years of his life were passed in the rules of the King's Bench Prison. In the latter part of his career (when nearly 70), he became the proprietor of the Tivoli Gardens, Margate, the anxieties of which undertaking hastened his death, which occurred on Aug. 20, 1843.

ASHLEY, JOHN JAMES, was a pupil of Johann Schroeter, and a good organ and pianoforte player. He is remembered as an excellent singing-master, numbering among his pupils Mrs. Vaughan, Mrs. Salmon, Master Elliot (afterwards the glee composer), Charles Smith, etc.

ASHLEY, RICHARD, was a viola performer, connected with the principal orchestras in London and the provinces. Nothing is known of his career. (Burney, *Comm. of Handel; Mus. Periodicals; Biog. Dict. U. K. S.*) [E. F. R.]

ASHLEY, JOHN, known as 'Ashley of Bath,' was, for upwards of half a century, a performer on the bassoon, and a vocalist in his native city. He is chiefly remembered as the writer and composer of a large number of songs and ballads (between the years 1780 and 1830), many of which acquired considerable popularity. He is also deserving of notice as the author of two ingenious pamphlets in answer to Mr. Richard Clark's work on the origin of our National Anthem:—'Reminiscences and Observations respecting the Origin of God save the King,' 1827; 'A Letter to the Rev. W. L. Bowles, supplementary to the Observations, etc.' 1828, both published at Bath. [E. F. R.]

ASHWELL, Thomas, a cathedral musician in the middle of the 16th century, who adhered to the Romish faith, and some of whose motets still remain amongst the MSS. in the Music School at Oxford. [W. H. H.]

ASIOLI, Bonifacio, born at Correggio, April 30, 1769; began to study at five years of age. Before eight he had written several masses, and a concerto for pianoforte. At ten he went to study at Parma under Morigi. After a journey to Venice, where he enjoyed his first public success, he was made maestro di capella at his native town. By eighteen he had composed five masses, twenty-four pieces for the church and the theatre, and a number of instrumental pieces. In 1787 he changed his residence to Turin, where he remained nine years, composing five cantatas and instrumental music. In 1796 he accompanied the Duchess Gherardini to Venice, and remained there till 1799, when he removed to Milan, and in 1810 to Paris. There he continued in the service of the empress Marie Louise till July 1813. On the fall of the empire Asioli returned to Correggio, and died there May 26, 1832. Besides his compositions he published a 'Trattato d'armonia e d'accompagnamento;' a book of dialogues on the same; 'Osservazioni sul temperamento, etc.; and 'Disinganno' on the same. His principal work is 'Il Maestro di composizione.' All these works are written with accuracy and a clear and brilliant style. Asioli's biography was written by Coli, a priest of Correggio, under the title of 'Vita di B. Asioli,' etc. (Milan: Ricordi, 1834). [F. G.]

ASOLA, or ASULA, Giovanni Matteo, born at Verona in the latter half of the 16th century; priest and composer of church music and madrigals. He was one of the first to use figured basses. In 1592 he joined other composers in dedicating a collection of Psalms to Palestrina.

ASPULL, George, born in 1814, at a very early age manifested an extraordinary capacity as a pianoforte player. At eight years of age, notwithstanding that the smallness of his hands was such that he could not reach an octave, so as to press down the two keys simultaneously without great difficulty, and then only with the right hand, he had attained such proficiency as to be able to perform the most difficult compositions of Kalkbrenner, Moscheles, Hummel, and Czerny, besides the concertos of Handel, and the fugues of Bach and Scarlatti, in a manner almost approaching the excellence of the best professors. He also sang with considerable taste. As he grew older, his improvement was such as to lead to the expectation that he would eventually take a place amongst the most distinguished pianists. These hopes were, however, disappointed, by his death from a pulmonary disease, at the age of eighteen. He died Aug. 20, 1832, at Leamington, and was buried two days afterwards at Nottingham. Aspull left several manuscript compositions for the pianoforte, which were subsequently published, with his portrait prefixed, under the title of 'George Aspull's posthumous Works for the Pianoforte.' [W. H. H.]

ASSAI (Ital.), 'Very'; e.g. 'Allegro assai,' very fast; 'Animato assai,' with great animation; 'Maestoso assai,' with much majesty, etc.

ASSMAYER, Ignaz, born at Salzburg, Feb. 11, 1790: in 1808 organist of St. Peter's in that city, where he wrote his oratorio 'Die Sündfluth' (the Deluge), and his cantata 'Worte der Weihe.' In 1815 he removed to Vienna; in 1824 became organist to the Scotch church; in 1825 Imperial organist; in 1838 vice, and in 1846 chief, Kapellmeister to the court. He died Aug. 31, 1862. His principal oratorios—'Das Gelübde' (the Vow); 'Saul und David,' and 'Saul's Tod'—were frequently performed by the 'Tonkünstler-Societät,' of which Assmayer was conductor for fifteen years. Besides these larger works he composed fifteen masses, two requiems, a Te Deum, and various smaller church pieces, as well as nearly sixty secular compositions. These last are all published. His music is correct and fluent, but wanting in invention and force. [C. F. P.]

ASTON, Hugh, was an organist and church composer in the time of Henry VIII. A 'Te Deum' for five voices and a motet for six voices composed by him are preserved in the Music School at Oxford. [W. H. H.]

ASTORGA, Emanuele Baron d', born at Palermo in 1681 (Fétis pretends to give the day of his birth). He began the serious business of life by witnessing the execution of his father, the Marchese Capece da Roffrano, who was captain of a mercenary troop, and perished on the scaffold along with several Sicilian nobles after an unsuccessful émeute against the power of Spain. In the agony of this terrible occasion his mother actually died, and the child himself fainted away. After a time the orphan attracted the notice of the Princess Ursini, maid of honour to the wife of Philip V, who placed him in the convent of Astorga in Spain. In this asylum it was that he completed the musical education which there is reason to believe he had commenced under Francesco Scarlatti at Palermo. He quitted it after a few years, and on his entrance into the world obtained, through the influence of his patroness, the title of Baron d' Astorga. In 1704 he was sent on a diplomatic mission to the court of Parma. There he soon became a favourite for his music's sake and for his personal gifts, for he was a handsome man, composed with ease and ability, and sang with extraordinary finish and feeling his own graceful and original melodies. It is not otherwise than consonant with a character of which we have only slight though suggestive glimpses, to hear that on the termination of his mission he still lingered at the court of Parma, forgetful of his Spanish ties, and fettered by a secret love affair with his pupil Elisabetta Farnese, the niece of the reigning duke. Nor is it surprising that his entertainer should soon have found means to transfer so dangerous an ornament of his palace to some distant capital. Accordingly we find Astorga dismissed, early in

1705, with a letter of recommendation to Leopold I at Vienna. The emperor yielded at once to the fascinations of his visitor, and would have attached him to his person had not his own death too rapidly interrupted his intentions. Astorga remained in or returned to Vienna during the reigns of Joseph I and Charles VI, and for many years led a romantic life of travel and adventure, in the course of which he visited and revisited Spain, Portugal, England, and Italy, reconciling himself on his way to the neglected protectress of his boyhood. In 1712 he was in Vienna, and acted as godfather to the daughter of his friend CALDARA, whose register (May 9) may still be seen at S. Stephen's. In 1720 he reappeared there for a short time, and thence he finally retired to Bohemia, where he died, August 21, 1736, not however, as usually stated, in a monastery, but in the Schloss Raudnitz, which had been given up to him by its owner, the prince of Lobkowitz, and the archives of which contain evidence of the fact. This circumstance has only very recently been brought to light.

Among Astorga's compositions are his renowned 'Stabat Mater,' for 4 voices and orchestra, probably composed for the 'Society of Antient Musick' of London, and executed at Oxford in 1713, MS. copies of the score of which are to be found in the British Museum and the imperial libraries of Berlin and Vienna; and a pastoral opera 'Dafni' (not 'Dafne'), composed and performed at Barcelona in June 1709, and probably last heard at Breslau in 1726, and to be found in the Hofbibliothek at Vienna in the Kiesewetter collection. A requiem is also mentioned as possibly lying in the castle where he ended his days. His name is also known by his beautiful cantatas, of which a great number are extant. The Abbé Santini had no less than 98 of these, 54 for soprano and 44 for contralto, with accompaniment for figured bass on the harpsichord, besides ten composed as duets for the same two voices. Of the Stabat Mater Hauptmann (no indulgent critic) writes ('Briefe,' ii. 51), 'It is a lovely thing, . . . a much more important work than Pergolesi's, and contains a trio, a duet, and an air, which are real masterpieces, wanting in nothing; neither old nor new, but music for all times, such as is too seldom to be met with.' The work is published (with pianoforte accompaniment) in the Peters Collection, and has been recently re-instrumented by Franz and issued by Leuckhart. [C. F. P.]

A TEMPO (Ital.). 'In time.' When the time of a piece has been changed, either temporarily by an *ad libitum, a piacere,* etc., or for a longer period by a *più lento, più allegro,* or some similar term, the indication *a tempo* shows that the rate of speed is again to be that of the commencement of the movement.

ATHALIA. The third of Handel's oratorios; composed next after 'Deborah.' Words by Humphreys. The score was completed on June 7, 1733. First performed at Oxford July 10, 1733. Revived by Sacred Harmonic Society June 20, 1845.

ATHALIE. Mendelssohn composed overture, march, and six vocal pieces (Op. 74) to Racine's drama. In the spring of 1843 the choruses alone (female voices), with pianoforte. In May or June 1844, the overture and march. Early in 1845 choruses re-written and scored for orchestra. First performed at Berlin, Dec. 1, 1845; in England, Windsor Castle, Jan. 1, 1847; Philharmonic, March 12, 1849.

ATTACCA, i.e. 'begin' (Ital.), when placed at the end of a movement—as the Scherzo of Beethoven's C minor Symphony, or all the three first movements of Mendelssohn's Scotch ditto—signifies that no pause is to be made, but that the next movement is to be attacked at once.

ATTACK. A technical expression for decision and spirit in beginning a phrase or passage. An orchestra or performer is said to be 'wanting in attack' when there is no firmness and precision in their style of taking up the points of the music. This applies especially to quick *tempo.* It is equivalent to the *coup d'archet,* once so much exaggerated in the Paris orchestras, and of which Mozart makes such game (Letter, June 12, 1778).

The *chef d'attaque* in France is a sort of subconductor who marks the moment of entry for the chorus.

ATTAIGNANT, or ATTAINGNANT, PIERRE, a music printer of Paris in the 16th century, said to have been the first in France to adopt moveable types ('caractères mobiles') for music. The engraver of his types was Pierre Hantin. Between the years 1527 and 1536 he printed nineteen books containing motetts of various masters, French and foreign. Many of these composers would be entirely unknown but for their presence in these volumes. Among them we may cite Grosse, N. Gombert, Claudin, Hesdin, Consilium, Certon, Rousée, Mouton, Hottinet, Mornable, Le Roy, Manchicourt, Le Heurteur, Vermont, Richefort, Lasson, L'heritier, Lebrun, Wyllart, Feuin, L'enfant, Montu, Verdelot, G. Louvet, Dévitis, Jacquet, Delafage, Longueval, Gascogne, Briant, and Passereau. The collection is thus historically most important, and it is also of extreme rarity. Attaignant was still printing in 1543, which date appears on a 'Livre de danceries' by Consilium. He was however dead in 1556, since some compositions of Gervais' printed at his press in that year are said to be edited by his widow. [F. G.]

ATTERBURY, LUFFMAN, one of the musicians in ordinary to George III, and the composer of numerous catches and glees. Between 1778 and 1780 he obtained from the Catch Club prizes for three glees and two catches. He also composed an oratorio called 'Goliah,' which was performed for the first time at the Haymarket Theatre on Wednesday, May 5, 1773, being announced as 'for that night only.' It was again performed in West Wycombe church on August 13, 1775, on the occasion of the singular ceremony of depositing

the heart of Paul Whitehead, the politician and versifier, inclosed in a marble urn, as directed by his will, in the mausoleum there of his patron, Lord Le Despencer. About 1790 Atterbury published 'A Collection of Twelve Glees, Rounds,' etc. Eleven glees and nineteen catches by him are included in Warren's collections. His glee, 'Come, let us all a-Maying go,' still retains its popularity. He died in Marsham Street, Westminster, June 11, 1796. He is said to have combined with the profession of music the trade of a builder. [W. H. H.]

ATTEY, JOHN, a composer of part-songs, who flourished in the first quarter of the 17th century. He appears to have been patronised by the Earl and Countess of Bridgewater, to whom he dedicates his 'First Booke of Ayres of Foure Parts, with Tableture for the Lute,' in 1622. On the title-page of this work he calls himself 'Gentleman and Practitioner of Musicke.' It contains fourteen songs in four parts, which may be sung as part-songs or as solos by a soprano voice, accompanied by the lute, or the lute and bass-viol. As no second collection appeared, it is probable that the composer did not meet with sufficient encouragement in all cases. The madrigalian period was rapidly declining. (Rimbault, *Bibl. Madrig.*) [E. F. R.]

ATTWOOD, THOMAS, the son of a trumpeter, viola-player, and coal-merchant, was born in 1767. At nine years of age he became a chorister in the Chapel Royal, where he had for his masters successively Dr. Nares and Dr. Ayrton, and where he remained about five years. In his sixteenth year, performing in a concert at Buckingham House, he attracted the attention of the Prince of Wales (afterwards George IV), who sent him to Italy to study. In 1783 he went to Naples, where he remained for two years under the tuition of Filippo Cinque and Gaetano Latilla. From Naples he went to Vienna, and studied under Mozart—who expressed a highly favourable opinion of his talent (Kelly's Reminiscences, i. 225)—until February, 1787, when he returned to England. He became organist of St. George the Martyr, Queen Square, and a member of the Prince of Wales's chamber band. He was appointed musical instructor to the Duchess of York in 1791, and to the Princess of Wales in 1795. In the latter year, on the decease of John Jones, organist of St. Paul's Cathedral, Attwood became his successor; and in June, 1796, on the death of Dr. Dupuis, he was appointed Composer to the Chapel Royal. In 1821 he was nominated organist of George IV's private chapel at Brighton. Attwood was one of the original members of the Philharmonic Society on its establishment in 1813, and for some years occasionally conducted its concerts. In 1836, on the decease of John Stafford Smith, he succeeded him as organist of the Chapel Royal. Attwood died at his residence in Cheyne Walk, Chelsea, on March 28, 1838. He was buried in St. Paul's Cathedral, under the organ. In the early part of his life Attwood was much engaged in dramatic composition, in which he was very successful.

The pieces set by him were—The Prisoner, 1792; The Mariners, 1793; Caernarvon Castle, 1793; The Adopted Child, 1795; The Poor Sailor, 1795; The Smugglers, 1796; The Mouth of the Nile, 1798; The Devil of a Lover, 1798; A Day at Rome, 1798; The Castle of Sorrento, 1799; The Red Cross Knights, 1799; The Old Clothesman, 1799; The Magic Oak, 1799; True Friends, 1800; The Dominion of Fancy, 1800; The Escapes, or, The Water Carrier (partly selected from Cherubini's 'Les Deux Journées,' and partly original), 1801; Il Bondocani, 1801; St. David's Day, 1801; and, The Curfew, 1807. He also contributed two songs to 'Guy Mannering,' 1816.

Later in life Attwood devoted his attention more to cathedral music. A volume of his church compositions, containing four services, eight anthems, and nine chants, was published about fifteen years after his death, under the editorship of his godson, Dr. Thomas Attwood Walmisley. Besides these compositions Attwood produced two anthems with orchestral accompaniments; one, 'I was glad' (a remarkably fine composition), for the coronation of George IV, and the other, 'O Lord, grant the King a long life,' for that of William IV; and he had commenced a third, intended for the coronation of Queen Victoria, when his career was closed by death. He also, following the example of Matthew Lock, composed a 'Kyrie eleison,' with different music for each repetition of the words. Attwood produced many sonatas and lessons for the pianoforte, and numerous songs and glees. Of his songs, 'The Soldier's Dream' long maintained its popularity; and of his glees, 'In peace Love tunes the shepherd's reed,' and 'To all that breathe the air of Heaven,' are still well known to all admirers of that species of music. Attwood's compositions are distinguished by purity and taste as well as by force and expression.

It is interesting to notice that Attwood, a favourite pupil of Mozart, was one of the first among English musicians to recognise the genius of the young Mendelssohn. A friendship sprang up between the two composers which was only broken by the death of the elder. Thus the talented Englishman appears as a connecting link between the two gifted Germans. Several of Mendelssohn's published letters were written from Attwood's villa at Norwood, his three Preludes and Fugues for the organ are dedicated to him, and the autograph of a Kyrie eleison in A minor is inscribed 'For Mr. Attwood; Berlin, 24 March, 1833.' [W. H. H.]

AUBADE. A French term (from *aube*, the dawn), answering to nocturne or serenade. It was originally applied to music performed in the morning, and apparently to concerted music (Littré); but is now almost confined to music for the piano, and an Aubade has no distinct form or character of its own. Stephen Heller and Schulhoff have written pieces bearing this title.

AUBER, DANIEL-FRANÇOIS-ESPRIT, was born January 29, 1784 (according to Fétis, 1782), at Caen, where his parents were on a visit. The

family, although of Norman origin, had been settled in Paris for two generations, and that metropolis was always considered as his home by our composer. In his riper years he hardly ever left it for a single day, and not even the dangers of the Prussian siege could induce the then more than octogenarian to desert his beloved city. Although destined by his father for a commercial career, young Auber began to evince his talent for music at a very early period. At the age of eleven he wrote a number of ballads and 'Romances,' much *en vogue* amongst the elegant ladies of the Directoire; one of them called 'Bonjour' is said to have been very popular at the time. A few years later we find Auber in London, nominally as commercial clerk, but in reality more than ever devoted to his art. Here also his vocal compositions are said to have met with great success in fashionable drawing-rooms; his personal timidity however—a feature of his character which remained to him during his whole life—prevented the young artist from reaping the full benefit of his precocious gifts. In consequence of the breach of the Treaty of Amiens (1804) Auber had to leave England, and on his return to Paris we hear nothing more of his commercial pursuits. Music had now engrossed all his thoughts and faculties. His *début* as an instrumental composer was accompanied by somewhat peculiar circumstances. Auber had become acquainted with Lamarre, a violoncello-player of considerable reputation; and to suit the peculiar style of his friend, our composer wrote several concertos for his instrument, which originally appeared under Lamarre's name, but the real authorship of which soon transpired. The reputation thus acquired Auber increased by a violin-concerto written for and first played by Mazas at the Conservatoire with signal success; it has since been introduced here by M. Sainton. His first attempt at dramatic composition was of a very modest kind. It consisted in the re-setting of an old opera-libretto called 'Julie' for a society of amateurs (in 1811 or 12). The orchestra was composed of two violins, two violas, violoncello, and double-bass. The reception of the piece was favourable. Cherubini, the ruler of the operatic stage at that time, was amongst the audience, and recognising at once the powerful though untrained genius of the young composer, he offered to superintend his further studies. To the instruction of this great composer Auber owed his mastery over the technical difficulties of his art. As his next work, we mention a mass written for the private chapel of the Prince de Chimay, from which the beautiful *a capella* prayer in 'Masaniello' is taken. His first opera publicly performed was 'Le Séjour militaire,' and was played in 1813 at the Théâtre Feydeau. Its reception was anything but favourable, and so discouraged was the youthful composer by this unexpected failure that for six years he refrained from repeating the attempt. His second opera, 'Le Testament, ou les Billets-doux,' brought out at the Opéra Comique in 1819, proved again unsuccessful, but Auber was now too certain of his vocation to be silenced by a momentary disappointment. He immediately set to work again, and his next opera, 'La Bergère châtelaine,' first performed in the following year, to a great extent realised his bold expectations of ultimate success. The climax and duration of this success were, to a great extent, founded on Auber's friendship and artistic alliance with Scribe, one of the most fertile playwrights and *the* most skilful librettist of modern times. To this union, which lasted unbroken till Scribe's death, a great number of both comic and serious operas owe their existence, not all equal in value and beauty, but all evincing in various degrees the inexhaustible productive power of their joint authors. Our space will not allow us to insert a complete list of Auber's numerous dramatic productions; we must limit ourselves to mentioning those amongst his works which by their intrinsic value or external grace of execution have excited the particular admiration of contemporary audiences, or on which their author's claim to immortality seems chiefly to rest. We name 'Leicester,' 1822 (being the first of Auber's operas with a libretto by Scribe); 'Le Maçon,' 1825 (Auber's *chef-d'œuvre* in comic opera); 'La Muette de Portici' (Masaniello) 1828; 'Fra Diavolo,' 1830; 'Lestocq,' 1835; 'Le Cheval de Bronze, 1835; 'L'Ambassadrice,' 1836; 'Le Domino noir,' 1837; 'Les Diamans de la couronne,' 1841; 'Carlo Broschi,' 1842; 'Haydée,' 1847; 'L'Enfant prodigue,' 1850; 'Zerline,' 1851 (written for Madame Alboni); 'Manon Lescaut,' 1856; 'La fiancée du Roi des Garbes,' 1867; 'Le premier jour de bonheur,' 1868; and 'Le Rêve d'amour,' first performed in December 1869 at the Opéra Comique.

Auber's position in the history of his art may be defined as that of the last great representative of opéra comique, a phase of dramatic music in which more than in any other the peculiarities of the French character have found their full expression. In such works as 'Le Maçon' or 'Les Diamans de la couronne,' Auber has rendered the chevaleresque grace, the verve, and amorous sweetness of French feeling in a manner both charming and essentially national. It is here that he proves himself to be the legitimate follower of Boieldieu and the more than equal of Hérold and Adam. With these masters Auber shares the charm of melody founded on the simple grace of the popular *chanson*, the piquancy of rhythm and the care bestowed upon the distinct enunciation of the words characteristic of the French school. Like them also he is unable or perhaps unwilling to divest his music of the peculiarities of his own national type. We have on purpose cited the 'Diamans de la couronne' as evincing the charm of French feeling, although the scene of that opera is laid in Portugal. Like George Brown and the 'tribu d'Avenel' in Boieldieu's 'Dame Blanche,' Auber's Portuguese are in reality Frenchmen in disguise; a disguise put on more for the sake of pretty show than of actual

deception. We here recognise again that amalgamating force of French culture to which all civilised nations have to some extent submitted. But so great is the charm of the natural grace and true *gaieté de cœur* with which Auber endows his creations that somehow we forget the incongruity of the mongrel type. In comparing Auber's individual merits with those of other masters of his school, of Boieldieu for instance, we should say that he surpasses them all in brilliancy of orchestral effects. He is, on the other hand, decidedly inferior to the last-mentioned composer as regards the structure of his concerted pieces. Auber here seems to lack that firm grasp which enables the musician, by a distinct grouping of individual components, to blend into a harmonious whole what seems most contradictory, yet without losing hold of the single parts of the organism. His *ensembles* are therefore frequently slight in construction; his style indeed may be designated as essentially homophonous; but he is (perhaps for the same reason) a master in the art of delineating a character by touches of subtlest refinement.

Amongst his serious operas it is particularly one work which perhaps more than any other has contributed to its author's European reputation, but which at the same time differs so entirely from Auber's usual style, that without the most indubitable proofs one would hardly believe it to be written by the graceful and melodious but anything but passionately grand composer of 'Le Dieu et la Bajadére' or 'Le Cheval de Bronze.' We are speaking of 'La Muette de Portici,' in this country commonly called, after its chief hero, 'Masaniello.' In it the most violent passions of excited popular fury have their fullest sway; in it the heroic feelings of self-surrendering love and devotion are expressed in a manner both grand and original; in it even the traditional forms of the opera seem to expand with the impetuous feeling embodied in them. Auber's style in Masaniello is indeed as different as can be imagined from his usual elegant but somewhat frigid mode of utterance, founded on Boieldieu with a strong admixture of Rossini. Wagner, who undoubtedly is a good judge in the matter, and certainly free from undue partiality in the French master's favour, acknowledges in this opera 'the bold effects in the instrumentation, particularly in the treatment of the strings, the drastic grouping of the choral masses which here for the first time take an important part in the action, no less than original harmonies and happy strokes of dramatic characterisation.' Various conjectures have been propounded to account for this singular and never-again-attained flight of inspiration. It has been said for instance that the most stirring melodies of the opera are of popular Neapolitan origin, but this has been contradicted emphatically by the composer himself. The solution of the enigma seems to us to lie in the thoroughly revolutionised feeling of the time (1828), which two years afterwards was to explode the established governments of France and other countries. This opera was indeed destined to become historically connected with the popular movement of that eventful period. It is well known that the riots in Brussels began after a performance of the 'Muette de Portici' (August 25, 1830), which drove the Dutch out of the country, and thus in a manner acted the part of 'Lilliburlero.' There is a sad significance in the fact that the death (May 13, 1871) of the author of this revolutionary inspiration was surrounded and indeed partly caused by the terrors of the Paris commune.

About Auber's life little remains to be added. He received marks of highest distinction from his own and foreign sovereigns. Louis Philippe made him Director of the Conservatoire, and Napoleon III added the dignity of Imperial Maître-de-Chapelle. He however never acted as conductor, perhaps owing to the timidity already alluded to. Indeed he never was present at the performance of his own works. When questioned about this extraordinary circumstance, he is said to have returned the characteristic answer, 'Si j'assistais à un de mes ouvrages, je n'écrirais de ma vie une note de musique.' His habits were gentle and benevolent, slightly tinged with epicureanism. He was a thorough Parisian, and the *bonmots* related of him are legion. [F. H.]

AUBERT, Jacques ('le vieux'), an eminent French violinist and composer, born towards the end of the 17th century. He was violinist in the royal band, the orchestra of the Opera, and the Concerts Spirituels. In 1748 he was nominated leader of the band and director of the Duc de Bourbon's private music. He died at Belleville near Paris in 1753.

The catalogue of his published compositions contains five books of violin sonatas with a bass; twelve suites en trio; two books of concertos for four violins, cello and bass; many airs and minuets for two violins and bass; an opera and a ballet. All these works are of good, correct workmanship, and some movements of the sonatas are certainly not devoid of earnest musical feeling and character.

His son Louis, born in 1720, was also violinist at the Opera and the Concert Spirituel, and published a number of violin compositions and some ballets, which however are very inferior to his father's works. He retired from public activity in 1771. [P. D.]

AUBERT, Pierre François Olivier, violoncellist, born at Amiens in 1763, for twenty-five years member of the orchestra of the Opera Comique at Paris. His chief merit is having published two good instruction books for the violoncello at a time when a work of that kind was much needed. He wrote also string quartets, sonatas and duets for violoncello, and a pamphlet entitled 'Histoire abrégée de la musique ancienne et moderne.' [T. P. H.]

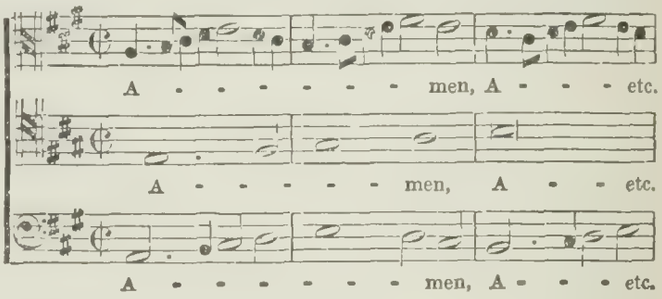
AUER, Leopold, born May 28, 1845, at Veszprem in Hungary, an eminent violin-player, was a pupil of Dont at the Vienna Conservatorio and afterwards of Joachim. From 1863 to 1865 he was leader of the orchestra at Düsseldorf,

from 1866 to 1867 at Hamburg, and since 1868 he has lived at St. Petersburg as solo-violinist to the court, though frequently visiting London.

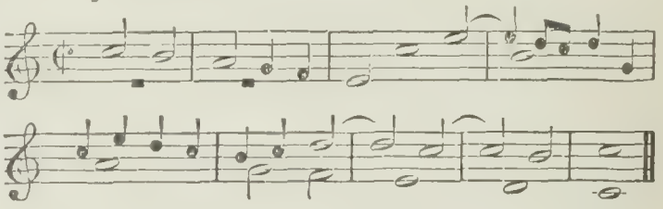
Auer has all the qualities of a great violinist—fullness of tone, perfect mastery over all technical difficulties, and genuine musical feeling. His success in the principal towns of the continent, as well as in London, has been very great. [P. D.]

AUGARTEN. The well-known public garden on the Au, or meadow, between the Danube and the Donau-Canal, in the Leopoldstadt suburb of Vienna, interesting to the musician from its having been, like our own Vauxhall and Ranelagh, the place of performance—often first performance—of many a masterpiece. It was dedicated to the public by the Emperor Joseph II, and was opened on April 30, 1775. At first it appears to have been merely a wood; then a garden—'the Tuileries garden of Vienna'—but after a time a concert-room was built, and in 1782 summer morning concerts were started by Martin, a well-known entrepreneur of the day, in association with Mozart, then at the height of his genius. Mozart mentions the project in a letter (May 18, 1782) to his father, and the first series of the concerts opened on the 26th of May, under brilliant patronage, attracted partly by the novelty of music so nearly in the open air, by the beauty of the spot, and by the excellence of the music announced. The enterprise changed hands repeatedly, until, about the year 1800, the concerts were directed by Schuppanzigh, the violin-player, of Beethoven notoriety. They did not however maintain their high character or their popularity, but had to suffer the inevitable fate of all similar institutions which aim over the heads of those whom they wish to attract. In 1813 they were in the hands of the 'Hof-Traiteur' and Wranitzky the musician. By 1830 performers of eminence had ceased to appear, then the performances in the Augarten dwindled to one on the 1st May, a great annual festival with the Viennese; and at length they ceased altogether in favour of other spots more fashionable or less remote, and the garden reverted to its original use as a mere place for walking and lounging. But its musical glories cannot be forgotten. Here Mozart was to be seen and heard in at least one series of concerts, at each of which some great symphony or concerto was doubtless heard for the first time; and here Beethoven produced one (if not more) of his masterpieces—the Kreutzer sonata, which was played there (May 1803) by Bridgetower and himself, the two first movements being read from autograph and copy dashed down only just before the commencement of the concert. Besides this, his first five symphonies, his overtures, and three first pianoforte concertos were stock pieces in the programmes of the Augarten. The concerts took place on Thursday mornings, at the curiously early hour of half-past seven, and even seven. Mayseder, Czerny, Stein, Clement, Linke, Moscheles, and many other great artists were heard there. (The above information is obtained from Hanslick's 'Concertwesen in Wien,' and Ries's 'Notizen.') [G.]

AUGMENTATION. This term is used to express the appearance of the subject of a fugue in notes of double the original value, e.g. crotchets for quavers, minims for crotchets, etc., and is thus the opposite to DIMINUTION. Or it is a kind of imitation, or canon, where the same thing takes place. Dr. Benjamin Cooke's celebrated canon by double augmentation (engraved on his tombstone) begins as follows, and is perhaps the best instance on record.



We subjoin by way of example one of a simpler kind by Cherubini.



When introduced into the development of a fugue, augmentation often produces a great effect. As examples we may cite the latter part of Handel's chorus 'O first created beam' in 'Samson'; the concluding chorus of Dr. Hayes' anthem 'Great is the Lord'; Dr. Croft's fine chorus 'Cry aloud and shout'; Leo's 'Tu es Sacerdos' in F, in his 'Dixit Dominus' in A'; and several of J. Sebastian Bach's fugues in his 'Wohltemperirte Clavier.' The old Italian church composers were very fond of introducing augmentation, especially towards the end of a choral fugue, and in the bass. They would call it 'La fuga aggravata nel Basso.' Fine examples are found in 'Amens' by Leo, Bonno, and Cafaro, in Novello's Fitzwilliam music. [F. A. G. O.]

AUGMENTED INTERVAL. An interval which is extended by the addition of a semitone to its normal dimension. The following examples show the augmentations of intervals commonly used:—

[W. P.]

AUSWAHL VORZÜGLICHER MUSIK-WERKE, a collection of ancient and modern music in strict style, published with the countenance of the 'Königliche Akademie der Kunste' of Berlin in 1840 (8vo. Trautwein). It contains :—

1. Fugue, 'Tu Rex.' Graun.
2. Do. 'Meine Zunge.' Fasch.
3. Do. from 4tett, F min. J. Haydn.
4. Do. 'Halleluja.' Handel.
5. Do. 'Di l'alimenta.' Naumann.
6. Do. for Org., G minor. Fr. Bach.
7. Fugue, 'Auf, dass wir.' C. P. E. Bach.
8. Do. 'Lobet seinen Namen.' Fesca.
9. Do. for Piano, B♭. Kiruberger.
10. Canon, Kyrie. Fux.
11. Fig. Choral, Ich lasse. J. S. [J. C.] Bach.
12. Fugue for Piano in F. Clementi.
13. Do. Gott ist offenbaret. Keiser.
14. Kyrie. Lotti.
15. Fugue for Piano, D m. Marpurg.
16. Do. 2 Choirs, 'Durch denselbigen.' J. C. Bach.
17. Christe. Graun.
18. Fugue for Piano, A min. Telemann.
19. Do. 'Christe.' Hasse.
20. Do. 'Quam olim,' M. Haydn.
21. Do. for Piano in C. Mozart.
22. Motet, 'Was betrübst.' H. Schütz.
23. Fig. Choral, 'Ewiger Lob.' Zelter.
24. Fugue for Org. in C. Pachelbel.
25. Kyrie. F. Schneider.
26. Fugue, 'Lasst uns.' Spohr.
27. Do. for 4tett in C. Kelz.
28. Motet (*a* 6) 'Tu es Petrus.' Pale trina.
29. Canon, 'Sanctus' and 'Hosanna.' Horsley.
30. Fugue for Organ, in B♭. Pasterwitz.
31. Benedictus, etc. Salieri.
32. Fugue, 'Tu ad dexteram.' Rungenhagen.
33. Do. for Org., B♭. Albrechtsberger.
34. Motet, 'Hilf Herr.' Homilius.
35. Fugue, 'Tunc imponent.' Jomelli.
36. Do. for 4tett, A min. Gassmann.
37. Do. 'Mai non turbarsi.' Marcello.
38. 'Ave Maria.' Klein.
39. Fugue, for 4tett in C. Henning.
40. Do. 'Timentibus.' Vierling.
41. Do. 'Et in sæcula.' Caldara.
42. Do. for Organ (4 subj.). Frescobaldi.
43. 'Eja mater.' Astorga.
44. Fuchetta, 'Cum Sancto.' Reissiger.
45. Introd. and Fugue for Org. M. G. Fischer.
46. Motet, 'O d' immenso.' J. A. Perti.
47. Fugue. 'Halleluja.' G. Harrer.
48. Do. for Piano, in F. N. Le Begue.

Some copies have an Appendix:

Aria, 'Ingemesco.' Durante.
Do. Agnus. J. S. Bach.
Duet, 'Occhi perché.' Steffani.
'Salve Regina.' Pergolesi.
'O my Irene' (Theodora). Handel.
Chorus and Air (Israeliten). C. P. E. Bach.
Duet and Chorus (Morgengesang) Reichardt.
Solo and Chorus (Do.) Do.
Aria, 'Pieta Signore.' Hasse.
Scena (Davidde pen.). Naumann.
Trio, 'Dominus. Leo.
'Gratias' and 'Deus Pater.' F. Feo.

AUTHENTIC. Such of the ecclesiastical modes are called authentic as have their sounds comprised within an octave from the final. They are as follow, in order of the Gregorian system :—

No.	Mode.	Compass.	Final.	Dominant.
1	Dorian	D to D	D	A
3	Phrygian	E to E	E	C
5	Lydian	F to F	F	C
7	Mixolydian	G to G	G	D
9	Æolian	A to A	A	E
11	Ionian or Iastian	C to C	C	G

A mode, or tone, or scale, must be made up of the union of a perfect fifth (diapente) and a perfect fourth (diatessaron). In the authentic modes the fifth is below, and the fourth above. Thus in mode 1 from D to A is a perfect fifth, and from A to the upper D, or final, a perfect fourth. In mode 9, from A to E is a perfect fifth, and from E to the upper A, or final, a perfect fourth, and so on.

In all these the fifths and fourths are perfect; but no scale or mode could be made upon B in conformity with this theory, for from B to F is an *imperfect* fifth and from F to the upper B is a *tritone* or *pluperfect* fourth, both which intervals are forbidden in the ancient ecclesiastical melody. This may serve also to explain the irregularity of the dominant of the third mode. In all the other authentic modes the fifth note of the scale is the dominant; but in the third mode, the fifth being B, and consequently bearing forbidden relations with F the fourth below it and F the fifth above it, B was not used, but C the sixth was substituted for it as the dominant. It is to be borne in mind that *melodic* and not *harmonic* considerations lay at the foundation of all these rules, and that the 'dominant' then meant the prevailing or predominant sound in the melody of the tone or scale. The prefix hyper (or over) is often added to the name of any authentic mode in the sense of *upper*, to distinguish it from the corresponding plagal mode, to which the word hypo (under or lower) was prefixed. Thus while the authentic Dorian or hyperdorian scale ran from D to D, its plagal, the hypodorian, began on the A below and ran to its octave, the dominant of the authentic scale. 'Ein feste Burg' and 'Eisenach' are examples of 'authentic' melodies, and the Old 100th and Croft's 104th of 'plagal' ones. [Gregorian Tones.]

The meaning of the term 'authentic' is variously stated. It is derived from the Greek verb *αὐθεντέω*, to rule, to assume authority over, as if the authentic modes ruled and had the superiority over their respective plagal modes. They are also called authentic as being the true modes promulgated by the authority of St. Ambrose; or as authentically derived from the ancient Greek system; or as being formed (as above stated) of the perfect diapente (or fifth) in the lower, and of the perfect diatessaron (or fourth) in the upper part of their scales, which is the harmonic division, and more musically authoritative than the arithmetical division which has the fourth below and the fifth above. [T. H.]

AUXCOUSTEAUX, Arthur d', born in Picardy at Beauvais (Magnin) or St. Quentin (Gomart). His family coat of arms contains a pun on his name; it is 'Azur à trois cousteaux, d'argent garnis d'or.' He was a singer in the church of Noyon, of which fact there is a record in the library of Amiens. Then he became 'Maistre de la Sainte Chapelle' at Paris, and, as appears from the preface to a psalter of Godeau's published by Pierre le petit, 'haut contre' in the chapel of Louis XIII. He died in 1656, the year of publication of the psalter just mentioned. He left many masses and chansons, all printed by Ballard of Paris. His style is remarkably in advance of his contemporaries, and Fétis believes him to have studied the Italian masters. [F. G.]

AVERY, John. A celebrated organ-builder, who built a number of instruments, ranging between 1775 and 1808. Nothing whatever is known of his life: he died in 1808, while engaged in finishing the organ of Carlisle Cathedral. The organs he is recorded to have built, are—St. Stephen's, Coleman-street, 1775; Croydon Church, Surrey, 1794 (destroyed by fire in 1866); Winchester Cathedral, 1799; Christ Church, Bath, 1800; St. Margaret's Church, Westminster, 1804; King's College Chapel, Cambridge, 1804 (some of the earlier work of Dallam's organ was, no doubt, incorporated in this instrument, but the case is the original one, erected by Chapman

and Hartop in 1606); Sevenoaks Church, Kent, 1798; Carlisle Cathedral, 1808. [E. F. R.]

AVISON, Charles, born at Newcastle-upon-Tyne, in 1710. When a young man he visited Italy for the purpose of study, and after his return to England, became a pupil of Geminiani. On July 12, 1736, he was appointed organist of the church of St. Nicholas, in his native town. In addition to his musical attainments, he was a scholar, and a man of some literary acquirement. In 1752 he published the work by which he is best known, 'An Essay on Musical Expression.' It contains some judicious reflections on the art, but the division of the modern authors into classes is rather fanciful than just. Throughout the whole of this work we find the highest encomiums on Marcello and Geminiani, frequently to the disparagement of Handel. In the following year it was answered anonymously by Dr. W. Hayes, the Oxford professor, in a pamphlet entitled 'Remarks on Mr. Avison's Essay on Musical Expression.' Hayes points out many errors against the rules of composition in the works of Avison; and infers from thence that his skill in the science was not very profound. He then proceeds to examine the book itself, and seldom fails to establish his point, and prove his adversary in the wrong. Before the conclusion of the same year, Avison re-published his Essay, with a reply to these Remarks, in which he was assisted by the learned Dr. Jortin, who added 'A Letter to the Author, concerning the Music of the Ancients.' In 1757 Avison joined John Garth, organist of Durham, in editing an edition of Marcello's Psalms, adapted to English words. He prefixed to the first volume a Life of Marcello, and some introductory remarks.

As a composer, Avison is known, if at all, by his concertos. Of these he published five sets for a full band of stringed instruments, some quartets and trios, and two sets of sonatas for the harpsichord and two violins—a species of composition little known in England until his time. The once favourite air, 'Sound the loud timbrel,' is found in one of the concertos. Geminiani held his pupil in high esteem, and in 1760 paid him a visit at Newcastle. He died in 1770, and was buried in the churchyard of St. Andrew there. He was succeeded as organist of St. Nicholas by his son and grandson. The former died in 1793; the latter in 1816. (Hawkins, *Hist.*; Kippis, *Biog. Brit.*; Brand, *Newcastle*, etc.) [E. F. R.]

AVOGLIO, Signora, was one of those who accompanied Handel in his visit to Ireland, at the end of 1741. In the newspapers of the time she is called 'an excellent singer,' and she had the honour of sharing with Mrs. Cibber the soprano music of the Messiah at its first and succeeding performances in Dublin. Handel, in a letter to Jennens, Dec. 29, 1741, says,—'Sig^{ra} Avolio, which I brought with me from London, pleases extraordinary.' She sang again in 'The Messiah,' when given in London, after Handel's return from Dublin, dividing the soprano part with Mrs. Clive. Before this time, she had sung with success in the 'Allegro, Penseroso, and Moderato'; and she appeared subsequently in 'Semele' and in 'Samson,' 1743. In this last she sang the famous 'Let the bright Seraphim' at the first performance of the oratorio, Feb. 18. [J. M.]

AVVERTIMENTO AI GELOSI, UN, an Italian opera by Balfe—his second—produced at Pavia in 1830 or 31, chiefly worth notice because of the fact that in it Ronconi made his second public appearance.

AYLWARD, Theodore, Mus. Doc., was born in or about 1730. Of his early career but little information can be gleaned. We find him in 1755 composing for the church, and in 1759 for the theatre. In 1769 the Catch Club awarded him the prize medal for his serious glee, 'A cruel fate,' a surprising decision, as one of the competing compositions was Arne's fine glee, 'Come shepherds we'll follow the hearse.' On June 5, 1771, Aylward was appointed Professor of Music in Gresham College. In 1784 he was nominated one of the assistant directors of the Commemoration of Handel. In 1788 he succeeded William Webb as organist and master of the choristers of St. George's Chapel, Windsor. On Nov. 19, 1791, he took the degree of Bachelor of Music at Oxford, and two days afterwards proceeded to that of Doctor. He died Feb. 27, 1801, aged 70. Dr. Aylward published 'Six Lessons for the Organ, Op. 1'; 'Elegies and Glees, Op. 2'; 'Six Songs in Harlequin's Invasion, Cymbeline, Midsummer Night's Dream,' etc.; and 'Eight Canzonets for two soprano voices.' Two glees and a catch by him are included in Warren's collections. His church music, with the exception of two chants, remains in manuscript. Dr. Aylward is said (on the authority of Bowles, the poet) to have been a good scholar, and possessed of considerable literary attainments. Hayley, the poet, inscribed some lines to his memory. Dr. Aylward's great-great-nephew, Theodore Aylward, is now (1876) the organist of Llandaff Cathedral. [W. H. H.]

AYRTON, Edmund, Mus. Doc., was born at Ripon, in 1734, and educated at the grammar school there. His father, a magistrate of the borough, intended him for the Church, but his strong predilection for music induced his father to let him study for that profession. He was accordingly placed under Dr. Nares, organist of York Minster, and made such rapid progress, that at an early age he was elected organist, auditor, and *rector-chori* of the collegiate church of Southwell, where he remained many years. In 1764 he was appointed a gentleman of the Chapel Royal. He was shortly afterwards installed as a vicar-choral of St. Paul's, and afterwards became one of the lay-clerks of Westminster Abbey. In 1780 he was promoted by Bishop Lowth to the office of Master of the children of His Majesty's chapels, on the resignation of Dr. Nares. In 1784 the University of Cambridge created him Doctor in Music, some time after which he was admitted

ad eundem by the University of Oxford. The anthem by which he obtained his degree, 'Begin unto my God with timbrels,' was performed in St. Paul's Cathedral, July 28, 1784, the day of general thanksgiving for the termination of the American revolutionary war, and was afterwards published in score. In 1805 he relinquished the mastership of the children of the chapel, having been allowed during many years to execute the duties of his other offices by deputy. He died in 1808, and his remains were deposited in the cloisters of Westminster Abbey. Dr. Ayrton's contributions to the Church consist of two complete morning and evening services, and several anthems. (*Mus. Periodicals; Biog. Dict. U. K. S.*) [E. F. R.]

AYRTON, WILLIAM, son of the preceding, was born in London in 1777. He was educated both as a scholar and musician, and was thus qualified to write upon the art. He married a daughter of Dr. S. Arnold, which introduced him into musical society, and he became a fashionable teacher. Upon the death of Dr. Aylward, in 1801, he was a candidate for the office of Gresham Professor of Music, but was unsuccessful, on account of his youth. In the palmy days of the 'Morning Chronicle' Mr. Ayrton was its honorary musical and literary critic from 1813 to 26; and he wrote the reviews of the Ancient Concerts and Philharmonic Society in the 'Examiner' from 1837 to 1851, also gratuitously. He was a Fellow of the Royal and Antiquarian Societies, and an original member of the Athenæum Club. He was one of the promoters and members of the Philharmonic Society at its foundation in 1813, and subsequently a director. More than once he held the important post of musical director of the King's Theatre, and in that capacity had the merit of first introducing Mozart's 'Don Giovanni' to an English audience in 1817, and afterwards others of Mozart's operas. According to a writer of the period he twice, if not oftener, regenerated that theatre, when its credit was weakened by repeated failures. In 1823 he commenced, in conjunction with Mr. Clowes the printer, the publication of the 'Harmonicon,' a monthly musical periodical, which was continued for eleven years. Independently of the valuable essays, biography, and criticism in this work, it contains a choice selection of vocal and instrumental music. The writing of this journal and its criticisms upon the art were much in advance of anything that had previously appeared in England. This was followed in 1834 by the 'Musical Library,' a collection of vocal and instrumental music, consisting of songs, duets, glees, and madrigals, and a selection of pianoforte pieces and adaptations for that instrument, and extending to eight volumes. A supplement containing biographical and critical notices, theatrical news, etc., was issued monthly, making three extra volumes. He wrote the musical articles for the 'Penny Cyclopædia'; the chapters on music in Knight's 'Pictorial History of England'; and the musical explanations for the 'Pictorial Shakespeare.' His latest work was a well-chosen collection of 'Sacred Minstrelsy,' published by J. W. Parker, in two vols. He died in 1858. (*Imp. Dict. of Biog.; Private sources.*) [E. F. R.]

AZOR AND ZEMIRA, OR THE MAGIC ROSE, in three acts; the English version of Spohr's opera ZEMIRE UND AZOR, produced at Covent Garden Theatre, April 5th, 1831.

B.

B. The name of the seventh degree of the natural scale of C. In French and Italian it is called *Si*, and in German *H* (*Ha*), the name *B* being given to our B♭. The reason of this anomalous arrangement is explained in the article ACCIDENTALS.

B is an important note in the history of the musical scale, since its addition to the hexachord of Guido, which contained only six notes, transformed the hexachord at once into the modern scale of seven sounds, and obviated the necessity for the so-called mutations or changes of name which were required whenever the melody passed beyond the limits of the six notes forming a hexachord (see that word). The date of the first recognition of a seventh sound in addition to the six already belonging to the hexachord is uncertain, but Burmeister, writing in 1599, speaks of the additional note as *nota adventitia*, from which it would appear that it had not then come into general use.

At the time when the necessity for the introduction of accidentals began to be felt, B was the first note which was subjected to alteration, by being sung a semitone lower, and as it was considered that this change had the effect of making the melody softer and less harsh, the altered B (B♭) was called *B molle*, while the original B received the name of *B durum*. It should be borne in mind that the modern German designations *B dur* and *B moll* (which answer to our B flat major and B flat minor) have nothing to do with the older Latin names, as the melody which contained the *B molle*, and was on that account called *cantus mollis*, was identical with the modern key of F major.

It is on account of B having been the first note to which a flat was applied that the name of the flat in German is *B* (also written *Be*), and that scales having flat signatures are called *B-Tonarten*.

B♭ is the key in which one of the clarinets in use in the orchestra is set, and in which horns, trumpets, and certain brass instruments belonging to military bands can be made to play by arrangement of their crooks.

The letter *B.* or *col B.* in a score is an abbreviation of *Basso*, or *col Basso*. (See also Accidentals, Alphabet.) [F. T.]

BABAN, Gracian, a Spanish composer, musical director in the cathedral of Valencia from 1650 to 1665. His masses and motets, written for several choirs, are preserved at Valencia. A Psalm of his is given by Eslava.

BABBINI, Matteo, a celebrated Italian tenor, was born at Bologna, 1754. He was intended for the practice of medicine; but, on the death of his parents, took refuge with an aunt, the wife of a musician named Cortoni. The latter instructed him, and cultivated his voice, making him a good musician and first-rate singer. His *début* was so brilliant that he was at once engaged for the opera of Frederick the Great. After staying a year at Berlin, he went to Russia, into the service of Catherine II. In 1785, he sang with success at Vienna; and in the next season in London, with Mara, when he took, though a tenor, the first man's part, there being no male soprano available. As far as method and knowledge went, he was a very fine singer, but he did not please the English *cognoscenti*; his voice was produced with effort, and was not strong enough to have much effect. He sang again, however, the next year (1787), and returning to Italy in 1789, appeared in Cimarosa's 'Orazi,' and was afterwards engaged at Turin. In 1792, the King of Prussia recalled him to Berlin, where he distinguished himself in the opera of 'Dario.' During the next ten years he sang at the principal Theatres of Italy, and appeared in 1802, at Bologna, though then 50 years old, in the 'Manlj' of Niccolini, and Mayer's 'Misteri Eleusini.' He now retired from the stage and settled in his native town, where he lived generally esteemed and honoured for the noble use he made of his riches; and died Sept. 21, 1816. His friend, Doctor Pietro Brighenti, published 'Elogio di Matteo Babbini,' Bologna, 1822. [J. M.]

BACCUSI, Ippolito, an Italian monk and musical composer of the 16th century. The dates of his birth and death are unknown, but we find him Maestro di Cappella at the cathedral of Verona in 1590. Scipione Cerreto gives an indication of his exact epoch by saying that he had composed works previously to 1550. This statement Fétis disbelieves, but he does not say why. Baccusi was one of the first composers who introduced into his accompaniments to church music instrumental parts in unison with the voice, in order to support the singers. The works in which he applied this system are printed; the first is intituled 'Hippolyti Baccusi, Eccl. Cath. Veronæ musicæ magistri, missæ tres, tum vivâ voce tum omni instrumentorum genere cantatu accommodatissimæ, cum octo vocibus, Anadino, Venice, 1596.' The other is a volume containing the psalms used at vespers, with two Magnificats. It has a frontispiece occupied by an analogous inscription of even greater length and, if possible, of even less elegant latinity. The rest of his compositions consist principally of masses, madrigals, mottetti, and psalms, and were published for the most part during his lifetime by Venetians such as Gardano Vincenti and Rampazetti. Isolated pieces of his are found in several miscellaneous publications of the period. Perhaps the most interesting of these is that contributed by him to the volume dedicated by fourteen different Italian composers to their great contemporary, Palestrina. [E. H. P.]

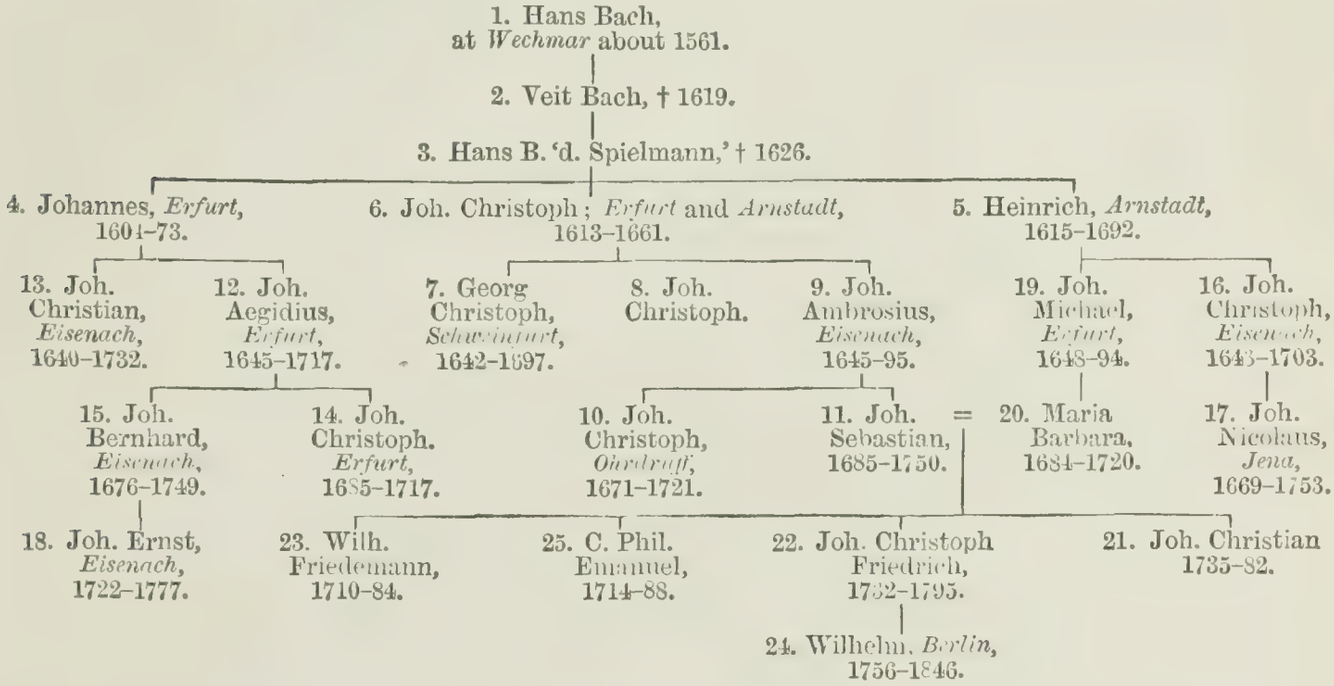
BACH. Though the name of Bach is familiar to all lovers of music, it is not generally known that it was borne by a very numerous family of musicians who occupied not merely honourable but prominent places in the history of their art through a period of nearly two hundred years. In this family musical talent was as it were bequeathed, and it seems almost like a law of nature that the scattered rays of the gift should after a hundred years finally concentrate in the genius of Johann Sebastian, whose originality, depth, and force, exhibit a climax such as only a few great spirits of any time or country have attained. But from this climax the artistic power of the race began to diminish, and with the second generation after its great representative was entirely extinguished. The history of the Bach family is not only a guide towards a just appreciation of the greatness of Sebastian, but it has an independent interest of its own through the eminence of some of its individual members. Born and bred in the Thüringen, the heart of Germany, the family for the most part remained there throughout two centuries; the sons of Sebastian being the first to spread to more distant parts. This stationary condition naturally produced a strong family feeling. According to tradition meetings of all the members took place for the purpose of social intercourse and musical recreation, and it seems that the brothers often married sisters. The Bachs always learned from one another, for they rarely had means for seeking their education elsewhere; thus the artistic sense and capacity of the family was, as we have said, hereditary, and by its undisturbed activity during a whole century became an important element in the development of Johann Sebastian. To this family unity also we may ascribe the moral excellence and cultivation of the Bachs.

Fully to appreciate the importance of these qualities in the development of the race, we must consider that these predecessors of Johann Sebastian lived in the miserable time of the Thirty Years' War, and in the midst of the moral indifferentism and collapse of intellectual power which distinguished that unhappy period. Yet the house of Bach exhibits an almost uniform example of moral worth together with a constant endeavour after the highest ideals — qualities which are all the greater because under the circumstances of the time they could hardly meet with recognition or encouragement.

In course of time the towns of Arnstadt, Erfurt, and Eisenach became the centres of the family; there we find its most important representatives, and an uninterrupted sequence through several generations filling the same office; so that, for

instance, in Erfurt the town musicians were known as 'the Bachs,' even though there had ceased to be any Bach among them. Another proof of the strong family feeling (and a valuable source of information) is the genealogy of the Bach family, begun by the great Sebastian himself, but chiefly composed by his son Carl Philip Emanuel. It contains fifty-three male members of the family, and gives the origin and dates of birth and death of each, and the most important events in their lives. This genealogical table soon became circulated amongst the family, and a copy of it in Emanuel's handwriting is to be found in the Royal Library at Berlin. For an account of the Bach-literature see the article on JOHANN SEBASTIAN.

The following table exhibits the chief members of this remarkable family, and contains all those whose lives are touched on below. The same numeral is affixed to each in both genealogy and biography.



The earliest notices go back to the beginning of the 16th century, and mention four distinct branches, of which the last only is of general interest, because it is that from which Johann Sebastian is descended. This, the actual musical branch, lived in Wechmar, a small place near Gotha. HANS BACH [1], the eldest of the Bachs, is mentioned as a *Gemeinde-Vormundschaftsglied* there in 1561. Then comes VEIT [2], possibly the son of the former, born between 1550 and 60, and generally considered the progenitor of the race. He is said to have been a baker, and to have moved into Hungary with many other Evangelicals for protection from persecution. But under the Emperor Rudolf II the Catholic reaction gave the Jesuits the upper hand, and this caused Veit to return home and settle at Wechmar as a baker and miller. The genealogy states that he loved and practised music; his chief delight was in a 'Cythringen' (probably a zither), upon which he used to play while his mill was at work. He died in 1619. But the real musical ancestor of the family was HANS [3], the son of Veit, born somewhere about 1580, and mentioned as 'the player'—that is to say, a professional musician. He was also a carpet-weaver, and is said to have been of a cheerful temperament, full of wit and fun. These characteristics are alluded to in a portrait formerly in the possession of Emanuel, in which he was represented as playing the violin with a bell on his shoulder, while below is a shield with a fool's cap. His profession took him all over the Thüringen, and he was well known and beloved everywhere. He died 1626, in the year of the first great plague. Of Hans's many children three sons deserve mention:—

JOHANNES BACH [4], born 1604, apprenticed at Suhl to the 'Stadt-pfeifer,' became organist at Schweinfurt, and perhaps also temporarily at Suhl. After an unsettled life amidst the turmoil of the Thirty Years' War, he settled at Erfurt in 1635 as director of the 'Raths-Musikanten,' and in 1647 became organist in the church there, thus representing both sacred and secular music. He was the forefather of the Bachs of Erfurt, and died there in 1673. His sons were Johann Christian and Johann Ægidius. (See below, Nos. 12 and 13.)

HEINRICH [5], born 1615. As a boy showed a remarkable taste for organ-playing; to satisfy which he would go off on Sundays to some neighbouring town to hear the organ, there being none at Wechmar. He received his musical education from his father and his elder brother Johann, probably during his residence at Schweinfurt and Suhl, and followed his father to Erfurt. In 1641 he became organist at Arnstadt, where he died in 1692, having filled his post for more than half a century. With him begins the line of Arnstadt Bachs. Besides his father's great musical gifts he inherited his cheerful disposition,

which, coupled with great piety and goodness, enabled him to overcome the disastrous effects of the war, and so to educate his children, all of them more or less gifted, as to enable them to fill honourable places in the history of music. For the life of Heinrich we have complete material in his funeral sermon by Gottfried Olearius (Arnstadt, 1692). In his sons, JOHANN CHRISTOPH and JOHANN MICHAEL (see those names, Nos. 16 and 19) the artistic importance of the elder Bachs before Johann Sebastian reaches its climax. In Ritter's 'Orgelfreund,' vol. vi. No. 14, there is an organ piece on the chorale 'Christ lag in Todesbanden,' which is ascribed to Heinrich Bach; of his other compositions nothing is known.

CHRISTOPH [6], the second son, born 1613, we mention last because he is the grandfather of Johann Sebastian. After a temporary post at the court of Weimar, and a stay at Prettin in Saxony, he settled at Erfurt in 1642, as member of the 'Raths-Musik'; moved from thence to Arnstadt 1653–4, and died there in 1661 as 'Stadt-Musikus' and 'Hof-Musikus' to the Count of Schwarzburg. Unlike his brother Heinrich he occupied himself exclusively with the town music—the 'Kunst-Pfeiferthum.' Further details of his life are wanting. His sons were—

GEORG CHRISTOPH [7], born 1642 at Erfurt, first school-teacher, then cantor at Themar near Meiningen, 1668; twenty years afterwards removed to Schweinfurt in the same capacity, and died there. None of his compositions are known to exist.

JOHANN CHRISTOPH [8], and his twin brother JOHANN AMBROSIUS [9], born 1645 at Erfurt, were so much alike in appearance and character that they were regarded as curiosities. After the early death of the father, who taught them the violin, and after they had completed their years of study and travel, Johann Christoph came to Arnstadt as Hof-Musikus to the Count of Schwarzburg. Disputes with the Stadt-Musikus caused the dismissal of all the court musicians, including Christoph, but he was afterwards restored to his post. He devoted himself to the church music, which had been much neglected, helped his old uncle Heinrich in his official work with the utmost disinterestedness, and died 1693. With his sons the musical activity of this branch of the family ceased. AMBROSIUS was more important. He remained with his brother till 1667, when he entered the association of the Erfurt 'Raths-Musikanten.' We have already mentioned that he was a violinist, but his importance in the history of music is due to the fact of his being the father of Johann Sebastian. He left Erfurt after a few years, and in 1671 settled at Eisenach, where he died in 1695. Of his numerous children we need only mention the two sons:—

JOHANN CHRISTOPH [10], born 1761. After receiving instruction from the celebrated organ-player Pachelbel in Erfurt, he became organist at Ohrdruff, and died in 1721. Further details about him will be found in the biography of his younger brother, the great Johann Sebastian. (See the article on him.)

Having thus sketched the general course of the family, we will take its various members in alphabetical order, reserving Johann Sebastian for the crown of all.

JOHANN ÆGIDIUS [12], younger son of the old Johannes of Erfurt, born 1645, was a member of the society directed by his father, became organist in St. Michael's Church, and in 1682 succeeded his brother JOHANN CHRISTIAN [13], as 'Raths-Musik director.' He died at Erfurt in 1717. Of his numerous children only two sons survived him—JOHANN CHRISTOPH [14], born 1685, who succeeded to the post of his father—and

JOHANN BERNHARD [15], born 1676. He was organist first at the Kaufmann's Church in Erfurt, then at Magdeburg, and finally at Eisenach, where, in 1703, he succeeded the older and more famous JOHANN CHRISTOPH [16]. These appointments, especially the last, give a favourable idea of his ability as an organist and composer. Of his compositions there still exist preludes on chorales, as well as pieces for klavier and suites for orchestra (or 'overtures after the manner of Telemann,' as they were called). The former were in the collections of Walther, the lexicographer, which are partly preserved in the Berlin library, and the latter amongst the remains of Sebastian, copied by himself. Johann Bernhard died in 1749.

Another JOHANN BERNHARD, son of Sebastian's brother Christoph [10], was born in 1700, succeeded his father as organist at Ohrdruff, and died in 1742.

JOHANN CHRISTIAN [13], eldest son of Johann of Erfurt, born 1640, was at first a member of his father's musical society; then removed to Eisenach, his younger brother Ægidius taking his place. Christian was the first of the family to go to Eisenach, but in 1668 we find him again at Erfurt; he succeeded his father in the direction of the musical society, and died in 1682. He was succeeded by his younger brother Ægidius. One son, Johann Christoph (1673–1727) is mentioned as organist at Gehren (near Arnstadt), where he succeeded the famous MICHAEL (see that name, p. 111). He had studied theology, but was of a quarrelsome haughty disposition, and had many conflicts with his superiors.

JOHANN CHRISTOPH [16], the most famous of this oft-recurring name, and also the most famous of the older generations, was the son of the old HEINRICH [5], of Arnstadt, and was born in 1643. He was a highly gifted musician, and through his own merits alone, independent of his illustrious nephew, occupies a very prominent place in musical history. His life was extremely simple. He was educated by his father, and at twenty-three became organist to the churches at Eisenach. Later he also became court-organist there, and died in 1703. Of his four sons we may mention JOHANN NICOLAUS

[17], 1669–1753. (See his name, p. 112.) Christoph's moral excellence, his constant striving after the highest ideals, his industry, and his technical proficiency, give him the most prominent place amongst the elder branch of the family. He was not only, as the old authorities tell us, one of the finest organ-players and greatest contrapuntists of his day, but he was altogether one of the most important artists and composers of the whole 17th century. He was regarded with undisputed consideration by the family, and both Johann Sebastian and his son Emanuel had the greatest respect for him. In spite of this, his importance during his life-time was not more widely recognised, and after his death he was but too soon forgotten; but this may be explained by the overpowering fame of his great nephew, by the quiet, reserved, simple nature of the man, who lived only for his art and his family, and lastly by the nature of his compositions. His few remaining works prove him to have been of a thoroughly independent and original nature, which, though affected by the influences of the time, was so in its own individual way. Having no sympathy with the prevalent Italian style, he endeavoured to carry on the art in his own way, and therefore to a certain degree stood aloof from his contemporaries. The leading feature in the development of the 17th century is the rise of instrumental music,—the struggle of the modern scales with the old ecclesiastical modes, the development of homophony with its melodious character, and its richness of harmony, in contradistinction to the old strict polyphony. These chief points in the general tendency of the time are not wanting in Johann Christoph. His cultivated sense of form enabled him to give his compositions that firm and compact structure which was a result of the new principles, while his natural musical feeling supplied due expression. His most important compositions are his vocal works, especially his motets; the few that exist only increase our regret at the loss of further proofs of his great ability. One of his best works was a kind of oratorio, for double chorus and orchestra, called 'The Combat of Michael and the Devil' (Rev. xii. 7–12); Johann Sebastian valued it very highly, and had it performed at Leipsic, as did Emanuel after him at Hamburg. Eight of his motets are given in the 'Musica Sacra' (of the Berlin 'Domchor') by Neidhart and Hertzberg; and others in a collection by Naue ('Neun Motette . . von Johann Christoph und Johann Michael Bach,' Leipzig, Hofmeister). The best-known of them is 'Ich lasse dich nicht,' familiar in England under the title of 'I wrestle and pray,' for a long time attributed to Johann Sebastian himself, and in fact so published by Schicht in his six motets. His few remaining instrumental works—arrangements of chorales, and variations for klavier—are less important, owing perhaps to the absence of Italian influence, and were soon forgotten. Gerber was in possession of a MS. volume of organ-music originally belonging to the Bach family, containing eight pieces by Johann Christoph; this invaluable book comprised works by all the celebrated organ-masters from 1680 to 1720, but has unfortunately been lost through the carelessness of Gerber's legatees.

Johann Ernst [18], the son of Johann Bernhard, of Eisenach, born 1722–77, studied law at the Leipsic University, and established himself as a lawyer at Eisenach. He was also so clever a musician as to be of great use to his father in his profession. He was at first appointed his assistant in 1748, and afterwards succeeded him; he also became Capellmeister at the court of Weimar, but kept up his house at Eisenach. Some of his vocal pieces are preserved, and show that he was superior to his time as a composer of sacred music, which was then rapidly declining. One or two of his compositions for klavier are to be found in Pauer's 'Alte Meister,' series 2, bk. 3.

Johann Michael [19], younger son of old Heinrich, and brother of Johann Christoph of Eisenach, born in 1648. He, like his brother, was educated by his father, whom he afterwards supported and helped in his professional duties. In 1673 he was appointed organist at Gehren near Arnstadt, where he died in 1694, in the prime of life. He had six children, a boy who died early, and five daughters, the youngest of whom, Maria Barbara [20], became the first wife of Johann Sebastian, and died 1720. Johann Michael had the same nature and character as his brother, the same simple pious mind and constant lofty aims. In depth of intention, flow of ideas, he vied with his brother, but the latter surpassed him in feeling for form. His invention is remarkable, but form is always his difficulty; in him we feel the want of certainty so characteristic of that time, which resulted from the constant seeking after new forms; and the defect is equally evident in his stiff counterpoint. We may however assume that with his great gifts Michael would have developed more in this direction but for his early death. The decline of the polyphonic style is especially felt in his motets, because he failed to build up his movements in the definite forms demanded by the new homophonic style. In instrumental music he seems to have been more important, perhaps because he was more accessible to the influence of Italy than his brother. Walther says that he wrote 'starke,' that is to say 'remarkable' sonatas, and his pieces were certainly longer esteemed than those of Johann Christoph. In the organ-book already mentioned there were no less than seventy-two fugued and figured chorale-preludes of his, showing how much those of his compositions were then valued. Of his vocal works, motets, arias, and church pieces with instrumental accompaniments, forerunners of Johann Sebastian's cantatas, some are still preserved, and give a highly favourable opinion of Michael's capacities. In the depth and force of his expression his relationship with Sebastian is clearly felt. (See the above-mentioned collections of Naue and Neidhardt). Michael

Bach also employed himself in making instruments.

There is a younger Johann Michael, born in 1754 or 1755, whose connection with the family is not quite clear; he was perhaps descended from the branch which settled at Schweinfurt. He became Cantor at Tonna, and also travelled to Holland, England, and even to America. On returning to Germany he studied at Göttingen, and then established himself as a lawyer at Güstrow, in Mecklenburg. In 1780 he published a book or pamphlet called 'Kurze und systematische Anleitung zum Generalbass,' etc.

Johann Nicolaus [17], a son of the celebrated Johann Christoph, born 1669, became organist of the town and university church at Jena, and died there 1753. For a long time he was in the position of senior to the whole family; but none of his sons lived, and thus his branch died out with him. He was known as a composer of 'suites,' and a mass by him in his own handwriting exists, giving a favourable impression of his talents in vocal composition. There is also a comic operetta by him called 'Der Jenaische Wein- und Bier-Rufer' (The wine and beer crier of Jena), a scene from Jena college life. He acquired great reputation in the manufacture of instruments. Incited, and perhaps even directed, by his uncle Johann Michael, he made many improvements in the construction of pianos, but his efforts were chiefly directed towards establishing equal temperament in the tuning of organs and pianos, an idea which at that time met with universal opposition.

Johann Christian [21], known as the Milanese or English Bach, eleventh son of Johann Sebastian, and youngest of those who survived their father, was born at Leipsic in 1735. Next to his brother Emanuel he is probably the best known amongst the sons of Sebastian, and the only one who broke through family traditions by travelling and adopting modern fashions in composition. His talent was certainly very remarkable, but his character and temperament forced him into directions very different from those of his ancient and honourable family. He was only fourteen when his father died, and he then went to live with his brother Emanuel in Berlin, where he studied pianoforte-playing and composition. A certain gaiety of disposition, possibly increased by his acquaintance with Italian singers, led him to Milan, where in 1754 he became organist of the cathedral. He wrote a great deal of vocal music in the pleasant and somewhat superficial manner of the Neapolitans then in vogue, which was in great favour with singers and amateurs. Inclination and talent made him turn to opera, and as he wished to devote himself to it entirely, but considered it hardly consistent with his position as cathedral organist, he left Milan in 1759, after marrying the Italian prima donna Cæcilia Grassi, and accepted an appointment as Director of Concerts in London, where he remained till his death in 1782. He was clever, intelligent, and genial, but in spite of his easy circumstances he died much in debt. The elegance and brilliancy of his pianoforte compositions made him the favourite of all amateur pianoforte-players, and did much towards the general diffusion of the taste for pianoforte-playing. But his greatest triumphs were won by his operas; the first was 'Orione, ossia Diana vendicata,' 1763, and this was followed by many others. Some of his sacred works, however, seem more important, such as Masses, Psalms, and a Te Deum, where we find such echoes of the hereditary musical spirit of the family as prove that Christian was still a member of the race. Burney kept up an intimate intercourse with him for many years, and gives a detailed account of him in his 'History of Music,' vol. iv.

Johann Christoph Friedrich [22], called the Bückeburg Bach, ninth son of Sebastian, born at Leipsic in 1732. He at first studied jurisprudence at Leipsic, but true to family tradition soon forsook the law, and under the direction of his father and elder brother became a thorough musician. He finally entered the service of Count Schaumburg as Capellmeister at Bückeburg, where he remained till his death in 1795, leaving behind him the reputation of an upright, modest, amiable man. As a composer he was industrious in all branches, especially in oratorios and passion music, and occasionally in opera. Though not attaining the eminence of his brothers, his compositions do no discredit to the family. In style he approaches nearest to his brother Emanuel. He left one son, Wilhelm Friedrich. (See that name.)

Wilhelm Friedemann [23], called the Halle Bach, eldest of Johann Sebastian's sons, born at Weimar in 1710. In the opinion of all his acquaintances he was not only the most gifted of the brothers, but altogether an unusually able man, a genius on whom the father built great hopes, and to whom the brothers looked for replacing him. Unhappily he entirely departed from the respectable and honourable ways of the Bachs. An obstinate character and utter moral recklessness prevented him from attaining the eminence which his youth seemed to promise, and his life exhibits the melancholy spectacle of a ruined genius. He was educated chiefly by his father, who fully appreciated his remarkable abilities, and devoted special care to it; he also received instruction on the violin from Graun. He attended the 'Thomas Schule,' and afterwards the university at Leipsic, and distinguished himself greatly in mathematics. In 1733 he became organist at the church of St. Sophia at Dresden, and in 1747 music-director and organist of St. Mary's at Halle. He held this office till 1767, when he was obliged to give it up, his way of life becoming more and more disorderly and dissolute, and making him careless and irregular in his duties. He then lived without regular occupation at Brunswick and Göttingen, and also at Berlin, where Forkel, his father's biographer, looked after him with the greatest devotion; he occasionally gave concerts on the piano or organ,

or wandered about with travelling musicians, but always sinking deeper and deeper. Quite at the last he received an appointment as Capellmeister at Hessen-Darmstadt, but he never took the post, and died at Berlin in 1784 in a state of great degradation and want. He was the greatest organ-player of his time, a thorough master of the theory of music, in which his remarkable mathematical knowledge was of great service to him, a master of fugue, and a famous improviser. Very few of his compositions have been published; he only wrote them down when necessity forced him to. This shows with what facility he could compose, but also how indifferent a matter it was to him. The royal library at Berlin possesses a good many of his writings, and some have been printed in the different collections of old pianoforte music. Two noble fantasias were introduced by Madame Arabella Goddard at the Monday Popular Concerts, and have been published in London.

Wilhelm Friedrich Ernst [24], son of the Bückeburg Bach, and the last grandson of Sebastian. Born at Bückeburg in 1759, he was educated under his father's care until able to perform in public; he then accepted an invitation from his uncle Christian in London. There he remained some years, much sought after and respected as a pianoforte teacher. On his uncle's death he returned to Germany and settled at Minden. On the accession of King Frederic William II of Prussia he wrote a 'Huldigungs cantata,' and was rewarded by being called to Berlin in 1790 as 'cembalist' to the Queen, with the title of Capellmeister. This post he retained under Queen Louise, wife of Frederic William III, and after her death retired into private life. He was the teacher of the royal children, as he had been of Frederic William III and his brothers. He lived in complete retirement till 1845. As the sole and last representative of the family, he assisted, with his wife and two daughters, at the inauguration of the monument erected to the memory of Johann Sebastian in front of the 'Thomas Schule' at Leipsic in 1843 through the efforts and instigation of Mendelssohn. With him the descendants of Johann Sebastian Bach became extinct. He was a good pianoforte and violin player, but his modesty prevented him from often appearing, and although he wrote much, in many styles, very little of his music is published.

Carl Philipp Emanuel [25], third son of Sebastian, often styled the Berlin or Hamburg Bach, born at Weimar March 14, 1714. His general precocity, quickness, and openness to impressions, induced his father to bring him up to the study of philosophy. With this view he went to the Thomas School and afterwards to the universities of Leipsic and Frankfort-on-the-Oder, where he entered on the study of law. But the thorough grounding in music which, as a matter of course, he had received from his father, and the natural influences of so musical a house, had virtually decided his future. When he entered at Frankfort he was already not only a fine player but a thorough musician. While there he conducted a singing society, which gave him opportunities of composing, and at length he finally relinquished law for music, in 1737 went to Berlin, and in 1746 obtained the appointment of Kammer-musiker and cembalist at the Court, with the special duty of accompanying Frederic the Great's flute solos at the private concerts. The Seven Years War (1757) however put an end to this pleasant position. Bach migrated to Hamburg and took the direction of the music in one of the churches there. In 1767 he succeeded Telemann, and this post he held till his death, Sept. or Dec. 14, 1788. As composer, director, teacher, and critic, his influence was very great, and he was beloved and respected both by his brother professionals and by the whole town. His goodness, pleasant manners, literary culture, and great activity in music, all combined to place him at the head of his father's sons and scholars. But when we remember that for a Bach his musical gifts were by no means extraordinary—far below those of Friedemann, for example—it is plain that he stands so high because he is recognised historically as one of the most remarkable figures in the transition period between J. S. Bach and Haydn. In such periods a man is eminent and influential more from his general cultivation than from proficiency in any special branch. At the particular time at which E. Bach lived there were no great men. The gigantic days of Handel and Bach were exchanged for a time of peruke and powder, when the highest ideal was neatness, smoothness, and elegance. Depth, force, originality, were gone, and 'taste' was the most important word in all things. But taste has to do with externals, and therefore lays an undue stress on outward form in art, and this was the direction taken by the musical works which acted as important precursors of the so-called classical period. Nowhere does the tendency to formal construction show itself so strongly as in the works of Emanuel Bach, and he is therefore to be regarded as the immediate precursor of Haydn. No doubt he is affected and restricted by the tendencies of the time, but he had the power of bringing them together and throwing them into artistic form, and therefore his works are of greater importance than those of any of his contemporaries. To form a right judgment of him as a composer he must be regarded apart from his father, and solely from the point of view of his own time; and when so judged it is impossible to deny that he surpassed most of his contemporaries, and is of paramount importance as a connecting link between the periods of Handel and Bach on the one hand and Haydn and Mozart on the other. His music is wanting in depth and earnestness, but it is always cheerful, highly finished, often full of intelligence and charm; and in regard to form, where his relation to Haydn—a man far more gifted than himself—is most evident, we find him in possession of all those germs which in Haydn's hands sprang into such luxuriant growth—the homophonic thematic movement,

the cyclical sonata-form, and new treatment of the orchestra.

His compositions in all departments are extraordinarily numerous; a complete list of them will be found in Gerber. Historically his instrumental compositions are the most valuable, because the development of the larger forms of instrumental music is the great characteristic of modern times. His vocal music, chiefly for the church, is for the most part flat and monotonous, a quality perhaps partly due to the dry and unenthusiastic rationalism of that day. Most important of all are his numerous compositions for the clavier—210 Solo pieces; 52 Concertos with orchestral accompaniments; Sonatas, Trios, etc.—in which he has exhibited and developed his father's principles of *technique*. Many of these pieces have been republished in the various collections of ancient music; and his principal work 'Sonaten, nebst Rondos und freien Phantasien, für Kenner und Liebhaber' (6 parts, 1779–87), was republished a few years since by Baumgart. Of his orchestral works, 18 in number, several have been recently reissued by Breitkopf & Härtel, and have excited so much interest as to procure them a place in the programmes of Orchestral Concerts. Bach's vocal works comprise—2 Oratorios, 'Die Israeliten in der Wüste' and 'Die Auferstehung und Himmelfahrt Jesu'; a celebrated 'Heilig' (Sanctus) for 2 Choirs; 'Melodien' to Gellert's sacred songs; 22 Passions; sacred Cantatas; Singspiele; secular songs, etc., etc. That he was not without ability in literature is shown by his great work 'Versuch über die wahre Art Klavier zu spielen' (2 parts, 1780) with examples and 18 specimen pieces. This book deserves notice as the first methodical treatise on clavier-playing; but it is more important still as containing the foundation of those principles which were first laid down by the great John Sebastian, and were afterwards developed by Clementi, Cramer, Field, and Hummel, into the pianoforte-playing of the present day. Bach lays special stress on refinement and taste in execution, in connection with which he gives detailed rules for the execution of the ornaments or 'Manieren' then considered so indispensable, and in this respect, as the most complete and authentic authority, his work will always possess considerable value. It has recently been re-edited (1857) by Schelling. [A. M.]

BACH, Johann Sebastian—'to whom,' in Schumann's words, 'music owes almost as great a debt as a religion owes to its founder'—youngest son of Ambrosius Bach, was born at Eisenach March 21, 1685. His life, like that of most of his family, was simple and uneventful. His father began by teaching him the violin, and the old-established family traditions and the musical importance of Eisenach, where the famous Johann Christoph was still actively at work, no doubt assisted his early development. In his tenth year the parents both died, and Sebastian was left an orphan. He then went to live with his elder brother, Johann Christoph, at that time organist at Ohrdruff, and under his direction began the clavier, at the same time carrying on his education at the Ohrdruff 'Lyceum.' The remarkable genius of the boy began at once to show itself. He could soon play all his lessons by heart, and aspired to more advanced music. This impulse his brother it seems did not encourage. We are told that he possessed a MS. volume containing pieces by Frohberger, Pachelbel, Kerl, Buxtehude, and other celebrated composers of the day. This book became an object of longing to the young Sebastian, but was strictly withheld from him by his brother. Determined nevertheless to gain possession of the volume, the boy managed with his little hands to get it through the latticed door of the cupboard in which it was kept, and at night secretly copied the whole of it by moonlight, a work which occupied him six months. When the stern brother as last discovered the trick, he was cruel enough to take away from the boy his hardly-earned work.

At the age of fifteen (1700) Johann Sebastian entered the 'Michaelis' school at Lüneburg; his beautiful soprano voice at once procured him a place among the 'Mettenschüler,' who took part in the church music, and in return had their schooling free. Though this gave him an opportunity of becoming acquainted with vocal music, instrumental music, especially organ and pianoforte playing, was always his chief study. Böhm, the organist of St. John's at Lüneburg, no doubt had an inspiring effect upon him, but the vicinity of Hamburg offered a still greater attraction in the person of the famous old Dutch organist Reinken. In his holidays Bach made many expeditions to Hamburg on foot to hear this great player. Another powerful incentive to his development was the ducal 'Hof-kapelle' at Celle, which, being in a great measure composed of Frenchmen, chiefly occupied itself with French instrumental music, and thus Bach had many opportunities of becoming acquainted with a branch of chamber and concert music, at that time of great importance. After remaining three years at Lüneburg he became for a time 'Hofmusikus' at Weimar in the band of Prince Johann Ernst, brother of the reigning duke, and in 1703 was made organist at Arnstadt in the 'new church.' Here he laboured with restless eagerness and energy at his own development in both *technique* and theory, and very possibly neglected the training of the church choir. In 1705 he obtained a month's leave to visit Lübeck in order to make acquaintance with the organist Buxtehude and hear his famous evening performances on the organ during Advent. He seems to have considered his stay there of so much importance that he prolonged it for three months. This liberty, and his habit in accompanying the services of indulging his fancy to the disturbance of the congregation, drew upon him the disapprobation of the church authorities, but without interfering with his position as organist—a fact which proves that the performances of the young genius were already appreciated. It seems that his reputation as an organist was even then so great that he had

received applications from various quarters. In 1707 he went to Mühlhausen in the Thüringen, and in the following year to Weimar as court-organist. From this time we may consider his studies to have been completed; at Weimar his fame as the first organist of his time reached its climax, and there also his chief organ compositions were written, — productions unsurpassed and unsurpassable. In 1714, when twenty-nine years of age, Bach was appointed 'Hof-Concertmeister,' and his sphere of activity became considerably enlarged. An interesting event took place at this time. Bach used to make yearly tours for the purpose of giving performances on the organ and clavier. On his arrival at Dresden in the autumn of 1717 he found there a French player of great reputation named Marchand, whose performances completely carried away his hearers, though he had made many enemies by his arrogance and intolerance of competition. Bach was induced to send a written challenge to the Frenchman for a regular musical contest, offering to solve any problem which his opponent should set him, of course on condition of being allowed to reciprocate. Marchand agreed, in his pride picturing to himself a glowing victory; time and place were fixed upon, and a numerous and brilliant audience assembled. Bach made his appearance—but no Marchand: he had taken himself off that very morning; having probably found an opportunity of hearing his opponent, and no longer feeling the courage to measure his strength with him.

On his return from Dresden in 1717 Bach was appointed Kapellmeister at Cöthen by Prince Leopold of Anhalt-Cöthen. This young prince, a great lover of music, esteemed Bach so highly that he could not bear to be separated from him, and even made him accompany him on his journeys. Bach's duties consisted merely in directing the Prince's chamber-music, as he had nothing to do with the church music or organ-playing. Accordingly this period of his life proved extraordinarily fertile in the production of instrumental music. A journey to Hamburg in 1721 brought him again in contact with the aged Reinken; on this occasion he was a candidate for the post of organist at the 'Jacobi Kirche,' where he was attracted by the splendid organ. In spite of his great fame, and notwithstanding his having again excited the most unmixed admiration by his organ-playing in Hamburg, he failed to obtain the post; an unknown and insignificant young man being preferred to him,— possibly because he offered to pay 4000 marks for the office. At length, in 1723, Bach was appointed cantor at the Thomas-Schule in Leipsic, and organist and director of the music in the two chief churches. Cöthen was no field for a man of his genius, and the Duke's love of music had considerably cooled since his second marriage. He therefore quitted the place for his new post, though retaining sufficient interest in it to write a funeral ode (Trauer-Ode) on the death of the Duchess in 1727. His position at Leipsic he retained till the end of his life; there he wrote for the services of the church his great Passions and Cantatas, and his High mass in B minor (1733), which exhibit the power of his unique genius in its full glory. In 1736 he received the honorary appointments of Hof-Componist to the Elector of Saxony, and Kapellmeister to the Duke of Weissenfels. In 1747, when already somewhat advanced in age, he received an invitation to Berlin to the court of Frederic the Great, where his son Emanuel held the post of cembalist, a fact which made the king desirous of hearing and seeing the great master himself. Bach accepted the invitation, was received with the utmost respect and kindness by the king (April 7, 1747)[1], had to try all the Silbermann pianofortes and organs at Potsdam, and excited the greatest wonder by his improvisation on given and self-chosen themes. On his return to Leipsic he worked out the theme which the king had given him, and dedicated it to him under the title of 'Musikalisches Opfer.' He now began to suffer from his eyes, and subsequently became quite blind. This was possibly caused by excessive straining of his sight, not only with the enormous number of his own compositions, but also with copying quantities of separate parts, and works by other composers, as materials for his own studies: besides this he himself engraved more than one of his own pieces on copper. On July 28, 1750, his life was brought to an end by a fit of apoplexy.

Bach was twice married (Oct. 17, 1707, and Dec. 3, 1721); by his first wife, Maria Barbara, the daughter of Michael Bach of Gehren, he had seven children. She died at Cöthen in 1720, during her husband's absence at Karlsbad with the Prince. Three only of her children survived their father—an unmarried daughter and two sons, Wilhelm Friedemann and Philip Emanuel. His second wife, Anna Magdalena Wülkens, youngest daughter of the Weissenfels Hof-Trompeter, had a musical nature and a fine voice, and showed a true appreciation for her husband. She helped to encourage a strong artistic and musical feeling in his house, and besides attracting foreign artists, exerted a beneficial influence on the sons, who were one and all musically gifted. This marriage produced thirteen more children, nine sons, of whom only two survived the father, Johann Christoph Friedrich and Johann Christian.

In Johann Sebastian centres the progressive development of the race of Bach, which had been advancing for years; in all the circumstances of life he proved himself to be at once the greatest and the most typical representative of the family. He stood, too, on the top step of the ladder: with him the vital forces of the race exhausted themselves; and further power of development stopped short.

All the family traits and qualities of the Bachs to which we drew attention in the introduction to this article, and which were handed on by natural disposition as well as education and tradition, stand out in Johann Sebastian with

[1] I owe this date to Mr. Carlyle, though he has omitted all mention of the occurrence in his Life of Frederick. [G.]

full decision and typical clearness:—a deeply religious sentiment which, though in many points closely approaching to the pietism then developing itself, yet adhered with a certain naïve severity to the traditional, orthodox, family views; a truly wonderful moral force, which, without any show, embraced the problem of life in its deepest sense; and a touching patriarchal spirit, which was satisfied with humble circumstances, rejoiced in the blessing of an unusually numerous family, and regarded the family life as the chief raison d'être. With and above all this there was an artistic striving, founded exclusively on ideal views, and directed with complete self-forgetfulness to ideal aims alone. His art and his family,—those were the two poles around which Bach's life moved; outwardly, simple, modest, insignificant; inwardly, great, rich, and luxurious in growth and production. His activity was extraordinary and unceasing. Besides his official duties and his actual labour as a composer, which in themselves alone are astonishing, he made copies for himself of other composers' works, including those of the Bach family; he sometimes engraved on copper, and even occupied himself with the manufacture of instruments. He invented an instrument between the violoncello and viola, which he called viola pomposa, and devised a piano with catgut strings which he called lauten-clavicymbalum. At the same time he was a model paterfamilias, made the musical education of his sons his especial and peculiar care, wrote educational works for his pupils like the 'Klavierbüchlein' for his son Friedemann, and the famous 'Kunst der Fuge,' and also trained a great number of pupils who afterwards themselves became famous, such as Johann Caspar Vogler, Agricola, Altnikol, afterwards his son-in-law, Marpurg, Kirnberger, and Ludwig Krebs. Bach's development points to a steady and indefatigable pursuit of a definite and fixed aim, guided by his genius alone. He had a clear insight into his artistic mission; developed himself out of himself with a perfect unity of purpose, holding aloof from external influences in the field of art, but rather drawing them to himself and so appropriating them through the power of his genius as to mould them into a complete whole. If in a measure he ran counter to the continual encroachments of Italian opera, this may be attributed less to his artistic than to his moral and religious views.

Bach's importance for the history of music lies in the fact that, starting with instrumental music, and adhering to the spirit of it, he developed all forms and species of composition in an entirely new and independent manner. The old vocal style, which was founded exclusively on polyphony, was exhausted. Bach created an entirely new vocal style based on instrumental principles, carried it to the summit of perfection, and there left it.

Bach's masterly counterpoint is generally spoken of as the special mark of his genius; and unapproachable as he is in this branch, his real power lies less in the almost inconceivable facility and dexterity with which he manages the complicated network of parts, than in that formal conformation of the movements which resulted from this manner of writing; in this he exhibits a consistency, fertility, and feeling for organic completeness which are truly inimitable. His melody, his harmony, and his periods all seem to be of one mould: an indestructible spirit of severe logic and unalterable conformity to law pervades the whole as well as the parts. These formal principles are governed, pervaded, and animated from first to last by the idea of the musical composition; so that the materials, though in themselves void of expression, become imbued with an inexhaustible depth of meaning, and produce infinite varieties of form. This wonderful unity of idea and formal construction gives the stamp of the true work of art to Bach's compositions, and explains the magical attraction which they exert on those who make them their earnest study. Besides these less obvious qualities, Bach's importance in the history of music shows itself in the immediate influence he exerted in various ways towards its greater development. He first settled the long dispute between the old church modes and the modern harmonic system; in his chorales he often makes use of the former, but the harmonic principle is predominant in his works, just as it still lies at the root of modern music. Connected with this was the 'equal temperament' which Bach required for instruments with fixed intonation. He put this in practice by always tuning his pianos himself, and moreover embodied his artistic creed in relation to it in his famous 'Wohltemperirte Klavier,' a collection of preludes and fugues in all keys. Bach's influence on the technical part of piano-playing must not be forgotten. The fingering which was then customary, which hardly made any use of the thumb, and very seldom of the little finger, was inadequate for the performance of his works. But he stood entirely upon his own ground, and formed for himself a new system of fingering, the main principle of which was the equal use and development of all the fingers, thus laying the foundation of the modern school; on the other hand he laid down many rules which, though no longer binding, to a certain degree reconciled the old and the new schools, and gave the whole system a thoroughly personal stamp, making it appear, like everything else of Bach's, unique.

Bach wrote unceasingly in every form and branch, and the quantity of his works is enormous. A tolerably complete catalogue (by Emanuel Bach and Agricola) is given in Mitzler's 'Musikalisches Bibliothek' (1754), of which the following is a summary:—

1. *Vocal Works.* Five sets of Sacred Cantatas (Kirchen-Cantaten) for every Sunday and Holyday in the year, besides many single ones, such as 'Gottes Zeit ist die beste Zeit'; and others for special occasions, such as the 'Trauer-ode' on

the death of the Electress of Saxony; 5 Passions; the Christmas Oratorio (in 5 parts); the Grand Mass in B minor, and 4 smaller do.; Motetts; 2 Magnificats, 5 Sanctus, as also many Secular Cantatas, including two comic ones, a 'Bauern-Cantate' and a 'Coffee-Cantate.'

2. *Instrumental Works.* A vast number of piano pieces of all kinds—Inventions, in 2 and 3 parts; Suites (6 small, called 'French Suites,' and 6 large 'English Suites'); Preludes and Fugues, amongst them the 'Wohltemperirte Klavier' in two parts, 48 Preludes and Fugues in all keys; the 'Kunst der Fuge'; Sonatas for piano with one or more instruments, amongst them the famous 6 Sonatas for Piano and Violin; Solo-sonatas for Violin and for Violoncello; Solos, Trios, etc., for different instruments in various combinations; Concertos for 1 to 4 pianos; Do. for violin and other instruments with orchestra; Overtures and Suites for orchestra; lastly an endless quantity of organ compositions—Fantasias, Toccatas, Preludes, Fugues and arrangements of Chorales. Of this almost inexhaustible mass a few only were printed during Bach's lifetime. These were—the 'Klavier-Uebung,' or Clavier practice, a collection of pieces for piano and organ, in 4 parts (1731–42); the Musikalisches Opfer,' dedicated to Frederic the Great, and a few organ arrangements of chorales; and shortly after his death the 'Art of Fugue' (1752), engraved by Bach himself, and a collection of Chorales selected by Emanuel Bach from his father's Cantatas, and published in two volumes (1765–69). These were afterwards reprinted in a more complete form by Breitkopf & Härtel, and in 1843 a 4th edition in score, specially arranged, was published in Leipsic by C. F. Becker.[1] The great mass of Bach's MSS. however lay untouched and unknown for many years; the vocal works seem to have been more especially ignored. The time immediately following Bach had no sympathy with the depth and individuality of his genius. True, his pupils and sons revered him as a consummate and inimitable contrapuntist and a masterly composer, and with true instinct set themselves to collect and copy all his existing works for piano and organ which they could procure. But with their generation all real interest in this mighty genius vanished, and it is not too much to say that within forty years after Bach's death, his fame, though still unapproachable, had become a mere historic tradition. How quickly and how generally this was the case is evident from the fact that the works of his son Emanuel were esteemed at least as highly as his own,[2] and that even a man like Adam Hiller, one of the most prominent and influential musicians of Bach's school, and one of his successors as Cantor at St. Thomas', Leipsic, in his 'Lebensbeschreibung berühmter Musikgelehrten und Tonkünstler' (Leipsic, 1784) chiefly admires his counterpoint and part-writing, and finds his melodies 'peculiar' (*sonderbar*).

It was the revolution produced by the composers of the classical period succeeding that just mentioned which first paved the way back to the understanding of Bach; at the end of the 18th and beginning of the 19th centuries the music publishers began to recollect the existence of these forgotten works. The 'Wohltemperirte Klavier' was published by Kollmann in London in 1799, and was soon followed by the firms of Nägeli at Zürich, Simrock at Bonn, Kühnel (now Peters) and Breitkopf & Härtel in Leipsic, with a number of piano and organ works. The six[3] unaccompanied motets, for 5 and 8 voices, edited by Schicht, were published by Breitkopf & Härtel as early as 1802. In 1809 the performances of Bach's Fugues and Trios by Samuel Wesley and Benjamin Jacob on the organ of Surrey Chapel, London, (one of the very few pedal organs at that time in England,) caused an extraordinary sensation, which was followed up by the publication of the 48 Preludes and Fugues (Birchall, 1809) and the 6 organ trios, all by Wesley and Horn. But it was Mendelssohn who gave the permanent impetus to the growing worship of Bach in Europe by the performance[4] of the Matthew Passion in Berlin, March 12, 1829, exactly one hundred years after its production. A powerful excitement seized the musical world; people began to feel that an infinite depth and fulness of originality united with a consummate power of formal construction was lying hidden in these neglected works. Performances of the Passion and of other vocal music of Bach took place in Berlin and elsewhere—*e. g.* in Breslau by the 'Sing-akademie,' under Mosevius—the editions increased in number and began to include the vocal works. The most important of these is that of Peters (dating from 1837), 'Gesammt Ausgabe der instrumentalen Werke Bach's,' edited by Czerny, Griepenkerl and Roitsch, with whom Hauptmann, David, Dehn, etc., were afterwards associated. This edition is still in progress, and includes 13 volumes of pianoforte works, 13 for pianoforte with accompaniment, 18 for other instruments, 9 for organ; and an excellent thematic catalogue by A. Dörffel (1866), specially referring to this edition. The same firm has begun an edition of the vocal works, and besides full and compressed scores of the Matthew and John Passions, the Christmas oratorio, the B minor Mass, and 4 smaller ditto, the 6 Motets, the Magnificat and 4 Sanctus, has published 10 Cantatas with piano accompaniment—all at the well-known low prices of this firm. Mention should be made of 4 Kirchengesänge, published in score with pianoforte arrangement by J. P. Schmidt (Trautwein); of 'Ein' feste Burg,' and the 117th Psalm, and 'Lob, Ehre, Weisheit' (8 voc.), issued by Breitkopfs, and of two comic Cantatas, edited by Dehn and published by Crantz—all harbingers of the edition of the Bach-Gesellschaft.

Mendelssohn was not content with the revival

[1] This edition contains the Chorale which closes the original edition of the 'Art of Fugue.'

[2] See, for example, Burney's 'Present State,' etc. ii. 245.

[3] The 3rd of these, 'Ich lasse dich nicht,' is now known to be by J. Christoph Bach.

[4] See Devrient's 'Recollections,' p. 38, etc., etc.

of the Passion music; through his efforts[1] a monument was erected, in 1842, which perpetuates the features of the great master in front of the 'Thomas schule,' over which he presided, and under the very windows of his study. Nor was the result of Mendelssohn's enthusiasm to stop here. In 1850, the centenary of Bach's death, the 'Bach-Gesellschaft' was founded at Leipsic for the publication of his entire works. This gave a real and powerful impulse to the worship of Bach; the discovery of the unsuspected treasures which were revealed even by the first annual volume led to the foundation of 'Bach Societies' all over Germany, which devote themselves to the performance of his works, especially the vocal works, and have thereby awakened such an enduring interest that now the Cantatas, Passions, and Masses of Bach rank with Handel's oratorios in the standing repertoires of all great German choral societies, and are regarded as tests for their powers of execution. No doubt the first impulse to these societies was given by the original Bach Society mentioned above. [See BACH-GESELLSCHAFT.]

Besides all these efforts for diffusing the knowledge of Bach's works, we must mention the labours of Robert Franz, the famous song-writer at Halle. In the performance of Bach's great vocal works with instrumental accompaniment, the organ forms an essential part, being necessary for carrying out Bach's obligato accompaniments. At concerts, where Bach is most frequently to be heard now, an organ not being always attainable, Franz devoted himself to replacing the organ part by arranging it for the orchestral instruments now in use. His thorough understanding of Bach's manner of writing, the musical affinity of his own nature, make him pre-eminently fitted for this work. A number of his arrangements, some in full score, some arranged for piano, have been published by C. F. Leuckart at Leipsic.

Amongst the literature relating to Bach we must first mention a biography written by his son Emanuel and his pupil Agricola. It appeared in the 'Musikalische Bibliothek' of Mitzler in 1754, and is especially important because it contains a catalogue of Bach's works which may be considered authentic; it includes both the then published works and all the MS. works which could be discovered, and is the chief source of all investigations after lost MSS. The first detailed biography of Bach was written by Professor Forkel of Göttingen, 'Ueber Bach's Leben, Kunst und Kuntswerke,' 2 vols., Leipsic, 1802; afterwards, in 1850, there appeared, amongst others, Hilgenfeldt's 'J. S. Bach's Leben, Wirken, und Werke,' 4to.; in 1865 'J. S. Bach,' by C. H. Bitter (2 vols. 8vo., Berlin), and in 1873 the 1st vol. of Spitta's exhaustive and valuable 'J. S. Bach.' The English reader will find a useful manual in Miss Kay Shuttleworth's unpretending 'Life.' There are also biographical notices in Gerber, Fétis, and the other biographical dictionaries; and monographs by Mosevius on the 'Matthew Passion' (Trautwein, 1845) and on the sacred cantatas and chorales (Id. 1852). In von Winterfeld's well-known work, 'Der evangelische Kirchen Gesang,' there is frequent reference to Bach. Mention should also be made of Hauptmann's 'Erläuterungen' of the 'Art of Fugue' (Peters), and of the admirable Prefaces to the various annual volumes of the Bach-Gesellschaft.

In England the study of Bach has kept pace with that in Germany, though with smaller strides. The performances and editions of Wesley have been already mentioned. In 1844 or 45 Messrs. Coventry and Hollier published 14 of the grand organ preludes and fugues and two toccatas. These appear to have been edited by Mendelssohn.[2] They are printed in 3 staves, and a separate copy of the pedal part 'arranged by Signor Dragonetti' (probably at the instigation of Moscheles), was published for the Cello or Double Bass. About the same time Dr. Gauntlett edited some Choruses for the organ. In 1854 the BACH SOCIETY of London was formed, the results of which are given under that head. On April 6, 1871, took place the first performance of the Passion in Westminster Abbey, which has now become an annual institution, and has spread to St. Paul's and other churches. [A. M.]

BACH-GESELLSCHAFT. A German society formed for publishing a complete critical edition of the works of JOHN SEBASTIAN BACH, in annual instalments, as a memorial of the centenary of his death—July 28, 1850. The idea originated with Schumann, Hauptmann, Otto Jahn, C. F. Becker, and the firm of Breitkopf & Härtel; was cordially endorsed by Spohr, Liszt, and all the other great musicians of the day (how enthusiastically would Mendelssohn have taken a lead, had he been spared but three years longer!), and the prospectus was issued to the public on the anniversary itself. The response was so hearty and immediate, both from musicians and amateurs, at home and abroad, as to leave no doubt of the feasibility of the proposal; the society was therefore definitely established. Its affairs were administered by a committee (Hauptmann, Becker, Jahn, Moscheles, Breitkopf & Härtel), whose headquarters were at Leipsic; the annual subscription was fixed at 5 thalers, or 15*s*., and the publications are issued to subscribers only, so as to prevent anything like speculation. The first volume appeared in December 1851, and contained a preface and list of subscribers, embracing crowned heads, nobility, public libraries, conservatoires and other institutions, and private individuals. The total number of copies subscribed for was 403, which had increased at the last issue (XXII—for 1872) to 519, the English contingent having risen at the same date from 23 to 56—or from 5·7 per cent to 10·8 per cent of the whole.

[1] See his Letters, Nov. 30, 39; Aug. 10, 40; Dec. 11, 42; and a paper by Schumann entitled 'Mendelssohn's Orgel-Concert,' in his 'Gesammelte Schriften' (iii. 256).

[2] See his letter printed in the Appendix to Polko's 'Reminiscences' (Longmans, 1869). Some of the pieces are headed 'arranged by Mendelssohn.'

The principles laid down for editing the volumes are stated in the preface to vol. i. as follows:—The original MS. to be consulted wherever possible; and also, as of extreme importance, the separate parts, which are often either in Bach's own writing or revised and corrected by him, exhibiting notes and marks of great consequence, both as corrections and as evidence of his practical care for the performance of his music, often making the separate parts more valuable than the score itself. Where such originals are not obtainable, recourse to be had to the oldest copies, especially those by Bach's own scholars; or, in default of these, the earliest printed editions, particularly when issued during his lifetime. No conjectural readings to be admitted.

The discovery of the original MSS. is beset with difficulties. Bach's MSS., except a few which were in the hands of Kirnberger and Kittel, came first into the possession of his sons, Friedemann and Emanuel. Those entrusted to Friedemann were lost, mislaid, or sold. Emanuel, on the contrary, took the greatest care of his, and left a catalogue which has proved of material value to investigators. A portion of his collection was acquired by Nägeli the publisher, of Zürich, but the principal part is now in the Berlin Imperial Library, and in that of the Joachimsthaler Gymnasium in the same city, which latter contains also the MSS. formerly belonging to Kirnberger and his pupil the Princess Anna Amalia. The library of the Thomas-School at Leipsic once contained a large number of cantatas, both in score and parts; but they were neglected by Cantor Müller (1801–9), and on his death all but a very small portion had vanished. Thus, although the bulk of the existing autographs is now to be found in Berlin, a considerable number remain widely scattered in private collections, access to which for such purposes as those of the Bach-Gesellschaft is naturally attended with much trouble.

It has been the aim of the editors, by the means just indicated, to obtain a text which should express the composer's intentions as nearly as possible. Each volume contains a preface, setting forth the sources drawn upon for the contents of the volume, and the critical method employed in dealing with them, with a host of interesting particulars on the nature and condition of the MSS., on Bach's method of writing, on his efforts to find the most perfect expression for his ideas (as shown by the incessant variations in his numerous copies of the same work), on the practical execution of Bach's music, etc., so that these prefaces may really be said to contain the sum of the present knowledge on the subject of Bach and his music in general. The 1st and 2nd years' volumes were edited by Hauptmann, the 3rd by Becker, the 4th and 6th by Rietz, the 14th by Kroll, and the rest by W. Rust, who has shown himself to the world in these prefaces the accurate indefatigable investigator which his friends have long known him to be. The following complete list of the yearly issues to the date of this article (1876) may not be unwelcome to our readers:—

1851. First Year.
Church Cantatas. Vol. 1.
1. Wie schön leuchtet.
2. Ach Gott, vom Himmel
3. Ach Gott, wie manches.
4. Christ lag in Todesbanden.
5. Wo soll ich fliehen hin.
6. Bleib' bei uns.
7. Christ unser Herr.
8. Liebster Gott, wann werd' ich sterben?
9. Es ist das Heil.
10. Meine Seel' erhebt.

1852. Second Year.
Church Cantatas. Vol. 2.
11. Lobet Gott.
12. Weinen, Klagen.
13. Meine Seufzer.
14. War' Gott nicht mit uns.
15. Denn du wirst meine Seele.
16. Herr Gott dich loben wir.
17. Wer Dank opfert.
18. Gleich wie der Regen.
19. Es erhub sich ein Streit.
20. O Ewigkeit, du Donnerwort.

1853. Third Year.
Clavier Works. Vol. 1.
15 Inventions and 15 Symphonies.
Klavierübung:
Pt. 1. 6 Partitas.
Pt. 2. A Concerto and a Partita.
Pt. 3. Choral-Preludes and 4duets.
Pt. 4. Air, with 30 Variations.
Toccata in F♯ minor.
Toccata in C minor.
Fugue in A minor.

1854. Fourth Year.
Passion Music from St. Matthew.

1855. Fifth Year.
Church Cantatas. Vol. 3.
21. Ich hatte viel Bekümmerniss.
22. Jesus nahm zu sich.
23. Du wahrer Gott.
24. Ein ungefärbt Gemüthe.
25. Es ist nichts Gesundes.
26. Ach wie flüchtig.
27. Wer weiss, wie nahe mir.
28. Gottlob! nun geht.
29. Wir danken dir, Gott.
30. Freue dich, erlöste Schaar.

Christmas Oratorio. In 4 sections.

1856. Sixth Year.
Mass in B minor.

1857. Seventh Year.
Church Cantatas. Vol. 4.
31. Der Himmel lacht.
32. Liebster Jesu.
33. Allein zu dir, Herr.
34. O ewiges Feuer.
35. Geist und Seele.
36. Schwingt freudig euch.
37. Wer da gläubet.
38. Aus tiefer Noth.
39. Brich dem Hungrigen.
40. Dazu ist erschienen.

1858. Eighth Year.
Four Masses: in F, A, G minor, and G.

1859. Ninth Year.
Chamber Music. Vol. 1.
3 Sonatas for Clavier and Flute.
Suite for Clavier and Violin.
6 Sonatas for ditto, ditto.
3 ditto for Clavier and Viola di gamba.
Sonata for Flute, Violin, and figured bass.
Ditto for 2 Violins and ditto.

1860. Tenth Year.
Church Cantatas. Vol. 5.
41. Jesu, nun sei gepreiset.
42. Am Abend aber desselbigen.
43. Gott fähret auf.
44. Sie werden euch.
45. Es ist dir gesagt.
46. Schauet doch und sehet.
47. Wer sich selbst erhöhet.
48. Ich elender Mensch.
49. Ich geh' und suche.
50. Nun ist das Heil.

1861. Eleventh Year.
Magnificat in D.
Four Sanctus', in C, D, D minor, and G.

Chamber Music. Vocal.
Phoebus and Pan.
Weichet nur, betrübte Schatten.
Amore traditore.
Contentment.
Aeolus.

1862. Twelfth Year.
Passion Music from St. John.

Church Cantatas. Vol. 6.
51. Jauchzet Gott.
52. Falsche Welt.
53. Schlage doch.
54. Widerstehe doch.
55. Ich armer Mensch.
56. Ich will den Kreuzstab.
57. Selig ist der Mann.
58. Ach Gott, wie manches. (2nd version.)
59. Wer mich liebet.
90. O Ewigkeit. (2nd version.)

1863. Thirteenth Year.
Betrothal Cantatas.
Dem Gerechten muss das Licht.
Der Herr denket an uns.
Gott ist unsere Zuversicht.
Three Chorales.

Clavier Works. Vol. 2.
The French Suites.
The English Suites.

Funeral Ode on the Duchess of Saxony.

1864. Fourteenth Year.
Clavier Works. Vol. 3.
The well-tempered Clavier, complete with Appendix.

1865. Fifteenth Year.
Organ Works:
6 Sonatas.
18 Preludes and Fugues.
3 Toccatas.
Passacaglia.

1866. Sixteenth Year.
Church Cantatas. Vol. 7.
61. Nun komm, der Heiden.
62. Ibid. (2nd version.)
63. Christen, atzet diesen Tag.
64. Sehet, welch' eine Liebe.
65. Sie werden aus Saba.
66. Erfreut euch, ihr Herzen.
67. Halt' im Gedächtniss.
68. Also hat Gott die Welt.
69. Lobe den Herrn.
70. Wachet, betet, seid bereit.

1867. Seventeenth Year.
Chamber Music. Vol. 2.
Concertos for Clavier and Orchestra: D minor; E; D; A; F minor; F; G minor.
Concerto for Clavier, Flute, and Violin, with Orchestra.

1868. Eighteenth Year.
Church Cantatas. Vol. 8.
71. Gott ist mein König.
72. Alles nur nach Gottes Willen.
73. Herr, wie du willst.
74. Wer mich liebet, 2nd version.
75. Die Elenden sollen essen.
76. Die Himmel erzählen.
77. Du sollst Gott.
78. Jesu, der du meine Seele.
79. Gott der Herr ist Sonn'.
80. Ein' feste Burg.

1869. Nineteenth Year.
Chamber Music. Vol. 3.
6 Concertos for various instruments, with Orchestra.

1870. Twentieth Year.
Church Cantatas. Vol. 9.
81. Jesus schläft.
82. Ich habe genug.
83. Erfreute Zeit.

84. Ich bin vergnügt.
85. Ich bin ein guter Hirt.
86. Wahrlich, ich sage euch.
87. Bisher habt ihr nichts.
88. Siehe, ich will viel Fischer.
89. Was soll ich aus dir machen.
90. Es reifet euch.

3 Dramas for various festivities.

1871. Twenty-first Year.
Chamber Music. Vols. 4 and 5.
2 Concertos for Violin and Orchestra.
1 ditto for 2 ditto and ditto.
1 Symphony movement for Violin.
3 Concertos for 2 Claviers and Orchestra.

Easter Oratorio.

1872. Twenty-second Year. (Issued in 1876.)
Church Cantatas. Vol. 10.
91. Gelobet seist du.
92. Ich hab' in Gottes.
93. Wer nur den lieben Gott.
94. Was frag' ich.
95. Christus der ist mein Leben.
96. Herr Christ, der ein'ge.
97. In allen meinen Thaten.
98. Was Gott thut, das.
92. Ditto. (2nd version.)
93. Ditto. (3rd version.)

[A. M.]

BACH SOCIETY, THE. This society was instituted in London in 1849, and its primary objects are stated in the prospectus to be—(1) the collection of the musical compositions of J. S. Bach, either printed or in MS., and of all works relating to him, his family, or his music; and (2) the furtherance and promotion of a general acquaintance with his music by its public performance. The original committee of management consisted of the late Sir W. S. Bennett (chairman), Messrs. R. Barnett, G. Cooper, F. R. Cox, J. H. B. Dando, W. Dorrell, W. H. Holmes, E. J. Hopkins, C. E. Horsley, John Hullah, H. J. Lincoln, O. May, and H. Smart, with Sir G. Smart and Mr. Cipriani Potter as auditors, and Dr. Charles Steggall as hon. secretary. Under the auspices of the society the first performance in England of the 'Passion according to St. Matthew' (Grosse Passions-Musik) took place at the Hanover Square Rooms on April 6, 1854, Dr. Bennett conducting. The principal vocalists were Mme. Ferrari, Misses B. Street, Dolby, Dianelli, and Freeman, and Messrs. Allen, Walworth, W. Bolton, and Signor Ferrari. Mr. W. Thomas was principal violin, Mr. Grattan Cooke first oboe, and Mr. E. J. Hopkins was at the organ, the new instrument by Gray and Davison being used on this occasion for the first time. The English version of the words was by Miss Helen F. H. Johnston. A second performance was given at St. Martin's Hall on March 23, 1858, Dr. Bennett again conducting. The audience on this occasion included the late Prince Consort. On June 21, 1859, the Society gave a performance of miscellaneous works by Bach, including the Concerto in C minor for two pianofortes, the Chaconne for violin (by Herr Joachim), and the Solo Fugue for pianoforte in D. The concert of 1860, on July 24, included the first eleven movements from the Mass in B minor. Three years later, on June 13, 1861, the Society gave the first performance in England of 'The Christmas Oratorio' (Weihnachts-Oratorium) also under Sir W. S. Bennett's direction. The Society was dissolved on March 21, 1870, when the library was handed over to the Royal Academy of Music. [C. M.]

BACHE, Francis Edward, born at Birmingham Sept. 14, 1833; died there Aug. 24, 1858, in his twenty-fifth year. As a child he showed very great fondness and aptitude for music, studied the violin with Alfred Mellon (then conductor of the Birmingham theatre), and in 1846 was allowed to play in the festival orchestra when Mendelssohn conducted 'Elijah.'

In the autumn of 1849 he left school at Birmingham to study under Sterndale Bennett in London. His first overture was performed at the Adelphi Theatre in Nov. 1850, and about a year later his 'Three Impromptus' (his first piano piece) came out. He remained studying with Bennett, and during the latter part of the time writing for Addison, Hollier, and Lucas, from 1849 to 53. In Oct. 53 he went to Leipsic, studied with Hauptmann and Plaidy, and took occasional organ lessons from Schneider at Dresden. He returned to London (after a short visit to the opera, 'William Tell,' etc., at Paris) early in 1855. At the end of 55 he was driven by severe illness to Algiers, but returned to Leipsic for the summer and autumn of 56; then went to Rome for the winter, calling on old Czerny in Vienna, who was much pleased with him, and wrote to that effect to Kistner. He reached England very ill in June 57, passed that winter in Torquay, and returned to Birmingham, which he never again left, in April 58.

Bache's published compositions are numerous, and include four mazurkas, op. 13; five characteristic pieces, op. 15; Souvenirs d' Italie, op. 19, for piano solo; andante and rondo polonaise, for piano and orchestra; trio for piano and strings, op. 25; romance for piano and violin; six songs, op. 16; barcarola Veneziana. Also a concerto in E for piano and orchestra, and two operas, 'Rübezahl' and 'Which is Which,' all unpublished. With all their merit, however, none of these can be accepted by those who knew him as adequate specimens of his ability, which was unquestionably very great. His youth, his impressionable enthusiastic character, and continual ill-health must all be considered in forming a judgment of one who, had he lived, would in all probability have proved a lasting ornament to the English school. [G.]

BACHELOR OF MUSIC. 'Bachelor,' a word whose derivation has been much disputed, is the title of the inferior degree conferred in various faculties by the Universities of this country. In Music, as in Divinity and Medicine, the degrees given are those of Bachelor and Doctor. There is no degree of Master, as in 'Arts.' The letters M.D. and M.B. being appropriated to degrees in Medicine, the abbreviations Mus. D. and Mus. B. are employed to distinguish those in Music. The degree of Bachelor must, in the ordinary course, precede that of Doctor; it is permitted, however, in cases of great merit, and especially where the candidate has obtained a high reputation in the art before offering himself for the degree, to pass at once to the degree of Doctor of Music without having previously taken that of Bachelor.

'Music' was one of the so-called seven arts taught in the monastic schools which arose in Western Europe under Charlemagne and his successors. The Universities, an expansion of these schools, inherited their curriculum; and during the Middle Ages the 'Ars Musica' was studied,

like certain other branches of knowledge, in the books of Boethius, a Roman author of the 6th century, whose writings furnished the Dark Ages with some poor shreds of the science of the ancient world. The study of Boethius was a pedantic repetition of mathematical forms and proportions, in keeping with the spirit of scholasticism, and calculated to retard rather than advance the progress of the art. Although it was a common thing for the scholar in the Middle Ages to play upon an instrument or two (see e.g. Chaucer's Clerk of Oxenford in the 'Prologue'), it is probable that no practical acquaintance with music was originally required for a degree, but that the scholar had only to read in public a certain number of 'exercises' or discourses upon Boethius, a ceremony which held the place of examination in the Middle Ages. We cannot, however, speak with certainty; for the earliest mention of graduates in music, viz. Thomas Seynt Just and Henry Habyngton at Cambridge, dates no further back than 1463. Forty years later a more or less elaborate composition appears to be regularly demanded of candidates for a degree. In 1506 Richard Ede was desired to compose 'a Mass with an Antiphona,' to be solemnly sung before the University of Oxford on the day of his admission to the degree of Bachelor; and in 1518 John Charde was desired 'to put into the hands of the Proctors' a mass and antiphona which he had already composed, and to compose another mass of five parts on 'Kyrie rex splendens.' The statutes given to the University of Oxford by Laud in 1636 enact that every candidate for the degree of Bachelor of Music shall compose a piece for five voices with instrumental accompaniments, and have it publicly performed in the 'Music School'; and though the words in which the degree was conferred still contained a permission 'to lecture in every book of Boethius,' it would seem that music was more seriously and successfully cultivated at Oxford during the 17th century than it has been before or since. The torpor into which the English Universities fell during the 18th century affected the value of their musical diplomas. Compositions were indeed still required of candidates for degrees; but the absence of a *bonâ fide* examination rendered the degree of little value as a test of personal merit. The reforming spirit of our own day has however extended itself in this direction, and the following rules, depending in part upon the statutes of the Universities, in part upon regulations drawn up by the present professors in pursuance of the statutes, are now in force as to the degree of Bachelor of Music.

At Oxford the candidate must (1) pass a preliminary examination (partly in writing, partly *vivâ voce*) in Harmony and Counterpoint in not more than four parts. He has then (2) to present to the Professor of Music a vocal composition containing pure five-part harmony and good fugal counterpoint, with accompaniment for at least a quintett stringed band, of such length as to occupy from twenty to forty minutes if it were performed, no public performance however being required. (3) A second examination follows after the interval of half a year, embracing Harmony, Counterpoint in five parts, Canon, Imitation, Fugue, Form in Composition, Musical History, and a critical knowledge of the full scores of certain standard compositions. If the candidate is not already a member of the University, he must become so before entering the first examination; but he is not required to have resided or kept terms. The fees amount in all to about £18.

The Cambridge regulations are nearly to the same effect. There is, however, only one examination; and, in addition to the subjects given above, a knowledge of the quality, pitch, and compass of various instruments is required. The rules of Trinity College, Dublin, state that the degree of Bachelor of Music in that college is intended to show 'that a sound practical knowledge of music has been attained, sufficient to manage and conduct a choir, or to officiate in cathedral or church service.' The number of persons annually taking the degree of Mus. Bac. at Oxford has increased considerably during the last ten years; in 1866 the number was three, in 1874 eleven. There does not seem to have been a similar increase at Cambridge. The degree of Mus. Bac. does not exist in foreign Universities. [C. A. F.]

BACHOFEN, Johann Caspar, born at Zurich, 1692, in 1718 singing-master in the Latin school, and cantor of one of the Zurich churches. Succeeded Albertin as director of the 'Chorherrn-gesellschaft' Association; died at Zurich, 1755. His hymns were very popular all over Switzerland, and his works give abundant evidence of his diligence and the wide range of his talent. (1) 'Musicalisches Halleluja oder schöne und geistreiche Gesänge,' etc. (no date), containing 600 melodies for two and three voices, with organ and figured bass. Eight editions down to 1767. (2) 'Psalmen Davids . . . sammt Füst und Kirchengesängen,' etc., 8vo., 1759 (second edition). (3) 'Vermehrte Zusatz von Morgen, Abend . . . . Gesängen,' 1738. (4) Twelve monthly numbers containing sacred airs arranged in concert-style (concert-weise) for two and three voices; 1755 (4th ed.). (5) Brockes' 'Irdisches Vergnügen in Gott,' set to music; 1740 (1000 pages). (6) 'Musicalische Ergetzungen'; 1755. (7) 'Der für die Sünden der Welt,' etc. (Brockes' 'Passion'), 1759. (8) 'Music. Notenbüchlein,' an instruction-book in music and singing. [F. G.]

BACK. The back of the instruments belonging to the violin-tribe appears to have two distinct functions. It has on the one hand to participate in the vibrations of the whole body of the instrument, and on the other to act as a sounding-board to throw back the waves of sound. This is the reason why the back, as a rule, is made of hard wood (maple), which, although not as easily set into vibration as deal, the usual material for the belly, is better adapted

to the fulfilment of the above functions. Now and then we meet with a violoncello by one of the old makers with a back of pine or lime-wood. But the tone of such an instrument, however good in quality, is invariably wanting in power and intensity.

The backs of violins, tenors, and violoncellos are shaped after one and the same model: most elevated and thickest in the centre; somewhat thinner and slanting towards the edges. They are made either of one piece, or of two, joined lengthwise in the middle. The back of the double-bass has retained that of the older viol-di-gamba tribe: it is flat, and at the top slants towards the neck. Close to the edges the back is inlaid with a single or double line of purfling, which is merely intended to improve the outward appearance of the instrument. [P. D.]

BADIALI, Cesare, a very distinguished basso cantante; made his first appearance at Trieste, 1827. After achieving a brilliant success at every one of the chief theatres of Italy, and especially at Milan, where he sang in 1830, 1831, and 1832, he was engaged for the opera of Madrid, then at Lisbon, and did not return to Italy till 1838. On his reappearance at Milan, he was welcomed with enthusiasm; and continued to sing there, and at Vienna and Turin, until 1842, when he was appointed principal chamber-singer to the Emperor. He sang afterwards at Rome, Venice, Trieste, Turin, and other towns of less importance. In 1845 he was at Leghorn. The Accademia di S. Cecilia of Rome received him as a member of its body. In 1859 he made his first appearance in London, when he made the quaint remark, 'What a pity I did not think of this city fifty years ago!' He retained at that time, and for some years longer, a voice of remarkable beauty, an excellent method, and great power of executing rapid passages. He was one of the few who have ever sung the music of Assur in Rossini's 'Semiramide' as it was written: in that part he was extremely good, and not less so in that of the Conte Robinson in the 'Matrimonio Segreto.' A singular feat is ascribed to him. It is said that, when supping with friends, he would drink a glass of claret, and, while in the act of swallowing it, sing a scale; and if the first time his execution was not quite perfect, he would repeat the performance with a full glass, a loud voice, and without missing a note or a drop.

He was a good musician, and left a few songs of his own composition. For the last ten years of his life he resided and sang in Paris, where he died about the year 1870. [J. M.]

BÄRMANN. The name of a remarkable family of musicians. (1) Heinrich Joseph, one of the finest of clarinet players—'a truly great artist and glorious man' as Weber calls him—born at Potsdam Feb. 17, 1784, and educated at the oboe school there, where his ability procured him the patronage of Prince Louis Ferdinand of Prussia. The peace of Tilsit (1807) released him from a French prison, and he then obtained a place in the court band at Munich. He next undertook a tour through Germany, France, Italy, England, and Russia, which established his name and fame far and wide. His special claim on our interest arises from his intimate connection with C. M. von Weber, who arrived in Munich in 1811, and wrote various concert-pieces for Bärmann, which remain acknowledged masterpieces for the clarinet. Meyerbeer also became closely acquainted with him during the congress at Vienna in 1813. Not less interesting and creditable was his intimacy with Mendelssohn, who was evidently on the most brotherly footing with him and his family, and wrote for him the two duets for clarinet and basset-horn published as Op. 113. He died at Munich June 11, 1847, leaving compositions behind him which are highly esteemed for their technical value. (2) His brother Karl, born at Potsdam 1782 and died 1842; a renowned bassoon player, and belonged to the royal band at Berlin. More important was (3) Karl, the son of Heinrich, and the true scholar and successor of his father. He was born at Munich 1820, and during a lengthened tour in 1838 was introduced by his father to the musical world as a virtuoso of the first order. After this he at once took the place of first clarinet in the Munich court band, with which he had indeed been accustomed to play since the age of fourteen. His compositions for the clarinet are greatly esteemed, especially his 'Clarinet School' (Andre, Offenbach) in two parts, the second of which contains twenty grand studies; also a supplement thereto, 'Materialien zur weiteren technischen Ausbildung,'—a collection of difficult passages from his own works. (4) His son, Karl jun., a fine pianoforte player, is teacher at this time (1875) in the music school at Munich.

Weber's friendship for the Bärmanns has been already mentioned. Two of his letters to them will be found in 'Letters of Distinguished Musicians' (pp. 351, 381). The same collection contains no less than thirteen letters from Mendelssohn to Heinrich, and one to Carl—letters delightful not only for their fun and cleverness, but for the close intimacy which they show to have existed between the two, and the very great esteem which Mendelssohn—a man who did not easily make friends—evidently felt for the great artist he addresses. Other references to Bärmann will be found in Mendelssohn's 'Reisebriefe.' [A. M.]

BAGATELLE (Fr. 'a trifle'). A short piece of pianoforte music in a light style. The name was probably first used by Beethoven in his 'Seven Bagatelles,' op. 33, who subsequently also wrote three other sets, two of which are published as ops. 119 and 126; the third is still in manuscript (Thayer, 'Chron. Verz.' No. 287). As bearing upon the title, it is worth while to mention that Beethoven's manuscript of his op. 119 has the German inscription 'Kleinigkeiten,' instead of the French equivalent. The form of the

bagatelle is entirely at the discretion of the composer, the only restriction being that it must be short and not too serious in its character. [E. P.]

BAGGE, SELMAR, musician and critic, born at Coburg June 30, 1823, son of the Rector of the Gymnasium there. His musical studies began early, and in 1837 he entered the Conservatorium at Prague under D. Weber. Later still he was a pupil of Sechter at Vienna, where in 1851 he became professor of composition at the Conservatorium, and in 1853 organist of one of the churches. In 1855 he resigned his professorship and took to writing in the 'Monatsschrift für Theater und Musik,' but he soon turned it into the 'Deutsche Musikzeitung,' of which periodical he was founder and editor. In 1863 he transferred himself to Leipsic as editor of the 'Deutschen Allgemeine Musikzeitung,' but this he relinquished in 1868 for the directorship of the music school at Basle. Bagge is a strong conservative and an able writer. Beethoven and Schumann are his models in art, and he has no mercy on those who differ from him, especially on the New German school. His music is correct and fluent, but poor in invention and melody. [G.]

BAGNOLESI, ANNA. An Italian contralto, who sang in London, 1732, in Handel's operas. She made her first appearance, Jan. 15, in 'Ezio,' and sang subsequently in 'Sosarme,' in a revival of 'Flavio,' and in 'Acis and Galatea' at its first public performance, June 10, and the succeeding occasions in that year. She also appeared in a reprise of Ariosti's 'Cajo Marzio Coriolano.' Nothing is now known of her after-career. [J. M.]

BAGPIPE (Fr. *Cornemuse*; Ital. *Cornamusa*; Germ. *Sackpfeife*). An instrument, in one or other of its forms, of very great antiquity. By the Greeks it was named ἄσκαυλος or συμφώνεια; by the Romans *Tibia utricularis*. Mersennus calls it *Surdeline*, and Bonani *Piva* or *Ciaramella*. In Lower Brittany it is termed *Bignou*, from a Breton word *bigno*—'se renfler beaucoup.' It has been named *Musette* (possibly after Colin Muset, an officer of Thibaut de Champagne, king of Navarre). Corruptions of these names, such as *Samponia* or *Samphoneja*, and *Zampugna*, are also common.

It appears on a coin of Nero, who, according to Suetonius, was himself a performer upon it. It is mentioned by Procopius as the instrument of war of the Roman infantry. In the crozier given by William of Wykeham to New College, Oxford, in 1403, there is the figure of an angel playing it. Chaucer's miller performed on it—

'A bagpipe well couth he blowe and sowne.'

Shakespeare often alludes to it. He speaks of 'the drone of a Lincolnshire bagpipe,' of the antipathy some people have to its sound, and of some who laugh like parrots at a bagpiper. At the close of the 15th century the bagpipe seems to have come into general favour in Scotland.

Until recently music for the bagpipe was not written according to the usual system of notation, but was taught by a language of its own, the notes having each names, such as hodroho, hananin, hiechin, hachin, etc. A collection of piobaireachd (pibrochs) in this form was published by Capt. Niel Macleod at Edinburgh in 1828.

In Louis XIV's time the bagpipe formed one of the instruments included in the band of the 'Grande Ecurie,' and was played at court concerts.

Its essential characteristics have always been, first, a combination of fixed notes or 'drones,' with a melody or 'chaunter'; secondly, the presence of a wind-chest or bag. From these peculiarities, the Greek, and from the second of them the Latin names clearly come. Although it has no doubt been re-invented in various times and places, it seems to be connected with the Keltic race, whether in Ireland, Scotland, or Brittany.

The wind has been variously supplied, either from the breath of the player, or from a small pair of bellows placed under one arm, the sac or bag being under the other. In the latter form it contains all the essentials of the organ. It is somewhat remarkable that the use of the lungs themselves as the wind-chest to reed instruments should have been adopted later and less universally.

At the present time there are four principal forms of the instrument used in this country—two Scotch (Highland and Lowland), the Irish, and the Northumbrian. The Scotch Highland pipe is blown from the chest, the others from bellows. The Irish bagpipe is perhaps the most powerful and elaborate instrument, keys producing the third and fifth to the note of the chaunter having been added to the drones. The Northumbrian is small and sweeter in tone; but the Scotch pipe is probably the oldest and certainly the most characteristic form: it will therefore be considered first, and at the greatest length.

In this instrument a valved tube leads from the mouth to a leather air-tight bag, which has four other orifices; three large enough to contain the base of three fixed long tubes termed drones, and another smaller, to which is fitted the chaunter. The former are thrown on the shoulder; the latter is held in the hands. All four pipes are fitted with reeds, but of different kinds. The drone reeds are made by splitting a round length of 'cane' or reed backwards towards a joint or knot from a cross cut near the open end; they thus somewhat resemble the reed in organ pipes, the loose flap of cane replacing the tongue, the uncut part the tube or reed proper. These are then set downwards in a chamber at the base of the drone, so that the current of air issuing from the bag tends to close the fissure in the cane caused by the springing outwards of the cut flap, thus setting it in vibration. The drone reeds are only intended to produce a single note, which can be tuned by a slider on the pipe itself, varying the length of the consonating air-column.

The chaunter reed is different in form, being made of two approximated edges of cane tied together, and is thus essentially a double reed,

like that of the oboe or bassoon, while the drone reed roughly represents the single beating reed of the organ or clarinet. The drone reed is an exact reproduction of the 'squeaker' which children in the fields fashion out of joints of tall grass, probably the oldest form of the reed in existence.

The drone tubes are in length proportional to their note, the longest being about three feet high. The chaunter is a conical wooden tube, about fourteen inches long, pierced with eight sounding holes, seven in front for the fingers, and one at the top behind for the thumb of the right hand. Two additional holes bored across the tube below the lowest of these merely regulate the pitch, and are never stopped.

The compass is only of nine notes, from G to A inclusive . They do not form any diatonic scale whatever, nor indeed are they accurately tuned to one another. The nearest approximation to their position can be obtained by taking the two common chords of G and A superposed, and adding one extra note in the neighbourhood of F, or F♯. In the former common chord, which is tolerably true, we have G, B, D, G, upwards, and in the latter A, C♯, E, A, which is far less accurate. G to A is not however a whole tone, only about ¾ of one. C♯, unlike that of the tempered scale, which is nearly a comma sharp, is here as much flat. The B and D accord with the low G, and not with the low A. It appears to the writer better thus to describe the real sounds produced than to indulge in speculation as to Lydian and Phrygian modes.

In the tuning of the drones there seems to be difference of practice. Glen's 'Tutor for the Great Highland Bagpipe' states that the drones are all tuned to A; the two smaller in unison with the lower A of the chaunter, the largest to the octave below; whereas from other works it appears that the sequence G, D, G, as well as D, A, D, are both admissible. But the Northumbrian or border pipe, a far more accurate instrument according to modern musical notions than the Scotch, provides for a possible change of key by the addition of a fourth supplementary drone; probably the three notes G, D, and A, might be tolerated, in alternate pairs, according to the predominant key of G or A in the melody. There is good ground, however, for believing that any attempt to accommodate the bagpipe to modern scale-notation would only result in a total loss of its archaic, semi-barbarous, and stimulating character.

Some confirmation of the view here taken as to the scale of the bagpipe may be derived from an examination of the music written for it. It is known to all musicians that a fairly passable imitation of Scotch and Irish tunes may be obtained by playing exclusively on the 'black keys.' This amounts simply to omission of semitones; and in semitones lies the special character of a scale, whether major or minor. The minor effect may indeed be obtained; and is usually remarkable in all tunes of the Keltic family, but it is done by chord rather than by scale. None of the oldest and most characteristic Scotch melodies contain scales; all proceed more or less by leaps, especially that of a sixth, with abundant use of heterogeneous passing notes. If the airs of the pibrochs be read with a view to map out the resting or sustained notes in the melody, it will be found, in the most characteristic and original tunes, that the scale is A, B, D, E, F♯ and high A. This is equivalent to the black-key scale, beginning on D♭. 'Mackinnon's lament' is a good example. The minor effect named above is gained through the major sixth, with the help of the drone notes; a fact which, though rather startling, is easily demonstrable.

This use of ornamental notes has in course of time developed into a new and prominent character in bagpipe music. Such a development is only natural in an instrument possessing no real diatonic scale, and therefore relying for tolerance of jarring intervals on perpetual suspension, or on constant discord and resolution; with a 'drone bass' in the strictest sense of the term. The ornamental notes thus introduced are termed 'warblers,' very appropriately, after the birds, who, until trained and civilised, sometimes by the splitting of their tongues, entirely disregard the diatonic scale, whether natural or tempered. First-rate pipers succeed in introducing a 'warbler' of eleven notes between the last up-beat and the first down-beat of a bar. Warblers of seven notes are common, and of five usual.

The Irish bagpipe differs from the Scotch in being played by means of bellows, in having a softer reed and longer tubes, with a chaunter giving ten or even twelve notes. The scale is said to be more accurate than the Scotch. The Northumbrian, of which a beautiful specimen has been lent to the writer by Mr. Charles S. Keene, is a much smaller and feebler instrument. The ivory chaunter has, besides the seven holes in front, and one behind, five silver keys producing additional notes. It is moreover stopped at the bottom, so that when all holes are closed no sound issues. The long wail with which a Scotch pipe begins and ends is thus obviated. Each hole is opened singly by the finger, the others remaining closed, contrary to the practice of other reeds. The gamut of the Northumbrian or Border pipes is given as fifteen notes, including two chromatic intervals, C and C♯, D and D♯. The drones can be tuned to G, D, G, or to D, A, D, as above stated.

Considering the small compass of the bagpipe, the music written for it appears singularly abundant. 'Tutors' for the instrument have been published by Donald MacDonald and Angus Mackay. Glen's collection of music for the great Highland bagpipe contains instructions for the management of the reeds, etc., with 213 tunes. Ulleam Ross, the present Queen's Piper, published a collection of pipe music in 1869 consisting of 243 marches, piobaireachds, or pibrochs, strathspeys, and reels, selected from a thousand

airs, amassed during thirty years from old pipers and other local sources. The chief collection of Northumbrian music is known as Peacock's; a book which is now so scarce as to be almost unprocurable.

Many composers have imitated the tone of the bagpipe by the orchestra; the most familiar cases occur in the 'Dame Blanche' of Boieldieu and the 'Dinorah' of Meyerbeer. [W. H. S.]

BAI, Tommaso, was born at Crevalcuore, near Bologna, towards the end of the 17th century, and was for many years one of the tenor singers in the chapel of the Vatican. In 1713 he was made maestro of that basilica, according to an extract from the chapel books cited by Baini, because he was the oldest and most accomplished member of the choir.[1] He died in the year following this recognition of his excellence. His fame rests on a single achievement. His 'Miserere,' written at the request of his choir, is the only one (if we except that by Baini) out of a long series by composers known and unknown, including Naldini, Felice Anerio, Tartini, and Alessandro Scarlatti, which has been thought worthy to take permanent rank with those of Allegri and Palestrina. Other works by Bai exist, but they are in manuscript. They consist of a mass, twelve motetti for four, five, and eight voices, and a 'De Profundis' for eight voices. They are all enumerated in the catalogue of the collection made by the Abbé Santini. [E. H. P.]

BAILDON, Joseph, a gentleman of the Chapel Royal, and lay-vicar of Westminster Abbey in the middle of the 18th century. In 1763 he obtained one of the first prizes given by the Catch Club for a catch, and in 1766 was awarded a prize for his fine glee, 'When gay Bacchus fills my breast.' In 1768 he was appointed organist of the churches of St. Luke, Old Street, and All Saints, Fulham. Ten catches and four glees by him are contained in Warren's collections, and others are in print. Baildon published a collection of songs in two books entitled 'The Laurel,' and 'Four Favourite Songs sung by Mr. Beard at Ranelagh Gardens.' [W. H. H.]

BAILLOT, Pierre Marie François de Sales, takes a prominent place among the great French violin-players. He was born Oct. 1, 1771, at Passy, near Paris, where his father kept a school. He shewed very early remarkable musical talent, and got his first instruction on the violin from an Italian named Polidori. In 1780 Sainte-Marie, a French violinist, became his teacher, and by his severe taste and methodical instruction gave him the first training in those artistic qualities by which Baillot's playing was afterwards so much distinguished. When ten years of age, he heard Viotti play one of his concertos. His performance filled the boy with intense admiration, and, although for twenty years he had no second opportunity of hearing him, he often related later in life, how from that day Viotti remained for him the model of a violin-player, and his style the ideal to be realised in his own studies. After the loss of his father in 1783 a Mons. de Boucheporn, a high government official, sent him, with his own children, to Rome, where he was placed under the tuition of the violin-player Pollani, a pupil of Nardini. Although his progress was rapid and soon enabled him to play successfully in public, we find him during the next five years living with his benefactor alternately at Pau, Bayonne, and other places in the south of France, acting as his private secretary, and devoting but little time to his violin. In 1791 he came to Paris, determined to rely for the future on his musical talent. Viotti procured him a place in the opera-band, but Baillot very soon resigned it, in order to accept an appointment in the Ministère des Finances, which he kept for some years, devoting merely his leisure hours to music and violin-playing. After having been obliged to join the army for twenty months he returned, in 1795, to Paris, and, as Fétis relates, became accidentally acquainted with the violin-compositions of Corelli, Tartini, Geminiani, Locatelli, Bach (?) and Handel. The study of the works of these great masters filled him with fresh enthusiasm, and he once more determined to take up music as his profession. He soon made his appearance in public with a concerto of Viotti, and with such success, that his reputation was at once established, and a professorship of violin-playing was given him at the newly-opened Conservatoire. In 1802 he entered Napoleon's private band, and afterwards travelled for three years in Russia (1805–1808) together with the violoncello-player Lamare, earning both fame and money. In 1814 he started concerts for chamber-music in Paris, which met with great success, and acquired him the reputation of an unrivalled quartett-player. In 1815 and 1816 he travelled in Holland, Belgium, and England, where he performed at the Philharmonic concert of Feb. 26, 1816, and afterwards became an ordinary member of the Society. From 1821 to 1831 he was leader of the band at the Grand Opéra; from 1825 he filled the same place in the Royal Band; in 1833 he made a final tour through Switzerland and part of Italy. He died Sept. 15, 1842, working to the end with unremitting freshness. He was the last representative of the great classical Paris school of violin-playing. After him the influence of Paganini's style became paramount in France, and Baillot's true disciples and followers in spirit were, and are, only to be found among the violinists of the modern German school. His playing was distinguished by a noble powerful tone, great neatness of execution, and a pure, elevated, truly musical style. An excellent solo-player, he was unrivalled at Paris as interpreter of the best classical chamber-music. Mendelssohn and Hiller both speak in the highest terms of praise of Baillot as a quartett-player. An interesting account of some of his personal traits will be found in a letter of the former, published in 'Goethe and Mendelssohn'

[1] 'Come il più antico e virtuoso della Cappella.'

(1872). Although his compositions are almost entirely forgotten, his 'Art du Violon' still maintains its place as a standard work.

He also took a prominent part with Rode and Kreutzer in compiling and editing the 'Méthode de Violon adoptée par le Conservatoire,' and a similar work for the violoncello. His obituary notices of Grétry (Paris, 1814) and Niotti (1825), and other occasional writings, shew remarkable critical power and great elegance of style.

His published musical compositions are:—15 trios for 2 violins and bass; 6 duos for 2 violins; 12 études for violin; 9 concertos; symphonie concertante for 2 violins, with orchestra; 30 airs variés; 3 string quartetts; 1 sonata for piano and violin; 24 préludes in all keys, and a number of smaller pieces for the violin. [P. D.]

BAKER, ——, Mus. Doc., was born at Exeter in 1768. Taught by his aunt, he was able at seven years of age to play upon the harpsichord, and about the same time was placed under the tuition of Hugh Bond and William Jackson, then organist of Exeter cathedral. He also received lessons on the violin from Ward. In 1775 he quitted Exeter for London, where he was received into the family of the Earl of Uxbridge, who placed him under William Cramer and Dussek for instruction on the violin and pianoforte. He afterwards obtained an appointment as organist at Stafford. He took the degree of Doctor of Music at Oxford about 1801. He died about 1835. Dr. Baker's compositions comprise anthems, glees, organ voluntaries, pianoforte sonatas, and other pieces, the music to an unfortunate musical entertainment called 'The Caffres,' produced for a benefit at Covent Garden Theatre, June 2, 1802, and at once condemned, and numerous songs, many of them composed for Incledon, his former fellow-pupil under Jackson. [W. H. H.]

BALBI, Luigi, born at Venice towards the middle of the 16th century, a Cordelier monk, pupil of Costanzo Porta, director of the music in the church of S. Antonio at Padua, and afterwards in the convent of his order at Venice (1606). He composed masses, motetts, and madrigals (Venice, 1576–1606), and died in 1608. One seven-part and five eight-part motets by him are printed in Bodenschatz's 'Florilegium Portense,' Pt. 2. [M. C. C.]

BALDASSARRI, Benedetto, an eminent Italian singer, who sang the tenor part of Timante in Handel's opera 'Floridante,' at its first and succeeding performances in 1721. He appeared also in Buononcini's 'Crispo,' and other pieces, in the next year. He had already sung in 'Numitor' by Porta, and other operas, with Durastanti and her companions of the old troupe. [J. M.]

BALDENECKER, Nicolaus, member of an extensive family of musicians, born at Mayence 1782, first violin at the Frankfort theatre from 1803 to 51, and joint-founder with Schelble of the amateur concerts which resulted in the famous 'Cäcilien-Verein' of that city.

BALDI, a counter-tenor singer, who sang in London in operas of Handel, Buononcini, and others, from 1725 to 28. In the first year he sang in 'Elisa' and Leonardo Vinci's 'Elpidia,' replacing Pacini in the latter, who previously sang in it. In 1726 he appeared in Handel's 'Alessandro,' 'Ottone,' and 'Scipione'; in 1727 in 'Admeto' and 'Riccardo,' as well as in Buononcini's 'Astianatte'; and in 1728 he sang in 'Tolomeo,' 'Siroe,' and 'Radamisto,'—all by Handel. He seems to have been an excellent and useful artist, only eclipsed by the great Senesino, who monopolised the leading parts. [J. M.]

BALELLI, an Italian basso engaged at the opera in London towards the end of the 18th century. In 1787 he sang in 'Giulio Cesare in Egitto,' a pasticcio, the music selected by Arnold from various works of Handel's; and in the 'Re Teodoro,' a comic opera of Paisiello. In 1788 he appeared in Sarti's 'Giulio Sabino'; and the next year in Cherubini's 'Ifigenia,' and in operas both comic and serious by Tarchi. [J. M.]

BALFE, Michael William, was born at Dublin, May 15, 1808. When he was four years old his family resided at Wexford, and it was here, in the eager pleasure he took in listening to a military band, that Balfe gave the first sign of his musical aptitude. At five years of age he took his first lesson on the violin, and at seven was able to score a polacca composed by himself for a band. His father now sought better instruction for him, and placed him under O'Rourke (afterwards known in London as Rooke), who brought him out as a violinist in May 1816. At ten years old he composed a ballad, afterwards sung by Madame Vestris in the comedy of 'Paul Pry,' under the title of 'The Lover's Mistake,' and which even now is remarkable for the freshness of its melody, the gift in which he afterwards proved so eminent. When he was sixteen his father died, and left him to his own resources; he accordingly came to London, and gained considerable credit by his performance of violin solos at the so-called oratorios. He was then engaged in the orchestra at Drury Lane, and when T. Cooke, the director, had to appear on the stage (which was sometimes the case in the important musical pieces), he led the band. At this period he took lessons in composition from C. F. Horn, organist of St. George's Chapel, Windsor, and father of the popular song-writer. In 1825 he met with a patron, the Count Mazzara, whom he accompanied to Italy. At Rome he was located in the house of his patron, and studied counterpoint under Frederici, afterwards head of the Conservatorio at Milan. He next went to Milan, and studied singing under Filippo Galli. Here he made his first public essay as a dramatic composer by writing the music to a ballad entitled 'La Perouse,' the melody and instrumentation in which created a favourable sensation. He was now in his 20th year. Visiting Paris, he was introduced to Rossini, then director

of the Italian Opera; the maestro was not slow to perceive his talent, and offered him an engagement as principal barytone, on condition that he should take a course of preparatory lessons from Bordogni. He made his first appearance at the close of 1828 in 'Figaro,' with decided success. At the close of his Paris engagement he returned to Italy, and was welcomed by a new patron, the Count Sampieri of Bologna. In the carnival season of 1829-30 he was principal barytone at Palermo, and here produced his first complete opera 'I Rivali di se stessi,' written in the short space of twenty days. This was followed in rapid succession by 'Un Avvertimento ai gelosi,' produced at Pavia, and 'Enrico Quarto' at Milan, where he was engaged to sing with Malibran at the Scala. At Bergamo he met Mlle. Rosen, a German singer, whom he married. He continued to sing on the stage in Italy until the spring of 1835, when he came to London, and appeared at several public and private concerts.

Balfe's career as a writer of English operas commenced from this year, when he produced the 'Siege of Rochelle' at Drury Lane (Oct. 29), with distinguished success. It was played for more than three months without intermission, and completely established the composer's fame. 'The Maid of Artois' came out in the following spring, its success heightened by the exquisite singing of Malibran. 'The Light of other days' in this opera, says one of his biographers, 'is perhaps the most popular song in England that our days have known.' In the autumn of this year Balfe appeared as a singer at Drury Lane. In 1837 he brought out his 'Catherine Grey' and 'Joan of Arc'—himself singing the part of Theodore; and in the following year (July 19, 38), 'Falstaff' was produced at Her Majesty's Theatre, the first Italian opera written for that establishment by an English composer since Arne's 'Olympiade.' Two months previously 'Diadeste' was given at Drury Lane. In 1839 he was much on the boards, playing Farinelli in Barnett's opera of that name at Drury Lane, and in an English version of Ricci's 'Scaramuccia' at the Lyceum. In 1840 he entered the field as manager of the Lyceum (the English opera-house), and produced his 'Keolanthe' for the opening night, with Madame Balfe in the principal character; but with all its merited success the opera did not save the enterprise from an untoward close.

Balfe now migrated to Paris, where his genius was recognised, and MM. Scribe and St. George furnished him with the dramatic poems which inspired him with the charming music of 'Le Puits d'Amour' (performed in London under the title of 'Geraldine'), and 'Les Quatre fils d'Aymon' (known here as 'The Castle of Aymon'), both given at the Opéra Comique. While thus maintaining his position before the most fastidious audience of Europe, Balfe returned *en passant* to England, and produced the most successful of all his works, 'The Bohemian Girl' (Nov. 27, 1843). This opera has been translated into almost every European language, and is as great a favourite on the other side of the Atlantic as on this. In 1844 he brought out 'The Daughter of St. Mark,' and in the following year 'The Enchantress'—both at Drury Lane. In 1845 he wrote 'L'Etoile de Seville' for the Académie Royale, in the course of the rehearsals of which he was called to London to arrange his engagement as conductor of Her Majesty's Theatre; which office he filled to the closing of that establishment in 1852. 'The Bondman' came out at Drury Lane in the winter of 1846, Balfe having arrived from Vienna specially for the rehearsals. In Dec. 1847 he brought out 'The Maid of Honour,'—the subject of which is the same as Flotow's 'Martha,'—at Drury Lane. In 1849 he went to Berlin to reproduce some of his operas, when the king offered him the decoration of the Prussian Eagle, which as a British subject he was unable to accept. Between this year and 1852, when the 'Sicilian Bride' was given at Drury Lane, and a few weeks later, at the Surrey Theatre, 'The Devil's in it,' Balfe had undertaken to conduct a series of National Concerts at Her Majesty's Theatre: the plan of these performances was devised with a view to the furtherance of the highest purposes of art, and several important works were produced in the course of the enterprise, which did not, however, meet with success.

At the close of 1852 Balfe visited St. Petersburg with letters of introduction from the Prince of Prussia, now Emperor of Germany, where he was received with all kinds of distinction. Besides popular demonstrations and imperial favour he realised more money in less time than at any other period. The expedition to Trieste, where his next work 'Pittore e Duca,' was given during the Carnival, with such success as the failure of his prima donna could permit, brings us to 1856, when, after an absence of four years, he returned to England.

In the year after his return Balfe brought out his daughter Victoire (afterwards married to Sir John Crampton, and subsequently to the Duke de Frias), as a singer at the Italian opera at the Lyceum; and his next work, 'The Rose of Castile,' was produced by the English company also at this theatre on Oct. 29, 1857. This was succeeded, in 1858, by 'La Zingara,' the Italian version of 'The Bohemian Girl,' at Her Majesty's Theatre, and by 'Satanella' at the Lyceum. 'Satanella' had a long run, and one of the songs, 'The power of Love,' became very popular. His next operas were 'Bianca,' 1860; 'The Puritan's Daughter,' 1861; 'The Armourer of Nantes' and 'Blanche de Nevers' in Feb. and Nov. 1863.

In December 1869 the French version of his 'Bohemian Girl' was produced at the Théatre Lyrique of Paris under the title of 'La Bohemienne,' for which the composer wrote several additional pieces, besides recasting and extending the work into five acts. The success attending this revival procured him the twofold honour of being made Chevalier de la Légion d'Honneur by the Emperor of the French, and Commander of the Order of Carlos III by the Regent of Spain.

In 1864 Balfe retired into the country, became

the proprietor of a small landed property in Hertfordshire, called Rowney Abbey, and turned gentleman farmer. Here he amused himself with agriculture and music, making occasional visits to Paris. He had several severe attacks of bronchitis, and suffered much from the loss of a favourite daughter, which much weakened his constitution. In September 1870 he caught a violent cold, which caused a return of his old complaint, and on October 20 he expired.

'Il Talismano,' the Italian version of Balfe's last opera, 'The Knight of the Leopard,' was produced at Drury Lane, on June 11, 1874; and on September 25 in the same year a statue to his memory, by a Belgian artist, M. Mallempre, was placed in the vestibule of Drury Lane, the scene of so many of his triumphs.

Balfe's miscellaneous pieces are numerous, including the operetta of 'The Sleeping Queen,' performed at the Gallery of Illustration; three cantatas—'Mazeppa,' performed in London; and two others composed at Paris and Bologna. Many of his ballads are not likely to be soon forgotten. His characteristics as a composer are summed up by a brother artist (Professor Macfarren) in the following words:—'Balfe possesses in a high degree the qualifications that make a natural musician, of quickness of ear, readiness of memory, executive facility, almost unlimited and ceaseless fluency of invention, with a felicitous power of producing striking melodies. His great experience added to these has given him the complete command of orchestral resources, and a remarkable rapidity of production. Against these great advantages is balanced the want of conscientiousness, which makes him contented with the first idea that presents itself, regardless of dramatic truth, and considerate of momentary effect rather than artistic excellence; and this it is that, with all his well-merited success with the million, will for ever prevent his works from ranking among the classics of the art. On the other hand it must be owned that the volatility and spontaneous character of his music would evaporate through elaboration, either ideal or technical; and that the element which makes it evanescent is that which also makes it popular.' (*Imp. Dict. of Univ. Biog.*; Kenney's *Memoir*, 1875). [E. F. R.]

BALINO, see FABRI.

BALL, WILLIAM, an English litterateur, who died in London on May 14, 1869, aged 85, and deserves a place in a Dictionary of Music for having adapted to English words the librettos of various great musical compositions—Masses of Haydn, Mozart, and Beethoven (No. 1), Mozart's 'Requiem,' Rossini's 'Stabat Mater' (to entirely different words); and especially Mendelssohn's 'St. Paul.'

BALLABILE (Ital., from *ballare*, to dance). A piece of music adapted for dancing. The term can be applied to any piece of dance music. Meyerbeer frequently uses it in his operas, e. g. in 'Robert le Diable,' where the three dances in the scene of the resurrection of the nuns in the third act are entitled in the score '1°. 2do. and 3°. ballabile.' He also applies the term to the dance music of the ball-room scene at the commence- of the fifth act of the 'Huguenots.' More recently Dr. Hans von Bülow has given the title of 'Ballabili' to the dance-numbers of his 'Carnevale di Milano,' these dances being respectively a polacca, a waltz, a polka, a quadrille, a mazurka, a tarantella, and a galop. [E. P.]

BALLAD, from the Italian *ballata*,[1] a dance, and that again from *ballare*, to dance. The form and application of the word have varied continually from age to age. In Italy a Balletta originally signified a song intended to be sung in dance measure, accompanied by or intermixed with dancing; 'in the Crusca dictionary,' says Burney, 'it is defined as Canzone, che si canta ballando'—a song sung while dancing. The old English ballads are pieces of narrative verse in stanzas, occasionally followed by an envoi or moral. Such are 'Chevy Chase,' 'Adam Bell, Clym of the Clough and William of Cloudeslee,' 'The Babes in the Wood'; and, to come to more modern times, such are 'Hozier's Ghost' (Walpole's favourite), Goldsmith's 'Edwin and Angelina,' and Coleridge's 'Dark Ladie.' But the term has been used for almost every kind of verse—historical, narrative, satirical, political, religious, sentimental, etc. It is difficult to discover the earliest use of the word. Many references which have been made to old authors reputed to have employed it are not to the point, as it will be found in such cases that the original word in the old Latin chronicles is some form of the noun 'cantilena.'

In a MS. of the Cotton collection, said to be as ancient as the year 1326, mention is made of ballads and roundelays (Hawkins, Hist. of Music). John Shirley, who lived about 1440, made a collection of compositions by Chaucer, Lydgate, and others, and one of the volumes, now in the Ashmolean collection, is entitled 'A Boke cleped the abstracte brevyaire, compyled of diverse *balades*, roundels, . . . collected by John Shirley.' In the devices used at the coronation of Henry VI (Dec. 17, 1431) the king was portrayed in three several ways, each 'with a ballad' (Sharon Turner). Coverdale's Bible, printed in 1535, contains the word as the title of the Song of Solomon—'Salomon's Balettes called Cantica Canticorum.'

Ballad making was a fashionable amusement in the reign of Henry VIII, who was himself renowned for 'setting of songes and makyng of ballettes.' A composition attributed to him, and called 'The Kynges Ballade' (Add. MSS. Brit. Mus. 5665), became very popular. It was mentioned in 'The Complainte of Scotland,' published in 1548, and also made the subject of a sermon preached in the presence of Edward VI by Bishop Latimer, who enlarged on the advantages of 'Passetyme with good companye.' Amongst Henry's effects after his decease, mention is made of 'songes and ballades.' In Queen Eliza-

[1] *Ballata* = a dancing piece, as *Suonata*, a sounding piece, and *Cantata*, a singing piece.

beth's reign ballads and ballad singers came into disrepute, and were made the subject of repressive legislation. 'Musicians held ballads in contempt, and great poets rarely wrote in ballad metre.'

Morley, in his 'Plaine and easie introduction to Practicall Musicke,' 1597, says, after speaking of *Vilanelle*, 'there is another kind more light than this which they tearm *Ballete* or daunces, and are songs which being sung to a dittie may likewise be danced, these and other light kinds of musicke are by a general name called *aires*.' Such were the songs to which Bonny Boots, a well-known singer and dancer of Elizabeth's court, both 'tooted it' and 'footed it.' In 1636 Butler published 'The Principles of Musicke,' and in that work spoke of 'the infinite multitude of Ballads set to sundry pleasant and delightful tunes by cunning and witty composers, with *country dances* fitted unto them.' After this the title became common.

The name has been applied to a pastoral song, 'Sumer is icumen in,' preserved in the Harleian MSS., which dates from the 13th century, and furnishes the earliest example known (though it is obvious that so finished a composition cannot have been the first) of part music. The music is in triple measure, and a sort of dance rhythm, but the song can in no sense be called a ballad. [See SUMER IS ICUMEN IN.] The music of many real old ballads has however survived, for which the reader may be referred to Mr. W. Chappell's well-known work. 'Chevy Chase' appears to have been sung to three tunes. [CHEVY CHASE.] One of these, 'The hunt is up,' was a favourite popular air, of which we give the notes—

This old tune was otherwise employed. In 1537 information was sent to the Council against John Hogon, who, 'with a crowd or a fyddyll,' sang a song with a political point to the tune 'The hunt is up.' 'If a man,' says Fletcher of Saltoun, 'were permitted to make all the ballads, he need not care who should make the laws of a nation.' 'Lilliburlero' (beloved of my uncle Toby), is a striking proof of the truth of Saltoun's remark, since it helped to turn James II out of Ireland. The tune and the history of the song will be found under LILLIBURLERO. 'Marlbrouk,' the 'Marseillaise,' and the 'Wacht am Rhein,' are other instances of ballads which have had great political influence.

Ballads have sunk from their ancient high estate. Writing in 1802 Dr. Burney said, 'A ballad is a mean and trifling song such as is generally sung in the streets. In the new French Encyclopédie we are told that we English dance and sing our ballads at the same time. We have often heard ballads sung and seen country dances danced; but never at the same time, if there was a fiddle to be had. The movement of our country dances is too rapid for the utterance of words. The English ballad has long been detached from dancing, and, since the old translation of the Bible, been confined to a lower order of song.' Notwithstanding the opinion of Dr. Burney the fact remains incontrovertible that the majority of our old ballad tunes are dance tunes, and owe their preservation and identification to that circumstance alone—the words of old ballads being generally found without the music but with the name of the tune attached, the latter have thus been traced in various collections of old dance music. The quotation already made from Butler shews that the use of vocal ballads as dance tunes implied in the name had survived as late as the reign of Charles I. One instance of the use of the word where dancing can by no possibility be connected with it is in the title to Goethe's 'Erste Walpurgisnacht,' which is called a Ballad both by him and by Mendelssohn, who set it to music. The same may be said of Schiller's noble poems 'Der Taucher,' 'Ritter Togenburg,' and others, so finely composed by Schubert, though these are more truly 'ballads' than Goethe's 'Walpurgisnacht.' So again Mignon's song 'Kennst du das Land,' though called a 'Lied' in Wilhelm Meister, is placed by Goethe himself at the head of the 'Balladen' in the collected edition of his poetry. In fact both in poetry and music the term is used with the greatest freedom and with no exact definition.

At the present time a ballad in music is generally understood to be a sentimental or romantic composition of a simple and unpretentious character, having two or more verses of poetry, but with the melody or tune complete in the first, and repeated for each succeeding verse. 'Ballad concerts' are ostensibly for the performance of such pieces, but the programmes often contain songs of all kinds, and the name is as inaccurate as was 'Ballad opera' when applied to such pieces as 'The Beggar's Opera,' which were made up of well-known airs with fresh words. [ENGLISH OPERA.] [W. H. C.]

BALLADE, a name adopted by Chopin for four pieces of pianoforte music (op. 23, 38, 47, 52) which, however brilliant or beautiful, have no peculiar form or character of their own, beyond being written in triple time, and to which the name seems to be no more specially applicable than that of 'Sonnet' is to the pieces which Liszt and others have written under that name. Brahms has also published four 'Balladen' (op. 10) and Liszt two.

BALLARD, a family of printers, who for nearly 200 years virtually enjoyed the monopoly of printing music in France. Their types were made by Guillaume le Bé in 1540, and remained in use as late as 1750. The first patent was granted to Robert Ballard by Henri II in 1552, and he and his son-in-law Adrien Leroy printed many tablatures for the lute and other music. They were followed by Pierre, and he again by

his son Robert, under whom the house rose to its greatest height both in privileges and position. He was succeeded by Christophe, T. B. Christophe, and Christophe Jean François, who died in 1765. His son held the patent until it was abolished during the Revolution. One of the earliest specimens of their art of printing is 'The Psalms of Marot,' 1562. Lully's operas were printed by the Ballards—first about 1700, from moveable types, and afterwards from engraved copper plates. [F. G.]

BALLERINA (Ital.), a female ballet-dancer.

BALLET. The ballet is a more modern entertainment even than the opera, with which it has long been intimately connected. The name seems to have been derived from the Italian *ballata*, the parent of our own 'ballad'; and the earliest ballets (Ballets de Cour), which corresponded closely enough to our English masques, were entertainments not of dancing only, but also of vocal and instrumental music. M. Castil Blaze, in an interesting monograph ('La Dance,' etc.; Paris, Paulin), traces back the ballet from France to Italy, from Italy to Greece, and through the Greek stage to festivals in honour of Bacchus. But the ballet as signifying an entertainment exclusively in dancing dates from the foundation of the Académie Royale de Musique, or soon afterwards. In 1671, the year in which Cambert's 'Pomone,' the first French opera heard by the Parisian public, was produced, 'Psyche,' a so-called tragédie-ballet by Molière and Corneille was brought out. Ballets however in the mixed style were known much earlier; and the famous 'Ballet comique de la Royne,' the 'mounting' of which is said to have cost three-and-a-half millions of francs, was first performed at the marriage of the Duke of Joyeuse in 1581. [BALTAZARINI.] The work in question consisted of songs, dances, and spoken dialogue, and seems to have differed in no important respect from the masques of an earlier period. Another celebrated ballet which by its historical significance is better worthy of remembrance than the 'Ballet comique de la Royne,' was one represented on the occasion of Louis XIV's marriage with Marie Thérèse, and entitled 'Il n'y a plus de Pyrénées.' In illustration of this supposed political fact half the dancers were dressed in the French and half in the Spanish costume, while a Spanish nymph and a French nymph joined in a vocal duet. Other ballets of historical renown were the 'Hercule amoureux,' at which more than 700 persons were on the stage, and the 'Triomphe de l'Amour' in 1681. Louis XIV took such a delight in ballets that he frequently appeared as a ballet-dancer, or rather as a figurant, himself. For the most part his majesty contented himself with marching about the stage in preposterous costumes, and reciting verses in celebration of his own greatness. Occasionally, however, he both sang and danced in the court ballets. When in 1669 the 'Great Monarch' assumed, ostensibly for the last time, the part of the Sun in the ballet of 'Flora,' it was thought that His Majesty's theatrical career had really come to an end. He felt, however, as so many great performers have since done under similar circumstances, that he had retired too soon; and the year afterwards he appeared again in 'Les Amants magnifiques,' composed by the king himself, in collaboration with Molière. In this work Louis executed a solo on the guitar—an instrument which he had studied under Francesco Corbetta, who afterwards went to England and obtained great success at the court of Charles II. It is indeed recorded of him that in connection with 'Les Amants magnifiques,' he played the part of author, ballet-master, dancer, mimic, singer, and instrumental performer. As Louis XIV did not think it beneath his dignity to act at court entertainments, he had no objection to his courtiers showing themselves publicly on the stage. In the royal letters patent granted to the Abbé Perrin, the first director of the French Opera, or 'Académie Royale de Musique' as from the beginning it was called, free permission was given to 'all gentlemen and ladies wishing to sing in the said pieces and representations of our royal academy without being considered for that reason to derogate from their titles of nobility, or from their privileges, rights, and immunities.' The right to sing seems to have been interpreted as including the right to dance; and several ladies and gentlemen of good birth profited by the king's liberality to appear in the ballets represented at the Académie Royale. The music of Louis XIV's ballets was for the most part written by Lulli, who also composed the songs and symphonies for the dance-interludes of Molière's comedies. The dramatic ballet or *ballet d'action* is said to have been invented by the Duchesse du Maine, celebrated for her evening entertainments at Sceaux, which the nobles of Louis XIV's court found so exhilarating after the formal festivities of Versailles. With a passion for theatrical representation the Duchess combined a taste for literature; and she formed the project of realising on the stage of her own theatre her idea of the pantomimes of antiquity, as she found them described in the pages of her favourite authors. She went to work precisely as the arranger of a ballet would do in the present day. Thus taking the fourth act of 'Les Horaces' as her libretto (to use the modern term), she had it set to music for orchestra alone, and to the orchestral strains caused the parts of Horace and of Camille to be performed in dumb show by two celebrated dancers who had never attempted pantomime before. Balon and Mademoiselle Prévost, the artists in question, entered with so much feeling into the characters assigned to them, that they drew tears from the spectators.

Mouret, the musical director of the Duchess's 'Nuits de Sceaux,' composed several ballets, on the principle of her ballet of 'Les Horaces,' for the Académie Royale. During the early days of the French opera, and until nearly the end of the 17th century, it was difficult to obtain dancers in any great number, and almost impossible to find female dancers. The company of vocalists

was recruited from the cathedral choirs, but for the ballet there were only the dancing masters of the capital and their pupils of the male sex to select from. There were no dancing mistresses, and ladies would not under any circumstances have consented to dance in public. On this point, however, the fashion was destined soon to change. Nymphs, dryads, and shepherdesses were for a time represented by boys, who equally with the fauns and satyrs wore masks. But at last ladies of the highest position, with Madame la Dauphine and the Princesse de Conti amongst them, appeared by express desire of the king in the ballets at Versailles; and about the same time several ladies of title taking advantage of the royal permission, joined the opera in the character of ballet-dancers. The first professional ballerina of note at the Académie was Mlle. Lafontaine, who with three other danseuses and a befitting number of male dancers, formed the entire ballet company. It is not necessary to relate the stories, more or less scandalous, told of various ballet dancers — of the Demoiselles de Camargo, of Mlle. Pélissier (who, expelled from Paris, visited London, where she was warmly received in 1734); of Mlle. Petit, dismissed from the opera for misconduct, and defended in a pamphlet by the Abbé de la Marre; of Mlle. Mazé, who, ruined by Law's financial scheme, dressed herself in her most brilliant costume, and drowned herself publicly at noon; or of Mlle. Subligny, who came to England with letters of introduction from the Abbé Dubois to Locke. The eminent metaphysician, who had hitherto paid more attention to the operations of the human mind than to the art of dancing, did honour to the abbé's recommendation, and (as Fontenelle declared in a letter on the subject) 'constituted himself her man of business.' We now, however, come to a ballerina, Mlle. Sallé, who besides being distinguished in her own particular art, introduced a general theatrical reform. In the early part of the 18th century—as indeed at a much later period—all sorts of anachronisms and errors of taste were committed in connection with costume. Assyrian, Greek, and Roman warriors appeared and danced *pas seuls* in the ballets of the Académie Royale, wearing laced tunics and powdered wigs with pigtails a yard long. The wigs were surmounted by helmets, and the manly breasts of the much-beribboned warriors were encased in a cuirass. Mlle. Sallé proposed that each character should wear the costume of his country and period; and though this startling innovation was not accepted generally in the drama until nearly a century later, Mlle. Sallé succeeded in causing the principles she advocated to be observed at the opera—at least during her own time, and so far as regarded the ballet. Mlle. Sallé's reform was not maintained even at the Académie; for about half a century later Galatea, in Jean Jacques Rousseau's 'Pygmalion,' wore 'a damask dress made in the Polish style over a basket hoop, and on her head an enormous *pouf* surmounted by three ostrich feathers.' It has been said that Mlle. de Subligny brought to London letters from the Abbé Dubois to Locke. Mlle. Sallé arrived with an introduction from Fontenelle to Montesquieu, who was then Ambassador at the court of St. James's. This artist was, indeed, highly esteemed by the literary society of her time. She enjoyed the acquaintance not only of Fontenelle, Montesquieu, and our own Locke, but also of Voltaire, who wrote a poem in her honour. In London Mlle. Sallé produced a 'Pygmalion' of her own, which, at least as regards the costumes, was very superior to the 'Pygmalion' of Rousseau brought out some forty or fifty years afterwards. In representing the statue about to be animated, she carried out her new principle by wearing not a Polish dress but simple drapery, imitated as closely as possible from the statues of antiquity. A full and interesting account of Mlle. Sallé's performance, written by a correspondent in London, possibly Montesquieu himself, was published on March 15, 1734, in the 'Mercure de France.' 'She ventured to appear,' says the correspondent, 'without skirt, without a dress, in her natural hair, and with no ornament on her head. She wore nothing in addition to her bodice and under petticoat but a simple robe of muslin arranged in drapery after the model of a Greek statue. You cannot doubt, sir,' he adds, 'the prodigious success this ingenious ballet so well executed obtained. At the request of the king, the queen, the royal family, and all the court, it will be performed on the occasion of Mlle. Sallé's benefit, for which all the boxes and places in the theatre and amphitheatre have been taken for a month past.'

Madeleine Guimard, a celebrated *danseuse* at the French opera during the Gluck and Piccinni period, is frequently mentioned in the correspondence of Grimm and of Diderot. Houdon, the sculptor, moulded her foot. Fragonard, the painter, decorated her rooms, until presuming to fall in love with her it was found necessary to replace him by Louis David—afterwards so famous as a historical painter in the classical style; Marie Antoinette consulted her on the subject of dress, and when by an accident on the stage she broke her arm, prayers were said at Notre Dame for Mlle. Guimard's injured limb. Marmontel, referring to her numerous acts of charity, addressed to her a flattering epistle in verse; and a popular divine made her munificence the subject of a sermon. The chronicles of the time laid stress on Guimard's excessive thinness, and she was familiarly known as the 'Spider,' while a wit of the period called her *la squelette des Grâces*. The French Revolution drove numerous French artists out of the country, many of whom visited London. 'Amongst them,' says Lord Mount-Edgecumbe in his Memoirs, 'came the famous Mlle. Guimard, then near sixty years old, but still full of grace and gentility; and she had never possessed more.'

Gaetan Vestris, the founder of the Vestris family, was as remarkable for his prolonged youthfulness as Mlle. Guimard herself — who, however, instead of being 'near sixty,' was not

more than forty-six when she arrived in London). Gaetan Vestris made his début at the French opera in 1748; and M. Castile Blaze, in his 'Histoire de l'Académie Royale de Musique,' tells us that he saw him fifty-two years afterwards, when he danced as well as ever, executing the steps of the minuet 'avec autant de grâce que de noblesse.' The family of Vestris—originally Vestri—came from Florence. Gaetan had three brothers, all dancers; his son Auguste was not less famous than himself ('Auguste had Gaetan Vestris for his father,' the old man would say—'an advantage which nature refused me'); Auguste's nephew was Charles Vestris, and Auguste's favourite pupil was Perrot, who married Carlotta Grisi, and who by his expressive pantomime more even than by his very graceful dancing, enjoyed in London an amount of success which male dancers in this country have but rarely obtained. Innumerable anecdotes are told of the vanity and self-importance of Gaetan Vestris, the head of this family of artists. On one occasion when his son was in disgrace for having refused, on some point of theatrical honour, to dance in the divertissement of Gluck's 'Armide,' and was consequently sent to Fort-l'Evêque, the old man exclaimed to him in presence of an admiring throng: 'Go, Augustus; go to prison! Take my carriage, and ask for the room of my friend the King of Poland.' Another time he reproved Augustus for not having performed his duty by dancing before the King of Sweden, 'when the Queen of France had performed hers by asking him to do so.' The old gentleman added that he would have 'no misunderstanding between the houses of Vestris and of Bourbon, which had hitherto always lived on the best terms.' The ballet never possessed in London anything like the importance which belonged to it in France, from the beginning of the 18th century until a comparatively recent time. For thirty years, however, from 1820 to 1850, the ballet was an attractive feature in the entertainments at the King's (afterwards Her Majesty's) Theatre; and in 1821 the good offices of the British ambassador at the court of the Tuileries were employed in aid of a negociation by which a certain number of the principal dancers were to be temporarily 'ceded' every year by the administration of the Académie Royale de Musique to the manager—at that time Mr. Ebers, of our Italian Opera. Mlles. Noblet and Mercandotti seem to have been the first *danseuses* given, or rather lent, to England by this species of treaty. Mlle. Taglioni, who appeared soon afterwards, was received year after year with enthusiasm. Her name was given to a stage coach, also to a great coat; and—more enduring honour—Thackeray has devoted some lines of praise to her in the 'Newcomes,' assuring the young men of the present generation that they will 'never see anything so graceful as Taglioni in La Sylphide.' Among the celebrated dancers contemporary with Taglioni must be mentioned Fanny Ellsler (a daughter of Haydn's old copyist of the same name) and Cerito, who took the principal part in the once favourite ballet of 'Alma' (music by Costa). Fanny Ellsler and Cerito have on rare occasions danced together at Her Majesty's Theatre the minuet in 'Don Giovanni.' To about the same period as these eminent *ballerine* belonged Carlotta Grisi, perhaps the most charming of them all. One of her most admired characters was that of Esmeralda in the ballet arranged by her husband, the before-mentioned Perrot, on the basis of Victor Hugo's 'Notre Dame de Paris.' Pugni, a composer, who made ballet music his speciality, and who was attached as composer of ballet music to Her Majesty's Theatre, wrote music for Esmeralda full of highly rhythmical and not less graceful melodies. In his passion for the ballet Mr. Lumley once applied to Heinrich Heine for a new work, and the result was that 'Mephistophela,' of which the libretto, written out in great detail, is to be found in Heine's complete works. The temptation of Faust by a female Mephistopheles is the subject of this strange production, which was quite unfitted for the English stage, and which Mr. Lumley, though he duly paid for it, never thought of producing. In one of the principal scenes of 'Mephistophela' the temptress exhibits to her victim the most celebrated danseuses of antiquity, including Salome the daughter of Herodias. King David too dances a *pas seul* before the ark. Probably the most perfect ballet ever produced was 'Giselle,' for which the subject was furnished by Heine, the *scenario* by Theophile Gautier, and the music by Adolphe Adam. Adam's music to 'Giselle' is, as Lord Mount-Edgcumbe said of Madeleine Guimard, 'full of grace and gentility.' The 'Giselle Waltz' will long be remembered: but we must not expect to see another 'Giselle' on the stage until we have another Carlotta Grisi; and it is not every day that a dancer appears for whom a Heine, a Gautier, and an Adam will take the trouble to invent a new work. Beethoven's 'Prometheus' is perhaps the only ballet which has been performed entire in the concert room, for the sake of the music alone. The Airs de Ballet from Auber's 'Gustave' and Rossini's 'William Tell' are occasionally found in concert programmes, and those in Schubert's 'Rosamunde' and Gounod's 'Reine de Saba' have immortalised those operas after their failure on the stage. [H. S. E.]

BALLETS, compositions of a light character, but somewhat in the madrigal style, frequently with a 'Fa la' burden which could be both sung and danced to; these pieces, says Morley (Introduction), were 'commonly called Fa las.' Gastoldi is generally supposed to have invented or at all events first published ballets. His collection appeared in 1597, and was entitled 'Balletti a cinque voci, con li suore versi per cantare, suonare et ballare.' The first piece in the book is a musical 'Introduzione a i Balletto,' with directions for the performers 'Su cacciam man a gli stromenti nostri, e suoniam et cantiam qualche Balletti.' These must therefore have had both instrumental and dancing accompaniments. In 1595 Morley published a collection of 'Ballets for five voices,' professedly in imitation of Gas-

toldi, and was followed three years later by Weelkes, with 'Ballets and Madrigals to 5 voices.' 'Balletto' is used by Bach for an allegro in common time. See Catalogue, Anh. I. Ser. 3. Inv. 2 & 6. [W. H. C.]

BALLO IN MASCHERA, IL. Opera in four acts, libretto by Somma, music by Verdi. Produced at Rome in 1859; at Paris, Théâtre des Italiens, Jan. 13, 1861; and in London, Lyceum, June 15, 61.

BALTAZARINI (or BALTAGERINI), an Italian musician; the best violinist of his day. He was brought from Piedmont in 1577 by Marshal de Brissac to Catherine de' Medicis, who made him intendant of her music and her first valet de chambre, and changed his name to M. de Beaujoyeulx, which he himself adopted. He seems to have been the first to introduce the Italian dances into Paris, and thus to have been the founder of the ballet, and, through the ballet, of the opera. He associated the best musicians of Paris with him in his undertaking. Thus in the entertainment of 'Circe,' produced by him at the marriage of the Duc de Joyeuse and Mlle. de Vaudemont, on Sunday Oct. 15, 1581, known under the title of 'Ballet comique de la royne.' etc. (Paris, 1582), he states in the preface that the music was by Beaulieu and Maistre Salmon. Several numbers from it are given by Burney (Hist. iii. 279–283); and the Ballet in all its details and its connexion with the opera has been made the subject of a work 'Les origines de l'Opéra, etc.; par L. Cellier' (Paris, 1868).[1] The MSS. of others of Baltzarini's ballets are in the Bibliothèque Nationale. [G.]

BALTZAR, THOMAS, born at Lübeck about 1630; the finest violinist of his time, and the first really great performer heard in England. He came to this country in 1656, and stayed for some time with Sir Anthony Cope, of Hanwell, Oxon. Evelyn heard him play March 4, 1656, and has left an account which may be read in his Diary under that date. Anthony Wood met him on July 24, 1658, and 'did then and there to his very great astonishment, heare him play on the violin. He then saw him run up his Fingers to the end of the Fingerboard of the Violin, and run them back insensibly, and all with alacrity, and in very good tune, which he nor any in England saw the like before . . . Wilson thereupon, the public Professor, . . . did, after his humoursome way, stoop downe to Baltzar's Feet, to see whether he had a Huff on; that is to say, to see whether he was a Devill or not, because he acted beyond the parts of a man. . . . . Being much admired by all lovers of musick, his company was therefore desired; and company, especially musicall company, delighting in drinking, made him drink more than ordinary, which brought him to his grave.' At the Restoration Baltzar was appointed leader of the King's celebrated band of twenty-four violins, but died soon after, and was buried in the cloister of Westminster Abbey. He is entered on the Register as 'Mr. Thomas Balsart, one of the violins in the King's Service July 27, 1663.'

Baltzar did much towards placing the violin in England in its present position, at the head of all stringed instruments. He appears from Wood's account to have introduced the practice of the *shift*, till then unknown, and the use of the upper part of the finger-board. Playford's 'Division Violin' contains all that appear to have been printed of his compositions, but Burney speaks in high terms of some MS. solos in his possession; and a set of sonatas for a 'lyra violin, treble violin, and bass viol' were sold at the auction of Thomas Britton the 'musical small-coal man.' [M. C. C.]

BANCHIERI, ADRIANO, born at Bologna, 1567, pupil of Gerami the organist of the cathedral of Lucca and afterwards of S. Marco in Venice. He was first organist at Imola, of S. Maria in Regola; then in 1603 we find him at S. Michele in Bosco near Bologna. Gerber's statement that he was chosen abbot of Bosco is unsupported, and appears to be contradicted by the fact that on his works he is uniformly described as 'Monaco olivetano.' His first work, 'Conclusioni per organo,' appeared at Lucca in 1591; and Zuchelli gives the date of his death as 1634. He was great in all departments, theory, the church, and the theatre. His most important theoretical work is probably his 'L'Organo suonarino' (Amadius, Venice, 1605), which was often reprinted. It contains the first precise rules for accompanying from a figured bass—afterwards published separately by Lomazzo at Milan. In a later work, 'Moderna practica musicale' (Venice, 1613), he treats of the influence of the basso continuo on the ornaments in singing, and the alterations necessary in consequence thereof. At the same time he mentions the changes in harmony and tonality which were at that time beginning to prevail, as incomprehensible. In addition to his many compositions for the church, Banchieri wrote what were then called 'intermedi' for comedies. In his 'La Pazzia senile, raggionamenti vaghi e dilettevole, composti e dati in luce colla musica a tre voci,' published at Venice in 1598 and reprinted at Cologne—itself a kind of imitation of the 'Antiparnasso' of Orazio Vecchi—the transition from the madrigal to the new form of the intermedio is very obvious; the work may be almost called the first comic opera. He afterwards composed a pendant to it under the name of 'La prudenza giovenile,' to which he boldly affixed the title of 'Comedia in musica,' and which was published at Milan by Tini in 1607. Another analogous work is 'La barca di Venezia a Padua' (Venice, 1623), and still more so 'La fida fanciulla, comedia esemplare, con musicali intermedi apparente ed inapparenti,' Bologna, 1628 and 1629. Banchieri was a poet as well as a musician, and wrote comedies under the name of Camillo Scaligeri

[1] The air which of late years has been somewhat in vogue abroad and at home, under the title of 'Gavotte de Louis XIII,' is taken from this Ballet, where the first strain appears as 'Le son de la Clochette auquel Circé sortit de son jardin'—'un son fort gay.' The Trio to the 'Gavotte' has been added by the modern arranger.

della fratta. Lastly, in his 'Cartella musicale' (1614) we find a project for the foundation of an academy of science and art in his monastery at Bologna. [F. G.]

BAND. A combination of various instruments for the performance of music. The old English term was 'noise.' The French word 'bande' was applied to the 'vingt-quatre violins' of Louis XIV. (Littré.) Charles II had his 'four-and-twenty violins,' and the word doubtless accompanied the thing. It first appears in a MS. order (Ld. Chamberlain's Warrt. Bks. May 31, 1661) that the King's band of violins shall take instructions from Hudson and Mell. (See also State Papers, Domestic, lxxvii. No. 40, and lxxix. Aug. 19, 63.) It is not mentioned by Johnson (nor indeed in Latham's Johnson), Richardson, or Webster. The various kinds of bands will be found under their separate heads, viz. HARMONIE-MUSIC; MILITARY BAND; ORCHESTRA; KING'S PRIVATE BAND; WIND BAND. BANDMASTER and BANDSMEN are respectively the leader and members of a Military Band. [G.]

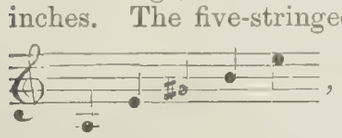
BANDERALI, DAVIDDE, born at Lodi 1780, died in Paris 1849; first appeared as a buffo tenor singer, which part may be said to have been created by him. He soon relinquished the stage, and became professor of singing in the Conservatoire first of Milan, and afterwards—on the recommendation of Rossini—in that of Paris (1828). In both places he trained singers who became celebrated. [M. C. C.]

BANDORA, Ital. *Mandora*, or *Mandola*; Neapolitan dial. *Pandura*; Span. *Bandolon*; Old Eng. *Pandore*, are the Romance names of varieties of the CITHER in the countries designated. Like the lute in size and in the form of the pear-shaped body, they are classed with the cither because they have generally wire strings (tuned in pairs) and are played with a plectrum of tortoiseshell or quill. The mandoline is a small and very beautiful instrument of the kind. These instruments, with their names, were derived from the East. In the heyday of the Renaissance they became very generally used to accompany the voice and support the recitals of improvisatori, as well as for solo performance. Although *πανδοῦρα* appears in Greek, it was not a true Greek instrument, but an exotic. Athenæus states that Pythagoras, writing about the Red Sea, says the Troglodytes made the pandoura of daphne, i. e. laurel, which grew near the seashore. According to Mr. Engel ('Musical Instruments,' 1874) the tambour or tamboura is their Eastern representative. There are several varieties of these pear-shaped instruments used in Turkey and Bulgaria. The large Turkish tamboura has a circular body, the open strings producing four tones: it has thirty-five frets of thin catgut bound round the neck and disposed for the intervals, smaller than halftones, belonging to the Arabic scale. The tamboura is also found in Persia, Egypt, and Hindostan. The ancient Egyptian *nofre*, hieroglyphic for 'good,' was a tamboura; and the Assyrians had an instrument of the kind, also played with a plectrum. The idea of tension would seem to be inherent in the first syllable of names of the bandora or tamboura family of instruments, preserving everywhere so remarkable an identity. (See BANJO, CALASCIONE, CITHER, LUTE, MANDOLINE.) [A. J. H.]

BANISTER, JOHN, born 1630, son of one of the waitts of the parish of St. Giles'-in-the-Fields, London. He received the rudiments of his musical education from his father, and arrived at great proficiency on the violin. He was noticed by Charles II, who sent him to France for improvement; and on his return he was appointed leader of the king's band. The State Papers inform us, '1663, Mr. Banister appointed to be chief of His Majesty's violins.' Pepys, in his Diary, under the date Feb. 20, 1666–7, says:—'They talk how the King's violin, Banister, is mad that a Frenchman is come to be chief of some part of the King's musique.' The Frenchman here alluded to was the impudent pretender Louis Grabu. It is recorded, we know not upon what authority, that Banister was dismissed the King's service for saying, in the hearing of His Majesty, that the English performers on the violin were superior to those of France. This musician is entitled to especial notice as being the first to establish lucrative concerts in London. These concerts were made known through the medium of the 'London Gazette'; and on December 30, 1672, there appeared the following advertisement:—'These are to give notice that at Mr. John Banister's house, now called the Musick-school, over against the George Tavern in White Friars, this present Monday, will be musick performed by excellent masters, beginning precisely at four of the clock in the afternoon, and every afternoon for the future, precisely at the same hour.' Many similar notices may be found in the same paper (1673 to 1678), from which it appears that Banister carried on these concerts till near the period of his decease, which occurred on the third of October, 1679. He was buried in the cloisters of Westminster Abbey. Banister wrote the music to the tragedy of 'Circe,' written by Dr. Charles Davenant, eldest son of Sir William Davenant, performed at the Duke of York's Theatre in 1676. Downes ('Roscius Anglicanus,' 1703) calls it an 'opera,' and says 'All the musick was set by Mr. Banister, and being well performed, it answered the expectation of the company.' One of the songs is printed in the second book of 'Choice Ayres and Songs,' 1676, and a MS. copy of the first act is preserved in the library of the Sacred Harmonic Society. Jointly with Pelham Humphrey he wrote the music to 'The Tempest,' performed in 1676, some of the songs of which were published in the same year. He contributed to Playford's 'Courtly Masquing Ayres,' 1662; and some lessons for 'viols or violins of his are appended to a small volume entitled 'New Ayres and Dialogues,' 1678. (Hawkins; *Notes to North's Memoirs of Musick*,

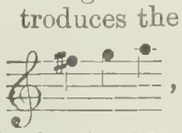
etc.). His son, JOHN, was educated in music under his father, and attained great excellence as a performer on the violin. He was one of the 'musicians' of Charles II, James II, William and Mary and Anne; and, at the beginning of the 18th century, when Italian operas were first introduced in English form into this country, he occupied the post of principal violin. He composed some music for the theatre, and, in conjunction with Godfrey Finger, published a small collection of these pieces. He was also a contributor to Henry Playford's 'Division Violin,' 1685, the first printed book for the violin put forth in this country. He resided for many years in Brownlow Street, Drury Lane, where he died in 1735. There is a fine mezzotint engraving of him by Smith. [E. F. R.]

BANJO (American). An instrument of the guitar kind, played with the fingers, but without the aid of frets to guide the stopping in tune of the strings. The banjo has a long neck, and a body like a drumhead, of parchment, strained upon a hoop to the required writhe or degree of stiffness for resonance. There is no back to it. Banjoes have five, six, seven, or nine catgut strings, the lowest in pitch being often covered with wire. The chanterelle or melody-string is called from its position and use the thumbstring, and is placed not, as in other fingerboard instruments, highest in series, but on the bass side of the lowest-tuned string, the tuning-peg for it being inserted halfway up the neck instead of in the head. The length of the thumb-string is given as sixteen inches from the nut to the bridge, and that of the others twenty-four inches. The five-stringed banjo is tuned either



the last note being the thumbstring, or in G, a note lower. The six-stringed is tuned

. The seven-stringed introduces the middle C in the lowest octave, and the nine has three thumb-strings



but is rarely used. The pitch of the banjo, like that of the guitar, is an octave lower than the notation. 'Barre' designates the false nut made by placing the first finger of the left hand across the whole of the strings at certain lengths from the bridge to effect transposition. [See CAPO TASTO.]

As to the origin of the banjo the existence of instruments of the lute or guitar kind implies a certain grade of knowledge and culture among the people who know how to stretch strings over soundboards, and to determine the required intervals by varying the vibrating lengths of the strings. Such instruments found in use by savage or very uncivilised peoples suggest their introduction through political or religious conquest by a superior race. The Arabs may thus, or by trade, have bestowed a guitar instrument upon the negroes of Western Africa, and the Senegambian 'bania' be, as Mr. Carl Engel suggests ('Musical Instruments,' 1874, p. 151), the parent of the American negro's banjo. Others derive the name from Bandore. [A. J. H.]

BANTI, BRIGITTA GIORGI, said to have been the daughter of a Venetian gondolier, was born at Crema, Lombardy, 1759. She began life as a 'cantante di piazza,' or street-singer; and received some little instruction at the expense of a rich amateur. At the age of 19 she set out for Paris, to seek her fortune, supporting herself by singing at inns and cafés by the way. De Vismes, Director of the Académie, happening to hear a splendid voice on the Boulevard at Paris one evening, stopped at the café where the girl was singing, and slipping a louis into her hand desired her to come to him at the Opera the next day. Here, upon hearing an air of Sacchini twice or thrice, she astonished the Director by singing it perfectly from beginning to end. He engaged her for the Opera, where she made a triumphant *début* in a song between the second and third acts of 'Iphigénie en Aulide.' While singing in Paris, though she never made the slightest mistake in concerted pieces, she sometimes executed her airs after a very strange fashion. For instance: in the allegro of a cavatina she would, in a fit of absence, recommence the air from the very beginning, go on with it to the turning-point at the end of the second part, again recommence, and continue this proceeding until warned by the conductor that she had better think of ending. In the meantime the public, delighted with her voice, is said to have been quite satisfied. Agujari having left London, the managers of the Pantheon gave the young singer — still called Giorgi — an engagement, on condition that £100 a year should be deducted from her salary for the cultivation of her voice. Sacchini was her first master, but he soon gave her up in despair. Piozzi followed, with no better success. Abel was the last. She was at this time, without doubt, a very bad singer with a very beautiful voice; and of so indolent and careless a disposition that she never could be made to learn the first rudiments of music. In 1780 she left England, and sang to enthusiastic audiences at several foreign courts. Lord Mount-Edgcumbe heard her at Reggio in 1785, where, he says, her singing was delightful. In 1799 she returned to London, making her *début* in Bianchi's 'Semiramide,' in which she introduced an air from Guglielmi's 'Debora,' with violin obligato, originally played by Cramer, afterwards by Viotti, Salomon, and Weichsell, the brother of Mrs. Billington. This song, though long and very fatiguing, was always encored, and Banti never failed to repeat it. Genius in her seemed to supply the want of science; and the most correct ear, with the most exquisite taste, enabled her to sing with more effect, expression, and apparent knowledge of her art, than many a better singer. She never was a good musician, nor could sing at sight with ease; but having once learnt a song, and mastered its character, she threw into it deeper pathos and truer feeling

than any of her rivals. Her voice was of most extensive compass, rich and even, and without a fault in its whole range,—a true *voce di petto* throughout. In her youth it extended to the highest pitch, and was so agile that she excelled most singers in the bravura style; but, losing a few of her upper notes, she modified her manner by practising the cantabile, to which she devoted herself, and in which she had no equal. Her acting and recitative were excellent. Her most favourite pieces were the 'Alceste' of Gluck, in which she very greatly excelled, three of her songs in it having to be repeated every night; his 'Ifigenia in Tauride'; Paisiello's 'Elfrida' and 'Nina'; 'Mitridate,' by Nasolini; 'Alzira,' 'Merope,' 'Cinna,' and others composed expressly for her by Bianchi. She also acted in comic operas, and was particularly successful in Paisiello's 'Serva Padrona.' Her spirits never flagged; nor did her admirers ever grow weary of her. They never wished for another singer; but Mrs. Billington had now returned, and astonished the public with her marvellous execution. The manager engaged her for the next season, and allowed Banti, whose health was now failing, to depart. Before the close of her last season (1802), however, an interesting performance took place. Banti prevailed on Mrs. Billington to sing with her on the night of her benefit, leaving her the choice of opera and character. Portogallo's 'Merope' was chosen, Mrs. Billington acting the part of the heroine, and Banti that of Polifonte, though written for a tenor. Banti died at Bologna, February 18, 1806, bequeathing her larynx (of extraordinary size) to the town, the municipality of which caused it to be preserved in spirits. Her husband was the dancer Zaccaria Banti, who was dancing in London as early as 1777 in Sacchini's 'Creso.' She left a daughter, married to Dr. Barbieri, who raised to her memory a monument in the cemetery outside the walls of Bologna, which was afterwards repaired and adorned by her husband, and from which we learn the places and dates of her birth and death ('Harmonicon,' viii.). [J. M.]

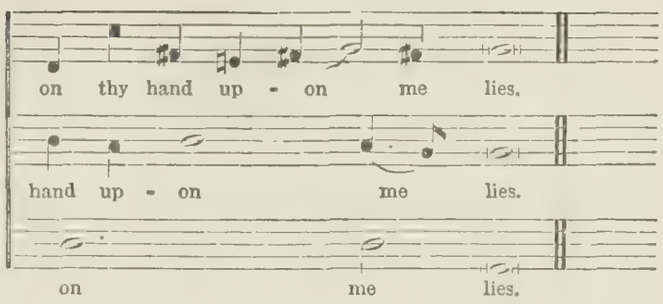
BAPTISTE, a violin-player, whose real name was Baptiste Anet, a pupil of Corelli, and apparently one of the first to introduce the works and style of his great master at Paris, thereby materially influencing the development of violin-playing in France. When French writers of the period speak of him as an extraordinary phenomenon, and as the first of all violinists, we must remember that at that time instrumental music, and especially the art of violin-playing, was still in its infancy in France. Baptiste did not settle in Paris, in spite of his great success, owing probably to the circumstance of Louis XIV's exclusive liking for old French music and for Lully. From Paris he went to Poland, where he spent the rest of his life as conductor of the private band of a nobleman. He published three sets of sonatas for the violin; two suites de pièces pour deux musettes, op. 2; and six duos pour deux musettes, op. 3. [P. D.]

BAPTISTIN, Jean, a violoncellist whose real name was Johann Baptist Struck; of German parentage, born at Florence about 1690. He came to Paris, and he and Labbé were the earliest players of the cello in the orchestra of the Opéra. He had two pensions from the king, fixing him—the first to France, and the second to Paris. He produced 3 operas and 15 ballets, and published 4 books of cantatas. He died 1755.

BAR. A vertical line drawn across the stave to divide a musical composition into portions of equal duration, and to indicate the periodical recurrence of the accent. The word bar is also commonly, though incorrectly, applied to the portion contained between any two such vertical lines, such portion being termed a 'measure.' In the accurately ancient 'measured music' (*musica mensuralis*—that is, music consisting of notes of various and determined length, and so called to distinguish it from the still older *musica choralis* or *plana*, in which all the notes were of the same length) there were no bars, the rhythm—which was always triple—being shown by the value of the notes. But as this value was not constant, being affected by the order in which the longer or shorter notes followed each other, doubtful cases occasionally arose, for the better understanding of which a sign called *punctum divisionis* was introduced, written . or $\surd$, which had the effect of separating the rhythmic periods without affecting the value of the notes, and thus corresponded precisely to the modern bar, of which it was the earliest precursor.

The employment of the bar dates from the beginning of the 16th century, and its object appears to have been in the first place to facilitate the reading of compositions written in score, by keeping the different parts properly under each other, rather than to mark the rhythmic divisions. One of the earliest instances of the use of the bar is found in Agricola's 'Musica Instrumentalis' (1529), in which the examples are written on a single stave of ten lines, the various parts being placed above each other on the same stave (the usual arrangement in the earliest scores), with bars drawn across the whole stave. Morley also in his 'Practical Musick' (1597) makes a similar use of bars in all examples which are given in score; but the introduction of the bar into the separate voice parts used for actual performance is of much later date. The works of Tallis (1575), Byrd (1610), and Gibbons (1612), were all published without bars, while in Ravenscroft's Psalter (1621) the end of each line of the verse is marked by a single bar. This single bar is termed by Butler ('Principles of Musick,' 1636) an imperfect close, which he says is introduced 'at the end of a strain, or any place in a song where all the parts meet and close before the end,' while the perfect close (the end of the whole composition) is to be marked with 'two bars athwart all the Rules.'

Henry Lawes appears to have been the first English musician who regularly employed bars in his compositions. His 'Ayres and Dialogues,' published in 1653, are barred throughout, though the 'Choice Psalmes put into Musick for Three Voices' by Henry and William Lawes, published only five years previously, is still without bars. The part-writing of the 'Choice Psalmes' is in many cases varied and even elaborate, and there must have been considerable difficulty in performing them, or indeed any of the compositions of that date, without the assistance of any signs of rhythmic division, especially as they were not printed in score, but only in separate parts. Their general character may be judged from the following example, which has been translated into modern notation and placed in score for greater convenience of reading. It may be observed that although without bars, the 'Choice Psalmes' are intended to be sung in common time, and that all have the sign C at the commencement; some of the 'Ayres and Dialogues,' on the other hand, are in triple time, and are marked with the figure 3.



In modern music the use of bars is almost universal. Nevertheless there are some cases in which for a short time the designed irregularity of the rhythm requires that they should be dispensed with. An example of this is found in certain more or less extended passages termed cadences (not to be confounded with the harmonic cadence or close), which usually occur near the end of a composition, and serve the purpose of affording variety and displaying the powers of execution of the performer. (See the close of the Largo of Beethoven's Concerto in C minor, op. 37.) Also occasionally in passages in the style of fantasia, which are devoid of any definite rhythm, examples of which may be found in the Prelude of Handel's first Suite in A, in Emanuel Bach's Fantasia in C minor, at the beginning of the last movement of Beethoven's Sonata in B flat, op. 106, and in the third movement of Mendelssohn's Sonata, op. 6.

But even in this kind of unbarred music the relative value of the notes must be approximately if not absolutely preserved, and on this account it is often expedient during the study of such music to divide the passage into imaginary bars, not always necessarily of the same length, by the help of which its musical meaning becomes more readily intelligible. This has indeed been done by Von Bülow in regard to the passage in the Sonata above alluded to, and it is so published in the 'Instructive Edition of Beethoven's Works' (Stuttgart, Cotta, 1871), the result being a considerable gain in point of perspicuity. Similar instances will occur to every student of pianoforte music.

A double bar, consisting of two parallel vertical lines, is always placed at the end of a composition, and sometimes at the close of a section or strain, especially if the strain has to be repeated, in which case the dots indicating repetition are placed on one or both sides of the double bar, according as they may be required. Unlike the single bar, the double bar does not indicate a rhythmic period, as it may occur in the middle or at any part of a measure, but merely signifies the *rhetorical* close of a portion of the composition complete in itself, or of the whole work. [F. T.]

BARBAJA, Domenico, born 1778 at Milan, of poor parentage; was successively waiter at a coffee-house on the Piazza, manager of an English riding-circus, lessee of the Cucagna playhouse at Naples, and director of the San Carlo theatre. While at Naples he made the acquaintance of Count Gallenberg, the Austrian ambassador, followed him to Vienna in 1821, and obtained the direction of both the

'Kärnthner-thor' theatre and that 'auf der Wien,' which he held till 1828. He was the first to introduce a subscription into the Vienna theatres. During his management the company embraced the best talent of the day, including Mesdames Colbran-Rossini, Sontag, Esther Mombelli, Giuditta Grisi, Mainvielle-Fodor, Feron, Canticelli; Signori Donzelli, Cicimarra, Bassi, Tamburini, Rubini, David, Nozzari, Lablache, Ambrogi, Benedetti, and Botticelli. The ballet was sustained by Duport, Salvatore, and Taglioni. Though Barbaja introduced Rossini into Vienna, he by no means neglected German opera, and under his management Weber's 'Euryanthe' was produced Oct. 25, 1825. He was at the same time manager of the two most celebrated opera-houses in Italy, La Scala at Milan, and San Carlo at Naples; not to mention some smaller operatic establishments also under his direction. Bellini's first opera, 'Bianca e Ferdinando,' was written for Barbaja and produced at Naples. His second opera, 'Il Pirata,' was also composed for Barbaja, and brought out at Milan. Several of Donizetti's works, and all Rossini's later works for the Italian stage, were first presented to the public by the famous impresario, who was destined one day himself to figure in an opera. Barbaja is at least introduced by name in 'La Sirène,' by Scribe and Auber. From his retirement till his death, Oct. 16, 1841, he resided on his property at Posilippo. He was very popular, and was followed to his grave by an immense concourse of people. [C. F. P.]

BARBELLA, Emanuele, violinist. Born at Naples in the earlier part of the 18th century. The following short account of his musical education was written by himself at the request of Dr. Burney, who gives it in his History (iii. 570): — 'Emanuele Barbella had the violin placed in his hand when he was only six and a half years old, by his father Francesco Barbella. After his father's decease he took lessons of Angelo Zaga, till the arrival of Pasqualino Bini, a scholar of Tartini, in Naples, under whom he studied for a considerable time, and then worked by himself. His first instructor in counterpoint was Michele Gabbalone; but this master dying, he studied composition under the instructions of Leo, till the time of his death.' He adds, 'Non per questo, Barbella e un vero asino che non sa niente'—'Yet, notwithstanding these advantages, Barbella is a mere ass, who knows nothing.' He wrote six sonatas for violin, and six duos for violin and bass, adhering closely to the principles of Tartini. Burney gives an example of his composition, and says that his tone and manner were 'marvellously sweet and pleasing, even without any other accompaniment than the drone-bass of an open string.' He died at Naples in 1773. [E. H. D.]

BARBER OF SEVILLE, THE. Operas of this name, founded on the celebrated play of Beaumarchais (1775), have been often produced. Two only can be noticed here: (1) that of Paisiello, first performed at St. Petersburg in 1780, and at Paris in 1789—at the 'Théâtre de Monsieur,' in the Tuileries, July 12, and at the Théâtre Feydeau, July 22; (2) that of Rossini—libretto by Sterbini—produced at Rome, Dec. 26, 1816, and at Paris, in the Salle Louvois, Oct. 26, 1819. Rossini hesitated to undertake the subject previously treated by Paisiello, and before doing so obtained his permission. He is said to have completed the opera in 15 days. On its appearance in Paris an attempt was made to crush it by reviving Paisiello's opera, but the attempt proved an entire failure; Paisiello's day was gone for ever. [G.]

BARBERS OF BASSORA, THE. A comic opera in 2 acts; words by Madison Morton; music by John Hullah. Produced at Covent Garden, Nov. 11, 1837.

BARBIERI, a Spanish dramatic composer of the present day, and chief promoter of an association for instituting a Spanish national opera in opposition to the Italian. 'Jugar con fuego' (1851), 'La Hechicera,' 'La Espada de Bernardo,' and 'El Marques de Caravaca,' are the names of some of his operas which have been performed in Madrid with success.

BARBIREAU,[1] Maitre Jacques, a celebrated musician of the 15th century, choir-master and teacher of the boys in the cathedral of Antwerp from 1448 till his death in 1491. Many of the great musicians of the 15th and 16th centuries were his pupils; he maintained a correspondence with Rudolph Agricola, and is constantly quoted by his contemporary Tinctor as one of the greatest authorities on music of his time. Of his compositions, a mass for five voices, 'Virgo parens Christi,' another for four voices, 'Faulx perverse,' and a Kyrie for the same, are in the imperial library at Vienna, and some songs for three and four voices in that of Dijon. Kiesewetter has scored the Kyrie from the first-named mass and a song for three voices, 'Lome (l'homme) bany de sa plaisance.' [M. C. C.]

BARCAROLE (Ital.), i. e. a 'boat-song.' Pieces of music written in imitation or recollection of the songs of Venetian *barcaroli* as they row their gondolas—or as they formerly did; for their songs at present appear to have little in them either agreeable or characteristic. Barcaroles have been often adopted by modern composers; as by Hérold in 'Zampa'; by Auber in 'Masaniello' and 'Fra Diavolo'; by Donizetti in 'Marino Faliero'; by Schubert, 'Auf dem Wasser zu singen' (Op. 72); by Chopin for Piano solo (Op. 60); and by Sterndale Bennett for Piano and Orchestra in his 4th Concerto. Mendelssohn has left several examples. The first 'Song without words' that he composed—published as Op. 19, No. 6—is the 'Venetianisches Gondellied' in G minor, which the autograph shows to have been written at Venice Oct. 16, 1830. Others are Op. 30, No. 6; Op. 62, No. 5; and the beautiful song, Op. 57, No. 5, 'Wenn durch die Piazzetta.' One essential

[1] Pronounced Barbirieau; called also Barbicola, Barbyrianus, and Barbingant.

characteristic in all these is the alternation of a strong and a light beat in the movement of 6-8 time—Chopin's alone being in 12-8—with a triplet figure pervading the entire composition, the object being perhaps to convey the idea of the rise and fall of the boat, or the regular monotonous strokes of the oars. The autograph of Bennett's barcarole is actually marked 'In rowing time.' The *tempo* of the barcaroles quoted above differs somewhat, but is mostly of a tranquil kind. The 'Gondoletta' entitled 'La Biondina,' harmonised by Beethoven, and given in his '12 verschiedene Volkslieder' (Nottebohm's Catalogue, p. 176), though of the same character as the boatmen's songs, is by Pistrucci, an Italian composer. [W. H. C.]

BARCROFTE, THOMAS, said to have been organist of Ely Cathedral circ. 1535. Nothing is known of his biography. A Te Deum and Benedictus (in F), and two anthems are ascribed to him in Tudway's MS. Collection. The former are dated 1532, a date much too early for an English setting of these hymns. It seems much more probable that the author of these compositions was George Barcrofte, A.B., vicar-choral and organist of Ely Cathedral in 1579. The latter died in 1609. The service above mentioned, and one of the anthems, 'O Almighty God,' were printed by the Motett Society. [E. F. R.]

BARDELLA, ANTONIO NALDI, called 'Il Bardello,' chamber-musician to the Duke of Tuscany at the end of the 16th and beginning of the 17th centuries, and, according to Arteaga, inventor of the Theorbo. Caccini states that he was an admirable performer on that instrument.

BARDI, GIOVANNI, Count of Vernio, a Florentine noble, lived in the end of the 16th century, an accomplished scholar and mathematician, member of the academy Della Crusca, and of the Alterati in Florence, maestro di camera to Pope Clement VIII. Doni attributes to him the first idea of the opera, and it is certain that the first performances of the kind were held in his house by his celebrated band of friends, Vicenzo Galilei, Caccini, Strozzi, Corsi, Peri, and Rinuccini, and that he himself composed the words for more than one such piece, e.g. 'L'amico fido,' and 'Il combattimento d'Apollino col serpente.' [M. C. C.]

BARGAGLIA, SCIPIONE, a Neapolitan composer and contrapuntist, mentioned by Cerreto, lived in the second half of the 16th century. According to Burney the word 'Concerto' occurs for the first time in his work 'Trattenimenti ... da suonare' (Venice, 1587).

BARGIEL, WOLDEMAR, son of a teacher of music at Berlin, and step-brother of Mme. Clara Wieck-Schumann (his mother being the divorced wife of Friedrich Wieck), was born at Berlin, Oct. 3, 1828. He was made to play the piano, the violin, and organ at home, and was instructed in counterpoint by Dehn. As a youth of 18, and in accordance with the advice of his brother-in-law, Robert Schumann, he spent two years at the *Conservatorium* of Leipzig, which was then (1846) under Mendelssohn's supervision: and, before leaving it, he attracted general attention by an octet for strings, which was performed at one of the public examinations.

After his return to Berlin, in 1850, he commenced work as a teacher, and increased his reputation as a composer by the publication of various orchestral and chamber works, as well as pianoforte pieces. In 1859 he was called to a professorship at the Conservatorium of Cologne, which, in 1865, he exchanged for the post of Capellmeister, and director of the school of music at Rotterdam. Latterly (1874), he has found a field still more fit for his powers, at the Königliche Hochschule für Musik, which is now flourishing under the leadership of Joachim, at Berlin.

As a composer, Bargiel must be ranked among the foremost disciples of Schumann. He makes up for a certain lack of freshness and spontaneity in his themes by most carefully elaborated treatment. Besides his pianoforte pieces, op. 1-5, and his trios for pianoforte and strings, two overtures for full orchestra, 'Zu einem Trauerspiel,' and 'Medea,' and the 23rd Psalm for female voices should be particularly mentioned. [E. D.]

BARITONE, the name usually applied to the smaller bass saxhorn in B♭ or C. It stands in the same key as the euphonium, but the bore being on a considerably less scale, and the mouthpiece smaller, it gives higher notes and a less volume of tone. It is almost exclusively used in reed and brass bands, to the latter of which it is able to furnish a certain variety of quality. [W. H. S.]

BARKER, CHARLES SPACKMAN, was born at Bath Oct. 10, 1806. Left an orphan at five years old, he was brought up by his godfather, who gave him such an education as would fit him for the medical profession. But Barker, accidentally witnessing the operations of an eminent London organ-builder, who was erecting an organ in his neighbourhood, determined on following that occupation, and placed himself under the builder for instruction in the art. Two years afterwards he returned to Bath and established himself as an organ-builder there. About 1832 the newly-built large organ in York Minster attracted general attention, and Barker, impressed by the immense labour occasioned to the player by the extreme hardness of touch of the keys, turned his thoughts towards devising some means of overcoming the resistance offered by the keys to the fingers. The result was the invention of the pneumatic lever, by which ingenious contrivance the pressure of the wind which occasioned the resistance to the touch was skilfully applied to lessen it. Barker offered his invention to several English organ-builders, but finding them indisposed to adopt it, he went to Paris, where he arrived about the time that Cavaillé-Col was building a large organ for the church of St. Denis. To that eminent builder he addressed himself, and Cavaillé, seeing the importance of the invention, immediately adopted it. Barker afterwards took the direction of the business of Daublaine

and Callinet (afterwards Ducroquet, and later Merklin and Schütz), and built in 1845 a large organ for the church of St. Eustache, which was unfortunately destroyed by fire six months after its erection. He also repaired the fine organ of the church of St. Sulpice. Later the pneumatic lever came gradually into use in England. Barker is also the inventor of the electric action. He has returned to England, and at present (1875) resides in London. [W. H. H.]

BARNARD, Rev. John, a minor canon of St. Paul's cathedral in the time of Charles I, was the first who published a collection of cathedral music. His work appeared in 1641 under the title of 'The First Book of Selected Church Musick, consisting of Services and Anthems, such as are now used in the Cathedrall and Collegiat Churches of this Kingdome. Never before printed. Whereby such Bookes as were heretofore with much difficulty and charges, transcribed for the use of the Quire, are now to the saving of much Labour and expence, publisht for the general good of all such as shall desire them either for publick or private exercise. Collected out of divers approved Authors.' The work was printed, without bars, in a bold type, with diamond headed notes, in ten separate parts—medius, first and second contratenors, tenor and bassus for each side of the choir, Decani and Cantoris. A part for the organ is absolutely necessary for some of the verse anthems in which intermediate symphonies occur, but it is extremely doubtful whether it was ever printed. From many causes – the wear and tear resulting from daily use in choirs, the destruction of service-books during the civil war, and others—it happened that a century ago no perfect copy of this work was known to exist, the least imperfect set being in Hereford cathedral, where eight of the ten vocal parts (some of them mutilated) were to be found, the bassus decani and medius cantoris being wanting. It so remained until January 1862, when the Sacred Harmonic Society acquired by purchase a set consisting also of eight vocal parts, including the two wanting in the Hereford set, and some also being mutilated. A duplicate of the bassus decani which had been with this set was purchased by the Dean and Chapter of Hereford, and a transcript of the imperfect medius cantoris was permitted by the society to be taken for them, so that the Hereford set still retains its pre-eminence. The work does not include the compositions of any then living author, the compiler in his preface declaring his intention of giving such in a future publication.

Its contents are as follows :—

Tallis, 1st Serv. 4 voices, D min.
N. Strogers, 4 v. D min.
E. Bevin, 4 and 5 v. D min.
W. Bird, 4, 5 and 6 v. D min.
O. Gibbons, 4 v. F.
W. Mundy, 4, 5 and 6 v. D min.
R Parsons, 4, 5, 6 and 7 v. F.
T. Morley, 1, 2, 3, 4 and 5 v. D min.
Dr. Gyles, 1, 2, 3, 4, 5 and 6 v. C.
[The above are Mg. and Ev. Services complete, and are each entitled '1st Service'.]
Mr. Ward, Mag. and N. D. 1, 2, 3, 4 and 5 v. G min.
Mr. Woodson, Te Deum, 4 v. D min.
Bird, 2nd Serv. with verses, Mag. and N. D. G min.
Bird, 3rd S., Mag. and N. D. 5 v. C.
Morley, 2nd S., Mag. and N. D. 5 v. G.
O. Gibbons, 2nd S., Mg. and Ev. 1, 2, 3, 4 and 5 v. D minor
Tallis, 1st Preces.
Do. 1st Ps. to do. Wherewithall.
Do. 2nd Ps., O doe well.
Do. 3rd Ps., My soul cleaveth.
Bird's 1st Preces.
Do. 1st Ps. to do. O clap.
Do. 2nd Ps., Save me o God.
Do. 2nd Preces.
Do. 1st Ps. to do. When Israel.
Do. 2nd Ps., Hear my prayer.
Do. 3rd Ps., Teach me o Lord.
O. Gibbons, 1st Preces.
Do. 1's. to do. Thou openest.
Tallis, Responses, Prayer, etc.
Do. Litany.

Full Anthems, 4 parts.

Tallis, O Lord give thy H. Spirit.
E. Hooper, Teach me.
Farrant, Hide not thou.
Do. Call to remembrance.
J. Shepheard, Haste Thee.
Do. (2nd pt.) But let all.
W. Mundy, O Lord the maker.
Do. O Lord the world's Saviour.
O. Gibbons, Deliver us.
Do. (2nd pt.) Blessed be.
O. Gibbons, Almighty & everlasting.
Batten, O praise the Lord.
Do. Hide not Thou.
Do. Lord we beseech Thee.
Do. Haste Thee o God.
Do. (2nd pt.) But let all those.
Do. When the Lord.
Dr. Tye, I will exalt Thee.
Do. (2nd pt.) Sing unto the Lord.
Do. Deus misereatur. [Divided into 3 little anthems.]

Full Anthems of 5 parts.

Tallis, With all our hearts.
Do. Blessed be Thy name.
E. Hooper, O Thou G. Almighty.
Tallis, I call and cry.
Mundy, O Lord, I bow.
Bird, Prevent us.
E. Hooper, Behold it is Christ.
Robt. White, The Lord bless us.
Tallis, Wipe away.
Bird, O God whom our offences.
Do. O Ld. make thy servant Chas.
Dr. Tye, I lift my heart.
Bird, O Lord turn.
Do. (2nd pt.) Bow Thine ear.
Dr. Giles, O give thanks.

Full Anthems for 6, 7, 8 parts.

Bird, Sing joyfully, 6 v.
R. Parsons, Deliver me, 6 v.
O. Gibbons, Hosanna, 6 v.
Do. Lift up your heads, 6 v.
Weelkes, O Lord grant, 6 and 7 v.

Anthems with Verses.

Bird, O Ld. rebuke me not.
Do. Hear my prayer.
W. Mundy, Ah helpless wretch.
Morley, Out of the deep.
O. Gibbons, Behold Thou hast.
Batten, Out of the deep.
Ward, I will praise.
Bird, Thou God.
Do. Christ rising.
Do. (2nd pt.) Christ is risen.
Dr. Bull, Deliver me.
Ward, Let God arise.

From the printed and manuscript parts, aided by other old manuscript organ and voice parts, Mr. John Bishop of Cheltenham has made a score of the work, which, it is to be regretted, remains unpublished. It is now in the British Museum.

Seven separate parts of the MS. collections made by Barnard for his work, comprising upwards of 130 services and anthems besides those included in the published work, are now in the library of the Sacred Harmonic Society. [W. H. H.]

BARNETT, John, born at Bedford July 1, 1802. His mother was a Hungarian, and his father a Prussian, whose name was Bernhard Beer, which was changed to Barnett Barnett on his settlement in this country as a jeweller. In his infancy John shewed a marked predilection for music, and as his childhood advanced proved to have a fine alto voice. At the age of eleven he was articled to S. J. Arnold, proprietor of the Lyceum, Arnold engaging to provide him with musical instruction in return for his services as a singer. The young vocalist accordingly appeared upon the stage at the Lyceum, and continued a successful career until the breaking of his voice During this time he was receiving instruction in music, first from C. E. Horn, and afterwards from Price, the chorus-master of Drury Lane. He wrote, while yet a boy, two masses and many lighter pieces, some of which were published. At the expiration of his term with Arnold he took pianoforte lessons of Perez, organist of the Spanish embassy, and subsequently of Ferdinand Ries. From the latter he received his first real lesson in harmony.

His first essay for the stage was the musical farce of 'Before Breakfast' (Lyceum, 1825), the success of which induced him to continue the line he had commenced. Among the pieces he subsequently wrote may be enumerated 'Monsieur Mallet,' 'Robert the Devil,' 'Country Quarters,' 'Two Secon ls,' 'The Soldier's Widow,' 'The Picturesque,' 'Married Lovers,' 'The Deuce is in her,' 'Charles the Twel th' (which con-

tained the popular ballad 'Rise gentle Moon'), and 'The Carnival of Naples,' the latter performed at Covent Garden in 1830. Meantime he was not unmindful of the higher branches of his art, and in 1829 published his oratorio of 'The Omnipresence of the Deity,' which has never been performed in public. In 31 he brought out at Sadler's Wells 'The Pet of the Petticoats,' subsequently transplanted to the greater theatres. This was his most important dramatic work up to this period. It was deservedly popular, and contained dramatic music then new to the English stage.

In 1832 Barnett was engaged by Madame Vestris as music-director of the Olympic Theatre, for which he wrote a number of popular musical pieces—'The Paphian Bower,' 'Olympic Revels,' 'The Court of Queen's Bench,' 'Blanche of Jersey,' etc. Also for Drury Lane a lyrical version of Mrs. Centlivre's 'Bold stroke for a Wife,' with Braham in the principal character. Under the title of 'Win her and Wear her' this piece was played for a few nights, but failed to obtain the success it merited, partly owing to the inappropriateness of the subject. The music contains many gems introduced by the composer into his later works.

In 1834 he published his 'Lyrical Illustrations of the Modern Poets,' a collection of songs of remarkable beauty and poetic feeling; and shortly afterwards 'Songs of the Minstrels,' and 'Amusement for Leisure Hours.' These productions, the first especially, raised him in the estimation of the musical world.

Barnett's great work 'The Mountain Sylph' was produced at the Lyceum in August 1834 with remarkable success. It was originally designed as a musical drama for one of the minor theatres, and afterwards extended into complete operatic form. It met with some opposition on the first night, but soon became a standard favourite. 'Here then,' says Professor Macfarren, 'was the first English opera constructed in the acknowledged form of its age since Arne's time-honoured Artaxerxes; and it owes its importance as a work of art, not more to the artistic mould in which it is cast than to the artistic, conscientious, emulous feeling that pervades it. Its production opened a new period for music in this country, from which is to be dated the establishment of an English dramatic school, which, if not yet accomplished, has made many notable advances.' Barnett dedicated the work to his old master, Arnold, extolling him as the fosterer of the British Muse; but before the year was out he changed his tone, complaining in the public prints that this same manager had refused to pay him for the composition of a new opera.

He now spent some time in Paris, with the purpose of producing there his opera of 'Fair Rosamond,' but returned, on the invitation of Bunn, to bring out the work at Drury Lane. It was performed in February 1837, with indifferent success, mainly owing to its ill-constructed libretto. It is full of charming music, and, wedded to a new poem, would command attention from an audience of the present day. In this year Barnett married the daughter of Lindley the violoncellist, with whom he went to Frankfort, with the view of studying Vogler's system of harmony and the principles of composition under Snyder von Wartensee. Here he wrote a symphony and two quartets, which are still unpublished. On his return to London in 1838, he produced his opera of 'Farinelli' at Drury Lane, perhaps his best work. In this year, in conjunction with Morris Barnett, the actor, dramatist, and journalist, he opened the St. James's Theatre, with the intention of founding an English opera house; but (owing to unforeseen circumstances) the theatre prematurely closed at the end of the first week.

At the beginning of 1841 Barnett established himself as a singing master at Cheltenham, where he remains (1876) in extensive practice. In the following year he published a pamphlet of sixty pages, entitled 'Systems and Singing Masters: an analytic comment upon the Wilhem System as taught in England'—cleverly and caustically written, but unjustly severe upon Mr. Hullah.

Mr. Barnett has at least three operas which have never been performed. 'Kathleen,' the libretto by Sheridan Knowles, is highly spoken of by those who have heard the music. His single songs are said to number nearly four thousand.

Barnett's music is highly dramatic. His melodies are marked by decided character, and his skill in orchestration is great. It is much to be regretted that he has withheld his later works from the public. (*Imp. Dict. of Univ. Biog.*; *Private sources.*) [E. F. R.]

BARNETT, John Francis, nephew of the preceding, son of Joseph Alfred Barnett, a professor of music, was born Oct. 6, 1838. He began the study of the pianoforte when six years old under the guidance of his mother. When eleven he was placed under Dr. Wylde. The boy progressed rapidly in his studies, and a twelvemonth later became a candidate for the Queen's Scholarship at the Royal Academy of Music. This he gained, and at the expiration of two years, the duration of the scholarship, he competed again, and was again successful. During the first year of his scholarship he was engaged and played (from memory) Mendelssohn's Concerto in D minor at the New Philharmonic Society, under the direction of Spohr (July 4, 1853). The second scholarship coming to an end in 1857, he visited Germany, studied under Hauptmann and Rietz at the Conservatorium at Leipsic, and performed at the Gewandhaus (Mar. 22, 1860). At the expiration of three years he returned to London and played at the Philharmonic, June 10, 1861. The first composition that brought the young composer into notice was a symphony in A minor, produced at the Musical Society of London (June 15, 1864). He has since written several quartets and quintets for string instruments, pianoforte trios, as well as an 'Overture Symphonique' for

the Philharmonic Society (May 11, 1868), a concerto in D minor, and other works. In 1867, at the request of the committee of the Birmingham Festival, he composed his cantata 'The Ancient Mariner,' on Coleridge's poem, which was an acknowledged success. In 1870 he received a second commission from the Birmingham Festival committee to write a cantata, and this time he chose 'Paradise and the Peri,' which was performed the same year with great success. Both these works have been given repeatedly in England and the Colonies. Mr. Barnett next wrote his overture to Shakspeare's 'Winter's Tale' for the British Orchestral Society, which performed it Feb. 6, 1873. In the same year he produced his oratorio 'The Raising of Lazarus,' which may be regarded as his most important work. In the following year he received a commission to compose an instrumental work for the Liverpool Festival, when he chose for his theme Scott's 'Lay of the Last Minstrel.' This was produced on Oct. 1, 1874. Besides the works enumerated, Mr. Barnett has written a number of pianoforte and vocal compositions, including a 'Tantum Ergo' in eight parts. [E. F R.]

BARON, Ernst Theophilus, a famous lute player, born at Breslau Feb. 27, 1696. His first instruction was obtained from Kohatt, a Bohemian, in 1710, next in the Collegium Elizabethanum at Breslau; and he afterwards studied law and philosophy at Leipsic. After residing in Halle, Cöthen, Zeitz, Saalfeld, and Rudolstadt, he appeared in Jena in 1720, whence he made an artistic tour to Cassel, Fulda, Würzburg, Nuremberg, and Regensburg, meeting everywhere with brilliant success. In Nuremberg he made some stay, and there published his 'Historisch-theoretisch und practische Untersuchung des Instruments der Lauten' (J. F. Rüdeger, 1727), to which he afterwards added an appendix in Marpurg's 'Historisch-kritischen Beiträge,' etc. In 1727 Meusel, lutenist at the court of Gotha, died, and Baron obtained the post, which however he quitted in 1732, after the death of the duke, to join the court band at Eisenach; there he remained till 1737, when he undertook a tour by Merseburg and Cöthen to Berlin, and was engaged by King Friedrich Wilhelm I. as theorbist, though he possessed no theorbo, and was compelled to obtain leave to procure one in Dresden. Weiss, the great theorbist, was at that time living in Dresden, and from him, Hofer, Kropfgans, and Belgratzky, a born Circassian, Baron soon learnt the instrument. After this he remained in Berlin till his death, April 20, 1760; and published there a great number of short papers on his instrument and music in general. Many of his compositions for the lute were published by Breitkopfs. [F. G.]

BARONESS, THE, an artist of German origin, as is supposed, who sang in the operas abroad and in London, and was known by no other name. She sang the part of Lavinia, in the opera of 'Camilla,' by Buononcini (Drury Lane, 1706), and that of Eurilla in 'Love's Triumph,' at the Haymarket, some time afterwards. She was a perfect mistress of the grandest method of singing, an art which was even then becoming rare, and she shared that proud pre-eminence with but a few such singers, as Cornelio Galli, Tosi, and Siface. She took a great part, with Sandoni, in the teaching and cultivation of Anastasia Robinson, so far as that singer would submit to receive any instruction at all; being herself, at the same time, engaged at the Opera, and 'greatly caressed,' as Hawkins informs us. Her name must not be confounded with that of Hortensia, the mistress of Stradella, as was done by Humfrey Wanley, the compiler of the Harleian Catalogue, relying on the information of his friend Berenclow; for that unfortunate lady was, according to the best accounts, assassinated at the same time with her lover. [J. M.]

BARRE, Antonio, was of French extraction, but the place and date of his birth are unknown. We find him as a composer of established repute at Rome in 1550. In 1555 he started in that capital a printing-press, which he afterwards removed to Milan, and from which he published a series of six volumes containing pieces by himself and other writers. The titles of these are as follows:—(1) 'Primo Libro delle Muse a 5 voci, Madrigali di diversi Autori.' (2) 'Primo Libro delle Muse a 4 voci, Madrigali ariosi di Antonio Barre ed altri diversi autori.' Both of these volumes were dated 1555, and were dedicated, the first to Onofrio Virgili, the second to the Princess Felice Orsini. (3) 'Secondo Libro delle Muse a quattro voci, Madrigali ariosi di diversi excellentissimi Autori, con due Canzoni di Gianetto, di nuovo raccolti e dati in luce. In Roma appresso Antonio Barre 1558.' (4) 'Madrigali a quattro voci di Francesco Menta novamente da lui composti e dati in luce; in Roma per Antonio Barre 1560.' (5) 'Il Primo Libro di Madrigali a quattro voci di Ollivier Brassart. In Roma per Antonio Barre 1564.' Of this last only the alto part is known to exist, having been actually seen by Fétis. (6) 'Liber Primus Musarum cum quatuor vocibus, seu sacræ cantiones quas vulgo Mottetta appellant. Milan, Antonio Barre, 1588.' Out of these six volumes even the learned and indefatigable Baini had only thoroughly satisfied himself as to the existence of the two first. The last is said to contain no less than twenty-nine pieces by Palestrina, besides specimens of the work of Orlando Lasso, Rore, Animuccia, and other rare masters. [E. H. P.]

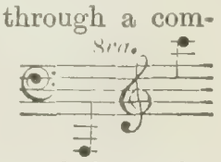
BARRE, Leonard, a native of Limoges, and pupil of Willaert, a singer in the Papal Chapel in 1537, and thus contemporary with Arcadelt. He was one of the musicians sent by the Pope to the Council of Trent in 1545 to give advice on church music. His claims as a composer rest on some motets and madrigals published in a collection at Venice in 1544, and on many MS. compositions preserved in the library of the Papal Chapel. [J. R. S. B.]

BARREL ORGAN. A musical instrument, of all others the most easy of manipulation, as it requires nothing beyond the regular rotary motion of a handle to keep it playing. In some examples even this power is applied mechanically, either by means of clock-work, or by weights. These instruments are of the most various capacities, from the simple street organ —the 'barrel organ' of ordinary parlance—to large and complicated machines representing the full orchestra. But the principle of action is the same in all. A wooden cylinder, or *barrel*, placed horizontally, and armed on its outside circumference with brass *staples* or *pins*, slowly revolves, in the direction from back to front; and in doing so the pins raise certain trigger-shaped keys, which correspond with simple mechanism communicating with valves that on being opened allow wind to enter the required pipes. In this way either melody or harmony is produced. The wind is produced by bellows which are worked by the same motion which turns the barrel. The most simple kind of instrument of this nature is the small 'bird organ,' used, as its name implies, for teaching bulfinches to pipe—which plays the simplest music in melody only.

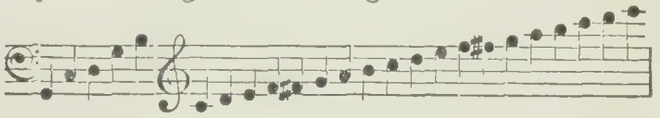
It is not positively known when barrel organs were first made, but they are supposed to date from about the beginning of the last century. An organ-builder of the name of Wright, the great-grandfather of the present firm of Robson, made a barrel organ for Fulham Church, which alone would carry the date a long way back in the last century. Mr. Flight of Exeter Change, the grandfather of the present builder of that name, was also a celebrated maker of barrel organs in his day. The finest and most elaborate specimen of a 'Finger and Barrel' organ that was ever made, was the APOLLONICON, constructed by Flight and Robson at a cost of nearly £10,000, and first exhibited by them about the year 1815. This has been already described under its own head. The firms of Flight and Robson, and of Bryceson, father of the present builder of that name, made perhaps the greatest number of barrel organs, which kind of instrument was in much demand some fifty years ago, for churches and chapels, though now seldom met with there. These were set with psalm and hymn tunes, chants, and occasionally with voluntaries.

A church barrel organ had rarely a *chromatic* compass of notes, but usually only a greater or less approximation thereto. Thus it would generally have either 8, 14, 17, 21, 27, 28, or 31 keys. In the case of one having 14 keys, two *diatonic* scales, of short range, would be presented, namely G and D, into which all the tunes 'marked' upon the barrel would be transposed, and a few pipes at somewhat large intervals apart would be supplied by way of bass, such as D and G. In organs with more keys, the G♯ would be inserted, allowing the scale of A to be used. In organs having a further increased number of keys the D♯ would be introduced, permitting the scale of E to be employed; and so on. Strange to say, scales with flats were never planned unless specially ordered; nor was there much provision for tunes in the minor mode in organs with comparatively but few 'keys.'

Some organs are made having the complete compass and with all the chromatic semitones, and are 'marked' to play overtures, movements of symphonies, selections from operas, sets of waltzes, and other music of that class in the most beautiful manner. The place occupied in the making of these instruments by the late John Robson has been taken by Messrs. Imhof and Mukle of London, who supply a large number of mechanical organs to private houses in the country at prices ranging from £100 to £1500. One of the completest of these instruments contains 8 ordinary stops, ranging through a complete chromatic scale of $5\frac{1}{3}$ octaves, and six solo stops; with a swell of three stops in addition to drums, triangle, cymbals, and castanets—in fact a representation of the entire orchestra. Three machines work the whole of this elaborate apparatus. The barrels can be changed very rapidly, and as each barrel takes $11\frac{1}{2}$ minutes to complete its revolutions there are few movements of the great symphonies and few overtures which cannot be performed, and in fact the best machines contain barrels for such movements as well as for the operatic selections more usually found on them. The mechanical contrivances in these instruments are highly ingenious, the music, as already remarked, is often of the best, and the effect in a suitable space and under proper circumstances is very pleasing. Instruments of this character are occasionally furnished with a manual, and are then known as 'Barrel and Finger Organs.'



The ordinary street organ was first made by a builder named Hicks at the beginning of this century. At present the smallest kind has 24 keys, sounding the following notes:—



In the second size an A is added on the fifth line of the bass stave, and a C♯ in the treble; in the third size an F, F♯, G, and A in alt.; and in the fourth, the largest of all, the scale is continued up to E, and C♯ is added in alt. The effect even of simple modulations with such imperfect means will be easily understood. In fact the 'setting' the barrels of a street organ—like the hearing them—must be a constant struggle with difficulties. There are 2 stops, an open (rarely of metal) and a closed (wood). The barrel is set to play 9 or 10 tunes. These instruments weigh from 40 to 56 lbs., and cost from £18 upwards. The pipes and all other parts are made at the factory of the firm already mentioned, in the Black Forest, but the barrels are 'set'—i.e. the pins are inserted—and the whole put together in London. Street organs are chiefly used in England, but are also largely exported to South America, the West Indies, and other places.

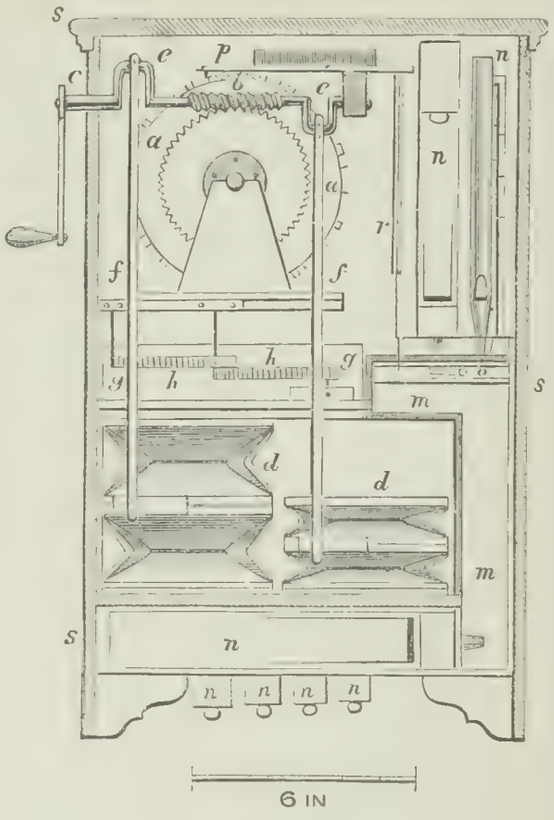
The annexed illustration shows a cross section of an ordinary barrel organ. *a* is the barrel, 'set' round its circumference with 'pins,' at the various intervals, and of the various lengths, necessary for the music, and turned by the worm *b* on the shaft *c*; *d d* are the bellows worked by the cranks *e e* on the shaft and the connecting rods *f f*, and delivering the wind into an air chamber *g*, which runs to the further end of the case, and is kept at a uniform pressure by the spiral springs *h h*. The air vessel again delivers the wind into the wind-chest *m*, which communicates with the pipes *n n*. Each pipe has its valve *o*, which is kept closed by a spring until the corresponding pin on the barrel raises the trigger *p*, and forcing down the connecting wire *r*, opens the valve and admits wind to the pipe. *s s* is the case. Space being very valuable in these instruments the pipes are packed together very closely, and are often bent in shape to fit the demands of the case. In the diagram one is shown lying beneath the floor of the bellows.

The barrel is made of *staves*, about $2\frac{1}{2}$ inches wide, of the best pine wood without knots or sap, and seasoned for many years before being used. At each end of the barrel, and sometimes also in the middle, is a circular piece of hard mahogany called a *barrel-head*, to which the staves are glued and pegged. The barrel is then handed to the turner, who makes it perfectly cylindrical, and it is then covered with cartridge paper and sometimes painted. At one end of the barrel the 'head' is furnished with a circle of teeth for the *worm* connected with the handle to work in when slowly rotating the barrel. Projecting from this 'head' is the *notch-pin*. The number of notches in the pin corresponds to the number of tunes played by the barrel. A *knife* lowered into the notch prevents the barrel from shifting its position. The simplest arrangement is for the barrel to play a tune completely through in the course of a single revolution.

The keys are usually 7-8ths of an inch apart, and the intervening space upon the barrel may be filled either with pins for producing fresh tunes to the number of nine or ten, or with a continuation of the original piece lasting for the same number of revolutions of the barrel. In the latter case the 'notches' are arranged in a spiral so as to allow the barrel to shift horizontally to left or right at the end of each revolution without the intervention of the hand.

It is not within the scope of this article to speak of the players of the street organs, but it may be mentioned that there are some four 'masters' in London, employing from 30 to 50 men each, to whom the organs are let out on hire. The number of organs sold for use in London alone by the house already named is about 30 a year, but the export trade to the West Indies, Brazil, etc., is also considerable.

Barrel organs have been made with three and four barrels in a circular revolving iron frame. The first of the kind, containing four barrels, was made by Mr. Bishop, sen., the father of the present organ-builder of that name, for Northallerton church, Yorkshire, about the year 1820. Many years later Messrs. Gray and Davison



made grinder organs with three barrels in one frame. [E. J. H.]

BARRET, Apollon Marie-Rose, a remarkable oboe player, born in the south of France in 1804, pupil of Vogt at the Conservatoire, solo player at the Odéon and Opéra Comique, and at last permanently attached to the Italian Opera in London till 1874. Barret is the author of the 'Complete Method for the Oboe, comprising all the new fingerings, new tables of shakes, scales, exercises,' etc. (Jullien and Co.). [F. G.]

BARRETT, John, a pupil of Dr. Blow, was music master at Christ's Hospital and organist of the church of St. Mary-at-Hill about 1710. Many songs by him are in the collections of the period, particularly in D'Urfey's 'Wit and Mirth, or, Pills to purge Melancholy,' in which is 'Ianthe the lovely,' which furnished Gay with the tune for his song 'When he holds up his hand' in 'The Beggar's Opera.' Barrett composed overtures and act tunes for 'Love's last shift, or, The Fool in Fashion,' 1696, 'Tunbridge Walks,' 1703, and 'Mary, Queen of Scots,' 1703. [W. H. H.]

BARRINGTON, Daines, the Hon., born in London 1727, died there 1800, Recorder of Bristol and puisne judge in Wales, is mentioned here as the author of an account of Mozart during his visit to London in 1764, at eight years of age, in the 'Philosophical Transactions' for 1780 (vol. xi.). Barrington also published 'Miscellanies' (London, 1781), in which the foregoing account is repeated, and a similar account is given of the early powers of four other children, William Crotch, Charles and Samuel Wesley, and Lord Mornington. [M. C. C.]

BARNBY, Joseph, born at York Aug. 12, 1838, a chorister in York Minster, and student at the Royal Academy of Music: was for nine years organist of St. Andrew's, Wells Street, London, and contributed much to the excellence of the services at that church. Conductor of 'Barnby's Choir,' of the 'Oratorio Concerts,' and of the Royal Albert Hall Choral Society; and appointed to the important post of succentor and director of musical instruction at Eton College, 1875. Mr. Barnby has published an oratorio, 'Rebekah,' which contains some charming modern music, and many other compositions, both sacred and secular. He edited the 'Hymnary' for Messrs. Novello, to which he contributed many tunes, justly admired for beauty of melody and harmony. [E. F. R.]

BARSANTI, Francesco, born at Lucca about 1690. In 1714 he accompanied Geminiani to England, which country henceforth became his own. He played both the flute and oboe, the latter for many years in the opera band. He held a lucrative situation in Scotland, and while there made and published 'A Collection of Old Scots' Tunes, with the Bass for Violoncello or Harpsichord,' etc. (Edinburgh, 1742). After his return to England about 1750, he played the viola at the opera in winter and Vauxhall in summer. At the close of his life he was dependent upon the exertions of his wife and his daughter, a singer and actress of considerable ability. His other publications include 'Twelve concertos for violins,' and Six 'Antifone' in the style of Palestrina. [M. C. C.]

BARTEI, Girolamo, general of the Augustin order of monks at Rome in the beginning of the 17th century. From two somewhat obscure passages in Baini's 'Memorie' we gather that he published at Rome in 1618 some masses for eight voices, some ricercari for two voices, and two books of concerti for two voices. To these Fétis adds some 'Responsoria' for four equal voices, printed at Venice in 1607.

BARTHEL, Johann Christian, born at Plauen 1776, a musician from a very early age, in 1789 played at the house of Doles before Mozart, who praised him highly, and soon after entered the school of St. Thomas at Leipsic as a pupil of J. A. Hiller. At sixteen, on Hiller's recommendation, he was appointed concert-conductor to the court of Schöneburg, and some time afterwards occupied a similar post at Greitz. In 1806, on the death of J. G. Krebs, was appointed organist to the court of Altenburg, where he remained till his death in 1831. [M. C. C.]

BARTHELEMON, François Hippolite, born at Bourdeaux July 27, 1741, was the son of a French government officer and an Irish lady. He commenced life as an officer in the Irish brigade, but being induced by the Earl of Kelly, a well-known amateur composer, to change his profession for that of music, he became one of the most distinguished violinists of his time. In 1765 he came to England, and was engaged as leader of the opera band. In 1766 he produced at the King's Theatre a serious opera called 'Pelopida,' and in the same year married Miss Mary Young, a niece of Mrs. Arne and Mrs. Lampe, and a favourite singer. In 1768 Garrick engaged him to compose the music for the burletta of 'Orpheus,' introduced in his farce 'A Peep behind the Curtain,' the great success of which led to his composing the music for other pieces brought out at the same theatre. In 1768 he went to Paris, and produced there a pastoral opera called 'Le fleuve Scamandre.' In 1770 Barthélémon became leader at Vauxhall Gardens. In 1776 he left England with his wife for a professional tour through Germany, Italy, and France. At Florence Barthélémon, at the request of the Grand Duke of Tuscany, set to music the Abate Semplici's oratorio 'Jefte in Masfa.' He returned to England late in 1777. An acquaintance with the Rev. Jacob Duché, chaplain to the Female Orphan Asylum, led to his composing, about 1780, the well-known tune for the morning hymn 'Awake, my soul.' In 1784 Barthélémon and his wife made a professional visit to Dublin. In 1791–9 he contracted an intimacy with Haydn, then in London. On Sept. 20, 1799, Mrs. Barthélémon died. Besides the compositions above named Barthélémon wrote the music for the following dramatic pieces:—'The Enchanted Girdle'; 'The Judgment of Paris,' 1768; 'The Election,' 1774; 'The Maid of the Oaks,' 1774; 'Belphegor,' 1778; and several quartets for stringed instruments, concertos and duos for the violin, lessons for the pianoforte, and preludes for the organ. As a player he was distinguished by the firmness of his hand, the purity of his tone, and his admirable manner of executing an adagio. He died July 20, 1808. [W. H. H.]

BARTHOLDY, Jacob Salomon, of a Jewish family, born at Berlin 1779, died in Rome 1825, a Prussian diplomatist, and author of an important article in the Berlin 'Musikalischer Zeitung' for 1805, 'Ueber den Volksgesang der Sicilianer.' [M. C. C.]

BARTHOLOMEW, William, born in London 1793; died Aug. 18, 1867. A man of many accomplishments—chemist, violin-player, and excellent flower-painter; but to the English public familiar as the translator or adapter of the words of most of Mendelssohn's vocal works. 'St. Paul' and the 'Lobgesang' were adapted by others, but 'Antigone' (for which he received the gold medal of merit from the King of Prussia), 'Athalie,' 'Œdipus,' 'Lauda Sion,' the 'Walpurgisnight,' the Finale to 'Loreley,' 'Elijah,' and the fragments of 'Christus,' with most of Mendelssohn's songs, were Mr. Bartholomew's work—not, as any one familiar with Mendelssohn's habits will believe, without constant suggestion and supervision from the composer. 'Hear my Prayer' was composed at Mr. Bartholomew's request for the concerts of Miss Mounsey, a lady whom he married in 1853. Besides the above, Mr.

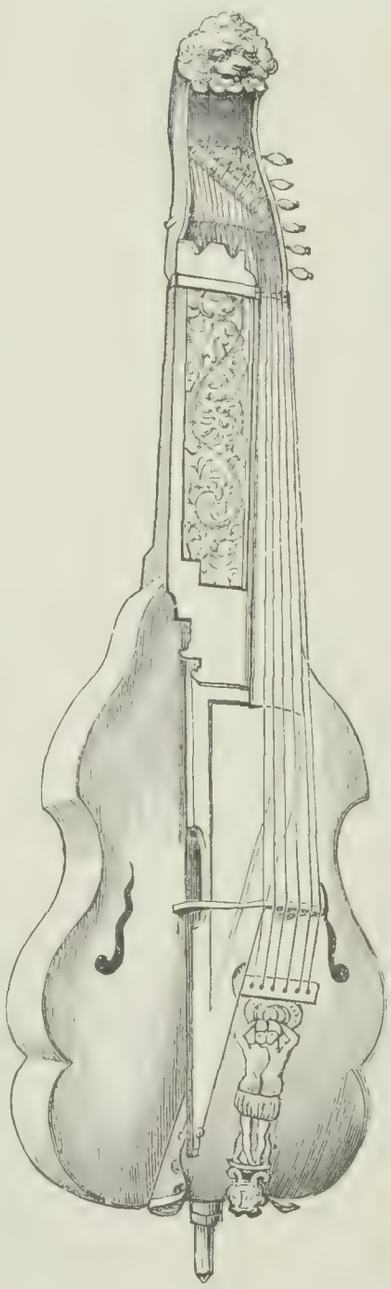
Bartholomew wrote English words for Méhul's 'Joseph' (by command of the Queen); Spohr's 'Jessonda'; Costa's 'Eli,' 'Naaman,' and 'The Dream'; and Mrs. Bartholomew's 'The Nativity,' etc. For the last few years of his life he was confined to his room by paralysis of the lower limbs. [G.]

BARTLEMAN, JAMES, was born Sept. 19, 1769, probably at Westminster, and educated under Dr. Cooke in the choristers' school of Westminster Abbey. He soon showed voice and capacity far beyond his fellow pupils, and became a great favourite with his master. His voice while it remained a soprano was remarkable for strength and fine quality of tone. He distinguished himself as a boy-singer by his refined and expressive rendering of Dr. Greene's solo anthem, 'Acquaint thyself with God.' He was greatly patronised by Sir John Hawkins, in whose family he was a frequent visitor (see Miss Hawkins's 'Anecdotes'). In 1788 his name appears for the first time as a bass chorister, at the Concerts of Ancient Music, where he remained till 1791, when he quitted it to assume the post of first solo bass at the newly established Vocal Concerts. In 1795 he returned to the Ancient Concerts, and immediately took the station which, till compelled by ill health, he never quitted, of principal bass singer in the first concert of the metropolis. Before Bartleman's time only one bass solo of Purcell's had been heard at these concerts—that of the Cold Genius in the 'Frost Scene' of 'King Arthur.' It is to him we are indebted for making us acquainted with those magnificent monuments of the giant of English composers, 'Let the dreadful Engines,' 'Thy Genius, lo!' 'Ye twice ten hundred Deities,' 'Hark, my Daridcar.' In the short course of one season he revived them all, and continued to sing them with unabated applause until he sang no more. Bartleman's execution was that of his time and school, and confined chiefly to written divisions; his own ornaments were few, simple, and chaste, and always in strict keeping with the feeling of the air in which they were introduced. The latter years of his life were embittered by disease which he vainly struggled against. He died April 15, 1821, and was buried in the cloisters of Westminster. His epitaph is by Dean Ireland. He formed a large and valuable musical library, which was sold by auction by White of Storey's Gate, shortly after his death. (*Harmonicon*, 1830; *Books of Ancient Concerts; Private Sources.*) [E. F. R]

BARTLETT, JOHN, an English musician of the early part of the 17th century. He published a work entitled 'A Book of Ayres, with a Triplicitie of Musicke, whereof the First Part is for the Lute or Orpharion, and Viole de Gamba, and 4 Parts to Sing: the Second Part is for 2 Trebles, to sing to the Lute and Viole: The Third Part is for the Lute and one Voyce, and the Viole di Gamba,' 1606. It is dedicated to the 'Right Honourable his singular good Lord and Maister, Sir Edward Seymore.' Bartlett took his degree as Mus. Bac. at Oxford in 1610. (Wood, *Athenæ Oxon.*; Rimbault, *Bib. Mad.*) [E. F. R.]

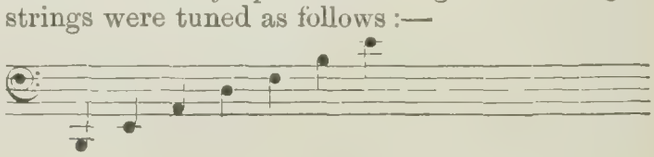
BARTOLINI, VINCENZIO, a very good second soprano, appeared in London, 1782, in 'Il Convito,' a comic opera by Bertoni. In the next season he took part in 'L'Olimpiade,' a pasticcio; and in 1784 he sang in Anfossi's 'Issipile' and 'Due Gemelle,' and the 'Demofoonte' of Bertoni. He sang also in the Commemoration of Handel in Westminster Abbey that year, and in 1786 we find him still in London, performing in Tarchi's 'Virginia.' He was singing with success at Cassel in 1792. [J. M.]

BARYTON, also VIOLA DI BARDONE or BORDONE. *Bordone* is the Italian for 'drone,' and



Leopold Mozart, in his 'Violin-School,' contends that the tone of this instrument, owing probably to the vibration of the sympathetic metal-strings, was suggestive of the hum of the bee.

The Baryton, a stringed instrument not unlike the viola da gamba, played with a bow, was in use up to the end of the 18th century, but owing probably to its complicated mechanism and to the weakness of its tone, which rendered it unfit for use in orchestral playing, is now entirely obsolete. Its neck was very broad, hollowed out, and open at the back. It was usually mounted with six or seven catgut strings, stretched over the fingerboard, and played on with the bow; while the metal strings, varying in number from nine to twenty-four, and running underneath the fingerboard, were pinched with the thumb of the left hand, and acted at the same time as sympathetic strings. The catgut strings were tuned as follows:—



Leopold Mozart considered it one of the loveliest of instruments; and when we hear that Haydn for a considerable time tried hard to learn to play it, we must regret its being now so entirely neglected.

C. F. Pohl, in his Biography of Haydn (Berlin, 1875), gives us the following notices concerning the baryton.

1. Makers:—M. Feldlen (1656), H. Kramer (1714), D. A. Stadlmann (1732), J. Stadlmann (1750), all of Vienna; Joachim Tielke at Hamburg (1686), maker of the fine specimen in the S. Kensington Museum, from which our cut is taken; and Andreas Stainer, of Absom in the Tyrol (1660).

2. Performers:—M. A. Berti, Vienna (1721–1740); Signor Farrant, London (1744); Abell, London (1759–87). Anton Kraft, Karl Franz and Andreas Lidl, members of Prince Esterhazy's private band under Haydn (Lidl played in concerts in England in 1776); Friedel, member of the royal band at Berlin at the end of the last and beginning of the present century. Fauner (1794) and V. Hauschka (1795–1823) are named as accomplished amateur-performers.

3. Composers:—Niemecz, L. Tomasini and A. Kraft of Esterhaz, Wenzl Pichl, Ferd. Paër, Weigl and Eybler, all of Vienna; and last, but not least, Haydn. Pohl enumerates no less than 175 compositions of Haydn's for the instrument; viz. 6 Duets for two barytons, 12 Sonatas for baryton and violoncello, 12 Divertimenti for two barytons and bass, 125 Divertimenti for baryton, viola and violoncello; 17 so-called Cassations; 3 Concertos for baryton with accompaniment of two violins and bass. [P. D.]

BARYTON (Ital. *Baryton*; Fr. *Basse-Taille, Concordant*). The male voice intermediate to the bass and the tenor. The compound *βαρύτονος* signifies 'of heavy *timbre*,'—in this instance, *in relation to the tenor*. It is therefore a misnomer; for, however close their approximation in compass, the quality of what is now understood by the baryton voice unmistakeably marks it as a high bass, not a low tenor. The recognition of this important fact is manifest in the works of the majority of modern composers. One instance out of many will suffice. The principal part in Mendelssohn's oratorio 'Elijah' ranges from the C in the bass stave to the F above it, very rarely descending below the former note. Sung, as it might be with perfect—or too much—ease, by a low tenor, it would obviously lose all its dignity and breadth. Since the production of Mozart's 'Nozze di Figaro' and 'Don Giovanni' the baryton voice has found much favour with composers, and been cultivated with unprecedented success. Innumerable principal parts have been written for it; and not to speak of artists of this class still before the public, the names of Bartleman in England, of Ambrogetti in Italy, and of Martin in France, are historical. [Bass]. [J. H.]

BASEVI, Abramo, a learned Florentine musician, founder and proprietor of the musical periodical 'Armonia' and of its continuation 'Boccherini,' and one of the originators of the Società del Quartetto,' which has done much to introduce German music into Italy. Basevi is the composer of two operas, 'Romilda ed Ezzelino,' produced at the Teatro Alfieri in March 1840, and 'Enrico Odoardo' at the Pergola in 1847; the author of theoretical works on music, of a treatise 'Sulla divinazione,' and a 'Studio delle opere di G. Verdi, 1859.' [F. G.]

BASILI, or BASILY, Domenico Andrea, chapel-master at Loreto in the middle of last century. He died in 1775. Santini's collection contained works by him; and a set of twenty-four studies of his for the clavier, entitled 'Musica universale,' etc. was printed by Alessandri of Venice, and is not without merit. His son Francesco was born in 1766, and on the death of his father the boy was sent to Rome and became a scholar of Jannaconi. While still young he was made chapel-master at Foligno. His first appearance in opera was at Milan, in 'La bella incognita,' when he was twenty-two. For Rome he wrote 'La Locandiera' (1789); for Florence 'Achille nell' assedio di Troja' (1798) and the 'Ritorno d'Ulysse' (1799), and for Venice 'Antigono.' Later he became chapel-master at Macerata, and wrote a large number of comic operas for Venice, not all equally successful. He then made a rich marriage, which enabled him to give up work, but the marriage turned out unhappy, and after a separation, in 1816, he returned to his former post at Loreto. For the San Carlo at Naples Basili composed an oratorio, 'Sansone,' in which Lablache sang the chief part. A requiem which he had written for Jannaconi was performed on March 23, 1816, at the Apostles' Church in Rome. In 1827 he was appointed director of the Conservatorio at Milan, where it was his fortune to refuse admission to Verdi. In August 1837 he was called to Rome to take the place of chapel-master at St. Peter's, vacant by the death of Fioravanti, and remained there till his own death on March 25, 1850. While at Rome he was made very unhappy by his inability with the means at his disposal to perform the great masterpieces of old Italian church music. If supported in his wish a great revival might have been accomplished, but with Basili the last hope of a resurrection of Italian church music has perished, a doom which neither Rossini nor Verdi—whose style the rigid Basili would hardly have approved—have done much to avert. In addition to many operas, besides those already named, and much church music, Basili composed symphonies in the style of Haydn, one of which used often to be played at Brussels under Fétis' conducting, and always with great applause. [F. G.]

BASS. (Ger. *Bass*; Fr. *Basse*; Ital. *Basso*.) The lower or grave part of the musical system, as contradistinguished from the treble, which is the high or acute part. The limits of the two

are generally rather vague, but middle C is the practical division between them. Attempts have been made to spell the word 'base'; but this proceeds from a mistake. 'Bass' derives its form from the French or Italian, though ultimately from the Greek *βάσις* in its sense of foundation or support, the bass being that which supports the harmony. In former times this was much more obvious than it is now, when a single bass line represented a whole piece, and an accompanyist was satisfied with the addition of figures, from which he deciphered the rest of the harmony without having it written out in full. The importance of melody, which is a development of more modern styles, has somewhat obliterated this impression, and music seems to most people now-a-days to depend more upon the upper part than to rest upon the lower. [C. H. H. P.]

BASS is also the lowest or deepest of male voices.

By the old masters those notes of the bass voice only were employed which could be placed on the bass stave, eleven in number. By the moderns this compass has been largely extended, chiefly upwards. For whereas even the employment of the lower E is now exceptional, and that of the D below it most rare, its double octave, and even the F and F♯ above it, are not unfrequently called into requisition, even in choral music. Examples dating even as far back as the end of the 17th century point to the existence of bass voices of extraordinary extent. The Services (intended for *choral* performance) of Blow and his contemporaries abound in deep notes; and in a solo Anthem, 'They that go down to the sea in ships,' composed no doubt for an exceptional performer, Mr. Gostling, of His Majesty's Chapel Royal, as well as for a special occasion—the escape of King Charles II and the Duke of York from shipwreck—Purcell has employed repeatedly both the lower D and the E two octaves and a tone above it. Handel however has employed a still more extended compass. In a song for Polifemo, 'Nel Africano selve,' from his early Acis and Galatea, is the following passage, quoted by Chrysander (Händel, i. 244):—

A contemporary singer, Boschi, might by all accounts have sung these passages—the groups of high notes in the third or falsetto register.

No theory resting on difference of pitch will account for such passages. If the church-pitch of the 17th century was lower than that of our own time, the lower notes employed in them become still more astonishing to us than they are already; if (as is probable if not certain) that pitch was higher than our own, the higher notes will stand in the same predicament. The unquestionably greater compass of the basses, and even tenors, of former times, is however explained by the fact, that judicious training, while it increases the intensity and flexibility, and improves the quality and equality of a voice, diminishes its compass. Voices of extensive range are rarely homogeneous; and their *timbre* or quality is generally found to be in inverse ratio to their extent. More than one passage in Milton, beyond doubt a competent judge, indicates the existence, at any rate in Italy, of considerable vocal skill even in the 17th century; and if half that has come down to us respecting the accomplishments of Balthazar Ferri be true, one singer at least flourished in the first half of that century of extraordinary skill. But prior to the end of it, when the first Italian schools were opened at Bologna under Pistocchi, singing, in the full sense of the word, was an art, skill in which was confined to a small number of persons, and instruction in which had not extended beyond the land of its origin. It is not extraordinary therefore that in the North of Europe very extensive—in other words, untrained—voices existed in the 17th century in greater number than now.

The intensity or power of the bass voice is due to the same causes as that of the tenor, the contralto, the soprano, or indeed of any other wind-instrument—the capacity and free action of the apparatus by which it collects and ejects air—in the human body, the lungs. Its 'volume' depends on the capacity of the pharynx, the cavity at the back of the mouth, between the root of the tongue and the veil of the palate, the part of the vocal mechanism most easily open to inspection. As with all well-endowed vocalists, the jaw of the bass is generally wide, the tongue large, the teeth small, and the mouth capable of easy expansion. The bass singer is generally above, as the tenor is generally below, the middle height.

The bass voice is of three kinds; the *Basso profondo*, the *Basso cantante*, and the *Baryton*. To these may be added the altogether exceptional *Contra-Basso*, standing in the same relation to the *Basso profondo* as the instrument so called does to the violoncello. This voice, found or at least cultivated only in Russia, is by special training made to descend with facility to C below the bass stave, , and even two, three, and four notes lower.

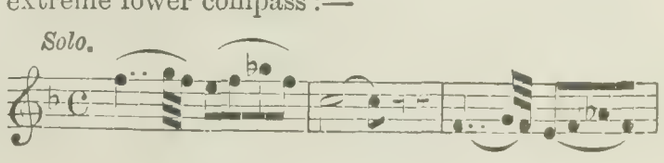
The *Basso profondo* and the *Basso cantante* are distinguished rather by their quality than their compass; that of both extending occasionally from the E flat below the bass stave to the F above it. This possible compass is frequently increased by a third register, or falsetto, of a quality wholly distinct from that of the first or second. The English male counter-tenor is in general a bass whose second and third registers have been cultivated exclusively, always to the deterioration, sometimes to the destruction, of the first.

The employment of basses and barytons in

principal characters on the operatic stage, though frequent only since the latter part of the last century, dates from a much earlier epoch. Instances of it may be found in the operas of Lully and his imitators, native and foreign. Its subsequently increased frequency may still be attributed to the French, with whom dramatic propriety, in opera, has always taken precedence of musical effect. Gluck and his contemporary Piccinni, whose laurels were chiefly gathered on the French stage, both employ this class of voice largely; but it first assumed its still greater importance in the operas of Mozart, who would seem to have been the first composer to recognise the fact that the baryton or higher bass is the average and therefore typical, voice of man. To the prominence given both to the bass and the baryton voice in his later operas he was doubtless urged by a variety of causes, not the least being a paucity of competent tenors in the companies for which he had to write. To this however must be added the decline, in number, excellence, and popularity, of the class of vocalists of which Farinelli may be regarded as the type; and (closely connected with this) to an increased craving for dramatic effect, only attainable by the employment of basses and barytons, among whom as a rule—liable however to splendid exceptions—singing *actors* have always been found in the greatest excellence and number. This change in the once established order of things has not been brought about without protest. A distinguished amateur, the Earl of Mount-Edgecumbe, whose 'Musical Reminiscences' embody an account of the Italian Opera in England from 1773 to 1834, says, in reference to it:—'The generality of voices are (now) basses, which, for want of better, are thrust up into serious operas where they used only to occupy the last place, to the manifest injury of melody, and total subversion of harmony, in which the lowest part is their peculiar province. These new singers are called by the novel appellation of *basso cantante* (which by-the-bye is a kind of apology, and an acknowledgment that they ought not to sing), and take the lead in operas with as much propriety as if the double-bass were to do so in the orchestra, and play the part of the first fiddle. A bass voice is too unbending and deficient in sweetness for single songs, and fit only for those of inferior character, or of the buffo style. In duettos it does not coalesce so well with a female voice, on account of the too great distance between them, and in fuller pieces the ear cannot be satisfied without some good intermediate voices to fill up the interval, and complete the harmony.' And he adds in a note, 'It has always surprised me that the principal characters in two of Mozart's operas should have been written for basses, namely, Count Almaviva and Don Giovanni, both of which seem particularly to want the more lively tones of a tenor; and I can account for it in no other wise than by supposing they were written for some particular singer who had a bass voice, for he has done so in no other instance.' In making this last assertion the venerable writer forgot or ignored Mozart's 'Così fan tutte,' 'Die Zauberflöte,' and 'Die Entführung aus dem Serail,' in all of which basses are employed for principal characters. His argument, however, though ingenious, is based on an assumption unjustified and unjustifiable by either theory or practice — that melody inevitably occupies, or is only effective in, an upper part. The example of Mozart, which he so severely denounces, has been followed largely by Rossini and all the operatic composers of later times. In the majority of their operas *bassi cantanti* appear in large numbers, without any 'kind of apology,' and persons who 'ought not to sing' do so, greatly to the enhancement of dramatic effect and the pleasure of their hearers. [BARYTON.] [J. H.]

BASS-BAR, an oblong piece of wood, fixed lengthwise inside the belly of the various instruments belonging to the violin-tribe, running in the same direction with the strings, below the G string, and acting as a beam or girder to strengthen the belly against the pressure of the left foot of the bridge, as the sound-post does against that of the right foot. It is the only essential part of the instrument which, owing to the gradual elevation of the pitch, has had to undergo an alteration since Stradivari's time. Tartini states, in the year 1734, that the tension of the strings on a violin was equal to a weight of 63 lbs., while now-a-days it is calculated at more than 80 lbs. This enormous increase of pressure requires for the belly a proportionate addition of bearing-power, and this could only be given by strengthening the bass-bar, which has been done by giving it a slight additional depth at the centre, and adding considerably to its length. In consequence of this we hardly ever find in an old instrument the original bass-bar of the maker, just as rarely as the original sound-post or bridge, all of which, however, can be made as well by any experienced living violin-maker as by the original Stradivari or Amati. [P. D.]

BASS CLARINET, an instrument of the same construction as the ordinary clarinet, but speaking an octave lower. The one most generally used is that in B♭, but Wagner writes for one in A, and a third in C has been employed. They are all slow-speaking hollow-toned instruments, rather wanting in power. The clarinet quality is less marked than in the acuter forms of the instrument, insomuch that they more resemble an organ pipe of bourdon tone. Meyerbeer, from his friendship with Sax, who paid particular attention to this instrument, has introduced it in his operas and other works. In the fifth act of 'The Huguenots' there is a fine declamatory passage for it in B♭, exhibiting its extreme lower compass:—



In the Coronation March of the 'Prophète' it takes the melody, and in Auber's Exhibition March two such instruments are employed. It is written in the treble or tenor clef, the latter being better, as assimilating its part to that for the bassoon. Although occasionally of value for producing exceptional effects, it does not present any great advantages for orchestral use. [W. H. S.]

BASS CLEF. The well-known mark of the bass clef, is a modification of the letter *F*, which has in the course of centuries arrived at its present shape, in the same way that the *G* and *C* have altered their forms.

The early sub-division of the graver male voices is attested by the variety of positions on the stave occupied by the bass or F clef. Since the beginning of the 18th century this clef (for whatever variety of bass voice) has occupied the fourth line exclusively. Up to that period its occasional position on the *third* line  indicated that the music following it was for the baryton voice; the stave so initiated being called the baryton stave. At a still earlier epoch the bass clef was sometimes placed on the *fifth* line,  . This *basso profondo* stave, which makes room for two more notes below than can be placed on the bass stave proper, is used (among others) by L. Lossius in his 'Psalmodia' (Wittenbach, 1579), and more recently by Praetorius in his 'Cantiones Sacrae' (Hamburg, 1622). It does not seem however at any time to have met with general favour. On the other hand, the baryton stave was much employed, not only for choral music, but for solos, up to the beginning of the last century. Some of Purcell's songs (e. g. 'Let the dreadful engines') in the 'Orpheus Britannicus' are written upon it, and with reason, for it takes in, with the aid of a single leger-line, the entire compass employed, from the lower A to the upper F. [Clef.] [J. H.]

BASS-DRUM. This is the largest of all drums, and is used in military bands and modern orchestras. [Drum, 3.] [V. de P.]

BASS FLUTE. There were in former times four forms of the flute à bec or flageolet, the lowest being the bass flute, and the others respectively tenor, alto, and descant flutes. These are now all but disused. A bass flute still exists, though it is rarely heard, and is not written for by any composer of eminence. Its compass is from upwards. In older forms of the Bass-flute, to bring the mouthpiece within reach of the finger holes the tube was bent, and returned upon itself, as in the Bassoon; but as made by Boehm it resembles an ordinary flute of large size—32 inches long, and one inch diameter. The Bass-flute requires a great deal of breath, and the tone is not strong, but it is of very fine quality. [W. H. S.]

BASS TRUMPET. [Trombone.]

BASS TUBA. The lowest of the saxhorns. [Bombardon.]

BASSANI, Giovanni Battista, an eminent violin-player and composer, was born at Padua about 1657. He lived for some years at Bologna as conductor of the cathedral-music, and from 1685 in a similar position at Ferrara, where he was a member of the 'Accademia della Morte.' He was also made a member, and in 1682 'principe' of the 'Accademia dei Filarmonici' of Bologna. From 1680 to 1710 he published six operas and thirty-one vocal and instrumental works, viz. masses, cantatas for one, two, or three voices with instruments, and two sets of sonatas for two violins with bass—a complete list is given by Fétis. These works, copies of which are now very rare, are said to be written in a noble pathetic style, and to be marked by good and correct workmanship. Kent borrowed from them largely. Amongst others the chorus 'Thy righteousness,' in his anthem 'Lord what love,' is taken from Bassani's Magnificat in G minor with very slight alteration. The 'Hallelujahs' in 'Hearken unto this' are transcribed note for note from Bassani's 'Alma Mater.' But Kent was a sad appropriator.

Bassani died at Ferrara in 1716. It is generally believed, though not absolutely proved, that Corelli was his pupil. [P. D.]

BASSET-HORN (Fr. *Cor de Bassette*; Ital. *Corno di Bassetto*; Germ. *Bassethorn*). A tenor clarinet standing in F, furnished with additional low keys and a prolonged bore, enabling it to reach the octave C, which is equivalent to F below the bass clef . With the exception of the last four semitones thus added, the instrument is in all respects a clarinet, and the necessary transposition will be found under that heading. These four notes are obtained by means of long keys worked by the thumb of the right hand, which, in the ordinary clarinet, has no other function besides that of supporting the instrument. For convenience of handling, the instrument has been made in various curved shapes; with a bend either between the right and left hands, or in the upper part just below the mouthpiece. Occasion-

ally it has been made with a bore abruptly bent on itself like that of the bassoon. Its compass is more extensive than even the clarinet, and its tone fuller and more reedy.

Mozart is the composer who has written most for this instrument. In one great work, his 'Requiem,' it replaces the clarinet, there being independent parts for two players. Perhaps the finest instance of its use is in the opening of the 'Recordare.' In his opera 'Clemenza di Tito' it is also employed, and a fine obbligato is allotted to it in the song 'Non piu di fiori.' In his chamber music there are often parts for two or even three bassethorns.

Mendelssohn has also written for it, especially two concert-pieces for clarinet and bassethorn, op. 113 and 114, intended to be played by the Bärmanns, father and son, with pianoforte accompaniment. Other composers have occasionally employed it, but it is to be regretted that it has never taken so prominent a place in orchestral music as its fine tone and facility of execution entitle it to hold. It is often confused with the COR ANGLAIS, or English horn, which is an oboe of similar pitch to the Basset-horn. [W. H. S.]

BASSI, LUIGI, born at Pesaro 1766, died at Dresden 1825. An eminent baritone singer, first appeared on the stage in women's parts at the age of thirteen; a pupil of Laschi at Florence. In 1784 he went to Prague, where he made a great reputation, especially in Paisiello's 'Re Teodoro,' and 'Barbiere di Siviglia,' and Martini's 'Cosa rara.' Mozart wrote the part of Don Juan for him.[1] He is said to have asked Mozart to write him another air in place of 'Fin c'han dal vino' in Don Juan, but Mozart replied 'Wait till the performance: if the air is not applauded, I will then write you another.' A hearty encore settled the question. He is also said to have induced Mozart to re-write 'La ci darem' five times to suit him. But these stories are probably mere legends of Mozart's good humour. In 1806 Bassi left Prague in consequence of the war. For some years he was in the pay of Prince Lobkowitz, Beethoven's friend, appearing occasionally in public in Vienna; but in 1814 he returned to Prague, when Weber had the direction of the opera, and in 1815 was called to Dresden as a member of the Italian company there, but shortly afterwards became manager of the opera instead, and died there in 1825. Bassi was gifted with a fine voice, even throughout the register, a prepossessing appearance, and considerable dramatic ability. He is not to be confounded with Nicolo or Vincenzo Bassi. [M. C. C.]

BASSIRON, PHILIPPE, a native of the Netherlands, living in the 15th century, and contemporary with Josquin des Pres. Some of his masses were printed by Petrucci of Fossombrone in 1508. [J. R. S. B.]

[1] Bassi is usually said to have been also the original Almaviva in Figaro; but this is incorrect, Mandini was the first. See Jahn's 'Mozart' (2nd ed.) ii. 243.

BASSO CONTINUO, BASSE CONTINUE, or simply CONTINUO, is the same thing as our English term Thorough-Bass in its original and proper signification, as may be seen by comparison of English with foreign works where these terms occur. For instance, in the score of the 'Matthäus Passion' of Bach the lowest line in the accompaniments of the choruses is for the violoncellos and basses and 'organ e continuo,' for the two latter of which figures are added; while in the recitative a single line and figures is given for the 'continuo' alone. The edition of Purcell's 'Orpheus Britannicus,' published in 1698-1702, has the title 'A collection of choicest songs for 1, 2, and 3 voices, with symphonies for violin and flutes and a *thorough-bass* to each song figured for the Organ, Harpsichord, or Theorbo-Lute.' The origin of the name is the same in both cases, as it is the bass which *continues* or goes *through* the whole piece, from which with the aid of figures the accompaniment used to be played. (For complete discussion of the subject see THOROUGH-BASS.) [C. H. H. P.]

BASSO DI CAMERA, Italian for a chamber-bass; that is, a small double-bass, such as is generally used by double-bass players for solo performances.

BASSO OSTINATO is the same as the English GROUND-BASS, which see. It means the continual repetition of a phrase in the bass part through the whole or a portion of a movement, upon which a variety of harmonies and figures are successively built. [C. H. H. P.]

BASSOON (Fr. *Basson*, Ital. *Fagotto*, Ger. *Fagott*). A wooden double-reed instrument of eight-foot tone. The English and French names are derived from its pitch, which is the natural bass to the oboe and other reed instruments; the Italian and German names come from its resemblance to a faggot or bundle of sticks.

It is probably, in one form or another, of great antiquity, although there exists circumstantial evidence of its discovery by Afranio, a Canon of Ferrara. This occurs in a work by the inventor's nephew, entitled 'Introductio in Chaldaicam linguam, mystica et cabalistica, a Theseo Albonesio utriusque juris doctori,' etc. (Pavia, 1539). It is illustrated by two rough woodcuts, and is termed 'Descriptio ac simulacrum Phagoti Afranii,' from which it would appear that the author, although an Italian, did not realise the etymological origin of the name. A class of instruments named bombards, pommers, or brummers, which were made in many keys, seems to have been the immediate predecessor of the bassoon. Some of the older forms are well described, with representations of their shape, in the 'Metodo completo di Fagotto' of Willent. They possess a contrivance which does not exist at the present day on any reed, though it somewhat anticipates the 'crooks' and 'transposing slides' of brass instruments. Besides the holes to be stopped by the fingers, there are other intermediate apertures stopped by pegs, and only to be opened in certain keys. No doubt

in the older style of music this mechanism may have been useful; but it would hardly adapt itself to the rapid modulations of later composers.

The Bassoon is an instrument which has evidently originated in a fortuitous manner, developed by successive improvements rather of an empirical than of a theoretical nature; hence its general arrangement has not materially altered since the earliest examples. Various attempts have been made to give greater accuracy and completeness to its singularly capricious scale; but up to the present time all these seem either to have diminished the flexibility of the instrument in florid passages, or to have impaired its peculiar but telling and characteristic tone. Almenräder in Germany is credited with certain improvements, but one of the best of these efforts at reconstruction was shown in the Exhibition of 1851 by Cornelius Ward, and it has already fallen entirely into disuse. Hence bassoons by the older makers are generally preferred to newer specimens, and they therein alone resemble stringed among wind-instruments. Those of Savary especially are in great request, and command high prices. The copies of these made by Samme in this country are not far inferior to them, though they lack the particular sweetness and singing tone of the French maker.

The compass is from sixteen-foot B♭ to A♭ in the treble 
The upper limit has been greatly raised in modern instruments by additional mechanism, so that the C, and even the F above the A♭ referred to, can be reached. The natural scale is however that named, the notes above A♭ being uncertain and somewhat different in quality from those below.

Like the oboe, of which it is the bass, the bassoon gives the consecutive harmonics of an open pipe, a fact which Helmholtz has shown mathematically to depend on its conical bore.

It consists of five pieces, named respectively the crook, wing, butt, long joints, and bell. These, when fitted together, form a hollow cone about eight feet long, tapering from $\frac{3}{16}$ of an inch at the reed to $1\frac{3}{4}$ inches at the bell end. In the butt joint this bore is bent abruptly back upon itself, both sections being pierced in the same block of wood, and united at the lower end; the prolongation of the double tube being in general stopped by means of a flattened oval cork. The whole length of the instrument, by internal measurement, being ninety-three inches, about twelve are in the crook, thirty-two in the downward branch, and the remaining forty-nine in the ascending joints. The height is thus reduced to a little over four feet, and the various holes are brought within reach of the fingers. They would still be situated too far apart for an ordinary hand if they were not pierced obliquely; the upper hole for each forefinger passing upwards in the substance of the wood, and those for the third or ring-fingers passing downwards in a similar way. There are three holes in the wing joint—so named from a projecting wing of wood intended to contain them; three others on the front of the butt joint—to be closed by the first three fingers of the left and right hands respectively; a single hole on the back of the butt joint, for the thumb of the right hand; and a series of interlocking keys on the long joint, producing the lowest notes of the scale by means of the left thumb. It will thus be seen that the instrument is held in the hollow of the two hands, with the left uppermost, at the level of the player's breast, the right hand being somewhat below and behind the right thigh. A strap round the neck supports the bulk of the weight. The little finger of the right hand touches two keys which produce A♭ and F  . With this latter note the real fundamental scale ends, exactly as it does in the oboe; all the mechanism of the long joint and bell only strengthening the tone and producing the seven lowest semitones upwards from B♭. In comparing the bassoon with its kindred treble instrument, the oboe, it must be remembered that it has this supplementary prolongation of its compass downwards, which the other lacks. The seven lowest holes and keys therefore produce only one sound apiece; but the case is totally different with those following next above them, from the little finger of the right hand to the forefinger of the left. These eight holes and keys can each be made to give two sounds at an interval of an octave by varying the pressure of the lip. After the double register thus obtained has been run through, there still remain a few notes to be got by cross-fingerings at the interval of a twelfth, namely the F♯, G♮, and A♭, with which the natural scale has been stated to end. In modern instruments two or even three keys are added at the top of the wing-joint, to be worked by the thumb of the left hand stretched across from the other side. They open small harmonic holes close to the crook, and enable seven semitones to be added, from A to E♭ inclusive

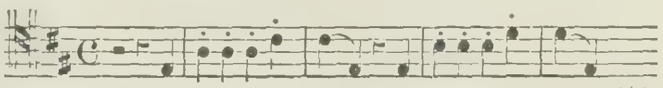
Even above this there are two outlying notes, E♮ and F  , to be obtained by exceptional players without mechanism; and it is not improbable that still higher, although

useless, harmonics might by assiduous study be exacted from this remarkable instrument.

It will thus be seen—what indeed was affirmed in the outset—that the scale of the bassoon is complicated and capricious. To this it must be added that it is variable in different patterns, and that even a fine player cannot play upon an unfamiliar instrument. Each has to be learned independently; and although the theoretical imperfection of such a course is obvious, it has a certain compensation in the fact that a bassoon-player must necessarily rely upon his ear alone for correct intonation, and that he thus more nearly approximates to the manipulation of stringed instruments than any member of the orchestra, except the trombones. In some of the most important and delicate notes there are two, three, or even four alternatives of fingering open to the performer; as these produce sounds slightly differing in pitch and quality, they may be employed by a judicious musician for obtaining accurate consonance and for facilitating difficult passages. But it must be admitted that the scale of the bassoon is a sort of compromise, for the construction of which no precise formula can be given.

Whatever its theoretical imperfections, it cannot be denied that the musical value of the bassoon is very great, and it has for about two centuries been largely used by composers. Its position in the orchestra has somewhat changed in the course of time. Originally introduced—probably first in Cambert's 'Pomone' (Paris, 1671)—as a purely bass instrument, it has gradually risen to the position of tenor, or even alto, frequently doubling the high notes of the violoncello or the lower register of the viola. The cause of the change is evidently the greater use of bass instruments such as trombones and ophicleides in modern orchestral scores, on the one hand, and the improvements in the upper register of the bassoon itself on the other. There is a peculiar sweetness and telling quality in these extreme sounds which has led to their being named vox-humana notes. We have good evidence that even in Haydn's time they were appreciated, for in the graceful minuet of his 'Military Symphony' we find a melody reaching to the treble A♮. The passage affords an excellent specimen of good solo writing for the instrument, though requiring a first-rate player to do it justice.

Indeed it is between the time of Handel and Haydn that the above-mentioned change seems to have taken place. Handel's scores contain few bassoon parts, and those—with one remarkable exception, the Witch music in the oratorio of Saul—mostly of a ripieno character; Haydn on the other hand uses it as one of the most prominent voices of his orchestra. Boieldieu also, who dates a little later, has assigned to the bassoon the principal melody in the overture to the 'Dame Blanche,' repeating it afterwards with increased elaboration in the form of a variation.



etc.

Variation.

etc.

Bach uses it frequently, sometimes merely to reinforce the basses, but often with an independent and characteristic part. The 'Quoniam' in the Mass in B minor has two bassoons obligato throughout, and other instances of its use will be found in the cantatas 'Am Abend aber' (No. 42), and 'Ich hatte viel Bekümmerniss' (No. 21), in the volumes of the Bach-Gesellschaft. In the Score of the Matthew Passion the bassoon does not appear. Boyce, a writer who can hardly have known much of foreign music, gives it a fine part in the song 'Softly rise thou southern breeze,' in his 'Solomon' (1743).

Cherubini has given it a fine solo in his opera of 'Médée,' which is remarkable for its difficulty, and also for its extraordinary compass, ending on the extreme high notes.

Mozart, besides a concerto with orchestra which is hardly[1] known, constantly employs the bassoon in his scores. It figures prominently in his symphonies, even when other wind-parts are deficient; most of his masses contain fine phrases for it; in the Requiem, of which the instrumentation is peculiar, it fills a leading place, contrasting with three trombones and two corni di bassetto. All his operas moreover assign it great prominence; he seems fully aware of its beauty as an accompaniment to the voice, which it supports and intensifies without the risk of overpowering the singer.

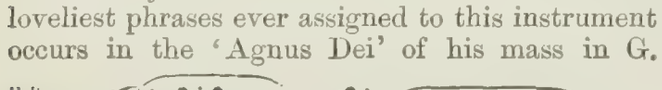
Beethoven never fails to employ it largely, reinforcing it in some works by the contrafagotto. The First Symphony is remarkable for the assignment of subject as well as counter-subject in the slow movement to first and second bassoons working independently; both afterwards joining with the two clarinets in the curious dialogue of the trio between strings and reeds. The Second Symphony opens with a prominent passage in unison with bass strings; in the Adagio of the Fourth is an effective figure exhibiting the great power of staccato playing possessed by the bassoon; in the first movement of the Eighth it is employed with exquisite humour, and in the minuet of the same symphony it is entrusted with a melody of considerable length. Perhaps the most remarkable passage in Beethoven's writing for this instrument, certainly the least known, occurs in the opening of the Finale of the Ninth or Choral Symphony, where the theme of the movement, played by cellos and violas in unison, is accompanied by the first bassoon in a

[1] In B flat, composed 1774. Kochel, No. 191.

long independent melody of the greatest ingenuity and interest.

Mendelssohn shows some peculiarity in dealing with the bassoon. He was evidently struck, not only with the power of its lower register, a fact abundantly illustrated by his use of it in the opening of the Scotch Symphony and, with the trombones, in the grand chords of the overture to 'Ruy Blas'; but he evidently felt, with Beethoven, the comic and rustic character of its tone. This is abundantly shown in the music to the 'Midsummer Night's Dream,' where the two bassoons lead the quaint clowns' march in thirds; and still further on in the funeral march, which is obviously an imitation of a small country band consisting of clarinet and bassoon, the latter ending unexpectedly and humorously on a solitary low C. In the Overture the same instrument also suggests the braying of Bottom. It is worth notice how the acute ear of the musician has caught the exact interval used by the animal without any violation of artistic propriety. As if in return for these vile uses, the same composer has compensated the instrument in numberless fine figures, of which it is unnecessary to specify more than the quartett of horns and bassoons in the trio of the Italian Symphony, the majestic opening phrases of the so-called 'Pilgrim's March,' and the flowing cantabile in octaves with the oboe which forms the second movement of the introductory symphony to the 'Hymn of Praise.'

Weber exhibits the same knowledge of its powers as his predecessors. Although the French horn, and after it the clarinet, are obviously his favourite instruments, the bassoon comes very little behind them. One of the loveliest phrases ever assigned to this instrument occurs in the 'Agnus Dei' of his mass in G.



It is absolutely alone on the telling G of the upper register; the voice following in imitation and the bassoon then repeating the passage. In the Concert-Stück, for piano and orchestra, there is a difficult but beautiful point for bassoon alone, which leads into the march for the clarinets. His two symphonies are marked by the same character, especially the first, in which the bassoon leads throughout, with some effective organ points. The overtures, and indeed all his operas, are very fully scored for bassoons. His bassoon concerto in F and his Hungarian rondo are grand works, scored for full orchestra.

Meyerbeer has somewhat neglected the bassoon for the bass clarinet—in the Prophète March for instance; but he has given it many passages of importance, and some of a grotesque character, as in the incantation scene of 'Robert le Diable.' He frequently employs four instead of two instruments.

The Italian writers use it freely. Donizetti assigns it an obbligato in the air 'Una furtiva lagrima.' Rossini opens the 'Stabat Mater' with the effective phrases—

for bassoons and cellos in unison, which again occur at the end of the work. In his latest composition, the 'Messe Solennelle' it is almost too heavily written for, and is at times comic and ineffective.

Auber writes but little for the bassoon, using it chiefly in sustaining high notes at the very top of its register. There is however a melodious passage for the two, with the horns, in the overture to the 'Sirène.'

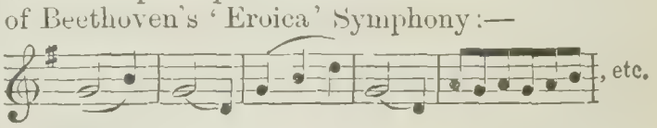
The following list of music for bassoon, solo and concertante, may be found useful. The writer desires to acknowledge the valuable aid he has received in its compilation and elsewhere from Mr. Charles Evans of the British Museum.

Mozart, concerto in B♭; Ferdinand David, concertino in B♭, op. 12; Kalliwoda, var. and rondeau in B♭, op. 57; Weber, andante and rondo ongarese in C. op. 55, concerto in F, op. 75; Kummer, concerto in C, op. 25; Neukirchner, fantasia with orchestra; Jacobi, potpourri with orchestra; Dotzauer, quatuor, op. 36, with violin, viola, and cello; twelve pieces for three bassoons, by G. H. Kummer, op. 11; twelve trios for three bassoons, by G. H. Kummer, op. 13; forty-two caprices for bassoon, by E. Ozi; six duos concertants for two bassoons, by E. Ozi; Lindpaintner, op. 24, rondeau in B♭.

Other works will be found under CLARINET, OBOE, etc. [W. H. S.]

BASTARDELLA, or BASTARDINA. See AGUJARI.

BASTIEN ET BASTIENNE, a German operetta or pastoral in one act (15 Nos.), words by Schachtner from the French, the music by Mozart 'in his 12th year,' 1768; performed in a Garden-house at Vienna belonging to his friends the Messmers. (Köchel, No. 50; Jahn, 1st ed. i. 122). The subject of the Intrade (in G) is by a curious coincidence all but identical with the principal theme of the first movement of Beethoven's 'Eroica' Symphony:—



BASTON, JOSQUIN, a Flemish composer of the first half of the 16th century, and still living in 1566. Unlike most of his contemporaries, he does not seem to have visited Italy, as his published works, consisting of motets and chansons, form part of collections printed either at Louvain or Antwerp. [J. R. S. B.]

BATES, JOAH, was born in 1740 at Halifax, where he received his early education under Dr. Ogden, and learned music from Hartley, organist of Rochdale. He subsequently removed to Manchester, where he studied organ-playing

under Robert Wainwright, organist of the collegiate church, now the cathedral. He next removed to Eton and thence to Cambridge, where he became fellow and tutor of King's College. He then became private secretary to the Earl of Sandwich, first Lord of the Admiralty, and a well known musical amateur. About that time he conceived the plan of the Concert of Ancient Music which was established in 1776, Bates being appointed conductor. In 1780 he was appointed a commissioner of the Victualling Office, and married Miss Sarah Harrop, a pupil of Sacchini, and a favourite concert singer, who had studied under him the music of Handel and the elder masters. He next, in 1783, in conjunction with Viscount Fitzwilliam and Sir Watkin Williams Wynne, projected the Commemoration of Handel, which was carried into effect the following year, Bates officiating as conductor. He was afterwards appointed a commissioner of the Customs and a director of Greenwich Hospital. Having projected the Albion Mills, of the success of which he was so sanguine as to invest the whole of his own and his wife's fortunes in them, he was nearly ruined by their destruction by fire in 1791. In 1793 he resigned the conductorship of the Concert of Ancient Music. He died June 8, 1799. A fine painting of Joah Bates and his wife, by F. Coates, R. A., is in the possession of the Sacred Harmonic Society. [W. H. H.]

BATES, William, a composer of the 18th century, produced music for the following dramatic pieces:—'The Jovial Crew,' comic opera, 1760; 'Pharnaces,' opera, 1765; 'The Ladies' Frolick,' an alteration of 'The Jovial Crew' (jointly with Dr. Arne), 1770; 'The Theatrical Candidates,' musical prelude, 1775. He was also the composer of 'Songs sung at Marybon Gardens, 1768,' and of several glees, catches, and canons, eleven of which are included in Warren's collections. It has been conjectured that he was a member of one of the theatrical orchestras. [See Catley, Anne.] [W. H. H.]

BATESON, Thomas, one of the great English madrigalian composers of the Elizabethan period. The dates of his birth and decease are unknown; but we may infer that he was a young 'practitioner in the art' when he produced his 'First Set of Madrigals' in 1604, wherein he compares his compositions to 'young birds feared out of their nest before they be well feathered,' and hopes they will be 'so shrouded' in 'the leaves of his patron's good liking,' so that neither any 'ravenous kite nor craftie fowler, any open mouthed Momus or mere shy detractor may devour or harm them that cannot succour or shift for themselves.' At the back of the dedication to his 'honourable and most respected good friend Sir William Norres,' is the madrigal 'When Oriana walkt to take the ayre,' with the following note. 'This song was sent too late, and should have been printed in the set of Orianas' (a set of madrigals in praise of Queen Elizabeth, published in 1601). In 1599, five years prior to the date of his first publication, he was appointed organist of Chester Cathedral, which situation he held till 1611. Shortly after this date he went to reside in Ireland, under the patronage of Lord Chichester, and in 1618 published his 'Second Set of Madrigals.' On the title-page of this work he styles himself 'Bachelor of Musick, Organist, and Master of the Children of the Cathedral Church of the Blessed Trinity, Dublin.' In the university of the latter city he is supposed to have taken his degree. Bateson's first set of Madrigals was reprinted by the Musical Antiquarian Society, and specimens of his church music are in the same society's 'Anthems by Composers of the Madrigalian Era.' (*The composer's works*; *Private Sources.*) [E. F. R.]

BATON, Charles, called 'le jeune' to distinguish him from his elder brother Henri, who performed on the musette. Was a player on the Vielle or hurdy-gurdy in Paris in the middle of the 18th century. He published an 'Examen de la lettre de M. Rousseau sur la musique Française' (Paris, 1754), and a 'Memoire sur la Vielle' in the 'Mercure' for 1757. He improved his instrument, and composed much for it—Suites for two vielles, musettes, etc. Baton died at Paris in 1758.

BATON (Fr. *Bâton*), the stick with which the conductor of an orchestra beats the time. Hence the expression 'under Mr. —'s baton,' *i.e.* under his direction. The first baton employed in England was probably the 'Taktirstäbchen' used by Spohr at the Philharmonic in 1820 (Selbstbiog. ii. 87). Batons are usually turned out of maple-wood for lightness, 21 or 22 inches long, and tapering from 3-4ths to 3-8ths of an inch in diameter. They are occasionally given as 'testimonials,' in which case they are made of metal or of ivory ornamented with silver or gold.

When Berlioz and Mendelssohn met at Leipsic in 1841 they exchanged batons, and Berlioz accompanied his with the following letter, in the vein of Fenimore Cooper:—'Au chef Mendelssohn. Grand chef! nous nous sommes promis d'échanger nos tomahawcks; voici le mien! Il est grossier, le tien est simple; les squaws seules et les visages pâles aiment les armes ornées. Sois mon frère! et quand le Grand Esprit nous aura envoyés chasser dans les pays des âmes, que nos guerriers suspendent nos tomawcks à la porte du con eil.' Mendelssohn's reply is not extant, but no doubt it was quite *à propos*. [G.]

BATTEN, Adrian, the date of whose birth is not known, was brought up in the Cathedral Choir of Winchester, under John Holmes the organist, and in 1614 appointed vicar-choral of Westminster Abbey. In 1624 he removed to St. Paul's Cathedral, where he held the same office in addition to that of organist. Batten's name is well known in our cathedral choirs from his short full anthem 'Deliver us, O Lord.' Burney says of him: 'He was a good harmonist of the old school, without adding anything to the common stock of ideas in melody or modulation with which the art was furnished long

before he was born. Nor did he correct any of the errors in accent with which former times abounded.' This criticism is hardly just. Batten's anthem, 'Hear my prayer,' is, in point of construction and effect, equal to any composition of his time. He composed a Morning, Communion, and Evening Service in the Dorian Mode, and a large number of anthems; the words of thirty-four may be found in Clifford. Six are printed in Barnard, two more in Boyce, and 18 others are comprised in Barnard's MS. collection in the library of the Sacred Harmonic Society.

The date of Batten's death is uncertain. He was living in 1635, when he made a transcript of some anthem music, to which the following note is appended:—'All these songs of Mr. John Holmes was prickt from his own pricking in the year 1635, by Adrian Batten, one of the vickers of St. Paul's in London, who sometime was his scholar.' He is supposed to have died in 1640. (Burney, *Hist.; MS. Accounts of Westminster and St. Paul's.*) [E. F. R.]

BATTISHILL, Jonathan, the son of Jonathan Battishill, a solicitor, and grandson of the Rev. Jonathan Battishill, rector of Sheepwash, Devon, was born in London in May 1738. In 1747 he became a chorister of St. Paul's Cathedral under William Savage, and on the breaking of his voice his articled pupil. On the expiration of his articles he officiated for Dr. Boyce at the organ of the Chapel Royal, and composed some songs for Sadler's Wells Theatre. Soon afterwards he was engaged to play the harpsichord at Covent Garden Theatre, an early result of which engagement was his marriage in 1763 to Miss Davies, a singing-actress at that theatre, and the original performer of Madge in 'Love in a Village.' On her marriage Mrs. Battishill retired from the exercise of her profession. In 1764 Battishill composed, in conjunction with Michael Arne, the music for the opera of 'Almena.' The piece, owing to the poverty of the dialogue, was soon withdrawn, but for proof that want of merit in the music had nothing to do with the withdrawal it is only necessary to refer to Battishill's songs 'Thus when young Ammon march'd along' and 'Poised in Heaven's eternal scale,' written to display the fine bass voice of Samuel Champness. In the same year Battishill composed the music for the pantomime 'The Rites of Hecate.' At a later period he abandoned the theatre and devoted his attention to the composition of church music, and produced several anthems (including that beautiful one 'Call to remembrance'), in which melody and skilful treatment of the parts are admirably combined. In 1771 he gained the Catch Club prize for his fine Anacreontic glee 'Come bind my hair.' About this time he was appointed organist of the united parishes of St. Clement, Eastcheap, and St. Martin, Orgar, and soon afterwards of Christ Church, Newgate Street. In 1775 he lost his wife, and her death so affected him that he desisted from composition, and devoted much of his time to his books, of which he had collected between six and seven thousand volumes, chiefly classical works. He died at Islington Dec. 10, 1801, aged sixty-three years, and was buried, pursuant to his dying wish, in St. Paul's Cathedral, near the grave of Dr. Boyce. Battishill published two collections of songs for three and four voices, and a collection of favourite songs sung at the public gardens and theatres. Several of his glees and catches are printed in Warren's and other collections. Four of his anthems are included in Page's 'Harmonia Sacra.' In 1804 Page edited 'Six Anthems and Ten Chants,' with a finely engraved portrait of the composer prefixed. In the same year Page also inserted in a collection of hymns twelve psalm tunes and an ode composed by Battishill. The popular song 'Kate of Aberdeen' was composed by Battishill for Ranelagh Gardens. Battishill's compositions are distinguished by an uncommon combination of energy and vigour with grace and elegance. [W. H. H.]

BATTLE OF PRAGUE, THE. A piece of military programme-music describing the engagement between the Prussians and Austrians before Prague, in 1757. It was composed by Kotzwara—a native of Prague—for Piano, with Violin and Cello *ad libitum*, and was published at Hamburg and Berlin (according to Fétis) about 1792, and in London in 1793. The piece had an immense success at the time and for a quarter of a century after, and was the precursor of the 'Siege of Valenciennes,' and many others of the same kind—culminating in Beethoven's 'Battle of Vittoria.' The English editions contain 'God save the King,' as the Hymn of triumph after the victory, and a drum-call 'Go to bed Tom.' Now as 'Heil dir in Siegerkranz,' which has become a kind of Prussian national hymn, to the tune of 'God save the King,' was not produced till 1799, it seems probable that the tune and the name have been put into the English editions for the English market, and that if the German edition could be seen (which the writer has not been able to do) it would be found that some Prussian air and call were there instead of those named. [G.]

BATTLE SYMPHONY. The ordinary English name for Beethoven's 'Wellingtons Sieg, oder die Schlacht bei Vittoria.' It was first performed in London, under the direction of Sir George Smart, at Drury Lane Theatre on Feb. 10, 1815.

BATTON, Désiré Alexandre, born in Paris 1797, died there 1855; the son of an artificial flower maker. Was a pupil at the Conservatoire (including counterpoint under Cherubini) from 1806 to 1817, in which year he won the 'Grand Prix' for his cantata 'La mort d'Adonis,' entitling him to travel for five years in Italy and Germany at government expense, and he accordingly started in 1818, after the performance of his comic opera 'La Fenêtre secrète' at the Théâtre Feydeau. During his tour he composed

several works, chiefly sacred music, in Rome, and a symphony performed in Munich. After his return to Paris in 1823 he brought out three operas, the failure of which drove him to adopt his father's trade. 'La Marquise de Brinvilliers,' composed in 1832 in conjunction with Auber, Hérold, and Carafa, was however better received. Batton's failure as a dramatic composer may in great part be attributed to the poverty of his libretti. [M. C. C.]

BATTUTA (Ital. beat, or measure). 'A battuta,' like 'a tempo,' means a return to the strict beat. Beethoven uses the word in the Scherzo of the Choral Symphony—'Ritmo di tre battute,' 'Ritmo di quattro battute,' to signify that the rhythm in those places goes in groups of three bars or four bars respectively. In the Presto of his E flat Quartett (Op. 74), where the time changes to 'Più presto, quasi prestissimo,' he adds the direction 'Si ha s'immaginar la battuta di 6-8'—the movement being written in 3-4.

BAULDUIN, or BAUDOUIN, Noel, a native of the Netherlands, contemporary with Josquin des Prés, and from 1513 to 1518 chapel-master of the church of Notre Dame at Antwerp, where he died in 1529. Two of his motets were printed by Petrucci of Fossombrone in 1519, which suggests that he visited Italy, and proves in any case that his fame had reached that country during his lifetime. The rest of his works, many of which are preserved in the Papal Chapel, are included in collections published some time after his death. [J. R. S. B.]

BAUMGARTEN, C. F., a native of Germany, and pupil of the famous organist J. P. Kunzen; came early to London and never left it; was organist at the Lutheran Chapel in the Savoy, and leader of the band of the English opera, Covent Garden. He was also composer and leader of the Duke of Cumberland's private band, which contained Blake, Waterhouse, Shield, Parke, and the elder Cramer. Baumgarten wrote much for the 'Professional Concerts' of 1783 and later, various operas and pantomimes—amongst others, Blue Beard, 1792. As an organist he had great skill in modulation and a thorough knowledge of his instrument, but as a violin-player, both in concerted music and as a leader, he was languid and wanting in energy—'a sleepy orchestra,' says Haydn in his diary. His theoretical knowledge was acknowledged by Haydn and Gyrowetz. 'He was the man to mix learning with effect, and therefore to write captivations that are felt by all' ('The World,' 1787). When he made Haydn's acquaintance in 1792 he had almost forgotten his mother tongue. In 1794 he lost his position at Covent Garden, and was succeeded by Mountain ('The Oracle,' Sept. 19). After this nothing is known of him. Baumgarten was a man of much ability and culture; his pupils were numerous and distinguished. He wrote an admirable treatise on music, and was a keen student of astronomy, mathematics, and history; but he does not seem to have possessed the art of making use of his advantages, and was quickly forgotten. A song of his, 'Her image ever rose to view,' from 'Netley Abbey,' is preserved in Ayrton's 'Musical Library.' [C. F. P.]

BAYADERES, dancing girls attached to the Hindoo temples. The nature of their profession may be inferred from Goethe's Ballad 'Der Gott und die Bajadere,' which forms the groundwork of Catel's opera 'Les Bayadères,'[1] and of Auber's opera-ballet 'Le Dieu et la Bayadère.' They are a prominent feature in Spohr's 'Jessonda.'

BAYLY, Rev. Anselm, D.C.L, son of Anselm Bayly of Haresfield, Gloucestershire, was born in the year 1719. He matriculated at Exeter College, Oxford, Nov. 4, 1740. On Jan. 22, 1741, he was appointed lay vicar of Westminster Abbey, and on the 29th of the same month was admitted a gentleman of the Chapel Royal, both places being vacant by the death of John Church. On March 13, 1744, having resigned his place as gentleman, he was admitted priest of the Chapel Royal. He graduated as B.C.L. June 12, 1749, and D.C.L. July 10, 1764. In the latter year, on the death of the Rev. Dr. Fifield Allen, Bayly was appointed his successor as sub-dean of the Chapel Royal. He died in 1792. He was author of 'A Practical Treatise on Singing and Playing,' 1771, and 'The Alliance of Musick, Poetry, and Oratory,' 1789, and of several theological and grammatical works. In 1769 he edited a collection of the words of Anthems, to which he contributed an interesting preface on cathedral music. [W. H. H.]

BAZZINI, Antonio, eminent violinist, was born in 1818 at Brescia. From 1840 he has played with great success in most of the principal towns of Italy, Germany, France, and Belgium. As a performer he belongs to the school of Paganini, his playing, although not free from mannerism and a certain sentimentality, being distinguished by a most brilliant technique of the left hand and the bow, and by great vivacity of style. As a composer for his instrument Bazzini shews more earnest artistic feeling than most modern Italians. Having published in earlier years a number of operatic fantasias, many *pièces de salon*, a concertino and and an allegro de concert, he has of late come forward with works for the chamber and church, which have met with great success at Milan and other Italian places. Bazzini is now (1876) Professor of Composition at the Milan Conservatorio. [P. D.]

BEALE, John, a pianist, born in London about 1796, was a pupil of John Baptist Cramer. In 1820 he was elected a member of the Philharmonic Society, and in 1821 was an active promoter of a concert given to celebrate the birthday of Mozart. On the establishment of the Royal Academy of Music he was

[1] For an amusing anecdote connected with this opera and with the dislike of Napoleon I to loud music see Clement, 'Dictionnaire Lyrique,' p. 92*b*.

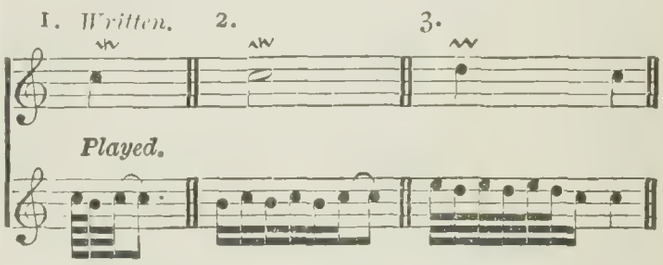
named one of the professors of the pianoforte there. [W.H.H.]

BEALE, WILLIAM, was born at Landrake Jan. 1, 1784, and brought up as a chorister of Westminster Abbey under Dr. Arnold and Robert Cooke. In 1813 he gained by his madrigal, 'Awake, sweet muse,' the prize cup given by the Madrigal Society. He published in 1820 a collection of his glees and madrigals. On the title-page of his madrigal 'What ho! what ho!' published in 1816, he is styled 'Gent^{n}. of His Majesty's Chapels Royal.' It is certain, however, that he never held such an appointment. He died in London on the 3rd of May, 1854. [W.H.H.]

BEARD, JOHN, one of the most eminent of English tenor singers, born about 1717, was in his boyhood a chorister of the Chapel Royal under Bernard Gates. He first appeared as a tenor singer in Handel's performances at Covent Garden Theatre in 1736, singing in 'Alexander's Feast,' 'Acis and Galatea,' and 'Atalanta.' On Aug. 30, 1737, he appeared at Drury Lane Theatre as Sir John Loverule in Coffey's ballad opera 'The Devil to Pay,' and in the following season was regularly engaged there. In 1739 he married Lady Henrietta, the young widow of Lord Edward Herbert, and daughter of the Earl of Waldegrave, on which he retired for a short time from professional life. After fourteen years uninterrupted happiness, Lady Henrietta died in 1753, aged thirty-six. Beard performed at Drury Lane until 1743, after which he was engaged at Covent Garden until 1748; he then returned to Drury Lane, where he continued until 1759, in which year he married Charlotte, daughter of John Rich, proprietor of Covent Garden Theatre, and was again engaged at that house. Rich dying in 1761, Beard became, in right of his wife, proprietor and manager of the theatre, and so continued until an increasing deafness determined him to dispose of his interest in it and quit the stage. He took his leave of the public as Hawthorn in 'Love in a Village' May 23, 1767. After his retirement he resided at Hampton, where he died, Feb. 4, 1791, in his seventy-fourth year. His wife survived him until August 26, 1818, when she died at Hampton at the great age of ninety-two. Beard throughout life bore the reputation of being a highly honourable and upright man. To form an estimate of his abilities as a singer it is only necessary to remember that Handel composed for him the great tenor parts in 'Israel in Egypt,' 'Messiah,' 'Samson,' 'Judas Maccabeus,' and 'Jephthah.' [W. H. H.]

BEAT. The name given in English to a melodic grace or ornament, but with considerable uncertainty as to which particular ornament it denotes, the word having been very variously applied by different writers.

With some authors it signifies the ACCIACATURA, but it appears to be most generally understood to mean the MORDENT (Ger. *Beisser*) (Ex. 1), in which connection it seems not impossible that its English name may have been originally 'bite.' Dr. Callcott however, in his Grammar of Music, speaks of the beat as a reversed shake, and derives its name from *Battement*, giving an example as in Ex. 2. *Battement* again, according to Rousseau (Dictionnaire de Musique), is a shake beginning on the upper instead of the principal note (Ex. 3)



It is doubtless owing to this uncertainty that the word has now almost fallen into disuse. [F.T.]

BEAT. The movement of the hand or baton by which the rhythm of a piece of music is indicated, and by which a conductor ensures perfect agreement in tempo and accent on the part of the orchestra or chorus; also, by analogy, the different divisions of a bar or measure with respect to their relative accent.

Among the ancients the ordinary method of beating time was by striking the foot upon the ground. The person who exercised this function, corresponding to our modern conductor, was called by the Greeks *Coryphaeus* (principal), and by the Romans *Pedarius* or *Pedicularius*, from the custom of employing the foot to beat with, and it was usual for him to wear sandals of wood or metal, called *pedicula* or *scabella*, in order by their percussion to render the rhythm more evident. Sometimes the measure was marked by clapping the hands—in which case the time-beater was called *Manuductor*; and sometimes by the striking together of oyster-shells, bones, etc.

To our ears this incessant and noisy percussion would be unendurable, and a modern conductor would be severely criticised who could not keep his performers in time by the noiseless movements of his baton; nevertheless, the improvement is of comparatively recent date, for we find Rousseau in 1768 complaining that the listener at the Paris opera should be 'shocked by the continual and disagreeable noise made by him who beats the measure.'

The method of beating now commonly in use in England, France, and Germany is as follows:—the first note of each bar (which has always the strongest accent) is indicated by a downward movement of the hand or baton, and this part of the bar is therefore usually known as the 'down-beat'; in triple time this is followed by two unaccented beats, which are shown by a movement first to the right and then upwards, unless in scherzos or other movements in rapid time, where it is usual to give merely a down beat at the beginning of the bar. In common time there may be either one or three non-accents, in the first case the simple up-beat suffices, in the latter the beats following the down-beat are to the left, to the right, and then upwards. In all cases

the movement immediately preceding the down-beat is an up-beat.

In beating compound time (that is, time in which each beat is made up of three parts) it is customary to give each beat three times in succession, thus in 12-8 time there would be three down, three left, three right, and three up-beats, except in rapid tempo, when the ordinary number of beats will suffice, one beat being equivalent to three notes.

In the greater part of Italy a somewhat different method of beating is adopted, there being no beats to the right or left; when therefore there are more than two beats in a bar, two down-beats are given in succession, followed in triple time by one and in common time by two up-beats.

In theoretical works, the down-beat or accent, and the up-beat or non-accent, are usually spoken of by their Greek names of *thesis* and *arsis*. [F. T.]

BEATRICE DI TENDA. Italian opera, the libretto by F. Romani, the music by Bellini; produced at Venice in 1833, and at the Théâtre des Italiens, Paris, Feb. 8, 1841, and in London, at the King's Theatre, March 22, 1836.

BEATS are a wavy throbbing effect produced by the sounding together of certain notes, and most noticeable in unisons and consonances, when not perfectly tuned to one another.

To explain their origin reference must be made to elementary facts in the science of sound. Sound is conveyed to our ears by the waves into which the air, or other medium, is thrown by the vibration of what is called the sounding body. These waves are proportionally relative to the rapidity of the vibrations of the note sounding, and therefore also to its pitch; they consist of alternate condensation and rarefaction, each vibration being considered (in England and Germany) to comprise both the compression and distension of the particles of the air analogous to the crest and trough of a wave of water. These are, as it were, opposite forces, and can be made to counteract each other if two waves be simultaneously produced which start at such a distance from each other that the condensation of one exactly corresponds to the rarefaction of the other. A very simple proof of this may be obtained by striking a large tuning-fork and holding it close to the ear, and turning it slowly round; when a particular point will be found on either side of the fork at which the sound ceases, although the fork continues to vibrate, because the two prongs are in such a position relative to the ear that their sound-waves in that direction mutually counterbalance one another.

Beats are produced by sound-waves which have such relations in size and rapidity, that at certain intervals they cross one another and, condensation and rarefaction being simultaneous for the moment, produce silence. For instance, if two notes which vibrate respectively 100 and 101 times in a second be sounded together, it is clear that the sound-waves of the latter will gain $\frac{1}{100}$ on the former at each vibration, and half-way through the second will have gained so much that its condensation will exactly correspond with the rarefaction of the other note (or vice versâ), and for the moment silence will result; and so for each second of time.

If the notes be further apart, as 100 to 102, the latter will gain twice as much in every vibration, and there will be two places where the waves counteract each other, and therefore two beats in each second. Hence the rule that the *number of beats per second is equal to the difference between the rates of vibration of the notes.*

It is found practically that it is not necessary for the waves to be exactly in opposition; for in the case of one note with 100 vibrations in a second and another with 103, though the three beats will be heard according to the rule above given, it is proved mathematically that there will be only one point at which the condensation and rarefaction are exactly simultaneous, and the other two extremes of opposition are not exact, though within $\frac{1}{10300}$ of a second of coincidence.

In point of fact the sound will be lessened to a minimum up to the extreme of opposition in the position of the waves, and increased to the full power of the two sounds up to the perfect coincidence of the vibrations.

It will have been observed that the beats increase in number as the notes become more wide apart. According to Helmholtz they are most disagreeable when they number about 33 in a second, which is nearly the number produced by the sounding together of treble C and D♭. From that point they become less and less harsh till with such an interval as treble C and E, which produces 128 beats in a second, there is no unpleasant sensation remaining.

Beats are of three kinds. The first and most commonly known is produced by the sounding together of two notes nearly in unison—to which the above description applies simply. They are associated with the name of the great violinist Tartini, for reasons concerning which a controversy has arisen, and which are too long to be here set down.

The second kind arises from the imperfect tuning of consonances—such as the third, fourth, fifth, sixth, or octave. Here the notes are too wide apart for the primary beats as described above to be noticeable But the primary beats are in this case thrown into groups or cycles, which produce the effect of beats. These were first investigated by Dr. Robert Smith, Master of Trinity Coll. Cambridge (died 1768), and are called after him.

The third kind, also due to the imperfect tuning of consonances, is that which has been most carefully investigated by Helmholtz, and is called by him the *over-tone beat.* It is produced exactly in the manner first described between the harmonics of one note and another fundamental note which is not in tune with the first, or between the harmonics of two fundamentals which are out of tune.

For instance, if bass C be sounded with middle C, and the latter be slightly out of tune, middle C and the first harmonic of the lower C will be in the position of imperfectly tuned unisons, and beats will be produced. If C and G be sounded together, and the latter be out of tune, the second harmonic of the former and the first of the latter will clash in a similar manner, and beats will be produced between them. And so with other consonances.

The value of beats to organ-tuners is well known, as their disappearance when the notes are in tune is a much safer criterion of exactness than the musical sense unaided. Moreover it is possible to discover, by simple calculation of the number of beats in a second relative to the number of vibrations, the exact amount any note is out of tune with another.

For more complete discussion of this subject, see an article by W. Pole, Mus. Doc., F.R.S., in 'Nature' for 1876, Nos. 324, 325. [C. H. H. P.]

BEAULIEU, Marie Désiré, whose family name was Martin, son of an artillery officer of Niort, born in Paris 1791. He studied under Rodolph Kreutzer, Benincori, and Méhul, and obtained the 'Grand Prix' at the Conservatoire in 1810. He did not accept the five years' tour to which the prize entitled him, and settled at Niort. Here he founded quartet meetings, and in 1829 a Philharmonic Society, which was afterwards expanded into the 'Association musicale de l'Ouest' (1835). This society was the first of its kind in provincial France, and through the untiring zeal of its founder has attained a high pitch of excellence. Yearly festivals are held in turn at Niort, Poitiers, La Rochelle, Angoulême, Limoges, and Rochefort; and Mendelssohn's 'St. Paul' and 'Elijah' were performed at Rochelle by this society long before they were heard in Paris. Beaulieu wrote in all styles, but excelled in church music. His principal work was a requiem on the death of Méhul, composed 1819, performed 1840. He also wrote much on music. A complete list of his compositions is given by Fétis. [M. C. C.]

BEAUMAVIELLE, a baritone singer, brought from Toulouse by Perrin to sing in 'Pomone,' the first French opera by Cambert, produced in 1671. After Lulli had obtained the transference of Perrin's monopoly to himself, Beaumavielle was one of the best singers at his opera-house. He died in 1688, soon after Lulli, and was succeeded by Thévenard. [M. C. C.]

BEBUNG (Ger.; Fr. *Balancement*; Ital. *Tremolo*), a certain pulsation or trembling effect given to a sustained note in either vocal or instrumental music, for the sake of expression. On stringed instruments it is effected by giving an oscillating movement to the finger while pressing the string; on wind instruments and in singing by the management of the breath.

The word Bebung refers, however, more particularly to an effect peculiar to the old clavichord, but not possible on the modern pianoforte, in which the continuous and uninterrupted repetition of a note was produced not by a fresh blow, but by a movement of the tip of the finger without leaving the key. This effect was formerly held in high estimation as a means of expression, and Emanuel Bach in the introduction to his 'Versuch über die wahre Art das Clavier zu spielen,' says, comparing the then newly-invented pianoforte with the clavichord, 'I believe, nevertheless, that a good clavichord possesses—with the exception that its tone is weaker—all the beauties of the former (the pianoforte), and in addition the *Bebung* and the power of sustaining the tone, inasmuch as after striking each note I can give a fresh pressure.'

The Bebung was not often marked, except sometimes by the word *tremolo*. Marpurg, however ('Principes du Clavecin'), gives the following as the sign of its employment, using as many dots over the note as there were to be repetitions of the sound— . [F. T.]

BECHER, Alfred Julius, born of German parents at Manchester, 1803; educated at Heidelberg, Göttingen, and Berlin. His life was one of perpetual movement and adventure. Before he was 40 he had lived in Elberfeld, Cologne, Düsseldorf, the Hague, and London, had practised as an advocate, edited a mercantile newspaper, and twice filled the post of Professor of Composition. But whatever else he did he was always faithful to music. In 1841 his wanderings came to an end in Vienna, and at the instance of Mendelssohn he took up musical criticism, in which he was very successful, associating himself with the 'Wiener Musik-Zeitung' and the 'Sontagsblättern.' He was equally enthusiastic for the old masters and for Berlioz. In 1848 he threw himself into politics as a violent democrat, became editor of the 'Radikale,' was tried by court martial and shot on Nov. 23, 1848, in the Stadtgraben of Vienna. Becher published songs, sonatas, and pianoforte pieces, many of which became favourites. He composed a symphony, a violoncello fantasia (performed at a concert at which he had the aid of Jenny Lind), and string quartets. But these, though full of ability and intelligence, never made any impression on the public. Becher's literary works were almost entirely fugitive, but he published a biography of Jenny Lind (1846). [C. F. P.]

BECHSTEIN, Friedrich Wilhelm Karl. The first half of this century was not marked by any noteworthy progress in North German pianoforte-making, the instruments made being far behind the Viennese. But this reproach cannot now be applied either to Berlin or Leipsic. Herr Bechstein established his workshops in the former city in 1855. By the adoption of the American system of iron framing and of an action based upon the English, he has raised a reputation for his concert instruments reaching beyond Prussian limits. Herr Bechstein is a native of Gotha. [A. J. H.]

BECK, Franz, born at Mannheim 1731, died at Bourdeaux 1809, violinist and composer. When quite young he took refuge in Paris from the effects of a duel, and thence removed to Bourdeaux. Here he became director of a series of concerts (1780), and trained many eminent musicians; among others Blanchard and Bochsa. His compositions are excellent, though comparatively few in number. They comprise 24 Symphonies (1776); a 'Stabat Mater,' performed at the Concerts Spirituels in 1783; 'Pandore,' a melodrama (1789); a 'Gloria' and 'Credo'; MS. Sonatas for Pianoforte, and Quartets for Strings. [M. C. C.]

BECKER. In Russia the pianoforte-makers have been Germans. The leading Russian house at the present time owes its origin to Jacob Becker, a native of the Bavarian Palatinate, who founded it in 1841. Although pianoforte-making had early in this century been introduced in St. Petersburg, until about 1850 pianists had imported their instruments for public performance. From that time however Becker succeeded in making concert instruments, and since 1871 Mr. Paul Peterssen, the present head of the house, by adopting modern principles of framing, has made an effectual stand against this—to Russian interests—disadvantageous competition, and it has now become as much a matter of course to hear the Russian pianofortes of Becker in the concerts of Petersburg and Moscow as it is to hear the Russian language in polite society. [A. J. H.]

BECKER, Carl Ferdinand, organist and professor at the Conservatorium of Leipsic, born in 1804, studied the piano, harmony, and composition, under Schicht and Schneider. Played the piano in public at fourteen years old, but afterwards paid more attention to the organ, and rose by degrees to be organist of the Nicolai-Kirche in Leipsic. On the foundation of the Conservatorium at Leipsic he was invited by Mendelssohn to join the new enterprise. The estimation which Becker enjoyed in Germany was due less to his compositions than to his productions in musical literature. Prominent amongst these are his 'Systematisch-chronologische Darstellung der musik-Literatur,' etc. (1836), with a supplement (1839), in which Becker is said to have been assisted by Anton Schmid, custos of the Hofbibliothek at Vienna. He also wrote 'Hausmusik in Deutschland in 16ten, 17ten, 18ten Jahrh.' (1840); also 'Die Tonwerke des 16ten und 17ten Jahrh.'—a catalogue of the music printed during that period (1847); and a catalogue of his own collection—'Alphabetisch und chronologisch geordnetes Verzeichniss,' etc. (Breitkopf, 1847). The collection itself, containing works of the greatest rarity, he bequeathed to the city of Leipsic at his death Oct. 26, 1877. [F. G.]

BECKER, Constantin Julius, born at Freiberg Feb. 3, 1811. Showed an early talent for music, which was well developed by his master Anacker. In 1835 he came to Leipsic and assisted Schumann in editing the 'Neue Zeitschrift für Musik'; but in 1843 removed to Dresden and occupied himself in teaching singing. In 1846 he returned to Oberlössnitz, and lived there in solitude till his death, Feb. 26, 1859. A symphony of his was performed with great applause at the Gewandhaus in 1843, and his opera 'Die Belagerung von Belgrad' was produced at Leipsic on May 21, 1848. But the work by which he will be remembered is his 'Männergesang-Schule,' 1845. He was the author of 'Die Neuromantiker,' a romance (1840), and of a translation of Berlioz's 'Voyage Musicale.' [F. G.]

BECKER, Dietrich, violinist and composer to the Hamburg senate towards the middle of the 17th century; one of the earliest German instrumental composers; published sonatas on chorales for violin, viol di gamba, and bass (Hamburg, 1668), as well as 'Die musikalischen Frühlingsfruchte,' consisting of pieces for instruments in four and five parts, with basso continuo. [F. G.]

BECKER, Jean, eminent violin-player, born at Mannheim in 1836. His first teacher was Kettenus, then leader of the Mannheim orchestra, and he afterwards learned from Alard in Paris. He began to perform in public when only eleven, and was still very young when he became the successor of Kettenus. In 1859 he played with great success in Paris, and thence went to London, where he appeared at the Monday Popular Concerts, and was for one season leader of the Philharmonic Concerts. After travelling for some years through most parts of Europe, he settled in 1866 at Florence, and associated himself with two Italian musicians, Masi and Chiostri, and the German violoncellist Hilpert. These artists, well known under the name of the 'Florentiner Quartett,' have earned, by their careful and spirited performances of the classical masterpieces of quartet literature, a great and well-deserved reputation in most musical centres of the continent. Becker's style as a solo-player appears to be a compromise between the severe style of the German school and the lighter and more brilliant one of the French. [P. D.]

BECKWITH, John Christmas, Mus. Doc., was born Dec. 25, 1759, and studied music under Dr. Philip Hayes. He succeeded Garland as organist of the cathedral and St. Peter's Mancroft, Norwich, about 1780. On July 5, 1803, he took his degrees as Mus. Bac. and Mus. Doc. at Oxford. He composed many anthems—six of them published by Clementi—and a few vocal pieces, some of which became popular. He was considered a good singing-master, and was the instructor of Thomas Vaughan. In 1808 he published a set of chants under the following title:—'The First Verse of every Psalm of David, with an Ancient or Modern Chant, in Score, adapted as much as possible to the Sentiment of each Psalm.' The preface to this work contains 'a short history of chanting,' which displays learning and research, and contains the

first suggestion of marked psalters. Dr. Buck, who was his pupil and successor at Norwich Cathedral, describes his master as being almost as proficient in painting as in music. He died June 3, 1809. [E. F. R.]

BEDOS DE CELLES, Dom François, a learned Benedictine, born at Caux in the diocese of Bezières in 1706, entered the order at Toulouse in 1726, and died at St. Maur on Nov. 25, 1779. Author of 'L'art du facteur d'orgues' (Paris, 1766–78), an admirable work for the time, written at the request of the Académie des Sciences; also of an account of the new organ at St. Martin of Tours, in the 'Mercure de France' for Jan. 1762, of which a German translation by J. F. Agricola will be found in Adelung's 'Musica mechanica organœdi.' De Celles was a member of the Académie des Sciences of Bourdeaux, and corresponding member of that of Paris. [F. G.]

BEER, Jacob Meyer, the original name of Giacomo Meyerbeer.

BEER, Joseph (sometimes written BOER), a remarkable clarinet-player; born 1744 at Grünwald in Bohemia, served as trumpeter first in the Austrian and then in the French army during the Seven Years' War. In 1771 he went to Paris, and there took up the clarinet, on which he rap dly became the first performer of his time. In 1782 he left Paris, and travelled through Holland, Italy, Russia, and Hungary, exciting everywhere the greatest possible enthusiasm. He died at Potsdam in 1811. As a performer Beer united a masterly execution to great power of expression, and indeed effected a complete revolution in the clarinet, which he greatly improved by the addition of a fifth key. Till nearly fifty years old he had heard only French players, and had insensibly acquired their loud harsh tone; but having heard in Brussels a German performer, Schwartz, he discovered what the instrument was capable of, and finally became as celebrated for the softness and purity of his tone, for the delicacy of his nuances, and especially his decrescendo, as he was for his execution. In fact he marks an epoch in the history of the instrument. His compositions comprise three concertos for two clarinets, variations, and duets. [M. C. C.]

BEETHOVEN, Ludwig van[1], born at Bonn, probably Dec. 16, 1770.[2] The earliest form of the name is that with which we are familiar, but it takes many other shapes in the uncertain spelling of the time, such as Biethoffen, Biethofen, Biethoven, Bethoven, Betthoven, and Bethof. He himself appears to have always spelt it as we know it.[3] The family belonged originally to a village near Louvain; thence in 1650 they moved to Antwerp, where in 1685 the name appears in the registers. His father Johann or Jean, and his grandfather Ludwig, were both musicians in the Court band of the Elector of Cologne, at Bonn—the latter a bass-singer, and afterwards Capellmeister, appointed March 1733, the former a tenor singer, March 27, 1756. The grandfather lived till Dec. 24, 1773, when the little Ludwig had just completed his third year. He was a small lively person with extraordinarily bright eyes, much respected and esteemed as a musician, and made an indelible impression on his grandson. His portrait was the only one which Beethoven took from Bonn to Vienna, and he often spoke of it to the end of his life. Beethoven's mother—daughter of the chief cook at Ehrenbreitstein—was married to Johann on Nov. 12, 1767. She was twelve years younger than her husband; her original name had been Keverich, but at the time of the marriage she was a widow—Maria Magdalena Leym or Laym. She died after a long illness on July 17, 1787, a woman of soft heart and easy ways, much beloved by her son. The father, on the other hand, was a severe hard man of irregular habits, who evidently saw his son's ability, gave him the best instruction that his poverty would allow, and kept him to his music with a stern, strict, perhaps cruel, hand. It is perhaps fortunate he did so. The first house they occupied in Bonn, that in which the great composer was born, was 515 in the Bonngasse, now designated by a tablet erected in 1870. Besides their eldest, Ludwig Maria, who was born April 1, 1769, and lived but six days, the Beethovens had three other sons—Caspar Anton Carl, April 7, 1774; Nikolaus Johann, Oct. 1, 1776; and August Franz Georg, Jan. 16, 1781, died Aug. 16, 1783; a daughter, Feb. 23, 1779, who lived only four days, and a second girl, Maria Margaretha Josepha, May 4, 1786. The first of these was the father of the ill-fated youth who gave his uncle so much distress, and was probably the ultimate cause of his death. He died at Vienna, Nov. 5, 1815. The second, Johann, was an apothecary, at Linz and Vienna, the 'Gutsbesitzer' of the well-known anecdote, his brother's *bête noire*, and the subject of many a complaint and many a nickname. He died at Vienna Jan. 12, 1848. From the Bonngasse the family migrated to 7 or 8 on the Dreieck, and thence to the Rheingasse, No. 934. To the latter they came in 1775 or 76, and there they remained for a few years. Johann Beethoven's income from the Chapel was 300 florins a year (£25)—a miserable pittance, but that of most musicians of the chapel; and this appears to have been his sole means of subsistence, for his voice was nearly gone, and there is no sign of his having had other employment.[4]

According to Beethoven's own statement in the dedication to his earliest publication—the 3 Sonatas for Pianoforte (1781 or 82)—he began music in his fourth year. The few traits preserved of that early period show that, like other children, he did not acquire it without tears. His father was his first teacher, and from him he learned both violin and clavier; reading, writing, arithmetic, and a little Latin he obtained in one of

[1] *Van* in Dutch is not, like *von* or *de*, a sign of nobility.

[2] The baptism is registered on the 17th, and it was the custom to baptise on the day following birth. Beethoven's own belief was that he was born in 1772, which accounts for an occasional mistake in his estimate of the age at which he wrote his early works.

[3] In his letters; but in an advertisement of his, 31 March, 1804, it is Bethofen (Nottebohm, *Beethoveniana*, p. 4).

[4] See the register in Thayer, *Ludwig van Beethovens Leben*, i. 147.

the common public schools, and even this ceased when he was thirteen. At school he was shy and uncommunicative, and cared for none of the ordinary games of boys. Before he was nine his music had advanced so far that his father had no longer anything to teach him, and in 1779 he was handed over to Pfeiffer, a tenor singer who had recently joined the opera in Bonn, and seems to have lodged with the Beethovens, and by whom he was taught, irregularly enough, but apparently with good and lasting effect, for a year. At the same time he fell in with a certain Zambona, who taught him Latin, French, and Italian, and otherwise assisted his neglected education. The organ he learned from Van den Eeden, organist to the Court Chapel, and an old friend of his grandfather's. About this time, 1780, 81, there is reason to believe that the Beethovens found a friend in Mr. Cressener, the English *chargé d'affaires*, long time resident at Bonn, and that he assisted them with a sum of 400 florins. He died on Jan. 17, 1781, and Beethoven (then just past ten) is said to have written a Funeral Cantata to his memory,[1] which was performed. The Cantata, if it ever existed, has hitherto been lost sight of. One composition of this year we have in 9 Variations on Dressler's March in C minor,[2] which though published in 1783, are stated on the title to be 'composées .... par un jeune amateur L. v. B. agé de dix ans. 1780.' In Feb. 1781 Neefe succeeded Van den Eeden as Organist at the Court, and Beethoven became his scholar. This was a great step for the boy, since Neefe, though somewhat over conservative as a musician, was a sensible man, and became a real friend to his pupil.

There is ground for supposing[3] that during the winter of 1781 Ludwig and his mother made a journey in Holland, during which he played at private houses, and that the tour was a pecuniary success. On June 29, 1782, old Van den Eeden was buried, and on the next day the Elector's band followed him to Münster, where as Bishop he had a palace, Neefe leaving Ludwig, then 11½ years old, behind him as his regularly appointed deputy at the chapel organ, a post which, though unpaid, was no sinecure, and required both skill and judgment. This shows Neefe's confidence in his pupil, and agrees with his account of him, written a few months later, as 'playing with force and finish, reading well at sight, and, to sum up all, playing the greater part of Bach's Well-tempered Clavier, a feat which will be understood by the initiated. This young genius,' continues he, 'deserves some assistance that he may travel. If he goes on as he has begun, he will certainly become a second Mozart.'

On the 26th April 1783, Neefe was promoted to the direction of both sacred and secular music, and at the same time Beethoven (then 12 years and 4 months old), was appointed 'Cembalist im Orchester,' with the duty of accompanying the rehearsals in the theatre; in other words of conducting the opera-band, with all the responsibilities and advantages of practice and experience which belong to such a position. No pay accompanied the appointment at first, but the duties ceased when the Elector was absent, so that there was leisure for composition. The pieces published in this year are a song, 'Schilderung eines [4] Mädchens,' and 3 Sonatas for Piano solo,[5] composed, according to the statement of the dedication, in 1781. On Aug. 16, 1783, the youngest boy, August Franz, died, the father's voice began still further to fail, and things generally to go from bad to worse.

The work at the theatre was now rather on the increase. From Oct. 83 to Oct. 85, 2 operas of Gluck, 4 of Salieri, 2 of Sarti, 5 of Paisiello, with a dozen others, were studied and performed; but Ludwig had no pay. In Feb. 84 he made an application for a salary, but the consideration was postponed, and it was probably as a set-off that he was shortly afterwards appointed second Court-organist. Meantime, however, on April 15, 84, the Elector Max Friedrich died, and this postponed still farther the prospect of emolument. The theatrical company was dismissed, and Neefe having only his organ to attend to, no longer required a deputy. The Beethovens were now living at No. 476 in the Wenzelgasse, whither they appear to have moved in 83, and Ludwig played the organ in the Minorite church at the six o'clock mass every morning.

The music of 84 consists of a Rondo for the Piano in A,[6] published early in the year, and a song 'An einen [7] Säugling': a Concerto for Piano and a piece in 3-part harmony, both in MS., are mentioned as probably belonging to this year.[8]

One of the first acts of the new Elector Max Franz, was to examine his establishment, and on June 27, 84, he issued a list of names and salaries of his band,[9] among which Beethoven's father appears with a salary of 300 florins, and Beethoven himself, as second organist, with 150 florins, equivalent to £25 and £13 respectively. A memorandum of the same date[10] shows that an idea was entertained of dismissing Neefe and putting Beethoven into his place as chief organist. In fact Neefe's pay was reduced from 400 to 200 florins, so that 50 florins a year was saved by the appointment of Beethoven. An economical Elector! In the Holy Week of 1785 the incident occurred (made too much of in the books) of Beethoven's throwing out the solo singer in Chapel by a modulation in the accompaniment, which is chiefly interesting as showing how early his love of a joke showed itself.[11] During this year he studied the violin with Franz Ries—father of Ferdinand. The music of 1785 is 3 Quartets for Piano and Strings,[12] a Minuet for Piano in E♭,[13] and a song 'Wenn jemand eine Reise thut' (Op. 52, No. 1).

In 1786 nothing appears to have been either composed or published, and the only incident of this year that has survived, is the birth of a

second girl to the Beethovens — Marie Margaretha Josepha, May 4.

In 1787 occurred the first real event in Beethoven's life—his first journey to Vienna. Concerning this there is an absolute want of dates and details. Some one must have been found to supply the means for so expensive a journey, but no name is preserved. As to date, his duties as organist would probably prevent his leaving Bonn before the work of Holy Week and Easter was over. The two persons who were indelibly impressed on his recollection by the visit[1] were Mozart and the Emperor Joseph. From the former he had a few lessons, and carried away a distinct—and not very appreciative[2]—recollection of his playing; but Mozart must have been so much occupied by the death of his father (May 28) and the approaching production of 'Don Giovanni' (Oct. 29) that it is probable they had not much intercourse. The well-known story of Beethoven's introduction to him, when divested of the ornaments[3] of Seyfried and others, stands as follows:—Mozart asked him to play, but thinking that his performance was a prepared piece, paid little attention to it. Beethoven seeing this entreated Mozart to give him a subject, which he did; and the boy, getting excited with the occasion, played so finely that Mozart, stepping softly into the next room, said to his friends there, 'Pay attention to him; he will make a noise in the world some day or other.' His visit seems not to have lasted more than three months, but, as we have said, all certain information is wanting. He returned by Augsburg, where he had to borrow three Carolins (£3) from Dr. von Schaden. His return was hastened by the illness of his mother, who died of consumption July 17, 1787, and his account of himself in a letter[4] to Von Schaden, written seven weeks after that date, is not encouraging. A short time more and the little Margaretha followed her mother, on Nov. 25, so that 1787 must have closed in very darkly. The only compositions known to belong to that year are a Trio in E♭,[5] and a Prelude in F minor for Piano solo.[6] However, matters began to mend; he made the acquaintance of the von Breuning family—his first permanent friends—a mother, three boys, and a girl. He gave lessons to the girl and the youngest boy, and soon became an inmate of the house, a far better one than he had before frequented, and on terms of close intimacy with them all. The family was a cultivated and intellectual one, the mother—the widow of a man of some distinction—a woman of remarkable sense and refinement; the children, more or less of his own age. Here he seems to have been first initiated into the literature of his country, and to have acquired the love of English authors which remained with him through life. The intimacy rapidly became strong. He often passed whole days and nights with his friends, and accompanied them on excursions of several weeks duration to their uncle's house at Kerpen, and elsewhere. At the same time he made the acquaintance of Count Waldstein, a young nobleman eight years his senior, an amateur musician, whose acquaintance was peculiarly useful in encouraging and developing Beethoven's talent at a time when it naturally wanted support. On Waldstein Beethoven exercised the same charm that he did later on the proud aristocracy of Vienna. The Count used to visit him in his poor room, gave him a piano, got him pecuniary help under the guise of allowances from the Elector, and in other ways sympathised with him. Either now or shortly afterwards, Beethoven composed a set of variations for 4 hands on a theme of the Count's,[7] and in 1805 made him immortal by dedicating to him the grand sonata (op. 53), which is usually known by his name. Another acquaintance was the Countess of Hatzfeld, to whom he dedicated a set of Variations, which were for long his showpiece.

In the summer of 1788, when Beethoven was 17½ years old, the Elector altered the plan[8] of his music, and formed a national theatre on the model of that of his brother the Emperor Joseph. Reicha was made director, and Neefe pianist and stage-manager. The band was 31 strong, and contains names such as Ries, the two Rombergs, Simrock, Stumpff—which often recur in Beethoven's life. He himself played second viola, both in the opera and the chapel, and was still assistant Hof-organist. In this position he remained for four years; the opera *répertoire* was large, good, and various, the singers were of the best, and the experience must have been of great practical use to him. Among the operas played in 89 and 90 were Mozart's 'Entführung,' 'Figaro,' and 'Don Giovanni'—the two first apparently often. Meantime Johann Beethoven was going from bad to worse. Stephen Breuning once saw Ludwig take his drunken father out of the hands of the police, and this could hardly have been the only occasion. At length, on Nov. 20, 1789, a decree was issued ordering a portion of the father's salary to be paid over to the son, who thus, before he was nineteen, became the head of the family.

The compositions of 1789 and 90 are 2 Preludes for the Piano (op. 39), 24 Variations on Righini's 'Venni[9] Amore,' a Song 'Der[10] freie Mann,' and probably a Cantata on the death of the Emperor Joseph II, still in MS.[11] The only extra musical event of this year was the visit of Haydn and Salomon on their road to London. They arrived on Christmas Day. One of Haydn's Masses was performed; he was complimented by the Elector, and entertained the chief musicians at dinner at his lodgings. 1791 opened well for Beethoven with a 'Ritter Ballet,' a kind of masked ball, in antique style. Count Waldstein appears to have arranged the plan, and Beethoven composed the music; but his name does not seem to have been connected with it at the time, and it remained unpublished till 1872, when it appeared arranged for piano. In the autumn the *troupe* accompanied the Elector to Mergentheim, near Aschaffenburg,

to a conclave of the *Deutschen Orden*; the journey was by water along the Rhine and Main, the weather was splendid,—there was ample leisure, and the time long remained in Beethoven's recollection 'a fruitful source of charming images.' At Aschaffenburg he heard a fine player—the Abbé Sterkel, and showed his instant appreciation of the Abbé's graceful finished style by imitating it in extemporising. In Mergentheim the company remained for a month (18 Sept.—20 Oct.). An interesting account of the daily musical proceedings is given by Junker, the Chaplain at Kirchberg,[1] including an account of Beethoven's extempore playing. He compares it with that of Vogler, whom he knew well, and pronounces it to have displayed all Vogler's execution, with much more force, feeling, and expression, and to have been in the highest degree original.

The Beethovens were still living in the Wenzelgasse, Carl learning music, and Johann under the Court Apothecary. Ludwig took his meals at the Zehrgarten[2]—a great resort of the University professors, artists, and literary men of Bonn, and where the lovely Babette Koch, daughter of the proprietress, was doubtless an attraction to him.[3] His intimacy with the Breunings continued and increased; Madame von Breuning was one of the very few people who could manage him, and even she could not always make him go to his lessons in time: when he proved too obstinate she would give up the endeavour with the remark 'he is again in his *raptus*,' an expression which Beethoven never forgot. Music was their great bond, and Beethoven's improvisations were the delight of the family. His duties at the organ and in the orchestra at this time were not very great; the Elector's absences were frequent, and gave him much time to himself, which he spent partly in lessons, partly in the open air, of which he was already very fond, and partly in assiduous practice and composition. The sketch-books of that time are crammed with ideas, and confirm his statement, made many years later,[4] that he began thus early the method of working which so emphatically distinguishes him.

In July 1792 Haydn again passed through Bonn on his return from London. The Elector's Band gave him a dinner at Godesberg, and Beethoven submitted a cantata to him, 'which Haydn greatly praised, warmly encouraging the composer to proceed with his studies.' What the cantata was is not known, though it is conjectured to have been on the death of the Emperor Leopold II.[5]

The compositions which can be fixed to the years 1791 and 92 consist of Songs (portions of op. 52), a Rondino[6] for Wind instruments, the Trio for Strings, op. 3, an Allegro and Minuet for 2 Flutes (Aug. 23, MS.), and perhaps a set of 14 Variations[7] for Pianoforte, Violin, and Cello, in Eb, published in 1804 as op. 44; 12 Variations[8] for Piano and Violin on 'Se vuol ballare'; 13 ditto for Piano[9] on 'Es war einmal'; and 12 ditto[10] for Piano, 4 hands, on an air of Count Waldstein's.

Hitherto the Elector seems to have taken no notice of the most remarkable member of his orchestra. But in the course of this year—whether prompted by Neefe or Waldstein or by his own observation, or possibly by Haydn's approbation—he determined that Beethoven should visit Vienna in a more permanent manner than before, for the purpose of studying at his expense. Haydn was communicated with, and in the very beginning of November Beethoven left Bonn, as it proved, never to return to it again. His parting words to Neefe are preserved:[11]—'Thank you for the counsel you have so often given me on my progress in my divine art. Should I ever become a great man you will certainly have assisted in it, which will be all the more gratifying to you, since you may be convinced that' etc. The Album in which his friends—Waldstein, the Breunings, the Kochs, Degenhart, and others—inscribed their farewells is still existing,[12] and the latest date is Nov. 1. E. Breuning's lines contain allusions to 'Albion,' as if Beethoven were preparing to visit England—possibly with Haydn? Waldstein's entry is as follows:—'Dear Beethoven, you are travelling to Vienna in fulfilment of your long-cherished wish. The genius of Mozart is still weeping and bewailing the death of her favourite. With the inexhaustible Haydn she found a refuge, but no occupation, and is now waiting to leave him and join herself to some one else. Labour assiduously, and receive Mozart's spirit from the hands of Haydn. Your true friend Waldstein. Bonn, October 29, 1792.'

What provision the Elector made for him beyond his modest pay of 150 florins is not known. An entry of 25 ducats (£12 10*s*.) is found in his notebook shortly after he reached Vienna, but there is nothing to show what length of time that moderate sum represented, or even that it came from the Elector at all.

Thus ended the first period of Beethoven's life. He was now virtually twenty-two. The list of his known compositions to this time has been given year by year. If we add the Bagatelles (op. 33), the 2 easy Sonatas (op. 49), the 2 Violin Rondos (op. 51), the Serenade Trio (op. 8), and a lost Trio for Piano, Flute, and Bassoon,[13]—all probably composed at Bonn—and compare them with those of other composers of the first rank, such as Mozart, Schubert, or Mendelssohn, it must be admitted that they are singularly few and unimportant. For the orchestra the Ritterballet already referred to is the single composition known, while Mozart—to mention him only—had in the same period written 36 Symphonies, including so mature a masterpiece as the 'Parisian' in D. Against Mozart's 28 Operas, Cantatas, and Masses, for voices and full orchestra, composed

before he was 23, Beethoven has absolutely nothing to show. And the same in other departments. That he meditated great works, though they did not come to paper, is evident in at least one case. A resident in Bonn, writing to Schiller's sister Charlotte, on Jan. 26, 1793,[1] says:—'I enclose a setting of the *Feuer-farbe* on which I should like your opinion. It is by a young man of this place whose talent is widely esteemed, and whom the Elector has now sent to Vienna to Haydn. He intends to compose Schiller's *Freude*, and that verse by verse. I expect something perfect; for, as far as I know him, he is all for the grand and sublime. Haydn informs us that he shall set him to great operas, as he himself will shortly leave off composing. He does not usually occupy himself with such trifles as the enclosed, which indeed he composed only at the request of a lady.' This letter, which shows how early Schiller's 'Hymn to Joy' had taken possession of Beethoven—there to remain till it formed the finale to the Ninth Symphony thirty years later—is equally interesting for the light it throws on the impression which Beethoven had already made on those who knew him, and who credited him with the intention and the ability to produce great works, although he had not yet produced even small ones. This impression was doubtless due mainly to the force and originality of his extempore playing, which even at this early age was prodigious, and justified his friends in speaking of him[2] as one of the finest pianoforte-players of the day.

By the middle of November Beethoven was settled at Vienna. His first lodging was a garret at a printer's in the 'Alservorstadt'[3] outside the walls, in the direction of the present Votive-Church; but this was soon exchanged for one 'on the ground floor,'[4] of which we have no nearer description. On the journey from Bonn we find him for the first time making notes of little occurrences and expenses—a habit which never left him. In the entries made during his first few weeks in Vienna we can trace the purchase of a wig, silk stockings, boots, shoes, overcoat, writing-desk, seal, and hire of piano. From the same source we can infer the beginning of his lessons. The first payment to Haydn is 8 groschen (say 9½*d.*, we may surely presume for one hour) on Dec. 12. The lessons took place in Haydn's house[5] (Hamberger Haus, No. 992) now destroyed. They were lessons in 'strict counterpoint,' and the text-book was Fux's 'Gradus ad Parnassum.' Of Beethoven's exercises 245 have been preserved,[6] of which Haydn has corrected 42. Haydn was naturally much occupied, and it is not surprising that Beethoven should have been dissatisfied with his slow progress, and with the cursory way in which his exercises were corrected, and have secretly accepted the offer of additional instruction from Schenk, a well-known Vienna composer. But no open rupture as yet took place. Beethoven accompanied Haydn to Eisenstadt some time in 1793, and it was not until Haydn's departure for England on Jan. 19, 94, that he openly transferred himself to another master. He then took lessons from Albrechtsberger in counterpoint, and from Schuppanzigh on the violin, three times a week each. In the former the text-book was Albrechtsberger's own 'Anweisung zur Composition,' and the subject was taken up where Haydn had left it, and pursued much farther. No less than 263 exercises are in existence under the following heads—Simple strict counterpoint; Free composition in simple counterpoint; Imitation; Simple fugue; Fugued chorale; Double fugue, with triple counterpoint in the 8th, 10th, and 12th; Triple counterpoint and Triple fugue; Canon. Nottebohm has pointed out the accuracy and pains which Albrechtsberger bestowed on his pupil, as well as[7] the care with which Beethoven wrote his exercises, and the characteristic way in which he neglected them in practice. He also gives his reasons for believing that the lessons did not last longer than March 1795. The impression they left on Albrechtsberger was not flattering: 'Have nothing to do with him,' said the old contrapuntist to an enquiring lad, 'he has learnt nothing, and will never do anything in decent style.'[8] In fact what was a contrapuntist to do with a pupil who regarded everything in music—even consecutive fifths[9]—as an open question, and also thought it a good thing to 'learn occasionally what is according to rule, that one may hereafter come to what is contrary to rule?'[10] Besides the lessons with Haydn and Albrechtsberger, some exercises exist in Italian vocal composition, dating from 1793 to 1802, and showing that Beethoven availed himself of Salieri's well-known kindness to needy musicians, to submit his pieces to him. Salieri's corrections are chiefly in the division of the Italian syllables. Another musician whom he consulted, especially in his early attempts at quartet writing, was Aloys Förster, to whom he remained long and greatly attached.[11]

Meantime Beethoven kept up communication with Bonn. On Dec. 18, 92, his poor father died, and the 100 thalers applied to the support of his brothers naturally stopped. On Beethoven's application, however, the grant was allowed to go on, in addition to his own pay. Ries drew and transmitted the money for him.[12] The Breunings still held their place in his heart; two letters to Eleonore, full of affection, are preserved, and he mentions having also written twice to one resident of Bonn, and three times to another, in the course of the first twelvemonth. In January 1794 the Elector visited Vienna, and with the March quarter-day Beethoven's allowance ceased. In the following October the Emperor declared war with France, Bonn was taken possession of by the republican army, and the Elector fled.

Now that Beethoven is landed in Vienna—as it turns out, never again to leave it—and is left to his own resources, it may be convenient to pause in the narrative of his life, and sketch his character and person as briefly as possible. He had already a large acquaintance among the aristocracy of Vienna. Among his kindest friends and most devoted admirers were the Prince and Princess Karl Lichnowsky. They devoured his music, gave him a quartet of valuable instruments [1] for the performance of it, put up with his caprices and eccentricities, gave him an annuity of £60, and made him an inmate of their house for years. He was also frequently at the houses of Baron van Swieten, Prince Lobkowitz, Count Fries, and other noblemen, at once leaders of fashion and devoted amateurs. At these houses he was in the constant habit of playing, and in many of them no doubt he taught, but as to the solid results of this no record remains—nor do we know the prices which he obtained for his published works, or the value of the dedications, at this period of his career. Musical public, like that which supported the numerous concerts flourishing in London at this date,[2] and enabled Salomon to risk the expense of bringing Haydn to England, there was none; musicians were almost directly dependent on the appreciation of the wealthy.

That Beethoven should have been so much treasured by the aristocracy of Vienna notwithstanding his personal drawbacks, and notwithstanding the gap which separated the nobleman from the *roturier*, shows what an immense power there must have been in his genius, and in the absolute simplicity of his mind, to overcome the abruptness of his manners. If we are to believe the anecdotes of his contemporaries his sensitiveness was extreme, his temper ungovernable, and his mode of expression often quite unjustifiable. At the house of Count Browne, when playing a duet with Ries, a young nobleman at the other end of the room persisted in talking to a lady: several attempts to quiet him having failed, Beethoven suddenly lifted Ries's hands from the keys, saying in a loud voice 'I play no longer for such hogs'; nor would he touch another note nor allow Ries to do so, though entreated by all.[3] On another occasion, when living in the house and on the bounty of the Lichnowskys, the prince, knowing how sensitive Beethoven was to neglect, ordered his servants whenever they heard Beethoven's bell and his at the same time to attend to Beethoven's first. No sooner however did Beethoven discover that such an order had been given than he engaged a servant of his own to answer his bell.[4] During one of the rehearsals of 'Leonora,' the third bassoon was absent, at which Beethoven was furious. Prince Lobkowitz, one of his best friends, tried to laugh off the matter, saying that as the first and second were there the absence of the third could not be of any great consequence. But so implacable was Beethoven that in crossing the Platz after the rehearsal he could not resist running to the great gate of the Lobkowitz Palace and shouting up the entrance,[5] 'Lobkowitzscher Esel'—'ass of a Lobkowitz.' Any attempt to deceive him, even in the most obvious pleasantry, he could never forgive. When he composed the well-known 'Andante in F' he played it to Ries and Krumpholz. It delighted them, and with difficulty they induced him to repeat it. From Beethoven's house Ries went to that of Prince Lichnowsky, and not being able to contain himself played what he could recollect of the new piece, and the Prince being equally delighted, it was repeated and repeated till he too could play a portion of it. The next day the Prince by way of a joke asked Beethoven to hear something which he had been composing, and thereupon played a large portion of his own 'Andante.' Beethoven was furious; and the result was that Ries was never again allowed to hear him play in private. In fact it led in the end to Beethoven's ceasing to play to the Prince's circle of friends.[6] And on the other hand, no length of friendship or depth of tried devotion prevented him from treating those whom he suspected, however unjustly, and on however insufficient grounds, in the most scornful manner. Ries has [7] described one such painful occurrence in his own case à propos to the Westphalian negotiations; but all his friends suffered in turn. Even poor Schindler, whose devotion in spite of every drawback was so constant, and who has been taunted with having 'delivered himself body and soul to Beethoven,' had to suffer the most shameful reproaches behind his back, the injustice of which is most surely proved by the fact that they are dropped as suddenly as they were adopted.[8] When Moritz Lichnowsky, Schuppanzigh, and Schindler were doing their utmost to get over the difficulties of arranging a concert for the performance of the Choral Symphony and the Mass in D, he suddenly suspected them of some ulterior purpose, and dismissed them with the three following notes:[9]—'To Count Lichnowsky. Falsehoods I despise. Visit me no more. There will be no concert. Beethoven.' 'To Herr Schindler. Visit me no more till I send for you. No concert. Beethoven.' 'To Herr Schuppanzigh. Visit me (*besuche er mich*) no more. I give no concert. Beethoven.'

The style of the last of these three precious productions—the third person singular—in which the very lowest rank only is addressed, seems to open us a little door into Beethoven's feeling towards musicians. When Hummel died, two notes from Beethoven [10] were found among his papers, which tell the story of some sudden violent outbreak on Beethoven's part. 'Komme er (the same scornful style as before) nicht mehr zu mir! er ist ein falscher Hund, und falsche Hunde hole der Schinder. Beethoven.' And though this was followed by an apology couched in the most ultra-affectionate and coaxing terms—

'Herzens Natzerl,' 'Dich küsst dein Beethoven,' and so on—yet the impression must have remained on Hummel's mind. There can be no doubt that he was on bad terms with most of the musicians of Vienna. With Haydn he seems never to have been really cordial. The old man's neglect of his lessons embittered him, and when after hearing his first three Trios, Haydn, no doubt in sincerity, advised him not to publish the third, which Beethoven knew to be the best, it was difficult to take the advice in any other light than as prompted by jealousy. True he dedicated his three Pianoforte Sonatas (op. 2) to Haydn, and they met in the concert-room, but there are no signs of cordial intercourse between them after Beethoven's first twelve months in Vienna. In fact they were thoroughly antagonistic. Haydn, though at the head of living composers, and as original a genius as Beethoven himself, had always been punctilious, submissive, subservient to etiquette. Beethoven was eminently independent and impatient of restraint. It was the old world and the new—De Brézé and Mirabeau[1]—and it was impossible for them to agree. They probably had no open quarrel, Haydn's tact would prevent that, but Haydn nick-named him 'the Great Mogul,' and Beethoven retorted by refusing to announce himself as 'Haydn's[2] scholar,' and when they met in the street their remarks were unfortunate, and the antagonism was but too evident.

For Salieri, Eybler, Gyrowetz, and Weigl, able men and respectable contrapuntists, he had a sincere esteem, though little more intimate feeling. Though he would not allow the term as regarded Haydn, he himself left his characteristic visiting card on Salieri's table as his 'scholar'—'Der Schuler Beethoven war da.'[3] But with the other musicians of Vienna, and the players of his own standing, Beethoven felt no restraint on open war.[4] They laughed at his eccentricities, his looks and his Bonn dialect,[5] made game of his music, and even trampled[6] on it, and he retorted both with speech and hands. The pianoforte-players were Hummel, Woelffl, Lipawsky, Gelinek, Steibelt. Steibelt had distinctly challenged him,[7] had been as thoroughly beaten as a man could wish, and from that day forward would never again meet him. Gelinek, though equally vanquished, compensated himself by listening to Beethoven on all occasions, and stealing his phrases[8] and harmonies, while Beethoven retorted by engaging his next lodging where Gelinek could not possibly come within the sound of his piano. Woelffl and Hummel were openly pitted against him, and no doubt there were people to be found in Vienna in 1795, as there are in London in 1876, to stimulate such rivalry and thus divide artists whom a little care might have united. Hummel is said to have excelled him in clearness, elegance, and purity, and Woelffl's proficiency in counterpoint was great, and his huge hands gave him extraordinary command of the keys; but for fire, and imagination, and feeling, and wealth of ideas in extempore playing, none of them can have approached Beethoven. 'His improvisation,' says Czerny,[9] 'was most brilliant and striking; in whatever company he might chance to be, he knew how to produce such an effect upon every hearer, that frequently not an eye remained dry, while many would break out into loud sobs; for there was something wonderful in his expression, in addition to the beauty and originality of his ideas, and his spirited style of rendering them.' He extemporised in regular 'form,' and his variations—when he treated a theme in that way—were not mere alterations of figure, but real developments and elaborations of the subject.[10] 'No artist,' says Ries,[11] 'that I ever heard came at all near the height which Beethoven attained in this branch of playing. The wealth of ideas which forced themselves on him, the caprices to which he surrendered himself, the variety of treatment, the difficulties, were inexhaustible.' Even the Abbé Vogler's admirers were compelled to admit as much.[12] He required much pressing, often actual force, to get him to the piano, and he would make a grimace or strike the keys with the back of his hand[13] as he sat down; but when there he would extemporise for two hours and even more at a time, and after ending one of his great improvisations, he would burst into a roar of laughter, and banter his hearers on their emotions. 'We artists,' he would say, 'don't want tears, we want applause.'[14] At other times he would behave as if insulted by such indications of sympathy, and call his admirers fools, and spoiled children.

And yet no outbursts of this kind seem to have made any breach in the regard with which he was treated by the nobility—the only unprofessional musical society of Vienna. Certainly Beethoven was the first musician who had ever ventured on such independence, and there was possibly something piquant in the mere novelty; but the real secret of his lasting influence must have been the charm of his personality—his entire simplicity, joined to his prodigious genius. And he enjoyed good society. 'It is good,' said he, 'to be with the aristocracy; but one must be able to impress them.'[15]

This personal fascination acted most strongly on his immediate friends—on Krumpholz (who seems to have played the part of Coleridge's humble follower John Chester[16]), on the somewhat cold and self-possessed Breuning, as well as on Ries, Zmeskall, Schindler, Holz, and others, who had not, like Haslinger or Streicher, anything to gain from him, but who suffered his

roughest words and most scurvy treatment, and returned again and again to their worship with astonishing constancy. Excepting Breuning none of these seem really to have had his confidence, or to have known anything of the inner man which lay behind the rough husk of his exterior, and yet they all clung to him as if they had.

Of his *tours de force* in performance too much is perhaps made in the books. His transposing the Concerto in C into C♯ at rehearsal was exactly repeated by Woelffl[1]; while his playing the piano parts of his Horn Sonata, his Kreutzer Sonata, or his C minor Concerto without book, or difficult pieces of Bach at first sight, is no more than has been done by Mozart, Mendelssohn, Sterndale Bennett, and many inferior artists. No, it was no quality of this kind that got him the name of the 'giant among players'; but the loftiness and elevation of his style, and his great power of expression in slow movements, which when exercised on his own noble music fixed his hearers and made them insensible to any faults of polish or mere mechanism.

It was not men alone who were attracted by him, he was an equal favourite with the ladies of the Court. The Princess Lichnowsky watched over him—as Madame von Breuning had done—like a mother.[2] The Countesses Gallenberg and Erdödy, the Princess Odescalchi, the Baroness Ertmann, the sisters of the Count of Brunswick, and many more of the reigning beauties of Vienna adored him, and would bear any rudeness from him. These young ladies went to his lodgings or received him at their palaces as it suited him. He would storm at the least inattention during their lessons, and would tear up the music and throw it about.[3] He may have used the snuffers as a toothpick in Madame Ertmann's drawing-room; but when she lost her child he was admitted to console her; and when Mendelssohn saw her[4] fifteen years later she doted on his memory and recalled the smallest traits of his character and behaviour. He was constantly in love, and though his taste was very promiscuous,[5] yet it is probably quite true that the majority of his attachments was for women of rank, and that they were returned or suffered. Unlike poor Schubert, whose love for the Countess Marie Esterhazy was so carefully concealed, Beethoven made no secret of his attachments. Many of them are perpetuated in the dedications of his sonatas. That in E♭ (op. 7), dedicated to the Countess Babette de Keglevics, was called in allusion to him and to her, 'die verliebte.' To other ladies he writes in the most intimate, nay affectionate style. He addresses the Baroness Ertmann by her Christian name as 'Liebe, werthe, Dorothea Cäcilia,' and the Countess Erdödy—whom he called his confessor—as 'Liebe, liebe, liebe, liebe, liebe, Gräfin.'[6] Thayer's investigations[7] have destroyed the romance of his impending marriage with Giulietta Guicciardi (afterwards Countess Gallenberg); yet the fact that the story has been so long believed shows its abstract probability. One thing is certain, that his attachments were all honourable, and that he had no taste for immorality. 'Oh God! let me at last find her who is destined to be mine, *and who shall strengthen me in virtue.*' Those were his sentiments as to wedded love.

His dedications have been mentioned. The practice seems virtually to have begun with him,[8] to have sprung from the equal and intimate relation in which he—earliest among musicians—stood to his distinguished friends; and when one looks down the list,[9] from op. 1 to op. 135—unsurpassed even by any later composer—and remembers that the majority were inspired by private friendship,[10] and that only a minority speak of remuneration, it is impossible not to be astonished.

Formal religion he apparently had none; his religious observances were on a par with his manners. It is strange that the Bible does not appear to have been one of his favourite bo ks. He once says to a friend,[11] 'It happens to be Sunday, and I will quote you something out of the Gospel—Love one another'; but such references are very rare. But that he was really and deeply religious, 'striving sacredly to fulfil all the duties imposed[12] on him by humanity, God, and nature,' and full of trust in God, love to man, and real humility, is shown by many and many a sentence in his letters. And that in moments of emotion his thoughts turned upwards is touchingly shewn by a fragment of a hymn—'Gott allein ist unser Herr'—which Mr. Nottebohm[13] has unearthed from a sketch-book of the year 1818, and which Beethoven has himself noted to have been written, 'Auf dem Wege Abends zwischen den und auf den Bergen.' The following passages, which he copied out himself and kept constantly before him, served him as a kind of Creed, and sum up his theology:—

I am that which is.

I am all that is, that was, and that shall be. No mortal man hath lifted my veil.

He is alone by Himself, and to Him alone do all things owe their being.

How he turned his theology into practice is well exemplified in his alteration of Moscheles' pious inscription. At the end of his arrangement of Fidelio Moscheles had written 'Fine. With God's help.' To this Beethoven added, 'O man, help thyself.'[14]

In his early Vienna days he attempted to dress

in the fashion, wore silk stockings, perruque, long boots, and sword, carried a double eye-glass and a seal-ring. But dress must have been as unbearable to him[1] as etiquette, and it did not last; 'he was meanly dressed,' says one of his adorers, 'and very ugly to look at, but full of nobility and fine feeling, and highly cultivated.'[2] Czerny first saw him in his own room, and there his beard was nearly half an inch long, his black hair stood up in a thick shock, his ears were filled with wool which had apparently been soaked in some yellow substance, and his clothes were made of a loose hairy stuff, which gave him the look of Robinson Crusoe. But we know that he never wore his good clothes at home;[3] at any rate the impression he usually made was not so questionable as this. Those who saw him for the first time were often charmed by the eager cordiality of his address, and by the absence of the bearishness and gloom[4] which even then were attributed to him. His face may have been ugly, but all admit that it was remarkably expressive. When lost in thought and abstracted his look would naturally be gloomy, and at such times it was useless to expect attention from him; but on recognising a friend his smile was peculiarly genial and winning.[5] He had the breadth of jaw which distinguishes so many men of great intellect; the mouth firm and determined, the lips protruded with a look almost of fierceness: but his eyes were the special feature of the face, and it was in them that the earnestness and sincerity of his character beamed forth. They were black, not large but bright, and when under the influence of inspiration—the *raptus* of Madame von Breuning—they dilated in a peculiar way. His head was large, the forehead both high and broad, and the hair[6] abundant. It was originally black, but in the last years of his life, though as thick as ever, became quite white, and formed a strong contrast to the red colour[6] of his complexion. Beard or moustache he never wore. His teeth were very white and regular, and good up to his death;[7] in laughing he shewed them much. The portraits and busts of Beethoven are with few exceptions more or less to blame; they either idealise him into a sort of Jupiter Olympus, or they rob him of all expression. It must have been a difficult face to take, because of the constant variety in its expression, as well as the impatience of the sitter. The most trustworthy[8] likenesses are (1) the miniature by Hornemann, taken in 1802, and photographed in Breuning's 'Schwarzspanierhaus' (Vienna, 1874); (2) the head by Letronne, engraved by Höfel, and (badly) by Riedel for the A. M. Z., 1817; (3) the little full length sketch by Lyser, to the accuracy of which Breuning expressly testifies, except that the hat should be straight on the head, not at all on one side.

He was below the middle height—not more than 5 feet 5 inches; but broad across the shoulders and very firmly built—'the image of strength.'[9] His hands were much covered with hair, the fingers strong and short (he could barely span a tenth), and the tips broad, as if pressed out with long practising from early youth. He was very particular as to the mode of holding the hands and placing the fingers, in which he was a follower of Emanuel Bach, whose *Method* he employed in his earlier days. In extempore playing he used the pedal far more than one would expect from his published sonatas, and this made his quick playing confused, but in *Adagios* he played with divine clearness and expression.[10] His attitude at the piano was perfectly quiet and dignified, with no approach to grimace, except to bend down a little towards the keys as his deafness increased.[11] This is remarkable, because as a conductor his motions were most extravagant.[12] At a *pianissimo* he would crouch down so as to be hidden by the desk, and then as the *crescendo* increased, would gradually rise, beating all the time, until at the *fortissimo* he would spring into the air with his arms extended as if wishing to float on the clouds. When, as was sometimes the case after he became deaf, he lost his place, and these motions did not coincide with the music, the effect was very unfortunate, though not so unfortunate as it would have been had

he himself been aware of the mistake. In the orchestra, as at the piano, he was urgent in demanding expression, exact attention to *piano* and *forte*, and the slightest shades of *nuance*, and to *tempo rubato*. Generally speaking he was extremely courteous to the band, though to this rule there were now and then exceptions. Though so easily made angry his pains as a teacher must have been great. 'Unnaturally patient,' says one pupil,[1] 'he would have a passage repeated a dozen times till it was to his mind'; 'infinitely strict in the smallest detail,' says another,[2] 'until the right rendering was obtained.' 'Comparatively careless[3] as to the right notes being played, but angry at once at any failure in expression or *nuance*, or in apprehension of the character of the piece; saying that the first might be an accident, but that the other showed want of knowledge, or feeling, or attention.' What his practice was as to remuneration does not appear, but it is certain that in some cases he would accept no pay from his pupils.

His simplicity and absence of mind were now and then oddly shown. He could not be brought to understand why his standing in his nightshirt at the open window should attract notice, and asked with perfect simplicity 'what those d——d boys were hooting at.'[4] At Penzing in 1823 he shaved at his window in full view, and when the people collected to see him, changed his lodging rather than forsake the practice.[5] Like Newton he was unconscious that he had not dined, and urged on the waiter payment for a meal which he had neither ordered nor eaten. He forgot that he was the owner of a horse until recalled to the fact by a long bill for its keep. In fact he was not made for practical life; never could play at cards or dance, dropped everything that he took into his hands, and overthrew the ink into the piano. He cut himself horribly in shaving. 'A disorderly creature' (ein unordentlicher Mensch) was his own description, and 'ein konfuser Kerl' that of his doctor,[6] who wisely added the saving clause 'though he may still be the greatest genius in the world.' His ordinary handwriting was terrible, and supplied him with many a joke. 'Yesterday I took a letter myself to the post-office, and was asked where it was meant to go to. From which I see that my writing is as often misunderstood as I am myself.'[7] It was the same twenty years before—'this cursed writing that I cannot alter.'[8] Much of his difficulty probably arose from want of pens, which he often begs from Zmeskall and Breuning; for some of his MSS.[9] are as clear and flowing as those of Mozart, and there is a truly noble character in the writing of some of his letters, e.g. that to Mr. Broadwood (see p. 194), of which we give the signature.

Notwithstanding his illegible hand Beethoven was a considerable letter writer. The two collections published by Nohl contain 721, and these are probably not more than half of those he wrote.[10] Not a large number when compared with those of Mendelssohn or even Mozart—both of whom died so early,—but large under all the circumstances. 'Good letters' they cannot be called. They contain no descriptions or graces of style; they are often clumsy and incorrect. But they are also often eminently interesting from being so brimfull of the writer's personality. They are all concerned with himself, his wants and wishes, his joys and sorrows; sometimes when they speak of his deafness or his ill health, or confess his faults and appeal to the affection of his correspondent, they overflow with feeling and rise into an affecting eloquence, but always to the point. Of these, the letters to Wegeler and Eleanore von Breuning, and that to his brothers (called his 'Will'), are fine specimens. Many of those addressed to his nephew are inexpressibly touching. But his letters are often very short. Partly perhaps from his deafness, and partly from some idiosyncrasy, he would often write a note where a verbal question would seem to have been more convenient. One constant characteristic is the fun they contain. Swift himself never made worse puns with more pleasure, or devised queerer spelling[11] or more miserable rhymes, or bestowed more nicknames on his friends. Krumpholz is 'my fool'; he himself is 'the Generalissimus,' Haslinger 'the Adjutant,' Schindler 'the Samothracian' and 'Papageno'; Schuppanzigh is 'Falstaff'; Bernard, 'Bernardus non Sanctus'; Leidesdorf is 'Dorf des Leides'; Hoffmánn is adjured to be 'kein Hófmann,' Kühlau is 'Kühl nicht lau,' and so on. Nor are they always *comme il faut*, as when he addresses Holz as 'lieber Holz vom Kreuze Christi,' or apostrophises 'Monsieur Friederich, nommé Liederlich.' Sometimes such names bite deeply:—his brother Johann is the 'Braineater,' 'Pseudo-brother,' or 'Asinus,' and Caspar's widow the 'Queen of Night.' No one is spared. A canon to Count Moritz Lichnowsky runs 'Bester

Herr Graf, du bist ein Schaf.' The anecdote about his brother already alluded to is a case in point.[1] Johann, who lived on his own property, called on him on some *jour de fête*, and left his card 'Johann van Beethoven, Gutsbesitzer' (land proprietor), which Beethoven immediately returned after writing on the back 'L. van Beethoven, Hirnbesitzer' (brain proprietor). This fondness for joking pervaded his talk also; he liked a home-thrust, and delivered it with a loud roar of laughter. To tell the truth he was fond of horse-play, and that not always in good taste. The stories—some of them told by himself—of his throwing books, plates, eggs, at the servants; of his pouring the dish of stew over the head of the waiter who had served him wrongly; of the wisp of goat's beard sent to the lady who asked him for a lock of his hair—are all instances of it. No one had a sharper eye or ear for a joke when it told on another. He was never tired of retailing the delicious story of Simon the Bohemian tenor who in singing the sentence 'Auf was Art Elende' transformed it into 'Au! fwa! Sartellen Thee!'[2] But it must be confessed that his ear and his enjoyment were less keen when the joke was against himself. When at Berlin in 1796 he interrupted Himmel in the middle of an improvisation to ask when he was going to begin in earnest. But when Himmel, months afterwards, wrote to him that the latest invention in Berlin was a lantern for the blind, Beethoven not only with characteristic simplicity did not see the joke, but when it was pointed out to him was furious, and would have nothing more to do with his correspondent.

The simplicity which lay at the root of so many of his characteristic traits, while it gave an extraordinary force and freshness to much that he did and said, must often have been very inconvenient to those who had intercourse with him. One of his most serious quarrels arose from his divulging the name of a very old and intimate friend who had cautioned him privately against one of his brothers. He could see no reason for secresy; but it is easy to imagine the embarrassment which such disregard of the ordinary rules of life must have caused. Rochlitz describes the impression he received from him as that of a very able man reared on a desert island, and suddenly brought fresh into the world. One little trait from Breuning's recollections exemplifies this—that after walking in the rain he would enter the living room of the house and at once shake the water from his hat all over the furniture, regardless, or rather quite unaware, of the damage he was doing. His ways of eating in his later years became quite unbearable.

One fruitful source of difficulty in practical life was his lodgings. His changes of residence were innumerable during the first year or two of his life in Vienna; it is impossible to disentangle them. Shortly after his arrival the Lichnowskys took him into their house, and there for some years he had nominally a *pied à terre*; but with all the indulgence of the Prince and Princess the restraint of being forced to dress for dinner, of attending to definite hours and definite rules, was too much for him, and he appears very soon to have taken a lodging of his own in the town, which lodging he was constantly changing. In 1803, when an opera was contemplated, he had free quarters at the theatre, which came to an end when the house changed hands early in 1804. A few months later and he was again lodged in the theatre free. At Baron Pasqualati's house on the ramparts he had rooms—with a beautiful look-out[3]—which were usually kept for him, where he would take refuge when composing, and be denied to every one. But even with this he had a separate and fresh quarter nearly every winter.[4] In summer he hated the city, and usually followed the Vienna custom of leaving the hot streets for the delicious wooded environs of Hetzendorf, Heiligenstadt, or Döbling, at that time little villages absolutely in the country, or for Mödling or Baden, further off. To this he 'looked forward with the delight of a child.... No man on earth loves the country more. Woods, trees, and rocks give the response which man requires.' 'Every tree seems to say Holy,[5] Holy.' Here, as already remarked, he was out of doors for hours together, wandering in the woods, or sitting in the fork of a favourite lime-tree in the Schönbrunn gardens[6] sketch-book in hand; here his inspiration flowed, and in such circumstances the 'Mount of Olives,' 'Fidelio,' the 'Eroica Symphony,' and the majority of his great works were sketched and re-sketched, and erased and re-written, and by slow degrees brought far on to perfection.

His difficulties with his lodgings are not hard to understand; sometimes he quarrelled with them because the sun did not shine into the rooms, and he loved the light; sometimes the landlord interfered. Like other men of genius whose appearance would seem to belie the fact, Beethoven was extremely fond of washing.[7] He would pour water backwards and forwards over his hands for a long time together, and if at such times a musical thought struck him and he became absorbed, he would go on until the whole floor was swimming, and the water had found its way through the cieling into the room beneath. On one occasion he abandoned a lodging for which he had paid heavily in advance, because his landlord, Baron Pronay, insisted on taking off his hat to him whenever they met. One of the most momentous of his changes was in 1804. After he was turned out of his lodgings at the theatre Beethoven and Stephen Breuning inhabited two sets of rooms in a building called the *Rothe Haus*. As each set was large enough for two, Beethoven soon moved into Breuning's rooms, but neglected to give the necessary notice to the landlord, and thus after a time found that he had both lodgings on his

[7] In a letter to Countess Erdödy accepting an invitation he stipulates for 'a little bath room.'

hands at once. The result was a violent quarrel, which drove Beethoven off to Baden, and estranged the two friends for a time. We have Beethoven's version of the affair in two letters to Ries—July, and July 24, 1804—angry implacable letters, but throwing a strong light on his character and circumstances, showing that it was not the loss of the money that provoked him, but an imputation of meanness; showing further that here, as so often elsewhere, his brother was his evil genius; and containing other highly interesting personal traits.

Besides the difficulties of the apartments there were those with servants. A man whose principles were so severe as to make him say of a servant who had told a falsehood that she was not pure at heart, and therefore could not [1]make good soup; who punished his cook for the staleness of the eggs by throwing the whole batch at her one by one, and who distrusted the expenditure of every halfpenny—must have had much to contend with in his kitchen. The books give full details on this subject, which need not be repeated, and indeed are more unpleasant to contemplate than many other drawbacks and distresses of the life of this great man.

In the earlier part of his career money was no object to him, and he speaks as if his purse were always open to his friends.[2] But after the charge of his nephew was thrust upon his hands a great change in this, as in other respects, came over him. After 1813 complaints of want of money abound in his letters, and he resorted to all possible means of obtaining it. The sum which he had been enabled to invest after the congress he considered as put by for his nephew, and therefore not to be touched, and he succeeded in maintaining it till his death.

It is hard to arrive at any certain conclusion on the nature and progress of Beethoven's deafness, owing to the vagueness of the information. Difficulty of hearing appears first to have shown itself about 1798 in singing and buzzing in his ears, loss of power to distinguish words, though he could hear the tones of voice, and great dislike to sudden loud noise. It was even then a subject of the greatest pain to his sensitive nature;[2] like Byron with his club-foot he lived in morbid dread of his infirmity being observed, a temper which naturally often kept him silent; and when a few years later[3] he found himself unable to hear the pipe of a peasant playing at a short distance in the open air, it threw him into the deepest melancholy, and evoked the well-known letter to his brother in 1802, which goes by the name of his Will. Still many of the anecdotes of his behavour in society show that during the early years of the century his deafness was but partial; and Ries, intimate as he was with his master, admits that he did not know it till told[4] by S. Breuning. It is obvious from Schindler's statement that he must have been able to hear the yellowhammers in the trees above him when he was composing the Pastoral Symphony in 1807 and 1808. A few facts may be mentioned bearing on the progress of the malady. In 1805 he was able to judge severely of the *nuances* in the rehearsal of his opera. In 1807, 1809, 1813 he conducted performances of his own works. In 1814 he played his B flat trio—his last appearance in public in concerted music. From 1816 to 1818 he used an ear trumpet.[5] At the opening of the Josephstadt Theatre in 1822, he conducted the performance—nearly to ruin it is true, but at the same time he was able to detect that the soprano was not singing in time, and to give her the necessary advice. A subsequent attempt (in Nov. 1822) to conduct 'Fidelio,' led to his having to quit the orchestra, when his mortification was so great that Schindler treats the occurrence as an epoch in his life.[6] At this time the hearing of the right ear was almost completely gone; what he did hear—amongst other things a musical box[7] playing the trio in 'Fidelio,' and Cherubini's overture to 'Medea'—was with the left ear only. After this he conducted no more, though he stood in the orchestra at the performance of the 'Choral Symphony,' and had to be turned round that he might see the applause which his music was evoking. From this to the end all communication with him was carried on by writing, for which purpose he always had a book of rough paper, with a stout pencil, at hand.

The connexion between this cruel malady and the low tone of his general health was closer than is generally supposed. The *post mortem* examination showed that the liver was shrunk to half its proper size, and was hard and tough like leather, with numerous nodules the size of a bean woven into its texture and appearing on its surface. There were also marks of ulceration of the pharynx, about the tonsils and Eustachian tubes. The arteries of the ears were athrumatous, and the auditory nerves—especially that of the right ear—were degenerated and to all appearance paralysed. The whole of these appearances are most probably the result of syphilitic affections at an early period of his life.[8] The pains in the head, indigestion, colic, and jaundice, of which he frequently complains, and the deep depression which gives the key to so many of his letters, would all follow naturally from the chronic inflammation and atrophy implied by the state of the liver, and the digestive derangements to which it would give rise, aggravated by the careless way in which he lived, and by the bad food, hastily devoured, at irregular intervals, in which he too often indulged. His splendid constitution and his extreme fondness for the open air must have been of great assistance to him. How thoroughly he enjoyed the country we have already seen, for, like Mendelssohn, he was a great walker, and in Vienna no day, however busy or however wet, passed without its 'constitutional'—a walk, or rather run, twice round the ramparts,

[8] This diagnosis, which I owe to the kindness of my friend Dr. Lauder Brunton, is confirmed by the existence of two prescriptions, of which, since the passage in the text was written, I have been told by Mr. Thayer, who heard of them from Dr. Bartolini.

a part of the city long since obliterated; or farther into the environs.

Beethoven was an early riser, and from the time he left his bed till dinner—which in those days was taken at, or shortly after, noon—the day was devoted to completing at the piano and writing down the compositions which he had previously conceived and elaborated in his sketch-books, or in his head. At such times the noise which he made playing and roaring was something tremendous. He hated interruption while thus engaged, and would do and say the most horribly rude things if disturbed. Dinner—when he remembered it—he took sometimes in his own room, sometimes at an eating-house, latterly at the house of his friends the Breunings; and no sooner was this over than he started on his walk. He was fond of making appointments to meet on the glacis. The evening was spent at the theatre or in society. He went nowhere without his sketch-books, and indeed these seem to distinguish him from other composers almost as much as his music does. They are perhaps the most remarkable relic that any artist or literary man has left behind him. They afford us the most precious insight into Beethoven's method of composition. They not only show—what we know from his own admission—that he was in the habit of working at three, and even four, things at once,[1] but without them we should never realise how extremely slow and tentative he was in composing. Audacious and impassioned beyond every one in extemporising, the moment he takes his pen in hand he becomes the most cautious and hesitating of men. It would almost seem as if this great genius never saw his work as a whole until it actually approached completion. It grew like a plant or tree, and one thing produced another.[2] There was nothing sudden or electric about it, all was gradual and organic, as slow as a work of nature and as permanent. One is prompted to believe, not that he had the idea first and then expressed it, but that the idea came in the process of finding the expression. There is hardly a bar in his music of which it may not be said with confidence that it has been re-written a dozen times. Of the air 'O Hoffnung' in Fidelio the sketch-books show 18 attempts, and of the concluding chorus 10. Of many of the brightest gems of the opera, says Thayer, the first ideas are so trivial that it would be impossible to admit that they were Beethoven's if they were not in his own handwriting. And so it is with all his works. It is quite astonishing to find the length of time during which some of his best-known instrumental melodies remained in his thoughts till they were finally used, or the crude vague commonplace shape in which they were first written down. The more they are elaborated the more fresh and spontaneous do they become.

To quote but two instances out of many. The theme of the *Andante* in the C minor Symphony, completed in 1808, is first found in a sketch-book of the year 1800, mixed with memoranda for the 6 Quartets, and in the following form:[3]—

Another is the first subject of the Allegro in the Sonata Op. 106. It first appears[4] thus—

then, with a slight advance,

next

then

and finally, after several pages more of writing and rewriting, it assumes its present incisive and spontaneous shape.

In these books every thought that occurred to him was written down at the moment; he even kept one by his bedside for use in the night.[5] Abroad or at home it was all the same, only out of doors he made his notes in pencil, and inked them over on his return to the house. It is as if he had no reliance whatever on his memory. He began the practice as a boy[6] and maintained it to the last. In the sale catalogue of his effects more than 50 of such books are included. Many of them have been parted and dispersed, but some remain intact. They are usually of large coarse music paper, oblong, 200 or even more pages, 16 staves to the page, and are covered from beginning to end, often over the margin as well, with close crowded writing. There is something very affecting in the sight of these books,[7] and in being thus brought so close to this mighty genius and made to realise the incessant toil and pains which he bestowed on all his works, small and great. In this he agreed with Goethe, who says, à propos to his 'Ballad,' 'Whole years of reflection are comprised in it, and I made three or four trials before I could bring it to its present shape.'[8] The sketch-books also show how immense was the quantity of his ideas. 'Had he,' says Nottebohm,[9] 'carried out all the symphonies which are begun in these books we should have at least fifty.'

But when, after all this care and hesitation, the works were actually completed, nothing ex-

1 Letter to Wegeler, June, 1800.

2 Thus the 3-bar rhythm of the Scherzo of the 9th Symphony gradually came as he wrote and re-wrote a fugue subject apparently destined for a very different work. Nottebohm, *N. B.* XXIII.

ternal made him change them. No convenience of singers or players weighed for a moment against the integrity of his finished composition. When Sonntag and Ungher protested against the unsingable passages in the Ninth Symphony, and besought him to bring them within the compass of their voices, 'Nein und immer nein,' was the dry answer.[1] When Kraft, the cellist in the Schuppanzigh Quartet, complained that a passage 'did not lie within his hand,' the answer was 'it must lie'—'muss liegen.'[2]

A man to whom his art was so emphatically the business of his life, and who was so insatiable in his standard of perfection, must have been always advancing. To him more than to any other musician may be applied Goethe's words on Schiller:—'Every week he altered and grew more complete, and every time I saw him he appeared to me to have advanced since the last in knowledge, learning, and judgment.'[3] It is no wonder then that he did not care for his early works, and would sometimes even have destroyed 'Adelaide,'[4] the Septet, and others of his youthful pieces, if he could. Towards the end of his life he heard a friend practising his 32 Variations[5] in C minor. After listening for some time he said 'Whose is that?' 'Yours,' was the answer.' 'Mine? That piece of folly mine?' was his retort; 'Oh, Beethoven, what an ass you were in those days!' A good deal of this may have been momentary caprice; but making all allowance, one can imagine his feelings at the close of his life on receiving a commission from an English amateur for a 'Symphony in the style of his Second or of his Septet,' or on reading the contemporary effusions on the Eroica and C minor Symphonies, in which his honest and well-meaning critics[6] entreated him to return to the clearness and conciseness of his early works.

Hardly less characteristic than the sketch-books are his diaries or journals, in which the most passionate and personal reflections, resolutions, prayers, aspirations, complaints, are mixed up with memorandums of expenses and household matters, notes about his music, rules for his conduct, quotations from books, and every other conceivable kind of entry. These books have been torn up and dispersed as autographs; but a copy of one extending from 1812 to 1818 fortunately exists, and has been edited with copious notes and elucidations by Herr Nohl, the whole throwing great light on that unfortunate period of his life. A ray of light is also occasionally to be gained from the conversation-books already mentioned, some of which have been preserved, though as Beethoven's answers were usually spoken this source is necessarily imperfect.

If now we ask what correspondence there is between the traits and characteristics thus imperfectly sketched and Beethoven's music, it must be confessed that the question is a difficult one to answer. In one point alone the parallel is obvious—namely, the humour, which is equally salient in both. In the finale of the 7th and 8th Symphonies there are passages which are the exact counterparts of the rough jokes and horse-play of which we have already seen some instances. In these we almost hear his loud laugh. The Scherzo of Symphony No. 2, where the F♯ chord is so suddenly taken and so forcibly held, might almost be a picture of the unfortunate *Kellner* forced to stand still while the dish of stew was poured over his head. The bassoons in the opening and closing movements of No. 8 are inimitably humorous; and so on in many other instances which will occur to every one. But when we leave humour and go to other points, where in the life shall we look for the grandeur and beauty which distinguish the music? Neither in letters nor anecdotes do we find anything answering to the serene beauty of the slow movements (No. 2, No. 4, No. 9), or the mystic tone of such passages as those of the horns at the end of the Trio of the Eroica or of certain phrases in the finale of the Choral Fantasia and of the Choral Symphony, which lift one so strangely out of time into eternity. These must represent a state of mental absorption when all heaven was before his eyes, and in which he retired within himself far beyond the reach of outward things, save his own divine power of expression.

Equally difficult is it to see anything in Beethoven's life answering to the sustained nobility and dignity of his first movements, or of such a piece as the 'Overture to Leonora, No. 3.' And then if we come to the most individual and characteristic part of all Beethoven's artistic self, the process by which his music was built up—the extraordinary caution which actuated him throughout, the hesitation, the delays, the incessant modification of his thoughts, the rejection of the first impressions—of the second—of the third—in favour of something only gradually attained to, the entire subordination of his own peculiarities to the constant thought of his audience, and of what would endure rather than what pleased him at first—to all this there is surely nothing at all corresponding in his life, where his habit was emphatically a word and a blow. The fact is that, like all musicians, only in a greater degree than any other, in speech Beethoven was dumb, and often had no words for his deepest and most characteristic feelings. The musician has less connexion with the outside world than any other artist, and has to turn inward and seek his art in the deepest recesses of his being only.[7] This must naturally make him less disposed to communicate with others by the ordinary channels of speech and action, and will account for much of the irritability and uncertainty which often characterise his dealings with his fellow men. But the feelings are there, and if we look closely enough into the life we shall be able to detect their existence often where we least expect it. In Beethoven, for example, what was his treatment of his nephew—the strong devotion which seized him

directly after his brother's death, and drove him to sacrifice the habits of a lifetime; his inexhaustible forgiveness, his yearning tenderness—what are these, if properly interpreted, but a dumb way of expressing that noble temper which, when uttered in his own natural musical language, helps to make the first movement of the Eroica so lofty, so dignified, and so impressive?

We must now return to the chronicle of the events of Beethoven's life.

His position at Bonn as organist and pianist to the Emperor's brother, his friendship with Count Waldstein, who was closely related to some of the best families in Vienna, and his connexion with Haydn, were all circumstances sure to secure him good introductions. The moment was a favourable one, as since Mozart's death, a twelvemonth before, there had been no player to take his place; and it was as a player that Beethoven was first known. It is pleasant to know that his show-piece, with which he took the Vienna connoisseurs by storm, was his Variations on 'Venni amore,' which we have already mentioned as composed before he left Bonn. Public concerts in our sense of the word there were few, but a player had every opportunity at the musical parties of the nobility, who maintained large orchestras of the best quality, and whose music-meetings differed from public concerts chiefly in the fact that the audience were better educated, and were all invited guests. Prince Lichnowsky and Baron van Swieten appear to have been the first to secure Beethoven, the former for his regular Friday morning chamber performances, the latter for soirées, when he had either 'to bring his night-cap in his pocket' or else to stay after the other guests had gone, and send his host to bed with half-a-dozen of Bach's fugues as an *Abendsegen*. The acquaintance probably began shortly after Beethoven's arrival; and after a twelvemonth of unpleasant experience in the Vienna lodgings, the Prince induced him to accept apartments in his house. His wife was a Princess of Thun, famous for her beauty and her goodness; he himself had been a pupil of Mozart; and both were known as the best amateur musicians of Vienna. Beethoven was poor enough to be tempted by such hospitality, but it was an absurd arrangement, and he very soon infringed it by disregarding the Prince's hours, often dining at the *Gasthof*, having a lodging of his own elsewhere, and other acts of independence. Here however he was frequently heard, and thus became rapidly known in the most musical circles, and Ries's anecdotes show (after making allowance for the inaccuracy of a man who writes 30 years after the events) how widely he was invited, how completely at his ease he was, and how entirely his eccentricities were condoned for the sake of his playing and his great qualities. Not that we are to suppose that Beethoven gave undue time to society. He was too hard a worker for that. His lessons with Haydn and Albrechtsberger (from the latter he had three a week) were alone enough to occupy a great deal of time, and his own studies in counterpoint exist to show that he did not confine himself to the mere tasks that were set him. Moreover his lessons with Albrechtsberger contain sketches for various compositions, such as 'Adelaide,' a part of one of the Trios (op. 1), and the Symphony in C,[1] all showing how eager he was to be something more than a mere player or even a splendid improviser. These sketches afford an early instance of his habit of working at several compositions at one and the same time. The date of one of them, about Feb. 1795, seems to imply either that the story—grounded on Ries's statement—that the Trios were in MS. for many months[2] before they were printed is inaccurate, or, more probably, that Beethoven re-wrote one of the movements very shortly before delivering the work to the publisher, which he did on May 19. In this case it would show the wisdom of the plan which he adopted with most of his early works,[3] of keeping them in MS. for some time and playing them frequently, so as to test their quality and their effect on the hearers, a practice very consistent with his habitual caution and fastidiousness in relation to his music. At any rate the Trios were published first to the subscribers, by July 1795, and then, on Oct. 21, to the public. They were shortly followed by a work of equal importance, the first three Pianoforte Sonatas,[4] which were first played by their author at one of the Prince's Fridays in presence of Haydn, and published on the 9th of the following March as op. 2, dedicated to him. He had not then written a string-quartet, and at this concert Count Appony[5] proposed to Beethoven to compose one, offering him his own terms, and refusing to make any conditions beyond the single one that the quartet should be written—a pleasant testimony to the enthusiasm excited by the new Sonatas, and to the generosity of an Austrian nobleman. In addition to the Trios, the publications of his three first years in Vienna include the 12 Variations on 'Se vuol ballare' (July 1793); the 13 on 'Es war einmal' (early in 1794); the 8 for 4 hands on Count Waldstein's theme (1794); and 9 for Piano Solo on 'Quant' e più bello'[6] (Dec. 30, 1795). The compositions are more numerous, and besides the Trios and Sonatas (op. 1 and 2) include a Trio for Oboes and Corno inglese (op. 87), which remained unpublished till 1806; a Rondo in G for Pianoforte and Violin,[7] which he sent to Eleanore von Breuning, and which remained unpublished till 1808; the two Concertos for Piano and Orchestra, of which 'No. 2' is the earlier, and 'No. 1' was composed before March

[1] See Nottebohm's *Beethovens Studien*, i. 202.

[2] Haydn left Vienna for London on Jan. 19, '94, and did not return till Sept. '95, when the Trios had been printed and in the subscribers' hands for some weeks. If he therefore advised Beethoven not to publish the third it must have been before he left Vienna. Ries's statement is so explicit that the alternative suggested in the text seems the only escape from the difficulty.

[3] He maintained this plan till 1812, when he informs Varenna that he never publishes until a year after composition. Letter Feb. 8, 1812.

[4] In the *Adagio* of No. 1 the corresponding movement in No. 3 of the early Piano Quartets is partially adopted—a rare thing with Beethoven.

[5] Wegeler, p. 29. [6] B. & H. 167. [7] Ibid. 102.

29, 95; Songs, 'Adelaide,' and 'Opferlied,'[1] both to Matthison's words, and 'Seufzer eines Ungeliebten,'[2] all probably composed in 95; Canon 'Im Arm[3] der Liebe,' an exercise with Albrechtsberger; 12 Minuets and 12 'Deutsche Tänze' for Orchestra,[4] composed Nov. 95.

On March 29, 95, Beethoven made his first appearance before the outside public at the annual concert in the Burg Theatre, for the widows' fund of the Artists' Society. He played his Concerto in C major.[5] The piece had probably been suggested by Salieri, and with it Beethoven began a practice which he more than once followed when the work was bespoken — of only just finishing the composition in time; the Rondo was written on the afternoon of the last day but one, during a fit of colic. At the rehearsal, the piano being half a note too flat, Beethoven played in C♯.[6] Two days after he appeared again at the same theatre at a performance for the benefit of Mozart's widow, playing a Concerto of Mozart's between the acts of the 'Clemenza di Tito.'[7] Later in the year he assisted another benevolent object by writing 12 minuets and 12 waltzes for orchestra for the ball of the 'Gesellschaft der bildenden Künstler' on the 22nd Nov. He was evidently a favourite with the Artists, who advertise 'the master-hand of Herr Ludwig van Beethoven,' while they mention Süssmayer —who also contributed music—without an extra word. These dances, after publication, remained in favour for two more seasons, which is mentioned as a great exception to rule. On Dec. 18 he again appeared in public at a concert of Haydn's in the 'little Redoutensaal,' playing a Concerto of his own—but whether the same as before is not stated. The dedication of the Sonatas and his co-operation at Haydn's concert allow us to hope that the ill-feeling already alluded to had vanished. So closed the year 1795. Bonn was at this time in the hands of the Republican army, and Beethoven's brother the Apotheker was serving as a 'pharmacien de 3ème classe.'

1796 was a year of wandering. Haydn and he appeared together at a second concert on January 10.[8] In the interval Beethoven went perhaps to Prague, certainly to Nuremberg. On Feb. 19 he was in Prague again, where he composed the Scena[9] 'Ah! perfido' for Madame Duschek, the friend of Mozart. From thence he travelled to Berlin, played at court, amongst other things the two cello sonatas op. 5, probably composed for the occasion, and received from the King a box of louis d'or, which he was proud of showing as 'no ordinary box, but one of the kind usually presented to ambassadors.' At Berlin his time was passed pleasantly enough with Himmel the composer and Prince Louis Ferdinand. He went two or three times to the Singakademie,[10] heard the choir sing Fasch's psalms, and extemporised to them on themes from those now forgotten compositions. In July the Court left Berlin, and Beethoven probably departed also; but we lose sight of him till Nov. 15, the date of a 'farewell-song'[11] addressed to the volunteers on their leaving Vienna to take part in the universal military movement provoked by Napoleon's campaigns in Italy. The war was driving all Germans home, and amongst others Beethoven's old colleagues the two Rombergs passed through Vienna from Italy, and he played for them at a concert.

The publications of 1796 consist of the 3 Piano Sonatas, op. 2 (March 9); 12 Variations on a minuet *à la Vigano*[12] (Feb.), and 6 on 'Nel cor più sento'[13] (Mar. 23); 6 Minuets (also in March) for Piano, originally written for orchestra—perhaps the result of his success with the 'bildender Künstler.'[14] Of the compositions of the year, besides those already named, may be mentioned as probable the Piano Sonata in G,[15] the second of the 2 small ones (op. 49); and another of the same rank in C[16] for Eleanore von Breuning; we may also ascribe to the latter part of this year the Duet Sonata (op. 6); 12 Variations on a Russian dance;[17] the String Quintet (op. 4), arranged from an Octet for wind instruments, very probably of his præ-Vienna time. The Russian Variations were written for the Countess Browne, wife of an officer in the Russian service, and were acknowledged by the gift of the horse which we have already mentioned as affording an instance of Beethoven's absence of mind. But the winter months must have been occupied by a more serious work than variations—the Quintet for piano and wind (op. 16),[18] which Beethoven produced at a concert of Schuppanzigh's on April 6, 1797, and which is almost like a challenge to Mozart on his own ground, and the not less important and far more original Pianoforte Sonata in E♭ (op. 7). This great work, 'quite novel, and wholly peculiar to its author, the origin of which can be traced to no previous creation, and which proclaimed his originality so that it could never afterwards be disputed,' was published on Oct. 7, '97, but must have been often played before that date. The sketches for the 3 Sonatas, op. 10, are placed by Nottebohm in this period, with the Variations on the 'Une fièvre brûlante.' The three String Trios, op. 9, also probably occupied him during some part of the year. The Serenade Trio, op. 8, though published in 1797, more probably belongs with op. 3 to the Bonn date. The Variations on 'See the conquering hero' for Pianoforte and Cello, dedicated to the Princess Lichnowsky,[19] were published during this year, and were probably written at the time.

Vienna was full of patriotism in the spring of 1797. Haydn's 'Emperor's Hymn' had been sung in the theatre for the first time on Feb. 12,[20] and Beethoven wrote a second military Lied, 'Ein

grosses deutsches Volk sind wir,'[1] to Friedelberg's words, which is dated April 14, but did not prove more successful than his former one. In May he writes to Wegeler in terms which show that with publications or lessons his pecuniary position is improving; but from that time till Oct. 1—the date of an affectionate entry in Lenz von Breuning's album—we hear nothing whatever of him. A severe illness has to be accounted for,[2] and this is probably the time at which it happened. In November occurred the annual ball of the 'Bildenden Künstler,' and his dances were again played for the third time; the seven Ländler,[3] ascribed to this year, were not improbably written for the same ball. His only other publications of 1797 not yet mentioned are the Pianoforte Rondo in C major, which many years afterwards received the opus number 51, and last, but not least, 'Adelaide.' Some variations[4] for 2 Oboes and Corno Inglese on 'La ci darem' were played on Dec. 23 at a concert for the Widows and Orphans Fund, but are still in MS.

The chief event of 1798 is one which was to bear fruit later—Beethoven's introduction to Bernadotte the French ambassador, by whom the idea of the Eroica Symphony is said[5] to have been first suggested to him. Bernadotte was a person of culture, and having R. Kreutzer, the violin-player, as a member of his establishment may be presumed to have cared for music. Beethoven, who professed himself an admirer of Bonaparte, frequented the ambassador's levees; and there is ground for believing that they were to a certain extent intimate. On April 2 Beethoven played his Piano Quintet (op. 16) at the concert for the Widows and Orphans Fund. The publications of this year show that the connexion with the von Brownes indicated by the dedication of the Russian Variations was kept up and even strengthened; the 3 String Trios, op. 9 (published July 21), are dedicated to the Count, and the 3 Sonatas, op. 10 (subscribed July 7, published Sept. 26), to the Countess. The 3rd of these sonatas forms a landmark in Beethoven's progress of equal significance with op. 7. The letter[6] which he appended to the Trios speaks of 'munificence at once delicate and liberal'; and it is obvious that some extraordinary liberality must have occurred to draw forth such an expression as 'the first Mæcenas of his muse' in reference to any one but Prince Lichnowsky. In other respects the letter is interesting. It makes music depend less on 'the inspiration of genius' than on 'the desire to do one's utmost,' and implies that the Trios were the best music he had yet composed. The Trio for Piano, Clarinet, and Cello (op. 11), dedicated to the mother of Princess Lichnowsky, was published on Oct. 3. This is the composition which brought Steibelt and Beethoven into collision, to the sad discomfiture of the former.[7] Steibelt had shown him studied neglect till they met at Count Fries's, at the first performance of this Trio, and he then treated him quite *de haut en bas*. A week later they met again, when Steibelt produced a new Quintet and extemporised on the theme of Beethoven's Finale—an air from Weigl's 'Amor marinaro.' Beethoven's blood was now fairly up; taking the cello part of Steibelt's quintet he placed it upside down before him, and making a theme out of it played with such effect as to drive Steibelt from the room. Possibly this fracas may account for Beethoven's known dissatisfaction with the Finale.[8] The other publications of 1798 are Variations: 12 for Piano and Cello on an air in the 'Zauberflöte,' afterwards numbered as op. 66; 6, easy,[9] for Piano or Harp, possibly written for some lady friend, and published by his old ally Simrock at Bonn; and 8 on 'Une fièvre brulante.'[10]

This year he again visited Prague, and performed at two public concerts, making an immense impression.[11] After his return, on Oct. 27, he played one of his two Concertos at the Theatre *auf den Wieden*. Wölfl was in Vienna during this year, and in him Beethoven encountered for the first time a rival worthy of his steel. They seem to have met often at Count Wetzlar's (Wölfl's friend), and to have made a great deal of music together, and always in a pleasant way.[12] It must have been wonderful to hear them, each excited by the other, playing their finest, extemporising alternately and together (like Mendelssohn and Moscheles), and making all the fun that two such men at such an age and in capital company would be sure to make. Wölfl commemorated their meeting by dedicating three sonatas to Beethoven, but met with no response.

But Beethoven did not allow pleasure to interfere with business, as the publications of the following year fully show. The 3 Sonatas for Piano and Violin, dedicated to Salieri (op. 12), published on Jan. 12, 1799, though possibly composed earlier must at any rate have occupied him in correction during the winter. The little Sonata in G minor (op. 49, No. 1) is a child of this time, and is immediately followed in the sketch books by the 'Grande Sonate pathétique'—Beethoven's own title—(op. 13), dedicated to Prince Lichnowsky, as if to make up for the little slight contained in the reference to Count Browne as his 'first Mæcenas.' The well-known Rondo to the Sonata appears to have been originally intended for the third of the String Trios.[13] Of the origin of the 2 Sonatas, op. 14 (published Dec. 21), little is known. The sketches for the first of the two are coincident in time with those for the Concerto in B♭, which was completed in 1794,[14] and there is ground for believing that it was originally conceived as a string quartet, into which indeed Beethoven

converted it a few years after. The second is probably much later, and is specially interesting from the fact that Beethoven explained it[1] to be a dialogue between two lovers, he entreating and she resisting. The Sonatas are dedicated to the Baroness Braun.

The other publications of 1799 are variations: 10 on Salieri's 'La Stessa'; 7 on Winter's 'Kind, willst du'; and 8 on Süssmayer's 'Tändeln.'[2] A comparison of the dates of publication with those of the appearance of the operas from which the themes are taken, shows that two of these were written shortly before publication.

Beethoven was now about to attack music of larger dimensions than before. His six string Quartets, the Septet, the 1st Symphony, and the 'Mount of Olives,' are fast approaching, and must all have occupied him more or less during the last year of the century. In fact the sketches for the three first of the quartets (first in date of composition), Nos. 5, 1, 6, are positively assigned to this year, though there is evidence that the earliest of the three had been begun as far back as 94 or 95.[3] And though sketches of the Septet have not yet been made public, yet it is contrary to all Beethoven's habits in the case of so important a piece, and apparently quite spontaneously undertaken, that he should not have been at work at it for a long while before its production. The same with regard to the 1st Symphony. Both were produced on April 2, 1800. Traces of the Symphony, or of a previous one in the same key,[4] are found as early as the beginning of 95, and there is no doubt that two such experiments in a new field must have occupied much time and labour. Besides these he was working on a very important new Sonata in B♭ (op. 22).

The few recorded events of 1800 are all closely connected with music. On Wednesday, April 2, Beethoven gave the first concert which he had attempted in Vienna for his own benefit. It took place at the Burg Theatre, which was given him for the occasion, at 7 p.m., and the progamme was as follows:—1. Symphony, Mozart. 2. Air from the Creation. 3. A grand Pianoforte Concerto, 'played and composed' by Beethoven. 4. The Septet. 5. Duet from the Creation. 6. Improvisation by Beethoven on Haydn's Emperor's Hymn. 7. Symphony, No. 1. The Concerto was doubtless one of the two already known—the Septet had been previously performed at Prince Schwarzenberg's,[5] had pleased immensely, and Beethoven was evidently proud of it. 'It is my Creation,' said he—let us hope not in Haydn's presence. He had not forgotten Bonn, and the theme of the variations is said by Czerny[5] to be a Rhine *Volkslied*. The work was dedicated in advance to the Empress, and though not published for some time, became rapidly popular. So much for the compositions, but the performance appears from the report in the Leipsic paper[6] to have been shameful; the band disliked Wranitzky the conductor, and vented their dislike on the music. In addition to this it appears that the rehearsal, if it took place at all, was a very imperfect one. A reference in one of Beethoven's letters (April 22, 1801) shows that it was his custom not to write in the piano part into his Concertos, and therefore to play them from memory.

On the 18th of the same month Beethoven appeared again at the concert of Punto the horn-player, with a Sonata for Horn and Piano, composed for the occasion. This he had naturally not been able to touch while preparing for his own concert, and in fact it was written down on the day before the performance.[7] Here again there cannot have been much chance of rehearsal. But with two such players it was hardly needed; and so much did the Sonata delight the hearers, that in defiance of a rule forbidding applause in the Court Theatre the whole work was unanimously encored. On the 27th, the anniversary of the day on which he first entered Bonn, Beethoven's old master, the Elector, returned to the capital. In May Steibelt made his appearance in Vienna from Prague, where his *charlatanerie* and his real ability had gained him prodigious financial success. We have already alluded to his conflict with Beethoven. In Vienna he does not appear to have succeeded, and in August he was again in Paris.

The announcement of Beethoven's benefit concert names No. 241 'im tiefen Graben,' 3rd storey, as his residence. He had now left Prince Lichnowsky's, and he maintained this lodging for two years. In this year we hear for the first time of his going to the country for the autumn. He selected Unter-Döbling, a village two miles north of Vienna, and his lodging was part of the house occupied by the Grillparzer family. Madame Grillparzer long recollected his fury on discovering her listening to his playing outside the door, and the stern revenge he took.[8]

As regards publications 1800 is a blank, but composition went on with immense energy. If we throw back the Symphony and the Septet into 1797, we have still the Horn Sonata and the Piano Sonata in B♭ (op. 22)—a work of great moment—the Six Quartets, the String Quintet in C, the Piano Concerto in C minor. Of all these very important works we have Beethoven's own mention in a letter of Dec. 15, 1800, in addition to the evidence as to date afforded by the sketch-books.[9] And besides these we are bound to believe that the Ballet of Prometheus, performed March 28, 1801, occupied him at least during the latter portion of the year. An incident of this summer was Beethoven's letter to Matthison (Aug. 4) sending him his 'Adelaide,' a letter interesting for its courteous and genial tone, for its request for another poem, and for its confession that his early works had already begun to dissatisfy him. After his return to town occurred Czerny's introduction to him. Czerny, then a lad of just upon 10, became Beethoven's pupil

in pianoforte playing, and has left a delightful account of his first interview, and of much which occurred after it.[1] Among the letters of this winter and the spring of 1801 are some to Hoffmeister, formerly a composer, and then a music-publisher in Leipsic, which ended in his publishing the Septet, the Symphony in C, the Piano Concerto in B♭, and the Sonata (op. 22) in the same key. The price given for these works was 20 ducats each, except the Concerto, which was 10. The ducat was equal to 10s. English. The Concerto is priced so low because 'it is by no means one of my best, any more than that I am about to publish in C major, because I reserve the best for myself, for my journey'[2]— a confession which proves that the Concerto in C minor was already in existence. The letters show keen sympathy with projects for the publication of Bach's works, and of Mozart's sonatas arranged as quartets.[3] They speak of his having been ill during the winter, but the vigorous tone of the expression shows that the illness had not affected his spirits. On Jan. 30, 1801, he played his Horn Sonata a second time, with Punto, at a concert for the benefit of the soldiers wounded at Hohenlinden.

He was now immersed in all the worry of preparing for the production of his Ballet of Prometheus, which came out on March 28 at the Court (Burg) Theatre. Its great success is evident from the fact that it was immediately published in a popular form—Pianoforte Solo,[4] dedicated to Princess Lichnowsky—and that it had a run of 16 nights during 1801, and 13 during the following year. Apart from its individual merits the Prometheus music is historically interesting as containing a partial anticipation of the Storm in the Pastoral Symphony, and (in the Finale) an air which afterwards served for a Contretanz, for the theme of elaborate variations, and for the subject of the last movement of the Eroica Symphony. The Ballet gave occasion for an unfortunate little encounter between Beethoven and Haydn, evidently unintentional on Beethoven's part, but showing how naturally antagonistic the two men were. They met in the street the day after the first performance, 'I heard your new Ballet last night,' said Haydn, 'and it pleased me much.' '*O lieber Papa*,' was the reply, 'you are too good: but it is no *Creation* by a long way.' This unnecessary allusion seems to have startled the old man, and after an instant's pause he said 'You are right: it is no *Creation*, and I hardly think it ever will be?'

The success of 'Prometheus' gave him time to breathe, and possibly also cash to spare: he changed his lodgings from the low-lying 'tiefen-Graben' to the Sailer-stätte, a higher situation, with an extensive prospect over the ramparts.[5] For the summer of 1801 he took a lodging at Hetzendorf, on the south-west side of the city, attracted by the glades and shrubberies of Schönbrunn, outside which the village lies, and perhaps by the fact that his old master the Elector was living in retirement there. It was his practice during these country visits to live as nearly as possible in entire seclusion, and to elaborate and reduce into ultimate form and completeness the ideas which had occurred to him during the early part of the year, and with which his sketch-books were crowded. His main occupation during this summer was 'The Mount of Olives,' which Ries found far advanced when he arrived in Vienna in 1801.[6] The words were by Huber,[7] and we have Beethoven's own testimony[8] that they were written, with his assistance, in 14 days. He was doubtless engaged at the same time, after his manner, with other works, not inferior to that oratorio in their several classes, which are known on various grounds to have been composed during this year. These are 2 Violin Sonatas in A minor and F, dedicated to Count von Fries—originally published together (Oct. 28) as op. 23, but now separated under independent Nos.; the String Quintet in C (op. 29); and not less than 4 masterpieces for the Piano—the Grand Sonatas in A♭ (op. 26) and D (op. 28); the two Sonatas entitled 'Quasi Fantasia' in E♭ and in C♯ minor (op. 27); which, though not published till 1802, were all four completed during this year. To each of them a word or two is due. The Sonata in A♭—dedicated, like those of op. 1 and 13, to his prime friend Prince Carl Lichnowsky—is said[9] to owe its noble Funeral March to pique at the praises on a march by no means worthy of them in Paer's 'Achille.' That opera—produced at Vienna on the 6th June of this year—is the same about which Paer used to tell a good story of Beethoven, illustrating at once his sincerity and his terrible want of manners. He was listening to the opera with its composer, and after saying over and over again, 'O! que c'est beau,' 'O! que c'est intéressant,' at last could contain himself no longer, but burst out 'il faut que je compose cela.'[10] The Grand Sonata in D received its title of 'Pastorale' (more appropriate than such titles often are) from Cranz the publisher, of Hamburg. The Andante, by some thought inferior to the rest of the Sonata, was Beethoven's peculiar favourite, and very frequently played by him.[11] The flyleaf of the autograph of the work contains a humorous duet and chorus—'the praise of the fat,' making fun of Schuppanzigh[12]—'Schuppanzigh ist ein Lump, ein Lump,' etc. The remaining two, qualified as 'Fantasia' by their author, have had very different fates. One, that in E♭, has always lived in the shadow of its sister, and is comparatively little known.

[1] Published by C. F. Pohl, *Jahres-Bericht des Conservatoriums der Gesellschaft der Musikfreunde in Wien*, 1870. Also Thayer, ii. 103. The drawback to this, and to so much of the information regarding Beethoven, is that it was not written till many years after the events it describes. [2] Letter of Dec. 15, 1800.

[3] In curious contradiction to the strong expressions on the subject of arrangements in a subsequent letter, quoted by Thayer, ii. 183.

[4] Originally numbered op. 24, but when the Overture was issued in Parts it was numbered op. 43, and op. 24 was given to the Violin Sonata in F.

The other, the so-called 'Moonlight Sonata,'[1] is as widely played and as passionately loved as any of Beethoven's pianoforte works. It is one of his most original productions. The dedication to the Countess Guicciardi, upon which so much romance has been built, has had a colder light thrown on it by the lady herself. 'Beethoven,' said she, 'gave me the Rondo in G, but wanting to dedicate something to the Princess Lichnowsky he took the Rondo away, and gave me the Sonata in C♯ minor instead.'[2]

Meantime his deafness, which began with violent noise in his ears, had gradually merged into something more serious. He consulted doctor after doctor, Frank, his friend Wegeler, and Wering, but the malady constantly increased. It gave him the keenest distress; but so great were his resolution and confidence that not even the prospect of this tremendous affliction could subdue him. 'I will as far as possible defy my fate, though there must be moments when I shall be the most miserable of God's creatures.' . . . . 'Not unhappy: no, that I never could endure! I will grapple with fate; it shall never drag me down.' The letters to Wegeler of June 29[3] and Nov. 16, 1801, from which these words are taken, give an extraordinary picture of the mingled independence and sensibility which characterised this remarkable man, and of the entire mastery which music had in him over friendship, love, pain, deafness, or any other external circumstance. 'Every day I come nearer to the object which I can feel, though I cannot describe it, and on which alone your Beethoven can exist. No more rest for him!' 'I live only in my music, and no sooner is one thing done than the next is begun. As I am now writing, I often work at three and four things at once.' How truly this describes the incessant manner in which his ideas flowed may be seen from the sketch-book published by Nottebohm,[4] and which is the offspring of this very period—Oct. 1801 to May 1802. It contains sketches for the Finale of the Second Symphony, for the 3 Violin Sonatas (op. 30); for Piano Sonatas in G and D minor (op. 31); for the Variations in F (op. 34), and in E♭ (op. 35); and a large number of less important works, the themes of which are so mixed up and repeated as to show that they were all in his mind and his intention at once.

The spring of 1802 saw the publication of several very important pieces, the correction of which must have added to his occupations—the Serenade (op. 25); the Sonatas in B♭[5] (op. 22), A♭ (op. 26), E♭ and C♯ minor (op. 27); the Variations for Piano and Cello on Mozart's air 'Bei Männern,' and 6 Contretänze. It is curious to notice that up to op. 22 all the Solo Sonatas, as well as the Duet (op. 6) and the 3 with Violin (op. 12) are published 'for Clavecin or Pianoforte.' The Sonata in B♭ is the first to break the rule, which comes to an end with the two quasi-fantasias, op. 27. One would like to know if this is a mere publisher's freak—which, knowing Beethoven's care of details, it is hard to believe—or whether great works like op. 7; op. 10, No. 3; and op. 26 were intended for instruments so unlike the Piano as the whispering Clavichord or the prancing Harpsichord—for 'Clavecin' may mean either. All the works just enumerated were out by April, and were followed in the later months by the Septet, issued in two portions; the Sonata in D (op. 28); 6 Ländler;[6] the Rondo in G (Op. 51, No. 2); and in December by the Quintet in C (op. 29).

Beethoven had recently again changed his doctor. Vering did not satisfy him, and he consulted Schmidt, a person apparently of some eminence, and it was possibly on his recommendation that he selected the village of Heiligenstadt, at that time a most retired spot, lying beyond Unter-Döbling, among the lovely wooded valleys in the direction of the Kahlenberg and Leopoldsberg. Here he remained till October, labouring at the completion of the works mentioned above, which he had sketched early in the year, and which he probably completed before returning to Vienna. Here too he wrote the very affecting letter usually known as 'Beethoven's will,' dated Oct. 6, and addressed to his brothers, to be opened after his death,[7] a letter full of depression and distress, but perhaps not more so than that written by many a man of sensibility under adverse temporary circumstances, and which does not give us a high idea of Dr. Schmidt's wisdom in condemning a dyspeptic patient to so long a course of solitude. At any rate, if we compare it with the genial, cheerful strains of the music which he was writing at the time—take the Symphony in D as one example only—and remember his own words: 'I live only in my music, ... letter-writing was never my *forte*'—it loses a good deal of its significance.[8] Once back in town his spirits returned; and some of his most facetious letters to Zmeskall are dated from this time. On returning he changed his residence from the Sailer-Stätte, where we last left him, to the Peters-Platz, in the very heart of the city, and at the top of the house. In the storey above Beethoven lived his old friend Förster, who had won his affection by giving him hints on quartet writing on his first arrival in Vienna. Förster had a little son whom Beethoven undertook to instruct, and the boy, then just 6, long[9] remembered having to get up in the dark in the winter mornings and descend the stairs for his lessons. This winter again there were many proofs to correct—the 2 Piano Sonatas (op. 31, 1 & 2), the 3 Violin ditto, 2 sets of Variations (op. 34, 35), all which appeared early in 1803. The Piano Sonatas he regarded as a change in his style[10]—which they certainly are, the D minor especially. The Variations he

[1] This foolish sobriquet is derived from a criticism on the work by Rellstab mentioning moonlight on the Lake of Lucerne.

[2] Thayer, ii. 172.

[3] No year is given in the date of the letter. Wegeler places it in 1800, but Thayer (ii. 155, 6) has proved it to belong to 1801.

[10] Ibid. 186.

mentions[1] as distinct in kind from his earlier ones, and therefore to be included in the series of his large works, and numbered accordingly. In addition there were published 2 Preludes (op. 39), dating from 1789; 7 Bagatelles, some of them as old as 1782, but one at least (No. 6) written within the last twelve months. Also the Romance in G for Violin and Orchestra (op. 40), which was published this year, and 6 Sacred Songs (op. 48), dedicated to his Russian friend Count von Browne. And proofs at that date appear to have been formidable things, and to have required an extraordinary amount of vigilance and labour. Not only had the engravers' mistakes to be guarded against, and the obscurities of Beethoven's writing, but the publishers were occasionally composers and took on themselves to correct his heresies and soften his abruptnesses as they passed through their hands. Thus in the Sonata in G (op. 31, No. 1), Nägeli of Zurich interpolated four bars.[2] Of course Beethoven discovered the addition on hearing Ries play from the proof, and his rage was naturally unbounded. The mistakes were corrected, and an amended proof was transmitted at once to Simrock of Bonn, who soon got out an 'Edition très correcte';—but Nägeli adhered to his own version of Beethoven's music, and editions are still issued[3] containing the four redundant bars. It is needless to say that after Opus 31 he published no more for Beethoven. But even without such intentional errors, correcting in those days was hard work. 'My Quartets,' he[4] complains, 'are again published full of mistakes and *errata* great and small; they swarm like fish in the sea—innumerable.' The Quintet in C (op. 29), published by Breitkopf, was pirated by Artaria of Vienna, and being engraved from a very hasty copy was extraordinarily full of blunders.[5] Beethoven adopted a very characteristic mode of revenge; fifty copies had been struck off, which he offered Artaria to correct, but in doing so caused Ries to make the alterations with so strong a hand that the copies were quite unsaleable.[6] It was an evil that never abated. In sending off the copies of the A minor Quartet twenty years later, he says, 'I have passed the whole forenoon to-day and yesterday afternoon in correcting these two pieces, and am quite hoarse with stamping and swearing'—and no wonder when the provocation was so great. The noble Sonatas, op. 31, to the first of which one of the above anecdotes refers, were unfortunate in more ways than one. They were promised to Nägeli, but Caspar Beethoven[7] by some blunder—whether for his own profit or his brother's does not appear—had sold them to a Leipsic house.[8] The discovery enraged Beethoven, who hated any appearance of deceit in his dealings; he challenged his brother with the fact, and the quarrel actually proceeded to blows. Knowing how much Beethoven disliked his early works, it is difficult not to imagine that the appearance of the two boyish Preludes, op. 39, and of the Variations, op. 44 (1792 or 3), both published at Leipsic—was due to the interference of Caspar.

A great event in 1803 was the production of 'The Mount of Olives,' his first vocal composition on a larger scale than a scena. The concert took place in the Theatre 'an der Wien' on April 5, and the programme included three new works—the Oratorio, the Symphony in D, and the Pianoforte Concerto in C minor, played by himself. Interesting accounts of the rehearsal (in which Prince Lichnowsky showed himself as friendly as ever) and of the performance will be found in Ries and Seyfried.[9] Difficult as it is to conceive of such a thing, the Symphony appears to have been found too laboured by the critics, and not equal to the former one.[10] The success of the Oratorio is shown by the fact that it was repeated three times (making four performances) by independent parties in the course of the next twelve months. The Sonata for Piano and Violin, now so well known as the 'Kreutzer Sonata,' was first played on May 17, at the Augarten, at 8 a.m. There was a curious bombastic half-caste English violin-player in Vienna at that time named Bridgetower. He had engaged Beethoven to write a sonata for their joint performance at his concert. Knowing Beethoven's reluctance to complete bespoken works, it is not surprising to find him behind time and Bridgetower clamouring loudly for his music. The Finale was easily attainable, having been written the year before for the Sonata in A (op. 30, No. 1), and the violin part of the first movement seems to have been ready a few days before the concert, though at the performance the pianoforte copy still remained almost a blank, with only an indication here and there. But the Variations were literally finished only at the last moment, and Bridgetower had to play them at sight from the blurred and blotted autograph of the composer. Beethoven's rendering of the Andante was so noble, pure, and chaste, as to cause a universal demand for an encore. A quarrel with Bridgetower caused the alteration of the dedication.

Before Beethoven left town this year he made an arrangement to write an opera for Schikaneder, Mozart's old comrade, the manager of the Theatre 'an der Wien.'[11] Beyond the bare fact nothing is known on the subject. It is possible that a MS. Trio[12] preserved in the library of the 'Gesellschaft der Musikfreunde' at Vienna, and afterwards worked up into the duet in 'Fidelio,' is a portion of the proposed work, but this is mere conjecture. The arrangement was announced on June 29, and Beethoven had before

that date, perhaps as early as April, taken up his quarters at the theatre with his brother Caspar, who, with all his faults, was necessary to a person so inapt at business as Ludwig. His summer and autumn were again spent—after a few weeks *Kur* at Baden[1]—at Ober-döbling, and were occupied principally with his third Symphony on 'Napoleon Bonaparte,' the idea of which, since its suggestion in 1798, appears to have ripened with the contemplation of the splendid career of the First Consul as soldier, lawgiver, statesman, and hero, until it became an actual fact.

Of the order in which the movements of this mighty work were composed we have not yet any information, but there is no doubt that when Beethoven returned to his lodgings in the theatre in the autumn of 1803 the Finale was complete enough, at least in its general outlines,[2] to be played through by its author. There are traces of Beethoven being a great deal in society this winter. Two young Rhinelanders—Gleichenstein, a friend and fellow official of Breuning's in the War Office, and Mähler, also a government official and an amateur portrait painter, were now added to his circle.[3] With another painter, Macco, he[4] appears to have been on terms of great intimacy. The Abbé Vogler was in Vienna this season with his pupil Carl Maria von Weber, and a record[5] survives of a soirée given by Sonnleithner, at which Vogler and Beethoven met, and each gave the other a subject to extemporise upon. The subject given by Beethoven to Vogler we merely know to have been 4½ bars long, while that on which he himself held forth was 'the scale of C major, three bars, *alla breve*.' Vogler was evidently the more expert contrapuntist, but Beethoven astonished even his rival's adherents by his extraordinary playing, and by a prodigious flow of the finest ideas. *Noctes cœnæque deorum.*—Clementi too was in Vienna about this time, or a little later, with his pupil Klengel. He and Beethoven often dined at the same restaurant, but neither would speak first, and there was no intercourse.[6] Not for want of respect on Beethoven's side, for he had a very high opinion of Clementi, and thought his *Method* one of the best. This winter[7] saw the beginning of a correspondence which was not destined to bear fruit till some years later—with Thomson the music-publisher of Edinburgh. Thomson had already published arrangements of Scotch airs by Pleyel and Kozeluch, and, with the true eye of a man of business, was now anxious to obtain from a greater and more famous musician than either, six sonatas on Scotch themes. Beethoven replies on Oct. 5, offering to compose six sonatas for 300 ducats (£150). Thomson responded by offering half the sum named, and there for the present the correspondence dropped. The prospect of an opera from Beethoven was put an end to at the beginning of 1804 by the theatre passing out of Schikaneder's hands into those of Baron von Braun, and with this his lodging in the theatre naturally ceased.[8] He moved into the same house with Stephen Breuning—the 'Rothe Haus,' near the present Votive Church, and there the rupture already spoken of took place.

The early part of 1804 was taken up in passing through the press the Symphony No. 2 (dedicated to Prince Carl Lichnowsky), and the three 4-hand Marches, which were published in March—but the real absorbing occupation of the whole winter must have been the completion of the Bonaparte Symphony. At length the work was done, a fair copy was made, the outside page of which contained the[9] words 'Napoleon Bonaparte . . . . . Louis van Beethoven,' and it lay on the composer's table for the proper opportunity of official transmission to Paris. On May 3 the motion for making Napoleon emperor passed the Assembly, and on the 18th, after his election by *plébiscite*, he assumed the title. The news must have quickly reached Vienna, and was at once communicated to Beethoven by Ries. The story need not be given here in detail. In a fury of disappointment and with a torrent of reproaches he tore off the title page and dashed it on the ground. At some future time it received the new name by which we know it, and under which it was published—'Sinfonia eroica per festeggiare il sovvenire d'un gran uomo'—but this was probably an afterthought, and the cover of the MS. now in the Bibliothek at Vienna,—

Sinfonia grande
Napoleon Bonaparte
804 im August
del Sigr.
Louis van Beethoven

Sinfonie 3 Op. 55

an intermediate title. The right to use the Symphony was purchased by Prince Lobkowitz, to whom it is dedicated. It was played at his house during the winter, and remained in MS. till October 1806.

The *fracas* at Breuning's rooms ended by Beethoven's dashing off to Baden, and then returning to his old quarters at Döbling. There he composed the Grand Sonata in C, which he afterwards dedicated to Count Waldstein, and that in F, op. 54, which though only in two movements and dedicated to no one is not inferior in originality to its longer companion. It is to the Finale of this work, and not that of the 'Appassionata' as usually believed, that Ries's story applies. Ries appears to have often gone out, as he often did, to Döbling—within an easy walk of Vienna—and to have remained with his master all the after

[9] These words can still be made out on the cover of the MS. score at Vienna.

part of the day. They went for an immense walk, and did not get home till eight in the evening. During the whole time Beethoven had been humming and growling to himself, but without anything like a tune. On Ries asking him what it was, he replied that it was a theme for the finale of the Sonata. The instant they reached the house he sat down to the piano without taking off his hat, and for more than an hour pounded away at his new idea. Ries sat in a corner listening.—The Sonata in C, just mentioned, contained when completed a long Andante in F—the subject of a very characteristic story, already alluded to (p. 167). This, however, at the advice of some judicious critic, he was induced to take out and replace by the present short introductory Adagio, after which it was published separately, and became the well-known 'Andante favori.'[1] During this summer, on July 19 or 26, there was a concert at the Augarten, at which Beethoven conducted; the Symphony in D was performed, and Ries made his first public appearance as Beethoven's scholar in the C minor Concerto. Ries's story of his cadence is too long for these pages, but should be read.[2] The Pianoforte part having to be written out for Ries, the Concerto was at last ready for publication, and in fact made its appearance in November, dedicated to Prince Louis Ferdinand of Prussia, an amateur of remarkable musical gifts, whose acquaintance Beethoven made when he visited his father's court in 1796, and who while in Vienna at this very time was one of the first to hear and appreciate the new Symphony. When Beethoven came back it was to a new lodging, in a house of Baron Pasqualati's, on the Mölker-Bastion near Prince Lichnowsky's, and in some sense this was his last; for though he left it more than once yet the Baron always forbid the rooms to be let, saying that Beethoven was sure to come back to them again. Breuning and he soon met, and a reconciliation took place which was not interrupted for many years—but they never again put their friendship so far to the proof as to live together.

Breuning's attitude through the whole affair is in keeping with his solid sensible character, and does him infinite credit. His letter to Wegeler of November 13 gives no hint of a quarrel, but is full of the deepest sympathy with Beethoven under the affliction of his deafness. In addition to the works already mentioned as published during 1804 must be named the great Sonata in Eb, which ultimately became the 3rd of opus 31; 7 Variations on 'God save the King,'[3] and 5 on 'Rule Britannia'; a song, 'Der Wachtelschlag,'[4] and 'Ah! perfido.' Why he selected these two English airs does not appear. At a later date he said, à propos to its use in his Battle Symphony, 'I must show the English a little what a blessing they have in God save the King.'[5] It is satisfactory to find him so fond of it.—The first trial of the Eroica took place in December[6] at Prince Lobkowitz's. The opinions expressed concerning it are collected by Thayer, and should be read and digested by all who are tempted to regard music from the 'finality' point of view.

Beethoven's connection with the Theatre an der Wien, though interrupted, was not at an end. Baron von Braun took Schikaneder into his service, and one of their first acts was to renew the offer. Bouilly's opera, which had been already set by Gaveaux[7] and Paer,[8] was chosen, and Sonnleithner was employed to make the German translation. Beethoven went back to his rooms at the theatre, and set to work with energy. But, remembering his habit of doing several things at once, we need not suppose that, though at work on an opera, he dropped other compositions. A letter to Artaria shows that on June 1, 1805, he was engaged on a new Quintet, the suggestion of Count Fries.[9] Though he had even proceeded so far as to mention it to the publisher, its ultimate fate must be left to the discovery of Herr Nottebohm; it certainly never arrived at publication. He also completed the Sonata in F (op. 54), and probably entirely composed the Triple Concerto (op. 56). But the opera was his main and absorbing business. During the whole of the spring he was hard at work, and in June he betook himself to Hetzendorf, there to put his sketches into shape, and to get inspiration from his favourite woods and fields. To give an idea of the extraordinary amount of labour and pains which he bestowed on his work, and of the strangely tentative manner in which so great a genius proceeded, we may mention[10] that in the sketch-book which contains the materials for the opera—a thick oblong volume of 300 pages, 16 staves to the page—there are no less than 18 distinct and different beginnings to Florestan's air 'In des Lebens Frühlingstagen,' and 10 to the chorus 'Wer ein holdes Weib.' To reduce these chaotic materials to order, and to score the work, was the entire occupation of these summer months. Closely as he was occupied he could occasionally visit Vienna, and on one occasion in July[11] we find him at Sonnleithner's rooms with Cherubini and Vogler. Cherubini arrived in Vienna with his wife early in the month, and remained till the following April. His operas had long been favourites on the Vienna stage. The 'Deux Journées' was performed under his direction shortly after his arrival, and 'Faniska' was produced for the first time on Feb. 25, 1806. Beethoven knew them well, and has left on record[12] that he esteemed their author above all then living writers for the stage. He also thought so highly of Cherubini's Requiem as to say that he should borrow largely from it in the event of his writing one. But the influence of Cherubini on Beethoven's vocal music is now[13] acknowledged. The two artists were much

together, and agreed as well as two men of such strong character and open speech were likely to agree. Cherubini presented the composer of 'Fidelio' with a copy of the *Méthode* of the Conservatoire, and the scores of 'Médée' and 'Faniska' are conspicuous in the sale catalogue of Beethoven's scanty library.[1]

One proof that 'Fidelio' was complete before his return to town is afforded by the fact that he allowed others to hear it. On one occasion he played it to a select set of friends,[2] when Ries (as already mentioned) was excluded; and thus—as he was shortly afterwards called to Bonn by the conscription—lost his chance of hearing the opera at all in its first shape. That Beethoven's voice in singing was 'detestable'[3] will not have diminished the interest of the trial. The work of rehearsing the music now began, and was evidently attended with enormous difficulties, especially in regard to the singers. They complained that their passages were unsingable, while Beethoven on his part was determined to make no alterations—and apparently none were made.[4] With the band he fared little better. He even invokes his deafness as an assistance. Writing only two days before the first performance, he says,[5] 'Pray try to persuade Seyfried to conduct my opera to-day, as I wish to see and hear it from a distance; in this way my patience will at least not be so severely tried by the rehearsal as when I am close enough to hear my music so bungled. I really do believe it is done on purpose. Of the wind I will say nothing, but——. All *pp. cresc.*, all *decresc.*, and all *f. ff.* may as well be struck out of my music, since not one of them is attended to. I lose all desire to write anything more if my music is to be so played.' And again,[6] 'the whole business of the opera is the most distressing thing in the world.'

The performance was fixed for Wednesday, Nov. 20. External events could hardly have been more unpropitious. The occupation of Ulm and Salzburg had been followed on Nov. 13 by the entry of the French army into Vienna. Bonaparte took up his quarters at Schönbrunn; the Emperor of Austria, the chief nobility and other wealthy persons and patrons of music had deserted the town, and it was a conquered city tenanted by Frenchmen. It was in such circumstances that 'Fidelio, oder die eheliche Liebe' was produced. The opera was originally in 3 acts. It was performed on the 20th, 21st, and 22nd, and was then withdrawn by the composer.[7] The overture on these occasions appears to have been that known as 'Leonora No. 2.' It was felt by Beethoven's friends that, in addition to the drawbacks of the French occupation and of the advanced character of the music, the opera was too long; and a meeting was held at Prince Lichnowsky's house, when the whole work was gone through at the piano, and after a battle lasting from 7 till 1 in the morning, Beethoven was induced to sacrifice three entire numbers. It is characteristic of Beethoven that though furious and unpleasant to the very greatest degree while the struggle was going on, yet when once the decision was made he was in his most genial temper.[8] The libretto was at once put into the hands of Stephen Breuning, by whom it was reduced to two acts and generally improved, and in this shortened form, and with the revised Overture known as 'Leonora No. 3,' it was again performed on March 29, 1806, but, owing to Beethoven's delays over the alterations, with only one band rehearsal. It was repeated on April 10, each time to fuller and more appreciative houses than before, and then, owing to a quarrel between Beethoven and Baron Braun, the intendant of the theatre, suddenly and finally withdrawn. Attempts were made to bring it out at Berlin, but they came to nothing, and this great work was then practically shelved for seven or eight years.

It is an astonishing proof of the vigour and fertility of the mind of this extraordinary man that in the midst of all this work and worry he should have planned and partly carried out three of his greatest instrumental compositions. We have the assurance of Mr. Nottebohm[9] that the Piano Concerto in G and the Symphony in C minor were both begun, and the two first movements of the latter composed, in 1805. The two last of the String Quartets, op. 59, appear to have been written during this winter—before that in F,[10] which now stands first. There are many indications in his letters that his health was at this time anything but good, and the demands of society on him must have been great. Against them he could arm himself by such reflections as the following pencil[11] note in the margin of a sketch-book of this very date. 'Struggling as you are in the vortex of society, it is yet possible, notwithstanding all social hindrances, to write operas. Let your deafness be no longer a secret—even in your Art!'

On April 10, 1806, 'Fidelio' was performed for the last time; on May 25[12] the marriage contract of Caspar Carl Beethoven with Johanna Reis was signed—harbinger of unexpected suffering for Ludwig—and on May 26 he began the scoring of the first of the three Quartets, which were afterwards dedicated to the Russian Ambassador, Count Rasoumoffsky, as op. 59. So says his own writing at the head of the autograph.[13] These Quartets, the Russian airs in which it is natural to suppose were suggested by the Ambassador (a brother-in-law of Prince Lichnowsky), are another link in the chain of connection between the republican composer and the great Imperial court of Petersburg, which originated some of his noblest works.

His favourite summer villages had been defiled by the French, and perhaps for this reason

contains the Trio in the 'Deux Journées' and a piece from the 'Zauberflöte,' mixed up with bits of 'Fidelio' and of the Finale of the B flat Symphony.

Beethoven did not pass the summer of 1806 at the usual spots, but went to the country-house of his friend Count Brunswick—whose sisters[1] were also his great allies—in Hungary. Here he wrote the magnificent Sonata in F minor, than which nothing more impetuous, more poetical, or more enduring ever came from his pen. His letters may have been full of depression[2]—but it vanished when he spoke in music, and all is force, elevation, and romance. In October he left Count Brunswick for the seat of Prince Lichnowsky, near Troppau, in Silesia, 40 miles N.E. of Olmütz. The war was in full progress (Jena was fought on Oct. 16), and the Prince had several French officers quartered upon him. They were naturally anxious to hear Beethoven, but he refused to play to them; and on being pressed by his host and playfully threatened with confinement to the house, a terrible scene took place—he made his escape, went off by night post to Vienna, and on his arrival at home was still so angry as to demolish a bust of the Prince in his possession. He brought back with him not only the Sonata just named, but the Pianoforte Concerto in G, the Symphony in B flat (No. 4), the Rasoumoffsky Quartets, and the 32 Variations in C minor. The Quartets were played frequently in MS. during the winter at private concerts, but the larger orchestral works were not heard till later. The Violin Concerto (op. 61) was first played by Clement—a well-known *virtuoso*, and at that time principal violin of the Theatre an der Wien—at his concert on Dec. 23, and there is evidence to show, what might have been assumed from Beethoven's habit of postponing bespoken works to the last, that it was written in a hurry, and Clement played his part without rehearsal, at sight. What chance can such great and difficult works, new in spirit and teeming with difficulties, have had of influencing the public when thus brought forward? No wonder that the Concerto was seldom heard till revived by Joachim in our own time. The MS. shows that the solo part was the object of much thought and alteration by the composer—evidently after the performance.

The publications of 1806 consist of the Sonata in F, op 54 (April 9); a trio for two Violins and Viola (April 12), adapted from a trio[3] for two Oboes and Cor Anglais, and afterwards numbered op. 87; the Andante in F (May) already mentioned as having been originally intended for the Waldstein Sonata; and lastly, on October 29, in time for the winter season, the Eroica Symphony, dedicated to Prince Lobkowitz. In addition to these an arrangement of the 2nd Symphony as a Pianoforte trio,[4] by Beethoven's own hand, was published at Vienna.

The first external musical event of 1807 was the performance of the new Symphony, No. 4, which took place before a very select audience in the middle or end of March.[5] The concert was organised for Beethoven's benefit, no doubt to compensate him for his disappointment with the Opera, and was largely subscribed to. No programme of equal length was probably ever put together; it contained the 1st and 2nd Symphonies, the Eroica—hardly known as yet, and in itself a programme—and the new work—2½ hours of solid orchestral music without relief! A second performance of the Symphony was given at a public concert on Nov. 15. The overture to 'Coriolan'—a tragedy by Collin—must have occupied him during the opening of the year, since it is included with the new Symphony, the new Concertos for Violin and Piano, and the 3 String-quartets in a sale of copyrights for England,[6] which Beethoven effected on April 20 to Clementi, who had for some years been at the head of a musical business in London. For these and an arrangement of the Violin Concerto for Piano (dedicated to the wife of Stephen von Breuning), Clementi paid £200 down, Beethoven binding himself to compose three new Sonatas for the sum of £60 more—a part of the bargain which was not carried out. Beethoven's finances were thus for the time flourishing, and he writes in high spirits on his prospects.[7]

Another overture belonging to this period is that in C, known as op. 138, and erroneously styled 'Leonora No. 1,' the fact being that it was written as 'a new Overture' for the production of 'Fidelio' in Prague in the spring of this year.[8] Another great work approaching completion during the summer was the Mass in C, which was written for Prince Esterhazy, Haydn's patron, and after considerable delay was first sung in the Chapel at Eisenstadt on Sept. 13, the name-day of the Princess Marie of Esterhazy. Beethoven and his old rival Hummel—then the Prince's Chapelmaster—were both present. After the mass the Prince, perhaps puzzled at the style of the music, so different from that to which he was accustomed in his Chapel—hinted as much to Beethoven, in the strange question 'What have you been doing now?' Hummel overheard the remark, and probably amused at the *naïveté* of the question (for Hummel can have found nothing to question in the music) unfortunately smiled. Beethoven saw the smile, misinterpreted it, and left the Palace in a fury. This occurrence possibly explains why the name of Esterhazy, to whom the mass is dedicated in Beethoven's autograph, is replaced by that of Prince Kinsky in the published copy (1812).

The date of the C minor Symphony has not yet been conclusively ascertained, but there is good ground for believing that it and the Pastoral Symphony were completed, or at any rate much advanced, during this year, at Heiligenstadt and in the country between that and the Kahlenberg, as Beethoven pointed out to Schindler in 1823[9]—the visit to Eisenstadt being probably undertaken for the sake of the Mass only.

Of his activity in town during the winter there are more certain traces. A musical society of amateurs was formed, who held their concerts in the Hall of the Mehlgrube. At one of these, in December, the Eroica Symphony was performed, and the overture to Coriolan played for the first time. At another the B flat Symphony was performed for the second time, with immense appreciation. Beethoven himself conducted both of these concerts. December is also the date of a memorial to the directors of the Court Theatre, praying that he might be engaged at an annual salary of 2400 florins, with benefit performances, to compose one grand opera and an operetta yearly—a memorial evidently not favourably received.

The publications of 1807 are not numerous, they consist of the Sonata in F minor (op. 57), dedicated to Count Brunswick (Feb. 18), and since designated 'Appassionata' by Cranz of Hamburg; the 32 Variations for Piano[1] (April); and the Triple Concerto (op. 56), dedicated to Count Lobkowitz (July 1).

1808 opened with the publication of the overture to 'Coriolan' (op. 62), dedicated to the author of the tragedy, and the 3 new String-quartets (op. 59). There is reason to believe[2] that Beethoven again passed the summer at Heiligenstadt, whence he returned to Vienna, bringing with him ready for performance the two Symphonies, C minor and Pastoral, the two Pianoforte Trios in D and E flat, and the Choral Fantasia, a work new not only in ideas and effects but also in form, and doubly important as the precursor of the Choral Symphony. It and the Symphonies were produced at a Concert given by Beethoven in the theatre an der Wien on Dec. 22. It was announced to consist of pieces of his own composition only, all performed in public for the first time. In addition to the three already mentioned the programme contained the Piano Concerto in G, played by himself; two extracts from the Eisenstadt Mass; [3] 'Ah! perfido'; and an extempore fantasia on the pianoforte. The result was unfortunate. In addition to the enormous length of the programme and the difficult character of the music the cold was intense and the theatre unwarmed. The performance appears to have been infamous, and in the Choral Fantasia there was actually a break down.[4]

The Concerto had been published in August, and was dedicated to Beethoven's new pupil and friend the Archduke Rodolph. It commemorates the acquisition of the most powerful and one of the best friends Beethoven ever possessed, for whom he showed to the end an unusual degree of regard and consideration, and is the first of a long series of great works which bear the Archduke's name. The Sonatina in G, the fine Sonata for Piano and Cello in A, and the Piano Fantasia in G minor—the last of less interest than usual—complete the compositions of 1808, and the Pianoforte adaptation of the Violin Concerto,[5] dedicated to Madame Breuning, closes the publications.

Hitherto Beethoven had no settled income beyond that produced by actual labour, except the small annuity granted him since 1800 by Prince Lichnowsky. His works were all the property of the publishers, and it is natural that as his life advanced (he was now 39) and his aims in art grew vaster, the necessity of writing music for sale should have become more and more irksome. Just at this time, however, he received an invitation from Jerome Bonaparte, King of Westphalia, to fill the post of Maître de Chapelle at Cassel, with a salary of 600 gold ducats (£300) per annum, and 150 ducats for travelling expenses, and with very easy duties. The first trace of this offer is found in a letter of his own, dated Nov. 1, 1808; but he never seems seriously to have entertained it except as a lever for obtaining an appointment under the Court of Austria. In fact the time was hardly one in which a German could accept service under a French prince. Napoleon was at the height of his career of ambition and conquest, and Austria was at this very time making immense exertions for the increase of her army with a view to the war which broke out when the Austrians crossed the Inn on April 9. With this state of things imminent it is difficult to imagine that King Jerome's offer can have been seriously made or entertained. But it is easy to understand the consternation into which the possibility of Beethoven's removal from Vienna must have thrown his friends and the lovers of music in general, and the immediate result appears to have been an undertaking on the part of the Archduke Rodolph, Prince Lobkowitz, and Prince Kinsky, dated March 1, 1809, guaranteeing him an annual income of 4000 (paper) florins, payable half-yearly, until he should obtain a post of equal value in the Austrian dominions.[6] He himself, however, naturally preferred the post of Imperial Kapellmeister under the Austrian Government, and with that view drew up a memorial,[7] which however appears to have met with no success, even if it were ever presented. At this time, owing to the excessive issue of bank notes, the cash value of the paper florin had sunk from 2*s.* to a little over 1*s.*, so that the income secured to Beethoven, though nominally £400, did not really amount to more than £210, with the probability of still further rapid depreciation.

Meantime the work of publication went on apace, and in that respect 1809 is the most brilliant and astonishing year of Beethoven's life. He now for the first time entered into relations with the great firm of Breitkopf & Härtel. Simrock published (in March) the 4th Symphony, dedicated to Count Oppersdorf as op. 60, and Breitkopf and Härtel head their splendid list with the Violin Concerto, dedicated to Breuning as op. 60, and also issued in March.

[7] See Nohl, *Briefe*, No. 48, 49, and *Neue Briefe*, 41.

This they followed in April by the C minor and Pastoral Symphonies (op. 67 and 68), dedicated jointly to Prince Lobkowitz and Count Rasoumoffsky, and by the Cello Sonata in A (op. 69), dedicated to the Baron von Gleichenstein, who with Zmeskall shared Beethoven's intimate friendship at this date; and these again in October,[1] by the two Pianoforte Trios (op. 70), dedicated to the Countess Erdödy, in whose house Beethoven had been living since his rupture with [2]Lichnowsky; and lastly on Nov. 22 by a Song, 'Als die Geliebte sich trennen wollte.'[3]

On May 12 the French again entered Vienna; on the 21st Aspern was fought, and Napoleon took possession of the island of Lobau, close to the city. Wagram took place on July 6, and the whole summer, till the peace of Schönbrunn on Oct. 14, must have been a very disturbed season for the inhabitants of Vienna. Beethoven's lodging being on the wall was much exposed to the firing. The noise disturbed him[4] greatly, and at least on one occasion he took refuge in the cellar of his brother's house in order to escape it. He had his eyes open however to the proceedings of the French, and astonished a visitor many years afterwards with his recollections of the time.[5] It is remarkable how little external events interfered with his powers of production. As far as quality goes the Piano Concerto in E flat and the String Quartet in the same key—both of which bear the date 1809—are equal to any in the whole range of his works. The 6 Variations in D (op. 76)—the theme afterwards used for the March in the 'Ruins of Athens'—are not remarkable, but the Piano Sonata in F♯ written in October is very so. Though not so serious as some, it is not surpassed for beauty and charm by any of the immortal 33. It seems to have been a special favourite of the author's. 'People are always talking of the C♯ minor Sonata,' said he once, 'but I have written better things than that. The F♯ Sonata is something very different.'[6] A more important (though not more delightful) Sonata had been begun on May 14 to commemorate the departure of the Archduke from Vienna on that day. It is dated and inscribed by Beethoven himself, and forms the first movement of that known as 'Les Adieux, l'Absence et le Retour.' Among the sketches for the Adieux is found a note[7] 'Der Abschied am 4ten Mai—gewidmet und aus dem Herzen geschrieben S. K. H.'—words which show that the parting really inspired Beethoven, and was not a mere accident for his genius to transmute, like the four knocks in the Violin Concerto, or the cook's question in the last Quartet. A March for a military band in F, composed for the Bohemian Landwehr under Archduke Anton, and 3 Songs—'L'amante impaziente' (op. 82, No. 4), 'Lied aus der Ferne,'[8] and 'Die laute Klage'[9]—complete the compositions of 1809. Haydn had gone to his rest on May 31, in the middle of the Austrian occupation, but we find no allusion to him in any of Beethoven's journals or letters.

The correspondence with Thomson of Edinburgh, opened in 1806, was renewed this autumn. It began with a letter from Thomson, sending 43 airs, which was promptly answered by Beethoven, and it lasted until Feb. 21, 1818, during which time Beethoven harmonised no less than 164 national melodies. For these he received in all a sum of some £200.[10]

1810 began with the return of the Archduke on Jan. 30, and the completion of the Sonata. The sketch books[11] show that the next few months were occupied with the composition of the music to 'Egmont,' the String Quartet in F minor, Songs of Goethe's (including the Erl King,[12] which, though well advanced, was never completed), and with the preliminary ideas of the B flat Trio. The music to 'Egmont' was first performed on May 24, probably at some private house, as no record of it survives in the theatrical chronicles. It was in May[13] that Beethoven had his first interview with Bettina Brentano, then twenty-five years old, which gave rise to the three well-known letters, the authenticity of which has been so hotly disputed. Knowing Beethoven's extreme susceptibility it is not difficult to believe that the letters are in the main genuine, though some of the expressions have probably been tampered with. Beethoven's relation to the Archduke, and his increasing reputation, were beginning to produce their natural result. He complains[14] that his retirement is at an end, and that he is forced to go too much into society. He has taken up his summer quarter at Hetzendorf as before, but the old seclusion is no longer possible, he has to be in and out of Vienna at the season which he detested, and which hitherto he had always devoted entirely to composition. That he was also at Baden in August is evident from some MS. pieces of military music, all dated Baden, 1810, and one of them August.[15] He seems to have had some prospect of marriage at this time, though the only allusion to it is that it has been broken off.[16] Meantime this winter was a busy one for the publishers of his music. The pianoforte arrangement of 'Fidelio,' as revised for 1806 (without Overture or Finales), was published by Breitkopf in October, and is dedicated to the Archduke Rodolph. In December the same firm issued the Quartet in E♭ (op. 74), inscribed to Prince Lobkowitz, the Variations in D (op. 76), the Fantasia in G minor, the Sonata in F♯—dedicated respectively to Count Brunswick, and his sister Therese—and the Sonatina[17] in G; also earlier in the year the Sestet for wind instruments (op. 71), and the Song 'Andenken' (No. 248). Another Sestet

(op. 81 *b*)—probably, like that just mentioned, an early work—was issued by Simrock, and four settings of Goethe's 'Sehnsucht,' with a few more songs by other publishers. The frequent appearance of Goethe's name in the music of this year is remarkable, and coupled with the allusion in his letter to Bettina of Aug. 11, implies that the great poet was beginning to exercise that influence on him which Beethoven described in his interview with Rochlitz in 1823.

The Trio in B flat was completed during the winter, and was written down in its finished form between March 3 and 26, as the autograph informs us with a particularity wanting in Beethoven's earlier works, but becoming more frequent in future. The Archduke (to whom it was ultimately inscribed) lost no time in making its acquaintance, and as no copyist was obtainable, seems to have played it first from the autograph.[1] The principal compositions of 1811 were the music to two dramatic pieces written by Kotzebue, for the opening of a new theatre at Pesth, and entitled 'Hungary's first hero,' or 'King Stephen,' and the 'Ruins of Athens.' The Introduction to the Choral Fantasia, which may be taken as a representation of Beethoven's improvisation, inasmuch as it was actually extemporised at the performance—was written down *à propos* to the publication of the work in July, and a Song 'An die Geliebte'[2] is dated December in the composer's own hand.

The publications of the year are all by Breitkopf, and include the Overture to 'Egmont' in February; the Piano Concerto in E*b*, and the Sonata in the same key (op. 81 *a*), in May and July respectively, both dedicated to the Archduke;—the Choral Fantasia (op. 80), dedicated to the King of Bavaria (July), and the 'Mount of Olives' (Nov.). The preparation of the last-named work for the press so long after its composition must have involved much time and consideration. There is evidence that an additional chorus was proposed;[3] and it is known that he was dissatisfied with the treatment of the principal character. A note to Treitschke (June 6) seems to show that Beethoven was contemplating an opera. The first mention of a metronome[4] occurs in a letter of this autumn.

The depreciation in the value of paper money had gone on with fearful rapidity, and by the end of 1810 the bank notes had fallen to less than 1-10th of their nominal value—*i. e.* a 5-florin note was only worth half a florin in silver. The *Finanz Patent* of Feb. 20, 1811, attempted to remedy this by a truly disastrous measure—the abolition of the bank notes (*Banco-zettel*) as a legal tender, and the creation of a new paper currency called *Einlösungsscheine*, into which the bank notes were to be forcibly converted at 1-5th of their ostensible value, i.e. a 100-florin note was exchangeable for a 20-florin *Einlösungsschein*. Beethoven's income might possibly have been thus reduced to 800 florins, or £80, had not the Archduke and Prince Lobkowitz agreed to pay their share of the pension (1500 + 700 = 2200 florins) in *Einlösungsscheine* instead of bank notes. Prince Kinsky would have done the same as to his 1800 florins, if his residence at Prague and his sudden death (Nov. 13, 1812) had not prevented his giving the proper instructions. Beethoven sued the Kinsky estate for his claim, and succeeded after several years, many letters and much heart-burning, in obtaining (Jan. 18, 1815) a decree for 1200 florins *Einlösungsscheine* per annum; and the final result of the whole, according to Beethoven's own statement (in his letter to Ries of March 8, 1816), is that his pension up to his death was 3400 florins in *Einlösungsscheine*, which at that time were worth 1360 in silver, = £136, the *Einlösungsscheine* themselves having fallen to between $\frac{1}{2}$ and $\frac{1}{3}$rd of their nominal value.

1812 opens with a correspondence with Varenna, an official in Gratz, as to a concert for the poor, which puts Beethoven's benevolence in a strong light. He sends the 'Mount of Olives,' the 'Choral Fantasia,' and an Overture as a gift to the Institution for future use—promises other (MS.) compositions, and absolutely declines all offer of remuneration. The theatre at Pesth was opened on Feb. 9 with the music to the 'Ruins of Athens' and 'King Stephen,' but there is no record of Beethoven himself having been present. This again was to be a great year in composition, and he was destined to repeat the feat of 1808 by the production of a second pair of Symphonies. In fact from memoranda among the sketches for the new pair, it appears that he contemplated[5] writing three at the same time, and that the key of the third was already settled in his mind—'Sinfonia in D moll—3te Sinf.' However, this was postponed, and the other two occupied him the greater part of the year. The autograph score of the first of the two, that in A (No. 7), is dated May 13; so that it may be assumed that it was finished before he left Vienna. The second—in F, No. 8—was not completed till October. His journey this year was of unusual extent. His health was bad, and Malfatti, his physician,[6] ordered him to try the baths of Bohemia—possibly after Baden or some other of his usual resorts had failed to recruit him, as we find him in Vienna on July 4, an unusually late date. Before his departure there was a farewell meal, at which Count Brunswick, Stephen Breuning, Maelzel, and others were present.[7] Maelzel's metronome was approaching perfection, and Beethoven said goodbye to the inventor in a droll canon, which was sung at the table—he himself singing soprano[8]—and afterwards worked up into the lovely Allegretto of the 8th Symphony. He went by Prague to Töplitz, and Carlsbad—where he notes the postilion's horn[9] among the sketches

for the 8th Symphony—Franzensbrunn, and then Töplitz again;[1] and lastly to his brother Johann's at Linz, where he remained through October and into November, as the inscriptions on the autographs of the 8th Symphony and of three Trombone pieces written for All Souls day demonstrate. The Trombone pieces became his own requiem. At Töplitz he met Goethe, and the strange scene occurred in which he so unnecessarily showed his contempt for his friend the Archduke Rudolph and the other members of the Imperial family.[2] At Töplitz he met Amalie Sebald, and a series of letters[3] to her shows that the Symphony did not prevent him from making love with much ardour. While in Carlsbad he[4] gave a concert for the benefit of the sufferers in a fire at Baden.[5] The fact of his extemporising at the concert, and hearing the postilion's call, as well as an entry among the sketches for the 8th Symphony, to the effect that 'cotton in his ears when playing took off the unpleasant [6]noise'—perhaps imply that his deafness at this time was still only partial.

One of his first works after returning to Vienna was the fine Sonata for Piano and Violin, published as op. 96. It was completed by the close of the year, and was first played by the Archduke and Rode—whose style Beethoven kept in view in the violin[7] part—at the house of Prince Lobkowitz, early in 1813. A comparative trifle is the 'Lied an die Geliebte,'[8] written during this winter in the album of Regina Lang. The only work published in 1812 is the Mass in C, dedicated—possibly as an acknowledgment of his share in the guarantee—to Prince Kinsky, and issued in Nov. as op. 86 by Breitkopf & Härtel. The state of his finances about this time compelled him to borrrow 2300 florins from the Brentanos of Frankfort, old friends who had known and loved him from the first. A trace of the transaction is perhaps discernible in the Trio in B♭ in one movement,[9] written on June 2, 1812, 'for his little friend Maximiliana Brentano, to encourage her in playing.' The effect of the Bohemian baths soon passed away, the old ailments and depression returned, the disputes and worries with the servants increased, and his spirits became worse than they had been since the year 1803.

The only composition which can be attributed to the spring of 1813 is a Triumphal March, written for Kuffner's Tragedy[10] of 'Tarpeia,' which was produced—with the March advertised as 'newly composed'—on March 26. On April 20 the two new Symphonies appear to have been played through for the first time at the Archduke's.[11] On the advice of his medical men he went at the end of May to Baden, where[12] he was received with open arms by the Archduke. Hither he was followed by his friend Madame Streicher, who remained at Baden for the summer, and took charge of his lodgings and clothes, which appear to have been in a deplorable state. On his return to town he re-occupied his old rooms in the house of Pasqualati, on the Mölk Bastion. The Streichers continued their friendly services; after some time procured him two good servants, and otherwise looked after his interests. These servants remained with him for a year or two, and this was probably the most comfortable time of the last half of Beethoven's life.[13]

As early as April we find him endeavouring to arrange a concert for the production of his two Symphonies; but without success.[14] The opportunity arrived in another way. The news of the great defeat of the French at Vittoria (fought June 21) reached Vienna on July 13, following on that of the disaster of Moscow and the battles of Lutzen and Bautzen (May 2 and 21), and culminating in Leipsic Oct. 19. It is easy to understand how great the sensation was throughout the whole of Germany, and how keenly Beethoven must have felt such events,[15] though we may wonder that he expressed his emotion in the form of the Orchestral programme-music, entitled 'Wellington's Victory, or the Battle of Vittoria,' a work conceived on almost as vulgar a plan as the 'Battle of Prague,' and containing few traces of his genius. This however is accounted for by the fact that the piece was suggested by Maelzel[16] the mechanician, a man of undoubted ability, who knew the public taste far better than Beethoven did. An occasion for its performance soon suggested itself in a concert for the benefit of the soldiers wounded at Hanau (Oct. 30), where the Austrians endeavoured to cut off the retreat of the French after Leipsic. The concert took place on Dec. 8, in the large Hall of the University, and was organised by Maelzel. The programme, like the Battle Symphony itself, speaks of a man who knew his audience. It was of reasonable length and contained the 7th Symphony—in MS. and produced for the first time—two Marches performed by Maelzel's mechanical trumpet, and the Battle Symphony. The orchestra was filled by the best professors of the day—Salieri, Spohr, Mayseder,[17] Hummel, Romberg, Moscheles, etc. Beethoven himself conducted, and we have Spohr's testimony that the performance of the Symphony was really a good one. The success of both concerts was immense, and Beethoven addressed a letter of thanks to the performers, which may be read at length in Schindler and elsewhere.

It was probably about this time that Beethoven forwarded a copy of the Battle Symphony to the Prince Regent. The letter which accompanied it has not been preserved, but it was never acknowledged by the Prince, and

[15] See the note to Thayer, ii. 313. The idea noted in his diary is a far nobler one—a National Hymn, each nation engaged to be represented by a march, and the whole to close with a Te Deum. Nohl, *Beethovenfeier*, pp. 71, 72.
[16] See Moscheles' note to his edition of Schindler, i. 153.
[17] Beethoven's droll note to Hummel (Nohl, *Neue Briefe*, No. 96) shows that there was no quarrel between them.

Beethoven felt the neglect keenly. The work was produced at Drury Lane a year afterwards—Feb. 10, 1815, and had a great run, but this was through the exertions of Sir George Smart, who himself procured the copy from Vienna.

Early in January 1814 a third concert was given in the great Redoutensaal with the same programme and nearly the same performers as before, except that some numbers from the 'Ruins of Athens' were substituted for Maelzel's march; and on the 27th Feb. a fourth, with similar programme and with the important addition of the Symphony in F—placed last but one in the list. The huge programme speaks of Beethoven himself as clearly as the two first did of the more practical Maelzel. The 7th Symphony was throughout a success, its *Allegretto* being repeated three times out of the four. But the 8th Symphony did not please, a fact which greatly discomposed Beethoven. On April 11 Beethoven played the B♭ Trio at Schuppanzigh's benefit concert, and in the evening a Chorus of his to the words 'Germania, Germania,' was sung as the finale to an operetta of Treitschke's, *à propos* to the fall of Paris (March 31). Moscheles was present at the concert, and gives[1] an interesting account of the style of Beethoven's playing. Spohr heard[2] the same trio, but under less favourable circumstances. A month later Beethoven again played the B♭ trio—his last public appearance in chamber music. The spring of 1814 was remarkable for the revival of 'Fidelio.' Treitschke had been employed to revise the libretto, and in March we find Beethoven writing to him—'I have read your revision of the opera with great satisfaction. It has decided me once more to rebuild the desolate ruins of an ancient fortress.' This decision involved the entire re-writing and re-arrangement of considerable portions; others were slightly altered, and some pieces were reintroduced from the first score of all. The first performance took place at the Kärnthnerthor Theatre on May 23. On the 26th the new Overture in E was first played, and other alterations were subsequently introduced. On July 18 the opera was played for Beethoven's benefit. A Pianoforte score, made by Moscheles under Beethoven's own direction,[3] carefully revised by him, and dedicated to the Archduke, was published by Artaria in August. One friendly face must have been missed on all these occasions—that of the Prince Lichnowsky, who died on April 15.

During the winter of 1814–15 an unfortunate misunderstanding arose between Beethoven and Maelzel. The Battle Symphony was originally written at the latter's suggestion for a mechanical instrument of his called the Panharmonicon, and was afterwards orchestrated by its author for the concert, with the view to a projected tour of Maelzel in England.[4] Beethoven was at the time greatly in want of funds, and Maelzel advanced him £25, which he professed to regard as a mere loan, while the other alleged it was for the purchase of the work. Maelzel had also engaged to make ear-trumpets for Beethoven, which were delayed, and in the end proved failures. The misunderstanding was aggravated by various statements of Maelzel, and by the interference of outsiders, and finally by Maelzel's departure through Germany to England, with an imperfect copy of the Battle Symphony clandestinely obtained. Such a complication was quite sufficient to worry and harass a sensitive, obstinate, and unbusinesslike man like Beethoven. He entered an action against Maelzel, and his deposition on the subject, and the letter[5] which he afterwards addressed to the artists of England, show how serious was his view of the harm done him, and the motives of the doer. Maelzel's case, on the other hand, is stated with evident *animus* by Beethoven's adherents,[6] and it should not be overlooked that he and Beethoven appear to have continued friends after the immediate quarrel blew over. If to the opera and the Maelzel scandal we add the Kinsky lawsuit now in progress, and which Beethoven watched intently and wrote much about, we shall hardly wonder that he was not able to get out of town till long past his usual time. When at length he writes from Baden it is to announce the completion of the Sonata in E minor, which he dedicates to Count Moritz Lichnowsky. The letter[7] gives a charming statement of his ideas of the relation of a musician to his patron.

The triumphant success of the Symphony in A, and of the Battle-piece, and the equally successful revival of Fidelio, render 1814 the culminating period of Beethoven's life. His activity during the autumn and winter was very great; no bad health or worries or anything else external could hinder the astonishing flow of his inward energy. The Sonata is dated 'Vienna, 16th August,' and was therefore probably completed—as far as any music of his was ever completed till it was actually printed—before he left town. On Aug. 23 he commemorated the death of the wife of his kind friend Pasqualati in an 'Elegischer Gesang' (op. 118). On Oct. 4 he completed the Overture in C ('Namensfeier,' op. 115), a work on which he had been employed more or less for two years, and which has a double interest from the fact that its themes seem to have been originally intended[8] to form part of that composition of Schiller's 'Hymn to Joy' which he first contemplated when a boy at Bonn, and which keeps coming to the surface in different forms, until finally embodied in the 9th Symphony in 1823. Earlier in the year he had made some progress with a sixth Piano Concerto—in D—of which not only are extensive sketches in existence, but sixty pages in complete score. It was composed at the same time with the Cello Sonatas (op. 102); and finally gave way to them.[9] But there was a less congenial work to do—Vienna had

been selected as the scene of the Congress, and Beethoven was bound to seize the opportunity not only of performing his latest Symphonies, but of composing some new music appropriate to so great an occasion.[1] He selected in September[2] a Cantata by Weissenbach, entitled 'Die glorreiche Augenblick'—an unhappy choice, as it turned out—composed it more quickly than[3] was his wont, and included it with the Symphony in A, and the Battle of Vittoria, in a concert for his benefit on Nov. 29. The manner in which this concert was carried out gives a striking idea of the extraordinary position that Beethoven held in Vienna. The two Halls of the Redouten-Saal were placed at his disposal for two evenings by the government, and he himself sent personal invitations in his own name to the various sovereigns and other notabilities collected in Vienna. The room was crowded with an audience of 6000 persons, and Beethoven describes[4] himself as 'quite exhausted with fatigue, worry, pleasure, and delight.' At a second performance on Dec. 2 the hall was less crowded. One of the fêtes provided during the Congress was a tournament in the Riding School on Nov. 23, and for this Beethoven would appear[5] to have composed music, though no trace of it has yet been found. During the continuance of the Congress he seems to have been much visited and noticed, and many droll scenes doubtless occurred between him and his exalted worshippers. The Archduke and Prince Rasoumoffsky, as Russian Ambassador, were conspicuous among the givers of fêtes, and it was at the house of the latter that Beethoven was presented to the Empress of Russia.

In addition to the profit of the concerts Schindler implies that Beethoven received presents from the various foreign sovereigns in Vienna. The pecuniary result of the winter was therefore good. He was able for the first time to lay by money, which he invested in shares in the Bank of Austria.[6]

The news of Bonaparte's escape from Elba broke up the Congress, and threw Europe again into a state of perturbation. In Vienna the reaction after the recent extra gaiety must have been great. Beethoven was himself occupied during the year by the Kinsky lawsuit; his letters upon the subject to his advocate Kauka are many and long, and it is plain from such expressions as the following that it seriously interrupted his music. 'I am again very tired, having been forced to discuss many things with P—. Such things exhaust me more than the greatest efforts in composition. It is a new field, the soil of which I ought not to be required to till, and which has cost me many tears and much sorrow.' . . . . 'Do not forget me, poor tormented creature that I am.'[7]

Under the circumstances it is not surprising that he composed little during 1815. The two Sonatas for Piano and Cello (op. 102), dated 'July' and 'August'; the Chorus 'Es ist vollbracht,' as finale to a piece of Treitschke's, produced to celebrate the entry into Paris (July 15); the 'Meeresstille und glückliche Fahrt,' and a couple of Songs, 'Sehnsucht' and 'Das Geheimniss'[8]—are all the original works that can with certainty be traced to this year. But the beautiful and passionate Sonata in A (op. 101), which was inspired by and dedicated to his dear friend Madame Ertmann—'Liebe werthe Dorothea Cecilia'—was probably composed at the end of this year, since it was played in public on Feb. 18, 1816, though not published for a year after. The national airs which he had in hand since 1810 for Thomson of Edinburgh were valuable at such a time, since he could turn to these when his thoughts were too much disturbed for original composition—a parcel of Scotch Songs is dated May 1815.

The publications of 1815 are still fewer than the compositions. The Polonaise in C (op. 89)—dedicated to the Empress of Russia,[9] who had greatly distinguished Beethoven at one of Prince Rasoumoffsky's receptions—appeared in March; the Sonata op. 90, and a Song, 'Kriegers Abschied,' in June. These are all. On June 1 he wrote to Salomon, then resident in London, offering his works from op. 92 to 97 inclusive for sale, with 'Fidelio,' the Vienna Cantata, and the Battle Symphony. And this is followed in November by letters to Birchall, sending various pieces. Salomon died on Nov. 25.

The second quarrel with Stephen Breuning must have occurred in 1815[10]. Some one had urged him to warn Beethoven against pecuniary relations with his brother Caspar, whose character in money matters was not satisfactory. Breuning conveyed the hint to Beethoven, and he, with characteristic earnestness and simplicity, and with that strange fondness for his unworthy brothers which amounted almost to a passion, at once divulged to his brother not only the warning but the name of his informant. A serious quarrel naturally ensued between Breuning and Caspar, which soon spread to Beethoven himself, and the result was that he and Breuning were again separated—this time for several years. The letter in which Beethoven at last asks pardon of his old friend can hardly be omitted from this sketch. Though undated it was written in 1826.[11] It contained his miniature painted by Hornemann in 1802, and ran as follows (the original has *Du* and *dein* throughout):—

'Beneath this portrait, dear Stephen, may all that has for so long gone on between us be for ever hidden. I know how I have torn your heart. For this the emotion that you must certainly have noticed in me has been sufficient punishment. My feeling towards you was not malice. No—I should no longer be worthy of your friendship; it was passionate love for you and myself; but I doubted you dreadfully, for people came between

us who were unworthy of us both. My portrait has long been intended for you. I need not tell you that I never meant it for any one else. Who could I give it to with my warmest love so well as to you, true, good, noble Stephen? Forgive me for distressing you; I have suffered myself as much as you have. It was only when I had you no longer with me that I first really felt how dear you are and always will be to my heart. Come to my arms once more as you used to do.'

October was passed in Baden, chiefly in bed.

On Nov. 15 of this year Caspar Carl Beethoven died—a truly unfortunate event for Ludwig. Caspar had for long received pecuniary assistance from his brother, and at his death he charged him with the maintenance of his son Carl, a lad between 8 and 9. This boy, whose charge Beethoven undertook with all the simplicity and fervour of his nature, though no doubt often with much want of judgment, was quite unworthy of his great uncle. The charge altered Beethoven's nature, weaned him from his music, embroiled him with his friends, embittered his existence with the worry of continued contentions and reiterated disappointments, and at last, directly or indirectly, brought the life of the great composer to an end long before its natural term.

On Christmas Day, at a concert in the Redouten Saal for the benefit of the Bürger Hospital, Beethoven produced his new Overture and Meeresstille, and performed the 'Mount of Olives.' As an acknowledgment for many similar services the municipal council had recently conferred upon him the freedom of the city—*Ehrenbürgerthum.* It was the first public title that the great *roturier* had received. He was not even a Capellmeister, as both [1]Mozart and Haydn had been, and his advocate was actually forced to invent that title for him, to procure the necessary respect for his memorials in the lawsuit which occupied so many of his years after this date.[2] It is a curious evidence of the singular position he held among musicians. He was afterwards made a member of the Philharmonic Societies of Stockholm and Amsterdam, and received Orders from some of the Courts in exchange for his Mass, but the one title he valued was that of *Ton-dichter*—'Poet in music.'[3]

The resuscitation of his Oratorio is perhaps connected with a desire in Beethoven's mind to compose a fresh one. At any rate he was at this time in communication both with the Tonkünstler Societät and the Gesellschaft der Musik-Freunde of Vienna on the subject. By the latter body the matter was taken up in earnest. Subject and poet were left to himself, and a payment of 300 gold ducats was voted to him for the use of the oratorio for one year. The negotiation dragged on till 1824 and came to nothing, for the same ostensible reason that his second Opera did, that no good libretto was forthcoming.[4]

1816 was a great year for publication. The Battle Symphony in March; the Violin Sonata and the B♭ Trio (op. 96, 97)—both dedicated to the Archduke—in July; the 7th Symphony—dedicated to Count Fries, with a pianoforte arrangement, to the Empress of Russia; the String Quartet in F minor (op. 95)—to Zmeskall; and the beautiful Liederkreis (op. 98) to Prince Lobkowitz; all three in December. These, with the 8th Symphony and three detached Songs, form a list rivalling, if not surpassing, that of 1809. The only compositions of this year ar the Liederkreis (April), a Military March in D, 'for the Grand Parade' (Wachtparade), June 4, 1816;[5] a couple of songs; and a trifle in the style of a birthday cantata for Prince Lobkowitz.[6] This is the date of a strange temporary fancy for German in preference to Italian which took possession of him. Some of his earlier pieces contain German terms, as the Six Songs, op. 75, and the Sonata 81 *a*. They reappear in the Liederkreis (op. 98) and Merkenstein (op. 100) and come to a head in the Sonata op. 101, in which all the indications are given in German, and the word 'Hammerklavier' appears for 'Pianoforte' in the title. The change is the subject of two letters to Steiner.[7] He continued to use the name 'Hammerklavier' in the sonatas op. 106, 109, and 110; and there apparently this vernacular fit ceased.[8]

Beethoven had a violent dislike to his brother's widow, whom he called the 'Queen of Night,' and believed, rightly or wrongly, to be a person of bad conduct. He therefore lost no time in obtaining legal authority for taking his ward out of her hands and placing him with Giannatasio del Rio, the head of an educational institution in Vienna; allowing his mother to see him only once a month. This was done in February 1816, and the arrangement existed till towards the end of the year, when the widow appears to have appealed with success against the first decree. The cause had been before the *Landrechts* court, on the assumption that the *van* in Beethoven's name indicated nobility. This the widow disputed, and on Beethoven's being examined on the point he confirmed her argument by pointing successively to his head and his heart saying—'My nobility is *here* and *here*.' The case was then sent down to a lower court, where the magistrate was notoriously inefficient, and the result was to take the child from his uncle on the ground that his deafness unfitted him for the duties of a guardian. Carl's affairs were then put into the hands of an official, and all that Beethoven had to do was to pay for his education. Against this decree he entered an appeal which was finally decided in his favour,

[1] 'Was haben Sie da?' was the enquiry of the 'privilegirte Bettlerin' when the hearse drew up with Mozart's body at the gate of the Cemetery, 'Ein Capellmeister' was the answer. [2] Schindler, i. 262.

[3] See Breuning, 101; and compare letter to Mlle. Streicher, *Briefe*, No. 200; and the use of the word 'gedichtet' in the title of the Overture Op. 115.

[4] See the very curious letter from Beethoven of Jan. 23, 1824, in Pohl's pamphlet, *Gesellschaft*, etc., 1871.

[5] B. & H. 15. [6] See Thayer's Catalogue, No. 208.

[7] *Briefe*, Nos. 167, 168.

[8] The German comes out however when he is deeply moved, as in the 'Bitte für innern und äussern Frieden,' and the 'Aengstlich' in the 'Dona' of the Mass, the 'beklemmt' in the Cavatina of the B flat Quartet, etc.

but not till Jan. 7, 1820. Meantime his energies were taken up with the contest and the various worries and quarrels which arose out of it, involving the writing of a large number of long and serious letters. How he struggled and suffered the following entry in his diary of the early part of 1818 will show:—'Gott, Gott, mein Hort, mein Fels, o mein Alles, du siehst mein Inneres und weisst wie wehe mir es thut Jemanden leiden machen müssen bei meinem guten Werke für meinen theuren Karl. O höre stets Unaussprechlicher, höre mich—deinen unglücklichen unglücklichsten aller Sterblichen.' Between the dates just mentioned, of the beginning and ending of the law-suits, he completed no orchestral music at all. Apart from sympathy for a great composer in distress, and annoyance at the painful and undignified figure which he so often presented, we have indeed no reason to complain of a period which produced the three gigantic Pianoforte Sonatas, op. 106,[1] op. 109,[2] and op. 110[3]—which were the net product of the period; but such works produce no adequate remuneration, and it is not difficult to understand that during the law-suit he must have been in very straitened circumstances, cheap as education and living were in Vienna at that date. His frequent letters to Ries and Birchall in London at this time urging his works on them for the English market are enough to prove the truth of this. One result of these negotiations was the purchase by the Philharmonic Society, through Mr. Neate, under minute of July 11, 1815, of the MS. overtures to the 'Ruins of Athens,' 'King Stephen' and op. 115, for 75 guineas. To make matters worse Prince Lobkowitz died on Dec. 16, 1816, and with him—notwithstanding that here too Beethoven appealed to the law—all benefit from that quarter ceased. His pension was therefore from that date diminished to about £110. The few compositions attributable to this period are an arrangement of his early C minor Trio (op. 1) as a String Quintet (op. 104); two sets of national airs with variations for Piano and Flute (op. 105 and 107), a few songs—'So oder so,' 'Abendlied,' and the Hymn of the Monks in 'William Tell'[4] in memory of his old friend Krumpholz, who died May 2—and others. None of these can have been remunerative; in fact some of them were certainly presented to the publishers.

An incident of this date which gratified him much was the arrival of a piano from Broadwoods. Mr. Thomas Broadwood, the then head of the house, had recently made his acquaintance in Vienna, and the piano seems to have been the result of the impression produced on him by Beethoven. The Philharmonic Society are sometimes credited with the gift, but no resolution or minute to that effect exists in their records. The books of the firm, however, show that on Dec. 27, 1817, the grand piano No. 7362[5] was forwarded to Beethoven's address. A letter appears to have been written to him at the same time by Mr. Broadwood, which was answered by Beethoven immediately on its receipt. His letter has never been printed, and is here given exactly in his own strange French.[6]

'A Monsieur Monsieur Thomas Broadvood a Londres (en Angleterre).

Mon très cher Ami Broadvood!
jamais je n'eprouvais pas un plus grand Plaisir de ce que me causa votre Annonce de l'arrivée de cette Piano, avec qui vous m'honorez de m'en faire présent; je regarderai comme un Autel, ou je deposerai les plus belles offrandes de mon esprit au divine Apollon. Aussitôt comme je recevrai votre Excellent instrument, je vous enverrai d'en abord les Fruits de l'inspiration des premiers moments, que j'y passerai, pour vous servir d'un souvenir de moi à vous mon très cher B., et je ne souhaits ce que, qu'ils soient dignes de votre instrument.

Mon cher Monsieur et ami recevéz ma plus grande consideration de votre ami et très humble serviteur Louis van Beethoven. Vienne le 3me du mois Fevrier 1818.'

The instrument in course of time reached[7] its destination, was unpacked by Streicher, and first tried by Mr. Cipriani Potter, at that time studying in Vienna. What the result of Beethoven's own trial of it was is not known. At any rate no further communication from him reached the Broadwoods.

A correspondence however took place through Ries with the Philharmonic Society on the subject of his visiting England. The proposal of the Society was that he should come to London for the spring of 1818, bringing two new MS. Symphonies to be their property, and for which they were to give the sum of 300 guineas. He demanded 400,—150 to be in advance.[8] However, other causes put an end to the plan, and on the 5th of the following March he writes to say that health has prevented his coming. He was soon to be effectually nailed to Vienna. In the summer of 1818 the Archduke[9] had been appointed Archbishop of Olmütz. Beethoven was then in the middle of his great Sonata in B♭ (op. 106), and of another work more gigantic still; but he at once set to work with all his old energy on a grand Mass for the installation, which was fixed for March 20, 1820. The score was begun in the autumn of 1818, and the composition went on during the following year, uninterrupted by any other musical work, for the B♭ Sonata was completed for press by March 1819, and the only other pieces attributable to that year are a short Canon for 3 Voices ('Glück zum neuen Jahr'),

1 Composed 1818-19, and published Sept. 1819.
2 Composed 1819-20, published Nov. 1821.
3 Dated Dec. 25, 1821, and published Aug. 1822.
4 [illegible] & H. 224, 247, 265.
5 The compass of this instrument was 6 octaves, from C five lines below the Bass stave. A sister piano, No. 7252, of the same compass and quality, was made about the same time for the Princess Charlotte, and is now at Claremont. The number of grand pianos (full and concert only) now (Feb. 1878) reached by the firm is 21,150.
6 This interesting autograph is in the possession of Mr. M. M. Holloway, to whom I am indebted for its presence here.
7 The note from Broadwood's agent in Vienna which accompanied this letter shows that all freight and charges were paid by the giver of the piano.
8 Letter to Ries July 9, 1817; and Hogarth's *Philharmonic Society*, p. 18.
9 Schindler, i. 269.

and 10 Variations of National Airs (op. 107). The Sonata just referred to, the greatest work yet written for the piano, and not unjustly compared with the Ninth Symphony, belonged in a special sense to the Archduke. The first two movements were presented to him for[1] his Name-day; the whole work when published was dedicated to him, and the sketch of a piece for solo and chorus[2] exists in which the subject of the first Allegro is set to the words 'Vivat Rodolphus.' In addition the Archduke is said to have been able to play the Sonata. Beethoven may have hated his 'Dienstschaft,' but there is reason to believe that he was sincerely attached to his clever, sympathetic, imperial pupil.

The summer and autumn of both 1818 and 19 were spent at Mödling. His health at this time was excellent, and his devotion to the Mass extraordinary. Never had he been known to be so entirely abstracted from external things, so immersed in the struggle of composition. Schindler[3] has well described a strange scene which occurred during the elaboration of the Credo—the house deserted by the servants, and denuded of every comfort; the master shut into his room, singing, shouting, stamping, as if in actual conflict of life and death over the fugue 'Et vitam venturi'; his sudden appearance wild, dishevelled, faint with toil and 24 hours fast! These were indeed 'drangvollen[4] Umständen'—wretched conditions—but they are the conditions which accompany the production of great works. During the whole of this time the letters[5] show that his nephew occupied much of his thoughts. While at work on this sublime portion of the Mass[6] just mentioned, he was inspired to write the beautiful Sonata in E major (op. 109), the first of that unequalled trio which terminate that class of his compositions.

It is hardly necessary to say that the Installation went by without Beethoven's Mass, which indeed was not completed till the beginning of 1822. He announces its termination on Feb. 27,[7] and the perfect copy of the score was delivered into his patron's hands on March 19, exactly two years after the day for which it was projected. As the vast work came to an end, his thoughts reverted to his darling pianoforte, and the dates of Dec. 25, 1821, and Jan. 13, 1822, are affixed to the two immortal and most affecting Sonatas, which vie with each other in grandeur, beauty, and pathos, as they close the roll of his large compositions for the instrument which he so dearly loved and so greatly ennobled.

But neither Mass nor Sonatas were sufficient to absorb the energy of this most energetic and painstaking of musicians. The climax of his orchestral compositions had yet to be reached. We have seen that when engaged on his last pair of Symphonies in 1812, Beethoven contemplated a third, for which he had then fixed the key of D minor. To this he returned before many years were over, and it was destined in the end to be the 'Ninth Symphony.' The very characteristic theme of the Scherzo actually occurs in the sketch-books as early as 1815,[8] as the subject of a 'fugued piece,' though without the rhythm which now characterises it. But the practical beginning of the Symphony was made in 1817, when large portions of the first movement —headed 'Zur Sinfonie in D,' and showing a considerable approach to the work as carried out—together with a further development of the subject of the Scherzo, are found in the sketch-books. There is also evidence[9] that the Finale was at that time intended to be orchestral, and that the idea of connecting the 'Hymn of Joy' with his 9th Symphony had not at that time occurred to Beethoven. The sketches continue in 1818,[10] more or less mixed up with those for the Sonata in B♭; and, as if not satisfied with carrying on two such prodigious works together, Beethoven has left a note giving the scheme of a companion symphony which was to be choral in both the Adagio and Finale.[11] Still, however, there is no mention of the 'Ode to Joy,' and the text proposed in the last case is ecclesiastical.

We have seen how 1819, 1820, and 1821 were filled up. The summer and autumn of 1822 were spent at Baden, and were occupied with the Grand Overture in C (op. 124), for the opening of the Josephstadt Theatre at Vienna, whence it derives its title of 'Weihe des Hauses' —and the arrangement of a March and Chorus from the 'Ruins of Athens' for the same occasion, and was followed by the revival of 'Fidelio' at the Kärnthnerthor[12] theatre in November. That the two symphonies were then occupying his mind—'each different from the other and from any of his former ones'—is evident from his conversation with Rochlitz in July 1822, when that earnest critic submitted to him Breitkopf's proposition for music to Faust.[13] After the revival of 'Fidelio' he resumed the Symphony, and here for the first time Schiller's hymn appears in this connexion. Through the summer of 1823 it occupied him incessantly, with the exception of a few extras—the 33 Variations (op. 120), which were taken up almost as a *jeu d'esprit*, and being published in June must have been completed some time previously, a dozen 'Bagatelles' for the Piano (op. 119, 1–6, and op. 126), which can be fixed to the end of 1822 and beginning of 1823, and a short cantata for the birthday of Prince Lobkowitz (April 13) for soprano solo and chorus, the autograph of which is dated the evening previous to the birthday.[14] He began the summer at Hetzendorf, but a sudden dislike to the civilities of the landlord drove him to forfeit 400 florins which he had paid in advance, and make off to Baden. But wherever he was, while at work he was fully absorbed; insensible to sun and rain, to meals,

to the discomforts of his house and the neglect of the servants, rushing in and out without his hat, and otherwise showing how completely his great symphony had taken possession of him. Into the details of the composition we cannot here enter, farther than to say that the subject of the vocal portion, and its connexion with the preceding instrumental movements were what gave him most trouble. The story may be read in Schindler and Nottebohm, and it is full of interest and instruction. At length, on Sept. 5, writing from Baden to Ries, he announces that 'the copyist has finished the score of the Symphony,' but that it is too bulky to forward by post. Ries was then in London, and it is necessary to go back a little to mention that on Nov. 10, 1822, the Philharmonic Society passed a resolution offering Beethoven £50 for a MS. symphony, to be delivered in the March following. This was communicated to Beethoven by Ries, and accepted by him on Dec. 20. The money was advanced, and the MS. copy of the 9th Symphony in the Philharmonic library carries a statement in his autograph that it was 'written for the society.' How it came to pass notwithstanding this that the score was not received by the Philharmonic till after its performance in Vienna, and that when published it was dedicated to the King of Prussia, are facts difficult to reconcile with Beethoven's usual love of fairness and justice.

Notwithstanding the announcement to Ries the process of final polishing went on for some months longer. Shortly before he left Baden, on Oct. 5, he received a [1]visit from Weber and his pupil young Benedict, then in Vienna for the production of Euryanthe. The visit was in consequence of a kind wish for the success of the work expressed by Beethoven to Haslinger, and was in every way successful. In former times[2] he had spoken very depreciatingly of Weber, but since the perusal of Freischütz had [3]changed his mind. No allusion was made to Weber's youthful censures on the 4th and 7th Symphonies; Beethoven was cordial and even confidential, made some interesting remarks on opera books, and they parted mutually impressed. He returned to town at the end of October to a lodging in the Ungergasse, near the Landstrasse gate, and by February 1824 began to appear in the streets again and enjoy his favourite occupation of peering with his double eyeglass into the shop windows,[4] and joking with his acquaintances.

The publications of 1823 consist of the Overture to the 'Ruins of Athens' (op. 114), and the 'Meeresstille' (op. 112), both in February; and the Sonata (op. 111) in April.

The revival of 'Fidelio' in the previous winter had inspired Beethoven with the idea of writing a new German opera, and after many propositions he accepted the 'Melusina' by Grillparzer, a highly romantic piece, containing many effective situations, and a comic servant's part, which took his fancy extremely. Grillparzer had many conferences with him, and between the two the *libretto* was brought into practical shape. While thus engaged he received a commission from Count Brühl, intendant at the Berlin Theatre, for an opera on his own terms. Beethoven forwarded him the MS. of 'Melusina' for his opinion, but on hearing that a ballet of a somewhat similar character was then being played at Berlin, he at once renounced all idea of a German opera, and broke out in abuse of the German singers for their inferiority to the Italians, who were then playing Rossini in Vienna. In fact this season of 1823 had brought the Rossini fever to its height, no operas but his were played. Beethoven had indeed heard the 'Barbiere' in 1822,[5] and had even promised to write an opera for the Italian company in the same style, a promise which it is unnecessary to say was never redeemed. Like Mendelssohn he was in earnest in pursuit of an opera-book, but, like Mendelssohn, he never succeeded in obtaining one to his mind. What he wanted he told Breuning on his death-bed—something to interest and absorb him, but of a moral and elevating tendency, of the nature of 'Les Deux Journées' or 'Die Vestalin,' which he thoroughly approved; for dissolute stories like those of Mozart's operas had no attraction for him, and he could never be brought to set them. After his death a whole bundle of libretti was found which he had read and rejected.[6]

But opera or no, it was quite a different thing to find the public so taken up with Rossini that no one cared for either his Mass or his new Symphony.[7] He had written early in 1823 to Prussia, France, Saxony, Russia, proposing a subscription for the Mass of 50 ducats from the sovereigns of each of those countries—but the answers were slow and the subscriptions did not arrive, and he therefore made use of the opportunity afforded him by Count Brühl to propose the two works to him for production at Berlin. The answer was favourable, and there appeared good prospect of success. But the disgrace of driving their great composer to the northern capital for the production of his last and greatest works was too much for the music-loving aristocracy of Vienna—and an earnest memorial was drawn up, dated February 1824, signed by the Lichnowskys,[8] Fries, Dietrichstein, Palfy, and 25 others of the persons principally concerned with music in that city, beseeching him to produce the Mass and Symphony, and to write a second opera, which should vindicate the claim of classical music, and show that Germany could successfully compete with Italy. Such an address, so strongly signed, naturally gratified him extremely. The theatre 'an der Wien' was chosen, and after an amount of bargaining and delay and vacillation which is quite incredible—partly arising from the cupidity of the manager, partly from the extraordinary obstinacy and suspiciousness of Beethoven, from

[8] The Archduke was away, and so also must Lobkowitz have been.

the regulation of the censorship, and from the difficulties of the music—but which was all in time surmounted by the tact and devotion of Lichnowsky, Schindler, and Schuppanzigh, the concert took place in the Kärnthnerthor theatre on May 7.[1] The programme consisted of the Overture in C—'Weihe des Hauses'—the Kyrie, Credo, Agnus and Dona, of the Mass in D, in the form of three hymns,[2] and the 9th Symphony. The house was crowded, and the music, especially the Symphony, excited the greatest enthusiasm. It was on this occasion that the affecting incident occurred of the deaf composer being turned round by Mlle. Ungher that he might *see* the applause he and his music were evoking. But financially the concert was a failure. The use of the theatre, including band and chorus, cost 1000 florins, and the copying 800 more, but the prices remained as usual, so that the net result to Beethoven was but 420 florins, or under £40. Well might he say that 'after six weeks of such discussion he was boiled, stewed, and roasted.' He was profoundly distressed at the result, would eat nothing, and passed the night in his clothes. The concert, however, was repeated on the 23rd at noon, the theatre guaranteeing Beethoven 500 florins. On the second occasion all the Mass was suppressed but the Kyrie; the trio 'Tremate' and some Italian solos were introduced; the Overture and Symphony remained. The result of this was a loss to the management, and furnishes a curious trait of Beethoven's character. He could not without difficulty be induced to accept the guaranteed sum, but he invited Schindler, Schuppanzigh, and Umlauf to dinner, and then accused them in the most furious manner of having combined to cheat him over the whole transaction! This broke up the party; the three faithful friends went off elsewhere, and Beethoven was left to devour the dinner with his nephew. The immediate effect of the outbreak was to put an end to a promising negotiation which he was carrying on with Neate, who in a letter of Dec. 20, 1823, had, on the part of the Philharmonic Society, offered him 300 guineas and a benefit guaranteed at £500 for a visit to London with a Symphony and a Concerto. The terms had been accepted, and the arrangements for the journey were in a forward state; and although it is probably true that Beethoven's attachment to his nephew was too strong to allow of his leaving him when it came to the point, yet it is equally true that the event just related was the ostensible cause. Four days after he was at his beloved Baden, and craving for music paper.[3]

The subscriptions to the Mass had come in slowly, and in nine months amounted only to 350 ducats (£175) for seven copies.[4] This was too slow to satisfy the wishes of the composer. Indeed he had for some time past been negotiating in a much more mercantile style than before for the sale of Mass, Symphony, and Overture. He offered them to various publishers.[5] It is an unexpected trait in his character, and one for which we may thank his devotion to his nephew, to whom he was now sacrificing everything, that he might leave him well provided for. It resulted in his dealing for the first time with Schott, of Mayence, who purchased the Mass and the Symphony for 1000 and 600 florins respectively on July 19, 1824. He appears at this time to have taken generally a more commercial view of his position than usual, to have been occupied with plans[6] for new collected editions of his works (which however came to nothing), and generally to have shown an anxiety to make money very unlike anything before observable in him. In such calculations he was much assisted by a young man named Carl Holtz, a government employé, a good player on the violin and cello, a clever caricaturist, a bon vivant,[7] and generally a lively agreeable fellow. Holtz obtained an extraordinary influence over Beethoven. He drew him into society, induced him to be godfather to his child, to appoint him his biographer,[8] and amongst other things to forsake his usual sobriety, and to do that which has been absurdly exaggerated into a devotion to drink. That these commercial aims—too absurd if one reflects on the simple unbusinesslike character of Beethoven — and the occasional indulgence to which we have alluded, did not impair his invention or his imagination is evident from the fact that at this time he composed his last Quartets, works which, though misunderstood and naturally unappreciated at the time, are now by common consent of those who are able to judge placed at the head of Beethoven's compositions for individuality, depth of feeling, and expression. The relations with Russia, which Beethoven had originally cultivated through the Count de Browne, and the works dedicated to the Emperor of Russia and the Prince Rasoumoffsky, and which had been deepened by the personal attention shown him in 1814 by the Empress were now to bear their full fruit. Early in 1824 he received a letter from Prince Galitzin, a Russian nobleman living at Petersburg, and subsequently others, requesting him to compose three string quartets to be dedicated to the Prince and handsomely paid for. The first of these, that in E♭, sketched at Baden in the autumn of 1824, was sold to Schott[9] in advance for the sum of 50 ducats, and was completed after his return to Vienna early in October. It was first played on March 6, 1825, and published in the following March. With the Quartet Schott received the Overture op. 124, the 'Opferlied' (op. 121), and 'Bundeslied' (op. 122), an air 'An Chloe' (op. 128), and 11 Bagatelles (op. 126), for which he paid the sum of 130 ducats. The Quartet was

[1] Schindler, ii. 62-68.

[2] These were thus announced, and sung to German words, owing to the interference of the Censure and the clergy. A similar stipulation is still made at Exeter Hall. A Mass must be announced as a 'Service.' Thus extremes meet.

[3] Letter to Steiner, May 27.

[4] Schindler, ii. 17. The subscribers were the courts of Prussia, France, Saxony, Darmstadt, and Russia; Prince Radziwill, and Mr. Schelble, the founder of the Cäcilien Verein at Frankfort.

[8] Ibid. No. 379.

[9] Letter of Sept. 17. Here again we are puzzled by the fact that the quartet was sold to Schotts before Prince Galitzin had either paid, or declined to pay, the sum he promised.

played by Schuppanzigh, Weiss, Linke, and Holtz, and it was a humorous idea of the Master's to make each player, after so long an interval, sign a compact 'pledging his honour to do his best, and vie with his comrades in zeal.'[1]

The second Quartet was that which now stands third—in A minor, op. 132. It was first played on Nov. 6, 1825, and was published on Sept. 27 by Schlesinger. For this he seems to have obtained 80 ducats. In a letter to Peters it is mentioned as 'a Quartet, and a grand one too.'

The third, in B flat (op. 130), originally ended with a fugue of immense length and still greater obscurity, which was afterwards published separately as op. 133. It was completed in 1825, and was played in its first form on March 21, 26. The new finale—so gay and full of spirit—was written (at Artaria's instance) in great discomfort at his brother's house at Gneixendorf on Nov. 26, just before leaving on the journey which cost him his life. It is his last completed composition. The Quartet was published by Artaria, May 7, 1827. The relations between Beethoven and Prince Galitzin have been the subject of much controversy. It will be sufficient here to say that Beethoven is not known to have received the promised payment, and that the quartets were sold by him to the publishers already named.

Beethoven remained at Baden till October 1824. On his return to Vienna his nephew entered the University as a student in philology. The career of this worthy may be summed up in a few lines. He went in for his degree and was plucked, abandoned literature for trade, stood for the necessary examination in the Polytechnic School, and was plucked again; in despair attempted to shoot himself, and failed even to do that. He was then, as a suicide, taken charge of by the police, and after a time ordered out of Vienna at a day's notice, and at last joined the army.[2] And through it all his old uncle clung to him with truly touching affection. He, most simple-minded of men, could not believe that any one should really not desire to do his best; and so on the least appearance of contrition or amendment he forgives and embraces him, he bathes him in tenderness and confidence, only each time to find himself again deceived. The letters which this more than father wrote to his unworthy prodigal son are most affecting—injudicious no doubt, but full of tenderness and simplicity.

The first few weeks of the winter of 1824 were occupied in scoring the E flat Quartet, the composition of which had been the work of the summer, but it was hardly complete before Beethoven was taken with a severe illness in the lower part of the stomach.[3] For this he called in Staudenheim, a surgeon of eminence, who however was soon cashiered as too brusque, and replaced by Braunhofer. The malady hung about him till his next visit to the country; and its disappearance is commemorated in the *canzona di ringraziamento in modo lidico offerta alla divinita da un guarito*, which forms so noble a feature in the A minor Quartet. His stay at Baden in 1825 was of unusual length, lasting from May 2 till October 15,[4] by which date the Quartet was completely finished. It had already been tried, strictly in private, as early as August at the desire of the publisher, Beethoven sitting close to the players, and perhaps profiting by the rehearsal to make many alterations; and on Nov. 6 was played, still in private but to a densely crowded room,[5] by Schuppanzigh and Linke's quartet party.

The B♭ Quartet was his next work, and it was first performed in public by the party just mentioned on March 21, 1826. The *Presto* and *danza tedesca*[6] were encored, but the Cavatina seems to have made no impression, and the fugue, which then served as finale, was universally condemned. In the case of the fugue his judgment agreed with that of his critics; it was published separately (op. 133) and a new finale written; but he did not often give way to the judgments of his contemporaries. 'Your new quartet did not please,' was one of the bits of news brought to him on his death-bed by some officious friend. 'It will please them some day,' was the answer.[7]

Between the date last-mentioned and October 1826 occurred the series of disasters with young Carl already alluded to; and the latter month found both uncle and nephew at Johann Beethoven's residence at Gneixendorf. It is a village near Krems, on the Danube, about 50 miles west of Vienna, and here his brother had settled on the property (*Gut*) which gave occasion to Ludwig's famous joke (see p. 172 *a*). The party must have been a curiously ill-assorted one. The somewhat pompous money-loving *Gutsbesitzer*; his wife, a common frivolous woman of questionable character;[8] the ne'er-do-weel nephew, intensely selfish and ready to make game of his uncle or make love to his aunt; and in the midst of them all the great composer—deaf, untidy, unpresentable, setting every household rule and household propriety at defiance, by turns entirely absorbed and pertinaciously boisterous, exploding in rough jokes and horse-laughter, or bursting into sudden fury at some absolute misconception;—such a group had few elements of permanence in it. But nothing could stop the wonderful flow of Beethoven's thoughts. In fact, music being to him the language of his emotions, the more agitated he was the more he composed, and his very deafness, which fortunately must have made him insensible to much that went on around him, drove him more completely into himself and compelled him to listen to the workings of his own heart unalloyed by anything external. To his deafness we no doubt mainly owe the very individual and original style of the later Quartets. Thanks to Michael Krenn,[9] who was engaged by Frau Johann to wait on him, we can see him with our own eyes. 'At half-past 5 he was up and at his table, beating time with hands and feet, singing, humming, and writing. At half-

past 7 was the family breakfast, and directly after it he hurried out of doors, and would saunter about the fields, calling out, waving his hands, going now very slowly, then very fast, and then suddenly standing still and writing in a kind of pocket-book. At half-past 12 he came into the house to dinner, and after dinner he went to his own room till 3 or so; then again in the fields till about sunset, for later than that he might not go out. At half-past 7 was supper, and then he went to his room, wrote till 10, and so to bed.'

During the last three years he had been composing incessantly, and yet all that he had done seemed to him as nothing—as a mere prelude to what he was yet to do. As Newton before his death spoke of himself as 'a child picking up a few shells on the shore while the great ocean of truth lay undiscovered before him,' so does Beethoven in somewhat similar strain express himself at the close of his life:—'I feel as if I had written scarcely more than a few notes.'[1] And again—'I hope still to bring a few great works into the world, and then, like an old child, to end my earthly course somewhere amongst good people.'[2] His wish, however, was not fulfilled; he was to die in harness. Either before leaving Vienna or immediately after it he had completed the C♯ minor Quartet, and before the end of October had finished another, that in F, which is dated with his own hand 'Gneixendorf[3] am 30 Oktober, 1826.' This is the work the finale of which embodies the strange dialogue between Beethoven and his cook, 'Muss es sein?—Es muss sein,' and shows how he could rise from the particular to the universal. A week or two later and he had written a fresh finale to replace the enormously long fugue which originally terminated the B♭ Quartet, and dated it 'Nov. 1826.' And this was his last work. By that time the fine weather, of which he speaks shortly after his arrival,[4] had departed. The economical *Gutsbesitzer* had forbidden his infirm brother a fire in his room, the food was not to his taste, and he was informed that for both food and lodging a charge would be made; so that he determined to brave the police and return with his nephew to Vienna on Dec. 2. The journey from Gneixendorf to Krems, the post town, is not far,[5] but the close carriage could not be had, and Beethoven was obliged to perform it in an open chaise—the weather was cold and damp, and the result was a violent cold in the stomach, which was the beginning of the end. He took to his bed on reaching the Schwarzspanierhaus. His former physicians, Braunhofer and Staudenheim, refused to attend him, and he was in the hands of a Dr. Wawruch who had been casually called to him by a billiard-marker at the rooms frequented by young Carl Beethoven. The cold had developed into an inflammation of the lungs, and on this dropsy supervened. Wawruch, who appears to have been a poor practitioner and a pompous pedant,[6] drenched his patient with herb decoctions, but the malady would probably have ended fatally whatever treatment had been adopted. What the poor patient most required was good nursing and comfort, and this he could not obtain till after the departure of his nephew for his regiment in the latter half of December. Then Schindler and Stephen Breuning came to his bedside, and from this time to the end Gerhard Breuning, the son of Stephen, a boy of eleven, was his constant attendant. He was first tapped on Dec. 18, then again on Jan. 8, and a third time on Jan. 28. It was during one of these operations that on seeing the water he made the characteristic remark 'Better from my belly than from my pen.' The confidence both of Beethoven and his friends in Wawruch now became much shaken, and an application was made to Malfatti, who had attended him years before, but like so many others had parted from him in anger. It was long before Malfatti would answer the appeal, and even then he would only act in conjunction with Wawruch. The treatment was now changed, and iced punch administered in large quantities as a restorative. His faith in Malfatti was only equalled by his disgust at Wawruch. He would watch for the arrival of the former with eagerness, and welcome him as if he were an angel—whereas when Wawruch appeared he would immediately stop talking, turn his face to the wall with the exclamation 'Ach, der Esel!' and only answer his enquiries in the most grumpy manner.[7] Under the change Beethoven's spirits greatly improved, and if permitted he would at once have begun to work. This however was forbidden, and reading only allowed. Walter Scott was recommended him, and he began 'Kenilworth,'[8] but soon threw it down with the exclamation 'the man writes only for money.' He now made acquaintance with some of Schuberts songs[9] for the first time, and was delighted with them—'Truly Schubert has the divine fire,' were his words. Handel's works, in 40 volumes,[10] a present from Stumpff, arrived at this date, and were an unfailing source of interest to him[11] as he lay in bed. A lithograph of Haydn's birthplace gave him the liveliest satisfaction; his delight at receiving it, his wrath at the misspelling of the name, and his curious care in paying for it, may be read in Breuning's narrative (pp. 98–100). During the four months of his last illness he wrote and dictated many letters—24 are published, some of them of considerable length, and others no doubt remain in MS.

His nephew still retained his hold on his affections. A letter to Dr. Bach, his old advocate, of Jan. 3, declares the lad his sole heir, and commits

[11] Breuning, 94.

him to Bach's special care. He was continually tormented with anxiety as to their future maintenance. Notwithstanding Prince Galitzin's promise, dated Nov. 10/22, 1826, no portion of the money due from him on the 3 Quartets had yet been received. The seven bank shares he would not allow to be touched, regarding them as the property of his nephew. He therefore wrote to his friends[1] in London, urging the Philharmonic Society to carry out their old intention of giving a concert for his benefit. The reply to this was a letter from Moscheles,[2] dated March 1, sending £100 from the Philharmonic Society on account of the proceeds of a concert shortly to be given. His delight at this response was great, and his answer, dated March 18 (forwarding also the metronome marks of the 9th Symphony), is full of warmth and enthusiasm. Meantime a fourth tapping had taken place on Feb. 27, and a great discharge was caused by his emotion at the receipt of Moscheles' letter on March 17.

During his illness he had a few visitors besides Schindler and the two Breunings, who were his daily attendants, and Holtz, who came frequently. Breuning mentions Johann Beethoven and the nephew (in the early part of the time only), Tobias and Carl Haslinger, Diabelli, Baron Eskeles, Rauch, Dolezalek, Clement. Strangers occasionally arrived, amongst whom Hummel with his pupil Ferdinand Hiller, then a boy of 15, who saw[3] him on March 8, are worthy of note. But the friends of his earlier days—Fries, Erdödy, Ertmann, Brunswick, Gleichenstein, Zmeskall, Seyfried, the Streichers, Czerny, Schuppanzigh, Linke — those who had been honoured by his dedications, or had reaped the glory of producing his compositions—were either dead or otherwise occupied; at any rate none appeared. The absence of all trace of the Archduke Rudolph at this time, or of any reference to him in the correspondence of the last few years, is very remarkable.

Neither Beethoven himself nor any of his friends seem to have been aware that death was near. His letter to Moscheles of March 18 is full of projects, and a conversation reported by Breuning (p. 97) shows that he contemplated a tenth Symphony, a Requiem, Music to Faust, and an instruction book for the Piano—'to be something quite different from that of any one else.' To Moscheles he speaks of the Symphony as lying 'in his desk fully sketched,'—much as Coleridge used to talk of works as complete of which the title pages only had been put on paper; for nothing which can be identified with the description has been found. Indeed, the time of both projects and fulfilment was over—the night was come in which no man can work. The accumulation of water increased alarmingly, the wounds inflamed, lying became painful, and it was evident that the end was near. On the 12th he wrote to Schott desiring the dedication of the C♯ minor Quartet to be altered in favour of Baron von Stutterheim, in token of his obligation to him as colonel of his nephew's regiment. On the 18th, after dictating his letter to Moscheles, he settled the dedication of his last Quartet (in F, op. 135) to Johann Wolfmayer,[3] a Vienna merchant for whom he had much respect. On the following day he spoke of writing to Stumpff and Smart, but was compelled to relinquish the task to Schindler. *Plaudite amici, comoedia finita est*, said he to his two faithful friends, with a touch of his old good humour—the play was over, the lifelong symphony ended, and it was time to draw the curtain. On the 23rd, with the help of Breuning, he added with his own hand a codicil to his will, appointing his nephew Carl his sole heir, but without power over the capital of the property bequeathed. Thus two of his latest acts were inspired by his nephew. Several people appear to have come in and out during the last few days to look once more at the departing composer. Amongst these Schubert is said to have remained a long time, and to have been recognised by Beethoven, though he failed to understand the signs made by the dying man. He left the room at length deeply moved. On the 24th Beethoven received the Sacraments of the Roman Church, and at about one in the afternoon of the same day he sank into apparent unconsciousness, and a distressing conflict with death began which lasted the rest of that day, the whole of the next, and until a quarter to six on the evening of the 26th, the constant convulsive struggle and the hard rattle in the throat testifying at once too painfully to the strength of his constitution and the fact that he was still alive. Stephen Breuning and Schindler had gone to the Währinger Cemetery to choose the spot for the grave; the little Breuning was away at his lessons; Johann Beethoven's wife and Anselm Hüttenbrenner (the friend of Schubert) alone[4] were in the sick room. As the evening closed in, at a quarter to six, there came a sudden storm of hail and snow, covering the ground and roofs of the Schwarz-spanierplatz, and followed by a flash of lightning, and an instant clap of thunder. So great was the crash as to rouse even the dying man. He opened his eyes, clenched his fist, and shook it in the air above him. This lasted a few seconds while the hail rushed down outside, and then the hand fell, and the great composer was no more.

He was 56 years old on the 16th of the previous December.

The seven bank shares (for 1000 florins each) were discovered the next day after long search in a secret drawer in the writing desk, together with the two passionate and mysterious letters so often supposed—though to all appearance inaccurately—to be addressed to the Countess Giulietta Guicciardi.

The post mortem examination was made on the evening of the 27th by Dr. Wagner in the presence of Wawruch. During the 28th the

body lay in one of the rooms, and a sketch[1] of the face was made by Danhauser.

The funeral took place on the 29th at 3 p.m., and was attended by an immense mass of people, including all the musicians of the city. From the house to the Church of the Minorites, in the Alsergasse on the glacis, a procession was formed, in which Breuning, Johann van Beethoven, and Mosel, were chief mourners; the coffin was borne by eight members of the Opera, with Eybler, Hummel, Seyfried, Kreutzer, Weigl, Gyrowetz, Gänsbacher, and Würfel, and thirty-two torch bearers—amongst them Czerny and Schubert—round it. A choir of 16 men singers and 4 trombones alternately sang and played two *Equali* of Beethoven's, originally written for trombones for All Souls Day during his stay in Linz, and arranged to the words of the 'Miserere' and 'Amplius' by Seyfried. The crowd was [2]enormous, soldiers had to be called in to force the way, and it took an hour and a half to pass the short distance from the house to the church. From the church the body was taken in a hearse drawn by four horses, and without music, to the Währinger cemetery, followed by a long string of carriages and many people.

At the gate of the cemetery an address by Grillparzer was recited by Anschütz—who being an actor was not permitted to speak on consecrated ground—and two poems by Castelli and Schlechta were read and distributed. Before the earth was filled in three laurel wreaths were placed on the coffin by Hummel. The grave is against the south wall of the cemetery, near the middle. Schubert is three places off, and Clement and Seyfried lie nearly opposite.

On April 3, the furniture and clothes, with the pianos by Graf and Broadwood, were sold by auction[3] at the lodgings. The same day a solemn mass was performed in the Hofpfarrkirche of the Augustines; Mozart's Requiem was sung, Lablache not only taking the bass part but paying Barbaja a sum of 200 gulden for the cost of the singers. Two days later Cherubini's Requiem was sung at the Karlskirche.

In November[4] the sale of his musical effects took place by auction. Thayer has reprinted the catalogue in his *Verzeichniss*, p. 173. There were 50 lots of sketch and note-books; 19 autographs of unpublished and 73 autographs of published pieces; 5 MS. copies of published pieces; 40 copies of unpublished works; 10 sets of MS. parts; 17 MS. copies of music by various authors—including Cherubini's 'Faniska' and Mozart's 'Zauberflöte'; 26 lots of printed music; 6 of works on music; 1 autograph symphony of Haydn's; a pianoforte; a medal; and two violins. The produce of the sale was 1193 florins, curiously little[5] when compared with the prices which such treasures would fetch now. This sum, added to the value of the bank shares and the Philharmonic £100, made in all, according to Schindler,[5] a total of 10,232 florins (in silver), or a little over £1000.

In course of time the grave fell into neglect, and in 1863 the Gesellschaft der Musik-freunde undertook to exhume and re-bury[6] the remains of both Beethoven and Schubert. This was done on Oct. 13, and Beethoven's monument now consists of a large flat stone covering the grave, surrounded by an iron railing, and headed by an obelisk in stone bearing a lyre, the usual emblems of eternity, and the simple name BEETHOVEN.

Beethoven's music has been divided by Herr von Lenz[7] into three styles, and the division has evidently some justice in it, or it would not have been so widely accepted as it is even by those who differ about its details. That the division is not chronological is evident from the fact that M. Lenz includes the 2nd Symphony (op. 36), written in 1802, in the first period, while he places the Sonatas op. 26 and 27, which were completed a year earlier, and the 3 Sonatas op. 31, which were written in company with the 2nd Symphony, in the second period. As far as the Sonatas are concerned he ends the first period with op. 22.

But we may go further than that. The first movement of the Solo Sonata in E♭ (op. 7) and the Finale of the Quartet in F, op. 18, No. 1, contain examples of the episodes which form one of Beethoven's main characteristics, such as even the first movement of the Eroica can hardly surpass for independence and originality. The Scherzo of Symphony No. 1 and the Scherzo and Finale of Symphony No. 2 contain passages which would be found original and characteristic if met with in the compositions of many years later. Some will find it hard to place the Quartet in F minor, which Mendelssohn thought the most *Beethovenish* of all Beethoven's works, in anything but the third style; while the overture in C, op. 124, written in 1822, might be classed with the works of an earlier period. And yet on the whole the division is just, as an expression of the fact that Beethoven was always in progress; and that, to an extent greater than any other musician, his style matured and altered as he grew in life. He began, as it was natural and inevitable he should, with the best style of his day—the style of Mozart and Haydn; with melodies and passages that might be almost mistaken for theirs, with compositions apparently moulded in intention[8] on them. And yet even during this Mozartian epoch we meet with works or single movements which are not Mozart, which Mozart perhaps could not have written, and which very fully reveal the future Beethoven. Such are the first two movements of the Sonata in A (op. 2), the Sonatas in E♭ (op. 7) and D (op. 10, No. 3) and B♭ (op. 22), the Scherzos of the 1st and 2nd

Symphonies already mentioned, and the Coda of the Finale to the 2nd Symphony. From this youthful period he passes by the 3 Sonatas op. 31—which we have seen him speaking of as a change in his style—by the Kreutzer Sonata (March, 1803), by the Pianoforte Concerto in C minor,[1] and by the Eroica (1804), to his mature period, a time of extraordinary greatness, full of individuality, character, and humour, but still more full of power and mastery and pregnant strong sense.

This splendid and truly astonishing period contains the opera of Leonora-Fidelio, with its 4 overtures; the Mass in C; six Symphonies, from the Eroica to the No. 8 inclusive; the overture to Coriolan; the Egmont music; the Pianoforte Concertos in G and E flat; the Violin Concerto; the Rassoumoffsky Quartets, and those in Eb and F minor; the 3 later P. F. Trios; the Liederkreis; and last not least, a dozen Sonatas for Piano solo, of which the chiefs are the D minor and the 'Appassionata,' though the others are closely akin and hardly inferior.

From this period of extraordinary force and mastery—though abounding also in beauty and sentiment—he passes by a second transition to his third and final style. This transition is perhaps more obvious than the former. The difference between the 9th Symphony and its predecessors—not only in dimensions and in the use of the chorus, but in elevation and sentiment, and in the total impression produced—is unmistakable. The five Pianoforte Sonatas, op. 101 to 111, are perfectly distinct from any of the earlier ones, not only in individuality—for all Beethoven's works are distinct—but in a certain wistful yearning, a sort of sense of the invisible and vision of the infinite, mingled with their power. The last Quartets, op. 127 to op. 135, have the same characteristics as the Sonatas; but they are also longer, full of changes of time, less observant than before of the traditional forms of expression, less careful to make obvious the links of connection, and still more full of intense personality and of a wild unimprisoned spirit. All the sentiment and earnestness of Schumann, all the grace and individuality of Schubert, are there; with an intensity, breadth, and completeness, which those masters might perhaps have attained if they had bestowed the time and pains on their work which Beethoven did. In this period he passes from being the greatest musician to be a great teacher, and in a manner which no one ever did before and possibly no one will ever do again, conveys lessons which by their intense suggestiveness have almost the force of moral teaching. The cause of this is not far to seek. As we have seen in the preceding portion of this sketch the year 1814 was the culminating period of Beethoven's prosperity. He had produced his latest and then greatest works under such favourable circumstances as no musician had before enjoyed. He had been fêted and caressed by emperors and empresses, and others of the greatest of this world's great; he had for the first time in his life been able to put by money, and feel at all independent of daily labour. Immediately on this came an equally great and sudden reverse—and that not a material reverse so much as a blow to his spirit, and a series of misfortunes to mind and heart such as left all his former sufferings far behind. His brother's death; the charge of the nephew; the collision with the widow and with his other relatives and friends; the law-suits; the attempts to form a home of his own, and the domestic worries and wretchedness consequent thereon; the last stages of his deafness; the appearance of chronic bad health; the actual want of money—all these things, which lasted for many years, formed a Valley of the Shadow of Death, such as few men have been called to traverse, and which must inevitably have exercised a great influence on a nature so sensitive and in some respects so morbid. That this fiery trial did not injure his power of production is evident from the list of the great works which form the third period—from op. 101 inclusive. That it altered the tone and colour of his utterance is equally evident from the works themselves. 'He passes,' as Mr. Dannreuther has finely [2]said, 'beyond the horizon of a mere singer and poet, and touches upon the domain of the seer and the prophet; where, in unison with all genuine mystics and ethical teachers, he delivers a message of religious love and resignation, identification with the sufferings of all living creatures, deprecation of self, negation of personality, release from the world.'

Beyond the individual and peculiar character which distinguishes his works and makes them Beethovenish, as Haydn's are Haydnish and Mozart's Mozartish, though in a greater degree because of the stronger character of the man—there are definite peculiarities in Beethoven's way of working which should be specified as far as possible. That he was no wild radical, altering for the mere pleasure of alteration, or in the mere search for originality, is evident from the length of time during which he abstained from publishing or even composing works of pretension, and from the likeness which his early works possess to those of his predecessors. He began naturally with the forms which were in use in his days, and his alteration of them grew very gradually with the necessities of his expression. The form of the sonata is 'the transparent veil through which Beethoven seems to have looked at all [3]music.' And the good points of that form he retained to the last—the 'triune[4] symmetry of exposition, illustration, and repetition,' which that admirable method allowed and enforced—but he permitted himself a much greater liberty than his predecessors had done in the relationship of the keys of the different movements and parts of movements, and in the proportion of the clauses and sections with which he built them up. In other words, he

[1] In the Finale of this work we almost surprise the change of style in the act of being made.

[2] *Macmillan's Magazine*, July, 1870. [3] Ibid. [4] Ibid.

was less bound by the forms and musical rules, and more swayed by the thought which he had to express, and the directions which that thought took in his mind.

1. The range of keys within which the composers of sonatas and symphonies before Beethoven confined themselves was very narrow. Taking the first movement as an example of the practice, the first theme was of course given out in the tonic, and this, if major, was almost invariably answered in due course by a second theme in the 'dominant' or fifth above; for instance, if the sonata was in C the second subject would be in G, if in D it would be in A. If the movement were in minor, the answer was in the relative major—C minor would be answered by E♭, A minor by C♮, and so on. This is the case 19 times out of 20 in the sonatas and symphonies of Haydn and Mozart. A similar restriction governed the key of the second movement. It was usually in the 'subdominant' or fifth below—in F if the key of the piece were C, in B♭ if the key were F, and so on. If the piece were in a minor key the second movement was in the third below. A little more latitude was allowed here than in the former case; the subdominant now and then became the dominant, or, very rarely, the 'mediant' or third above; and the relative major was occasionally exchanged for the tonic major.

Beethoven, as already remarked, adopted very different relations in respect of the change of key from one movement to another. Out of 81 works in sonata form he makes the transition to the dominant only 3 times; to the subdominant 19 times; to the mediant or 3rd above 4 times; and to the submediant or 3rd below 30 times. From tonic major to tonic minor he changes 12, and from minor to major 8 times. His favourite change was evidently to the submediant or third below—that is to say, to a key less closely related to the tonic and more remote than the usual key. He makes it in his first work (Op. 1, No. 2). In his B♭ trio (op. 97) he has it twice, and in his Variations on an original theme (op. 34), each of the first 5 variations is a third below the preceding.

In the relation of his first and second subjects he is more orthodox. Out of 26 of the Pianoforte Sonatas the usual change to the dominant occurs 17 times, to the mediant 3, and to the submediant 3.

2. Another of his innovations had respect to the connection of the different subjects or clauses. His predecessors were in the habit rather of separating their clauses than of connecting them; and this they did by conventional passages of entirely different character from the melodious themes themselves, stuffed in between the themes like so much hay or paper for mere packing. Any symphony of Mozart or Haydn will give examples of this, which Wagner [1] compares to the 'rattling of the dishes at a royal feast.' Mozart also has a way of drawing up and presenting arms before the appearance of the second subject, which tends to cut the movement up into very definite portions. Of these tiresome and provoking intermediate periods Beethoven got rid by the use of phrases which are either parts of the main theme or closely related to it; and he thus gives his movements a unity and consistency as if it were an organic growth, and not a piece of work cunningly put together by art or man's device. How he effects this, and the very tentative and gradual way in which he does it, may be seen in Symphonies 1 and 2 and the Eroica, in which last all trace of the old plan has almost entirely disappeared.

3. The first movement of the Eroica supplies instances of other innovations on the established forms. Not only in the 'exposition' (before the double bar) are other themes brought in besides the two main subjects, but in the 'illustration,' or, to use the more common term, the 'working out,' there is an unanticipated explosion which, to say the least, is entirely without precedent, followed by an entirely fresh episode as important as anything that has occurred before, and that again by a new feature (the staccato bass) which, while it accompanies and reinforces the main subject, adds materially to the interest of the music. Again, in the 'repetition' we have not only a great departure from regular rule in the keys which the music goes through, but we have a coda of no less than 140 bars long, proclaiming itself by its opening as an independent member of the movement, and though made almost entirely out of previous material, yet quite differently expressed from anything before, and full of fresh meaning. Now none of these alterations and additions to the usual forms were made by Beethoven for their own sake. They were made because he had something to say on his subject which the rules did not give him time and space to say, and which he could not leave unsaid. His work is a poem in which the thoughts and emotions are the first things, and the forms of expression second and subordinate. Still, even in his innovations, how careful he is to keep as near the rules as possible! His chief episodes occur in the working out, where a certain licence was always lawful; and codas were recognised, and had even, as in Mozart's 'Jupiter,' been turned to noble account. The same characteristics are found in the ninth Symphony as in the third, only the mood of mind being entirely different, the mode of expression is different too, but the principle of the perfect subordination of the expression to the thought, while adhering as closely to the 'form' as was consistent with perfect expression, is the same. One or two pieces of his second period may however be named, in which both thought and mode of expression are so entirely different from anything before them, that they stand quite by themselves. Such movements as the opening Adagio of the Sonata in C♯ minor, or the Con moto of the Pianoforte Concerto in G—in which Schumann used to see a picture of Orpheus taming brute-nature—have no prototypes; they are pure

[1] *Music of the Future*, translated by Dannreuther, 1873; p. 44.

creations, founded on nothing previous, but absolutely new in style, idea, and form.

In the later quartets it must be admitted that he wandered further away from the old paths; the thought there seems everything and the form almost nothing. And this fact, as much as the obscurity and individuality of the thoughts themselves and their apparent want of connexion until they have become familiar, is perhaps the cause that these noble works are so difficult to understand. The forms, depend upon it, were founded in reason and nature. They grew through long periods to be what Haydn fixed them at; and as long as the thoughts of composers did not burst their limits they were perfect. Beethoven came, and he first enlarged and modified them, adhering however to their fundamental principle of recurrence and recapitulation, till in the end, withdrawn more and more into himself by his deafness, he wrote down what he felt, often without thinking of the exigences of those who were to hear him. This however only applies to the later Quartets. The ninth Symphony and the last Pianoforte Sonatas are as strictly in form, and as coherent and intelligible, as could be desired.

4. A striking instance of this loyalty is found in Beethoven's treatment of the 'Introduction.' This—a movement in slow time, preceding the first *Allegro*—forms part of the original design of the overture by Lully, and is found in nine out of ten of Handel's overtures. Haydn often has one in his symphonies, usually 8 to 12 bars long, occasionally as much as 20. Mozart has prefixed similar prefaces to some of his works, such as the Symphony in E flat, the Quintet for Piano and Wind instruments, and the famous Quartet in C, dedicated to Haydn. Beethoven, besides placing one before his Quintet for Piano and Wind (op. 16), which, as already remarked, is like a challenge to Mozart, has one to the Sonata Pathétique and to the first Symphony. In the last of these cases it is 12 bars long. In the 2nd Symphony it expands to 33 bars long, and increases largely in development. But even this is a mere preface when compared with the noble and impressive movements which usher in the *Allegros* of the 4th and 7th Symphonies—long and independent movements, the latter no less than 80 bars in length, full of important and independent ideas, and of the grandest effect.

In all the instances mentioned—the Succession of Keys, the Episodes, the Coda, the Introduction—Beethoven's modifications seem to have sprung from the fact of his regarding his music less as a piece of technical performance than his predecessors had perhaps done, and more as the expression of the ideas with which his mind was charged. The ideas were too wide and too various to be contained in the usual limits, and therefore the limits had to be enlarged. He regards first what he has to say—his thought—and how he shall convey and enforce and reiterate that thought, so as to express it to his hearer exactly as he thinks it, without being careful to find an old formula in which to couch it. Even consecutive fifths were no hindrance to him—they gave the exact sound in which he wished to convey his idea of the moment; and therefore he used them as naturally, as a speaker might employ at a particular juncture, with the best effect, an expression usually quite inadmissible. No doubt other musicians had used similar liberties; but not to the same extent, because no one before had been gifted with so independent and original a nature. But in Beethoven the fact was connected with the peculiar position he had taken in society, and with the new ideas which the general movement of freedom at the end of the eighteenth century, and the French Revolution in particular, had forced even into such strongholds as the Austrian courts. People who were the servants of archbishops and princes, and moved about with the rest of the establishment in the train of their master, who wore powder and pigtail and red-heeled shoes, and were forced to wait in ante-rooms and regulate their conduct strictly by etiquette, and habitually keep down their passions under decorous rules and forms, could not give their thoughts and emotions the free and natural vent which they would have had without the perpetual curb of such restraints and the habits they must have engendered. But Beethoven, like Mirabeau, had 'swallowed the formulas' of the day; he had thrown over etiquette, and, *roturier* as he was, lived on absolute equality with the best aristocracy of Vienna. What he felt he said, both in society and in his music, and the result is before us. The great difference is, as we have already remarked, that whereas in his ordinary intercourse he was extremely abrupt and careless of effect, in his music he was exactly the reverse; painstaking, laborious, and never satisfied till he had conveyed his ideas in unmistakeable language.

5. The Scherzo stands perhaps in a different category from the three features already mentioned. It is less of a modification and more of a distinct new creation. The word is met with in Haydn and Mozart, but in a different sense to that in which Beethoven uses it, and apparently neither of those masters have it in a symphony. To both of them the third movement of a symphony was a minuet. All that a minuet could be made they made of it, but it was never given them to go beyond. The minuet remained a dance tune to the end of its days, and is so even in Beethoven's No. 8 Symphony. In fact Haydn actually lamented that he could not make more of it than he had. When discussing a rule of Albrechtsberger's by which fourths were prohibited in strict composition, he [1]said, 'Such trifling is absurd; I wish, instead, that some one would try to compose a really new minuet.' This Beethoven did. The third movement of his first Symphony is what Haydn wished to [2]see. Though labelled 'menuetto' it is quite unlike a

[1] Griesinger, p. 114.

[2] One would like to know if Haydn ever heard the First or any other of Beethoven's Symphonies, and what his real feelings were about them. He lived on till 1809, and might thus have heard the Eroica and even the C minor.

minuet. It is in fact a scherzo, and in its little dimensions is the pattern and model of those gigantic movements which in the Eroica, the C minor, the No. 7, and especially the No. 9 of the Symphonies; in the B flat trio; in the Sonata, op. 106; and the first of the Rassoumoffsky Quartets, are so truly astonishing, and so characteristic of their great author.

6. An innovation of great importance in the Finale, for which no precedent can be found, was the introduction of the Chorus. In the Eroica Symphony Beethoven showed how a set of orchestral variations could be employed in a finale. In the Choral Fantasia again he showed with what effect a chorus could be employed in the same part of the work. But in the 9th Symphony he combined the two, by using the chorus in a succession of variations. Mendelssohn has followed his example in the 'Lobgesang,' the vocal portion of which is the last movement of a symphony; but he has not adopted the Variation-form.

7. One of the most striking characteristics of Beethoven's music is the individual variety of each piece and each movement. In the Symphonies every one of the 9 first movements is entirely distinct from the other 8, and the same of the andantes, scherzos, and finales. Each is based on a distinct idea, and each leaves a separate image and impression on the mind. And the same may be said of the majority of the smaller works, of the concertos and quartets and pianoforte trios—certainly of the sonatas, all but perhaps a very few. The themes and passages have no family likeness, and have not the air of having been taken out of a stock ready made, but are born for the occasion. He thus very rarely repeats himself. The theme of the slow movement of the Sonata in F minor and the second theme in the first movement of the Sonata in C (op. 2, Nos. 1 and 3) are adapted from his early pianoforte quartets. The minuet in the Septet is developed from that in the little Sonata in G (op. 49, No. 2). The Turkish March in the 'Ruins of Athens' had already appeared as a theme for Variations in D (op. 76). The theme of the Variations in the Choral Fantasia is a song of his own, 'Seufzer eines Ungeliebten' (No. 253), composed many years before. The melodies of two Contretänze (No. 17*a*) are employed in the Prometheus music, and one of them is also used in a set of Variations (op. 35) and in the Finale to the Eroica. In the Finale to the Choral Fantasia there are some slight anticipations of the Finale to the Choral Symphony; the Prometheus music contains an anticipation of the storm in the Pastoral Symphony, and the subject of the Allegretto to the 8th Symphony is found in a humorous Canon (No. 256–2)—such are all the repetitions that have been detected. How far he employed *Volkslieder* and other tunes not invented by himself is not yet known. Certain melodies in the Eroica, Pastoral, and No. 7 Symphonies, are said to have been thus adopted, but at present it is mere assertion.

This is perhaps the most convenient place for noticing a prominent fact about his own melodies, viz. that they often consist wholly or mainly of consecutive notes. This is the case with some of the very finest themes he has written, witness the Scherzo and Finale to the Choral Symphony; and that to the Choral Fantasia; the slow movements of the B♭ Trio and the Symphony in the same key; the Adagio to the Quartet op. 127, and many others.

8. In the former part of this sketch we have mentioned the extraordinary manner in which Beethoven wrote and rewrote until he had arrived at the exact and most apt expression of his thought. The same extraordinary care not to be mistaken is found in the *nuances*, or marks of expression, with which his works are crowded, and which he was the first to introduce in such abundance. For instance, to compare the 'Jupiter' Symphony—Mozart's last—with Beethoven's first, we shall find that the violin part of the first half of the opening *Allegro* has in the former (120 bars long) 14 marks of expression, in the latter (95 bars) 42 marks. The Andante to Mozart's Symphony in G minor has 38 marks to 131 bars, while that to Beethoven's No. 2 has 155 marks to 276 bars. In the later works this attention to *nuance* increases. The Allegro agitato of the Quartet in F minor, 125 bars long, contains 95 marks; the Cavatina in the Quartet in B♭, 66 bars long, contains 58 marks. It is part of the system of unwearied care and attention by which this great man, whose genius was only equalled by his assiduity, brought his works to their actual perfection, and to the certainty that they would produce what he himself calls *il suo proprio proposto effetto*[1]—their own special and intended effect. How original and splendid the effect of such *nuances* can be may be seen in the *Vivace* of the No. 7 Symphony, where the sudden change from *ff* to *pp*, accompanying an equally sudden plunge in the melody and abrupt change in the harmony, produces a wild romantic effect which once to hear is never to forget.

In addition, Beethoven here and there gives indications such as the 'Bitte um innern und äussern Frieden' at the 'Dona' in the Mass in D, the 'beklemmt' in the Cavatina of the B♭ Quartet, the 'Arioso dolente' of Sonata op. 110, which throw a very personal colour over the piece. The word 'Cantabile' has a special meaning when he employs it.

9. Beethoven used Variations to a very great extent. For the Pianoforte, Solo and in conjunction with other solo instruments, he has left 29 sets, some on original themes, some on airs by other composers. But besides these several movements in his Sonatas, Quartets, and Trios are variations, so entitled by him. Every one will remember those in the Septet, in the 'Harp' Quartet, in the Kreutzer Sonata, in the Solo Sonata in A flat, and in the two late Sonatas in E and C minor (op. 109 and 111). Many

[1] Preface to the Eroica.

other movements in the same branches of composition are variations, although not so named. The slow movements in the Sonata 'appassionata' and the op. 106 are splendid instances. In the Symphonies the slow movements of the C minor, the Pastoral and the Ninth, are magnificent examples, the last the most splendid of all —while the colossal Finales of the Eroica and the Ninth Symphony are also variations, though of a very different order from the rest and from each other. Of the lowest and most obvious type of variation, in which the tune remains in *statu quo* all through the piece, with mere changes of accompaniment above, below, and around it—the Herz-Thalberg type—the nearest approach to be found in Beethoven's works, is the 5th variation in op. 26. His favourite plan is to preserve the harmonic basis of the theme and to modify and embellish the melody. Of this type he makes use with astonishing ease and truly inexhaustible originality. It is to be found in some shape or other in nearly every work of his second and third periods. It is not his own invention, for fine instances of it exist in Mozart and Haydn, but no one practised it with such beauty and nobility as he did, unless it be Schubert, who at any rate approaches very near him in its use. Perhaps the finest instance of it is in the Adagio of the Ninth Symphony, in which the melody is varied first in common time and then in 12–8, with a grace, beauty, and strength which are quite unparalleled. There is, however, a [1]third kind of variation which is all Beethoven's own, in which everything undergoes a change—rhythm, melody, and harmony—and yet the individual theme remains clearly present. 'Perhaps one melodious step only of the subject is taken (op. 109; var. 1 and 5); perhaps the fundamental progressions of the harmony alone are retained; perhaps some thorough rhythmical alteration is made, with an entire change of key, as in the *Poco Andante*, Finale of Eroica; in the B♭ variation *alla marcia*, of the Ninth Symphony; and in many of the 33 Variations. This is no mere change of dress and decoration, but an actual creation of something new out of the old germ—we see the chrysalis change into the butterfly, and we know it to be the same creature despite the change.' 'In no other form than that of the Variation,' continues Mr. Dannreuther, 'does Beethoven's creative power appear more wonderful, and its effect on the art more difficult to measure.'

10. Of Fugues Beethoven wrote but few, and those near the end of his career, but he always knew how to introduce a *fugato* or bit of contrapuntal work with the happiest effect. Witness a passage in the working out of the first movement of the Eroica Symphony, and another in the Finale of the same work; or in the middle portion of the Allegretto of No. 7; or the lovely counterpoint for the Bassoon in the opening of the Finale of No. 9. Of complete fugues the only instrumental ones are the finale to the 3rd of the Rassoumoffsky Quartets; the finales to the Cello Sonata op. 102, No. 2, and the Solo Sonatas op. 101, 106, and 110; and the enormous movement in B flat which originally formed the termination to the great String Quartet in the same key. Of the last-named fugue one has no opportunity of judging, as it is never played; but of the others, especially those in the Solo Sonatas, it may be safely said that nothing in the whole of Beethoven's music is associated with a more distinct dramatic intention, whether it be, as has been [2]suggested, a resolution to throw off an affection which was enthralling him, or some other great mental effort.

11. Beethoven did not originate 'programme music,' for Bach left a sonata describing the departure of his brother; and two symphonies are in existence by Knecht—a countryman of Beethoven's, and a few years his senior—entitled 'Tableau musical de la nature,' and 'La joie des Bergers interrompue par l'orage,' which are not only founded on the same idea with his Pastoral Symphony, but are [3]said to contain somewhat similar themes and passages. But, though he did not invent it, he raised it at once to a higher level than before, and his programme pieces have exercised a great effect on the art. 'When Beethoven had once opened the road,' said Mendelssohn, 'every one was bound to follow'; and it is probable that without his example we should not have had Mendelssohn's overtures to 'The Hebrides' or to the 'Meeresstille und glückliche Fahrt.' His works in this line, omitting all which did not receive their titles from himself, are:—the 'Sonata pathétique'; 'La Malinconia,' an adagio in the String-quartet, No. 6; the 'Eroica' Symphony; the 'Pastoral' ditto; the Battle of Vittoria; the Sonata 'Les Adieux, l'Absence et le Retour'; the movements in the A minor quartet (op. 132) entitled 'Canzona di ringraziamento in modo lidico offerta alla divinita da un guarito,' and 'Sentendo nuova forza'; the movement in the F major quartet (op. 135), entitled 'Der schwergefasste Entschluss—Muss es sein? Es muss sein'; and a Rondo à capriccio for Piano (op. 129), the MS. of which is entitled by the composer 'Die Wuth über den verlornen Groschen ausgetobt in einer Caprice.' Beyond these Beethoven made no acknowledged attempts to depict definite scenes or moods of mind in instrumental music. We have already (p. 179*a*) quoted Schindler's statement that Beethoven intended the Sonatas in op. 14 to be a dialogue between two lovers, and to represent the 'entreating and resisting principle'; and the Sonata in E minor (op. 90) is said to have had direct reference to the difficulties attending Moritz Lichnowsky's passion for the actress whom he ultimately married. The first movement was to have been called 'Kampf zwischen Kopf und Herz,' and the second, 'Conversation mit der Geliebten.' But none of these titles were directly sanctioned by Beethoven himself. In the programme of

[3] Fétis, *Biographie*, s. v. Knecht.

the concert of Dec. 22, 1808, at which the Pastoral Symphony was produced, he prefixed the following words to the description of the Symphony :—'Pastoral Symphonie : mehr Ausdruck der Empfindung als Malerei'—'more expression of emotions than portraiture,' a canon which should surely be taken as the guide in interpreting all similar works of his.

We have now endeavoured to give the main external characteristics of Beethoven's music; but the music itself, though it resides in them, is beyond and above them all. 'While listening,' says Mr. Dannreuther, 'to such works as the Overture to Leonora, the Sinfonia Eroica, or the Ninth Symphony, we feel that we are in the presence of something far wider and higher than the mere development of musical themes. The execution in detail of each movement and each succeeding work is modified more and more with the prevailing poetic sentiment. A religious passion and elevation are present in the utterances. The mental and moral horizon of the music grows upon us with each renewed hearing. The different movements—like the different particles of each movement—have as close a connection with one another as the acts of a tragedy, and a characteristic significance to be understood only in relation to the whole; each work is in the full sense of the word a revelation. Beethoven speaks a language no one has spoken before, and treats of things no one has dreamt of before : yet it seems as though he were speaking of matters long familiar, in one's mother tongue ; as though he touched upon emotions one had lived through in some former existence. . . . The warmth and depth of his ethical sentiment is now felt all the world over, and it will ere long be universally recognised that he has leavened and widened the sphere of men's emotions in a manner akin to that in which the conceptions of great philosophers and poets have widened the sphere of men's intellectual activity.'[1]

Beethoven's published works may be summed up as follows :—

I. INSTRUMENTAL.

9 Symphonies—in C, D, E♭ (Eroica), B♭, C minor, F (Pastoral), A, F, and D minor (Choral).

The Battle of Vittoria; overture and music to Prometheus; overture and music to Egmont.

9 Overtures—Coriolan; Leonora No. 1; Do. No. 2; Do. No. 3; Fidelio; King Stephen; Ruins of Athens; op. 115 (Namensfeier): op. 124 (Weihe des Hauses).

Allegretto in E♭; March from Tarpeia—in C; Military March—in D; 12 Minuets; 12 'deutsche Tänze'; 12 Contretänze; Ritter Ballet.

1 Concerto for Violin and Orchestra in D; 1 fragment of do. in C; and 2 Romances for do.

5 Concertos for Piano and Orchestra—in C, B♭, C minor; G, and E♭; 1 do. arranged from Violin Concerto; Rondo for do. in B♭; 1 Triple Concerto (op. 56); 1 Choral Fantasia for Piano, Orchestra, and Chorus.

Cadences to Pianoforte Concertos.

---

2 Octets for Wind—both in E♭.

1 Septet for Strings and Wind.

1 Sestet for ditto—in E♭.

1 ditto for Wind—in E♭.

2 Quintets for Strings—in E♭ and C; 1 ditto, fugue (op. 137); 1 ditto arranged from P. F. Trio in C minor.

16 Quartets for Strings—in F, G, D, C minor, A, B♭; in F, E minor, C (Rassoumofsky); in E♭ (Harlem Q.); in F minor; in E♭; in B♭; in C♯ minor; in A minor; in F: also Fugue in B♭.

2 Equali for 4 Trombones.

5 Trios for Strings—in E♭; in G, D, C minor; in D (Serenade).

1 ditto Strings and Flute—in D (Serenade).

1 ditto for Wind.

3 Duos for Wind—in C, F, B♭.

1 Quintet for Piano and Wind—in E♭.

1 Quartet for Piano and Strings—after foregoing. 3 ditto (juvenile)—in E♭, D, and C.

8 Trios for Piano and Strings—in E♭, G, C minor; in D, E♭; in B♭; in B♭ (one movement); in E♭ (juvenile); after Symphony in D; Variations in G; 14 ditto in E♭.

1 Trio for Piano, Clar., and Cello in B♭; 1 ditto (after Septet) in E♭.

10 Sonatas for Piano and Violin—in D, A, E♭; in A minor; in F; in A, C minor, G; in A (Kreutzer); in G. 1 Rondo in G; 12 Variations in F.

5 ditto for Piano and Cello—in F, G minor; in A; in C, D. 12 Variations in C; 12 do. in F: 7 do. in E♭.

1 ditto for Piano and Horn—in F.

7 books of Variations for Piano and Flute.

1 Sonata for Piano, 4 hands—in D. 3 Marches for ditto—in C, E♭, D; 8 Variations in C and 6 in D.

38 ditto for Piano Solo—in F minor, A, C; in E♭; in C minor, F, D; in C minor (Pathétique); in E, G; in B♭; in A♭; in E♭, C♯ minor; in D; in G, D minor, E♭; in G minor and G (both small); in C (Waldstein); in F; in F minor (Appassionata); in F♯; in G (Sonatina); in E♭ (Adieux, etc.); in E minor: in A; in B♭ (op. 106); in E; in A♭; in C minor. In E♭, F minor, and D (early); in C (easy); in G and F (easy).

Variations for ditto, 21 sets—viz. 6 in F; 15 in E♭ (Eroica); 6 in D (Turkish March); 32 in C minor; 33 in C; 15 in G (easy); and 15 more sets, containing 144 variations.

3 Sets of Bagatelles for ditto—7, 11, 6; 4 Rondos in C, G; in A; and in G (à capriccio); Fantasia in G minor; 3 Preludes; Polonaise; Andante in F (favori); Minuet in E♭; 6 do; 13 Ländlers.

II. VOCAL.

2 Masses—in C, and D (Solennis).

1 Oratorio—'Christus am Oelberge.'

1 Opera—'Fidelio.'

'The Ruins of Athens.' Arrangement of March and Chorus from do.

'King Stephen.'

2 Patriotic Finales.

'Der glorreiche Augenblick.'

'Meeresstille und glückliche Fahrt.'

'Ah perfido!' Soprano and Orchestra. Opferlied; do., do., and Chorus.

'Tremate'; Trio with Orchestra.

Bundeslied; 2 Solos, Chorus, and Wind.

'Elegischer Gesang'; 4 Voices and Strings.

Songs with Piano acct.—66 and 1 Duet.

'Gesang der Mönche'; 3 Voices unacc.

18 Canons.

7 Books of English, Scotch, Irish, Welsh, and Italian Songs for Voice, Piano, Violin, and Cello.

All the above are included in Breitkopf & Härtel's complete edition, except the Ritter-Ballet, the Fragment of a Violin Concerto in C, and the two Equali for Trombones.

The Beethoven literature is very large. I shall confine myself to mentioning those portions of it which appear to have real value for the investigator.

I. His own letters. Of these there are several collections. (1) 'Briefe Beethovens' (Stuttgart, 1865), edited by Dr. Nohl: contains 411. (2) '83 . . . Original Briefe L. v. B's an den Erzherzog Rudolph,' edited by Köchel (Vienna, 1865). (3) 'Briefe von B. an Gräfin Erdödy und Max Brauchle,' edited by Schöne (Leipzig, 1867). The two last were included with many others in a further collection of 322 'Neue Briefe Beethovens,' edited by Nohl (Stuttgart, 1867). (4) Nohl's first collection and 66 of the letters to the Archduke were translated (I wish I could say carefully translated) by Lady Wallace, and published by Longmans (2 vols. 8vo. 1866).

Other letters are given by Thayer in his 'Beethovens Leben,' and by Pohl in 'Die Gesellschaft der Musik Freunde' (Vienna, 1871), and many others exist in MS. in collections of autographs.

II. Notices of him by friends and contemporaries. Many of these must be taken with reserve, as written long after the event, and with strong bias.

(1) By Seyfried, as Anhang to his edition of Beethoven's 'Studien' in Thorough-bass (Vienna,

[1] I have been much indebted in this part of my work to an admirable paper by Mr. Dannreuther in *Macmillan's Magazine* for July, 1876. I have quoted from it more than once, and if I have not done so still more it is because the style of his remarks is not suited to the bald rigidity of a Dictionary article.

March 26, 1832)—144 pages, containing biographical sketch, anecdotes and traits, letters (included in Nohl), three conversations, the sale catalogue, the music sung at the funeral, poems and addresses, a catalogue of Beethoven's works, etc.

(2) Wegeler and Ries, 'Biographische Notizen,' etc. (Coblenz, 1838), with 'Nachtrag' by Wegeler alone (Coblenz, 1845). Contains biography, letters, and a host of anecdotes.

(3) Schindler, 'Biographie' (Münster, 1840). This is the first edition of Schindler's work, which was translated into English by Moscheles, and published with many additions and modifications, and with no mention of Schindler on the title page, in 2 vols. 8vo. (Colburn, 1841). It was followed by 'Beethoven in Paris' (Münster, 1842), an account of the performance of some of the symphonies by the 'Societé des Concerts,' with various documents of interest; by a second edition of the Biography (Münster, 1845); and finally by a third edition in two volumes (Münster, 1860). This last has been very inaccurately translated into French by Sowinski (Paris, Garnier, 1865).

(4) Gerhard von Breuning, 'Aus dem Schwarzspanierhaus' (Vienna, 1874)—the recollections of Stephen von Breuning's son, who was 11 years old when Beethoven died, and was much with him during the last years of his life.

III. Smaller and more fragmentary notices are given of him—in 1798 or 99 by Czerny, in Pohl's 'Jahresbericht des Konservatorium . . . . . in Wien' (Vienna, 1870); and in later years by the same in Cocks's 'Musical Miscellany' (London, July and Aug. 1852, Jan. 1853); in 1809 by Reichardt in 'Vertraute Briefe' (Amsterdam, 1810); in 1814 by Spohr in his 'Selbstbiographie' (Cassel, 1860), and by Tomaschek in 'Libussa' for 1846; in 1822 by Rochlitz in the A. M. Z., 1828, p. 10, printed in 'Für Freunde der Tonkunst,' vol. iv. p. 348 (Leipzig, 1832); in 1824 [by Mr. Edward Schulz] in the 'Harmonicon,' Jan. 1824; and [by Mrs. Payne. Dr. Burney's niece,] in the 'Harmonicon,' Dec. 1825; in 1825 by Rellstab in 'Aus meinem Leben,' ii. 224.

Of later biographies must be mentioned that of M. Fétis in his 'Biographie universelle des Musiciens'; of Wilhelm von Lenz, 'Beethoven, eine Kunst-Studie,' a Life, with an extended critical and historical catalogue of the works; and of Herr Ludwig Nohl, 'Beethovens Leben,' of which the 3rd and last volume was published in Sept. 1876. Nohl is said to be inaccurate, and he is certainly diffuse, but I for one owe him a debt of gratitude for his various publications, the information in which can be found nowhere else. The notes to the biography contain a mass of materials of the greatest interest. Last and best is the 'Ludwig van Beethovens Leben' of A. W. Thayer (Berlin, 1866, 72), of which the 3rd vol. is on the eve of publication, and which, through the caution, wide research, and unflagging industry of its author has already taken a place far higher than any of its predecessors. Amongst other sources of information Mr. Thayer has inherited the memoranda collected by the late Otto Jahn, who had himself made some progress in a biography of Beethoven. The corrections which this able investigator has made in many most material points, and the light thrown by him on passages hitherto more than obscure, can only be appreciated by those who read his work.

IV. Of more miscellaneous works the following must be named:—W. von Lenz, 'Beethoven et ses trois Styles' (Petersburg, 1852; also Paris, Lavinée, 1855)—a book which, if full of rhapsody, is also full of knowledge, insight, and enthusiasm; Oulibicheff, 'Beethoven, ses critiques et ses glossateurs,' in direct antagonism to the foregoing (Paris, 1857); Berlioz, 'Etude analytique des Symphonies de Beethoven' in his 'Voyage musical,' vol. i. (Paris, 1844); Otto Jahn, three papers in his 'Gesammelte Aufsätze' (Leipzig, 1866), viz. 'Leonore oder Fidelio,' 'B. im Malkasten,' and 'B. und die Ausgaben seiner Werke'; R. Wagner, 'Beethoven' (Leipzig, 1870); Marx, 'B.'s Leben und Schaffen, 3rd edition (Berlin, 1875); Actenmässige Darstellung der Ausgrabung und Wiederbeisetzung der irdischen Reste von Beethoven und Schubert (Vienna, 1863); Nohl, 'Beethovens Brevier' (Leipzig, 1870), a collection of passages in his favourite authors extracted or marked by Beethoven; 'Die Beethoven Feier' (Vienna, 1871), containing amongst other things Beethoven's diary from 1812 to 1818. The analytical programmes of Beethoven's sonatas by Mr. J. W. Davison, prepared to accompany Mr. Charles Hallé's performance in 1861, are full of interest.

V. We now arrive at another class of works of more importance than any yet mentioned, except perhaps the letters, and absolutely indispensable to those who wish to investigate Beethoven's music chronologically, viz. the catalogues, and reprints of the sketch-books.

Catalogues of Beethoven's works were attempted by Artaria, Hofmeister, and Cranz, but the first one worthy of the subject was issued by Breitkopf & Härtel in 1851—'Thematisches Verzeichniss,' etc., large 8vo., 167 pp. The second edition of this, edited and enriched with copious notes, remarks, appendices, indexes, etc. by Mr. G. Nottebohm (Leipzig, 1868, pp. 1–220), leaves little to be desired. It is arranged in the order of the opus numbers of the pieces—where they are numbered—that is to say, in the order of publication. A catalogue from a different point of view—in the order of the production of the works, and embracing those unpublished as well as published, was issued by Mr. Thayer, as a precursor, or *mémoire pour servir*, to his 'Biography,' viz. 'Chronologisches Verzeichniss,' etc. (Berlin, 1865). It is difficult to overestimate the value of this unpretending list, which contains a vast amount of information not only before inaccessible, but unknown to students. It was followed by a work of equal interest—'Ein Skizzenbuch von B.,' etc., the reprint of one of Beethoven's sketch-books, with such commentary as is necessary fully to elucidate it.

This was edited by Mr. Nottebohm, and was succeeded in 1869 by the commencement of a series of articles in the 'Allgemeine musik. Zeitung' on various points in Beethoven's works, examined and elucidated chiefly through his sketch-books, and printed with copious quotations, the whole throwing a most interesting light on his method of working. These papers were collected and republished as 'Beethoveniana' (Leipzig, 1872). A further series, entitled 'Neue Beethoveniana,' by the same indefatigable explorer is now (1878) being published in the 'Musikalisches Wochenblatt.' The amount of new and important information on Beethoven's music furnished by these two series no one can tell who has not studied them. They are indispensable for all students of the subject. Mr. Nottebohm has published a new edition of 'Beethoven's Studien,' in which many mistakes in Seyfried's edition are corrected and much additional information given, such as no one who has not the peculiar knowledge possessed by Mr. Nottebohm would be competent to impart. [G.]

BEFFARA, Louis François, born at Nonancourt, Aug. 23, 1751; from 1792 to 1816 Commissaire de Police in Paris, where he died Feb. 2, 1838. Renowned for his collection of documents on the Paris operas, which were unfortunately consumed at the burning of the Hôtel de Ville during the Commune in 1871. For completeness and genuineness the collection could not be surpassed, and its loss is irreparable. [F. G.]

BEGGAR'S OPERA, The. A celebrated piece, written in 1727 by John Gay, who was said to have been instigated to its production by a feeling of annoyance at having been offered a court appointment which he regarded as beneath him. It is also said to have had its origin in an observation of Swift's to its author, that 'a Newgate pastoral might make an odd pretty sort of thing.' Under the thin veil of exposing the vices of highwaymen, pickpockets, gaolers, receivers of stolen goods, and their confederates and associates, it bristles with keen, well-pointed satire on the corrupt and venal politicians and courtiers of the day, and of the prevailing fashionable entertainment—the Italian opera. It has been denied that there is any reference to the latter, because the style of the music of Italian operas is not burlesqued, but the fact is apparent from the introductory dialogue between the Beggar (the assumed author of the piece) and the Player, in which the former is made to say, 'I have introduc'd the similes that are in all your celebrated operas; the Swallow, the Moth, the Bee, the Ship, the Flower, etc. Besides, I have a prison scene, which the ladies always reckon charmingly pathetick. As to the parts I have observed such a nice impartiality to our two ladies, that it is impossible for either of them to take offence.' The allusion in the last sentence to the deadly feud between Cuzzoni and Faustina, which in 1727 divided the fashionable world into two violently hostile factions, is so palpable as to cause surprise at its having been overlooked. 'The Beggar's Opera' was first offered to Colley Cibber for Drury Lane Theatre, but being rejected by him was accepted by John Rich, and brought out at Lincoln's Inn Fields Theatre, Jan. 29, 1727–28. Its success was decisive: it was performed sixty-two nights (not consecutive) during the season, and immediately afterwards played all over England, in Ireland, Scotland, and even in Minorca. By the time it had reached its thirty-sixth representation Rich had netted nearly £4000, whilst Gay's four 'author's nights' had produced him £693 13*s.* 6*d.*; whence it was said that it had made Gay rich and Rich gay. The songs were all written either to ballad tunes (English and Scotch, some of considerable antiquity), or the tunes of the most popular songs of the day. These tunes, sixty-nine in number, were arranged and scored by Dr. Pepusch, who also composed an overture for the piece. They were chosen with great judgment, and to them its remarkable success was in a great degree attributable. The rage for 'The Beggar's Opera' shewed itself in its scenes and songs appearing on fans and screens, in the attire of Lavinia Fenton (the performer of Polly) becoming the pattern for that of ladies of fashion, and in the temporary desertion of the Italian Opera. Hogarth published an engraving representing a scene in Act II. Some of the songs were said to have received finishing touches from the hand of Pope. The success of 'The Beggar's Opera' led to the production of a host of other pieces with songs written to ballad tunes, and thence denominated Ballad-Operas. [W. H. H.]

BEGNIS, Giuseppe de, born at Lugo, in the Papal States, 1793, sang soprano in the chapel at Lugo till he was nearly fifteen, when his voice broke. Thinking it would never return, and having a strong taste for comedy, he took lessons of Mandini, a celebrated Italian actor; but, his father being opposed to this course, he began to study music again under Saraceni the composer, the brother of Madame Morandi. He made his first operatic appearance in the carnival of 1813 as *primo buffo* in Pavesi's 'Marco Antonio' at Modena, and was most successful. He next went to Forli and Rimini, and returned to Modena. In the following carnival he sang at Siena, at the opening of the new Teatro degli Academici Rozzi, as Pazzo in Paer's 'Agnese,' and as Selim in the 'Turco in Italia' of Rossini, and was enthusiastically applauded in both. He next appeared at Ferrara, Badia, and Trieste. In the carnival of 1815 he was at Cesena, and particularly brilliant in Fioravanti's 'Bello piace a tutti,' in which he imitated with his falsetto the celebrated Pacchierotti. He now sang at various theatres until the carnival of 1816, at Milan, where he was laid up for three months, and unable to sing. On his recovery he proceeded to Parma, where his success was more brilliant than ever; then to Modena and Bologna. Here he played successfully in Paer's 'Agnese,' which had been tried twice before there without success. The piece was chosen for the benefit of Signora Ronzi, who was engaged there. Shortly after,

she was married to De Begnis, who was admitted to the Philharmonic Academy of Bologna at the same time. They were, however, separated for a time, De Begnis being engaged to sing at Rome, and Ronzi at Genoa. They met again at Florence, 1817, and performed together at Vicenza and Verona. Rossini engaged them for the opening of the new theatre at Pesaro. In 1819 they made their *débuts* at Paris with great success; and in 1822 appeared in London in the 'Turco in Italia,' where he was considered an excellent comic actor and singer. In 1823 he had the direction, with his wife, of the operas at Bath; and he was again engaged for the operatic season of 1824. He died Aug. 1849. [J. M.]

BEGNIS, Signora Ronzi de, the wife of the above, was possibly the young girl, Claudina Ronzi, born at Paris, Jan. 11, 1800, of whom there is still a record at the Conservatoire in that city, that she was admitted to a singing class March 9, 1809. However this may be, nothing more is known of her until her marriage with De Begnis at Bologna, 1816. In 1819 she made her first appearance at Paris, having sung at most of the principal Italian operas, and for Rossini at the opening of the new theatre at Pesaro in 1818. The Parisians thought her weak, especially as Rosina; but they admit that Donna Anna was never so well sung there by any one else before Sontag undertook it in 1828. It must be said that she received some instruction in the part from Garat, and that she profited by his lessons. In 1822 she came with her husband to London, where her voice and style steadily improved. 'She made her first appearance,' says Lord Mount-Edgecumbe, 'in the Turco in Italia, and acted in it delightfully. With a pretty face and pleasing countenance, she had a voice of great sweetness and flexibility, which she managed with considerable skill and taste. She decidedly excelled in comic parts: indeed, I have rarely seen a better buffa.' In 1824 she was eclipsed by the arrival of Pasta. In 1825 she shared with Madame Vestris the principal parts in the comic operas at the Haymarket Theatre, the temporary retreat of the company; but, soon after the return of Pasta, she fell ill and totally lost her voice, was obliged to throw up her engagement, and returned to Italy. Her death was announced in the 'Sunday Times,' July 3, 1853. [J. M.]

BEGREZ, Pierre Ignace, born at Namur Dec. 23, 1783. At the age of six he sang in the choir of the cathedral of St. Aubin. After some years he went to Paris, and was received in a violin-class at the Conservatoire, the 17th Floréal, An xii. (1804). He was at the same time engaged in the orchestra of the Opéra, then under the direction of Grasset. Finding, however, that he possessed a fine tenor voice, he soon threw aside the violin, and studied singing under Garat, from October 1806. In 1814 he carried off the first prize at the Conservatoire, and in 1815 he made his first appearance at the opera in Gluck's 'Armide,' which he followed with the principal parts of 'Les Bayadères' and 'Anacréon.' About the end of the same year he was engaged for the London Opera House, where he remained a permanent member of the company at the King's Theatre till 1822, when he retired from the boards, and devoted himself to teaching and singing in concerts. He had a beautiful voice, and good French style. He died Dec. 1863. [J.M.]

BEIDEN NEFFEN, DIE, or Der Onkel aus Boston. An opera in three acts, containing overture and 14 numbers, for voices and orchestra, the words by Dr. Caspar, the music by Mendelssohn, 1822.

BEIDEN PÄDAGOGEN, DIE. An opera in one act, containing overture and 12 numbers, for voices and orchestra; the words by Dr. Caspar, the music by Mendelssohn, 1821. Like the preceding this opera was only performed at the Mendelssohn's house. Both are still in MS., and the autographs are in the Bibliothek at Berlin.

BEKLEMMT, *i.e.* heavy at the heart, oppressed. A word which Beethoven has attached to the middle section of the Cavatina in his Quartet in B flat (op. 130), where he modulates into C flat; and where the choked and broken accents of the first violin fully bear out the expression. None of the old copies of the quartet give this interesting personal note of the composer's. It first appeared in Breitkopf & Härtel's complete edition. Correctly the word would be *beklommen*, but in words as in music Beethoven is always original and always right. [G.]

BELCKE, Friedrich August, a celebrated trombone-player, son of the town musician at Lucka in Saxony, and born May 27, 1795. The boy at an early age showed a fondness for brass instruments, and was a good horn-player before he took up the trombone, on which he soon reached a pitch of excellence before unknown. He first joined the Gewandhaus orchestra in Leipsic, and then obtained a permanent post in the royal band at Berlin. Frequent tours made him widely known. In 1838 he left the Berlin band of his own accord and retired to his native place, where he died Dec. 10, 1874. By trombone-players his compositions are well known and highly valued. He it is of whom Schumann pleasantly says, in his essay on 'The Comic in Music' (Ges. Schriften, i. 185), 'There is a phrase in the finale of Beethoven's eighth symphony which always makes the members of a well-known orchestra laugh, because they insist upon it that in this figure they hear  the name of Belcke, one of the best of their number.' [A. M.]

BELISARIO, Italian opera in three acts, libretto and music by Donizetti. Produced at Venice, Feb. 7, 1836; in London, at the King's Theatre, April 1, 1837; and at Paris, Théâtre des Italiens, Oct. 24, 1843.

BELL (Fr. *pavillon*). The everted opening in which most wind instruments terminate; especially those made of brass. It undoubtedly adds to the power of the tone, on the same principle as the speaking-trumpet reinforces the

voice, though the exact cause of the fact is not known. It was erroneously maintained by Sax that the material of the bell exercises no influence on the quality of the tone. Notes of exactly similar pitch with those from brass or wood can of course be obtained, as he stated, from similar bells made of leather, gutta percha, or papier-mâché. Even a trumpet-shaped orifice in a solid wall, fitted with a mouthpiece, gives all the open notes of a wind instrument. But the quality and timbre are found to be very different when compared with the real instrument. [W. H. S.]

BELLAMY, Richard, Mus. Bac. Cantab., a bass singer, was on March 28, 1771, appointed a gentleman of the Chapel Royal, and on January 1, 1773, a lay-vicar of Westminster Abbey. He also held the appointment of vicar choral and master of the choristers of St. Paul's Cathedral. In 1788 he published a volume containing a Te Deum for a full orchestra (performed at the installation of Knights of the Bath in May of that year), and a set of anthems. He died Sept. 11, 1813. His son, Thomas Ludford Bellamy, was born in Westminster in 1770. He was educated in the choir of Westminster Abbey under Dr. Cooke, and after the change of his voice to a bass studied under Tasca, the celebrated bass singer. He sang in London in the cathedral choirs and at concerts until 1794, when he went to Ireland as agent on a nobleman's estate, but having to give up that employment he went to Dublin, where in 1797 he became stage manager at the theatre. In 1800 he became part proprietor of the Manchester, Chester, Shrewsbury, and Lichfield theatres. In 1803 he sold his share and became sole proprietor of the Belfast, Londonderry, and Newry theatres. This speculation proving unsuccessful he returned to London, and sang at Covent Garden Theatre for five years. In 1812 he was engaged for five years at Drury Lane. During all this period he also appeared as a concert singer. In 1819 he was appointed choir-master at the chapel of the Spanish Embassy, which he retained for many years. In 1821, on the death of Bartleman, he was engaged as principal bass singer at the Concert of Ancient Music, and so continued until, a few years later, he was superseded by Henry Phillips. In 1840 he edited a volume of the poetry of glees, madrigals, catches, rounds, canons, and duets. He died in Judd Street, Brunswick Square, January 3, 1843, in his seventy-third year. [W. H. H.]

BELLE HÉLÈNE, LA, Opéra-bouffe in three acts, words by De Meilhac and Halévy, the music by Offenbach; produced at Paris, Théâtre des Variétés, Dec. 17, 1864.

BELLERMANN, Constantin, born at Erfurt, 1696, rector of Münden, a composer of operas and oratorios, and an extraordinary performer on the lute. His most important work is 'Programma in quo Parnassus Musarum voce, fidibus, tibiisque resonans, sive musices divinae artis laudes diversae species singulares effectus atque primarii autores succincte enarrantur' (Erfurt, 1743), an analysis of which is given by Mitzler in his 'Bibliothek,' vol. iii. He died at Münden in 1763. [F. G.]

BELLERMANN, Johann Joachim, born at Erfurt, 1735, visited Russia, and returned to become Director of the Gymnasium of his native town. He published very interesting 'Bemerkungen' on Russian airs, dances, and musical instruments (Erfurt, 1788). His son, Johann Friedrich, born at Erfurt, March 8, 1795, served in the war of independence (1813–15), studied at Berlin and Jena, and in 1819 became Professor, and in 1847 Director of the Gymnasium 'zum grauen Kloster' at Berlin. He was a great authority on ancient Greek music, and was especially known for his edition of the 'De anonymis scriptis de Musicâ,' and a work on the scales and notes of the Greeks. He died a few years since. His son Heinrich is now (1875) professor in the Berlin university, and author of an esteemed work on counterpoint. [F. G.]

BELLETTI, Giovanni, the great barytone, was born in 1813 at Sarzana, a town in the Lunigiana, of respectable parents engaged in trade. While still a child, he showed a very strong inclination to music. Having an exceedingly delicate ear and a wonderful agility of voice, he soon began to repeat with his child's treble every operatic air that he heard. His father, being advised to cultivate his son's talent, placed him in the hands of a master in the neighbourhood, upon whose advice he soon after transferred him, at no small personal sacrifice, to the famous school at Bologna, over which the celebrated Pilotti presided. The latter took the greatest interest in the boy, and taught him counterpoint as well as singing. After five years of study, Belletti received his diploma. His voice was now settled as a barytone of the most beautiful quality and evenness, with marvellous facility of execution. Advised to try the stage, he hesitated for some time, until he met at Carrara a Swedish sculptor named Byström, who proposed to take him to Stockholm, free from all risk or expense, to lodge in his house, and make his début; and, if unsuccessful, to send him back on the same terms to Italy. This generous offer he accepted, and arrived at Stockholm in 1837. Early the next year he appeared in the 'Barbiere,' and achieved his first success about a month earlier than Jenny Lind, with whose brilliant career he was so much connected afterwards. With her he sang in 'Lucia,' in 'Robert,' and others of Donizetti's and Meyerbeer's operas, translated into Swedish. To the influence of Jenny Lind, and to the critical taste of his first audience, as well as to the fine old school of singing in which he had been brought up, he owed the pure style and freedom from vulgarity which, more even than his noble voice, made him the greatest barytone of the century. When Jenny Lind left Stockholm for Paris, young Belletti returned to his native land: but when she came to London, Lumley, upon her urgent advice, soon persuaded him to come to sing with her again.

In the meantime he had sung with great success at Florence and Leghorn, in operas of Rossini and Donizetti. In 1848 he made his first appearance at Her Majesty's Theatre in 'Ernani,' with Mlle. Cruvelli, and during that season sang at both the opera-houses. After singing with no less success at Paris, he was engaged, with Lind and Benedict, by Barnum, for a tour in the United States; during which he maintained his reputation, and contributed to the enthusiastic reception which the company obtained in America. Returned once more to London, Belletti remained there till the end of 62, singing not only at the Opera, but in classical concerts and oratorios, with undiminished success. Since that time he has retired, in the midst of the most brilliant career, without a sign of faded powers, to Sarzana, his native place, where he lives a life of seclusion, universally respected, and surrounded by his family and relations, with whom he shares the earnings of the years he spent in his profession. [J. M.]

BELLINI, Vincenzo, born at Catania, the capital of Sicily, Nov. 3, 1802, was, like so many distinguished musicians, the son of an organist. From his father he received his first lessons in music; but a Sicilian nobleman, struck by the child's talent, persuaded old Bellini to allow him to send his son to Naples, where he offered to pay the child's expenses at the famous Conservatorio, directed at that time by Zingarelli. Here Donizetti, who was born nine years before and died thirteen years after Bellini, had preceded his short-lived contemporary by only a few years. Another of Bellini's fellow-pupils at the Conservatorio of Naples was Mercadante, the future composer of 'Il Giuramento' and 'La Testa di Bronzo,' It is probable enough that Mercadante (who in after years became director of the celebrated musical institution in which he received his early education) may have written better exercises and passed better examinations than his less instructed young friend Bellini. The latter however began at an earlier age to compose. Bellini's first work for the stage was produced while he was still at the academy. His 'Adelson e Salvino' had the good fortune to be played in presence of the celebrated Barbajà, manager at that time of La Scala at Milan, of the San Carlo at Naples, and of numerous minor opera-houses. The great impresario, with the keen-sightedness which always distinguished him, gave the promising student a commission to write an opera for Naples; and in 1826, Bellini's 'Bianca e Fernando' was brought out at the San Carlo without being so successful as to attract European attention. Bianca e Fernando, however, pleased the Neapolitan public, while its general merit encouraged Barbajà to entrust the young musician with the composition of another work, which this time was to be brought out at La Scala. The tenor part in Bellini's first opera for Milan was to be written specially for Rubini, who retired with the juvenile maestro into the country, and remained with him until the new opera, or at least the tenor part in it, was finished. The florid music of Rossini was at that time alone in fashion; and, by way of novelty, Bellini composed for Rubini, with his direct approbation, if not at his express suggestion, the simple expressive melodies which the illustrious tenor sang with so much effect when 'Il Pirata' was at length produced. Owing in a great measure to Rubini's admirable delivery of the tenor airs, 'Il Pirata'—the earliest of those works by Bellini which are still remembered—obtained a success not merely of esteem or even of enthusiasm, but of furore. It was represented soon afterwards in Paris, and in due time was heard in all the capitals of Europe where Italian opera was at that time cultivated. Bellini's next work was 'La Straniera,' first performed at Milan in 1828 with an admirable cast, including in the chief parts Madame Tosi, Donzelli, and Tamburini. 'La Straniera' was less successful than its predecessor, and it scarcely can be said to have met with general favour in Europe. Like 'Il Pirata' it was produced in London, where however it made but little impression. 'Zaira' (Parma, 1829) may be said to have failed. This at least is the only work of Bellini since the production of 'Il Pirata' which was never performed out of Italy. 'Il Capuletti ed i Montecchi,' composed for Venice and represented for the first time at La Fenice in 1830, was brilliantly successful throughout Italy; though in London and Paris the new musical version of 'Romeo and Juliet' seems to have owed such favour as it received to Madame Pasta's performance in the character of Romeo. This part, it may be noted, was the one selected by Herr Wagner's niece, Mlle. Johanna Wagner, for her début in London when, immediately after the so-called 'Jenny Lind mania,' that artist, so much admired in Germany, appeared without success at Her Majesty's Theatre. In 1831 Bellini, now 24 years of age, composed for La Scala the work generally regarded as his masterpiece. Romani, the first of modern Italian librettists, had prepared for him, on the basis of a vaudeville and ballet by the late M. Scribe, the 'book' of 'La Sonnambula'; and the subject, so perfectly suited to Bellini's idyllic and elegiac genius, found at his hands the most appropriate and most felicitous musical treatment. 'La Sonnambula,' originally represented at La Scala, could not but make the tour of Europe; and, warmly received wherever it was performed, it seems nowhere to have hit the public taste so much as in England. No Italian opera before or since 'La Sonnambula' has been so often played in London as that charming work, the popularity of which is due partly to the interest of its simple, natural, thoroughly intelligible story, chiefly to the beauty of the melodies in which it abounds. Thanks to Madame Malibran, who appeared in an English version of the work, 'La Sonnambula' soon became as popular in our own as in its native Italian language; and even to that large portion of the public which never enters an Italian opera-house the baritone's air 'When I view these scenes' (Vi

ravviso), the tenor's air 'All is lost now' (Tutto e sciolto), the soprano's air 'Ah do not mingle' (Ah non giunge), are as familiar as any of our national melodies. It may be noted, once for all, that the genius of Bellini was exclusively lyrical and tuneful. He was no harmonist, he had no power of contrivance; and in his most dramatic scenes he produces his effect simply by the presentation of appropriate and expressive melodies. The beauties of 'La Sonnambula,' says an English critic, 'so full of pure melody and of emotional music of the most simple and touching kind, can be appreciated by every one; by the most learned musician and the most untutored amateur—or rather, let us say, by any play-goer who not having been born deaf to the voice of music hears an opera for the first time in his life.' The part of Amina, the heroine of La Sonnambula, is still a favourite one with débutantes; and it was in this character that both Madame Adelina Patti and Mlle. Emma Albani made their first appearance before an English public. About a year after the production of La Sonnambula Bellini delighted the world of music with 'Norma,' which, very different in character from its immediate predecessor, is equally in its way a work of genius. Bellini has written no melody more beautiful than that of Norma's prayer, 'Casta Diva,' in which however it is impossible to deny that the second movement is unworthy of the first. In the duet of the final scene the reproaches addressed by Norma to the faithless Pollio have, apart from their abstract musical beauty, the true accent of pathos; and the trio in which the perjured priestess and betrayed woman upbraids her deceiver with his newly discovered treachery proves, when the devoted heroine is adequately impersonated, at least as successful as the two other pieces cited. The first and most celebrated representative of the Druid priestess was Madame Pasta. It afterwards became one of Giulia Grisi's greatest parts, and in our own day we have found an admirable Norma in Mlle. Titiens. Bellini's most important serious opera, like almost all operas of real dramatic merit, is founded on a French play. Romani's libretto of 'Norma' was based on Soumet's tragedy of the same name, produced at the Théâtre Français about a year before the opera of 'Norma' was brought out at the Scala Theatre of Milan. The successful opera has killed the drama from which its subject was derived—a result which under similar circumstances has happened more than once in the history of the modern stage. 'Don Giovanni,' 'Le Nozze di Figaro,' 'Fidelio,' 'Il Barbiere di Siviglia,' 'Lucrezia Borgia,' 'Norma,' are only a few of many examples which might be cited of highly successful operas indebted for their dramatic framework to plays already nearly obsolete. To return to Bellini: his 'Norma' was succeeded by 'Beatrice di Tenda,' which did but little to keep up the composer's reputation. Represented for the first time at Venice in 1833, it was performed three years afterwards, without much success, in London. In 1834 Bellini went to Paris, where, by the advice of Rossini, he was engaged to write an opera for the Théâtre Italien. Rossini is said to have recommended his young friend (Bellini was then twenty-seven years of age) to devote special attention to his orchestration, and generally to cultivate dramatic effect. In 'I Puritani'—which, according to the almost invariable rule, owed its dramatic materials and its stage form to a Frenchman—Bellini was not well served by his librettist. Its special and absorbing interest is attached either to the tenor part, as in 'Il Pirata,' or to the prima donna part, as in 'La Sonnambula' and 'Norma'; while besides being dull, even to those who understand it, the plot of 'I Puritani' has the additional disadvantage of being obscure. On the other hand, the score is full of the most engaging melodies of the true Bellinian type. The part of Elvira, dramatically considered, may be uninteresting; but no prima donna who is mistress of the Italian style will willingly miss an opportunity of making herself heard in the beautiful 'Qui la voce,' and in the joyful sparkling polacca. The chief part however in the opera, in a musical if not in a dramatic sense, belongs to the tenor. Few tenors since the time of Rubini, for whom it was written, have had voices sufficiently high to be able to sing it from beginning to end in the original keys. Otherwise the charming romance in the first act, 'A te o cara,' and the melody of the final concerted piece—so refined and so elevated in character—could not but tempt our Marios and Giuglinis. Both these artists were, in fact, frequently heard in the character of Arturo. The company for which 'I Puritani' was written comprised as leading vocalists, Grisi, Rubini, Tamburini, and Lablache; and the distribution of characters when this work was first performed was the same, for a few years at least, in London as in Paris. 'I Puritani' was produced in London for the benefit of Madame Grisi in 1835; and the 'Puritani season' was remembered for years afterwards, and is still cited by experienced habitués, as one of the most brilliant ever known. We have spoken of the prima donna's Cavatina and of her polonaise 'Son Vergin vezzosa,' of the tenor's romance, and of his leading motive in the concerted piece of the last act; nor must we forget the duet in three movements for the baritone and bass—as fully developed and destined to be quite as popular as the duet for the two soprani in 'Norma.' As regards the spirited concluding movement in the military style, with its vigorous accompaniment of brass instruments, Rossini, writing of the opera from Paris to a friend at Milan, observed: 'It is unnecessary for me to describe the duet for the two basses; you must have heard it where you are.' 'I Puritani' was Bellini's last opera. Soon after its production he went on a visit to an English friend, Mr. Lewis, at Puteaux, at whose house he was attacked with an illness from which he never recovered. 'From his youth upwards,' says Mr. J. W. Mould in his 'Memoir of Bellini,' 'Vincenzo's eagerness in his art was such as to keep him at the piano day

and night, till he was obliged forcibly to leave it. The ruling passion accompanied him through his short life, and by the assiduity with which he pursued it, brought on the dysentery which closed his brilliant career, peopling his last hours with the figures of those to whom his works were so largely indebted for their success. During the moments of delirium which preceded his death, he was constantly speaking of Lablache, Tamburini and Grisi; and one of his last recognisable impressions was that he was present at a brilliant representation of his last opera at the Salle Favart.' Bellini died on Sept. 23, 1835, in the 29th year of his age—not the greatest, but by far the youngest, of many admirable composers (as Purcell, Mozart, Schubert, Mendelssohn, Hérold) who scarcely lived to accomplish half the allotted years of man. It has been said that Donizetti, Bellini's contemporary and fellow-labourer, born nine years before him, outlived him by thirteen years; yet Donizetti was not fifty-two when he died. Judge Bellini on the other hand by what another of his contemporaries did during the first twenty-eight years of his career, and his youthful energy dwindles away before that of Rossini, who was but twenty-six when he produced 'Mosè in Egitto,' and who had previously composed, among works of less fame, 'Tancredi,' 'Il Barbiere,' 'Otello,' 'La Gazza Ladra,' and 'La Cenerentola.' But even if Bellini should outlive Rossini—and in the present day 'Il Barbiere' and 'Semiramide' are the only Rossinian operas which are played as often as 'La Sonnambula' and 'Norma'—it would still be necessary to remember that Bellini was but a follower of Rossini, and a pupil in his most melodious of schools. Directly after Bellini's death, and on the very eve of his funeral, the Théâtre Italien opened for the season with 'I Puritani.' The performance must have been a sad one; and not many hours after its conclusion the artists who had taken part in it were repeating Bellini's last melodies, not to the words of the Italian libretto, but to those of the Catholic service for the dead. The general direction of the ceremony had been undertaken by Rossini, Cherubini, Paer, and Carafa; the musical department being specially entrusted to Habeneck, the distinguished conductor of the French Opera. In the Requiem Service a deep impression was produced by a 'Lacrymosa' for four voices, of which the beautiful tenor melody in the third act of 'I Puritani' formed the fitting theme. The movement was sung without accompaniment by Rubini, Ivanoff, Tamburini, and Lablache. The mass was celebrated in the Church of the Invalides, and Bellini lies buried in the cemetery of Père la Chaise. Rossini, who had done so much for his young compatriot during his life-time, undertook the duty of conveying to the father the news of his death. 'You always encouraged the object of my eternal regret in his labours,' wrote the old Bellini in reply; '. . . I shall never cease to remember how much you did for my son. I shall make known everywhere, in the midst of my tears, what an affectionate heart belongs to the great Rossini; and how kind, hospitable, and full of feeling are the artists of France.' [H. S. E.]

BELLOC, Teresa Giorgi, was born at Milan, of French parents, and made her first appearance in 1804 at the theatre of La Scala in that city. One of her first *rôles* was Paisiello's 'Nina,' in which she was so successful as to obtain an engagement at the same theatre for the following year. She sang next at Paris in the same opera, in Martini's 'Cosa Rara,' and other pieces. Thence she visited Venice, Genoa, and Milan, where she appeared in the carnival of 1807, and remained for the rest of the year. At Venice in 1812 Rossini wrote for her, Raffanelli, and F. Galli, 'L'Inganno felice,' and at Milan, in 1817, 'La Gazza Ladra.' In the latter year she appeared for the first time in London under the name of Bellocchi, and succeeded Mme. Fodor. Though a good singer and actress in comic operas, she did not please much here, owing to the coarseness of her voice and the plainness of her person. She was something like Storace, with most of her defects, but not all her excellences. She however surprised the public, towards the close of her engagement, by a capital performance of 'Tancredi,' for which nothing could be less fitted than her figure; but the music suited her voice, and her singing of it was really so good as to atone for her personal appearance. She sang here during that and the two following seasons; and in 1821 she returned to Milan, singing there throughout that year and the next spring. She remained there the whole of 1823 and during the spring of 24. In 28 she quitted the stage. [J. M.]

BELLOWS. The apparatus by which the air is collected, compressed, and propelled through the several windtrunks or channels of an organ for ultimate redistribution among the pipes.

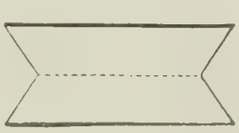
One of the matters of greatest importance in an organ is that the supply of wind shall be copious, unvarying, and continuous;—that it shall possess 'good lungs,' as Sebastian Bach used to say. Yet it is curious to note how singularly far from being in such condition were the early organs; and it is interesting to trace the steps by which, through centuries, the desired consummation was gradually, and only gradually, achieved. In the 4th century organs were blown by bellows formed like the ordinary household bellows, about five feet in length, which were 'weighted' by two men standing on the top; and as the men who performed the office of dead weight one day might be fifty pounds heavier than those who did so on the next, it is clear that the tone, speech, and power of the organ must have been subject to constant variation. In the 11th century the bellows—still of the household kind—were blown by hand, and although a nearer approach to an equal wind might then with care have been to some extent secured, yet it must still have varied with the muscular power of successive blowers. The sides or folds of these primitive contrivances were made of leather—'white horse's hides,' or 'shepis skyn,' as the

old accounts inform us—and were consequently subject to frequent injury from strain and friction; hence the constant appearance in old parish accounts of such entries as 'Paid for mending of the gret organ bellowis, and the small organ bellowis, v^{d}.' These ever-recurring failures at length suggested the use of some more durable material, and wooden *ribs* were substituted for the leather folds. This improvement was effected as long ago as 1419, in which year, as we learn from the Fabric Rolls of York Minster, John Couper, a *carpenter*, received 'For constructing the *ribs* of the bellows, xii^{d}.'

These bellows, however formed, could of course give only an intermittent supply of wind, being wholly inoperative while being drawn open; consequently two at the least were always required, one to supply wind while the other was replenishing. A more 'continuous' supply, though by no means of an 'unvarying' strength, was secured by the use of a contrivance like the ordinary smith's forge bellows, consisting of a *feeder* below and a *diagonal* reservoir above. When this form of bellows was first used, or finally abandoned, are matters not quite clear; but some disused specimens were lying in a lumber-room attached to Tong church, Shropshire, as late as the year 1789. Father Smith (died 1708) occasionally put something of the kind into his small cabinet organs; but attention was more particularly directed to the correction of the defects which continued to exist in the diagonal bellows.

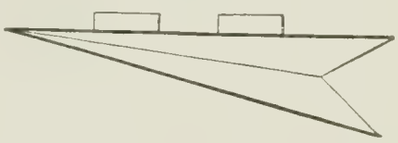
A diagonal bellows was formed of two pairs of triangular-shaped ribs for the sides, a pair of parallel ribs for the spreading end, a bottom-board, a top-board—all attached together by leathern hinges—and the superincumbent weights. For a long time the bellows were placed with the bottom board in a horizontal position, the top board rising, and the whole taking the following outline when inflated:—

This did not however produce a uniform current of air, but a somewhat lighter one at the commencement of the descent, and a gradually increasing one during the closing. This arose from two causes. The first was connected with the weights. A weight exercises its greatest influence on a horizontal surface, and loses some of that influence on an inclined plane. The second was due to the varying position of the wooden ribs. These would present an obtuse angle to the wind in the bellows when inflated, thus—



and one gradually increasing in acuteness as it closed—

The top weights acquiring greater influence as the top board approached a horizontal position, and the side and end folds wedging their way into the wind, the two actions gradually increased the density of the wind to one-fourteenth beyond its first pressure. Various ingenious means were devised for correcting this inequality—as accumulative springs; a counterpoise acting in opposition to the descent of the bellows; a string of leaden weights which were left in suspension as the bellows descended, etc.: but the simplest and perhaps most effectual of all was that adopted by some of the German organ-builders, which consisted in placing the bellows so that the top board took the horizontal position on the bellows being inflated—



In this case the top weights exercised their greatest pressure at the starting, at which time the ribs exercised their least, and *vice versâ*.

A bellows nevertheless still gave but an intermittent supply, and it was not until the year 1762 that an approach towards a successful combination of a feeder and a reservoir was made, by a clockmaker of the name of Cumming. This bellows had something of the form shown in the following outline:—

It presented the mistake however of having the two double sets of ribs folding the same way, which continued the defect in the increasing pressure of wind during the closing, that has already been noticed in the diagonal bellows. This led to the upper set being inverted, thus—

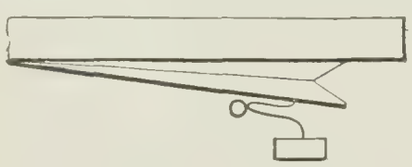
The upper set thus giving more room to the wind as the lower gave less, the one remedied the defect the other was calculated to cause. Thus the desired 'copious, unvarying, and continuous' supply of wind was at length secured.

There are certain disturbances which arise from the manner of the consumption of the wind.

It is essential that the bellows of an organ should yield a *steady* as well as an ample supply. The improved bellows being capable of the latter, the even flow was nevertheless apt to be disturbed from one of many causes. A prolific source of unsteadiness was unskilfulness on the part of the blower. At the commencement of the stroke the wind, in passing into the reservoir, has to overcome the pressure of the surface weights and raise the top-board, and at its

termination the surface weights have gently to resume their compressing force on the wind. But if the stroke be begun or concluded too suddenly there will be a momentary over-compression or a jerk in the wind, resulting in either case in a disturbance of the smooth sounding of the pipes.

Again, if several large pipes are sounded together, by many bass keys being put down simultaneously, there will be a great demand upon the wind supply, and a consequent possibility of the small pipes in the treble not being properly 'fed,' the result in that case being a momentary weakness or tremulousness in their speech. On letting the several bass keys suddenly rise, the consumption of wind would as suddenly be checked, and by thus causing for a moment a slight over-compression, the sensitive small pipes would sound too sharp and strong. These tendencies suggested the application of a small self-acting reservoir in the immediate neighbourhood of the pipes, which should add to or subtract from the ordinary wind-supply as occasion might require; and such an apparatus was successfully devised by the late Mr. Bishop, which consisted of side and end ribs, and a board, not unlike a small 'feeder,' with strong springs behind placed horizontally or vertically over a hole cut in the wind-chest or wind-trunk, the whole being called a 'concussion bellows.'

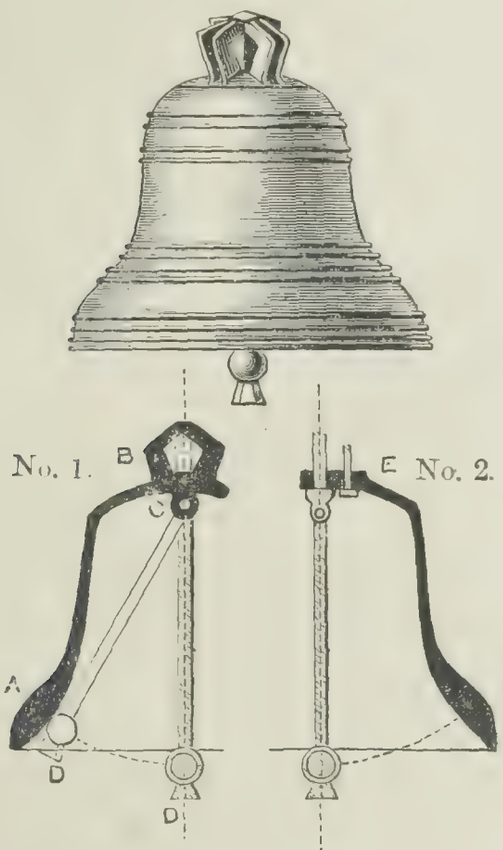


When at rest the concussion bellows stands about half way open, and charged to that extent with air. If a sudden and great demand is made upon the wind it immediately closes, adding its contents to the average supply; and if there is likely to be a redundance it expands, and so reduces it to the average. [E. J. H.]

BELLS. Musical instruments of metal, sounded by percussion, and consisting of a cup or bowl, caused to vibrate by the blow of a 'clapper' or hammer on the inner or outer surface of the bell. The external stroke, however, is only applied in special cases, as when a large bell is connected with a clock, and the hours struck upon it with an external hammer worked by mechanical means; or when a series of bells are arranged so that set compositions can be played upon them by a series of such hammers, and with musical precision. [See CARILLONS.] A fixed bell can also be played by an internal hammer pulled or struck against the inside. But the essential and typical form of the bell is that in which the stroke is given by a movable clapper hung within the bell, and caused to strike by swinging the latter, either by hand (in the case of small bells) or by a wheel and pulley system in the case of large ones. Bells have also been extensively used as personal ornaments and decorations, from those on the hem of the garment of the Jewish high-priest to those which formed the appendages of the head-dress of the mediæval jester. This decorative use of bells has also been applied to domestic animals; and the bells of the English waggoner's team were formerly as common an appendage as the sheep-bells and goat-bells in Switzerland and elsewhere, and the cow-bells in the New Forest, still are. In these cases the sound of the bell is excited by the movements of the body. But in all these forms or applications of the bell the principle is the same; it is an instrument with a hammer hung loose inside it, and caused to sound by the agitation, regular or irregular, communicated to it, and by which the hammer is made to strike against the inside. It is important to note this as the essential characteristic of bells, and that which distinguishes their special place among musical instruments. Of music, in the artistic sense of the word, bells in their true form are hardly capable. They may be tuned to a regular scale, and sounded in various successions, but the method of obtaining the sound by swinging the bell till the clapper hits it (by which method alone the full sound can be elicited) necessarily precludes anything like the exactitude in time or the variation in intensity by which form and expression are given to music. All the contrivances for performing music on bells with mechanical precision involve a greater or less departure from the true principle of the bell, and an impairing of its characteristic sound by fixing it instead of letting it swing freely. It will be seen, therefore, that bells form a kind of connecting link between the music of art and the music of nature; their fixed tone and synchronous vibrations connecting them with the art, while the irregular and formless character of the music produced from them even by the best peal-ringers, partakes of the wildness and vague character of natural sounds. It is this wildness of character which is one of the great charms of bell-music on a large scale, and which has caused it to be so much interwoven with the associations of men, both in real life and in imaginative literature.

Like the harp, the bell is præ-historic in its origin; nor would it serve much purpose here to speculate upon the probable origin or earliest form of the bell, of which in fact we know nothing; or even to dwell on the very uncertain archæology of the instrument. The records of almost all nations of whose early history we know anything imply the use of bells in one shape or another; generally, it would seem, as a sign or proclamation, just as the railway bell, the church bell, and 'that tocsin of the soul, the dinner-bell,' are still used. But there can be no question that the real development of bells and bell-ringing into their highest form is due to the art and the ecclesiastical fervour combined of the middle ages. The influences which led to the development of bell-ringing and bell-founding were not dissimilar to those which led to the great development of architecture in the cathedral form. Not that either architecture or bells were necessarily connected with ecclesiastical predominance; but that the church being the great power and central influence of mediæval

Europe, the art of the time was all drawn into its service, and thus it came to pass that bells having been, at a comparatively early period of the Christian era, introduced as an appendage to places of worship, their development, with all the art and science which the mediæval workmen had at command, became almost inseparably connected with that of church architecture, and their sounds associated in an especial degree with church celebrations. The form of bell which may be said to have been perfected by mediæval bell-founders (for it has been accepted as a type upon which no essential or radical improvement can be made) is that shown in the following diagram, in which also the principal component parts of the bell are distinguished.



The elevation of the exterior of the bell explains itself; the section shows the relative thickness and shape of the metal; the thickest portion, the 'sound-bow,' A, against which the clapper strikes, is usually $\frac{1}{13}$th of the total diameter of the bell at the lip. The half-section marked No. 1 shows the old method of providing for the hanging of the bell and the attachment of the clapper; the loops called 'canons,' B, being cast on solid to receive the iron straps by which the bell is fixed to the stock, and the bolt, C, for attaching the clapper also cast solid on the inside of the bell. It is necessary that C should be well below the line of axis on which the bell swings, so as to describe an appreciable circle around the axis, otherwise there will be no leverage to drive the clapper, and it will not fly properly. The swing of the clapper is further ensured and accelerated by the small piece, D, called the 'flight,' cast on to the striking part to increase the impetus of the blow. Half-section No. 2 shows a method of hanging the bell and clapper recommended by Sir E. Beckett, and adopted in a good many instances by Mr. Taylor of Loughborough, in which canons are dispensed with, and a thick crown, E, is used with bolt holes through which the bell is bolted to the stock, and a larger hole in the centre through which the clapper-bolt is also fixed to the stock, instead of being cast on to the bell. The advantage of this plan is that the bell can easily be turned on the stock, the clapper-bolt (which is circular where it passes through the bell) remaining stationary, and thus the blow of the clapper can be directed against a new portion of the sound-bow, should the original striking place have become worn or show any tendency to crack.

The material of which bells are composed is a mixture of copper and tin, which in the old bells appear to have been used in the proportion of about 3 to 1. Modern experiment has given rise to the conclusion that, while this combination gave the best sound, and the proportion of tin might even be increased with advantage to the sound, this proportion represents the extreme amount of tin which can be used without the danger of rendering the metal brittle and liable to crack, and that in regard to this consideration a margin within that proportion of tin is safer. 22 of copper to 7 of tin was used for the Westminster bells in the Victoria Tower. Any considerably larger proportion of copper than this, on the other hand, has a tendency to render the metal too soft, and impair the brilliancy of its tone.

The conclusion that the special shape figured above, or something near it, is the best for a bell, has no basis that any one seems to know of except experience. It has been theoretically maintained that plain hemispherical bells ought to give the best and purest tone, but except on a small scale it is not found to be so; the result being either that the tone is very heavy and dead, or that when forced by hard striking it is unmusical and disagreeable to the ear. Sets of hemispherical bells have lately been made of larger size, and with more success than before; they require, however, to be fixed and struck, and not swung; their tone when not struck too heavily is not unpleasing, but quite inferior in power and brightness to that of a swung bell of the usual form. It is also to be noted, though this fact again is equally inexplicable, or at least unexplained, that large and small bells require somewhat differing shape and proportions to realise the best sound. That the proportionate thickness or weight of metal for producing the best results should be different for large and small bells, it is more easy to understand. For a large bell, such as 6-feet diameter, experience seems to give a thickness of $\frac{1}{12}$ of the diameter as the best proportion. Smaller bells will bear a somewhat greater proportionate thickness, and the proportionate thickness—that is to say, the proportionate weight of metal to the note produced—is always increased in a large peal, from

the lower to the upper notes of the scale. The thinner the bell is in proportion to the weight of metal, it should be observed, the deeper is the pitch: so that if the same proportionate thickness were preserved in the treble as in the tenor of a peal, the former would have to be made of too small size and too little weight of metal to compete successfully with the tenor. By adding to the proportionate thickness of the treble, we are enabled to make it of larger size and heavier metal while preserving the high pitch. This effect of thickness on pitch is a thing to be borne in mind in ordering a peal of bells, and deciding what scale or pitch is to be adopted. The cost of the bells is in proportion to the weight of metal, and the question therefore is, given so much metal, in what form to cast it so as to get the best effect from it. This will often be best realised by not endeavouring to get too deep a tone from the peal; a peal tuned in the scale of E or of F may be equally cast with the same amount of metal, but will not be equally good, as either the E peal in that case must be too thin, or the F peal too thick. Where the amount of metal is limited, therefore, the higher pitch will give the best result, and enable the metal to be used to the best advantage.

The precise note which a bell of a certain shape, size, and weight will produce is almost a matter of experience; but the proportion between size and relative dimensions and pitch is capable of being approximately tabulated. The average *modulus* of the finest of the large bells of Europe, as between size and weight, is given by Sir E. Beckett (to whose work on Clocks and Bells the reader is referred for more detailed information on some of the points touched upon here), as 10 cwt. of metal for a bell 3 feet in diameter, and as the weight of metal varies as the cube of the diameter, a bell of 4 feet diameter would consume nearly 25 cwt., and one of 6 feet diameter 4 tons of metal. A bell of this last-named weight would, with the best and most effective disposition of the metal, give the note tenor C; and the pitch for other sizes may be deduced from this, on the rule that the number of vibrations per second in bells varies as $\frac{(\text{thickness})^2}{\text{diameter}}$.

Where a set of bells are in precisely similar proportions throughout, their dimensions would be simply in an inverse ratio to the number of vibrations per second of the notes they were intended to sound. But as in practice the higher pitched bells are always made thicker in proportion to the diameter than the lower ones, for the reasons mentioned above, the problem cannot for practical purposes be stated in the simple form of inverse ratio. Bells, it may be observed, are tuned by turning out a small portion from the inner side of the thickest part or sound-bow, when they are too sharp, so as to reduce the thickness and thereby flatten them, or by similarly turning off a small portion from the edge of the rim, so as to reduce the diameter, when it is desired to sharpen them. This latter process, however, impairs the shape, and is apt also to injure the tone of the bell; and if the casting cannot be so accurately regulated as to give hope of ensuring correctness at first, it is better to let any excess be on the side of sharpness, which can be corrected without damaging the bell. In the case of large peals the plan has sometimes been followed of casting all the smaller bells a trifle thick, so that if the whole peal is not precisely in tune, the tuning may all fall on the smaller bells, which will be reduced in thickness till they are brought down to the pitch to range correctly with the larger ones. Bells are however now cast with considerable accuracy, and the turning out of a nearly perfect, or, as it is called, a 'maiden' peal, is not an uncommon occurrence; though it must be said that peals are not unfrequently so called which are not as perfectly in tune as they ought to be, but which are left untouched in order to claim the credit of being a 'maiden' set. This ought never to be allowed; in fact a much more rigorous standard ought to be maintained in tuning bells than is usual: the number of bells not properly in tune with each other which we hear is a constant annoyance to those whose ears can detect the falsity, and perhaps does something towards confirming other listeners in their deficiency of what is called 'ear.'

The casting of a large bell is an operation requiring considerable preparation and a great deal of nicety of workmanship. The first process is to form the model of the inside surface of the bell, or the core, which is done on a conical-shaped base of iron or brickwork; the clay, after being approximately modelled by hand, is brought to the correct mould by means of what is called a 'sweep,' which is a flat piece of hard wood with one of its edges cut to the section of the inside of the bell, and which is attached to a pivot fixed in the centre of the core, and then 'swept' round the clay until the model of the inside of the bell is correctly formed. The core is then thoroughly dried by heat, either by a fire lighted under it (if it is on a brick base), or by being placed bodily in an oven (if it is on an iron base). The next point is to obtain the outer shape of the bell, and its thickness. There are two ways of doing this. The method which used to be universally adopted was to make upon the core, after it was dried, a model of the thickness of the bell in clay, the outer shape of the bell being obtained by another sweep operating in the same way, and turning on the same centre as that which formed the inside shape; then upon this, when dry, to build a cover or cope, the inner side of which closely followed the outer shape of the bell. This cope, going like an extinguisher over the whole, was strengthened with haybands, or, in the case of large models, with pieces of iron worked into it, so that when made it could be bodily lifted off, the clay bell previously made on the core broken away, and the cope replaced, leaving between it and the core the precise shape and thickness of the bell. The difficulty however of getting a good external

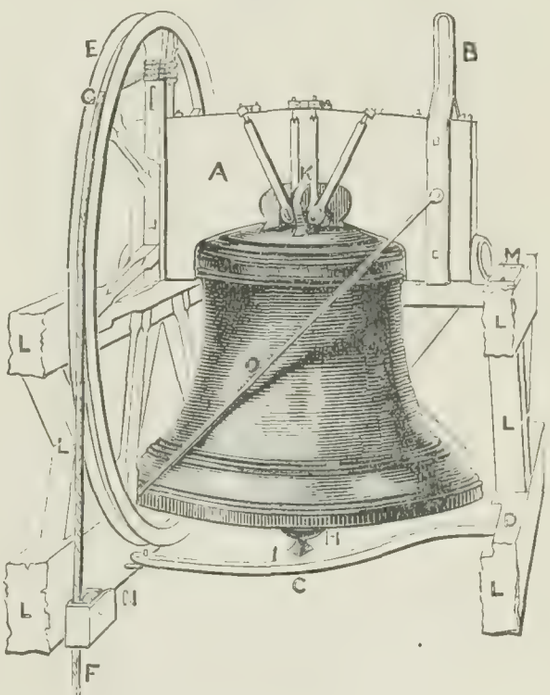
finish in this way must have been considerable. The method now usually employed is to dispense with the operation of making the clay 'thickness' altogether, and to have a metal cope larger than the size of the bell, and lined with clay, in which the external model of the bell is then formed by an inverted sweep, acting on the inside surface; the cope is then turned over the core, and the exact model of the bell is represented, of course, by the space between them. The direct action of the sweep secures a more finished exterior surface than with the old hand-made cope; and another advantage is that the iron cope can be bolted down to a plate below the core, so as to render the whole thing perfectly steady for the casting, and greatly facilitate the process of getting it into the sand. The mould which gives the shape of the top of the bell, with the clapper-ring and the ears or 'canons' for fixing the bell to the stock, is added to the model by a separate process, and the whole is then imbedded in the sand of the casting-room with the mouth downward, and the metal run in and left to cool.

Bells have occasionally been used in the orchestra, though hardly in any sense which can justify their being included among orchestral instruments; since when used singly and sounded by swinging in the ordinary way, they are invariably intended to give what may be called 'local colour' to a dramatic scene; to suggest something beyond or apart from the orchestra, as the prison-bell in the 'Trovatore,' the goat-bell in 'Dinorah,' or the vesper-bell in Bennett's 'Paradise and the Peri' overture. Mozart has, however, used a frame of bells played by a keyboard like that of a pianoforte ('Glockenspiel') in the score of 'Die Zauberflöte,' to represent the effect of Papageno's bells which are visibly present in his head-dress, though actually played in the band. The same instrument has been used in a somewhat similar manner by one or two other operatic composers, but always for stage effect rather than for directly musical purposes. A recent idea of some English organ-builders has been the attachment of a scale of bells to an organ, which are sounded either alone or in combination with the ordinary stops on drawing a stop-head which brings them under the control of the keys; but the addition is completely out of keeping with the genius of the organ, and is available rather for 'sensational' effects than as a real addition to the proper range of the instrument. All these experiments only serve to confirm the opinion that bell-music does not belong to the region of musical art properly so called; and attempts to drag the bell from its proper sphere, and force from it an expression foreign to its nature, have never permanently succeeded. [H. H. S.]

BELLS are rung in peal in the British Islands only, with the exception of one or two rings of bells in America and the Colonies. On the Continent they are simply clashed, being swung with a lever—the notes of the bells not being arranged in any special order. In our islands it is usual to tune bells in the diatonic scale, and they are then rung in order from the highest to the lowest.

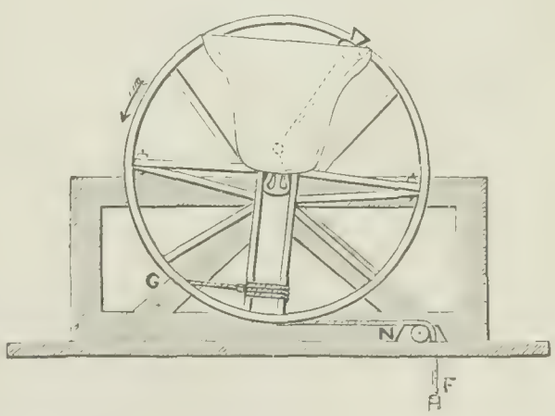
To enable the ringers to do this with accuracy, and also to enable them to change the order in which the bells strike by proper methods (see CHANGE-RINGING), bells are hung as shown in the accompanying illustrations:—

FIG. 1.



They are first carefully secured by iron bolts and braces through the ears or 'canons,' K, to the stock A (Fig. 1) which is fitted with axles or gudgeons of iron, M, working in brass or gun-metal bearings. The stock is fitted with a wheel, E, and a stay, B; and a ground pulley, N, is fixed to the floor of the belfry. By pulling the rope, F, the bell is gradually swung till she stands mouth upwards, as shown in Figs. 2 and 3, when she is maintained in this position by the stay B, and slider C, which prevent her from

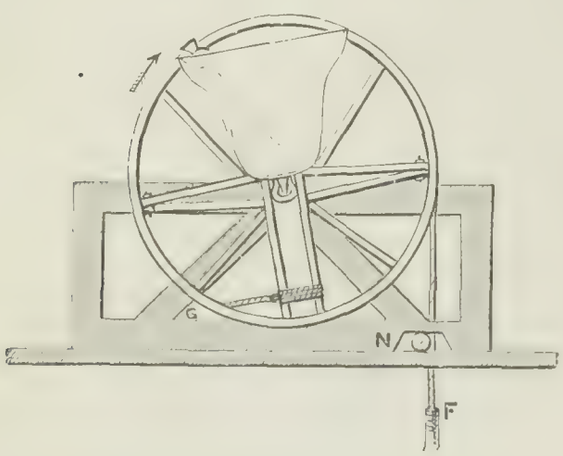
FIG. 2.



falling over (or turning clean round). It will be seen that when the rope, F, has been pulled enough to bring the fillet or 'sallie pin,' G, down to the nearest point to the ground pulley, N, that it can reach, it would in swinging past that point raise the rope; this gives the ringer a second pull, as will be seen by reference to Fig. 2, and this is called the 'hand-stroke' pull. Now by

following with the eye the motion of the bell as indicated by the arrow in No. 2, she will be seen to turn over, bringing the fillet G past N; then, winding the rope round the wheel as she moves, she will arrive at the position of the bell in Fig. 3—this is called the 'back-stroke' blow.

Fig. 3.



The first thing a ringer has to learn is so to swing his bell by the use of the rope, that he can be quite certain to bring her from one stroke to another, pulling her with proper judgment, so as just to throw her over the balance as shown in Figs. 2 and 3. If however too much force is used, there is a danger of breaking the stay or some other part of the machinery, and the ringer himself may be seriously injured.

An alteration in the method of hanging the bell to the stock has been invented by Sir E. Beckett, though only occasionally carried out. By the ordinary make the 'canons' for hanging are so arranged as to serve only for one position of the bell in regard to the stock, so that turning the bell in order to get the stroke of the clapper in a new position, after it has worn the bell, is impossible. Sir E. Beckett's plan consists in having only four instead of six canons, at right angles to one another and forming a cross, on plan, on the crown of the bell. By this means the position of the bell can be altered by merely unstrapping it and turning it on the stock. As the clapper must always fly in the same plane, it is in this plan bolted to the stock, the bolt passing through a hole in the centre of the crown of the bell. [C. A. W. T.]

BELLY. The belly or upper part of the instruments of the violin tribe, is perhaps the most important of all, as it is the first to receive through the bridge the vibrations of the strings, and to communicate them to the whole body of the instrument. Soft wood being more easily set in vibration in all its parts, the belly is invariably made of deal, while the back and sides, which are not intended to vibrate to the same extent, but rather to throw back the waves of sound, are made of harder wood—maple.

As a rule, wood of narrow grain is preferred for the belly, although there are some fine old instruments with bellies of wide-grained wood. The thickness of the belly is also of very great importance: if too thick, the instrument will be weak in tone; if too thin, the tone will be hollow and bellowing. The power of resonance is enhanced by the slightly arched form of the belly. The wood is thickest in the centre, and gradually gets thinner toward the sides. The gradation in which this is executed varies greatly with different makers, and also depends on the special qualities of the individual piece of wood of which a belly is made. The position and shape of the so-called *f*-holes likewise greatly influence the quality of tone. The great makers of the Brescia school, Gaspar da Salo and Maggini, made the *f*-holes large and almost upright; the Amatis, Stradivari, and Guarneri gave them a more slanting position, made them smaller, and infinitely more graceful in shape. Close to the edge the belly is inlaid with a single or double line of purfling, which is merely intended to improve the outward appearance of the instrument. [P. D]

BELLY or SOUNDBOARD of pianoforte. (Fr. *La Table d'harmonie*; Ital. *Tavola armonica*; Ger. *Resonanzboden, Resonanztafel*). The broad flat of wood, usually of Swiss pine, extended under the strings of a pianoforte, and connected with them by a bridge of hard wood over which they are stretched, is technically called the belly, but is also called the sound- or sounding-board. The strings when set in vibration, owing to their small surface in contact with the air, would be scarcely audible, were it not for the belly, an auxiliary vibrating body of large surface, to reinforce them. Thus the tone of a pianoforte essentially depends upon the movement and variable pressure of the strings at the point of contact with the bridge, by which their vibrations are conveyed to the belly to be intensified by the vibrations of the fibres of this elastic support. There is no sonorous body for which we may calculate movement under varied conditions, and then verify the calculation by trial, to compare with a stretched string. The problem is far more complicated of a resonant surface, as the belly, and appears to have offered less attraction to research. We are mainly indebted to Chladni for what we know of the forms of vibration of resounding substances. His determination of the nodal lines by means of fine sand placed upon vibrating surfaces has been of great importance to theory, and has been the foundation upon which the law of the practice of ribbing the belly diagonally to the direction of the grain with slender bars of pine has been finally established by Dr. Schafhaeutl, who has proved that this contrivance creates nodal lines of rest, and prevents the transversal vibration of the belly as a whole which would be inimical to the production of tone. But up to this time, in the construction of bellies, experiment alone has effected what has been achieved. The difference in the character of tone of pianofortes by different makers, depends very much upon variations in the proportions, direction of the grain, and barring of the belly; but as other important variations of structure invariably and simultaneously exist, the question is too complex

ever to be satisfactorily answered. The further description and history of belly will be found under PIANOFORTE. [A. J. H.]

BELMONTE UND CONSTANZA, ODER DIE ENTFÜHRUNG AUS DEM SERAIL, an opera in four acts, words by Bretzner, music by Johann Andre; produced at Berlin May 26, 1781. It is only worth mention because the libretto, as altered by Stephanie, was set by Mozart under the title of 'Die Entführung,' etc. [See p. 66 *a*.]

BELSHAZZAR. An oratorio of Handel's, occurring in the series between 'Joseph' and 'Hercules'; words by Jennens, much reduced by Handel. Dates on autograph (in Buckingham Palace)—at beginning, August 23, 1744; at end of first part, Scored Sept. 15, ditto; end of second part, Sept. 10, ditto. First performance at the King's Theatre on Wednesday March 27, 1745, announced as Belteshazzar. The oratorio was revived by the Sacred Harmonic Society on March 19, 1847. [G.]

BEMETZRIEDER, born in Alsace in 1743, came to Paris, and was engaged as teacher of music to the daughter of Diderot, whose patronage was of great service to him. In 1782 he left Paris for London, and there he died in 1817. He published both in London and Paris several didactic works on music, one of which, 'Leçons de claveçin' (Paris, 1771), was often republished in France, Spain, and England. In the contest between the Gluckists and Piccinnists he wrote on the side of toleration. Diderot rewrote the work just named—a questionable benefit, except as far as style is concerned.

BÉMOL, the French term for FLAT. For the origin of the name see the article ACCIDENTALS.

BENDA, HANS GEORG, a weaver, and wandering performer on several instruments, belonged to the village of Alt-Benatka in Bohemia, and was the head of a celebrated family of artists. His four sons, Franz, Johann, Georg, and Joseph, all devoted themselves to music.

(1) FRANZ BENDA. Born Nov. 25, 1709, remarkable as the founder of a special violin school. He was brought up under Graun and Quanz, and on the death of the former became (1771) concertmeister to Frederick the Great, whose flute concertos he thereafter accompanied. In his manner of playing he especially affected the cantabile. His published (posthumous) works consist of twelve solos for the violin (Paris), 'Etudes de Violon, ou Caprices,' 2 books, and 'Exercises progr. pour le Violon,' 1 book (Leipzig, Kühnel). He died at Potsdam, March 7, 1786. His second daughter, Caroline, married Capellmeister Wolff, and his fourth, Julianne, Capellmeister Reichardt. His eldest son, Friedrich, born 1745, was esteemed as an excellent player on the violin and clavier, and his compositions—the cantatas 'Pygmalion' and 'Die Grazien,' an oratorio 'Die Jünger am Grabe des Auferstandenen,' an opera 'Orpheus,' and various works for clavier and violin—found much acceptance. At his death, at Potsdam, in 1814, he was kön. preuss. Kammermusikus. His brother Carl, born 1748, approached nearest to his father in the style of his playing. He was teacher of music to Wilhelm III, and left six adagios, with remarks on the mode of executing the adagio (Berlin, Hummel).

(2) JOHANN, the second son of Hans Georg, and the least eminent of the brothers, was born 1713, and died as Kammermusikus at Berlin 1752.

(3) GEORG, born 1721, was the most distinguished of the four, renowned as an able clavier-player and oboist. In 1748 he was appointed Capellmeister to the Duke of Gotha, after which he studied in Italy, and on his return wrote his first Duodrama, 'Ariadne auf Naxos' (1774), a work which excited much attention for its novelty and ability, became widely known, and entitled him, notwithstanding the claims of Rousseau's 'Pygmalion,' to be called the inventor of the melodrama. Full and compressed scores of the work, with German and French words, quickly appeared, and a second melodrama, 'Medea,' had an equal success with the first. Georg visited Vienna and Paris for the performance of his works, and at length settled himself in the hamlet of Küstritz in Thuringia, where he died in 1795. Besides the compositions already mentioned he was the author of many instrumental works, of the operettas of 'Der Dorfjahrmarkt' (1776), 'Romeo und Julie' (1778), 'Der Holzbauer,' 'Lucas und Bärbchen,' and 'Orpheus,' also of 'Pygmalion,' a monodrama. His son Friedrich Ludwig, born at Gotha 1746, was music-director of the Hamburg theatre, and published in Leipsic an opera, 'The Barber of Seville," three violin concertos, and a 'Narren-ballet.' While in Hamburg he married a singer named Felicitas Agnesia Rietz, with whom he visited Berlin and Vienna, but from whom he very shortly separated. He died as director of the concerts at Königsberg, March 27, 1793.

(4) JOSEPH, the last of the four, a clever violin-player, held the post of Concertmeister to Friedrich Wilhelm II. at Berlin, where he died in 1804. His son Ernst Friedrich, born at Berlin 1747, was one of the founders of the Berlin amateur concerts, and died there in 1785.

(5) ANNA FRANZISKA, the only sister of the above four brothers, born 1726, was one of the best singers of her time. She married a musician of Gotha named Hattasch, and died there in 1780.

Of this family of artists, which thus lasted through three generations, the most remarkable on the whole were Franz and Georg, the latter of whom, by his melodrama and operettas has obtained a lasting position in musical history. [C. F. P.]

BENDLER, or BENDELER, SALOMON, was born at Quedlimburg, 1683. His father gave him his first instruction in music. Gifted with artistic feeling and a magnificent bass voice, young Bendler was soon a most remarkable singer. In 1712 he came to London, and sang the part of the King in 'Ambleto' by

Gasparini, and of Argante in Handel's 'Rinaldo.' However, he preferred an engagement at the opera in Hamburg, where he obtained a most brilliant success, as also at Leipzig and Brunswick. 'During a visit at Dantzig, he played the organ in the principal church; and, after a short prelude, gave forth the full force of his stupendous voice in a solo. A sudden noise in the church interrupted both the singer and the service: the wife of one of the chief magistrates, terrified by the tremendous tones, was safely delivered of a son. Her husband, a martyr to the gout, was no sooner informed of the event, than he found himself instantly cured. Hearing the name of the artist to whom he owed this double debt and happiness, he invited Bendler to meet a distinguished company at the christening feast, when he placed on his plate a sum of 300 ducats, thanking him at the same time for the service he had rendered him, both as physician and accoucheur.' This extraordinary singer died in 1724. [J. M.]

BENEDETTI, an Italian singer at the Opera in London, 1720. He is mentioned in a witty letter by Sir John Edgar in Steele's journal, 'The Theatre,' from Tuesday March 8 to Saturday March 12, 1720, as an instance of the touchiness of some artists. 'He set forth in the recitative tone, the nearest approach to ordinary speech, that he had never acted anything in any other opera below the character of a sovereign, and now he was to be appointed to be captain of a guard.'

His portrait was engraved by Vertue, and is mentioned by Walpole, 'Catalogue of Engravers,' p. 221. There is a proof impression in the British Museum. It was painted by Beluzzi. Benedetti is represented in a cloak, turned to the right, oval in a frame, 8vo. It is rare. [J. M.]

BENEDICITE, or the 'Song of the Three Children,' is the canticle which is used in the Anglican service after the first lesson in the morning, alternatively with the Te Deum, at the option of the minister. It is taken from the Greek continuation of Daniel, chap. iii., and is of very ancient use in the Church service, being mentioned in St. Benedict's 'Regula,' and by Amalarius as used at matins. It was also prescribed by Athanasius. The ancient Spanish and Gallican churches appointed it to come between the lessons, and in the ancient English offices it was one of several psalms with which Lauds began. It was retained by Cranmer in his 'English Liturgy' of 1549, and appointed to be used instead of the Te Deum in Lent; but this injunction was afterwards removed, and it became optional to use it at any time of the year.

In 'the Book of Common Prayer noted' which was published in 1550, the chant given for it by Marbeck is the same as that in the Sarum Breviary, but simplified, in accordance with Cranmer's wish that 'the note that shall be made thereunto, would not be full of notes, but as near as may be for every syllable a note, so that it may be sung distinctly and devoutly.'

This canticle is more fitted for a chant than any other musical form, because the second half of each verse is the same throughout. Purcell set it in his double service in B flat, but garbled the words by making the burden 'Praise him,' etc. only recur occasionally. [C. H. H. P.]

BENEDICT, Sir Julius, born at Stuttgart, Nov. 27, 1804. Sir Julius is one of the most eminent of the numerous foreign musicians who have settled in England since Handel's time. As composer, performer, and teacher of music, he has now held an exceptionally high position in this country for upwards of forty years. After studying under Hummel, at Weimar—during which he saw Beethoven (March 8, 1827)—he was, in his 17th year, presented by the illustrious pianist to Weber, who received him into his house, and from the beginning of 1821 until the end of 1824, treated him, in Sir Julius's own words, 'not only as a pupil, but as a son.' At the age of nineteen young Benedict was, on Weber's recommendation, appointed to conduct a series of operatic performances at Vienna. A few years afterwards we find him as chef d'orchestre at the San Carlo at Naples, where he produced his first opera, 'Giacinta ed Ernesto'—a work which seems to have been too German for the Neapolitan taste. On the other hand, 'I Portoghesi in Goa,' which Benedict composed in 1830 for Stuttgart, may have been found too Italian for the Germans; since, unsuccessful in the city for which it was specially written, it was warmly received by the operatic public of Naples. The youthful maestro, who showed himself a German among the Italians, and an Italian among the Germans, went in 1835 to Paris, at that time the head-quarters of Rossini and Meyerbeer, a frequent place of rendezvous for Donizetti and Bellini, and the home of Auber, Hérold, and Adolphe Adam, of Halévy, Berlioz, and Félicien David. At Paris Benedict made the acquaintance of Malibran, who suggested his visiting London; and from 1835 until now we have had Weber's favourite pupil residing permanently among us. In 1836 Benedict was appointed to the musical direction of the Opera Buffa, started by the late John Mitchell at the Lyceum Theatre. Here he brought out with success a little work called 'Un Anno ed un Giorno,' originally given in 1836 at Naples. In 1838 he produced his first English opera, 'The Gypsy's Warning'—known in the present day to those who are not acquainted with it as a whole by the very dramatic air for the bass voice, 'Rage thou angry storm.' Benedict was engaged at Drury Lane Theatre as orchestral conductor throughout that period of Mr. Bunn's management, during which Balfe's most successful operas ('The Bohemian Girl,' 'The Daughter of St. Mark,' 'The Enchantress,' 'The Bondman,' etc.) were brought out. To this period too belong Sir Julius Bénedict's finest operas, 'The Brides of Venice' and 'The Crusaders,' both produced at Drury Lane under the composer's immediate direction. In 1850 Benedict accompanied Jenny Lind to the United States, and directed the whole of the concerts given by the 'Swedish

Nightingale,' with such unexampled success, during her famous American tour. On his return to England he accepted an engagement as musical conductor at Her Majesty's Theatre, and afterwards at Drury Lane, whither Mr. Mapleson's establishment was for a time transferred. When in 1860 Mr. Mapleson was about to produce (at Her Majesty's Theatre) an Italian version of 'Oberon,' he naturally turned to the composer who, above all others, possessed the secret of Weber's style, and requested him to supply the recitatives wanting in the 'Oberon' composed for the English stage, but absolutely necessary for the work in Italianised form. Benedict added recitatives which may now be looked upon as belonging inseparably to the Italian 'Oberon.' Eighteen hundred and sixty was also the year of Benedict's beautiful cantata on the subject of 'Undine'—produced at the Norwich Festival—in which Clara Novello made her last public appearance. In 1862, soon after the remarkable success of Mr. Dion Boucicault's 'Colleen Bawn,' Benedict brought out 'The Lily of Killarney,' for which Mr. Oxenford (probably in collaboration with Mr. Boucicault) had furnished the excellent libretto. In 1863 he composed the cantata of 'Richard Cœur de Lion,' for the Norwich Festival of that year. His operetta the 'Bride of Song' was given at Covent Garden in 1864; his oratorio of 'St. Cecilia,' at the Norwich Festival in 1866; that of 'St. Peter,' at the Birmingham Festival of 1870. As 'conductor' at chamber-concerts, where the duties of the musician so entitled consist in accompanying singers on the pianoforte, and in seeing generally that nothing goes wrong, Benedict has come at least as often before the public as in his character of orchestral chief. With rare interruptions he has officiated as conductor at the Monday Popular Concerts since they first started, now some sixteen years ago. His own annual concert has been looked upon for the last forty years at least as one of the great festivals of the musical season. There is no form of music which this versatile composer has not cultivated; and though more prolific masters may have lived, it would be difficult to name one who has laboured with success in so many different styles. In 1873 a symphony by the now veteran composer was performed for the first time at the Crystal Palace; and a second in the following year; so that a complete edition of Benedict's works would include, besides ballads and pianoforte fantasias, operas, oratorios, and cantatas, compositions in the highest form of orchestral music. Sir Julius received the honour of knighthood in 1871. On the occasion of his seventieth birthday he was named Knight Commander of the orders of Francis and Joseph (Austria), and of Frederic (Wurtemberg). It was determined in the same year, by his numerous English friends, to offer him a testimonial 'in appreciation of his labours during forty years for the advancement of art, and as a token of their esteem.' In accordance with this resolution a service of silver, including a magnificent group of candelabra, was presented to Sir Julius, the following summer, at Dudley House, before a number of the most distinguished musicians and amateurs in London. Besides being a member of the before-mentioned Austrian and Wurtemburgian orders, Sir Julius Benedict has been decorated by the Sovereigns of Prussia, Italy, Belgium, Sweden, Portugal, and Hanover. [H. S. E.]

BENEDICTUS, the song of Zacharias, the father of John the Baptist, taken from Luke i., is the canticle appointed, alternately with the Jubilate, to follow the lessons in the Morning Service of the Anglican Church. It has occupied that position from ancient times, being mentioned by Amalarius († 837) as following the lessons at Lauds. It followed the lessons in the ancient English offices, and was retained by Cranmer in his English Liturgy in 1549, at first without the Jubilate, which was added in 1582 to obviate repetition when the Benedictus occurred in the gospel or second lesson. Two chants are given for it by Marbeck in 'The Book of Common Prayer Noted,' of 1550, viz. the 5th tone with 1st ending, and the 8th tone with 1st ending. It is admirably adapted to more elaborate forms of composition, and there are two well-known ancient settings by Tallis and Gibbons.

The same canticle is also used by the Roman Church and is mentioned by Mendelssohn in his letter to Zelter describing the music of Holy Week. But a different 'Benedictus,' which is better known to musicians, is that which occurs in the service of the Mass, after the Sanctus, which has been the occasion for much famous and beautiful music by the greatest masters; the whole words of which are only 'Blessed is he that cometh in the name of the Lord.' [C. H. H. P.]

BENELLI, Antonio Peregrino, born Sept. 5, 1771, at Forli. It is doubtful whether, as is said, he received instruction in counterpoint from Padre Martini, who died when Benelli was little more than 12, and was unable, for above two years before his death, to bestow much care upon his scholars. Benelli had, however, the instruction of Padre Mattei, the successor of Martini.

In 1790 he made his first appearance at the San Carlo, at Naples, as first tenor. His voice was of moderate quality; but his method was admirable, and obtained for him a *succès d'estime*. Benelli accepted an engagement at London in 1798, where he was received with favour. In 1801 he repaired to Dresden, and remained until the year 1822, at which time, when 51, and after singing in public for 32 years, his voice failed, and he retired with a pension.

Benelli had also made himself known as a clever composer, particularly in the Church style; but his best works are his excellent 'Method,' and his 'Solfeggi' which ran through several editions. He was a successful contributor to the 'Allgemeine musikalische Zeitung' of Leipzig. Upon his retirement, he obtained from Spontini the post of professor of singing at the Berlin Opera, which he filled till 1829. He might

have remained much longer, had he not attacked Spontini with violence, in 1828, in the 'Allgemeine Zeitung,' à propos to his opera of 'Olimpia.' Unfortunately he had previously written a very favourable review of the same work: Spontini printed the two accounts side by side. Benelli had nothing to reply; he soon received his *congé* and departed, first to Dresden, where he still had his pension, then to Börnichen in the Hartz, where he died in poverty August 6, 1830. Benelli's real title to estimation is founded on his 'Gesanglehre' (1819), which appeared first in Italian, as 'Regole per il canto figurato,' and on his 'Bemerkungen über die Stimme,' in the A.M.Z. Leipzig, (1824). [J. M.]

BENINCORI, Angelo Maria, born at Brescia 1779, died at Paris Dec. 30, 1821; pupil of Ghiretti, Rolla, and Cimarosa. His opera of 'Nitteti' was produced in Italy, and well received also in Vienna about 1800. At Vienna he formed the acquaintance of Haydn, with whose quartets he was so delighted as to abandon dramatic composition for the time and write nothing but quartets. In 1803 he went to Paris and wrote two operas, which were accepted but never performed, and it was with difficulty that this excellent musician obtained sufficient pupils to secure him a subsistence. In 1815, 1818, and 1819, he brought out three operas without success. The end of his life was brightened by a hope he did not live to see realised. Isouard had died leaving his opera 'Aladin' unfinished, and this Benincori was commissioned to complete. A march for the first act, and the three last acts completed the work, which was enthusiastically received on Feb. 6, 1822, just six weeks after Benincori's death. Perhaps however the fact that the theatre was on this occasion for the first time lighted with gas may have had some share in the success of the opera. He left much music in MS., but his best compositions are probably his quartets. [M. C. C.]

BENINI, Signora, an Italian prima donna, singing at Naples with her husband in 1784. They came to London in 1787, and sustained the first parts in comic opera. Benini had a voice of exquisite sweetness, and finished taste and neatness, but too little power for a large theatre. Though generally confined to opera buffa, yet her appearance and style seemed much more adapted to the opera seria, for which she had sufficient feeling and expression, as she showed in her excellent performance of Jephtha's daughter. During an illness of Mara, she filled with great sweetness, and much more appropriate figure and manner, her part in Tarchi's 'Virginia.' She had not indeed the gaiety of countenance nor the vivacity requisite for a *prima buffa*, and, though a singer of considerable merit, had to give way when Storace appeared. Of her subsequent life nothing is known. [J. M.]

BENNET, John, published in 1599 a set of 'Madrigals to four voyces,' which he described on the title as 'his first works.' These are seventeen in number, and excellent examples of that style of composition. He also contributed to Morley's collection 'The Triumphes of Oriana,' 1601, the well-known madrigal 'All creatures now are merry minded,' and to Ravenscroft's 'Briefe Discourse,' 1614 (see Ravenscroft), five compositions in parts. In the preface to the latter work Ravenscroft speaks of him in highly eulogistic terms. Some anthems and organ pieces by Bennet are extant in MS., whence it may be conjectured that he was connected with one of the cathedrals. [W. H. H.]

BENNET, Saunders, was organist at Woodstock, and composer of some pieces for the pianoforte and several songs and glees. He died of consumption in 1809, at an early age. [W. H. H.]

BENNETT, Alfred, Mus. Bac., Oxon., was the eldest son of Thomas Bennett, organist of Chichester. In 1825 he succeeded William Woodcock, Mus. Bac., as organist of New College, Oxford, and organist to the University. He published a volume containing a service and some anthems of his composition, and in 1829, in conjunction with William Marshall, a collection of chants. He died, 1830, by an accident, aged 25. [W. H. H.]

BENNETT, Thomas, born about 1779, was a chorister of Salisbury Cathedral under Joseph Corfe, organist and master of the choristers there. He became organist of St. John's Chapel, Chichester, and in 1803 organist at Chichester Cathedral. He published 'An Introduction to the Art of Singing,' 'Sacred Melodies' (selected), and 'Cathedral Selections.' He died March 21, 1848, aged sixty-nine. [W. H. H.]

BENNETT, William, was born about the year 1767 at Coombeinteignhead, near Teignmouth. He received his early musical education at Exeter under Hugh Bond and William Jackson. He then came to London, and studied under John Christian Bach, and afterwards under Schroeter. In 1793 he was appointed organist of St. Andrew's Church, Plymouth. His compositions comprise anthems, glees, songs, and pianoforte and organ music. [W. H. H.]

BENNETT, Sir William Sterndale, Mus. Doc., M.A., D.C.L., the only English musical composer since Purcell who has attained a distinct style and individuality of his own, and whose works can be reckoned among the models or 'classics' of the art, was born at Sheffield April 13, 1816. Like almost all composers of eminence he inherited the musical temperament; his grandfather, John Bennett, having been lay clerk at King's, St. John's, and Trinity Colleges, and his father, Robert Bennett, an organist at Sheffield, and a composer of songs; and doubtless he thus received some of that early familiarity with things musical in the daily life of his home which has had so much influence in determining the bent and the career of many eminent composers. The death of his father when he was but three years old cut him off from this influence of home tuition or habituation in music, but his education

in the art seems to have been well cared for by his grandfather, to whose home at Cambridge he was then transferred. At the age of eight he entered the choir of King's College Chapel, but his exceptional musical ability became so evident, that two years after he was removed from Cambridge and placed as a student in the Royal Academy of Music, with which institution his name was to be closely connected throughout his later life. He received instruction from Mr. Lucas and Dr. Crotch in composition, and from Mr. W. H. Holmes in pianoforte-playing, from whom he subsequently passed to the veteran, Cipriani Potter; and it may be assumed that to the influence of this teacher, himself the pupil and the enthusiastic votary of Mozart, we may trace in part that admiration for the pure style and clear form of the art of Mozart, which Bennett retained to the end of his life, in the midst of all the vicissitudes of modern musical fashion, and the influence of which is so distinctly traceable in his own music. Among the unpublished compositions of his Academy student days are some productions of great merit; but the first on which his reputation as composer depends (and which stands as Opus 1 in the list of his compositions), is the Concerto in D minor, written in 1832, and performed by the composer, then in his seventeenth year, at the prize concert of the Academy in 1833, on which occasion Mendelssohn was present, and encouraged the young composer by his warmly expressed sympathy and admiration, while the committee of the Academy gave a practical proof of their appreciation by publishing the work at their own expense. His next published work, the 'Capriccio in D minor,' op. 2 (dedicated to Cipriani Potter), clearly shows in its opening theme the influence of his admiration for Mendelssohn, then the central figure of the musical world, though there are touches of complete originality suggesting the pianoforte style which the composer subsequently made his own. The Overture to 'Parisina,' a most impassioned work, was composed in 1834, as also the Concerto in C minor, played at a concert of the Society of British Musicians in the same year; a work in the highest and purest style of the Mozart model, and evincing in some portions a constructive power worthy of the composer's great predecessor. In 1836 the impression produced by his unpublished F minor Concerto and the beautiful 'Naiades' overture, led to an offer from the firm of Broadwood to defray the expenses of his residence in Leipsic for a year, in order that he might have the opportunity of extending his circle of musical sympathy and experience, as well as of profiting by the neighbourhood and influence of Mendelssohn. That he did profit in his art by this visit is scarcely to be doubted, but it may be said that he gave to Leipsic at least as much as he carried away; and by the compositions produced there, as well as by the evidence afforded of his genius as a musician and pianoforte-player, he established for himself a reputation in that city of music higher than has perhaps been generally conceded to him in his native country, and won the friendship and enthusiastic eulogies of Robert Schumann. It is to this visit probably that is to be traced the idea still current in England that Bennett was a pupil and a mere imitator of Mendelssohn; an idea which can only be entertained by those who are either ignorant of his works or totally destitute of any perception of musical style, but which has been parrotted by incapable or prejudiced critics till it has come to be regarded by many as an admitted fact. After his return to England, Bennett composed in 1840 his other F minor Concerto, the published one, which is among the best known of his works, and one of the finest of modern compositions of its class. During a second visit to Leipzig in 1840–1 he composed his 'Caprice in E' for pianoforte and Orchestra, and his Overture 'The Wood Nymphs,' both among the most finished and artistic of his compositions. From 1843 to 1856 he was brought periodically before the English public by his chamber concerts, at which his individual and exceptional style and ability as a pianoforte-player were fully recognised. It may here be mentioned that in 1844 he married Mary Anne, daughter of Captain James Wood, R. N. In 1849 he founded the Bach Society for the study and practice of Bach's music, his enthusiasm for which was very likely in the first instance kindled by Mendelssohn, who did so much to open the eyes of his contemporaries to the grandeur of Bach's genius. One result of this was a performance of the Matthew Passion—the first in England—on April 6, 1854. In 1853 the director of the Gewandhaus Concerts offered him the conductorship of those concerts. In 1856 Bennett was engaged as permanent conductor of the Philharmonic Society, a post which he held till 1866, when he resigned it, and became Principal of the Royal Academy of Music. In 1856 he was elected, by a great majority, to fill the chair of Musical Professor at the University of Cambridge, where he also made special efforts to promote the knowledge and study of Bach's music, and shortly after his election received from the University the degree of Doctor of Music. In 1857 the University further conferred on him the degree of M.A., and at the same time a salary of £100 a year was attached to his Professorship. The year 1858 saw the production of his cantata the 'May Queen,' at the Leeds Musical Festival, a work full of beauty in the chorus writing, the solos, and the instrumentation, though heavily weighted by an absurd and ill-written *libretto*. No such drawback is attached to his other important choral work, 'The Woman of Samaria,' first produced with great success at the Birmingham Festival of 1867, and which, though it does not contain the elements of popularity for general audiences, has elicited the high admiration of all who can appreciate the more delicate and recondite forms of musical expression. For the Jubilee of the Philharmonic Society, in 1862, he wrote one of his most beautiful works, the 'Paradise and the Peri' overture, in which the 'programme' style of music (i. e. music illustrative of certain verbally stated ideas) is treated with a

delicate and poetic suggestiveness which charms alike the educated and the uneducated listener. In 1870 he received the honorary degree of D.C.L. from the University of Oxford. In 1871 Bennett received the distinction of knighthood, an honour which could add nothing to such an artist's reputation as his. In 1872 a public testimonial was presented to him at St. James's Hall in presence of a large and enthusiastic audience, and a scholarship at the Royal Academy of Music was founded out of the subscriptions.

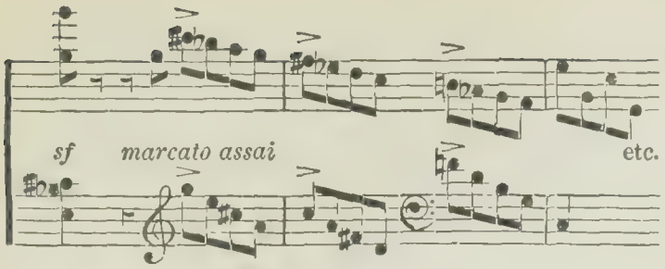
Bennett died after a short illness, almost 'in harness,' as it might be said, on Feb. 1, 1875. So quiet and unobtrusive had been his later life, that the spectacle of the crowd of distinguished persons who assembled at Westminster Abbey on the 6th to pay their last tribute of respect at his funeral, conveyed to many, even among those who had been in the habit of meeting him in society, the first intimation of the true intellectual rank of their departed countryman.

In estimating the position in his art of Sterndale Bennett (by this double name he has always been best known among writers and discoursers on music), it must be admitted that his genius had not that irresistible sweep and sway which compels the admiration even of the crowd, and utters things which sink deep into the souls of men. He can hardly be reckoned among the great musical poets of the world, and it would be both unwise and uncritical to claim that place for him. But what he wanted in power is almost made up, in regard to the artistic enjoyment to be derived from his works, in individuality and in finish. He is in a special degree a musician's composer. His excellences, in addition to the real and genuine feeling for beauty and expression which pervades his music, belong to that interesting and delicate type of art which illustrates in a special degree the fitness of means to an end, the relation between the feeling expressed and the manner and medium of expressing it; a class of artistic production which always has a peculiar interest for artists and for those who study critically the details of the art illustrated. His compositions do not so much carry us away in an enthusiasm of feeling, as they compel our deliberate and considerate admiration by their finish and balance of form, while touching our fancy by their grace and suggestiveness. But these qualities are not those which compel the suffrages of a general audience, to whom in fact many of the more subtle graces of Bennett's style are not obvious, demanding as they do some knowledge of the resources of the art, as well as critical and discriminating attention, for their full appreciation. On the other hand, the enjoyment which his works do convey, the language which they speak, to those who rightly apprehend it, is of a very rare and subtle description, and one to which there is no precise parallel in the art of any other composer.

If we try to define the nature of Bennett's genius more in detail, we should describe him in the first place as being almost, one might say, a born pianist. His complete sympathy with this instrument, his perfect comprehension of its peculiar power and limitations, are evident in almost everything he wrote for it; and his pianoforte compositions form, numerically, by far the larger section of his writings. His love for the instrument, indeed, might be said to have developed into favouritism in some instances, for in the Sestett for piano and stringed instruments the lion's share of the labours and honours of the performance is so completely given to the former that the work becomes almost a pianoforte concerto with accompaniments for strings only. In his pianoforte concertos, written as such, however, the composer gives its full share of importance to the band part, which is treated always with great beauty and piquancy, and an equally unerring perception of the special æsthetic qualities of the various instruments. In his treatment of the pianoforte, Bennett depends little upon cantabile passages, which are only by convention a part of the function of the piano, and in his writings are mostly episodical[1]; his sources of effect lie more in the use of glittering staccato passages and arpeggio figures, which latter peculiarly characteristic pianoforte effect he used, however, in a manner of his own, often alternating single with double notes in extended passages, as in this—

from the short 'Capriccio in A minor,' a very typical specimen on a small scale of his style of workmanship; at other times doubling them in close passages for both hands, as in the following from the finale of the 'Maid of Orleans' Sonata—

[1] A curious and charming exception is the now well-known 'Serenade' from the 'Trio' for pianoforte and strings, in which the piano has the singing melody with a pizzicato accompaniment for the violin; the composer, with his characteristic ear for subtleties of timbre, having evidently conceived the idea of giving a cantabile effect to the percussion sounds of the piano by opposing to it the still shorter and sharper sounds of the pizzicato.



or in the following highly characteristic passage from the same movement—

Passages of this class, which abound in these compositions, and the adequate and precise execution of which is by no means easy, illustrate the peculiarly hard bright glitter of effect which characterises Bennett's bravura passages for the piano, and which brings out in such high relief the qualities which are special to the instrument. Speaking more generally, his pianoforte works are characterised by an entire disdain of the more commonplace sources of effect; they are never noisy or showy, and there is not a careless note in them; the strict and fixed attention of both player and listener is demanded in order to realise the intention of music addressed mainly to the intellect and the critical faculty, never to the mere sense of hearing. As a whole, Bennett's pianoforte music is remarkably difficult in proportion to the number of notes used, from that delicate exactitude of writing which demands that every note should have its full value, as well as from the peculiar way in which his passages often lie for the hand, and which demands the greatest evenness of finger-power. Hence his works are not popular in the present day with amateurs, who prefer what will enable them to produce more thrilling effects with less trouble; but their value as studies and models for a pure style is hardly to be surpassed. Compared with the writings of Beethoven, or even of lesser composers who, following in his steps, have transferred the symphonic style to the piano, such works as those of Bennett have of course a very limited range, nor have they the glow and intensity which Chopin, for example, was able to infuse into what is equally a pure pianoforte style; but as specimens of absolutely finished productions entirely within the special range of the piano, they will always have the highest artistic interest and value; an appreciation of their real merit being almost a test of true critical perception.

Looking at the works of Bennett more generally, it may be observed that they show remarkable evidence of his apparently intuitive insight into problems and theories in regard to musical construction which have only been definitely recognised and tabulated by theorists since he began to write. When the school of composers who tumble notes into our ears in heaps, any way, have had their day, and it is again recognised that musical composition is a most subtle and recondite art, and not a mere method of jumbling sounds together to signify this or that arbitrarily chosen idea, it is probable that Bennett will receive much higher credit than has yet been accorded to him as an advanced thinker in music. The theory which connects every sound in the scale of a key with that key, making them all essential to its tonality, and the harmonic relations which are thereby shown to be logically consistent though little practised hitherto, received continual practical illustration in the works of Bennett, whose peculiar intellectually constructed harmonies and progressions are among the causes alike of his interest for musicians and his disfavour with the less instructed amateur population, whom they not unnaturally puzzle. A great English musical critic has pointed out, in a note on the 'Wood Nymphs' Overture (in the Philharmonic programme of March 22, 1871), the passage where 'the so-called chord of the diminished 7th from F sharp, with intervening silences, is heard on the unaccented second and fourth beats of the bar, and then an unaccompanied D, thrice sounded, asserts itself as the root of the chord,' thus presenting, adds Mr. Macfarren, 'a harmonic fact in an aspect as unquestionable as, at the time of writing, it was new.' But Bennett's music is full of such suggestions of the more extended modern view of the statics of harmony, the rather noteworthy as it does not appear that he made it the subject of any definite or deliberate theorising, or was indebted for his suggestions of this kind to anything more than his own intuitive insight into the more subtle harmonic relations. It is the frequent use of what may be termed perhaps (borrowing an expression from colour) the 'secondary' rather than the 'primary' relations of harmony—the constant appeal to the logic rather than the mere sensuous hearing of the ear—which gives to his music that

rather cold intellectual cast which is repelling to the average listener. In such a passage as this—

the ear of the uninitiated listener is almost startled by the closing E, like the sharp blow of a hammer, at the foot of an arpeggio passage which seems to presage a modulation to C through the dominant ninth on G. Equally significant passages might be quoted, such as this from the 'Rondeau à la polonaise'—

and many others that might be adduced, in which evidence is given that the composer had before his mind conceptions of harmonic relation new or unusual at the time, but which have since been accepted and formulated into theory.

Bennett's larger works for orchestra, and his secular and sacred Cantatas already mentioned, are characterised, like his piano music, by great finish and perfection of form and detail, and by a peculiarly refined perception of the relation of special instruments and special combinations to the end in view. His one published Symphony, that in G minor, may be thought slight and fragile in effect in comparison with the now prevalent 'stormy' school of writing; but those who are alive to the fact that power of sound is not power of conception, who look to thought and feeling rather than to mere effect in music, will find no deficiency of passion and impulse in parts of this beautiful work, while the grace and refinement both of composition and instrumentation are universally admitted. His cantata, the 'May Queen,' displays the most refined and artistic writing, both in regard to the effectiveness and spontaneous character of the choruses, the melodic beauty of the solos, the strongly-marked individuality imparted to the music of the different personages, and the charming and piquant effects of the orchestral accompaniments. Indeed, the work has very much the character of an operetta off the stage, and one cannot but regret that a composer who showed in this work so much power of dramatic characterisation in music should not have enriched the English lyric stage (poor enough!) with an opera. 'The Woman of Samaria' is less spontaneous in character, and in its style and treatment does not appeal to the popular mind; but it will always be delightful to musicians, and to those who hear considerately and critically. It is in general construction very much modelled on the style of Bach, whose peculiar power Bennett has successfully emulated in the introductory movement, with the Chorale sung simultaneously with, but in a different *tempo* from, the independent orchestral movement. Bennett's separate songs (two sets published during his life, and one in course of publication when he died) are small compositions of almost Greek elegance and finish, both in the melodious and expressive character of the voice part, and the delicate suggestiveness of the accompaniments. They illustrate in the most perfect degree the character which belongs more or less to all his art; that of high finish of form and grace of expression, not without deep feeling at times, but marked in general rather by a calm and placid beauty, and appealing to the fancy, the sentiment, and the intellect, rather than to the more passionate emotions.

The most puzzling fact in connection with the artistic career of Sterndale Bennett is the comparative fewness of his compositions, at a time when his mind and genius were still young, notwithstanding the power of his earlier works, and the promise which those who then knew him saw of a still higher development. In all probability the explanation of this is to be found partly in the desire to secure a more comfortable subsistence from the regular exercise of professional business, and partly in what those who knew him best described as the 'shy and reticent' character of his genius, which led him to distrust his capability of accomplishing great works, and of taking his stand in the world on the strength of his genius alone. 'He was not, in his later years at least,' says one who knew him, 'quick to publish his works; he always had individuality without a rapid execution, and took more time a great deal to finish than to sketch.' Whatever be the true explanation, it is matter for deep regret for all lovers of what is best and purest in musical art, that one so well fitted to add to its stores should have condemned himself, for many of the best years of his life, mainly to the exercise of a teacher's vocation. Of the brilliant gifts as a player, and the *tours de force* of memory, by which the composer astonished and delighted the Leipzig circle in his younger days, there are accounts extant which remind us of what used to be told of Mozart. When he sold his 'Capriccio in E' to a Leipzig publishing firm, they were surprised at receiving only the MS. of the orchestral score, and on their inquiring for the pianoforte part, it turned out that this had never been written down, though the composer had played the work both in London and Leipzig, and had apparently entirely forgotten the omission in handing over the MS. to the publishers.

By those who knew Sterndale Bennett he is described as having been a man of most kindly nature, and exceedingly modest and unassuming in manner and character. The feeling of loyal and affectionate attachment which he created among the pupils of the Royal Academy of Music, by some of whom his death was lamented almost like that of a kind parent, is a strong testimony to the amiability of his character—an amiability which was exercised without the

slightest derogation from his strict principles as an instructor. A significant instance is related of his determination to keep up a strict adherence to the purest style of music in the Academy. On entering the building one morning he fancied he detected from one of the practising rooms the sounds of the overture to 'Zampa,' and opened door after door till he found the culprits, two young ladies, who in answer to his grave enquiry 'how they came to be playing such music?' explained that they were only practising sight-reading of piano duets—to which the Professor replied by carrying away the offending volume, returning presently from the library with a duet of Mozart's which he placed before them in lieu of it. What he preached to his pupils he practised himself. In his whole career he never condescended to write a single note for popular effect, nor can a bar of his music be quoted which in style and aim does not belong to what is highest in musical art. Neither this quality nor his amiability of character preserved him, however, from attacks and detraction of the most ungenerous kind during his lifetime, from those who had their own motives in endeavouring to obscure his fame, and who found an unworthy assistance to their aims from so-called 'critics' in public journals, one of which for a long time conspicuously disgraced its musical columns by repeated sneers and inuendoes against a musician who was an ornament to the art and an honour to his country—a process which, as might be expected, only redounded to the discredit of those who stooped to it.

The following is a list of Sterndale Bennett's published works:—

Op. 1. First Concerto, in D minor.
„ 2. Capriccio for Pianoforte, in D minor.
„ 3. Overture, 'Parisina.'
„ 4. Second Concerto, in E flat.
„ 5.
„ 6.
„ 7.
„ 8. Sestet for Pianoforte and Strings.
„ 9. Third Concerto, in C minor.
„ 10. Three Musical Sketches—'Lake,' 'Millstream,' and 'Fountain.'
„ 11. Six Studies, in Capriccio form.
„ 12. Three Impromptus.
„ 13. Pianoforte Sonata, dedicated to Mendelssohn.
„ 14. Three Romances for Pianoforte.
„ 15. Overture, 'The Naiads.'
„ 16. Fantasia for Pianoforte, dedicated to Schumann.
„ 17. 'Three Diversions,' Pianoforte for four hands.
„ 18. Allegro Grazioso.
„ 19. Fourth Concerto, in F minor.
„ 20. Overture, 'The Woodnymph.'
„ 21.
„ 22. Caprice, in E major, Piano and Orchestra.
„ 23. Six Songs (First Set).
„ 24. Suite de Pieces, for Piano.
„ 25. Rondo piacevole for Pianoforte.
„ 26. Chamber Trio.
„ 27. Scherzo, for Pianoforte.
„ 28. Introductione e Pastorale, Rondino; Capriccio, in A minor—for Piano.
Op. 29. Two Studies—L'Amabile e L'Appassionata.
„ 30. Four Sacred Duets, for Two Trebles.
„ 31. Tema e Variazioni, for Piano.
„ 32. Sonata-duo, Pianoforte and Violoncello.
„ 33. Preludes and Lessons—60 pieces in all the keys, composed for Queen's College, London.
„ 34. Rondeau—'Pas triste pas gai.'
„ 35. Six Songs (Second Set).
„ 36. 'Flowers of the Months,' of which January and February were completed and published, 1876.
„ 37. Rondeau à la Polonaise, for Piano.
„ 38. Toccata, for ditto.
„ 39. 'The May Queen'—a Pastoral.
„ 40. Ode for the Opening of the International Exhibition, 1862. Words by Mr. Tennyson.
„ 41. Cambridge InstallationOde, 1862. Words by Rev. C. Kingsley.
„ 42. Fantasie-Overture, 'Paradise and the Peri.' 1862.
„ 43. Symphony in G minor.
„ 44. Oratorio, 'Woman of Samaria.'
„ 45. Music to Sophocles' 'Ajax.'
„ 46. Pianoforte Sonata, 'The Maid of Orleans.'

The Major, Minor, and Chromatic Scales, with Remarks on Practice, Fingering, etc.
Sonatina in C.
Romance, 'Geneviève.'
Minuetto espressivo.
Præludium.
Two Songs—'The better land'; 'In radiant loveliness.'
The Chorale Book, 1862; and Supplement to ditto, 1864; edited in conjunction with Mr. Otto Goldschmidt. The Supplement contains two original tunes by W. S. B.
Anthems—'Now, my God, let, I beseech Thee'; 'Remember now thy Creator'; 'O that I knew'; 'The fool hath said in his heart.'
Four-part Songs—'Sweet stream that winds'; 'Of all the Arts beneath the Heaven'; 'Come live with me.'
Four Songs in course of publication when he died.

[H. H. S.]

BENUCCI, an Italian basso engaged at Vienna in 1783, appeared in London in 1788 as first buffo; but, notwithstanding his fine voice and acting, was not so much admired as he deserved. He sang one more season here, appearing as Bartolo in Paisiello's 'Barbiere,' and as Zefiro in Gazzanigha's 'Vendemmia.' [J. M.]

BENVENUTO CELLINI. Opera in two acts, the words by Wailly and Barbier, the music by Berlioz, produced at the Académie Royale de Musique Sept. 3, 1838, and withdrawn after three representations, and what its author calls 'une chute éclatante.' It was performed at Covent Garden ('grand semi-seria,' in three acts) June 25, 1853.

BERALTA, an Italian soprano singer, engaged at London in 1757. She sang the part of 'Deceit' in Handel's last oratorio, 'The Triumph of Time and Truth,' at its production at Covent Garden, March 11, 1757, and at the subsequent performances of it. [J. M.]

BERBIGUIER, Benoit Tranquille, famous flute-player, born Dec. 21, 1782, at Caderousse in the Vaucluse; intended for the law, but the love of music being too strong for him, ran away from home and entered himself at the Conservatoire in Paris. From 1813 to 1819 he served in the army, and after that resided in Paris. As an adherent of the Bourbons he was driven thence by the Revolution of 1830 to take refuge at Pont le Voyé, where he died Jan. 29, 1838. As a player he stood in the first rank. His contemporaries praise the softness and peculiar sweetness of his tone and the astonishing perfection of his *technique*. As a composer he was very fertile in music for his instrument, both solo and accompanied—11 concertos, many fantasias and variations, 140 duos, 32 trios, with quartets and symphonies. But they are very unequal in excellence, generally more brilliant and showy than really good, the work of the *virtuoso* rather than of the musician. [A. M.]

BERCEUSE, a cradle song. A piano piece consisting of a melody with a lulling rocking accompaniment. Chopin's Op. 57 is a well-known example. Schumann has a 'Wiegenliedchen'—which is the same thing—in the Albumblätter (Op. 124), and his 'Schlummerlied' is a berceuse in all but the name.

BERCHEM, Jacques or Jachet, was born in Flanders at the commencement of the 16th century, and flourished in the epoch immediately preceding that of Lassus and Palestrina. He passed the greater part of his life, from 1535 to 1565, in the service of the Duke of Mantua,

and was called by the Italians Giachetto di Mantova. He must be carefully distinguished from two other composers, Jachet de Buus and Jachet de Wert, who lived in Italy at the same period; but it is impossible to decide which of the three is the author of certain pieces which bear the name of Jachet only. His motets, masses, and madrigals are to be found in the various collections printed at Venice between the years 1539 and 1545. One of his chief productions is a setting in four-part music of ninety-three stanzas of the 'Orlando Furioso' of Ariosto (Venice, 1561). [J. R. S. B.]

BERENSTADT, Gaetan. The name of this singer, of whom we have elsewhere no record, appears for the first time in the bass part of Argante in Handel's 'Rinaldo,' as revived in 1717, in which he took the place of the celebrated Boschi. After this we do not find him again in London till 1723, in which year he sang in Buononcini's 'Farnace' and Attilio's 'Coriolano,' as well as in the 'Flavio' and 'Ottone' of Handel. In the next year he performed in the 'Vespasiano' of Attilio, Buononcini's 'Calfurnia,' and Handel's 'Giulio Cesare.' His name does not occur again. [J. M.]

BERG, Adam, a renowned music printer of Munich, whose publications extend from 1540 to about 1599. His great work was the 'Patrocinium musices,' published under the patronage of the Dukes of Bavaria, the first volume of which appeared in 1573. After the death of Duke Albrecht V, in 1579, the publication was interrupted, and not resumed till 1589, when the second series appeared, also containing five volumes. The following is a list of the contents of the entire work:—

VOL. I. 1573.
O. de Lasso. Cantiones.
4 voices.
1. Pater noster.
2. Salve Regina misericordiæ.
3. Gaudent in cœlis.
4. Nos qui sumus.
5. Pulvis et umbra.
6. Lauda anima mea.
7. Pauper sum ego.
5 voices.
8. Exurgat Deus.
9. Misericordiam Domini.
10. Oculi omnium (2 parts).
11. Domine clamavi (3 do.).
12. Quis mihi det lacrimis.
13. Martini festum (2 pts.)
14. Exaudi Domine.
6 voices.
1. Media in vita (2 pts.
2. Ante me non est.
3. Confitemini (2 pts.).
4. O Gloriosa Domina.
5. In Deo salutare (2 pts.).
6. Regnum mundi.
7. Agimus tibi gratias.

VOL. II. 1574.
O. de Lasso. Masses.
1. Super 'Ita rime dolenti.'
2. „ Motetam 'Credidi propter.'
3. „ do. 'Sydus ex claro.'
4. „ do. 'Credidi propter.'
5. „ 'Le Berger et la Bergère.'

VOL. III. 1574.
O. de Lasso. Officia.
Vidi aquam.
Asperges me.
Officium Natalis Christi.
Do. Resurrectionis.
Do. Pentecostes.
Do. Corporis Christi.

VOL. IV. 1575.
O. de Lasso.
Passio. 5 vocum.
Vigiliæ mortuorum. 4 voc.
Lectionis matutinæ.
De Nativitate Christi. 4 voc.

VOL. V. 1576.
O. de Lasso. Magnificats.
1. 1mi Toni, 4 voc.
2. 5ti Toni, 4 voc.
3. 1mi Toni, 5 voc.
4. 2di Toni, 5 voc.
5. 4ti Toni. 5 voc.
6. 4ti Toni. 6 voc.
7. 5ti Toni, 6 voc.
8. 7mi Toni. 6 voc.
9. 6ti Toni, 8 voc.
10. 7mi Toni, 8 voc.

VOL. VI. 1589.
O de Lasso. Masses.
1. Super 'Dittes Maitresse.'
2. „ 'Amar Donne.'
3. „ 'Qual donna attende.'
4. „ 'In die tribulationis.'
5. „ 'Io son ferito Hailasso.'
6. Pro defunctis.

VOL. VII. 1589.
Francesco Sale. Officia. 5 et 6 vocum.
1. S. Andreæ Apostoli.
2. Nicolai Episcopi.
3. Conceptionis Mariæ.
4. Thomæ Apostoli.
5. Nativitatis Christi, in Imâ missa.
6. In summâ missâ. 6 voc.
7. Stephani Proto Mart.
8. Johannis Evang.
9. Circumcisionis. 6 voc.
10. Epiphaniæ. 6 voc.
11. Conversionis Pauli.
12. Purificationis Mariæ.
13. Matthiæ Apostoli.
14. Annuntiationis Mariæ.
15. De Communi S. Mariæ, Conceptione, Nativitate, Visitatione et Presentatione eiusdem Mariæ.

VOL. VIII. 1591.
Blasius Amon. Masses. 4 voc.
1. Super Ut, re, mi, fa, sol, la, La, sol, fa, mi, re, ut.
2. „ 'Pour ung plaisir.'
3. „ 'Surge propera.'
4. „ 'Dixit Dominus mulieri Chananææ.'
5. Pro Defunctis.

VOL. IX. 1594.
Cæsar de Zacchariis. Intonationes.
1. Vespertina.
Alia intonatio.
1. Primus tonus.
2. Secondus do.
3. Tertius do.
4. Quartus do.
5. Quintus do.
6. Sextus do.
7. Septimus do.
8. Octavus do.
9. Mixtus do.
Hymni.
Conditor alme.
Veni redemptor.
Verbum superbum.
Christe Redemptor.
A solus ortus.
Deus tuorum.
Stephano primo mart.
Exultet cœlum.
Solennis dies advenit.
Salvete flores.
Ibid.
Hostis Herodes.
O lux beata.
Deus Creator.
Corde natus.
Lucis creator.
Dies absoluti.
Audi benigne.
Te lucis ante.
Ad preces nostras.
Ex more docti.
Christe qui lux es.
Jam ter quaternis.
Jesu quadragenarie.
Vexilla regis.
Salve festa dies.
Clarum decus jejunii.
Ad cœnam agni.
Vita sanctorum.
Jesu nostra redemptio.
Festum nunc.
Veni creator.
O lux beata.
Pange lingua.
Sacris solenniis.
Conditor alme siderum.

VOL. X. 1598.
Francesco di Sale
Missa, Super 'Exultandi tempus est.' 5 voc.

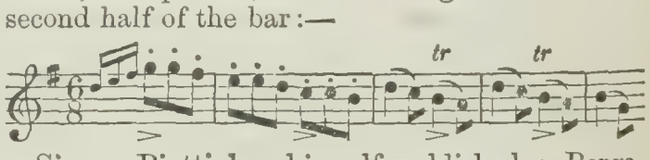
[F. G.]

BERG, George, a German by birth, was a pupil of Dr. Pepusch. In 1763 he gained the first prize medal awarded by the Catch Club for his glee 'On softest beds at leisure laid,' and obtained two other prizes in subsequent years. He published some books of songs sung at Marylebone Gardens, at which place in April 1765 he produced an ode called 'The Invitation.' Thirty-one of his glees and catches are included in Warren's collections. In 1771 he was organist of the church of St. Mary at Hill, near Billingsgate. He published several works for the organ, Pianoforte, flute, horn, etc., besides those above mentioned. [W. H. H.]

BERG, Johann, a music printer, born in Ghent, who set up a printing office in Nuremberg about 1550 in conjunction with Ulrich Neuber. After the death of Berg (about 1556) the office was carried on by Neuber and Gerlach. [F. G.]

BERGAMASCA—in the 'Midsummer Nights Dream,' a 'Bergomask.' An Italian dance, deriving its name from Bergamo, the well-known city of Tasso, Donizetti, and other eminent Italians. It is said to exist in old Italian *suites de pièces*.

According to Signor Piatti, himself a native of Bergamo, the characteristic dance of that district is of the following measure, like a country-dance, but quicker, with a strong accent on the second half of the bar:—



Signor Piatti has himself published a Bergamasca for Cello and Pianoforte (op. 14) which partakes of this character. Mendelssohn, however, in setting Shakspeare's 'Bergomask dance

between two of our company,' has given the measure an entirely different turn :—

BERGER, Ludwig, a remarkable pianoforte-player and gifted composer, born at Berlin April 18, 1777, and died there Feb. 16, 1838. His talent showed itself early, but received its great impulse from the notice taken of him by Clementi at Berlin in 1804, who undertook his tuition, and took him to St. Petersburg. Here he met Steibelt and Field, who had much influence on his playing. In 1812 he visited London, and became widely known as player and teacher. In 1815 he returned to Berlin, where he resided till his death, one of the most esteemed teachers of his time. Mendelssohn was his greatest pupil, but amongst others may be mentioned Taubert, von Herzberg, Henselt, and Fanny Hensel, Mendelssohn's sister. He latterly withdrew almost entirely from active life, owing to an over-fastidious hypochondriacal temper, which interfered much with his intercourse with society, and hindered the display of his remarkable ability as a composer. He left behind him a mass of good, nay even remarkable, music—pianoforte pieces, songs, cantatas, and unfinished operas. Amongst his published works his twenty-seven études are especially mentionable. These have been lately republished by Breitkopf, with a preface by C. Reinecke. [A. M.]

BERGGEIST, DER, a romantic opera in 3 acts; the story from Musäus' 'Rubezahl'; words by Döring; music by Spohr (op. 73). Produced at Cassel, March 24, 1825.

BERGONZI, Benedetto, a remarkable horn-player, born at Cremona, 1790, and died Oct. 1840. On Oct. 7, 1824, he received a silver medal from the Accademia of Milan for a valve-horn. [F. G.]

BERGONZI, Carlo, a celebrated violin-maker of Cremona. Born towards the end of the 17th century, he worked from about 1716 to 1755. He was a pupil of Antonio Stradivari, whom he imitated very closely in his early efforts, while his later instruments shew much originality and character. Their form and tone are equally beautiful, and they may justly be ranked immediately after those of Stradivari and Joseph Guarneri. He made not only violins, but also violas and cellos, which however are now very rare. His son, Michel Angelo, was but an indifferent violin-maker. [P. D.]

BERIOT, Charles Auguste de, celebrated violinist. Born of a noble Belgian family, Feb. 20, 1802, at Louvain. He had his first instruction in the violin from a local teacher, named Tiby, who was his guardian after the death of his parents; and made such rapid progress, that, when only nine years of age, he successfully performed in public a concerto of Viotti. He himself ascribed great influence on the formation of his character and the development of his talent to the well-known scholar and philosopher Jacotot, who, though himself no musician, imbued his young friend with principles of perseverance and self-reliance, which he never lost sight of throughout life, and which, more than anything else, contributed to make him attain that proficiency in his art on which his fame rests.

When nineteen years of age he went to Paris and pursued his studies there for some time under the advice of Viotti and Baillot, without actually being the pupil of either. After a short time he made his appearance in public with great success. From Paris he repeatedly visited England, where he met with a most brilliant reception. His first appearance at the Philharmonic Society took place on May 1, 1826, when he was announced as 'Violon de la chambre de sa Majesté le Roi de France.' On his return to Belgium he was nominated Solo-Violinist to the King of the Netherlands, which appointment he lost by the Revolution of 1830. For the next five years he travelled and gave concerts in England, France, Belgium, and Italy, together with the famous singer Maria Malibran, whom he married in 1835. At this time De Bériot was universally recognised as one of the most eminent of living violinists. After the sudden death of his wife he retired to Brussels in 1836, and did not appear in public till 1840, when he undertook a tour through Germany. In 1843 he was appointed Professor of violin-playing at the Brussels Conservatoire, and remained there till 1852, when the loss of his eyesight caused him to retire. He died at Louvain, April 20, 1870.

De Bériot may justly be considered the founder of the modern Franco-Belgian school of violin-playing, as distinguished from the classical Paris school, represented by Viotti, Kreutzer, Rode, and Baillot. He was the first after Paganini to adopt a great variety of brilliant effects in the way of harmonics, arpeggios, pizzicatos, etc., sacrificing to a certain extent the severity of style and breadth of tone, in which the old French school excelled. His playing was distinguished by unfailing accuracy of intonation, great neatness and facility of bowing, grace, elegance and piquancy. His compositions, which for a considerable time enjoyed general popularity, although not of much value as works of art, abound in pleasing melodies, have a certain easy, natural flow, and are such as to bring out the characteristic effects of the instrument in the most brilliant manner. The influence of Donizetti and Bellini on the one hand, and Auber on the other, are clearly visible.

De Bériot published seven concertos, eleven airs variés, several books of studies, four trios for piano, violin and violoncello, and together with Osborne, Thalberg and other pianists, a number of duos brilliants for piano and violin. He also wrote a rather diffuse book of instruction, 'Ecole transcendentale de Violon.'

Henri Vieuxtemps is the most distinguished of his numerous pupils. His son, Charles de Bériot, is a good pianist. [P. D.]

BERLIOZ, Hector, born Dec. 11, 1803, at La Côte Saint-André, near Grenoble, France; died March 9, 1869, at Paris.

He stands alone—a colossus with few friends and no direct followers; a marked individuality, original, puissant, bizarre, violently one-sided; whose influence has been and will again be felt far and wide, for good and for bad, but cannot rear disciples nor form a school. His views of music are practically if not theoretically adhered to by all eminent composers and executants since Beethoven; and if interpreted *cum grano salis* his very words could be used as watchwords which few musicians would hesitate to adopt. Take, for example, the following sentences, written at long intervals, yet forming a sort of profession of faith, to which Berlioz clung without flinching throughout the whole of his long career: 'Musique, art d'emouvoir par des combinaisons de sons les hommes intelligents et doués d'organes speciaux et exercés. . . . La musique, en s'associant à des idées qu'elle a mille moyens de faire naître, augmente l'intensité de son action de toute la puissance de ce qu'on appelle la poesie . . . réunissant à la fois toutes ses forces sur l'oreille qu'elle charme, et qu'elle offense habilement, sur le système nerveux qu'elle surexcite, sur la circulation du sang qu'elle accélère, sur le cerveau qu'elle embrase, sur le cœur qu'elle gonfle et fait battre à coups redoublés, sur la pensée qu'elle agrandit démesurément et lance dans les régions de l'infini: elle agit dans la sphère qui lui est propre, c'est-à-dire sur des êtres chez lesquels le sens musical existe réellement.' ('A travers chants,' p. 1.)

Berlioz's startling originality as a musician rests upon a physical and mental organisation very different from, and in some respects superior to, that of other eminent masters; a most ardent nervous temperament; a gorgeous imagination incessantly active, heated at times to the verge of insanity; an abnormally subtle and acute sense of hearing; the keenest intellect, of a dissecting analysing turn; the most violent will, manifesting itself in a spirit of enterprise and daring equalled only by its tenacity of purpose and indefatigable perseverance.

From first to last, from the 'Ouverture des Francs Juges' and the 'Symphonie fantastique' to 'Les Troyens,' Berlioz strove to widen the domains of his art; in the portrayal of varied and intense passions, and the suggestion of distinct dramatic scenes and situations, he tried to attain a more intimate connection between instrumental music and the highest poetry. Starting, as he did, on a voyage of discovery, no one need be surprised that he occasionally, nay perhaps frequently, sailed beyond his mark; and that he now and then made violent efforts to compel music to say something which lies beyond its proper sphere. But, be this as it may, his occasional failures do not render his works less interesting, nor less astonishing.

Berlioz was one of the most uncompromising champions of what, for want of a better name, has been dubbed 'programme music.' In his 'Symphonie fantastique' with its sequel 'Lelio,' and in 'Romeo et Juliette,' elaborate efforts are made, by means of programmes and superscriptions, to force the hearers' imagination to dwell on certain exterior scenes and situations during the progress of the music; and these efforts, it must be confessed, are not always successful. One either loses the musical thread and has to fly to the programme for explanation, or one dreams of the programme and misses the music. The really perfect specimens of Berlioz's instrumental works are in truth those in which the music speaks for itself, and the programme or superscription may be dispensed with. Such are, for instance, the 'Scène aux champs' and the 'Marche au supplice' in the 'Symphonie fantastique,' the 'Marche des Pélerins' in 'Harold,' the Overtures to 'King Lear,' 'Benvenuto Cellini,' 'Carnaval Romain,' 'Le Corsaire,' etc.

From a technical point of view certain of Berlioz's attainments are phenomenal. The gigantic proportions, the grandiose style, the imposing weight of those long and broad harmonic and rhythmical progressions towards some end afar off, the exceptional means employed for exceptional ends—in a word, the colossal, cyclopean aspect of certain movements, such as the 'Judex crederis' of his 'Te Deum,' or the 'Lacrymosa' and 'Dies iræ' of his 'Requiem,' are without parallel in musical art. The originality and inexhaustible variety of rhythms, and the surpassing perfection of his instrumentation, are points willingly conceded even by Berlioz's staunchest opponents. As far as the technique of instrumentation is concerned it may truly be asserted that he treats the orchestra with the same supreme daring and absolute mastery with which Paganini treated the violin, or Liszt the pianoforte. No one before him had so clearly realised the individuality of each particular instrument, its resources and capabilities. In his works the equation between a particular phrase and a particular instrument is invariably perfect; and over and above this, his experiments in orchestral *colour*, his combination of single instruments with others so as to form groups, and again his combination of several separate groups of instruments with one another, are as novel and as beautiful as they are uniformly successful.

French art can show nothing more tender and delicately graceful, more perfect in shape and diction than certain of his songs and choral pieces—the duet between Hero and Ursule, 'Vous soupirez Madame,' from 'Béatrice et Bénedict,' and single numbers among his 'Nuits d'été' and 'Irlande.' Nothing more touching in its simplicity than 'L'adieu des bergers' and 'Le repos de la Sainte Famille,' from 'L'Enfance du Christ.'

But there is a portion of Berlioz's works from which many of his admirers, who are certainly not open to the charge of being musical milksops, recoil with instinctive aversion. One must draw

the line somewhere, and the writer would draw it on the hitherside of such movements as the 'Orgies,' which form the finales of the 'La Symphonie fantastique' and 'Harold en Italie,' or the chorus of devils in the 'Damnation de Faust.' Bloodthirsty delirious passion such as is here depicted may have been excited by gladiator and wild beast shows in Roman arenas; but its rites, whether reflected through the medium of poetry, painting, or music, are assuredly more honoured in the breach than the observance. On the other hand, it cannot be overlooked that these same reprehensible pieces contain some of their author's most astonishing technical achievements.

No musician, unless he writes for the stage, can hope to live by his compositions in France; accordingly Berlioz was driven to the dubious 'métier' of beneficiaire—to conducting concerts of his own music whenever and wherever he could get a chance, and to journalism, 'feuilletonism.' A note of bitter complaint at the tortures hardly to be borne which the 'compte rendu' on matters musical he furnished weekly during a space of twenty years for the 'Journal des Débats' entailed on him, runs through all his prose. These newspaper scraps made a name for their author as the foremost musical critic and one of the most brilliant of French journalists; whilst the perfection of style and graphic narrative of his Mémoires, have proved him the equal of the best modern prosateurs. Frenchmen only can say whether or not his verse is likely to live by its own merits, apart from the music to which he wedded it, in 'L'Enfance du Christ,' 'Béatrice et Bénedict,' and 'Les Troyens.'

Berlioz knew the principal works of Beethoven, Weber, Spontini, Mozart, in every respect, down to the smallest details, by heart, and he has always and very frequently spoken of them with contagious enthusiasm and convincing eloquence. Yet he was by no means an erudite musician, his knowledge being restricted, like that of most men of genius, to the range of his personal sympathies. Of Handel, Bach, Palestrina, he knew little, and at times spoke in a manner to lay bare his ignorance.

Berlioz's father, a physician, wished him to follow the same career. At eighteen years of age, and much against his will, he was sent to Paris as a student of medicine; music however so engrossed him that, though he attended lectures and tried hard to overcome his repugnance to the dissecting room, his anatomical studies came to nothing, and he entered the Conservatoire as a pupil of Lesueur, after a violent quarrel with his parents, who stopped supplies and forced him to earn a scanty subsistence by singing in the chorus of an obscure theatre, Le Gymnase Dramatique. At the Conservatoire, which he once left in a huff and re-entered as a member of Reicha's 'classe de contrepoint,' he met with little encouragement from the dons, to whom his sentiments and beliefs, his ways and works were more or less antipathetic; and he was positively hated by the director, Cherubini. So that, in spite of his most remarkable attainments (the 'Ouverture des Francs Juges' and the 'Symphonie fantastique,' which he wrote whilst a pupil at the Conservatoire, are more than sufficient to show that he was then already the master of his masters, Cherubini of course excepted) it was only after having been repeatedly plucked that he was permitted, on the fourth trial, to take a prize for composition. In 1828 he took the second, and at last, in 1830, with the cantata 'Sardanapale,' the first prize—the 'Prix de Rome'—to which is attached a government pension, supporting the winner three years at Rome. On his return to Paris, finding it difficult to live by composing, he was driven to earn a livelihood by contributions to newspapers, and by occasional concerts and musical festivals, which he organised on a large scale. The story of his violent and eccentric passion for Miss Smithson—an Irish actress who came to Paris with an English troupe, and made a sensation as Ophelia and Juliet, whilst the enthusiasm for Shakspeare, kindled by Victor Hugo, was at its height—is minutely told in his 'Memoires,' published after his death. That sad book contains many a hint of the misery he subsequently endured with her as his wife, the prolonged fits of ill health, bad temper and ungovernable jealousy she was subject to; it tells how disgracefully she was treated by the very audience who had lauded her to the skies when she reappeared as Ophelia after the pseudo-enthusiasm for Shakspeare had blown over; how she fell from her carriage, broke a leg, and could act no more; how her losses as the manageress of an unsuccessful theatrical venture crushed him, and how they ultimately separated; Berlioz, with scrupulous fidelity, supplying her wants out of his poor pittance as a contributor to newspapers up to her melancholy death and interment.

Admired occasionally with an enthusiasm akin to adoration (for instance by Paganini, who, after hearing the 'Symphonie fantastique' at the Conservatoire, fell on his knees before Berlioz, kissed his hands, and on the following morning sent him a cheque for twenty thousand francs), always much talked of, but generally misunderstood and shamefully abused, Berlioz was not a popular man in France, and Parisians were curiously surprised at the success of his long 'Voyage musical,' when he produced his works in the principal cities of Germany and Russia. In 1852 Berlioz conducted the first series of the 'New Philharmonic Concerts' at Exeter Hall, and in the following year, on June 25, he conducted his opera 'Benvenuto Cellini' at Covent Garden.

He tried in vain to get a professorship at the Conservatoire. The modest appointment of librarian to that institute in 1839 and the cross of the Legion d'Honneur were the sole distinctions that fell to his lot.

His published works, few in number but colossal in their proportions, are as follows:—

Op. 1. Ouverture de 'Waverley.'
Op. 2. Irlande; 9 mélodies pour une et deux voix sur des traductions de Thomas Moore.
Op. 3. Ouverture des 'Francs Juges.'
Op. 4. Ouverture du 'Roi Lear.'

Op. 5. 'Grande Messe des Morts' (Requiem).

Op. 6. 'Le 5 Mai.' Chant sur la mort de l'empereur Napoléon, pour voix de basse avec chœurs et orchestre.

Op. 7. 'Les nuits d'été.' Six mélodies pour une voix avec orchestre ou piano.

Op. 8. 'Réverie et caprice.' Romance pour le violon avec orchestre ou piano.

Op. 9. Le Carnaval Romain, Ouverture Caracteristique.

Op. 10. *Grand Traité d'instrumentation et d'orchestration modernes.* Avec supplément 'Le chef d'orchestre.'

Op. 11. 'Sarah la Baigneuse.' Ballade à trois chœurs avec orchestre.

Op. 12. 'La Captive.' Réverie pour mezzo soprano avec orchestre.

Op. 13. 'Fleurs des Landes.' Cinq mélodies pour une voix avec piano.

Op. 14. 'Episode de la vie d'un artiste.' Symphonie fantastique en cinq parties.

Op. 14 bis. Lelio, ou Le retour à la Vie.' Monodrame lyrique, 2e partie de l'episode.

Op. 15. Grande symphonie funèbre et triomphale pour grande harmonie militaire, avec un orchestre d'instruments à cordes et un chœur ad libit.

Op. 16. 'Harold en Italie' Symphonie en 4 parties, avec un *alto* principal.

Op. 17. 'Roméo et Juliette.' Symphonie dramatique avec chœurs, solos de chant et prologue en récitatif choral.

Op. 18. 'Tristia.' 3 Chœurs avec orchestre. (Méditation religieuse, Ballade sur la Mort d'Ophélie, Marche funèbre.')

Op. 19. 'Feuillets d'Album.' 3 morceaux de chant avec piano.

Op. 20. 'Vox populi.' Deux grands chœurs avec orchestre. (La menace des Francs, Hymne à la France.)

Op. 21. Ouverture du 'Corsaire.'

Op. 22. 'Te Deum,' à trois chœurs avec orchestre et orgue concertants.

Op. 23. 'Benvenuto Cellini.' Opéra en trois actes. Paroles de Léon de Wailly et August Barbier. (Partition de piano. Paris, Choudens.)

Op. 24. 'La Damnation de Faust.' Légende dramatique en quatre parties.

Op. 25. 'L'Enfance du Christ.' Trilogie Sacrée. 1. 'Le songe d'Hérode.' 2. 'La fuite en Egypte.' 3. 'L'arrivée à Sais.

Op. 26. 'L'Impériale.' cantate à deux chœurs et orchestre.

'Le Temple universel.' Chœur à quatre voix et piano.

'Prière du Matin.' Chœur à deux voix et piano.

'La belle Isabeau.' Conte pendant l'orage, avec chœur.

'Le Chasseur danois.' Pour voix de basse avec piano.

'L'Invitation à la valse de Weber.' Orchestration.

'Marche Marocaine' de L. de Meyer. Orchestration.

'Recitatives' pour 'le Freischütz.'

'Béatrice et Bénedict.' Opéra en deux actes imité de Shakespeare. Paroles de Hector Berlioz. (Partition de piano. Paris, Brandus.)

'Les Troyens.' Poème lyrique en deux parties: (1) 'La prise de Troie.' (MS.) (2) 'Les Troyens à Carthage' (Partition de piano. Paris, Choudens.)

Besides the 'Traité d'instrumentation,' with its sequel 'Le chef d'orchestre,' included above amongst his musical works as op. 10, the subjoined literary productions have been issued in book-form:—

Voyage Musical . . . études sur Beethoven, Gluck et Weber, 2 vols. Paris, 1844.

Les soirées de l'orchestre, 1853.

Les grotesques de la musique; 1859.

A travers chants; 1862.

Memoires, comprenant ses voyages, etc., 1803-1865. Paris, 1870.

Historiettes et Scenes musicales; Les musiciens et la musique.

Advertised by M. Levy frères in 1872, but not yet published.

[E. D.]

BERMUDO, JUAN, born near Astorga in Spain about 1510, a Franciscan monk, author of 'Libro de la declaracion de instrumentos.' Volume I. only has been printed (Ossuna, 1549). Soriano-Fuertes ('Historia de la Musica española') states that the original in four volumes is among the MSS. in the National Library at Madrid.

BERNACCHI, ANTONIO, born at Bologna about 1690, is equally celebrated as a singer and as a master. During several years he received the instruction of Pistocchi, then the first singing-master in Italy, where there were at that time not a few; and to his care and skill, as well as to his own application, genius, and splendid soprano voice, the young Bernacchi owed his early superiority over all the other singers of his day, and the title which he gained of 'Il Re dei cantatori.' Fétis says that he made his first appearance in 1722; but it is much more likely that he did this ten years earlier, for he was singing in London in 1716 in the opera 'Clearte,' and in Handel's 'Rinaldo' in 1717, when he sang the part of Goffredo, which had previously been sung by Vanini Boschi and Galerati, two female contralti. While in England, his voice was thought to be weak and defective; but he covered these faults with so much skill that his singing was always much more admired by musicians than by the public. He remained here at first only for one season, after which he returned to Italy. Shortly afterwards he entered the service of the Elector of Bavaria, and subsequently that of the Emperor. Bernacchi now altered his style, making use of an embroidery of roulades,—a great innovation upon the old simple method of singing. This novelty had an immense success; and was immediately adopted by all the other singers, in spite of the outcry raised by the purists of the old school. Martinelli and Algarotti agree in blaming him for sacrificing expression to execution, and for 'opening the door to all the innovations which have debased the art.' Rousseau relates that Pistocchi, on hearing his former pupil, exclaimed 'Ah! woe is me! I taught thee to sing, and now thou wilt "play"!' The 'Daily Courant' of July 2, 1729, announced that 'Mr. Handel, who is just returned from Italy, has contracted with the following persons to perform in the Italian Opera: Sig. Bernacchi, who is esteemed the best singer in Italy;' etc. The new company disembarked at Dover at the end of September; and the Opera, which had been closed for eighteen months, re-opened December 2 with 'Lotario,' and a revival of 'Tolomeo,' in both of which Bernacchi played the principal character, formerly sustained by Senesino. In the season of 1730 he sang in Handel's 'Partenope,' after which he returned once more to Italy, with the desire of founding there a school for teaching his own method. Raff, Amadori, Mancini, Guarducci, and many more, were his scholars. The objection of the purists to Bernacchi's fioriture as new, has no foundation; for these embellishments were as old as the 16th century, and were only developed by him and employed more after the manner of instrumental music. He was also a good composer, having learnt composition from G. A. Bernabei; the Conservatoire at Paris possesses some songs and duets of his. He was admitted as a member of the Società Philarm. of Bologna in 1722, of which he became Princeps in 1748 and 49. He died March 1756. (See FARINELLI.) [J. M.]

BERNARD, surnamed IL TEDESCO, 'the German,' is said to have been organist at the church of St. Mark at Venice in the last half of the 15th century, and to have invented organ pedals. The catalogue of the organists of St. Mark—given in von Winterfeld's 'Gabrieli'—contains the name of 'Bernardo di Stefanino Murer,' as having held the post from April 15, 1445, to Sept. 22, 1459.

BERNARDI. (See SENESINO.)

BERNASCONI, ANTONIA, was the daughter of a valet-de-chambre of the Prince of Wurtemburg, whose widow married Andrea Bernasconi,

a music-master and composer. From him Antonia received such instruction as sufficed to develope her remarkable talents. She made her first appearance at Vienna, 1764, in 'Alceste,' which Gluck had written expressly for her. She afterwards sang at various Italian theatres, and in 1778 she appeared with Pacchierotti in 'Demofoonte,' a pasticcio, at the Opera in London. She was then a good musician, and a correct and skilful singer; but her voice was not powerful, and she was past her prime. She was a good actress, with but an indifferent figure. In the next season she remained, condescending, as it was then esteemed, to take the part of 'first woman' in the comic opera, which she performed admirably. In 1770–71 she had sung at Milan the part of Aspasia in Mozart's early opera 'Mitridate.' She distrusted the powers of the boy to compose the airs for her, and requested to see what she was to sing, to which he instantly acceded. She made trial of a piece, and was charmed with it. Mozart then, piqued at her want of confidence, gave her another, and a third, leaving Bernasconi quite confounded with so rare a talent and so rich an imagination at years so tender. Shortly afterwards an enemy (Gasparini of Turin) called on her with the words of the libretto set to different music, and endeavoured to persuade her not to sing the music of the young Mozart. 'She absolutely refused this wicked person, being quite overjoyed at the airs the young *maestro* had written for her, in which he consulted her inclination.'[1] The opera had a prodigious success.

In 1783 Bernasconi was at Vienna, where she had settled, though not engaged at the Opera; but she gave a few performances of the 'Alceste' and 'Ifigenia in Taüride' of Gluck, and of a comic opera 'La Contadina in Corte,' which she had sung with success in London. [J. M.]

BERNER, Friedrich Wilhelm, born at Breslau, March 16, 1780; pupil of his father the organist of the Elisabeth Church there, under whose tuition he made such rapid progress as to be appointed his assistant at thirteen years of age. Counterpoint and composition he learnt from Gehirnie, director of the choir at the Matthäus Church, and at the same time from Reichardt the cello, horn, bassoon, and clarinet, which last instrument he played in the orchestra of the theatre. The arrival of C. M. von Weber in Breslau to take the post of capellmeister roused Berner to fresh exertions. Weber valued him as an excellent pianoforte and clarinet player. In 1811 he and Schnabel were summoned to Berlin by Zelter to master the system of the Singakademie, with the view of establishing similar institutions in Breslau and the rest of Silesia, such being the wish of the Prussian government. Berner was also entrusted with the task of cataloguing the musical treasures of the suppressed monasteries. In the middle of all this activity he was seized with a long and serious illness which removed him on May 9, 1827. More details of his life will be found in the 'Hausfreund' for 1827, No. 15. Among his numerous pupils, Adolph Hesse the celebrated organist, himself also departed, is one of the most remarkable. He left many compositions both for voices and instruments, but his didactic writings are more valuable—'Grundregeln des Gesanges' (1815), 'Theorie der Choral-zwischenspiel' (1819), 'Lehre von den musikalischen Interpunktion' (1821). Some of his songs are even now very popular, e. g. 'Deutsches Herz verzage nicht.' [F. G.]

[1] Leopold Mozart's Letter.

BERNHARD, Christoph, capellmeister at Dresden; son of a poor sailor; born at Dantzic, 1612. He was so poor as to sing from door to door to keep himself from starving. By a Dr. Strauch he was placed in the Gymnasium, where he studied music under Balthazar Erben, and the organ under Paul Syfert. By the aid of the same benevolent individual he was enabled to visit Dresden with letters of recommendation to H. Schutz the capellmeister. There his fine tenor voice so far attracted the notice of the Kurfürst as to induce him to send Bernhard to Italy with the view of perfecting his singing. In Rome he became intimate with Carissimi, and excited the enthusiasm of the Italians by his compositions, amongst others a mass for ten voices. After returning with a party of young Italians to Dresden, he was enabled by the Kurfürst to make a second journey to Italy. The Italians who had returned with him however intrigued against their benefactor, and at length compelled Bernhard to resign his post and take a cantorship at Hamburg: ten years later he was recalled by the Kurfürst Johann George III, and remained in Dresden as capellmeister till his death, Nov. 14, 1692. His facility in counterpoint was very remarkable, and some extraordinary instances of his ability in this direction may be found in his setting of the Latin hymn 'Prudentia Prudentiana' (Hamburg, 1669) in triple counterpoint, as well as in other of his works. [F. G.]

BERNHARD, Wilhelm Christoph, remarkable as a first-rate player of the works of J. S. Bach, both for organ and piano. Born at Saalfeld about 1760; died at Moscow at the early age of twenty-seven in the year 1787. [F. G.]

BERNSDORF, Eduard, born at Dessau March 25, 1825, a pupil of F. Schneider at Dessau and of A. B. Marx at Berlin; has lived for many years at Leipsic. He has published various songs and pieces for the piano, but is chiefly known as editor of the 'Universal Lexikon der Tonkunst' (3 vols., with supplement, 1856), begun by von Schladebach—and also as a critic in the well-known musical periodical, the 'Signale.' Bernsdorf is a thorough conservative, with a strong antipathy to all modern efforts in music. Within his own predilections however he is a keen and intelligent critic, though a certain severity of expression in his reports of the Leipsic concerts has brought on him the dislike of many musicians. [A. M.]

BERSELLI, MATTEO, a celebrated Italian tenor, who came to England with Senesino; and with him made his first appearance in London in Buononcini's 'Astartus,' Nov. 19, 1720. He sang next in December of the same year, with Senesino again, in the 'Radamisto' (revival) of Handel; and in 1721 he appeared in 'Muzio Scævola,' joint work of Attilio, Buononcini, and Handel; in the 'Arsace' of Orlandini and Amadei; and in the anonymous 'L'Odio e L'Amore.' After that we lose sight of him. [J. M.]

BERTA, OR THE GNOME OF THE HARTZBERG, a romantic opera in 2 acts; words by Edward Fitzball; music by Henry Smart. Produced at the Haymarket Theatre, May 26, 1855.

BERTIN, LOUISE ANGELIQUE, born near Paris 1805, contralto singer, pianist, and composer. 'Le Loup Garou' (Paris, 1827) and 'Faust' (1831) were her most successful operas, though Victor Hugo himself adapted the libretto for her 'La Esmeralda' (1836). Mlle. Bertin's imperfect studies account for the crudities and irregularities to be found in her writings among many evidences of genius. She died Ap. 26, 1877.

BERTINI, GIUSEPPE, son of Salvatore Bertini, a musician at Palermo, born there about 1756; a composer of church music, and author of 'Dizionario . . . degli scrittori di musica' (Palermo, 1814), which, although largely borrowed from Choron and Fayolles, contains interesting original articles on Italian musicians.

BERTINI, HENRI, born in London 1798, a pianist, the last member of a musical family, which included the father, born at Tours 1750, and an elder brother BENOÎT AUGUSTE, who was a pupil of Clementi, and trained Henri after that master's method. At the age of twelve his father took him for a successful concert-tour in Holland, the Netherlands, and Germany. He was for some time in England and Scotland, but in 1821 settled finally in Paris. As a performer he excelled alike in phrasing and execution. His compositions (of which Fétis gives a complete list) were excellent for their time, but his chief work is an admirable course of studies. He died at Meylan, Oct. 1, 1876.

BERTINOTTI, TERESA, born at Savigliano, Piedmont, in 1776. When she was only two years old her parents went to live at Naples. Here, at the age of four, she began the study of music, under the instruction of La Barbiera, a very original artist, of a type that is now nearly lost, even at Naples. At twelve the little Teresa made her first appearance, with other children, at the San Carlino theatre, with great éclat. As she grew older, she showed the promise of great beauty, and developed a fine style of singing. Obtaining engagements only too easily she sang at Florence, Venice, Milan, and Turin with prodigious success. In the latter town she married Felice Radicati, a violinist and composer of instrumental music; but she still kept to her maiden name on the stage. In 1805 she sang with brilliant success at Vienna for six months; but she then left that city, on account of political events. In 1807 she went to Munich, and sang before the court; and then visited Vienna a second time, where she found the same welcome as before. An engagement from Louis Buonaparte, king of Holland, now reached her: she accepted it, and went to the Hague. Receiving proposals from London and Paris, she preferred the former, whither she came about 1810–11. Here she was thought to have a pleasing voice and a good manner; but after giving satisfaction in one serious opera, 'Zaira,' in which her songs were written for her by her husband, she was less successful in a second; upon which she took to comic opera, and performed extremely well in Mozart's 'Così fan tutte,' which was admirably acted in every part, the other characters being filled by Collini, Cauvini, Tramezzani, and Naldi. She also sang in the 'Flauto Magico' and a revival of Guglielmi's beautiful 'Sidagero.' Catalani, however, could not endure to be surrounded by so many good performers; and the situation consequently became so unpleasant that half the company, including Bertinotti, seceded to the Pantheon, taking with them, as 'best woman,' the celebrated Miss Stephens, who there made her début. The licence being only for intermezzos, operas of one act, and dancing without ballets d'action, the performances were not very attractive, and soon ceased. The house then closed, and most of the troupe, among whom was Bertinotti, left this country. She now returned to Italy, visited Genoa, and was next engaged at the end of 1812 for the opera at Lisbon. In 1814 she returned to Bologna, being called thither on family matters, and while there received an offer from the Italian opera at Paris, which she accepted but was prevented from fulfilling by the return of Napoleon from Elba. She therefore settled at Bologna, where her husband, who had obtained a place as first violin and professor, was killed in 1823 by an accident, being thrown from a carriage. She now retired from the stage, but continued to teach singing, and formed several admirable pupils. She died at Bologna, Feb. 12, 1854. [J.M.]

BERTOLDI, SIGNORA, announced July 2, 1729, among Handel's new company, as having 'a very fine treble voice,' was in reality the contralto BERTOLLI. [J. M.]

BERTOLLI, FRANCESCA, who arrived in England about the end of September 1729, was a splendid contralto, and 'also a very genteel actress, both in men and women's parts.' She was one of the new company with which Handel opened the season of 1729–30, and appeared in 'Lotario' and the revival of 'Tolomeo,' and in 'Partenope,' Feb. 24, 1730. She sang again in 'Poro,' Feb. 2, 1731, with Senesino: this opera had a run of fifteen nights, at that time a great success. Bertolli took in it the part formerly sung by Merighi. She took part in the revivals of 'Rodelinda' and 'Rinaldo' in the same season, and in the new operas, 'Ezio' and 'Sosarme,' at the beginning of 1732. In this season she sang,

in English, the contralto music of 'Esther,' then performed first in public (April 20), and repeated six times during May; and she appeared in 'Acis and Galatea,' sung partly in English and partly in Italian. In this same year she also performed in 'Flavio' and 'Alessandro' by Handel, and in Attilio's 'Coriolano.' In 1733 she played in 'Ottone,' 'Tolomeo,' and 'Orlando,' and in 'Deborah,' Handel's second English oratorio. She followed Senesino, however, when that singer left Handel, and joined the opposition at the Lincoln's Inn Theatre: she sang in 'Onorio' in 1734, and in Veracini's 'Adriano in Siria' in 1735, as well as in other pieces. In 1737 she returned to Handel, and sang in his 'Arminio,' Jan. 12, at Covent Garden; 'Giustino,' Feb. 16; 'Berenice,' May 12; and a revival of 'Partenope.' Her name never occurs again in the libretti of the time, and her after-history is unknown. [J. M.]

BERTON, Henri Montan, one of those not unfrequent instances in the history of art where a distinguished father is succeeded by a more distinguished son. Pierre Montan Berton, the father, composed and adapted several operas, and was known as an excellent conductor. He held the position of *chef d'orchestre* at the opera in Paris when the feud of the Gluckists and Piccinists began to rage, and is said to have acted as peacemaker between the hostile parties. His son Henri was born at Paris in 1767. His talent seems to have been precocious; at six he could read music at sight, and became a violinist in the orchestra of the opera when only fifteen. His teachers of composition were Rey, a firm believer in Rameau's theoretical principles, and Sacchini, a prolific composer of Italian operas. But this instruction was never systematic, a defect but too distinctly visible even in the maturest scores of our composer. His musical knowledge, and particularly his experience of dramatic effect, he mainly derived from the performances he witnessed. Hence the want of independent features in his style, which makes it sometimes difficult to distinguish his workmanship from that of other masters of the French school. In 1782 he became deeply enamoured of Mdlle. Maillard, a celebrated singer, by whom he had an illegitimate son François Berton, also a composer of some note, who died in 1832. This passionate attachment seems to have awakened his latent creativeness. His first work was a comic opera, 'La dame invisible,' written about the time referred to, but not performed till four years later (Dec. 1787). It is said that the young composer being too shy to produce his work it was shown by Mdlle. Maillard to Sacchini, who at once recognised Berton's talent. This led to the connection between the two musicians already alluded to. Berton made his public début as a composer at the Concerts Spirituels, for which he wrote several oratorios. One of these, 'Absalon,' was first performed with considerable success in 1786. But he soon abandoned sacred music for the more congenial sphere of comic opera. In 1787 two dramatic works—'Les promesses de mariage' and the above-named 'Dame invisible'—saw the light of the stage, and were favourably received.

The excitement of the revolutionary period did not fail to leave its traces on Berton's works. His opera 'Les rigueurs du cloître' owes its existence to this period. In it the individual merits and demerits of his style become noticeable for the first time—easy and natural melody, great simplicity and clearness of harmonic combinations, and skilful handling of stage effects; but a want of grandeur and true dramatic depth, and frequent slipshod structure of the *ensembles*. Amongst the masters of French comic opera Berton holds a respectable but not pre-eminent position. His power was not sufficient to inspire a whole organism with the breath of dramatic life. Hence his works have disappeared from the stage, although separate pieces retain their popularity.

During the Reign of Terror Berton had a hard struggle for existence. He even found difficulty in procuring a libretto from one of the ordinary manufacturers of that article, and to supply the want had to turn poet himself, although his literary culture was of the slightest order. The result was the opera 'Ponce de Leon,' first performed with great success in 1794. Five years later (April 15, 1799) he produced his chef d'œuvre, 'Montano et Stéphanie,' a romantic opera, with words by Dejaure, the librettist of Kreutzer's 'Lodoiska' and many other pieces. It is by far the most ambitious piece of its composer, and the numerous ensembles were at first considered so formidable as to make the possibility of execution doubtful. Some of the songs—for instance, the beautiful air of Stéphanie, 'Oui, c'est demain que l'hymenée'—are still heard with delight. Edouard Monnais, in his sketch entitled 'Histoire d'un chef d'œuvre,' has given a full account of the history of the work, founded partly on autobiographical fragments by the composer. Its success greatly advanced Berton's reputation, and freed him from the difficulties of the moment. It must suffice to add the titles of a few of the most celebrated of his numerous compositions:—'Le Délire' (1799), 'Aline, ou la Reine de Golconde' (1803), 'Ninon chez Madame de Sévigné' (1807), and 'Françoise de Foix' (1809). He also wrote numerous operas in co-operation with Méhul, Spontini, Kreutzer, Boieldieu, and other contemporary composers, besides several ballets.

Berton was for a long time Professor of Harmony at the Conservatoire; in 1807 he became conductor at the Italian opera in Paris, and in 1815 was made a member of the Institut. French and foreign decorations were not wanting; but he survived his fame, and the evening of his life was darkened. In 1828 he suffered by the bankruptcy of the Opéra Comique, to which he had sold the right of performing his works for an annuity of 3000 francs. Moreover he could not reconcile himself to the new currents of public taste. Rossini's success filled him with anger—a feeling which he vented in

two pamphlets, 'De la Musique mécanique et de la Musique philosophique' (1822), and 'Epître à un célèbre compositeur Français, précédée de quelques observations sur la Musique mécanique et la Musique philosophique' (1829). The celebrated composer is Boieldieu, who was by no means pleased with the dedication of a book so little in accordance with his own views. Berton survived all his children, and died as late as 1842. [F. H.]

BERTONI, Ferdinando Giuseppe, born at Salo near Venice 1727, died at Desenzano near Brescia 1810, pupil of Padre Martini, and a celebrated composer in his time. In 1750 was appointed organist of St. Mark's, Venice, and seven years later choir-master at the Conservatorio 'dei Mendicanti,' which post he held till the suppression of the Conservatoires on the fall of the Republic in 1797. His first opera, 'Orazio e Curazio,' appeared in Venice (1746), but it was not till the production of 'Orfeo' (1776) that he attracted attention. He composed it to the libretto which Gluck had set, and the same singer, Guadagni, took the part of Orfeo in both operas. In 1778 Bertoni was summoned to London with his friend Pacchierotti, and brought out his 'Quinto Fabio,' which had been successfully produced at Padua in the same year, and was equally well received here, owing in great part to Pacchierotti's performance of the part of Fabio. Bertoni visited London again with Pacchierotti, but the rage for Sacchini made it difficult for any one else to gain a hearing, and he returned finally to Venice in 1784. In the following year, on the death of Galuppi, he succeeded him as conductor at St. Mark's, the most honourable and lucrative post then open to a musician in Italy. Burney (Hist. iv. 514, 541) describes him as a man of ability and taste, but no genius. His works (of which Fétis gives a list) comprise 33 operas and oratorios, besides instrumental compositions. Little of his music has been published. [M. C. C.]

BERTRAND, Gustave, born at Paris Dec. 24, 1834, educated at the Ecole des Chartes, where he devoted himself to the study of ancient music and history of the organ. This learned and clever writer has contributed to Didot's 'Complément de l'Encyclopédie,' and has published many articles on music in 'Les Débats,' 'La Revue moderne,' 'Le Nord,' 'Le Ménestrel,' etc. His chief works are a pamphlet on Ancient Music (Didot, 1862); 'Les Nationalités musicales, étudiées dans le drame lyrique' (1872); and 'De la réforme des Etudes du Chant au Conservatoire' (1871). M. Bertrand has original views as a critic, and fills the department of musical archæology in the 'Commissions des Travaux historiques.' [G. C.]

BERWALD, Johann Friedrich, a violinist, son of one of the chamber musicians of the King of Sweden, born at Stockholm July 23, 1796, travelled as an infant prodigy, composed a symphony, and was famous in Russia, Poland, Austria, and Germany before he was ten years old. His second symphony was finished in Leipsic in 1799. In 1817 he again travelled, but in 1819 returned to Stockholm, and remained there as capellmeister till his death, April 3, 1868. His three daughters were singers of some repute. [F. G.]

BERWILLIBALD, Giorgio Giacomo, a German singer in the service of His Serene Highness the Margrave of Brandenburgh-Anspach, was in London in 1716, singing in Nicolini's opera 'Clearte,' with Bernacchi, Nicolini, Schiavonetti, and other great artists. [J. M.]

BESLER, Samuel, born at Brieg-on-the-Oder, Dec. 15, 1574; was in 1605 rector of the Gymnasium 'zum heiligen Geist' at Breslau, and died there, during an epidemic, July 19, 1625. The library of St. Bernhardinus at Breslau contains a vast collection of his compositions for the church, in which he was very prolific. Amongst them is a Passion after St. John, printed by Baumann at Breslau, 1621. [F. G.]

BESOZZI, an Italian family of distinguished wind-instrument players. (1) Alessandro, a very remarkable oboist; born at Parma in 1700, and died in the service of the King of Sardinia, at Turin, 1775. (2) His brother, Antonio, also a celebrated oboist; born at Parma 1707, and afterwards resided at Dresden. On the death of Alessandro he took his post at Turin, and died there in 1781. (3) Antonio's son Carlo, born at Dresden 1745, was also a renowned oboist. It is he, according to Fétis, whom Burney heard at Dresden, and of whom (ii. 27, 45) he gives so detailed and favourable an account, comparing him with Fischer. (4) A third brother, Hieronimo, a famous bassoon player, born at Parma 1713, was the special associate of Alessandro. Burney's account of the two brothers, and his criticism on their remarkable duet performances, will always be read with interest (Present State, iii. 69). He died at Turin shortly after the death of Antonio. (5) Gaetano, the youngest of the four brothers, born at Parma 1727, also an oboist, first at the Neapolitan and then at the French court, and lastly in London in 1793, where, notwithstanding his age, he was much admired for the certainty of his playing and its exquisite finish. (6) His son, Hieronimo, played the same instrument as his father; Burney (iii. 24) heard him at the Concert Spirituel at Paris in 1770. He died in Paris as early as 1785, leaving however (7) a son who was flautist at the Opéra Comique. (8) His son, Louis Désiré, born at Versailles April 3, 1814, carried off many prizes of the Conservatoire, and in 1837 the Grand Prix de Rome. [F. G.]

BESSEMS, Antoine, violinist, born April 4, 1806; in his sixteenth year composed motets and church music, and in 1826 was a scholar of Baillot's at the Conservatoire, Paris; in 1829 one of the first violins at the Théâtre Italien. After this he travelled, returned to Antwerp for a time, and finally settled in Paris as a teacher. He composed much for the voice (both solo and chorus) and for the violin. [F. G.]

BEST, William Thomas, was born at Carlisle (where his father was a solicitor), August 13, 1826. He received his first instruction in music from Young, organist of Carlisle Cathedral. He intended to follow the profession of a civil engineer and architect, but that pursuit proving distasteful he (when in Liverpool in 1840) determined to renew his musical studies, and devoted his attention to organ and pianoforte playing. The study of the organ was at that time greatly hindered by its defective construction, the unsuitable pedal compass, and the mode of tuning then in vogue, which rendered the performance of the works of the great organ composers almost an impossibility, whilst the number of professors practically acquainted with the works of Bach was then extremely small. Having determined on a rigid course of self-study, and fortunately obtaining the use of an organ of ameliorated construction, Best spent many years in perfecting himself in the art of organ-playing in all its branches. His first organ appointment was at Pembroke Chapel, Liverpool, in 1840; in 1847 he became organist of the church for the blind in that town, and in the following year organist to the Liverpool Philharmonic Society. In 1852 he came to London as organist of the Panopticon of Science and Art in Leicester Square, and of the church of St. Martin-in-the-Fields; and in 1854 was appointed organist of Lincoln's Inn Chapel. He returned to Liverpool in 1855 on receiving the appointment of organist to St. George's Hall. In 1860 he became organist of the parish church of Wallasey, Birkenhead, and in 1863 organist of Holy Trinity Church near Liverpool. In 1868 he was appointed organist of the Musical Society of Liverpool, and in 1872 was re-appointed organist to the Liverpool Philharmonic Society. These last two appointments and that at St. George's Hall he still holds. Best has composed several church services, anthems, and hymns, many fugues, sonatas, and other pieces for the organ; ten pianoforte pieces, two overtures, and a march for orchestra. He is also the author of 'The Modern School for the Organ,' 1853, all the examples and studies in which are original, and 'The Art of Organ Playing,' the first and second parts published in 1870, but the third and fourth yet in MS. Best's arrangements for the organ are exceedingly numerous. [W. H. H.]

BEUTLER, Benjamin, born at Mühlhausen near Erfurt 1792; died there 1837; a friend of Forkel, organist of the Marienkirche, and founder of a choral society for men's voices at Mühlhausen (1830). He organised musical festivals in his native town, and established choral practice in the schools, publishing for their use a collection of 'Choral-melodieen für das Mühlhausen Gesangbuch' (Mühlhausen, 1834).

BEVIN, Elway, an eminent theoretical and practical musician, the date of whose birth is unknown. He was of Welsh extraction, and received his musical education under Tallis. According to Wood (Ashmole MS. 8568, 106) he was organist of Bristol Cathedral in 1589. Hawkins says it was upon Tallis's recommendation that he was admitted a gentleman extraordinary of the Chapel Royal, June 3, 1589. But this is an error—he was not admitted until June 3, 1605, at which period Tallis had been dead just upon twenty years. In 1637, on the discovery that Bevin was of the Romish persuasion, he was expelled the chapel. At the same time he forfeited his situation at Bristol. Wood, who states this, refers to the chapter books of Bristol as his authority. His Service in D minor is printed in Barnard's 'Selected Church Musick,' and in Boyce's 'Cathedral Music,' and several anthems of his are extant in MS. But the work by which he is best known is his 'Brief and Short Introduction to the Art of Musicke, to teach how to make Discant of all proportions that are in use: very necessary for all such as are desirous to attaine knowledge in the art, and may by practice, if they can sing, soone be able to compose three, four, and five parts, and also to compose all sorts of canons that are usuall, by these directions, of two or three parts in one upon the plain Song.' London, 1631, 4to. This treatise is dedicated to Dr. Goodman, Bishop of Gloucester, to whom the author says he is 'bound for many favours.' What became of Bevin after his expulsion from his situations we have not ascertained. (*Cheque Book of Chapel Royal*, Camd. Soc.) [E. F. R.]

BEXFIELD, William Richard, Mus. Doc., born at Norwich April 27, 1824, and became a chorister of the cathedral under Dr. Buck. After leaving the choir he applied himself to the study of music, in which, although almost self-taught, he attained to considerable skill. He obtained the situation of organist at Boston, Lincolnshire, and in 1846 graduated as Bachelor of Music at Oxford. He lectured on music, and on the death of Dr. Crotch in 1847 became a candidate for the professorship of music at Oxford. In February 1848 he left Boston for London on being appointed organist of St. Helen's, Bishopsgate Street. He proceeded Doctor of Music at Cambridge in 1849.

On Sept. 22, 1852, his oratorio 'Israel restored' was performed at Norwich Musical Festival. Dr. Bexfield died Oct. 29, 1853, at the early age of twenty-nine. A set of organ fugues and a collection of anthems by him were published, besides his Oratorio. [W. H. H.]

BEYER, Ferdinand, born 1803. A fair pianist and tolerable musician, whose reputation rests upon an enormous number of easy arrangements, transcriptions, potpourris, fantasias, divertissements, and the like, such as second-rate dillettanti and music-masters at ladies' schools are pleased to call amusing and instructive. Like publishers of books, music publishers too keep their 'hacks,' and in such capacity Beyer was for many years attached to the firm of Schott and Co. at Mayence, where he died on May 14, 1863. [E. D.]

BIANCA, OR THE BRAVO'S BRIDE, a 'grand legendary opera' in 4 acts; words by Palgrave Simpson; music by Balfe. Produced at Covent Garden, Thursday, Dec. 6, 1860.

BIANCA E FALIERO, an opera by Rossini, produced at the Scala at Milan Dec. 26, 1819; one of Rossini's few failures. The subject is the same with that of Manzoni's 'Conte di Carmagnola.'

BIANCHI, FRANCESCO, an Italian singer engaged at the King's Theatre in the Haymarket in 1748, who sang in the 'Comedia in Comedia' of Rinaldo da Capua, and other operas. [J. M.]

BIANCHI, FRANCESCO, born at Cremona 1752. In 1775 he was appointed 'Maestro al Cembalo' to the Italian Opera in Paris under Piccinni, and there composed his first opera, 'La Reduction de Paris.' In 1780 he produced 'Castore e Polluce' at Florence, with the English Storace as the prima donna. This successful opera was rapidly followed by many others. In 1784 he was made vice-conductor at S. Ambrogio in Milan, and held an important post at the Scala. A curious story is told of his 'Desertore Francese.' The hero (Pacchierotti) appeared in the uniform of a French soldier, which so scandalised the classic Venetians that they hissed the opera off the stage. Fortunately however the Duchess of Courland passing through Venice expressed a desire to hear it, and courtesy having compelled the audience to keep silence, the music so enchanted them that the objectionable costume was forgotten, and the opera obtained an exceptional success. Some years later, Joseph II offered to take Bianchi into his service, but died (1790) before the latter could reach Vienna. In 1793 Bianchi came to London, having been offered an engagement at the King's Theatre on account of the success of his 'Semiramide,' in which the famous Banti was prima donna. This engagement lasted for seven years. In the intervals of the London season he made short tours abroad, and in one of these composed his 'Inez de Castro' at Naples (1794) for Mrs. Billington's first appearance on the Italian stage. Haydn's diary contains a favourable account of Bianchi's 'Acige e Galatea,' which he heard in London in 1794, but he considered the accompaniments too powerful for the voices. Haydn is also said to have kept one page in Bianchi's compositions turned down for reference when anything had ruffled his temper. In 1800 he married Miss Jackson, a singer, best known as Mrs. Bianchi Lacy—her name by her second marriage. From this time he was chiefly occupied in teaching till his death, by his own hand, at his house in Hammersmith (1810). His tombstone is in Kensington churchyard. Bianchi composed above fifty operas and oratorios, besides instrumental music. He was also the author of a work on the theory of music, portions of which are printed in Bacon's 'Musical Quarterly Review' (ii. 22). Enough has been said to show the estimation of Bianchi by his contemporaries. His chief value to us resides in the fact that he was the master of Sir Henry Bishop. Bianchi has been sometimes confounded with Bertoni, perhaps because of the connection of both with Pacchierotti. [M. C. C.]

BIANCHI, SIGNORA, a good Italian singer who came over with Tramezzani, and appeared at the same time in Guglielmi's 'Sidagero.' She remained for some time as 'a respectable second.' [J. M.]

BIBER, HEINRICH JOHANN FRANZ VON, a celebrated German violin-player and composer, born at Warthenberg in Bohemia about 1638, and died in 1698 at Salzburg, where he occupied the double post of high steward and conductor of music at the court of the Prince-Archbishop. His reputation as a performer and composer was very great, and the Emperor Leopold was so delighted with him that he not only presented him with a gold chain and a considerable sum of money, but also raised him to the rank of a nobleman. We, who have to form our estimate of Biber's merits and of his place in the history of violin-playing from those of his compositions which have come down to us, may well contend that his is the first German violin music of any artistic worth at all. At that period the art of violin-playing and the style of composing for the instrument in Germany were entirely under the influence of Italy. Unfortunately the earliest German violinists appear to be more connected with Farina and his school than with Vitali, Torelli, and Veracini. Thus we find the works of J. J. WALTHER (see that name), a contemporary of Biber, who enjoyed a great reputation in Germany, chiefly consisting, like those of Farina, of unconnected phrases, equally void of musical ideas and form, apparently invented to show off the performer's skill in execution, and often only devoted to crude and childish imitation of natural sounds. Although Biber can not be pronounced free from the faults of his German contemporaries—since his forms are often vague and his ideas somewhat aphoristic—still his sonatas contain some pieces which not only exhibit a well-defined form, but also contain fine and deeply-felt ideas, and a style which, though nearly related to that of the best Italians of his time, has something characteristically German in its grave and pathetic severity. Altogether Biber represents an immense progress in the art of violin-playing in Germany. That his powers of execution were very considerable we must conclude from his mode of writing for the violin, which presupposes great proficiency in the playing of double stops as well as dexterity in bowing. It is also worth notice that he appears to have been the first occasionally to modify the usual way of tuning the instrument. In two of his sonatas the violin must be tuned thus:—

 , and thus:— 
The following compositions of his have been published:—(1) Six sonatas for violin with figured

bass; Salzburg, 1681. (The sixth of these was recently edited by F. David in his 'Hohe Schule des Violinspiels.') (2) Fidicinium sacro-profanum, a set of twelve sonatas in four and five parts; Nürnberg no date. (3) Harmonia artificiosa, a collection of seven partitas or suites for three instruments; Nürnberg, no date. (4) A set of sonatas; Salzburg, 1676. (5) Vesperae longiores ac breviores for 4 voices, 2 violins, 2 violas, and 3 trombones ad libitum; Salzburg, 1693. There is also a 'Dramma Musicale' of his in MS. in the museum at Salzburg.

An engraved portrait of him at the age of thirty-six is extant. [P. D.]

BIBL, Andreas, born at Vienna April 8, 1797; and from 1818 organist at S. Stephen's. He came to the cathedral in Albrechtsberger's time as a singing boy, and learned organ-playing and composition from Josef Preindl. His style of playing was noble, and his compositions are clear and thoroughly church-like in character. He published preludes and fugues for the organ (Diabelli and Haslinger). His son Rudolph, born Jan. 6, 1832, studied under Sechter, and became organist at the cathedral 1859 and at the imperial chapel 1863. His playing was that of a sound musician, and his compositions for church and chamber, many of them still in MS., show that he knew how to keep pace with the times. [C. F. P.]

BIEREY, Gottlob Benedict, born at Dresden July 25, 1772, and instructed in music by Weinlig. His opera 'Wladimir' was produced at Vienna in 1807 with much applause. This success procured him the post of capellmeister in Breslau, vacated by C. M. von Weber, and in 1824 the direction of the theatre itself. On May 5, 1840, he died of a chest complaint at his country house near Breslau. Comic opera, or rather the 'Singspiel,' was the sphere in which he mostly distinguished himself. Forty of his operas, great and small, are extant, and of these the following are printed with pianoforte arrangement:—'Blumenmädchen' (1802); 'Wladimir' (1807); 'Der Betrogene Betrüger'; 'Die Schweizer Schäferin'; 'Der Zufall,' 'Elias Ripsraps' (Breslau, 1810, much success); 'Die Pantoffeln' (Vienna, 1810); 'Der Zank.' [F. G.]

BIFARIA. A name affixed to a quick movement in 3-bar rhythm in an 'Invention' or suite ascribed to J. S. Bach. (See Peters' 'Thematic Catalogue,' Anhang i. series 3). The name suggests the *Pifara*, but there is nothing in the piece itself like pipe-music.

BIGONSI, or BIGONZI, an Italian contralto, who sang in London in 1724 in Attilio's 'Vespasiano,' Buononcini's 'Calfurnia,' and the first performances of Handel's 'Giulio Cesare.' He only remained here one year. [J. M.]

BIGOT,[1] Marie (*née* Kiene), born at Colmar, Alsace, March 3, 1786; in 1804 married Mr. Bigot, librarian to Count Rasumoffsky, and accompanied him to Vienna. Here she made the acquaintance of Haydn, Salieri, and Beethoven, and found much enjoyment in their society. The first time she played to Haydn (then 72 or 73) the old man was so delighted as to embrace her, and to say 'My dear child, that music is not mine; it is yours!' and on the book from which she had been playing he wrote '20th Feb. 1805: this day has Joseph Haydn been happy.' Beethoven also, after she had played to him a sonata of his own, is reported to have said 'that is not exactly the reading I should have given; but go on, if it is not quite myself, it is something better.' These anecdotes are given by Fétis, who may be presumed to have heard them from Madame Bigot herself. On May 1, 1805, she played at the opening concert of the Augarten, and the report of the 'Allg. musik. Zeitung' characterises her playing as pleasing and often delicate and refined—a verdict which hardly bears out the expressions attributed to Haydn and Beethoven. A letter of Beethoven's, however, first published by Otto Jahn and reprinted by Thayer ('Beethoven,' ii. 337), puts his relations to her family beyond doubt; and there is no reason to disbelieve the picturesque anecdote related by Nohl (Beethoven, ii. 246) of her having played the 'Sonata appassionata' at sight from the autograph.

In 1809 the Bigots went to Paris. Here she became intimate with Baillot, Lamarre, Cherubini, and all the great musical characters. She played the music of Beethoven and Mozart with the two former both in public and private, and was highly valued by Cramer, Dussek, and Clementi. The war of 1812, however, put a rude stop to this happiness; Bigot was taken prisoner at Milan, lost his post at Count Rasumoffsky's, and his wife was thrown on her own resources. She accordingly began to give lessons, but the exertion interfered with her health. She died at Paris Sept. 16, 1820. Before her death however she had the honour of giving pianoforte lessons to Felix Mendelssohn during a short visit to Paris in 1816 (his 7th year). He refers to her in a letter of Dec. 20, 1831, and the warmth of his attachment to her family may be seen from another letter of Feb. 24, 1838, to Madame Kiene ('Goethe and Mendelssohn,' 2nd ed. p. 136), which shews that Mr. Bigot was still alive, and that the relations between Madame Bigot's family and the great French musicians were still maintained. [F. G.]

BILHON, Jean de, a French composer, contemporary with Josquin des Prés. Some of his masses, founded, as usual at the time, upon the themes of old French chansons, are preserved in the Pontifical Chapel, where he was

[1] According to the Allg. musik. Zeitung, Bigot de Morogues.

for some time a singer. Other compositions of his are to be found in various collections of church music published between the years 1534 and 1544 at Paris and Leyden. [J. R. S. B.]

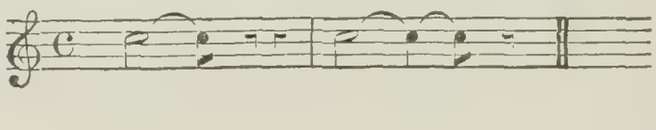
BILLINGTON, Mrs. Elizabeth, was the daughter of Carl Weichsel, a native of Freiberg in Saxony, and principal clarinet at the King's Theatre. Her mother was for several years a favourite singer at Vauxhall Gardens and elsewhere. The date of Mrs. Billington's birth is variously stated, but it was most probably 1768. She and her brother Carl were from the earliest possible moment trained to music, and on March 10, 1774, performed on the pianoforte and violin at their mother's benefit concert at the Haymarket Theatre. Such was Miss Weichsel's progress that before she had completed her eleventh year two sets of pianoforte sonatas from her pen had been given to the world. At fourteen years old she appeared as a singer at Oxford, and at sixteen became the wife of James Billington, a double-bass player. Immediately after their marriage they went to Dublin, where Mrs. Billington commenced her career as a stage singer in the opera of 'Orpheus and Eurydice.' On her return to London she obtained a trial engagement of twelve nights at Covent Garden, where she appeared Feb. 13, 1786, as Rosetta in 'Love in a Village.' Her success was such that the managers immediately engaged her for the remainder of the season at a large salary. She speedily attained a position at the Concert of Ancient Music, where she disputed with Mara for supremacy. Mrs. Billington remained in England until 1794, when she went with her husband and brother to Italy. Their intention was to travel solely for amusement, but at Naples Sir William Hamilton, the English ambassador, induced Mrs. Billington and her brother to perform in private before the king, who immediately prevailed on Mrs. Billington to sing in public at the San Carlo Theatre. Accordingly in May, 1794, she made her appearance there in Francesco Bianchi's opera 'Inez di Castro,' written expressly for her. Her success was complete, but her triumph was suddenly interrupted by the melancholy death of her husband, who, as they were about to set out for the theatre for her second performance, was stricken by apoplexy, and almost immediately expired. An eruption of Mount Vesuvius occurring about the same time was by the superstitious Neapolitans attributed to permission having been given to a heretic to perform at the San Carlo, and fears were entertained for Mrs. Billington's safety. However, on renewing her performances she experienced the most favourable reception, and sung successively in operas composed for her by Paisiello, Paer, and Himmel. In 1796 she went to Venice, where, being attacked by illness, she performed only once. She and her brother next visited Rome, and all the principal places in Italy. In 1798 she married a M. Felissent, from whom however she soon separated. In 1801 she returned to England, and the managers of Drury Lane and Covent Garden competing for her services it was arranged that she should perform at each house alternately, and she accordingly appeared at Covent Garden Theatre on Oct. 3, 1801, as Mandane in Arne's 'Artaxerxes,' still retaining the name of Billington. From this time her services were in constant request at the Italian Opera, the theatres, the Concert of Ancient Music, the Vocal Concerts, the provincial festivals, etc., until 1809, when she retired from public life. During this part of her career two memorable events took place, viz. her singing with Banti in Nasolini's opera 'Merope,' and her performance in a duet with Mara on the latter's last appearance. Once afterwards Mrs. Billington quitted her retirement to perform at a concert given in Whitehall Chapel on June 28, 1814, in aid of the sufferers by the war in Germany. In 1817 she was reconciled to her husband, and quitted England with him for her estate of St. Artien near Venice, where she died after a week's illness August 28, 1818. Mrs. Billington's compass was extensive (three octaves from A to A in altissimo), the upper notes being exquisitely beautiful. She excelled in passages of execution, but her powers of expression were limited. Sir Joshua Reynolds painted a fine portrait of her as St. Cecilia. [W. H. H.]

BILLINGTON, Thomas (who is sometimes erroneously called the husband, but was probably the brother-in-law, of Elizabeth Billington), was a harpist, pianist, and composer in the latter part of the 18th century. He published a church service for three voices; Pope's 'Elegy to the Memory of an Unfortunate Lady'; Pope's 'Eloisa to Abelard' (partly compiled); twenty-four ballads to Shenstone's Pastorals; Prior's 'Garland'; Petrarch's 'Laura'; and 'Laura's Wedding-day,' besides other pieces. [W. H. H.]

BINCHOIS, Egidius, contemporary with Dufay and our own Dunstable in the first half of the 15th century. His reputation rests chiefly upon the honour in which his name was held by his successors, but of late years two manuscripts have been brought to light containing chansons and motets of his composition. [J. R. S. B.]

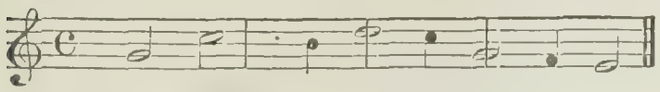
BIND (Ger. *Bindebogen*; Fr. *Liaison*; Ital. *Legatura*). A curved line (also called *tie*) placed between two notes of the same degree, to denote the continuance of the sound during the value of both, instead of the repercussion of the second note. The employment of the bind is a necessity whenever a sound is required to be of a duration which cannot be expressed by any single note, as for example five or seven quavers (Ex. 1), and it is also convenient, and in modern music invariably adopted, when the duration of a note extends beyond the limits of the bar (Ex. 2). This is, however, an improvement of comparatively recent date, such passages having been formerly written in the inconvenient form shown in Ex. 3.

1.



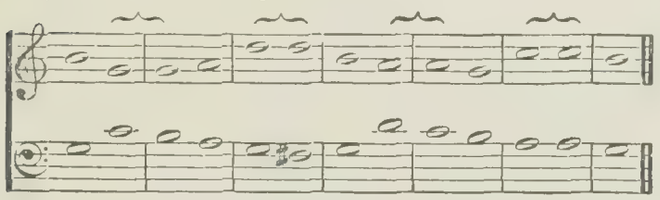
2.

3.

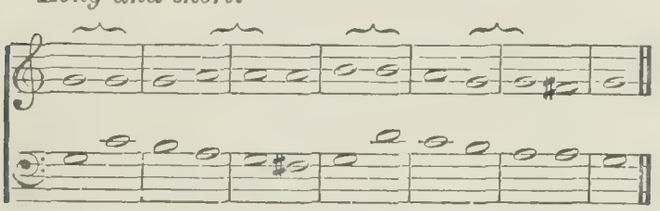


It is difficult to ascertain with anything like certainty the precise date of the invention of the bind, but it appears probable that it had its origin in the endeavours which were continually made by the earlier composers (before the 15th century) to give rhythmic variety to their counterpoint. Morley (Practical Music, 1597) describes two kinds of counterpoint, which he calls 'long and short' and 'short and long,' in each of which a single note alternates with two notes bound together, the sign of the bind being formed thus ⁀, as in Ex. 4; and the fourth of the five orders of counterpoint established by Fux (1725), and adopted by all his successors, consists of syncopation—that is, of a non-accented note bound to the accented note of the next bar (Ex. 5).

4. *Short and long.*



Long and short.



5.

A curved line similar to the bind, but placed between two notes of different names, denotes the slur or *legato*, and the possibility of confusion resulting from this resemblance induced Sir Sterndale Bennett to introduce a new sign for the bind, consisting of a rectilinear bracket, thus ⌐¬; he appears, however, to have thought the innovation not worth preserving, as he only employed it for a time in his op. 33 to 37, recurring afterwards to the usual curved line. [F. T.]

BINI, Pasqualino, violinist. Born at Pesaro (Rossini's native place) about 1720. He was a favourite pupil of Tartini, to whom he was recommended at the age of fifteen by Cardinal Olivieri. Under Tartini he practised with such diligence that in three or four years time he overcame the chief difficulties of his master's music, and played it with greater force than the composer himself. On returning to Rome, under the protection of Cardinal Olivieri, he astonished the violinists by his performance, especially Montanari, the chief violin-player of the time at Rome, who was generally believed to have died of mortification at the superiority of Bini's talents. Hearing that Tartini had changed his style of playing, he returned to Padua and placed himself for another year under his old master; at the end of which time he is said to have played with wonderful certainty and expression. After his return to Rome Tartini recommended Mr. Wiseman, his English friend, to Bini in the following words, which speak as highly for master as for scholar:—'Io lo mando a un mio scolare che suona più di me, e me ne glorio per essere un angelo di costume e religioso'—'I recommend him to a scholar who plays better than myself, and I am proud of it, as he is an angel in religion and morals'. [E. H. D.]

BIONI, Antonio, born in Venice 1700, a dramatic composer, pupil of Giovanni Porta, produced his first opera 'Climène' in 1721, his next, 'Udine,' 1722, and during the next nine years 24 more, of which 'Endimione' (1727) had the highest reputation. In 1730 he became director of the Italian theatre at Breslau, in 1731 the Elector of Mayence appointed him his chamber-composer, and in 1733 he probably returned to Italy. He conducted the performance of his 'Girita' at Vienna in 1738, which is the last fact known of him. Fétis gives a list of his works. [M. C. C.]

BIRCHALL, Robert, music-publisher, etc., said to have been apprenticed to Randall, the successor of Walsh, established a musical circulating library about 1784, prior to which he had been associated in business with Beardmore and also with Andrewes, successively at 129, 133 & 140 New Bond Street. He managed the celebrated series of Antient Concerts and most of the Benefit Concerts of those golden days. Birchall published many of Beethoven's works, including the original English editions of 'The Battle Symphony,' dedicated to the Prince Regent, in 1816, the Sonata op. 96, the Trio op. 97, an adaptation for the Pianoforte of Symphony No. 7—the copyrights of which he purchased from the composer. Beethoven's letters arranging for these, in queer English, and still queerer French, will be found in Nohl's two collections, *Briefe*, and *Neue Briefe*. After amassing a large fortune Birchall died in 1819, and was succeeded by Lonsdale & Mills. Mr. Samuel Chappell, the founder of the well-known firm at 50 New Bond Street, was originally at Birchall's. The catalogue of the house contains the celebrated collections formed by Latrobe, Mozart's operas, and an immense collection of standard works by the greatest composers and performers of the day. [R. E. L.]

BIRMINGHAM FESTIVAL. This Triennial Festival, which is now acknowledged to be the most important 'music meeting' in the provinces, was commenced in 1768 with a series of performances in St. Philip's Church and in the

theatre in King Street, in aid of the funds of the General Hospital. The first programme was exclusively Handelian, with a band of twenty-five and a chorus of forty, conducted by Mr. Capel Bond of Coventry, but since 1802 the programmes have been drawn from all sources. In 1778 a second festival was held, and in 1784 Lord Dudley and Ward was the president of the third festival, at which, for the first time, a body of noblemen and gentlemen assisted as stewards. In 1787 and 1790 the band was drawn from the King's Theatre in London, and with the chorus numbered 100 performers. In 1793 no festival was held, owing to the burning of the theatre, but from 1796 to 1829 there was a triennial festival. The next festival was in 1834, the first held in the New Town Hall, where the concerts have since taken place every third year. At the earlier festivals the male singers were members of the Worcester and Lichfield Cathedral choirs, the sopranos being selected from several Lancashire choral societies, famed then as now for the excellence of their voices. The members of a local Gentlemen's Musical Association also assisted in the chorus, which now consists of a local choral society, reinforced by members of the London Sacred Harmonic Society. In 1805 the number of performers was increased to 120, in 1808 to 188, in 1811 to 204, in 1820 to 231, in 1834 (in the Town Hall) to 386, and at the last Festival in 1876 the band numbered 130 and the chorus 390. At first the duties of organist and conductor were combined, but in 1832 they were divided. The conductors included Capel Bond (1768), Dr. Crotch (1808), S. Wesley (1811), T. Greatorex (1820), W. Knyvett (1834–43), Mendelssohn and Moscheles (1846), Costa (1849 to the present time). The band included the most eminent orchestral players of the time. The solo instrumentalists and principal singers include almost every artist of note of the past and present century, many of whom have here made their first appearances.

The scheme of the first festival (1768) included the Dettingen 'Te Deum,' the Utrecht 'Jubilate,' the 'Coronation Anthem' and the 'Messiah' (sung in the church), and 'L'Allegro' and 'Alexander's Feast' in the theatre. In 1778 an organ concerto was introduced at the church performance. In 1784 Purcell's 'Te Deum' was sung, and a new oratorio, 'Goliath,' by Atterbury, produced. Year by year Handel's music, although still forming the major part of the programmes, was more and more varied by the music of other masters.

Among the most noteworthy events in the history of the festival may be mentioned:—the introduction of Haydn's 'Creation' in the place of one of Handel's oratorios in 1802; the engagement of Mr. Greatorex, organist of Westminster Abbey, in 1805, previous to which year the organists had been local performers; the use of Mozart's accompaniments to the 'Messiah' for the first time in 1808; the withdrawal of the orchestral accompaniment at the church service, and the use of additional wind parts for the 'Messiah,' by Greatorex, in 1820; the introduction of nine trombones in addition to the organ at the church service in 1823; the last performance in church in 1829, the year in which operatic performances in character were introduced, and in which Signor Costa was compelled to appear as a vocalist as a condition of the payment of his expenses by the committee, who refused to allow him to conduct Zingarelli's cantata; the appearance of Mendelssohn as the conductor of 'St. Paul,' and as solo organist in 1837; the production of 'Elijah' in 1846; the appointment of Signor Costa as conductor, and the rearrangement of the plan of the orchestra, in 1849; and the formation of the Birmingham Amateur Harmonic Association, to form the local contingent of the chorus, in 1855. Sir Michael Costa wrote his 'Eli' and 'Naaman' for performance at the festivals of 1855 and 1864. The receipts at the festivals have gradually risen, and the actual profit, which is handed over to the treasurer of the General Hospital, stood at upwards of £7500 in 1873, as compared with £299 in 1768. The number of persons present on the four days of the festival in 1876 reached a total of 14,916, and the gross receipts were £15,180. Since their foundation, the festivals have yielded a grand total of upwards of £100,000 to the hospital funds. [C. M.]

BIS (Fr.), that is, 'twice,' a cry more in use abroad than here, and equivalent to ENCORE. The French even have a verb, *bisser*, to repeat.

When written, as it sometimes is in MS. music, over a phrase or passage, it signifies that the notes are to be repeated; the same thing would be effected by dots of repetition at the beginning and end of the phrase.

BISCHOFF, DR. LUDWIG FRIEDRICH CHRISTOPH, born at Dessau Nov. 27, 1794. His father was a cello-player in the Duke's band, and the boy was early initiated into music, though (like so many musicians) intended for science. In 1812 he entered the university of Berlin, and attended the philological lectures of Boeckh. But the war of freedom put a stop to study; Bischoff volunteered, and was taken prisoner by the French. After the treaty of Paris he resumed his studies and took his degree. He filled various posts in Switzerland, was professor at Berlin, and director of the gymnasium at Wesel from 1823 to 1849. Here he was remarkably active in musical matters, founding societies, assisting performances, and making his house in every sense a home for music. After twenty-five years he took his leave, and settled first in Bonn and then in Cologne. There he founded the 'Rheinische Musikzeitung' (1850) and the 'Nieder-Rheinische Musikzeitung' (1853), and edited them to the day of his death (Feb. 24, 1867), acting also as reporter to the 'Cölnische Zeitung,' and acquiring great influence throughout the Lower Rhine districts. The tendency of his papers was dead against that of the 'Neue Zeitschrift' of Schumann and Brendel, in regard to Wagner and Liszt. Bischoff's worship for Haydn, Mozart,

and Beethoven, with whom he afterwards associated Mendelssohn, was so exclusive as to preclude his appreciating even Schumann, essential as he is in the development of modern music. On the other hand his influence on music in the Lower Rhine was both good and great. He was the musical centre of the energy and devotion which kept up the festivals of Cologne, Aix-la-Chapelle, and Düsseldorf, and through them acted so beneficially on the whole of Germany. With Bischoff's death his papers came to an end, nor have they been yet replaced. [A. M.]

BISHOP, Sir Henry Rowley, was born in London, Nov. 18, 1786, and learned music under Francesco Bianchi. His bias for dramatic composition soon developed itself in a remarkable degree. In 1804 he wrote the music to a little piece entitled 'Angelina,' performed at Margate, and followed it by the music to a ballet, 'Tamerlan et Bajazet,' produced at the King's Theatre in 1806. This led to his writing, in the same year, two other ballets, performed at the Opera, and also the music for two operatic pieces produced at Drury Lane Theatre. In 1809 his music to the 'Circassian Bride' was received with enthusiasm. It was performed at Drury Lane on Feb. 23, and on the following night the theatre was burnt to the ground, and the composer's score consumed in the flames. The merits of the young musician were so apparent that the proprietors of Covent Garden Theatre engaged him for three years to compose and direct the music. He entered on this important office in the season 1810–11. The first piece upon which Bishop's talents were employed, in consequence of this arrangement, was a musical drama founded upon Sir W. Scott's poem 'The Lady of the Lake,' and produced as 'The Knight of Snowdon.' In the music Bishop displayed an amount of talent seldom surpassed by British composers. Before the expiration of the engagement, the 'Virgin of the Sun,' the 'Æthiop,' and the 'Renegade' were produced. A fresh engagement for five years was now concluded and when we say that Bishop signalised it immediately by 'The Miller and his Men,' no ampler proof can be given of the indications with which it commenced.

The Philharmonic Society was established in 1813, and Bishop was one of its original members, and took his turn as conductor. In the following year he produced portions of the opera of 'The Farmer's Wife,' the melodrama of 'The Forest of Bondy,' and other musical pieces. In this year he adapted the first of a series of foreign operas—Boieldieu's 'Jean de Paris'—which was followed in successive years by 'Don Giovanni,' 'Figaro,' 'Il Barbiere,' and 'Guillaume Tell.' A number of operatic pieces were produced in 1815, including additional music for Dr. Arne's 'Comus,' and for Michael Arne's 'Cymon.' Two of his well-known works, 'Guy Mannering' (of which Whittaker wrote a portion) and 'The Slave,' gave interest to the following year, in which also he wrote the musical interpolations in 'A Midsummer Night's Dream,' the first of a series of Shakesperian spoliations which, as Mr. Macfarren remarks, 'even the beauty of some of his introduced pieces has happily not preserved upon the stage.' It is impossible in our space to go through in detail all Bishop's productions for Covent Garden; suffice it to say, that among them were 'The Law of Java,' with its universally popular 'Mynheer Vandunck'; 'Clari,' with its household melody of 'Home, sweet home'; and 'Maid Marian,' full of charming English music. In 1825 Bishop accepted an engagement under Elliston, at Drury Lane, and the opera of 'The Fall of Algiers' was the first fruit of his new appointment. 'The engagement of Weber to write 'Oberon' for Covent Garden, induced the rival management to set Bishop to work upon an opera that should oppose it; and impressed with the magnitude of the competition, he occupied more than a year in the extremely careful composition of 'Aladdin,' which was produced in 1826, some weeks after Weber's opera. It had the misfortune of being allied to an even worse constructed drama than 'Oberon,' without the elegant writing which characterises that libretto; and lacking the individuality of Bishop without having the merit of Weber, it met with no success. In 1830 Bishop was appointed musical director at Vauxhall. In this capacity he wrote several operettas, and many songs, some of which acquired great popularity, 'My pretty Jane' being perhaps the best known at the present day. In the season of 1840–1 he was engaged by Madame Vestris as musical director of Covent Garden, where he produced 'The Fortunate Isles,' to celebrate the Queen's wedding. This was his last dramatic composition.

We must now notice a few other events of Bishop's life. In 1819, in partnership with the proprietor of Covent Garden, he commenced the direction of the extraordinary performances, then miscalled Oratorios; and in the following season undertook the speculation on his own account, which he relinquished however before the commencement of another year. In the autumn of 1820, he visited Dublin, and received the freedom of that city by cordial and unanimous suffrage. In 1833 the Philharmonic Society commissioned him to write a work for their concerts, and the sacred cantata of 'The Seventh Day' was the result. It is a clever and masterly work, but made no lasting impression, belonging as it did to a class of music entirely different from that in which he had achieved his fame. In 1839 he received his degree as Bachelor in Music at Oxford, and his exercise was performed at the triennial festival, of which he was conductor. In November 1841 he was elected to the musical professorship at Edinburgh, which he resigned in December, 1843. The distinction of knighthood was conferred upon him in 1842; and on the death of Dr. Crotch in 1848 he was appointed to the musical chair at Oxford. On the retirement of Mr. W. Knyvett in 1840, he was for three years occasionally, and in 1843 permanently, appointed conductor of the Antient Concerts, which office he held until the discontinuance of the performances in 1848. His last composition of importance was the ode for the installation of the

Earl of Derby as Chancellor of Oxford, in 1853. On this occasion he received the degree of Doctor in Music, the Ode being considered as his probational exercise.

Besides his dramatic productions, and the 'Seventh Day,' Bishop composed an oratorio, 'The Fallen Angel,' which has never been performed; music for three tragedies, 'The Apostate,' 'Retribution,' and 'Mirandola'; and a 'Triumphal Ode,' performed at the Oratorios. He also arranged the first volume of 'Melodies of Various Nations'; three volumes of 'National Melodies,' to which Moore wrote the poetry; and a number of English melodies with Dr. Mackay's verses. He edited the 'Messiah,' a large collection of Handel's songs, and many other works of importance.

He died April 30, 1855, and was buried in the cemetery at Finchley, where a monument to his memory has been erected by subscription.

The following chronological list of his productions for the stage includes the works which he altered or adapted :—

Angelina, 1804; Tamerlan et Bajazet, 1806; Narcisse et les Graces, 1806; Caractacus, 1806; Love in a Tub, 1806; The Mysterious Bride, 1808; The Circassian Bride, 1809; Mora's Love, 1809; The Vintagers, 1809; The Maniac, 1810; Knight of Snowdon, 1811; Virgin of the Sun, 1812; The Æthiop, 1812; The Renegade, 1812; Haroun Alraschid, 1813; The Brazen Bust, 1813; Harry le Roy, 1813; The Miller and his Men, 1813; For England, ho! 1813; The Farmer's Wife (with Davy, Reeve, etc.), 1814; The Wandering Boys, 1814; Sadak and Kalasrade, 1814; The Grand Alliance, 1814; Doctor Sangrado, 1814; The Forest of Bondy, 1814; The Maid of the Mill (additions), 1814; John of Paris (compiled from Boieldieu), 1814; Brother and Sister (with Reeve), 1815; The Noble Outlaw, 1815; Telemachus, 1815; Magpie or the Maid, 1815; John du Bart, 1815; Cymon (additions), 1815; Comus (additions), 1815; Midsummer Night's Dream, 1816; Guy Mannering (with Whittaker, etc.), 1816; Who wants a Wife, 1816; Heir of Verona (with Whittaker), 1817; Humorous Lieutenant, 1817; The Libertine (adapted from Don Giovanni), 1817; Duke of Savoy, 1817; Father and his Children, 1817; Zuma (with Braham), 1818; Illustrious Traveller, 1818; December and May, 1818; Barber of Seville (adapted from Rossini), 1818; The Marriage of Figaro (adapted from Mozart), 1819; Fortunatus, 1819; The Heart of Mid-Lothian, 1819; A Rowland for an Oliver, 1819; Swedish Patriotism, 1819; The Gnome King, 1819; The Comedy of Errors, 1819; The Antiquary, 1820; Battle of Bothwell Brig, 1820; Henri Quatre, 1820; Twelfth Night, 1820; Don John, 1821; Two Gentlemen of Verona, 1821; Montrose, 1822; The Law of Java, 1822; Maid Marian, 1822; Clari, 1823; The Beacon of Liberty, 1823; Cortez, 1823; Native Land, 1824; Charles the Second, 1824; The Fall of Algiers, 1825; Hofer (compiled from Rossini), 1830; Angelina (partly rewritten), 1825; Edward the Black Prince, 1825; Coronation of Charles X, 1825; Aladdin, 1826; The Knights of the Cross, 1826; Englishman in India, 1826; Under the Oak, 1830; Adelaide, 1830; The Tyrolese Peasant, 1832; Home sweet Home, 1832; The Magic Fan, 1832; The Sedan Chair, 1832; The Battle of Champagne, 1832; The Romance of a Day, 1832; Yelva, 1833; The Rencontre, 1833; Rural Felicity, 1834; The Doom Kiss, 1836; Manfred, 1836; The Fortunate Isles, 1841.

(*Imp. Dict. of Biog.; Gentleman's Mag.; Private Sources.*) [E. F. R.]

BISHOP, JOHN, was born at Cheltenham July 31, 1817. When about six years of age he was placed at a boarding-school at Oxford, where he remained two years and a half, and learned music from Daniel Feldon, organist of St. Peter's-in-the-East in that city. His next master was Arnold Merrick, organist of the parish church of Cirencester, and translator of the theoretical works of Albrechtsberger, and several other valuable treatises. Returning to Cheltenham Bishop became a pupil of Thomas Woodward, organist of the parish church there, under whom he studied for about five or six years. On the opening of the new church of St. Paul, Cheltenham, in 1831 Bishop, then fourteen years of age, was appointed its organist. He subsequently completed his musical education under Migliorucci, a favourite pupil of Zingarelli. In 1838 he became organist at Blackburn, Lancashire, but in the following year returned to Cheltenham, where he has since resided, and where he has filled successively the post of organist at St. James's Church, the Roman Catholic Chapel, and St. John's Church, from the latter of which he withdrew at the end of 1852. Bishop has directed his attention much to the study of the theory and history of music, and has translated and edited many valuable theoretical and other works, besides arranging and editing a large number of the masterpieces of the great classical composers. [W. H. H.]

BIZET, GEORGES, born at Paris Oct. 25, 1838, was a brilliant pupil and laureate at the Conservatoire from 1848 to 1857. He studied composition under Halévy, whose daughter he afterwards married. Before winning his 'prix de Rome,' he gave an insignificant operetta 'Docteur Miracle' (Bouffes Parisiens, April, 1857); and, after his return from Italy, composed 'Vasco de Gama' (1863), which did not gain him much credit. At the Théâtre Lyrique were performed 'Les Pêcheurs de perles,' in 3 acts (Sept. 30, 63), and 'La jolie Fille de Perth,' in 4 acts (Dec. 26, 67). 'Djamileh' (May 22, 72) was not successful, but the interludes to 'l'Arlésienne' (Sept. 30, 72), and his Overture 'Patrie' were received with applause. Bizet's last effort was 'Carmen,' in 4 acts, a sombre libretto, but a fine score, which was heard at the Opéra Comique on March 3, 75. This highly gifted composer and very talented pianist died almost suddenly on June 3, 75. Much was expected from him. He was a musician of superior abilities, though his vocal style is deficient in ease. [G. C.]

BLACK DOMINO, THE, the English version of Auber's DOMINO NOIR; translated by H. F. Chorley. Produced at Covent Garden (Pyne & Harrison) Feb. 20, 1861.

BLAES, ARNOLD JOSEPH, a great clarinet-player, born at Brussels 1814; pupil of Bachmann in the Conservatoire there, where he obtained the second prize in 1829 and the first in 1834. He visited Holland, Germany, and Russia, and in 39 was awarded a medal for his performance before the Société des Concerts in Paris: was solo clarinet to the King of the Belgians; and in 42 succeeded Bachmann as Professor in the Brussels Conservatoire. [M. C. C.]

BLAES, MME. ELISA, whose maiden name was MEERTI, born in Antwerp about 1820, a distinguished singer, and wife of the foregoing. She was engaged by Mendelssohn to sing at the Gewandhaus concerts at Leipsic (Oct. 6, 1839, and onwards), where her cultivated style, sympathetic voice, and great personal gifts, were long and highly appreciated. She has been heard in most of the European capitals, is now (1875) a teacher in Brussels. [M. C. C.]

BLAGROVE, HENRY GAMBLE, was the son of a professor of music at Nottingham, where

he was born in October 1811. At four years old he was taught by his father to play on a small violin which he had made for him, and at five years old he performed in public. His father bringing him to London he played in 1817 at Drury Lane Theatre in a performance called 'The Lilliputians,' and subsequently played in public daily at the Exhibition Rooms in Spring Gardens. In 1821 he was placed under the tuition of Spagnoletti, and on the opening of the Royal Academy of Music in 1823 he became one of its first pupils, François Cramer being his instructor. In 1824 he was awarded a silver prize medal for his proficiency. On the formation of Queen Adelaide's private band in 1830 Blagrove was appointed a member, and continued so until 1837. In 1833 he went to Germany for the purpose of studying his instrument under Spohr, and remained there until November 1834. Blagrove was one of the most distinguished of English violinists, and for upwards of thirty years occupied the position of concerto player and leader in all the best orchestras. He died, after a lingering illness, December 15, 1872. [W. H. H.]

BLAHETKA, Leopoldine, born Nov. 15, 1811 (not 1809), at Guntramsdorf, Baden, Austria; an able performer on the piano and physharmonika; daughter of J. L. Blahetka and Babette Traeg. At five years of age she was so good a player that by Beethoven's advice she was placed under Jos. Czerny for education as a musician. She afterwards had instruction from Kalkbrenner and Moscheles. Her progress was so rapid that she was able to undertake concert tours in company with her mother, from which she obtained much reputation, though they exposed her to many calumnious attacks. In 1832 she published as op. 25 a concert-piece for piano and orchestra which deserves notice. In 1830 a romantic piece of hers, 'Die Räuber und die Sänger,' was produced at the Kärnthnerthor theatre, Vienna, with applause. A few years later she made another tour in France, and in 1840 settled in Boulogne, where she still resides (1876). A few words in Schumann's *Gesammelte Schriften*, ii. 45, testify to her excellence as a player. [F. G.]

BLAKE, Rev. Edward, D.D., prebendary of Salisbury Cathedral, and rector of St. Thomas's Church in that city, was composer of the admired anthem 'I have set God always before me,' and of some duets for violin and viola. He died June 11, 1765. [W. H. H.]

BLANCHARD, Henri Louis, born at Bourdeaux 1778, died in Paris 1858, studied the violin under Rodolphe Kreutzer, and composition under Beck, Méhul, and Reicha. From 1818 to 1829 he was musical director at the Variétés, and composed a number of vaudeville airs which attained popularity, and also trios and quartets for strings. These more solid works exhibit considerable talent. In 1830 he became director of the Théâtre Molière, where two of his plays were produced. A third had a great run at the Théâtre Français in 1831. His opera of Diane de Vernon was produced at the Nouveautés on April 4 in the same year. As a musical critic Blanchard was able and impartial. He contributed articles to 'L'Europe littéraire et musicale' (1833), 'Le Foyer,' 'Le Monde Dramatique,' and 'La Revue et Gazette.' His biographies of Beck, Berton, Cherubini, Garat, and others, which originally appeared in these journals, have been published separately. [M. C. C.]

BLANCHE, i.e. 'white,' is the ordinary French word for the note 𝅗𝅥 which we call a minim. In the same manner the French call a crotchet, ♩, *noire*.

BLANCHE DE NEVERS, an opera in five acts, founded on the 'Duke's Motto.' Libretto by John Brougham; music by Balfe. Produced at Covent Garden by Pyne and Harrison Nov. 21, 1863.

BLANCKENBURGH, Gerbrandt van, organist at Gouda, probably father of Q. v. Blankenburg, author of a work of historical importance, 'Onderwyzinge hoemen alle de Toonen en halve Toonen, die meest gebryckelyck zyn, op de Handt-Fluyt zel konnen t' eenemal zuyverblaezen' (Amsterdam, P. Matthysz, 1654). A reprint of this interesting work has been published at the Hague. [F. G.]

BLANCKS, Edward, whom Francis Meres, in his 'Palladis Tamia, Wits Treasury,' 1598, classes among the 'famous English musicians' of the time, was one of the ten composers who harmonised the tunes for 'The Whole Booke of Psalmes, with their wonted Tunes as they are song in Churches, composed into foure parts,' published by Thomas Este in 1592, and reprinted by the Musical Antiquarian Society. Nothing more is known of him. [W. H. H.]

BLANGINI, Giuseppe Marco Maria Felice, celebrated tenor-singer, teacher of singing, and composer, was born Nov. 18, 1781. At the age of 9 he was admitted into the choristers' school of Turin Cathedral. He made rapid progress in music under the Abbate Ottani, a pupil of Padre Martini. By the time he was 12 he composed a motet and a Kyrie. His favourite instrument was the violoncello. His singing was so exquisite that he is said by it to have revived Baron Stackelberg the Russian ambassador at Turin after he had been given up by the physicians. When the war broke out in 1797 his family took refuge in France, but it was not till 1799 that Blangini went to Paris, where he soon became the fashionable composer of songs (Romances et nocturnes), and teacher of singing. In 1802 he was commissioned to complete Della Maria's unfinished opera 'La fausse Duègne,' which was followed in 1803 by 'Chimère et Réalité,' both for the Théâtre Feydeau, and in 1806 by 'Nephtali ou les Ammonites,' for the Grand Opéra. In 1805 he was called to Munich, where he produced 'Encore un tour de Caliphe,' and composed 'Inez de Castro,' and 'Les Fêtes Lacédémoniennes,' which were not performed. In 1806 Napoleon's

sister, Princess Borghese, appointed him her chapel-master, and in 1809 King Jerome made him his 'General Musik-director' at Cassel. In 1811 Blangini produced at Cassel 'Le Sacrifice d'Abraham,' and 'L'Amour philosophe,' and at the Feydeau in Paris 'Les Femmes vengées.' In 1814 he returned to Paris, and was appointed 'Surintendant de la musique du Roi.' The whole fashionable world, particularly the Faubourg St. Germain, thronged to him for lessons. He drew up a list of his pupils which reads like Leporello's catalogue in Don Giovanni, as it includes 3 Queens, 12 Princesses, 25 Countesses, etc. Blangini was an indefatigable composer of operas, though none of much interest were performed in Paris before 'La Marquise de Brinvilliers' (1831), in which Cherubini and Caraffa worked with him. One of the songs from Nephtali is still occasionally heard at a concert. His 'Romances,' in 34 numbers, continued in favour long after his death, which took place Dec. 18, 1841. His friend Maxime de Villemarest published his autobiography under the title 'Souvenirs de Blangini, maître de chapelle du Roi de Bavière, etc.' (Paris, 1834). The book is interesting, and gives an excellent picture of an artist's footing in society at that period. [F. G.]

BLANKENBURG, Quirin van, born 1654 at Gouda, Licentiate in philosophy and medicine, and organist of the Reformed Church at the Hague, well known for his 'Clavicymbel en Orgelboek der Psalmen en Kirkgezangen' (1732; 3rd ed. 1772). The inscription on his portrait compares him to Orpheus. In honour of the betrothal of the Prince of Orange he composed a collection of pieces in two parts, which might be performed either upright or upside down, forwards or backwards. His 'Elementa Musica' has some value as a theoretical work. Blankenburg died after 1739, but the precise date is not known. [F. G.]

BLAZE, François Henri Joseph, calling himself Castil-Blaze, one of the most prolific writers on music and the drama France has produced, was born at Cavaillon in 1784. His father, a lawyer by profession, was a good musician, friend of Grétry and Méhul, and composer of masses, operas, and chamber music. Blaze was sent to Paris in 1799 to study the law, but the love of music soon began to show itself. He became a pupil at the Conservatoire, and took private lessons in harmony. In the meantime his professional career promised to be a prosperous one. He obtained the position of sous-préfet in the Department of Vaucluse, and other appointments. But to one used to the excitement of Parisian society, and longing for literary and artistic distinction, official life in southern France could not but be tedious and uninteresting. At the age of thirty-six he threw up his post and set out with his family for the metropolis, chiefly with a view to publishing a book compiled during his leisure hours. It appeared in 1820, in two volumes, with the title 'De l'opéra en France,' and is the work on which his claims to remembrance are chiefly founded. The subjects treated comprise a much wider circle of observation than the title would imply. The first volume contains an elaborate though popular treatment of the various elements of music, including hints as to the choice of libretti, and the peculiarities of verse and diction best adapted for musical treatment. The second volume is devoted to the opera proper, describing at considerable length its various components, the overture, recitative, aria, ensemble, etc. The style is lucid and terse, and the book may be recommended to the amateur, although the student will look in vain for new material or originality of treatment. But even to the latter the frequent references to contemporary operas, a subject in which Castil-Blaze was thoroughly at home, will not be without interest. The chapter on the opera in the provinces is particularly valuable from an historic point of view. His remarks on the overture, in which he defends a broader and simpler conception of that form of art against those who expect from it an anticipatory reproduction of the drama itself, with all its complicated characters and situations, are excellent, and would be worth quotation if our space permitted it.

A considerable part of his book is polemical. He attacks the various uses and abuses of theatrical managers, the arrogance of ignorant critics, and the miserable translations supplied by literary hacks for the masterpieces of foreign composers. On the latter point he was entitled to speak, having himself reproduced more or less felicitously the libretti of numerous Italian and German operas. Amongst these we mention 'Figaro,' 'Don Juan,' and 'Zauberflöte'; 'Il Barbiere,' 'Gazza Ladra,' 'Otello,' 'Anna Bolena'; 'Der Freischütz,' 'Oberon,' 'Euryanthe;' and many others. These reproductions were chiefly for the use of provincial theatres where Italian opera was unattainable, and may have contributed much to popularise good music in France. Unfortunately Blaze frequently made bold to meddle with the scores, and even to introduce surreptitiously pieces of his own composition into the works of great masters. He used to tell with delight how one of his choral pieces fathered upon Weber was frequently played and applauded by unsuspecting audiences at the concerts of the Paris Conservatoire. Our author's own compositions do not call for notice. They are of an ephemeral nature, and are justly forgotten. Amongst his romances 'King Réné' is pretty, and was deservedly popular. He wrote several pieces of sacred and chamber music, one serious and two comic operas, none of which was successful to any considerable extent. More valuable is a collection of songs of southern France called 'Chants de Provence.'

The merits of Blaze's literary work having been discussed above, it will suffice to mention the titles of some of his works, mostly compilations, similar in character, although hardly

equal to 'De l'opéra en France.' We name 'Chapelle musique des Rois de France' (1832); 'La Danse et les Ballets depuis Bacchus jusqu'à mademoiselle Taglioni' (1832); and the works on the Théâtres lyriques de Paris, viz. 'L'Académie impériale' (formerly 'royale'; a history of that theatre published in 1855), and 'L'opéra Italien de 1548 à 1856' (1856).

For ten years previously to 1832 Blaze was musical critic of the 'Journal des Débats,' an important literary position afterwards held by Berlioz. He also wrote numerous articles for the 'Constitutionel,' the 'Revue et Gazette Musicale,' 'Le Menestrel,' etc., partly republished in book form.

Castil-Blaze died in 1857, after a few days' illness. A life like his, spent laboriously in the byeways of art, can hardly be called a thing sublime, but it is not without its uses and merits. The ideal truths emanating from creative genius stand in need of an intermediate stage of receptivity between their own elevation and the level of ordinary intellects. Blaze has occupied the position of an interpreter, thus indicated, not without credit. His knowledge of music and musical history was good, and his taste sound and comprehensive up to a certain point. But the wear and tear of journalistic routine could not but blunt his feeling for the subtler touches of beauty, and it would be unsafe to give implicit confidence to his opinion on questions of high art. [F. H.]

BLAZE DE BURY, Baron Henri, born in 1813, the son of the foregoing, is too much like him in all essential points to require detailed notice. In literary skill he surpasses his father; in musical knowledge he is decidedly his inferior. Blaze de Bury is indeed the prototype of the accomplished *littérateur* of the second empire. He is able to write well on most topics, and excellently on many. His style is refined and pleasing, but his attempts at depth are strangely mingled with the flippancy of the *feuilletoniste*. Amongst his works on music, which alone concern us here, the most remarkable are 'La Vie de Rossini' (1854); 'Musiciens contemporains'—short essays on leading musicians, such as Weber, Mendelssohn, Verdi, and many others (1856); and 'Meyerbeer et son temps' (1865). All these are reprints of articles contributed to the 'Revue des deux Mondes' and other periodicals. Another connection of Blaze de Bury with the history of music may be seen in the following circumstance. He wrote a comedy called 'La jeunesse de Goethe,' for which Meyerbeer supplied the incidental music. The score was unpublished when the master died, and will remain so, along with other MSS., till thirty years after his decease, in accordance with his own arrangement. In 1868 Blaze de Bury attempted to set aside the portion of the will referring to the MS. in question, but the action brought against the family was unsuccessful. [F. H.]

BLEWITT, Jonas, a celebrated organist in the latter half of the 18th century, author of 'A Treatise on the Organ, with explanatory Voluntaries'; 'Ten Voluntaries, or pieces for the Organ,' etc.; 'Twelve easy and familiar movements for the Organ,' etc. He died in 1805. His son, Jonathan Blewitt, was born in London in 1782, received the rudiments of his musical education from his father, and was afterwards placed under his godfather, Jonathan Battishill. At eleven years old he was appointed deputy organist to his father. After holding several appointments as organist, he left London for Haverhill, Suffolk; and subsequently became organist of Brecon, where he remained three years. On the death of his father he returned to London, with the intention of bringing out an opera he had composed for Drury Lane, but the burning of that theatre destroyed his hopes. He next went to Sheffield as organist. In 1811 he took up his abode in Ireland, in the family of Lord Cahir. He was appointed organist of St. Andrew's Church, Dublin, and composer and director of the music to the Theatre Royal in that city. The Duke of Leinster appointed him grand organist to the masonic body of Ireland, and he became the conductor of the principal concerts in Dublin. When Logier commenced his system of musical instruction in Ireland, Blewitt was the first who joined him; and being an able lecturer, and possessing sound musical knowledge, he soon procured the great majority of teaching in Dublin.

Before 1826 Blewitt was again in London, and wrote the music for a pantomime, 'Harlequin, or the Man in the Moon,' which was produced at Drury Lane with great success. In 1828 and 29 he was director of the music at Sadler's Wells, and wrote several clever works—'The Talisman of the Elements,' 'Auld Robin Gray,' 'My old woman' (adapted from Fétis), etc. He was also the composer of the operas of 'The Corsair,' 'The Magician,' 'The Island of Saints,' 'Rory O'More,' 'Mischief Making,' etc., and of a number of ballads, particularly in the Irish style, which enjoyed considerable popularity. Blewitt was a good singer, and possessed a fund of humour, qualifications which sometimes led him into questionable company. In his latter years he was connected with the Tivoli Gardens, Margate. He died September 4, 1853. [E. F. R.]

BLOW, John, Mus. Doc., born at North Collingham, Nottinghamshire, in 1648, was one of the first set of Children of the Chapel Royal on its re-establishment in 1660, his master being Captain Henry Cooke. Whilst yet a chorister he commenced composition; the words of three anthems produced by 'John Blow, one of the Children of His Majesty's Chapel,' are contained in Clifford's 'Divine Hymns and Anthems,' 1663, and an anthem with orchestral accompaniments composed by him in conjunction with Pelham Humphrey and William Turner, two of his fellow choristers, is still extant. On leaving the choir Blow became a pupil of John Hingeston, and subsequently of Dr. Christopher Gibbons. That he soon rose to great eminence is evidenced by the fact of his being chosen in

1669, at twenty-one years of age, organist of Westminster Abbey (a post not then a life appointment), but in 1680 he was displaced to make room for Henry Purcell. On the death of Purcell, in 1695, Blow was reappointed, and held the place until his death. On March 16, 1674, he was sworn in one of the gentlemen of the Chapel Royal in the room of the Rev. Roger Hill, deceased, and on July 21, 1674, was appointed master of the children of the chapel in succession to Pelham Humphrey, who died a week previously. Some years later he became one of the organists of the chapel. In 1685 he was appointed as one of the king's private music, and to the honorary office of Composer to the King. In 1687 he succeeded Michael Wise as almoner and master of the choristers of St. Paul's Cathedral, which offices he resigned in 1693 in favour of his pupil, Jeremiah Clarke. In 1699, on the establishment of the office of Composer to the Chapel Royal, Blow was installed in it. Dr. Blow was not a graduate of either university, his degree of Doctor of Music having been conferred on him by Sancroft, Archbishop of Canterbury. He married Elizabeth, only daughter of Edward Braddock, Gentleman and Clerk of the Cheque of the Chapel Royal and master of the choristers of Westminster Abbey. She died in childbirth Oct. 29, 1683, aged thirty, leaving one son and three daughters; the son, a boy of great promise, died June 2, 1693, aged fifteen; the daughters survived many years. Dr. Blow died Oct. 1, 1708, in the sixtieth year of his age, and was buried under the organ in the north aisle of Westminster Abbey, where a monument is erected to his memory. Dr. Blow was a very voluminous composer; his works comprise fourteen church-services, and upwards of one hundred anthems, nearly the whole of which are still extant, although but few are in print; sacred songs, duets, etc. (many of which are printed in Playford's 'Harmonia Sacra,' 1688 and 1714); odes for New Year's day, 1682, 1683, 1686, 1687, 1688, 1689, 1693 (?), 1694, and 1700; odes for St. Cecilia's day, 1684 (printed), 1691, and 1700, besides two which cannot be assigned to any particular year; ode by Dryden on the death of Purcell, 1695; songs, with which the various collections of the period abound; catches, many of them printed in 'The Catch Club,' 'The Pleasant Musical Companion,' 1724, and other collections; organ pieces; 'Lessons for the Harpsichord,' 1698 (printed), and 1705 (printed with some by Purcell). In 1700 Blow published by subscription a collection of his songs, etc., under the title of 'Amphion Anglicus,' with his portrait prefixed. In the preface to this work he expressed his intention of publishing his church music, but unfortunately never accomplished his purpose, a circumstance much to be regretted, since it is upon those productions that his fame chiefly rests. Three services and eleven anthems of his are printed by Boyce. [W. H. H.]

BLUETHNER, Julius Ferdinand, a pianoforte maker in Leipsic, whose instruments are much used in Germany; a native of Falkenberg near Zeitz. Herr Blüthner began business in Leipsic in 1853. Three years later he took out a patent for an action that has been much praised, and by the adoption of foreign improvements in iron framing and a systematised division of labour hitherto less practised in Germany than England, Herr Blüthner has succeeded in establishing his reputation on a sure basis, and competes on even ground with the best makers of his country. [A. J. H.]

BLUMENTHAL, Jacob, born at Hamburg Oct. 4, 1829, pupil of F. W. Grund there, and of C. M. von Bocklet and Sechter in Vienna. His proficiency in pianoforte playing was attained under Herz at the Conservatoire in Paris, which he entered in 1846. In 1848 he took up his residence in London, where be became pianist to the Queen, and a very fashionable teacher. As a composer he is known for a large number of brilliant, effective, and pretty pianoforte pieces, and for many songs, some of which, such as 'The Message,' have become widely and justly popular. Besides his residence in London, Blumenthal has now a house at Montreux. [A. M.]

BOB is a term used by change-ringers to denote certain changes in the working of the methods by which long peals of changes are produced. [See Change-Ringing.] [C. A. W. T.]

BOCCABADATI, Luigia, was born at Parma, where she received her musical education in a convent, and made a brilliant début in 1817. After singing at several theatres in Italy, she visited Munich, where her fine voice and good method were fully appreciated. She appeared at Venice in 1823, at Rome in 1824, at Milan in 1826, and again at Rome in 1827; and she met everywhere with the same success, especially in opera buffa, for which style of piece she was much in request. On this account she was persuaded to sing at Naples during the years 1829, 1830, and 1831. Despréaux, the composer, writing from Naples, Feb. 17, 1830 ('Revue Musicale,' vol. vii. p. 172), describes her as 'a little dry dark woman, who is neither young nor old. She executes difficult passages well; but she has no elegance, grace, or charm about her. Her voice, although extensive, is harsh at the top, but otherwise she sings in tune.' Berlioz says in the same Revue (xii. 75) in 1832, 'she is a *fort beau talent*, who deserves, perhaps, more than her reputation.' She appeared in London on Feb. 18, 1833, at the King's Theatre, in 'Cenerentola.' She was not successful here, and did not return another year. She sang at Turin for three seasons, and at Lisbon in 1840, 1841, and 1842. She returned to Turin in 1843, and sang at Genoa in 1844, and in the next year at Palermo. She was married to a M. Gazzuoli, by whom she had a son, and a daughter, Augustine, who was also a singer. Luigia Boccabadati died at Turin Oct. 12, 1850. [J. M.]

BOCCHERINI, Luigi, a highly gifted composer, born at Lucca, Jan. 14, 1740. The first

rudiments of music and the cello were taught him by his father, an able bass player, and the Abbé Vannecci, Chapel-master to the Archbishop. The boy's ability was so great as to induce them to send him to Rome, where he rapidly made himself famous both as composer and player. Returning to Lucca he joined Manfredi, a scholar of Tartini's, in a tour through Lombardy, Piedmont, and the south of France, and even as far as Paris, which they reached in 1768. Here they found a brilliant reception from Gossec, Capon, and Dupont sen., and their appearance at the Concerts Spirituels confirmed the favourable judgment of their friends. Boccherini became the rage; Vénier and La Chevardière, the publishers, contended for his first trios and quartets, the eminent Mme. Brillon de Jouy (to whom Boccherini dedicated six sonatas) attached herself to the two artists, and the Spanish ambassador, a keen amateur, pressed them to visit Madrid, promising them the warmest reception from the Prince of Asturias, afterwards Charles IV. Accordingly, in the end of 1768 or beginning of 69 they started for Madrid, but their reception was disappointing. Brunetti the violinist was then in favour, and neither King nor Prince offered the strangers any civility. They were however patronised by the Infanta Don Luis, brother of the King, whom Boccherini has commemorated on the title-page of his six quartets (op. 6), calling himself 'Compositore e virtuoso di camera di S. A. R. Don Luigi infante d'Ispagnia,' a title which he retained until the death of the Infanta in 1785. After that event he dedicated a composition to Friedrich Wilhelm II, King of Prussia, which procured him a valuable present, and the post of Chamber-composer to the King, with an annual salary, but burdened with the condition that he should compose for the King alone. With the death of Friedrich in 1797 the salary ceased, and Boccherini found himself unknown except to a small circle of friends. He obtained a patron, however, in the Marquis Benavente, in whose palace he was able to hear his music performed by his former comrades of the Villa Arenas—whither his old protector Don Luis had retired after his *mésalliance*—and to become once again known. Meantime ill health obliged him to drop the cello; he was often in want, and suffered severe domestic calamities. With the advent of Lucien Buonaparte, however, as ambassador of the French Republic at Madrid, better times arrived. Lucien appreciated Boccherini, and his productive talent revived. In 1799 he wrote six pianoforte quintets, and dedicated them to the French nation and Republic, but they were not published till after his death, and then appeared with the name of the Duchesse de Berri on the title-page. In 1801 and 1802 he dedicated twelve string quintets (op. 60 and 62) 'per il Cittadino Luciano Bonaparte,' and in 1801 a 'Stabat Mater' for three voices (op. 60), presented to the same, and published by Sieber of Paris. After this Boccherini's star sank rapidly, and his poverty was so great that he was glad to make arrangements of his works for the guitar for the use of the Marquis Benavente and other wealthy amateurs, till at length death released him from his troubles on May 28, 1805. The last of his sons, Don José, died in Dec. 1847, as librarian to the Marquis Seralbo, leaving a son Fernando, professor at the Academy of Fine Arts in Madrid (1851), the last representative of the name of Boccherini.

The ability in Boccherini's chamber-music, which is generally contemporary with Haydn's, is obvious and unquestionable. He is certainly wanting to some extent in force and contrast, but pleasant method, expressive melody, good treatment of ideas, and dignified style are never absent in his music. His originality was great, and had its influence on the progress of the art. To our practised ears his pieces may seem flat, tedious, wanting in variety of key, and too simple in execution, and doubtless these qualities have contributed to make them forgotten in Germany, though in England, Italy, and France his best works are still played and enjoyed. His quintets and cello sonatas (especially one of the latter in A) are often given at the Monday Popular Concerts.

Boccherini and Haydn are often named together in respect of chamber-music. It would be difficult to characterise the relation between them better than in the saying of Puppo the violinist, that 'Boccherini is the wife of Haydn.' It is usually assumed that these two great composers knew and esteemed each other's works, and that they even corresponded. No evidence of this is brought forward by Picquot, the earnest and accurate biographer of Boccherini, but it is nevertheless a fact. In a letter to Artaria ('Arenas, Feb. 1781') Boccherini sends his respects to Haydn, and begs him to understand that he is an enthusiastic admirer of his genius. Haydn, on his side, in two letters to Artaria, mentions his intention of writing to Boccherini, and in the meantime returns a complimentary message. Artaria at that time had published several string trios and quartets of Boccherini's, and had for long been in business relations with him.

Boccherini's facility was so great that he has been described as a fountain, of which it was only necessary to turn the cock to produce or suspend the stream of music. That he was remarkably industrious is evident from the detailed catalogue of his works made by Baillot, and given by Picquot. His first 6 trios date in 1760, and were followed in the next year by 6 quartets, published in Paris in 1768. The total number of his instrumental works amounts to 366, of which 74 are unpublished. The printed ones are as follows:—6 Sonatas for Piano and Violin; 6 ditto for Violin and Bass; 6 Duets for two Violins; 42 Trios for two Violins and Cello; 12 ditto for Violin, Viola and Cello; 91 String Quartets; 18 Quintets for Flute or Oboe, two Violins, Viola, and Cello; 12 ditto for Piano, two Violins, Viola, and Cello; 113 ditto for two Violins, Viola, and two Cellos; 12 ditto for two Violins, two Violas, and Cello; 16 Sextets

for various instruments; 2 Octets for ditto; 1 Suite for Full orchestra; 20 Symphonies, including 8 Concertante; 1 Cello Concerto. In addition to the above his vocal works are:—A Stabat Mater for three voices, with quintet string accompaniment; a Mass for four voices and instruments; a Christmas Cantata for four Solo voices, Chorus, and Orchestra; Villancicos or Motets for Christmas-time for four Voices and Orchestra; an Opera or Melodrama, La Clementina; 14 Concert airs and Duets, with Orchestra. Of the vocal works the Stabat Mater alone is published (Paris, Sieber, op. 61).

There are also many other pieces which are either spurious or mere arrangements by Boccherini of his own works. See 'Notice sur la vie et les ouvrages de Luigi Boccherini, suivie du catalogue raisonné de toutes ses œuvres, tant publiées qu'inédites, par L. Picquot,' 8vo. Paris, Philipp, 1851, with two portraits. (Printed at Bar le duc.) [C. F. P.]

BOCHSA, Robert Nicolas Charles, composer and eminent harpist, born at Montmédi 1789, was the son of Karl Bochsa, a flute and clarinet-player. He played the piano and flute in public at an early age, and composed airs de ballet for the theatre while yet a child. Before he was sixteen his opera 'Trajan' was produced at Lyons in honour of the Emperor's visit. His family having removed to Bourdeaux he became a pupil of Franz Beck, under whom he wrote a ballet, and an oratorio, 'Le Déluge Universel.' In 1806 he entered the Conservatoire at Paris as a pupil first of Catel and then of Méhul. He studied the harp under Nadermann and Marin, but soon formed a style of his own. He was continually discovering new effects, even to the close of his life, and may fairly be said to have revolutionised harp-playing. In 1813 he was appointed harpist to the Emperor Napoleon, and three years later to Louis XVIII and the Duc de Berri. Eight operas from his pen were performed at the Opéra Comique between 1813 and 1816. He composed a requiem to the memory of Louis XVI, which was performed with great solemnity in Jan. 1816, but a year later he was detected in extensive forgeries, and fled from France never to return. He was tried in his absence, and condemned to 12 years imprisonment, with a fine of 4,000 francs. He took refuge in London, where his fine playing was universally admired, and so popular did the harp become that he was unable to satisfy all the applicants for lessons. Parish-Alvars and J. B. Chatterton were both pupils of Bochsa. In 1822 he undertook the joint management, with Sir George Smart, of the Lent oratorios, and in 1823 the entire direction of them. Here he produced Stadler's 'Jerusalem,' oratorios by Wade and Sir John Stevenson, and his own 'Déluge Universel.' On the institution of the Royal Academy of Music Bochsa was appointed professor of the harp and general secretary, but in 1827 was dismissed on account of public attacks upon his character which he was unable to deny. In 1826 he succeeded Coccia as conductor at the King's Theatre, and six years later was himself succeeded by Costa. Rossini's 'Comte Ory' was produced under his management. Bochsa gave annual concerts, the programme of which always contained some striking novelty, though not always in the best taste. For instance, at one of them Beethoven's 'Pastoral Symphony' was accompanied by acted illustrations. In 1839 he ran away with the wife of Sir Henry Bishop and undertook a concert tour, visiting every country of Europe (except France), America, and Australia, where he died of dropsy at Sydney in 1855. Immediately before his death he composed a requiem, which was performed at his funeral.

As a composer Bochsa was too prolific for his own fame. Some of his many compositions for the harp, including a 'Method' for that instrument, are still known to harp-players. As a man he was irregular and dissipated to the last degree. [M. C. C.]

BOCKLET, Carl Maria von, pianoforte-player, born at Prague, 1801; learned the pianoforte from Zawora, the violin from Pixis, and composition from D. Weber. In 1820 he settled in Vienna as first violin in the Theatre 'an der Wien,' but shortly after resigned the violin and gave his whole attention to the piano. Beethoven took much interest in him, and at different times wrote him three letters of recommendation (Nohl, 'Beethovens Briefe,' Nos. 175, 176, 324). He was very intimate with Franz Schubert, whose piano compositions he was the first to bring into public notice, and for whom he had a romantic attachment. His great object in performance was to catch the spirit of the composition. Meeting with great success as a teacher he gradually withdrew himself from all public appearance; but in 1866, after a long interval, appeared once more to introduce his son Heinrich to notice. [F. G.]

BOCKSHORN, Samuel, born 1629, was originally director of the music at the Dreifaltigkeits Church in Pressburg, and in 1657 Capellmeister to the Duke of Wurtemberg in Stuttgart. Died not later than 1669. Amongst other compositions may be named a dramatic cantata 'Raptus Proserpinæ,' 1662. His works were largely published, and even as late as 1708 a new edition of his Sonatas, Cappricci, Allemandes, etc., was published in Vienna. [F. G.]

BODE, Johann Joachim Christoph, born at Barum in Brunswick 1730. He had a strange and varied life as bassoon and oboe-player, composer, newspaper editor ('Hamburger Correspondent'), printer (Lessing's 'Hamburgische Dramaturgie'), and translator (Burney's 'Present State of Music in Germany.') He died at Weimar Dec. 13, 1793. [M. C. C.]

BODENSCHATZ, Erhard, born at Lichtenberg in the Erzgebirge about 1570, studied theology and music at Leipsic, in 1600 became Cantor at Schulpforta, in 1603 Pastor at Rehausen, and in 1608 Pastor at Gross-Osterhausen, near Querfurt, where he died in 1638. Bodenschatz's Magnificat (1599) and his 'General-

bass' show him to have been an able contrapuntist; but his real value arises from the collections of music which he brought out—'Psalterium Davidis,' 4 voc. (Leipsic, 1605); 'Florilegium hymnorum,' 4 voc. (Leipsic, 1606); 'Harmonia angelica,' a collection of Luther's hymns (1608); 'Bicinia XC' (1615); and especially 'Florilegium Portense,' in 2 parts. Of Part 1 the first edition was printed by Lamberg of Leipsic in 1603, and contains 89 motets—increased in the 2nd edition (1618) to 120. Part 2 appeared in 1621, and contained 150 motets. There is no score of the work. It was published, like our own 'Barnard,' in separate parts, small 4to—8 of the first part, and 9 of the second—including in the latter case a Basso continuo part. A copy of the work is in the British Museum. Its contents are as follows:—

PART I (1618).

1. Pater noster. L. Hasler. 8 voices.
2. Exultat cor meum. Anon. 8 v.
3. Benedicam. A. Gabriel. 8 v.
4. Deus meus. Erbach. 8 v.
5. Man wird zu Zion. Hausman. 8 v.
6. Quaerite. Calvisius. 8 v.
7. Audi hymnum. Bodenschatz. 8 v.
8. Laudate pueri. Orlandus. 7 v.
9. Laudate Dominum. Hasler. 8 v.
10. Repleatur os meum. Gallus. 5 v.
11. Confitebor. Orlandus. 8 v.
12. Nisi Dominus. Anon. 8 v.
13. Beatus vir. Gallus. 8 v.
14. Deus adiutor. Eremita. 8 v.
15. Exultate. Gabriel. 8 v.
16. Laudate Dominum. Anon. 8 v.
17. Deus canticum. Fabricius. 6 v.
18. Cantate Domino. Ammonis. 8 v.
19. Exultate. Dulichius. 8 v.
20. Sacerdotes stabant. Anon. 8 v.
21. Cantate Domino. Anon. 8 v.
22. Exaudiat te Dominus. Fabricius. 6 v.
23. Sis praesens Deus, Fabritius. 6 v.
24. Ego sum panis. Gallus. 5 v.
25. Domine quid. Orlandus. 6 v.
26. Cor mundum. Anon. 6 v.
27. Media vita. Gallus. 8 v.
28. Cibavit nos. Bassanus. 8 v.
29. O quam metuendus. Gallus. 8 v.
30. Jubilate. Giovanelli. 8 v.
31. Domine Dominus noster. Erbach. 8 v.
32. Jubilate. Marentius. 8 v.
33. Cantate. Horologius. 8 v.
34. Laudate Dominum. Cantoni. 8 v.
35. Laudate Dominum. Venturus. 8 v.
36. Veniet tempus. Gallus. 8 v.
37. Audi tellus. Gallus. 8 v.
38. Non vos relinquam. Fabricius. 6 v.
39. Hymnum cantate. Massainus. 8 v.
40. In convertendo. Orlandus. 8 v.
41. O Domine Jesu Christe. A. Gabriel. 8 v.
42. Levavi oculos. Orlandus. 8 v.
43. Deus misereatur. Bischoff. 8 v.
44. Confitemini. Orlandus. 5 v.
45. Domine quis habitabit. Erbach. 6 v.
46. Deus in adiutor. Orlandus 6 v.
47. Domine, quando veneris. Gallus. 6 v.
48. Jubilate. F. Weissensee. 8 v.
49. Cantate Domino. Gallus. 8 v.
50. Angelus ad pastores. Orlandus. 5 v.
51. Nesciens mater. Erbach. 5 v.
52. Angelus ad pastores. H. Praetorius. 8 v.
53. Quem vidistis pastores. A. Gabriel. 8 v.
54. Das alte Jahr. Calvisius. 8 v.
55. Surge illuminare. H. Praetorius. 8 v.
56. Nunc dimittis. Anon. 5 v.
57. A Domino factum. Hasler. 8 v.
58. Surge propera. H. Praetorius. 8 v.
59. Quam pulchra es. Bodenschatz. 5 v.
60. Tristis est anima. Orlandus. 5 v.
61. Adoramus te. Gallus. 6 v.
62. Filiae Jerusalem. Gallus. 8 v.
63. Dominus Jesus. Gallus. 8 v.
64. Ecce quomodo. Gallus. 4 v.
65. Alleluia. Gallus. 8 v.
66. Tulerunt Dominum. Massainus. 8 v.
67. Tulerunt Dominum. H. Praetorius. 8 v.
68. Angelus Domini. C. Erbach. 6 v.
69. O viri, O Galilaei. Boschettus. 8 v.
70. Veni Sancte. Gallus. 8 v.
71. Hodie completi. A. Gabriel. 7 v.
72. Hodie completi. Gallus. 8 v.
73. Adesto unus Deus. Neander. 8 v.
74. Duo seraphim. Ingignerus. 8 v.
75. Te Deum patrem. H. Praetorius. 8 v.
76. Te Deum patrem. Erbach. 8 v.
77. Factum est. H. Praetorius. 8 v.
78. Jam non dicam. Gallus. 6 v.
79. Gaudent in coelis. Fabricius. 6 v.
80. Jam non dicam. Phinot. 8 v.
81. Ingrediente Domino. Zalamella. 5 v.
82. Hierusalem gaude. Gallus. 6 v.
83. Non auferetur scept. Meiland. 8 v.
84. Veni Domini. Gallus. 8 v.
85. Praeter rerum. Calvisius. 6 v.
86. Von Himel hoch. Calvisius. 6 v.
87. Freut euch. Calvisius. 6 v.
88. Gloria in excelsis. Calvisius.
89. Joseph, lieber Joseph. Calvisius. 6 v.

Finis [of the edition of 1603].

85. Gloria tibi Domine. H. Praetorius. 7 v.
86. Non auferetur. Rothius. 7 v.
87. Hosianna. Mauritius Landgr. Hassiae. 8 v.

[G.]

BOEHM, organist at Wehlan in East Prussia about 1770, one of the latest composers whose chorales are included in the choral-books. [F. G.]

BOEHM, Elizabeth, singer, born at Riga 1756, made her first appearance 1783; afterwards married the tenor Cartellieri at Strelitz, from whom she separated, and married again Boehm the actor, under whose name she became one of the most favourite actresses of the Berlin national theatre. She was the first to play Donna Elvira in Berlin (1790). She died 1797. [F. G.]

BOEHM, Heinrich, born 1836 at Blasria in Bohemia, where his father was leader of the choir and composer of the opera of 'Krathonos' (Rübezahl). Heinrich himself has composed 35 operas and operettas in Bohemian, and his name is well known on the stage of that country. [F. G.]

BOEHM, Joseph, a violinist of repute, born at Pesth in 1798. He was a pupil first of his father, and then of Rode, who took a lively interest in his talent. After having played with much success at Vienna in 1815 he travelled for several years in Italy, giving concerts in most of the principal towns. On his return to Vienna in 1819 he was appointed professor of the violin at the Conservatorium, which post he occupied till 1848. In 1821 he became a member of the imperial band, and retired in 1868. From 1823 to 1825 he travelled in Germany and France, earning applause everywhere for the soundness of his tone, his irreproachable technique, and his healthy musical style. But it is as a teacher that Boehm's name has won a permanent place in the history of modern violin-playing. For 50 years he resided at Vienna—(where he died, March 23, 1876)—devoting his powers to the instruction of his numerous pupils, among whom it will suffice to name Ernst, Joachim, L. Straus, Helmesberger, and Singer. In fact all the excellent violinists who during the last thirty years have come from Vienna were pupils either of Boehm or Mayseder, or both. These two masters appear to have supplemented each other by the different bent of their talents: Mayseder excelling chiefly by brilliant technique, while breadth of tone and thorough musical style were the prominent features of Boehm's playing.

He has published a number of compositions for the violin, polonaises, variations, a concertino, also a string-quartet, which however are of no importance. [P. D.]

BOEHM, Theobald, a flute-player of distinction, and Kammer-musicus at Munich, born about the commencement of the present century. Besides composing many brilliant works for his instrument, he introduced several notable improvements in its mechanism; especially a new fingering which bears his name, and was introduced in London about the year 1834. It has been found applicable also to the oboe and bassoon, and has been adapted by Klosé to the clarinet, though with less success than in the other cases, owing to the foundation of the latter scale on the interval of a twelfth.

Its principal peculiarity is the avoidance of what are termed 'cross-fingered' notes; viz. those which are produced by closing a hole below that through which the instrument is speaking. For this purpose the semitone is obtained by pressing down the middle finger of either hand, and the corresponding whole tone, by doing the same with the forefinger. A large number of duplicate fingerings is also introduced, which facilitate passages previously impracticable. On the flute the system has the advantage of keeping different keys more on a level as regards difficulty: E major, for instance, which on the old eight-keyed instrument was false, uneven in tone, and mechanically difficult, is materially simplified. On the other hand it to a certain extent alters the quality of the tone, making it coarser and less characteristic. It also complicates the mechanism, rendering the instrument heavier, and more liable to leakage.

Boehm's method has been generally adopted by flute-players both in this country and abroad. Klose's modification applied to the clarinet is used in France for military bands; many of Böhm's contrivances are incorporated in the oboes of M. Barret as made by Triebert of Paris, and are figured under the heading Cor Anglais. Bassoons on this system are rarely to be met with. [See Flute; Gordon.] [W.H.S.]

BOESENDORFER, Ludwig, a pianoforte-maker in Vienna. Ignaz Bösendorfer founded the firm in 1828. His son Ludwig succeeded him in 1859, and soon abandoning the cheaper build and mechanism identified with Vienna, that had influenced the technique of the Viennese school of pianists from the days of Mozart, adopted modern notions of tension and framing and an action of his own, grafting English principles

upon Viennese. By these changes he has raised his instruments to a place beside those of other acknowledged leading pianoforte-makers in Austria and Germany. [A. J. H.]

BOESSET, ANTOINE, born about 1585, died 1643, 'conseiller du roi' and 'surintendant de la musique des chambres du roi et de la reine' under Louis XIII; composer of court ballets, 24 in number, and ten books of airs in four and five parts, which attained immense popularity in their day. An English translation of the first book of his airs appeared with the title 'Court Ayres with their Ditties Englished' (London, 1629). He was succeeded in his posts and titles at the court of Louis XIV by his son JEAN BAPTISTE, born 1612, died 1685, and he, in 1667, by his son CLAUDE JEAN BAPTISTE, born about 1636, who composed, in addition to ballets for the court, a series of duets called 'Fruits d'Automne' (Paris, 1684). [M. C. C.]

BOHEMIAN GIRL, THE, a grand opera in three acts; the libretto adapted by Bunn from Fanny Ellsler's ballet of 'The Gipsy' (not the 'Gitana'); the music by Balfe. Produced at Drury Lane Nov. 27, 1843, also at Her Majesty's Feb. 6, 58, as 'La Zingara' (Piccolomini as Arline); and in December, 69, at the Théâtre Lyrique, Paris, as 'La Bohémienne,' with additions by the composer.

BOHRER, the name of a family of musicians. (1) CASPAR, born 1744 at Mannheim, trumpeter in the court band, and remarkable performer on the double-bass; called to Munich in 1778, and died there Nov. 4, 1809. (2) His son and pupil ANTON, born at Munich, 1783, learned the violin from Kreutzer, and composition from Winter and Danzi, and became violin-player in the court orchestra at Munich. With his brother MAX (born 1785) he undertook in 1810 an extensive tour, ending in Russia, where they narrowly escaped transportation to Siberia as employés of the King of Bavaria, Napoleon's ally. In 1823 the brothers were appointed to the royal orchestra in Berlin, but quarrelling with Spontini lost their posts. Anton then resided in Paris till 1834, when he was made Concertmeister at Hanover. Max obtained a similar position at Stuttgart. The brothers married two sisters of Ferdinand David and of Madame Dulcken. Anton's daughter, SOPHIE, a girl of much promise as a piano-player, died in 1849 at Petersburg, aged 21. [F. G.]

BOIELDIEU, FRANÇOIS ADRIEN,[1] was born December 16 (not 15), 1775, at Rouen, where his father held the position of secretary to Archbishop Larochefoucauld. His mother kept a milliner's shop in the same city. The union does not seem to have been a happy one. We know at least that during the Revolution the elder Boieldieu availed himself of the law of divorce passed at that time to separate from his first wife and contract a second marriage. Domestic dissensions were perhaps the reason why our composer, when his talent for music began to show itself, exchanged the house of his parents for that of his master, the organist of the cathedral, Broche, who, although an excellent musician and pupil of the celebrated Padre Martini, was known as a drunkard, and occasionally treated Boieldieu with brutality. On one occasion, it is said, the boy had stained one of his master's books with ink, and in order to evade the cruel punishment in store for him escaped from Broche's house and went on foot to Paris, where he was found after much trouble by his family. Whether he returned to Broche seems uncertain. Neither are we informed of any other master to whom the composer owed the rudimentary knowledge of his art. This knowledge, however acquired, was put to the test for the first time in 1793, when an opera by Boieldieu, called 'La fille coupable' (words by his father) was performed at Rouen with considerable success. It has hitherto been believed that Boieldieu left Rouen for Paris immediately, or at least very soon after, this first attempt. This however must be a mistake, unless we accept the improbable conjecture of a second temporary sojourn in the capital. Certain it is that Boieldieu was again in Rouen October 28, 1795, when another opera by him, 'Rosalie et Myrza,' was performed at the theatre of that city. The success of this second venture does not seem to have been brilliant, to judge at least by the 'Journal de Rouen,' which after briefly noticing the book observes silence with regard to the music. Many of Boieldieu's charming ballads and chansons owe their origin to this period, and added considerably to the local reputation of the young composer. Much pecuniary advantage he does not seem to have derived from them, for Cochet, the Paris publisher of these minor compositions, told Fétis that Boieldieu was glad to part with the copyright for the moderate remuneration of twelve francs apiece. Soon after the appearance of his second opera Boieldieu left Rouen for good. Ambition and the consciousness of power caused him to be dissatisfied with the narrow sphere of his native city, particularly after the plan (advocated by him in an article in the 'Journal de Rouen,' entitled 'Reflexions patriotiques sur l'utilité de l'étude de la musique') of starting a music school on the model of the newly-founded Conservatoire had failed.

To Paris therefore Boieldieu went for a second time, with an introduction from Garat the singer to Jadin (a descendant of the well-known Belgian family of musicians), at whose house he found a hospitable reception, and became acquainted with the leading composers of the day, Cherubini amongst the number. Boieldieu made his début as an operatic composer in the capital with the 'Famille Suisse,' which was performed at the Théâtre Feydeau in 1797, and had a run of thirty nights alternately with Cherubini's 'Médée.' Other operas followed in rapid succession, amongst which we mention 'Zoraïme et Zulnare' (written

[1] An important work by A. Pougin, 'Boieldieu: sa vie, ses œuvres, son caractère, sa correspondance,' published in 1875, has thrown new light on the composer's career, and corrected many erroneous statements made by Fétis and other biographers.

before 1796, but not performed till 1798), 'La Dot de Suzette' (same year), 'Beniowski' (after a drama by Kotzebue; performed in 1800 at the Théâtre Favart), and 'Le Calife de Bagdad' (performed in September of the same year with enormous success). To these operatic works ought to be added some pieces of chamber music, which we mention less for their intrinsic value than for the sake of completeness. They are, according to Fétis, a concerto and six sonatas for pianoforte, a concerto for harp, a duo for harp and pianoforte, and three trios for pianoforte, harp, and violoncello. To the success of these minor compositions Boieldieu owed his appointment as professor of the pianoforte at the Conservatoire in 1800. With the same year we may close the first period of Boieldieu's artistic career. The 'Calife de Bagdad' is the last and highest effort of this period. If Boieldieu had died after finishing it he would be remembered as a charming composer of pretty tunes cleverly harmonised and tolerably instrumented, in short as an average member of that French school of dramatic music of which he is now the acknowledged leader. Boieldieu's first manner is chiefly characterised by an absence of style—of individual style at least. Like most men of great creative power and of autodidactic training, like Wagner for instance, Boieldieu began by unconsciously adopting, and reproducing with great vigour, the peculiarities of other composers. But every new advance of technical ability implied with him a commensurate step towards original conception, and his perfect mastery of the technical resources of his art coincided with the fullest growth of his genius. During this earlier period matter and manner were as yet equally far from maturity. This want of formal certainty was felt by the composer himself, if we may believe a story told by Fétis, which, although somewhat doubtful on chronological grounds, is at any rate plausibly invented. He relates that, during the composition of the 'Calif of Bagdad,' Boieldieu used to submit every new piece as he wrote it to the criticism of his pupils at the Conservatoire. When, as happened frequently, these young purists took exception at their master's harmonic peccadilloes, the case was referred to Méhul, to whose decision, favourable or unfavourable, Boieldieu meekly submitted. Considering that at the time Boieldieu was already a successful composer of established reputation, his modesty cannot be praised too highly. But such diffidence in his own judgment is incompatible with the consciousness of perfect formal mastership.

After one of the successful performances of the 'Calife' Cherubini accosted the elated composer in the lobby of the theatre with the words 'Malheureux! are you not ashamed of such undeserved success?' Boieldieu's answer to this brusque admonition was a request for further musical instruction, a request immediately granted by Cherubini, and leading to a severe course of contrapuntal training under the great Italian master. The anecdote rests on good evidence, and is in perfect keeping with the characters of the two men. Fétis strongly denies the fact of Boieldieu having received any kind of instruction or even advice from Cherubini—on what grounds it is not easy to perceive. Intrinsic evidence goes far to confirm the story. For after the 'Calif of Bagdad' Boieldieu did not produce another opera for three years, and the first work brought out by him after this interval shows an enormous progress upon the compositions of his earlier period. This work, called 'Ma tante Aurore,' was first performed at the Théâtre Feydeau January 1803, and met with great success. In June of the same year the composer left France for St. Petersburg. His reasons for this somewhat sudden step have been stated in various ways. Russia at that time was the El Dorado of French artists, and several of Boieldieu's friends had already found lucrative employment in the Emperor's service. But Boieldieu left Paris without any engagement or even invitation from the Russian court, and only on his reaching the Russian frontier was agreeably surprised by his appointment as conductor of the Imperial Opera, with a liberal salary. It is very improbable that he should have abandoned his chances of further success in France, together with his professorship at the Conservatoire, without some cause sufficient to make change at any price desirable. Domestic troubles are named by most biographers as this additional reason. Boieldieu had in 1802 contracted an ill-advised marriage with Clotilde Mafleuray, a dancer; the union proved anything but happy, and it has been asserted that Boieldieu in his despair took to sudden flight. This anecdote however is sufficiently disproved by the fact recently discovered of his impending departure being duly announced in a theatrical journal of the time. Most likely domestic misery and the hope of fame and gain conjointly drove the composer to a step which, all things considered, one cannot but deplore. Artistically speaking the eight years spent by Boieldieu in Russia must be called all but total eclipse. By his agreement he was bound to compose three operas a year, besides marches for military bands, the libretti for the former to be found by the Emperor. But these were not forthcoming, and Boieldieu was obliged to take recourse to books already set to music by other composers. The titles of numerous vaudevilles and operas belonging to the Russian period might be cited, such as 'Rien de trop,' 'La jeune femme colère,' 'Les voitures versées,' 'Aline, reine de Golconde' (to words previously set by Berton), and 'Télémaque'; also the choral portions of Racine's 'Athalie.' Only the three first-mentioned works were reproduced by Boieldieu in Paris; the others he assigned to oblivion. 'Télémaque' ought to be mentioned as containing the charming air to the words 'Quel plaisir d'être en voyage,' afterwards transferred to 'Jean de Paris.'

In 1811 Boieldieu returned to Paris, where great changes had taken place in the meantime. Dalayrac was dead; Méhul and Cherubini, disgusted with the fickleness of public taste, kept silence; Nicolo Isouard was the only rival to be

feared. But Boieldieu had not been forgotten by his old admirers. The revival of 'Ma tante Aurore' and the first performance in Paris of an improved version of 'Rien de trop' were received with applause, which increased to a storm of enthusiasm when in 1812 one of the composer's most charming operas, 'Jean de Paris,' saw the light. This is one of the two masterpieces on which Boieldieu's claim to immortality must mainly rest. As regards refined humour and the gift of musically delineating a character in a few masterly touches, this work remains unsurpassed even by Boieldieu himself; in abundance of charming melodies it is perhaps inferior, and inferior only, to the 'Dame Blanche.' No other production of the French school can rival either of the two in the sustained development of the excellences most characteristic of that school. The Princess of Navarre, the Page, the Seneschal, are indestructible types of loveliness, grace, and humour. After the effort in 'Jean de Paris' Boieldieu's genius seemed to be exhausted: nearly fourteen years elapsed before he showed in the 'Dame Blanche' that his dormant power was capable of still higher flights. We will not encumber the reader's memory with a list of names belonging to the intervening period, which would have to remain names only. Many of these operas were composed in collaboration with Cherubini, Catel, Isouard, and others; only 'Le nouveau seigneur de village' (1813) and 'Le petit Chaperon rouge' (1818), both by Boieldieu alone, may be mentioned here. After the successful production of the last-named opera, Boieldieu did not bring out a new entire work for seven years. In December 1825 the long expected 'Dame Blanche' saw the light, and was received with unprecedented applause. Boieldieu modestly ascribes part of this success to the national reaction against the Rossini-worship of the preceding years. Other temporary causes have been cited, but the first verdict has been confirmed by many subsequent audiences. Up till June 1875 the opera has been performed at one and the same theatre 1340 times, and yet its melodies sound as fresh and are received with as much enthusiasm as on that eventful night of December 10, 1825, so graphically described by Boieldieu's pupil Adam. Such pieces as the cavatina 'Viens gentille dame,' the song 'D'ici voyez ce beau domaine,' or the trio at the end of the first act. will never fail of their effect as long as the feeling for true grace remains.

The 'Dame Blanche' is the finest work of Boieldieu, and Boieldieu the greatest master of the French school of comic opera. It is therefore difficult to speak of the composer, and of the work most characteristic of his style, without repeating to some extent, in a higher key of eulogy, what has already been said in these pages of other masters of the same school. With Auber, Boieldieu shares verve of dramatic utterance, with Adam piquancy of rhythmical structure, while he avoids almost entirely that bane of modern music, the dance-rhythm, which in the two other composers marks the beginning of the decline and fall of the school. Peculiar to Boieldieu is a certain homely sweetness of melody, which proves its kinship to that source of all truly national music, the popular song. The 'Dame Blanche' might indeed be considered as the artistic continuation of the *chanson*, in the same sense as Weber's 'Der Freischütz' has been called a dramatised Volkslied. With regard to Boieldieu's work this remark indicates at the same time a strong development of what in a previous article has been described as the 'amalgamating force of French art and culture'; for it must be borne in mind that the subject treated is Scotch. The plot is a compound of two of Scott's novels, the 'Monastery' and 'Guy Mannering.' Julian, (alias George Brown), comes to his paternal castle unknown to himself. He hears the songs of his childhood, which awaken old memories in him; but he seems doomed to misery and disappointment, for on the day of his return his hall and his broad acres are to become the property of a villain, the unfaithful steward of his own family. Here is a situation full of gloom and sad foreboding. But Scribe and Boieldieu knew better. Their hero is a dashing cavalry officer, who makes love to every pretty woman he comes across, the 'White Lady of Avenel' amongst the number. Yet nobody who has witnessed the impersonation of George Brown by the great Roger can have failed to be impressed with the grace and noble gallantry of the character.

The Scotch airs, also, introduced by Boieldieu, although correctly transcribed, appear, in their harmonic and rhythmical treatment, thoroughly French. The tune of 'Robin Adair,' described as 'le chant ordinaire de la tribu d'Avenel,' would perhaps hardly be recognised by a genuine North Briton; but what it has lost in raciness it has gained in sweetness.

So much about the qualities which Boieldieu has in common with all the good composers of his school; in one point however he remains unrivalled by any of them, viz. in the masterly and thoroughly organic structure of his ensembles. Rousseau, in giving vent to his whimsical aversion to polyphony, says that it is as impossible to listen to two different tunes played at the same time as to two persons speaking simultaneously. True in a certain sense; unless these tunes represent at once unity and divergence—oneness, that is, of situation, and diversity of feelings excited by this one situation in various minds. We here touch upon one of the deepest problems of dramatic music, a problem triumphantly solved in the second act of the 'Dame Blanche.' In the finale of that act we have a large ensemble of seven solo voices and chorus. All these comment upon one and the same event with sentiments as widely different as can well be imagined. We hear the disappointed growl of baffled vice, the triumph of loyal attachment, and the subdued note of tender love—all mingling with each

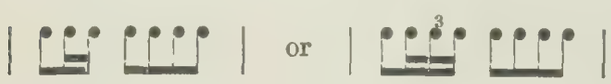
other and yet arranged in separate groups of graphic distinctness. This ensemble, and indeed the whole auction scene, deserve the appellation 'classical' in the highest sense of the word.

The remainder of Boieldieu's life is sad to relate. He produced another opera, called 'Les Deux Nuits,' in 1829, but it proved a failure, owing chiefly to the dull libretto by Bouilly, which the composer had accepted from good nature. This disappointment may have fostered the pulmonary disease, the germs of which Boieldieu had brought back from Russia. In vain he sought recovery in the mild climate of Southern France. Pecuniary difficulties increased the discomforts of his failing health. The bankruptcy of the Opéra Comique and the expulsion of Charles X, from whom he had received a pension, deprived Boieldieu of his chief sources of income. At last M. Thiers, the minister of Louis Philippe, relieved the master's anxieties by a government pension of 6000 francs. Boieldieu died October 8, 1834, at Jarcy, his country house, near Paris. The troubles of his last years were shared and softened by his second wife, to whom the composer was united in 1827 after a long and tender attachment. By her he had a son, ADRIEN, born in 1816, and educated at the Conservatoire under his father. He is the author of several comic operas, some of which have been successfully performed at the Opéra Comique and other theatres. It is perhaps chiefly the burden of his name which prevents him from taking a more distinguished position amongst contemporary French composers. At the centenary celebration of his father's birthday at Rouen a comic opera by the younger Boieldieu, called 'La Halte du Roi' was performed with great success. [F. H.]

BOLERO. A brisk Spanish dance in 3–4 time. The earliest form of its rhythm was

which later became

while to the longer notes of the accompaniment shorter melody notes were given, and *vice versâ*. Gradually the rhythm of the castanets, which were used as an accompaniment to the dance by the dancers themselves, was introduced into the music, which now assumed this form



The bolero usually consists of two chief parts, each repeated, and a trio. The castanet rhythm above referred to mostly commences at least one bar before the melody. Good examples of the bolero may be found in Méhul's 'Les deux Aveugles,' Weber's 'Preciosa' (gipsy-ballet), and Auber's 'Masaniello.' We give the opening of the last as an illustration

[E. P.]

BOLLA, SIGNORA, an Italian prima buffa, who sang in London at the opera in 1794. She was a very pretty woman, and a 'pleasing, genteel actress,' who with a better voice would have been an excellent singer. She was very successful in Paisiello's 'Zingari,' and in 'Nina,' which latter she chose for her benefit, with spoken dialogue instead of recitative; but this was considered an infringement of the rights of the English theatres, and after a few nights it was stopped 'by authority.' In 1802 she was singing at Paris in opera buffa with Lazzarini and Strinasacchi. [J. M.]

BOLOGNA. The first school for instruction in music in Italy was founded at Bologna in 1482 by Pope Nicholas V., when Bartolommeo Ramis Pereja, a Spaniard, was summoned from Salamanca to preside over it. Spataro (so called because he was by trade a maker of scabbards), one of the early Italian writers on music in the 15th century, was a disciple of Pereja.

In the 16th and 17th centuries Bologna had as many as thirty academies for the promotion of various sciences and arts. Four out of this number were musical, not including that of the 'Gelati' (founded 1588) which comprehended every science and art, and flourished throughout the 16th century. One of its members, Girolamo Desideri, wrote a valuable treatise on music. The four are as follows :—

1. 'Dei Concordi,' founded in 1615. The arms chosen by this institution were—three timepieces, a clock, an hour-glass, and a dial. The motto—'Tendimus una.'

2. 'Dei Filomusi,' founded in 1622 by Girolamo Giacobbi, a learned classical composer of the Bolognese school and 'Maestro di Capella' of San Petronio. This academy was entirely devoted to the study of musical science. Device—a bush of reeds, with the motto 'Vocis dulcedine captant.'

3. 'Dei Filaschici,' opened in 1633. Device—David's harp; motto—'Orbem demulcet attactu.' The object of this institution was to inquire into the science of sound.

4. 'Dei Filarmonici,' instituted in 1675 by Vincenzo Carrati entirely for music. Burney, in his 'Tour' of 1773 (p. 230), speaks of this academy as still in existence. He was present at a kind of trial of skill amongst the academicians which took place annually in the church of San Giovanni in Monte. The members of this society each composed portions of the service, and Burney, whose opinion of the performance was asked, praises highly the variety of style and masterly compositions of the members. 'At this performance,' he says, 'were present Mr. Mozart and his son, the little German whose premature and almost supernatural talents so much astonished us in London a few years ago when he had scarce quitted his infant state. He has been much admired at Rome and Naples, and has been honoured with the order of the Speron d'Oro by His Holiness, and was engaged to compose an opera at Milan for the next carnival.'

Orlov ('Traité de Musique,' 1822), speaks of the performance of the sixteen hundred members of the philharmonic society at Bologna, in the cathedral of San Petronio, to celebrate the festival of the patron saint. But there is no mention of this society in the report of 1866 as to the state of musical education in Italy.

In the 16th century there were but few practical musicians of the Bolognese school, though in the next, owing to these musical academies, the masters of the cathedral of San Petronio and other professors of the city were equal to those of the first class in any other part of Europe.

The result of these societies also appears in the series of musical dramas performed in Bologna since the year 1600. There seems to have been no public theatre in this city till 1680, when four operas were performed there 'nel Teatro Publico.' After this the music, which had previously been written by Venetian masters was supplied by members of the Bolognese academies. Among these were Petronio Franceschelli, who set the prologue to the opera of 'Caligula'; Giuseppe Felice Tosi, who composed ten operas between the years 1679 and 1691; Giacomo Antonio Perti, a composer of church music, but also employed in operas for Bologna and Venice; Giovanni Paolo Colonna, Maestro di Cappella di San Petronio; Aldobrandini Albergati; Pistocchi, who founded a famous Bolognese school of singing; and the renowned Padre Martini.

The above list of names contains only a few of the famous composers and practical musicians which were formed in the great Bolognese school. [C. M. P.]

BOLSETTI, an Italian primo buffo caricato, who with his wife, also a singer, played principal parts in the comic operas in London in 1789; such as Cimarosa's 'Villana Riconosciuta,' etc. [J. M.]

BOMBARDON, BOMBARD, BASS-POMMER OR BRUMMER, were originally names of the deeper varieties of the oboe or bassoon family; the bombardon, or largest instrument, reaching to contra F. From these the name was transferred to a bass reed-stop on the organ, with 16-foot tone. In the 'Traité de l'Orgue' by D. Bedos, it appears that the stop was sometimes carried down to 32-foot F. It was mainly employed in accompanying plain-chant.

The name has more recently been given to the lowest of the saxhorns. It is usually tuned in E flat, for the convenience of military players, but a larger instrument in B flat is occasionally employed. There are two forms of the instrument; the one like the euphonium in shape, but larger; the other circular, passing over the performer's shoulder, and with the bell directed forwards. The fundamental note of the first is the E flat of the 16-foot octave; that of the second the B flat in the 32-foot scale. [W. H. S.]

BOMTEMPO, JOÃO DOMINGOS, important Portuguese musician and composer, born 1775 (not 1781) at Lisbon, settled in Paris 1795, visited London, returned to Paris, and finally went back to Lisbon in 1820 and became head of the Conservatoire. As instructor of the royal family he was made Knight of the Order of Christ, and chief director of the court band. He died Aug. 13, 1842. Amongst his works the following deserve mention—Variçõe̊s sobre o fandango; 'Messe de Requiem à la mémoire de Camoens'; Responsorii for Queen Carlotta Joaquina (1822); Missa solenne for the promulgation of the Constitution (1821); Requiems for Maria I. and Pedro IV.; Methodo de Piano

(London, 1816); Alessandro nell Indie, opera seria. His style is clear and dignified, obviously formed on Handel and Haydn. [F. G.]

BOND, Hugh, appointed lay-vicar of Exeter Cathedral in 1762, was also organist of the church of St. Mary Arches in that city. He published 'Twelve Hymns and Four Anthems for four voices' of his composition. Many of his pupils rose to eminence in the profession. He died in 1792. [W. H. H.]

BONNO or BONO, Giuseppe, son of one of the imperial running footmen, born at Vienna 1710. Studied composition at Naples at the Emperor's cost, and in 1738 was taken into the Imperial Hof-kapelle as Hof-scholar, from which he rose to be Hof-compositeur (1739), and, on Gassmann's death, Hof-kapellmeister (1774). He was essentially a court-musician. His oratorios were executed after Lent at the court chapel, and his 'festi teatrali,' or occasional cantatas, were mostly performed by archduchesses before their imperial parents. Bonno was for many years vice-president of the Ton-künstler Societät, and the society executed his oratorio of 'Il Giuseppe ricognosciuto.' His Scores are preserved in the Imperial Library and the Musik-Verein at Vienna, and they show a very moderate amount of invention, sufficient to meet the wants of the time and the society in which he lived, but no more. He must however have had some qualities to make up for these defects, for Mozart (writing April 11, 1781, of the performances of one of his symphonies under Bonno's direction) calls him 'der alte ehrliche brave Mann.' He died April 15, 1788. A fine Amen by him, in the grand Italian style, is engraved in the Fitzwilliam music. [C. F. P.]

BONNY BOOTS. The nickname of a man who appears to have been both a singer and dancer of unequalled ability at the court of Elizabeth, a devoted adherent of the Queen, and—as may be inferred from the style in which he is mentioned in verses published during her lifetime—a personal favourite of hers. He is mentioned in the 9th and 25th Madrigals of the 'Triumphs of Oriana,' a collection of pieces in honour of Elizabeth, published in 1601 :—

9. 'Thus Bonny Boots the birthday celebrated
Of her his lady deerest,
Fair Oriana which to his hart was nearest.'

25. 'For Bonny Boots that so aloft could fetch it,
Oh he is dead, and none of us can reach it.'

Also in the 1st and 9th of Morley's Canzonets published in 1607 :—

1. 'Fly Love that are so sprightly
To Bonny Boots uprightly;
And when in Heaven thou meet him
Say that I kindly greet him,
And that his Oriana
True widow-maid still followeth Diana.'

9. 'Our Bonny Boots could toot it,
Yea and foot it;
Say lustie lads who now shall Bonny-Boot it.'

From three of these quotations it is evident that Bonny Boots was dead at the time.

Various conjectures have been made as to his identity. He has been supposed by Hawkins (Hist. chap. 106) to have been a Mr. Hale or Hales, whose singing had pleased the Queen. Also the Earl of Essex, who was beheaded Feb. 25, 1601. But neither identification is anything more than conjecture.

BONPORTI, Francesco Antonio, born about 1660 at Trient, was an Imperial Counsellor of Austria, and occupied himself with music, in which he was one of the earliest instrumental composers of importance. His first work—Sonatas for 2 Violins and Bass—appeared in 1696 at Venice. These were followed by many others, among which the most remarkable are 'Le triomphe de la grande Alliance,' op. 8, and 100 minuets for Violins and Bass. His 'Dodici Concertini e Serenate,' etc., were printed at Augsburg in 1741. [F. G.]

BOOM, Jan van, flute-player, born at Rotterdam 1773, belonged to the band of King Louis Bonaparte, settled at Utrecht and made many successful tours in Germany. His works chiefly consist of bravura pieces for the flute. His son Jan, born at Utrecht Oct. 15, 1809, was brought up as a pianist, and after a tour in Sweden and Denmark in 1825 settled at Stockholm, where in 1856 he became Professor in the Academy and Music School. In 1862 he visited the chief capitals of Europe to examine the systems of musical education. He has composed Symphonies, Quartets, Trios, and Pianoforte pieces of every description. [F. G.]

BOOSEY & CO., music publishers. This house was established about 60 years ago by Thomas Boosey. He commenced business as an importer of foreign music, and was one of the very few persons then engaged in that trade. Subsequently he became the English publisher for Hummel, Romberg, De Beriot, Rossini, Vaccaj, Mercadante, and other well-known composers. The house was afterwards identified with the Italian operas of Bellini, Donizetti and Verdi, until 1854, when a decision of the House of Lords deprived it of all its foreign copyrights. This judgment caused the firm to lose 'La Sonnambula,' 'La Traviata,' 'Il Trovatore,' and 'Rigoletto,' four of the most valuable properties that have existed in the music trade.

This serious loss of copyrights caused the firm to change its character, and it has since devoted its attention to the publication of popular English music, and to the production of cheap and standard musical works. [G.]

BORDONI, Faustina. [See Hasse.]

BORGHI, Luigi, a violinist and composer; pupil of Pugnani; lived from about 1780 in London, where we find him leader of the second violins at the Handel Commemoration in 1784. He published violin solos; duos for violins, violin and alto, violin and cello; violin-concertos; symphonies for orchestra, and a set of Italian canzonets. [P. D.]

BORJON, CHARLES EMMANUEL (incorrectly Bourgeon), advocate in the Parlement of Paris, author of many law-books, and an eminent amateur, born 1633, died in Paris 1691. He was a remarkable performer on the musette, and author of a 'Traité de la Musette' (Lyons, 1672), which contains a method of instruction, plates, and airs collected by him in various parts of France. Borjon was evidently a man of culture. He excelled in cutting out figures in parchment, some of which were noticed and valued by Louis XIV. [M. C. C.]

BOROSINI, FRANCESCO. This admirable tenor singer was born at Bologna, according to Fétis, about 1695; and in 1723 was one of the principal singers at the Grand Opera at Prague. Very little more of his history is known; but we have evidence that he came, with his wife, to London in 1724, and sang in operas; as in 'Artaserse' by Ariosti, and Handel's 'Tamerlane.' In 1725 he appeared in 'Rodelinda' and 'Giulio Cesare' by Handel, in Ariosti's 'Dario,' and the pasticcio 'Elpidia' given by the former master, with recitatives of his own. The names of Borosini and his wife are not found again in England after 1725. His wife, LEONORA, née D'AMBREVILLE, was originally French, and was a very remarkable contralto singer. In 1714, according to Fétis, she sang at the Palatine Court, and was engaged in 1723 for the Grand Opera at Prague, with her husband. When they were married is not known, but that they came to England together in 1724 is certain, for her name is found in the casts of the same operas in which he also performed. In 'Dario' and 'Elpidia' she is called Signora Sorosini, but this is a mere misprint. It is only curious that it should occur in two different works. [J. M.]

BORSELLI, an Italian singer who, with his wife Elisabetta, performed in comic operas in London in 1789 and 90; such as Martini's 'Cosa Rara,' Gazzaniga's 'Vendemmia,' Paisiello's 'Barbiere,' Cimarosa's 'Ninetta,' and operas of Tarchi, Fabrizi, Bianchi, Nasolini, and Federici. [J. M.]

BORTNIANSKY (acc. BARTNANSKY), DIMITRI, called the Russian Palestrina, was born at Gloukoff, a village of the Ukraine, in 1752, and early showed remarkable ability. He studied in Moscow and in Petersburg under Galuppi, at that time Capellmeister there. Galuppi soon left Russia, but the Empress Catherine supplied Bortniansky with funds to follow him to Venice (1768). He afterwards studied in Bologna, Rome, and Naples. The motets he composed at this period are not remarkable except for richness of harmony. Pälschlich counts him among the opera-composers then in Italy. In 1779 he returned to Russia, and became director of the Empress's church-choir (later—1796—called the 'Imperial Kapelle'), which he thoroughly reformed, and for which he composed 35 sacred concertos in 4 parts, 10 concertos for double choir, and a mass for 3 voices. It was this choir which was placed at the disposal of Boieldieu when, as chapel-master at Petersburg, he was commissioned to compose the music for Racine's 'Athalie.' Bortniansky has the merit of reducing Russian church music to a system. He died Sept. 28 (Oct. 9), 1825. [F. G.]

BOSCHETTI, SIGNORA, a talented soprano who sang in London in comic operas about the year 1772. She acted Rosalba in Piccinni's 'Schiava' in that year at the King's Theatre. [J. M.]

BOSCHI, GIUSEPPE, said to have been a native of Viterbo, was the most celebrated basso of the 18th century. Of his early life, his teacher, or of his first appearance, absolutely nothing is known. To Fétis his very name is unknown. Chrysander (Händel, i. 244) believes him to be the singer of the extraordinary part of Polifeme in Handel's early cantata at Naples in 1709, a portion of which was transferred to 'Rinaldo.' It is at any rate certain that on Feb. 24, 1711, he sang for the first time in London the part of Argante in that opera (Handel's first in London) at the Haymarket Theatre. It is strange enough that Argante was afterwards sung in 1717 by Berenstadt, a German alto, and in 1731 by Francesca Bertolli, a contralto. After this there is a blank in Boschi's history until Handel's return to London. In 1720 we find him again supporting with his magnificent voice the 'Radamisto' of Handel, and Buononcini's 'Astartus.' It is very probable, but not certain, that he was the original Polyphemus of 'Acis and Galatea,' performed privately at Cannons, the seat of the Duke of Chandos; there was then no other basso here capable of singing that part, and Boschi was already singing for Handel. In the same year he was in the cast of 'Muzio Scævola,' the third act of which was Handel's, as also in those of 'Arsace' by Orlandini and Amadei, 'L'Odio e l'Amore' (anonymous), and Buononcini's 'Crispo.' On Dec. 9, 1721, he took part in the first representation of Handel's 'Floridante,' and on Jan. 12, 1723, in that of 'Ottone,' and of 'Flavio' on May 14; besides which he sang in the 'Coriolano' of Ariosti, and 'Farnace' of Buononcini, and in 1724 in Handel's 'Giulio Cesare' and 'Tamerlane,' Ariosti's 'Artaserse' and 'Vespasiano,' and Buononcini's 'Calfurnia.' From this date he sang for Handel in all the operas during 1725, 6, 7, and 8. In 1728 he sang in 'Siroe,' 'Tolomeo,' and a revival of 'Radamisto.' Then came the break-up of the company, and Boschi's name appears no more. Whether he died, or retired to his native country, he was succeeded in 1729 by J. G. Riemschneider. It was unfortunate for Boschi, with his fine voice and execution, that he appeared in Handel's early time, when the operas were written chiefly for women and evirati; when tenors were rarely employed, and the basso only recognised as a disagreeable necessity. Towards the end of this period Handel began to write more freely for basses, and some fine airs fell to the share of Boschi, such, for example, as 'Finche lo strale' in 'Floridante,' 'No, non temere' and 'Del minacciar' in 'Ottone,' 'Tu di pietà' in 'Siroe,'

and 'Respira almen' in 'Tolomeo.' His voice was very powerful, and he could hold his own against Handel's accompaniments, which appeared very noisy to critics of those days. In a satire called 'Harlequin Horace, or the Art of Modern Poetry,' 1735, this line occurs,—

'And Boschi-like be always in a rage,'

to which the following note is appended: 'A useful performer for several years in the *Italian* operas, for if any of the audience chanced unhappily to be lulled to sleep by these soothing entertainments, he never failed of rousing them up again, and by the extraordinary fury both of his voice and action, made it manifest that, though only a tailor by profession, he was *nine* times more a *man* than any of his fellow-warblers.' His wife, FRANCESCA VANINI, a contralto, had been a great singer, but came to London when much past her prime and her voice failing. She sang in 1711 as Goffredo in Handel's 'Rinaldo'; but in 1712 this was given to Margarita de l'Epine, and Boschi's wife appeared no more. [J. M.]

BOSIO, ANGIOLINA, born at Turin August 22, 1830, belonged to a family of artists, both musical and dramatic. She was educated at Milan, and learned singing under Cataneo. She made her first appearance at the age of sixteen, July 1846, in 'I Due Foscari' at Milan. After a short time she went to Verona, and thence to Copenhagen, confirming at each place the promise of excellence which she had already given. At Copenhagen no effort was spared to retain her for a prolonged engagement, but the climate was intolerable to her. She next appeared at Madrid, where she was enthusiastically applauded, and her re-engagement demanded unanimously. In 1848 she appeared in Paris in 'I Due Foscari,' but this time without effect. She went immediately to the Havana, and thence to New York, Philadelphia, and Boston. At all these places she was much admired. In 1851 she returned to Europe, and married a Greek gentleman named Xindavelonis. She was engaged for the next season by Mr. Gye at Covent Garden, and made her début in 'L'Elisir d'Amore,' July 15, 1852. Of her person all could judge; but her voice seemed wiry, strange, perpetually out of tune, and her execution wild and ambitious. Never was a first appearance more scant in musical promise of one who was destined during her short career to become so deservedly great a favourite. But Madame Bosio was curiously made up of contradictions. Her features were irregular and ill-formed; yet on the stage she was so pleasing as to be known by the sobriquet of 'Beaux yeux.' 'Next to Madame Sontag, she was the most ladylike person whom I,' says Mr. Chorley, 'have seen on the stage of the Italian Opera. She had a certain condescending gracefulness, which made up for coldness. This demeanour, and her happy taste in dress, had no small influence on the rapid growth of her popularity, which grew to exceed that of Madame Persiani, whom she replaced, and whom by many she was thought to surpass, though in no respect her equal as a singer.' At the end of this season she made her first hit in 'I Puritani,' taking the place of Grisi, who had declined to sing. This was the turning point of Bosio's fortune. During the winter she was the prima donna at Paris, and reappeared in the next spring in London in 'Matilda di Shabran,' 'Jessonda,' and 'Rigoletto.' The latter was produced May 14. 'Her gay handsome face, her winning *mezzosoprano* voice, not without a *Cremona* tone in it, redeeming the voice from lusciousness, and her neat, lively execution, were all displayed in this part, short as it is.' From this date Bosio met with nothing but most brilliant success. In 1854 she reappeared in 'Il Barbiere,' and the critics had no words too glowing to express their admiration. In 'I Puritani' she was, with the exception of course of Grisi, the best Elvira that had been seen. The winter season found her again in Paris, and the spring of 1855 in London at the Royal Italian Opera,—in 'Ernani' and 'Le Comte Ory.' She sang at the Norwich Festival, receiving £300 for four days. That same year she accepted an engagement at St. Petersburg, the terms being 100,000 francs for four months, with a guaranteed benefit of 15,000 francs and a permission to sing at private concerts. Her success was extraordinary. Thence she went to Moscow. In 1856 she returned to Covent Garden. Her most remarkable performance was in 'La Traviata,' in which she presented a very different reading of the character to that of Mlle. Piccolomini at the other house. In 1857 she reappeared in 'La Traviata,' and in 'Fra Diavolo' with Gardoni and Ronconi. In 1858, after again singing at St. Petersburg with the greatest success, she returned to London in May and reappeared at the new theatre, Covent Garden. Returning again to St. Petersburg she was nominated première cantatrice, an honour never bestowed before. On April 12, 1859, she suddenly died. Her delicate constitution could not endure the rigorous climate of Russia. Never was the loss of an admired singer and charming artist more acutely felt by the whole musical public. She was buried with public ceremonial, April 15, in the cathedral vaults at St. Petersburg. [J. M.]

BOTTÉE DE TOULMON, an amateur, who was Librarian to the Conservatoire of Paris from Aug. 1831 till his death; born at Paris May 15, 1797, died there, from an attack brought on by the Revolution of 1848, March 22, 1850. His merits appear to have been chiefly those of devotion and perseverance. According to Fétis' account (Biogr. Univ.) he was incompetent and inaccurate, and his works—treatises on musical history and archæology, of which Fétis gives a list—appear not to be trustworthy. But he deserves the gratitude of all students of music for having published the catalogue of the compositions of Cherubini, which was kept up year by year by that master, and published after his death under the title of 'Notice des Manuscrits Autographes de Musique composée par feu M. L. C. Z

S. Cherubini, exsurintendant de la musique du roi, Directeur du Conservatoire de musique, Commandeur de l'ordre royale de la legion d'honneur, Membre de l'Institut de France, etc., etc., etc. Paris, chez les principaux editeurs de musique, 1843.' It is an 8vo. pamphlet of 36 pages, with a short preface by M. Bottée de Toulmon, and a notice to intending purchasers, for whom it was made public. It is now very rare. [G.]

BOTTOMLEY, Joseph, born at Halifax, Yorkshire, in 1786, at a very early age evinced a strong predilection for music, and so quickly profited by the instruction he received as to be able at seven years of age to perform a violin concerto in public. At twelve years of age he was removed to Manchester, where he studied under Grimshaw, organist of St. John's Church, and Watts, leader of the concerts. By the advice of the latter he took lessons on the violin from Yaniewicz, then in Manchester. At fifteen he was articled to Lawton, organist of St. Peter's, Leeds. On the expiration of his term he went to London, and studied pianoforte playing under Woelfl. In 1807 he was appointed organist of the parish church of Bradford, Yorkshire, but resided and taught chiefly in Halifax. In 1820 he was chosen organist of the parish church, Sheffield. Bottomley published several of his compositions for the pianoforte, and, in 1816, a small dictionary of music. [W. H. H.]

BOUCHE FERMÉE, À — i. e. with shut mouth—vocalisation without words, with the teeth closed and the lips nearly so; a trick occasionally adopted by composers. Examples may be found amongst the German part-songs, and also in Gounod's works. There have been singing masters who recommended the practice to their pupils, under an idea that it strengthened the breathing power without distressing the vocal organs. Beethoven never wrote anything *à bouche fermée*, but he alludes to the practice in a droll letter (Sept. 23, 1824) to Hauschka, conferring on him the 'Intendanz' of all 'Sing-und-Brumm-Vereine.' [W. H. C.]

BOUCHER, Alexandre Jean, a well-known violinist, was born at Paris in 1770. It is related that he played at the court when only six, and at the Concert Spirituel when eight years of age. In 1787 he went to Madrid, where he was appointed solo-violinist to the king, and associated as a quartet-player with Boccherini. In 1806 he returned to Paris, and in 1820 began to travel over Europe, exciting everywhere, if not the unconditional approbation of artists and critics, at any rate the admiration and curiosity of the general public by his extraordinary performances. In 1844 he returned to France, settled at Orleans, and died at Paris in 1861.

Possessed undoubtedly of an exceptional talent for execution, Boucher was not a little of a musical charlatan. Spohr made his personal acquaintance at Brussels in 1819, and speaks of him as follows: 'His face bore a remarkable likeness to Napoleon Bonaparte's, and he had evidently carefully studied the banished emperor's way of bearing himself, lifting his hat, taking snuff,' etc. (Selbstbiog. ii. 73). As soon as he came to a town where he intended giving a concert, he practised these tricks on the public walks and in the theatre, in order to attract the curiosity of the public; he even managed to spread a rumour that he was persecuted by existing governments on account of his likeness to Napoleon, because his appearance was likely to revive the sympathies of the masses for that great man. He certainly advertised a concert at Lille in these terms: 'Une malheureuse ressemblance me force de m'expatrier; je donnerai donc avant de quitter ma belle patrie, un concert d'adieux,' etc. He also styled himself 'L'Alexandre des Violons.'

In his proficiency in the execution of double stops, the staccato, and other technical difficulties, he appears to have been only surpassed by Paganini, and we are assured by competent contemporary critics that he now and then played a slow movement with ravishing, if somewhat extravagant, expression. But whatever powers of execution his performances may have shown, if, as Spohr states, he altogether spoiled a quartet of Haydn by tasteless additions, we must conclude that he was but an indifferent musician. After what we know of his general character as an artist, it is not surprising to learn that he not unfrequently wound up a furious passage by intentionally upsetting the bridge of his violin as a climax, and that he used to perform quite as much by the action of the face and legs as of the bow.

Boucher's wife was a clever player on the harp, but seems to have adopted her husband's doubtful means of winning the applause of the public. She used to play duets for piano and harp, with one hand on each instrument. [P. D.]

BOULANGER, Mme. Marie Julie (née Halligner), born 1786, died 1850; a dramatic singer. She studied in the Conservatoire under Plantade and Garat, and made her début with immense success at the Opéra Comique in 1811. Her voice was fine, her execution brilliant, and her acting full of character and intelligence. Her most successful rôles were those of soubrettes and maid-servants. She remained on the stage till 1845, but her voice had failed some time previously. [M. C. C.]

BOURGEOIS, Louis, writer on the theory of music, born in Paris in the beginning of the 16th century. He followed Calvin in 1541 to Geneva, where he was cantor of one of the churches, but quarrelled with the presbytery, who would not allow him to introduce a harmonised version of the Psalms in public worship. He threw up his post, and returned in 1557 to Paris, where he was still living in 1561, but after that date all trace of him is lost. His great work is 'Le droict chemin de musique,' etc. (Geneva, 1550). In this he proposed a new system of notation, which was accepted not only by the Protestants, but by all French musicians' and not finally abandoned till the beginning of

the 19th century. Bourgeois published several sets of Psalms in four parts. [F. G.]

BOURGEOIS, Louis Thomas, dramatic composer, born at Fontaine l'Evêque in 1676. He was counter-tenor at the Grand Opéra in Paris in 1708, but in 1711 devoted himself entirely to composing. In 1713 he produced 'Les Amours déguisés,' and in 1715 'Les plaisirs de la paix.' He was chapel-master at Toul in 1716, and afterwards at Strasbourg. He died in Paris in great poverty, Jan. 1750. He composed sixteen operas (for list see Fétis) and many cantatas. [F. G.]

BOURGES, Clementine de, eminent composer of the 16th century. Her husband was killed fighting against the Huguenots in 1560, and she died of grief Sept. 30 in the following year. Her compositions deserve to be ranked with those of the great composers of her time. A four-part chorus, 'Da bei rami,' by her is included in Paix's 'Orgel-tabulatur-Buch.' [F. G.]

BOURGES, Jean Maurice, distinguished musical critic, born at Bordeaux Dec. 2, 1812; came early to Paris, and studied composition under Barbereau. In 1839 he became joint-editor of the 'Revue et Gazette musicale,' the high reputation of which paper is in great measure owing to him. In 1846 'Sultana,' an opera of his, was successfully produced at the Opéra Comique. He made an excellent translation of the words of Mendelssohn's 'Elijah.' He died in 1868, after an illness of many years. [F. G.]

BOURRÉE. A dance of French origin, which is said to have come from the province of Auvergne. According to other authorities, however, it is a Spanish dance, from Biscay, where it is said to be still practised. The bourrée is often to be found in the older suites, especially in those of Bach, and is of a rapid tempo, in common (allabreve) time. In its general character it presents some features of analogy with the Gavotte, from which, however, it may readily be distinguished; first, because it is in allabreve time, that is, with only two beats in the bar, whereas the gavotte has four; and secondly, that the latter begins on the third crotchet in the bar, while the bourrée always commences on the fourth. Like most of the older dance-movements, it consists of two parts, each of which is repeated. In Bach's suites, a second bourrée frequently follows the first, in the same way as in a symphony or sonata, a trio follows a minuet, after which the first bourrée is repeated. There is a good modern example in Sullivan's music to the 'Merchant of Venice.' [E. P.]

BOUSQUET, Georges, composer and critic, born at Perpignan 1818, died at St. Cloud 1854; entered the Conservatoire as violin pupil; won the Grand Prix in 1838; and his compositions while he held the prize, particularly two masses (Rome, 18[illegible]40), excited hopes of a brilliant career. But his first opera, 'Le Mousquetaire,' produced at the Opera Comique in 1844, was a failure. 'Taburin' (1852) met with better success. For three seasons Bousquet conducted the orchestra at the Théâtre Italien. He contributed articles to the 'Revue et Gazette musicale.' [M. C. C.]

BOW. The strings of the various instruments of the violin tribe are made to vibrate by friction with the hair of the bow. Like the violin, the bow went through many progressive phases, till, at the end of last century, it acquired its present shape, which seems to leave no room for improvement. The bow with which the Rebec (the oldest stringed instrument played with the bow with which we are acquainted) was played, had the form of the weapon from which it derived its name. The stick was much bent, and a cord or string was tied from one end to the other. (Fig. 1.)

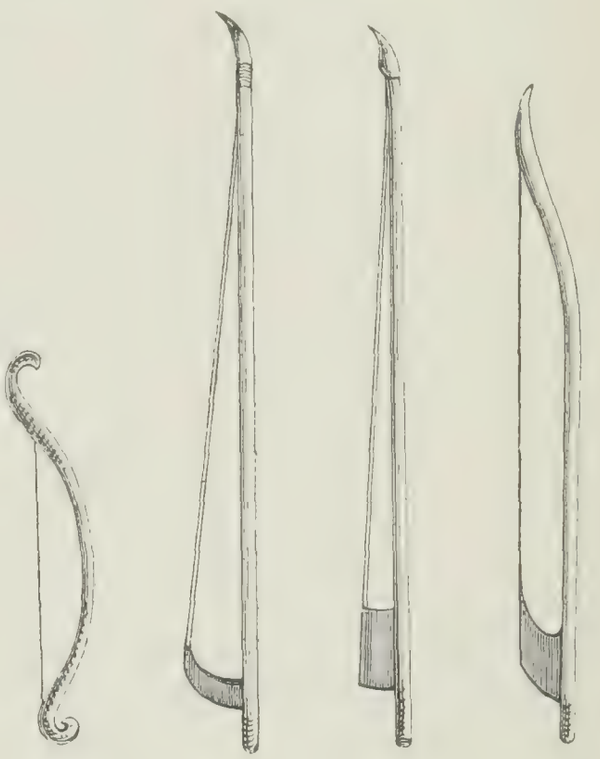


Fig. 1. Fig. 2. (1620.) Fig. 3. (1640.) Fig. 4. (1660.)

In pictures of the 13th century we notice something like a nut and head, and hair was possibly used in place of the cord. The bow now gradually loses more and more the actual bow-shape (Figs. 2, 3, 4); the head is distinct from the stick, and the nut is no longer a portion of the stick, but is attached to it by a wire. On the top of the stick a narrow piece of indented iron is fixed, on which the wire is hooked, and thus the hair made tighter or looser at pleasure. (Fig. 5.) The next step consisted in the substitution of a screw for the wire and indented iron, by which the tension of the hair could be perfectly regulated. This was Corelli's bow. (Fig. 6.) It was made of light wood, the stick perfectly straight, hardly if at all elastic, and very short. Tartini's bow (Fig. 7) was considerably longer, the wood thinner, and more elastic.

Towards the end of the 18th century Francois Tourte brought the art of bow-making to perfection, and created a model on which no improvement has been yet made. In fact his bow

combines all the qualities required to enable the player to follow out every conceivable nuance of tone and movement — lightness, firmness, and elasticity. The stick of the modern violin bow (Fig. 8) is made of Brazilian lance-wood (*Duguetia quitarensis*) or of Snake-wood (*Brosimum aubletii*); it is cut straight, following the grain of the wood, and afterwards slightly bent by exposure to heat. Although many trials have been

Fig. 5. Fig. 6. (170c.) Fig. 7. (174c.) Fig. 8.

made no wood has been found to possess the necessary qualities in the same degree as those mentioned.

The nut (*c*, Fig. 9) is made either of ebony or tortoise-shell. For violin, tenor, and violoncello bows white horse-hair is used; for double-bass bows (which are made of beech wood) black.

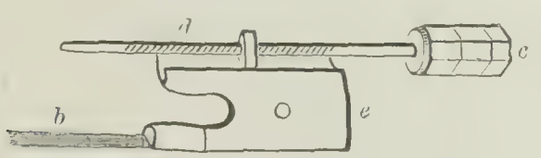

Fig. 9.

The hair (*b*) is inserted in the head (*e*) and the nut of the bow, and can be made tighter or looser by turning the screw (*d*).

The hair from the tail of stallions is preferred, as being stronger, more even, and free from greasiness. The friction on the string is increased by the application of rosin. From 175 to 250 hairs are put into a violin bow. Tourte fixed the length of a violin-bow to 29–29½ inches, of a tenor bow to 29, and of a violoncello bow to 28⅝–28¾. The bows of Tourte's own make are still considered the best, and command a high price; though not a few modern bow-makers have turned out very good bows, which frequently go under his name. [P. D.]

BOWING. This term is used in a twofold sense, corresponding to the German terms 'Bogenführung' and 'Strichart' respectively. In the first it designates in a general way the action of the bow on stringed instruments, and in that sense we speak of a style and method of bowing, or of the bowing of a player. In the second it means the particular manner in which a phrase or passage is to be executed, and the signs by which such a manner is usually marked; and in that sense we speak of the bowing of a phrase or passage.

1. Bowing (*Bogenführung*). While the left hand of the violin-player fixes the tone, and thereby does that which for the piano-player is already done by the mechanism of the instrument,—and while his correctness of intonation (supposing his ear to be accurate) depends on the proficiency of his left hand, as with the piano-player it depends on the tuner's proficiency,—it is the action of the violinist's right hand, his *bowing*, which, analogous to the pianist's touch, makes the sound spring into life; it is through the medium of the bow that the player realises his ideas and feelings. It is therefore evident that 'bowing' is one of the most important and difficult parts of the art of violin-playing, and that the excellence of a player, and even of a whole school of violin-playing, to a great extent depends on its method of bowing. The progress of the art of bowing closely followed the gradual perfection of the bow itself. As long as the stick of the bow was stiff and unpliable and the hair could not be made tighter or looser at pleasure, we can hardly speak of an art of bowing; for that art can only be practised with an elastic bow, which yields to the slightest pressure of the fingers. As long as the violin-player had merely to double the singers' part, no other *nuances* but piano and forte were required from him. These the stiff bow could produce, but nothing more. When at the beginning of the 18th century the violin began to emancipate itself from the position of a mere accompanyist, and entered on its glorious career of a solo-instrument, under such masters as Corelli and Vivaldi, it was only by the use of an elastic bow that it could acquire the faculty of producing various *nuances* and shades of tone. Tartini was the first to make the stick at all elastic, and must therefore be considered the next great advancer of the art of bowing. His work, 'L'Arte dell' Arco,' probably gives us a correct idea of the bowing of his time. A full broad tone, a variety of combinations of tied and detached notes, arpeggios with firm bow (no 'springing bow' as yet),—are the main features of his bowing. The full development, however, of all the powers of the violin was only possible with the modern bow, as first made by Tourte of Paris. The

thin, bent, elastic stick of his bow enables the player to follow out the slightest gradations of tone from the fullest forte to the softest piano, to mark all kinds of strong and gentle accents, to execute staccato, legato, saltato, and arpeggio passages. It cannot be said that the classical Paris school of violin-playing availed itself of all these advantages of Tourte's invention; their bowing does not show very great progress beyond Tartini and his school, and even Spohr does not advance materially upon them. But with Paganini a new era opened in the art. He uses freely almost every imaginable movement of the bow—he adds to the firm slow staccato the quick staccato of many notes—he develops the movement of the wrist to the highest perfection, enabling him to execute all kinds of bowing with the utmost celerity. But it cannot be said that this method of bowing was altogether favourable to a good musical style of playing, which requires as its first essential breadth of tone. Now this can only be produced by a perfectly quiet management of the bow, hardly compatible with Paganini's style of bowing.

It is the merit of the modern German school, represented chiefly at the Vienna and Leipzig Conservatoires, and by the greatest of modern violinists, Joachim, to have combined the fundamental qualities of all good bowing with the advantages to be derived from Paganini's style, without following onesidedly, as the modern French school has done, his brilliant but extravagant example, and thereby losing the true dignity of style handed down from Corelli and Tartini to Viotti, Rode, Spohr, and our day.

2. Bowing (*Strichart*). To the correct and truthful rendering of a musical phrase or passage on a stringed instrument, it is essential that an appropriate bowing should be chosen, or, if already given by the composer, be strictly adhered to. This appears self-evident, if we consider how one and the same passage, bowed in two different ways, may produce two entirely different effects. A succession of notes, intended by the composer to be played as a legato passage, and therefore with as little changing of bow as possible, would, if played with detached strokes of the bow, entirely lose its character. And again, to give a well-known example, what would become of the light and sparkling passages of one of Mendelssohn's Scherzi, if the staccato notes were played legato? Its character would be destroyed so as to become almost irrecognisable. True, the old masters left it more or less to the discretion of the performer to choose an appropriate bowing for the different parts of their compositions, and trusted to their artistic feeling and tact in this respect. Nay, if we go back to Handel and Bach, we often find what can only be called a mere sketch of a passage. Bach, in his celebrated Violin Solos repeatedly gives long successions of chords in three and four parts, merely adding the word 'arpeggio,' and leaving it to the player to execute them with a variety of bowings of his own choice and invention. However, the modern masters—partly since Mozart and Haydn, and absolutely since Beethoven—have given up this imperfect way of notation, just as they gave up writing figured basses instead of explicit accompaniments, and at the present time a composer very rarely omits to indicate the bowing with which he intends each passage to be executed. With the tendency of all modern composers since Beethoven and Schubert to bring the characteristic and descriptive power of music more and more into the foreground, it was but natural that the advanced technique of modern violin-playing should have developed a great number of new varieties of bowing, in order to do justice to all the subtle *nuances* which were to be rendered.

In orchestral performances and in the playing of chamber-music it is chiefly uniformity of bowing which is to be aimed at, and which alone ensures a well-balanced unanimous effect. The undeniable excellency of the orchestral performances at the concerts of the Paris Conservatoire, at the Gewandhaus-concerts in Leipzig, at the Crystal Palace Saturday Concerts, and similar institutions elsewhere, is owing at least as much to the enforcement of uniform bowing on the part of the conductors and leaders of the bands as to the careful observance of the pianos, fortes, and other dynamic signs.

A number of signs are used in musical notation to indicate various ways of bowing: (1) a slur ⌒ indicates that all the notes under the slur are to be played in one stroke of the bow; legato. (2) A slur with dots, ⌒ . . . . , means either staccato or saltato in one stroke; while the absence of a slur indicates that every note is to be done by a separate stroke. (3) Dots or dashes over the notes (. . . or ' ' ') mean sharp short strokes, either with firm bow (martellé) or with springing bows (spicato or saltato). (4) ⊔ or ⊓ means a downstroke, from the nut of the bow towards the head; ∨ or ∧ an upstroke. [P. D.]

BOWLEY, Robert Kanzow, the son of a boot-maker at Charing Cross, was born May 13, 1813. He was bred to his father's business, and succeeded him in it. His first knowledge of music was acquired by association with the choristers of Westminster Abbey. Ardent and enthusiastic, he pursued his studies vigorously. Whilst still a youth he joined a small society called 'The Benevolent Society of Musical Amateurs,' of which he afterwards became conductor. In 1834 he was one of the committee who promoted and carried out the 'Amateur Musical Festival' at Exeter Hall. About the same time he became organist of the Independent Chapel in Orange Street, Leicester Square, and continued so for several years. In October, 1834, he was admitted a member of the Sacred Harmonic Society, then in its infancy, and was soon afterwards elected a member of its committee. On the foundation of the society's now magnificent musical library in 1837 Mr. Bowley was appointed its librarian, an office which he held until 1854, when he was chosen treasurer, which post he occupied until his death. During the entire period of his connection with the society

he laboured incessantly to promote its welfare and advance its reputation, and instigated most of the steps which have tended to place it in its present high position. The scheme of celebrating the centenary of the death of Handel by performances of his music on a scale of unprecedented magnitude, and which eventually led to the establishment of the Handel Festivals at the Crystal Palace, was originated by him. In 1858 he was appointed General manager at the Crystal Palace, in which post he proved himself to be undoubtedly 'the right man in the right place,' and where he remained till his death, August 25, 1870. The energetic and self-devoted manner in which he discharged his duties will be long remembered by all who were associated with him. [W. H. H.]

BOWMAN, Henry, published at Oxford in 1677 a thin folio volume bearing the title of 'Songs for one, two, and three voyces to the Thorow-Bass. With some Short Simphonies. Collected out of some of the Select Poems of the incomparable Mr. Cowley, and others, and composed by Henry Bowman, Philo-Musicus.' A second edition appeared at Oxford in 1679. [W. H. H.]

BOYCE, William, Mus. Doc., was born at Joiners' Hall, Upper Thames Street (of which company his father, a cabinet maker, was beadle), in 1710. He became a chorister of St. Paul's Cathedral under Charles King, and, on quitting the choir, an articled pupil of Maurice Greene, then organist of the cathedral. On the expiration of his articles he obtained the situation of organist of Oxford Chapel, Vere Street, Cavendish Square, and pursued his studies under Dr. Pepusch. While yet a young man Boyce's hearing became much impaired, a calamity the greatest that can befal a musician, but which, in his case, did not lessen the ardour with which he pursued his studies. In 1736 he gave up his appointment at Oxford Chapel upon obtaining the post of organist at St. Michael's, Cornhill, which had become vacant by the removal of Joseph Kelway to St. Martin's-in-the-Fields. On June 21 in the same year he was sworn into the place of Composer to the Chapel Royal in the room of John Weldon, then lately deceased. He most ably discharged the duties of this office by the composition of many fine anthems and services, several of which are still, and will long continue to be, in use 'in quires and places where they sing.' In 1737 he was appointed conductor of the meetings of the Three Choirs of Gloucester, Worcester, and Hereford, which office he held for several years. In 1740 he composed the music for John Lockman's oratorio 'David's Lamentation over Saul and Jonathan,' and had it performed at Covent Garden Theatre. About the same time he set two odes for St. Cecilia's day, one written by Lockman, the other by the Rev. Mr. Vidal, undermaster of Westminster School. In 1743 he produced the serenata of 'Solomon,' written by Edward Moore, which was eminently successful, and one song in which ('Softly rise, O southern breeze,' for tenor voice with bassoon obligato) retained its popularity for upwards of a century, and is still occasionally heard. In 1749, on the erection of an organ in the church of Allhallows the Great and Less, Thames Street, Boyce was chosen organist. In the same year he was selected to compose the music for the ode written by William Mason for the installation of Henry Pelham, Duke of Newcastle, as Chancellor of the University of Cambridge. The ode, with Boyce's music, was performed in the Senate House, July 1, 1749, and on the following day, being Commencement Sunday, an anthem with orchestral accompaniments, by Boyce, was performed in Great St. Mary's Church, as an exercise for the degree of Doctor of Music, which the University then conferred on him. Both these compositions were soon afterwards published together. In the same year Boyce appeared as a composer for the theatre by setting Lord Lansdowne's masque of 'Peleus and Thetis' (introduced into his lordship's alteration of 'The Merchant of Venice,' entitled 'The Jew of Venice') and Moses Mendez's musical entertainment, 'The Chaplet'; the latter of which met with great success. In 1750 he set another piece of the same kind, also written by Mendez, called 'The Shepherd's Lottery.' On the death of Dr. Greene, in 1675, Dr. Boyce was appointed his successor as master of the king's band of music, and conductor of the annual festivals of the Sons of the Clergy at St. Paul's Cathedral. In the former capacity he was required to compose music for the new-year and birth-day odes of the poet-laureate; in the latter he voluntarily composed two fine anthems with orchestral accompaniments, besides additional accompaniments and choruses for Purcell's Te Deum and Jubilate, written for St. Cecilia's day, 1694. In 1758, on the death of John Travers, Boyce was appointed one of the organists of the Chapel Royal, upon which he resigned his places at St. Michael's, Cornhill, and Allhallows, Thames Street, and, his deafness still increasing, he gave up teaching, and removed to Kensington, where he employed himself principally in the collection and editing of the materials for the work by which he is best known—'Cathedral Music, being a collection in score of the most valuable and useful composisitions for that service by the several English masters of the last two hundred years.' This work was projected by Dr. Greene, who had commenced collections for it, but, finding his health failing, bequeathed all his materials to Dr. Boyce, with a request that he would complete the work. The 'Cathedral Music' was published in three volumes, the first of which appeared in 1760 and the last in 1778. This valuable publication, which redounds so much to the credit of its editor for diligence, judgment and scholarship, produced him little else than fame, its sale yielding but little beyond the expenses of production. On Feb. 7, 1779, the

gout, from which Boyce had long suffered, terminated the blameless life of this most amiable man and excellent musician. He was buried on February 16 with uncommon marks of respect, in the vault under the centre of the dome of St. Paul's Cathedral. In the year following his death his widow published a volume containing 'Fifteen Anthems and a Te Deum and Jubilate' of her husband's composition; and in 1790 another volume containing twelve anthems and a service was published, under the editorship of Dr. Philip Hayes. These anthems and services (with others, to the extent in all of forty-six anthems and five services) were afterwards published in four volumes under the editorship of Vincent Novello. In 1788 John Ashley, who had purchased the plates of the 'Cathedral Music,' issued a reprint of it, with a memoir (by Sir John Hawkins) and a portrait (finely engraved by Sherwin) of Boyce prefixed. In 1849 a new edition, with additional services and anthems and new lives of the composers was issued under the care of Joseph Warren. Besides the compositions above mentioned, Boyce produced the following: — Dryden's 'Secular Masque,' 1745; twelve sonatas for two violins and bass, 1747; a concerto; eight symphonies; 'Ode to Charity,' composed for the Leicester Infirmary, containing the duet for tenor and bass, 'Here shall soft Charity repair,' which long remained an indispensable part of the programme of every concert given in aid of a charity; Rev. Walter Harte's paraphrase of part of Pindar's first Pythian ode, 1749; Masque in 'The Tempest'; dirge in 'Cymbeline'; dirge in 'Romeo and Juliet'; trio in 'The Winter's Tale'; two odes in Home's tragedy, 'Agis,' 1758; besides many songs which appeared in 'The British Orpheus,' 'The Vocal Musical Mask,' etc. A collection of Dr. Boyce's songs, duets, and cantatas, entitled 'Lyra Britannica,' appeared from time to time in several books. Boyce's only son long filled a respectable position in the best orchestras as a double-bass player.

The following are the contents of the Cathedral Music:—

VOL. I.

Tallis, Preces, M. and E. Serv.
Morley, Burial Serv. G minor.
Farrant, M. and E. Serv. G minor.
Bevin, Do. D minor.
Gibbons, Do. F.
Child, Do. E minor.
Rogers, Do. D.
Blow, Do. A.
Aldrich. Do. G.
Blow, Do. G.
Do. Kyrie and Creed (triple measure) G.
14 Chants.

VOL. II.

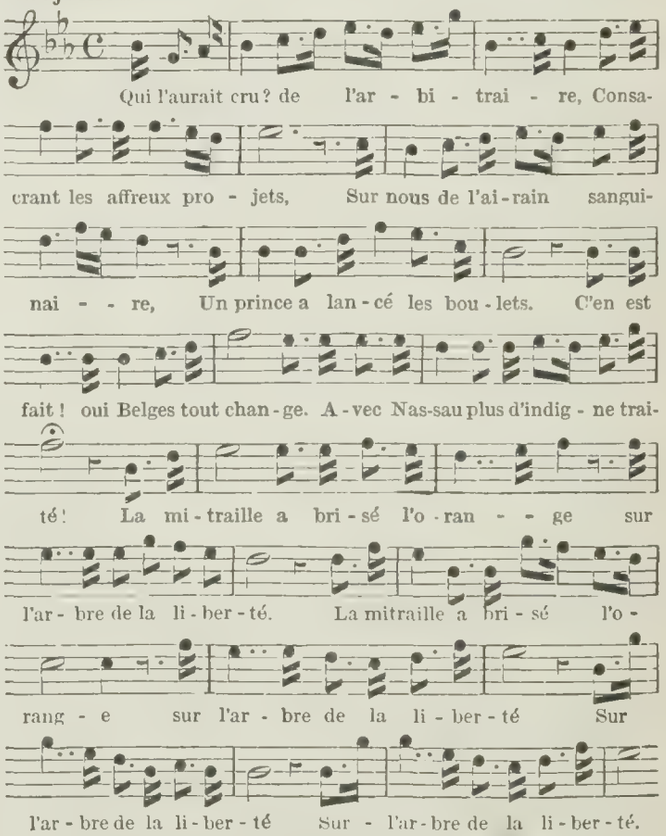
Henry VIII, Full Anth., O Lord the maker. 4 voices.
Tallis, F. A. I call and cry. 5 v.
Tye, F. A. I will exalt Thee. 4 v.
Do. (2nd pt.) Sing unto the Lord. 4 v.
Farrant, F. A. Call to remembrance. 4 v.
Do. F. A. Hide not Thou. 4 v.
Bird, F. A. O Lord, turn. 5 v.
Do. F. A. (2nd pt.) Bow Thine ear, O Lord. 5 v.
Do. F. A. Sing joyfully. 6 v.
Gibbons, F. A. Hosanna. 6 v.
Do. F. A. Lift up your heads. 6 v.
Do. F. A. Almighty and everlasting. 4 v.
Do. F. A. O clap your hands. 8 v.
Do. (2nd pt.) God is gone up. 8 v.
Batten, F. A. Hear my prayer. 5 v.
Do. F. A. O praise the Lord. 4 v.
Do. F. A. Deliver us, O Lord. 4 v.
Child, F. A. Praise the Lord. 4 v.
Do. F. A. O Lord, grant the King. 4 v.
Do. F. A. Sing we merrily. 7 v.
Rogers, F. A. Behold now. 4 v.
Do. F. A. Teach me, O Lord 4 v.
Blow, V. A. God is our hope 8 v.
Do. V. A. O God, wherefore art Thou absent. 5 v.
Do. V. A. Save me, O God. 4 v.
Do. F. A. The Lord hear thee. 4 v.
Do. F. A. My God, my God. 4 v.
Aldrich, V. A. Out of the deep. 4. v.
Do. F. A. O give thanks. 6 v.
Creyghton, F. A. I will arise. 4 v.
Purcell, V. A. O God, Thou art. 4 v.
Do. V. A. O God, Thou hast. 6 v.
Do. V. A. O Lord God of Hosts. 8 v.
Goldwin, V. A. I have set God. 4 v.
Clarke, F. A. Praise the Lord, O Jerusalem. 4 v.
Croft, V. A. God is gone up. 4. v.
Do. V. A. Put me not to rebuke. 4 v.
Weldon, V. A. In Thee, O Lord. 4 v.
Do. V. A. Hear my crying. 6 v.
Lawes (Wm.), V. A. The Lord is my light. 4 v.
Lock, V. A. Lord let me know mine end. 5 v.
Humphreys, V. A. Have mercy upon me. 3 v.
Do. V. A. O Lord my God. 3 v.
Blow, V. A. I was in the Spirit. 4 v.
Wise, V. A. Prepare ye the way of the Lord. 4 v.
Do. V. A. Awake, put on thy strength. 3 v.
Purcell, V. A. Thy way, O God. 4 v.
Do. V. A. Be merciful. 3 v.
Clarke, V. A. How long wilt Thou. 1 v.
Croft, V. A. O praise the Lord. 3 v.
Do. V. A. Give the King. 5 v.
5 Chants.

VOL III.

Bird, M. and E. Serv. D min.
Child, Do. D.
Blow, Do. E min.
Purcell, M. and E. Serv. (double), B flat.
Bull, V. A. O Lord my God. 5 v.
Humphrey, V. A. Thou art my King. 4 v.
Do. V. A. Like as the hart. 4 v.
Do. V. A. Hear, O Heavens. 3 v.
Do. V. A. Rejoice in the Lord. 4 v.
Do. V. A. Haste Thee, O God. 4 v.
Wise, V. A. The ways of Zion. 2 v.
Do. V. A. Thy beauty, O Israel. 4 v.
Do. V. A. Awake up, my glory. 3 v.
Do. V. A. Blessed is he. 3 v.
Blow, V. A. O Lord, I have sinned. 4 v.
Do. V. A. O sing unto God. 3 v.
Do. V. A. O Lord, Thou hast searched me out. 2 v.
Do. V. A. I beheld and lo! 4 v.
Turner, V. A. Lord, Thou hast been our refuge. 3 v.
Purcell, V. A. Behold, I bring you. 3 v.
Do. V, A. They that go down. 2 v.
Do. V. A. Thy word is a lantern. 3 v.
Do. V. A. O give thanks. 4 v.
Clarke, V. A. I will love Thee. 2 v.
Gibbons, Sanctus. 4 v. in F.
Child, Sanctus. 4 v. in E minor.
Rogers, Sanctus. 4 v. in D.
Creyghton, Sanctus. 4 v. in E flat.

[W. H. H.]

BRABANÇONNE, LA, the national air of the Belgians, dating from the revolution of 1830, when Belgium became an independent country. Both words and music were composed during the struggle; the former by a certain Jenneval, who was killed in one of the actions near Antwerp, the latter by CAMPENHOUT. The air is certainly unlike other 'national airs,' but it has taken a very firm hold in the country. The melody, and the words of the first stanza are subjoined:—



BRACE (Ger. *Klammer*; Fr. *Accolade*; Ital. *Accolada*). A vertical line, usually a double curve, used to couple together two or more staves, thus indicating that the music written therein is to be performed simultaneously, either by various instruments, or voices, or in pianoforte, harp, or organ-music, by the two hands of the performer.

In orchestral scores the whole of the staves forming the score are braced together by a vertical straight line, and curved braces are added to show the position in the score of certain instruments or groups of instruments, and so to facilitate the reading. These curved braces are usually employed to couple together the parts for the first and second violins, pianoforte or organ (if any), the violoncello and double-bass, and the three trombones.

In organ music with pedal obligato three staves are required, the lowest being for the pedals; these three are braced by means of a straight line, with a curved brace in addition, to indicate the two staves which belong to the manuals. [F. T.]

BRADE, WILLIAM, an English musician resident at Hamburg at the commencement of the 17th century. He was esteemed a good performer on the viol, and published 'Paduanen, Galliarden, Canzonetten,' etc. (Hamburg, 1609, 4to); 'Neue Paduanen and Gagliarden mit stimmen' (Hamburg, 1614, 4to); 'Neue lustige Volten, Couranten, Balletten, etc., mit 5 stimmen' (Frankfort, 1621, 4to). These publications are of more than ordinary interest, as containing English airs, some mentioned by Shakespeare. He died at Frankfort in 1647. [E. F. R.]

BRAHAM, JOHN, born in London of Jewish parents in 1774, was left an orphan at an early age, and in such humble circumstances that he is said to have sold pencils about the streets for a living. He was still very young when he became the pupil of Leoni, an Italian singer of celebrity; and his first appearance in public was at Covent Garden Theatre, April 21, 1787, for the benefit of his master. In the bill it is announced—'At the end of Act 1, 'The soldier tired of war's alarms,' by Master Braham, being his first appearance on any stage.' After the first act of the farce, he sang the favourite song of 'Ma chère amie.' At the opening of the Royalty Theatre in Wellclose Square, on June 20 in the same year, between the acts of the play, 'The soldier tired of war's alarms' 'was sung with great success by a little boy, Master *Abram*, the pupil of Leoni'; and another paper said 'Yesterday evening we were surprised by a Master *Abraham*, a young pupil of Mr. Leoni. He promises fair to attain perfection; possessing every requisite necessary to form a capital singer.' When he lost his boyish voice the future prospects of young Braham appeared doubtful; Leoni had fallen into difficulties, and about that time left England; but he found a generous patron in Abraham Goldsmith, and became a professor of the piano. On his voice regaining its power he went to Bath, and in 1794 made his appearance at some concerts there under the direction of Rauzzini, who, appreciating his talent, gave him musical instruction for three years. In 1796 he was engaged by Storace for Drury Lane, and his début (in an opera called 'Mahmoud') was so successful that in the year following he was engaged for the Italian opera-house. Hoping, however, to achieve a more permanent reputation than could be obtained by any other course, he resolved to visit Italy, and there complete his musical education. Florence was the first city at which he appeared in public; then he visited Milan, and afterwards Genoa, where he studied composition under Isola.

Taking leave of Italy in consequence of numerous solicitations from his own country, he reappeared at Covent Garden in 1801. From this point may be dated that triumphant career during which he created a constant furore, the effect of which has hardly yet passed away. The opera in which he made his first appearance was a work by Mazzinghi and Reeve, entitled 'The Chains of the Heart.' The music, however, was so feeble in the serious, and so commonplace and vulgar in the comic parts, that it lived only a few nights, and was succeeded by 'The Cabinet.' In this opera Braham was the composer of all the music of his own part, a custom to which he continued for several years to adhere, and seldom has music been more universally popular. Among the operas with which he was thus connected we may name 'Family Quarrels,' 1802; 'The English Fleet,' 1802; 'Thirty Thousand,' 1804; 'Out of Place,' 1805; 'False Alarms,' 1807; 'Kais, or Love in a Desert,' 1808; and 'The Devil's Bridge,' 1812. To follow Braham in all his engagements would exceed the limits of this notice; it is sufficient to say that in the theatre, concert-room, or church, he had scarcely a rival. *Non ce in Italia tenore come Braham* was the frequent exclamation of foreigners. His compass extended to about nineteen notes; and his falsetto, from D to A, was so entirely within his control that it was hardly possible to distinguish where his natural voice began and ended. After his voice had lost its natural power he was successively engaged at several theatres, on the mere strength of a reputation which seemed immortal; and his proficiency in singing Handel was universally acknowledged when his career as a popular vocalist had reached its termination. When Weber composed his opera 'Oberon' for the English stage (1826), Braham was the original Sir Huon.

In 1831 however the tide of fortune changed. In that year he purchased, jointly with Yates, the Colosseum in the Regent's Park for the large sum of £40,000. Five years afterwards he opened the St. James' Theatre, which he had erected at a cost of £26,000. The large fortune which his genius and energy had gained him was lost by these unfortunate speculations. He died Feb. 17, 1856.

In private life Braham was much respected. He moved in good society; and among his acquaintance his fame as a man of information, a humourist, and a raconteur, was scarcely inferior to his reputation as a vocalist. As a composer he completely attained the object he aimed at in his numerous songs, duets, etc., many of which attained the highest popularity. As a national song his 'Death of Nelson' has pleased and continues to please a vast majority of the inhabitants of the British Isles; it has therefore

accomplished its purpose. (*Dramatic Biography; Gentleman's Magazine*; etc.). [E. F. R.]

BRAHMS, JOHANNES, one of the greatest living German composers, and in the departments of choral and chamber music without a rival, was born at Hamburg on March 7, 1833. Being the son of a musician, he began his musical education in very early years, and carried it on later with brilliant success under Marxsen of Altona. He was introduced to Schumann at Düsseldorf in 1853, and so impressed that great composer with his extraordinary powers that he wrote an article about him in the 'Neue Zeitschrift für Musik,' in which, with the earnestness of a prophet, he pointed him out as the hero of the immediate musical future. In consequence of this Brahms at once became an object both of general attention and sceptical opposition. A tour which he undertook for the purpose of making himself and his works, such as his first three Sonatas and Trio, more generally known, seemed for the time scarcely to verify Schumann's prediction, for he found but little sympathy as a composer, and had but moderate success as a pianist.

For several years after this he remained at Hamburg in retirement, devoting himself assiduously to study and composition, after which he brought forward a number of works, which followed one another in quick succession, and soon established his reputation. In 1861 he went to Vienna, and finding ready sympathy, finally established himself there, where he has remained almost ever since, making only occasional tours, either as a pianist, or for the purpose of conducting his own works. In that city, so famous for its connection with great musicians, he officiated temporarily as conductor of the 'Sing-Academie' in 1863 and 64, and from 1873 to 75 as director of the famous concerts of the 'Gesellschaft der Musikfreunde,' to which he has given extraordinary lustre and importance through the performance of the great choral works of Handel and Bach.

The appreciation and diffusion of his works is steadily increasing. The 'Deutsches Requiem' (op. 45, 1868) established his fame, and from the time of its appearance every new work published by him became an event in the musical life of Germany, and even in this country, where his music is frequently performed at the Philharmonic, the Monday Popular Concerts, the Crystal Palace, and elsewhere. His first Symphony was produced at Carlsruhe Nov. 4, 1876, and his second at Vienna Dec. 24, 1877.

With the exception of Richard Wagner, who occupies a special position in modern music, Brahms is pre-eminent among living composers for the definite nature of his individuality; he appears as the climax of modern musical thought, standing, as it were, upon the shoulders of Schumann, whose artistic eye, as already mentioned, recognised the younger artist's affinity to his own nature, and based upon it his confidence in the progressive development of modern music. No comparison between him and Wagner is possible, for Wagner's fame is entirely founded on his dramatic works, in which department Brahms has as yet done nothing.

Indeed, notwithstanding his modern tendency, he is entirely opposed to the so-called 'new German school,' or 'school of the future,' which has attached itself to Wagner, and defends his art-principles on the ground of absolute music. Brahms takes his stand upon systematic principles of musical form, upon which indeed his individual characteristics a good deal depend. In point of style and construction his music displays a power which is now quite unique. In all his works, from the greatest to the smallest, the hand of a master is manifest, and if we analyse them, we shall find the same unwearied energy and consistency throughout the movement as is used at the outset to express the leading idea. He never allows himself to be drawn aside from his main idea, in spite of all the wealth of episode and secondary thoughts he has always at command. To this we may refer many of the prominent peculiarities of his style, such as its formal intensity, and certain original terms of harmony and modulation. This side of Brahms's genius is now undisputed, but the individual character of his ideas and the intellectual qualities of his nature certainly stand in the way of his overcoming opposition and gaining the sympathies of the large mass of the musical public. His deep brooding earnestness, and his abstraction from external things, absorb him so completely in his idea that he sometimes loses his feeling for beauty of sound. With him beauty seems to hold a place subordinate to expression, and a certain harshness is in consequence occasionally met with in his harmony which must hinder the popularity of his works. There is (if the word may be allowed) an unapproachable asceticism about his genius which is opposed to all that is merely pleasing to the ear. He does not court the understanding; he rather demands from it arduous and unwearied service.

As a pianoforte player, Brahms exhibits the same characteristics. He plays, not for the listener, but for himself and for the work which he is performing. Remarkable as his technical execution may be, with him it always seems a secondary casual matter, only to be noticed incidentally. But if we reflect that the *technique* of pianoforte playing is the sole medium for reproducing the idea of a pianoforte piece, it is possible that fault may in this respect be justly found with his playing; yet his intellectual qualities fit him for masterly performances of his own works; and in his execution of Bach, especially of the organ works on the piano, he is acknowledged to be quite unrivalled.

The following is a list of Brahms's published works to Sept. 1876:—

Op. 1. Sonata for P. F. in C.
2. Do. Do. F♯ minor.
3. Six Songs.
4. Scherzo for P. F. in E♭ minor.
5. Sonata for P. F. in F minor.
6. 6 Songs. Soprano or Tenor.
7. 6 Songs for one voice.
8. Trio in B., P. F., V. and Cello.
9. Variations for P. F. on a theme of Schumann.
10. 4 Ballads for P. F.
11. Serenade for Full Orchestra in D.
12. Ave Maria for female voices, Orch. and Organ.
13. Funeral hymn for Chorus and Wind.
14. 8 Songs and Romances for one voice and P. F.
15. Concerto, in D, for P. F. and Orch.

Op. 16. Serenade for small orchestra in A.
17. 4 songs for female Chorus, 2 Horns and Harp.
18. Sextet in B♭ for Strings.
19. Five poems for voice and P.F.
20. Three duets for S. and A. with P. F.
21. Variations for P. F.:
(1) On original theme;
(2) On a Hungarian melody.
22. 7 'Marienlieder' for mixed choir, in 2 parts.
23. Variations for P. F., 4 hands, on a theme of Schumann's.
24. Variations and Fugue for P. F. on theme of Handel's.
25. Quartet in G minor for P. F. and Strings.
26. Quartet in A for ditto.
27. Psalm xiii. for women's voices, with Organ or P. F.
28. Four Duets for Alto and Baritone with P. F.
29. Two Motets for 5 voices, à capella.
30. Sacred Song by Paul Flemming. 4 voices, mixed Choir and Organ.
31. Three Quartets for S.A.T.B.
32. 9 Songs by A. von Platen and G. F. Daumer. For voice and P. F. in 2 parts.
33. 15 Romances from Tieck's 'Magelone,' for voice and P. F. in 5 parts.
34. Quintet for P. F. and Strings in F minor.
34*. Sonata for P. F., 4 hands, from the foregoing.
35. 28 Variations (Studien) for P. F. solo on a theme of Paganini's.
36. Sextet in G for Strings.
37. Three Sacred Choruses for female voices.
38. Sonata in E minor for P. F. and Cello.
39. 16 Waltzes for P. F.; 4 hands.
40. Trio for P. F., Violin and Horn or Cello.
41. Five Part Songs for 4 men's voices.
42. Three Songs for Chorus, à capella, 6 v.
43. Four Songs for 1 voice and P. F.
44. Twelve Songs and Romances for female chorus, à capella.
45. German Requiem, Solo, Chorus and Orch.
46. Four Songs for 1 voice with P. F.
47. Four ditto. ditto.
48. Seven ditto. ditto.
49. Five ditto. ditto.
50. Rinaldo; Cantata by Goethe, for Tenor Solo, Male Chorus, and Orch.
51. Two Quartets for Strings, C minor and A minor.
52. Liebeslieder; Waltzes for P. F., 4 hands, and voices.
53. Rhapsodie; fragments from Goethe's 'Harzreise' for Alto Solo, Male Chorus, and Orch.
54. Schicksalslied (Song of Destiny) by F. Hölderlin, for Chorus and Orch.
55. Triumphlied (Rev., chap. xix.) for 8-part Chorus and Orch.
56 *a*. Variations on a theme of Haydn's for Orchestra.
56 *b*. Ditto. ditto. for 2 Pianos.
57. 8 Songs by Daumer for 1 voice and P. F.
58. 8 Songs for 1 voice and P. F.
59. 8 Songs for 1 voice and P. F.
60. Quartet (No. 3) in C minor for P. F. and Strings.
61. Four Duets for Sopr. and Alto.
62. Seven Songs for mixed Choir.
63. 9 Lieder und Gesänge for voice and P. F.
64. 3 Quartets for 4 solo voices and P. F.
65. Neue Liebeslieder-Waltzes.
66. Five Duets.
67. String Quartet; B♭.
68. Symphony, No. 1, C minor.
69. Nine Songs.
70. Four Songs.
71. Five Songs.
72. Five Songs.
73. Symphony, No. 2, in G.

Without Opus-number.

Hungarian dances for P. F., 4 hands.
The same for Orchestra.
Gluck's Gavotte for P. F. solo.
Studies for P. F. solo:
(1) Etude after Chopin;
(2) Rondo after Weber.
15 Volkskinderliedchen.
Mondnacht. Song for 1 voice and P. F.

[A. M.]

BRAMBILLA, Marietta, eldest of five sisters, all distinguished singers, was born near Milan about 1807, and made her début in London as Arsace in 'Semiramide' in 1827. She was a pupil of the Conservatorio at Milan, and had never appeared on any stage; but, though her acting was indifferent, her lovely contralto voice, her excellent style, youth, and great beauty, ensured her success. 'She has the finest eyes, the sweetest voice, and the best disposition in the world,' said a certain cardinal; 'if she is discovered to possess any other merits, the safety of the Catholic Church will require her excommunication.' She sang in London for several years, as well as in Italy; at Vienna during four consecutive seasons, 1837–1841; and at Paris, where she chose again Arsace for her début, and achieved a great success. Brambilla was distinguished as a teacher, and published (Ricordi) exercises and vocalizzi beside other pieces. [J. M.]

BRANDL, Johann, born Nov. 14, 1760, at Rohr, near Ratisbon, died at Carlsruhe May 26, 1837. He studied violin and piano as a child in the monastery at Rohr, and at 10 was sent by Canon Gelasius to the seminary at Munich. He learnt singing from Valesi; and at the Jesuit school at Neuburg, received a thorough musical education from a certain Feldmaier. He began his career in the convent of Trutpert, Freiburg-im-Breisgau, as teacher of the violin and piano. In 1784 he was appointed chapel-master to Prince Hohenlohe Bartenstein; in 1789 'musik-director' to the Bishop of Bruchsal; and in 1806 the same to the archduke of Baden at Carlsruhe, where he stayed till his death. He composed an opera, 'Hermann'; a monodrama, 'Hero'; and many symphonies, serenades, quartets, etc. His melodies are beautiful, and were highly esteemed, as may be seen by some articles in the Leipsic A. M. Z. for 1828. [F. G.]

BRANLE (Fr. *branle*, a movement of the body from side to side). An old French dance, the generic name of all dances in which, like the Cotillon or Grossvater, the whole party of dancers were led by one or two. (Littré.) The branle of the time of Louis XIV was a branle serieux. It combined in itself the movements of the minuet and the polonaise. For an example of the music see p. 289. [E. P.]

BRASS BAND. (Fr. *Fanfare*.) The smaller variety of the military band, chiefly employed in cavalry regiments, on account of the greater ease with which brass instruments can be played on horseback. It ordinarily consists of an E flat piccolo cornet, two or more cornets in B flat, two tenor saxhorns in E flat, one or more baritones and euphoniums, with one or more bombardons. Besides these, trumpets, and side-, bass-, or kettle-drums are usually present. It is materially improved by the substitution of flutes and E flat clarinets for the piccolo-cornet, and by the addition of trombones. It has not the variety of quality and richness of tone possessed by the full reed band, but is competent to produce very smooth and agreeable harmony. On account of the greater facility with which brass instruments of the saxhorn species are learned, as compared with clarinets and other reeds, a brass band is much more easy to establish and maintain in efficiency than a full military band. [W. H. S.]

BRAVO, i.e. 'well done.' An Italian term of applause which has gone from Italy to other countries, though never taking very firm root in England. It was the custom in Italy to applaud, not only at the end of a piece or passage, but during the performance, and the *bravos* were addressed to composer, singer, or instrument—'Bravo Mozart!' 'Bravo Lablache!' 'Bravo il fagotto!' The word was there naturally inflected, and the applause to a female singer would be 'Brava Grisi!' Beethoven when satisfied with the orchestra used to give a 'thundering Bravi tutti.' [G.]

BRAVURA (Ital., courage, bravery). A style of both music and execution involving the display of unusual brilliancy and technical power; music written to task the ability and test the

courage of the artist. Thus 'Let the bright Seraphim' (Samson), 'Gli angui d'inferno' (Flauto magico), and 'Non piu mesta' (Cenerentola) are bravura songs, requiring a compass and a power of execution out of the common.

The notion of effect for effect's sake is perhaps involved in the term. Beethoven therefore can never be said to have written bravura pieces, though many of his pieces require the greatest skill and are extremely brilliant.

'Con bravura' and 'Allegro di bravura' are similarly used to denote fire and brilliancy. [G.]

BREATH. Various signs are used in vocal music to indicate the places for taking breath, they are usually ' ✱ ⌟ ''. The management of the breath is of the greatest importance in singing, as by it a good tone is formed. The two essentials are (1) the power of controlling the quantity and force of air as it is expired; (2) the power of directing the vibrating column of air. By too great pressure of breath the form of the waves of sound most favourable to a good tone is disturbed, while too little pressure deprives the tone of strength. A certain quantity of breath will produce a tone in perfection, and any increase or diminution of that quantity will result in loss of quality or power. The old Italian masters of singing made the management of the breath a matter of primary consideration; they required their scholars in practising their exercises to do so piano, and to breathe at first as in speaking; the places for doing this were carefully and distinctly marked; if it were found that the pupil emitted his breath with too great a pressure or too rapidly, so as to crowd or impair the sound, he was taught to hold it back, and only when he had acquired a knowledge of and a feeling for pure tone was he permitted to attempt to take larger breaths, and shown how to gradually increase the breathing capacity of his lungs. The breath is the basis of a full rich tone in singing, and on the management of its vibrating column of air depends the great charm and beauty of vocalisation, no less than the power of successfully executing phrasing, according to the dictates of a poetical and intelligent mind. [W. H. C.]

BREITKOPF & HÄRTEL. On Jan. 27, 1869, this renowned firm of music-publishers in Leipsic celebrated the 150th anniversary of its existence. Its foundation was laid in 1719, when Bernhardt Christoph Breitkopf, member of a mining family of the Hartz, born at Clausthal March 2, 1695, set up a printing press at Leipsic. His first publication was a Hebrew Bible, quickly followed by a number of theological and historical works, in which Breitkopf's friendly relations to the poet Gottsched were of much use to him. In 1732 a printing office was built with the sign of 'zum goldnen Bär,' which in 1765 was increased by the addition of the 'silberne Bär.'

In 1745 Breitkopf gave up the printing business to his only son, and in 1765 the firm became B. C. Breitkopf & Son. On March 26, 1777 the old man died, aged 83. He had raised himself from a common printer to be the head of the first printing establishment in Germany, and he also had the happiness, which Gottsched had predicted, of seeing himself eclipsed by his son. The son, Johann Gottlob Immanuel, born Nov. 23, 1719, devoted himself with ardour, while a lad, to the acquirement of learning, leaving professional knowledge till later. His acquirements in literature were developed by intercourse with such scholars as Lessing and Winkelmann. He laboured to improve the practice of printing, and with that view wrote several papers. By the introduction of separate movable music type he produced, as early as 1750, a revolution in the music trade. In 1756 the first fruits of his innovations appeared in the shape of a splendid edition of an opera in full score, and in 3 vols., entitled 'Il trionfo della fedeltà, dramma per musica di E. T. P. A' (the initials of Ermelinda Talia Pastorella Arcada, a name assumed for the occasion by Antonia Amalia Walburga, Princess of Saxony). After this, Breitkopf published a long series of important compositions by C. P. E. Bach, Graun, Hiller, Leopold Mozart, etc. He had hardly begun to realise the results of his invention in the music trade when his energy found a new channel. During the Seven Years War (1756–63) he had organised on a large scale a warehouse of German, English, French, and Italian music, both MS. and printed, and had started a special trade in music, through the publication of systematic descriptive catalogues referring to his stock, and embracing the whole field of musical literature. Between 1760 and 80 he issued catalogues of printed music, both theoretical and practical, in six parts; of MS. music in four parts; and a third (especially important for the history of music)—a thematic catalogue of MS. music only, in 5 parts, with 16 supplements (1762–87). His activity was absolutely unceasing. In 1770 he founded a manufactory of playing cards (which he sold in 1782), a coloured paper manufactory, a bookselling business in Dresden and another in Bautzen. He died Jan. 29, 1794, honoured as the reformer of the music trade, and secure of a place in the history of the art of printing. His portrait is extremely interesting. The well-formed head, the speaking eye, the intelligent features, show intellectual power and strong will. Immanuel had two sons, who learned the printer's craft from their father. Bernhard Theodor (born 1749), was musician enough to compose some pretty music to Goethe's 'Jugendlieder' in 1769. He went in 1777 to Russia, and founded a printing office and bookselling business in Petersburg—was teacher in an institution for the education of girls, and died at a great age as Russian 'Staats-Rath.' His second son, Christoph Gottlob (born 1750), remained with his father. He was an amiable dilettante, to whom the burden of his vast business was intolerable; after carrying it on therefore for a year he gave it up to his friend G. C. Härtel, at the same time making him his heir. He died much lamented in 1800,

the last scion of a gifted race. Since then the business, though entirely in Härtel's hands, has been conducted under the well-known title of Breitkopf & Härtel.

GOTTFRIED CHRISTOPH HÄRTEL, son of Dr. Christoph Härtel, Burgomaster of Schneeberg, was born there Jan. 27, 1763. Having given up his former occupation, he applied himself with vigour to improve the business by undertaking the publication of musical works of the highest order. Thus he brought out the works of Mozart in 17 vols. (1798–1816); of Haydn in 12 vols. (1800–1806); of Clementi in 13 vols. (1800–1818); and of Dussek in 12 (1814–1818)—an undertaking which was the forerunner of many popular and critical collected editions. Härtel also started the 'Allgemeine musikalische Zeitung,' which long maintained its position as the best musical periodical, and advocated the interests of music from 1798 to 1848; he further published a literary paper, the 'Leipziger Literatur-Zeitung' (1812–1834), enlarged his stock of music and books, and made various practical improvements in printing. Amongst other things he introduced the system of engraving music on pewter plates, to which in 1805 he added a lithographic establishment, with the personal co-operation of Sennefelder, the inventor. Procuring workmen from Vienna, he next started the first factory of pianos in central Germany. Being a man of great cultivation and refinement, such constant absorption in business was not to his taste, but he accepted the task which fate had laid upon him, and executed it faithfully till his death on July 25, 1827.

Up to 1835 the business was carried on by his nephew FLORENZ HÄRTEL. But at that date HERMANN HÄRTEL, the eldest son of Gottfried (born April 27, 1803), entered the house as head, in partnership with his younger brother RAYMUND, who had joined in 1832. Hermann's fine character had been improved by an excellent education; he read law, and took his doctors' degree in 1828, and his love of art had been cultivated by a two years' residence in Italy. Both in public and private life he was a man of noble disposition and true culture. The brothers lived to see a remarkable spread of taste, and to publish many works of Mendelssohn, Schumann, Chopin, and other eminent modern composers; they brought out new editions of Schubert, Weber, and Hummel. Their catalogue up to 1874 included over 14,000 works, extending over the whole range of music. In 1866 they began the issue of a series of cheap editions of classical works in red covers, which are now widely known. They assisted in the formation of the BACH-GESELLSCHAFT, which, like the companion Handel Society, owes much to their energy, taste, and accuracy. In 1862 they projected a complete critical edition in score and parts of the works of Beethoven, which was completed in 1866, and is now (1876) being followed by a similar edition of Mendelssohn.

The list of their publications contains treatises by Kiesewetter and others on the history of music, important works by Tucher and Winterfeld on the church music of Germany; biographies, such as Bach by Spitta, Händel by Chrysander, Mozart by Jahn; thematic catalogues of Beethoven by Nottebohm, and Mozart by Köchel; works on the theory of music by Chladni, Hauptmann, Lobe, Köhler, Marx, Sechter, etc., as well as a long list of publications on literature, law, theology, medicine, natural philosophy, philology, archæology, etc., etc. The practical part of the business has increased so much that the Goldene Bär was in 1867 exchanged for a much larger building. By 1871 the printing had developed to such an extent that it became necessary to use the space formerly occupied by the pianoforte manufactory. Since the death of Hermann, Raymund, youngest son of Gottfried (born June 9, 1810), has been at the head of the house, assisted by two grandsons of Gottfried's—Wilhelm Volkmann and Dr. Georg Oscar Immanuel Hase. It is for these gentlemen to complete the edition of Mendelssohn, and to crown the great undertakings already enumerated, by the edition of Mozart's great works in score which they have already announced (1876).

(The above is taken by kind permission from papers in the archives of the firm.) [C. F. P.]

BREMNER, ROBERT, born in Scotland about 1720. He practised for some years as a teacher of singing, and afterwards, about 1748, became a music-seller at Edinburgh, under the sign of the 'Harp and Hoboy.' He subsequently settled in London, and commenced business, with the same sign, 'opposite Somerset House in the Strand.' He arranged many collections of 'Scots Songs for Voice and Harpsichord.' He was also the author of 'Rudiments of Music, with Psalmody,' a work which went through many editions; 'Thoughts on the Performance of Concert Music'; 'Instructions for the Guitar,' etc. He died at Kensington, May 12, 1789. [E. F. R.]

BRENDEL, DR. KARL FRANZ, musical critic, born Nov. 25, 1811, at Stollberg in the Harz; educated at the Gymnasium of Freiberg in Saxony, where his father was Berg-Rath, and at the universities of Leipsic and Berlin. Music always formed his special pursuit, in which he was mainly assisted by Anacker and Wieck. He began his public career with lectures on the history of music, delivered in Freiberg and in Dresden. In 1844 he settled in Leipsic as proprietor of Schumann's 'Neue Zeitschrift,' which he edited from Jan. 1, 1845, at the same time teaching musical history and æsthetics in Mendelssohn's newly established Conservatorium. Here he delivered the public lectures on which he founded his most comprehensive work, 'Geschichte der Musik in Italien, Frankreich, und Deutschland' (1852; 4th edition 1867), an attempt to treat the various historical developments of the art from one practical point of view. More important however were his articles in the 'Neue Zeitschrift,' written as a strenuous advocate of modern ideas in music. His first efforts were devoted to the recognition of Schumann; but in

time the paper became the organ of Wagner and Liszt. Brendel certainly had a rare power of appreciating the ideas of the real leaders of the movement, and of illustrating and developing them effectively, and thus materially assisted the movement. His treatment is dry, logical, and didactic; but what it wants in directness and poetical force is made up for by the perseverance with which he urges his arguments.

In 1850 he began to issue another periodical, entitled 'Anregungen für Kunst, Leben, und Wissenschaft,' which for several years supported the propaganda of the Zeitung in favour of Liszt and Wagner. But the most open exposition of the views of the party is to be found in his 'Musik der Gegenwart und die Gesammtkunst der Zukunft,' which must be regarded as a completion of his History, and is not free from considerable party spirit. With the year 1859 Brendel began to labour for the reconciliation of the contending parties, on the basis of the general progress of modern times. The field for this effort was the 'Allgemeine deutsche Musik-Verein,' or 'German musical union,' which arose out of a festival of musicians held on the occasion of the twenty-fifth anniversary of the 'Neue Zeitschrift,' and was founded in 1861. Brendel was not only one of the chief founders of the 'Verein,' but as its president he worked for it with restless energy to the time of his death, and his Zeitung was its official organ. Brendel died Nov. 25, 1868. The Zeitung continued to follow the same path as before, but lost its old eminence. Besides the works already mentioned Brendel issued various smaller publications, all more or less distinguished by a tendency for the New German School—'Liszt als Symphoniker' (1858), 'Organisation der Musik durch den Staat' (1866). An abridgment of his history, for schools, was published under the title of 'Grundzüge der Geschichte,' etc., and has been translated into several languages. [A. M.]

BREVE (Fr. *Carrée*; Ital. *Breve*). A note of the value of two semibreves, rarely met with in modern music, in which there is no place for it, as the longest bar commonly used (viz. a bar of 12-8 time) has but the value of a semibreve and a half. Although now nearly obsolete from its great length, the breve was originally (as indicated by its name, derived from *brevis*, short) the shorter of the two notes of which the earliest measured music, invented about A.D. 1200, was composed. These two notes, which corresponded to the long and short syllables of the text to which they were sung, were termed *longa* and *brevis*, and were written thus, and . The proportion which they bore to each other was not always constant, the *longa* containing sometimes three breves, in which case it was called perfect, and sometimes only two, when it is said to be imperfect. So likewise, after the introduction of a still shorter note called *semibrevis*, the *brevis* could be either perfect or imperfect, and consist of three or two semibreves. These variations of proportion, which, together with many others, remained in use until about the middle of the 17th century, and which could not but have added immensely to the difficulty of the study of music, were dependent on the order in which the longer and shorter notes followed each other, and also upon the appearance of certain time-signatures which were placed at the beginning of the composition. For a full account of these the reader is referred to Bellermann's treatise 'Die Mensuralnoten und Taktzeichen des 15. und 16. Jahrhunderts,' Berlin, 1858.

The breve, together with other notes belonging to the same epoch, was originally written black, the more modern white notes (Fr. *blanches*) written in outline being introduced by Dufay about the end of the 14th century. After this period black notes (Fr. *noires*) were exclusively used to express diminution, the note made black losing a portion of its value, either one-third or one-fourth, according to circumstances. A relic of this custom survives in modern music in the method of writing minim and crotchet.

In modern music the breve, in the rare cases in which it is used, is always written white, and either of an oblong form, thus , or oval with two small vertical strokes at each end, thus .

The expression *alla breve*, placed at the commencement of a composition, has been variously interpreted. Some have understood it to mean a rhythm of one breve to a bar, while others, translating the words 'alla breve' literally into 'in short fashion,' understand by it a rhythm of either two or four beats in a bar, but at a double rate of movement, semibreves being taken at about the speed of ordinary minims, and so on. In favour of this latter view is the fact that the signature of alla breve time is always the semicircle crossed by a vertical stroke, , which is the 'diminutio simplex in tempus imperfectum' of the ancient measured music, where it served precisely the same purpose, *i.e.* by reducing each note to half its proper value it doubled the rate of movement. Both views agree in the most important particular, namely, that compositions marked 'alla breve,' or, even when not so marked, if provided with the distinctive time-signature, must be performed twice as fast as if simply marked with the sign of common time, C or 4–4. And with regard to the opinion which holds that compositions alla breve ought to be written in bars of the value of a breve, it may be urged that in spite of the undoubted fact that most of such compositions have but one semibreve in the bar, it is possible that this method of writing may have been intended to represent merely the division of the original alla breve bar into two halves, for convenience of reading, a division which has actually been made in certain cases, as for example in Handel's chorus 'All we like sheep' (Messiah), which was originally written in bars of the value of two semibreves, and marked 'alla breve,' although now printed in bars of half that length. Moreover, it is certain that the expression alla breve has never been applied to movements in triple time, although if it had had reference merely to

the rate of movement this would have been perfectly possible. [F. T.]

BREWER, Thomas, was educated at Christ's Hospital, and brought up as a performer on the viol. He flourished in the time of Charles I, the Protectorate, and part of the reign of Charles II. He was the composer of several excellent fantasias for the viol; and many rounds and catches of his are printed in Hilton's 'Catch that Catch can.' He was the composer of the pretty three-part song 'Turn Amaryllis,' inserted by Playford in his 'Musical Companion.' In the Harleian MS., No. 6395, entitled 'Merry Passages and Jests,' compiled by Sir Nicholas Lestrange, is the following anecdote respecting him:—'Thomas Brewer, my musical servant, through his proneness to good fellowship, having attained to a very rich and rubicund nose, being reprov'd by a friend for his too frequent use of strong drinkes and sacke, as very pernicious to that distemper and inflammation in his nose—"Nay, faith," says he, "if it will not endure sacke, it is no nose for me."' The date of his death is not known. [E. F. R.]

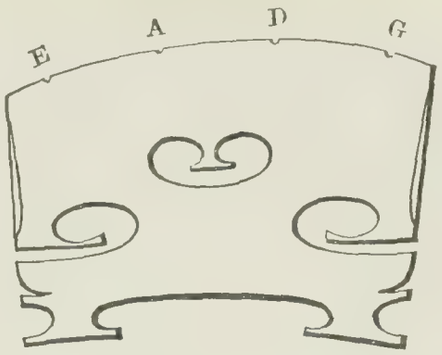
BRIARD, Étienne, engraver of music, born at Bar-le-Duc towards the end of the 15th century, settled at Avignon in 1530. He replaced the square characters hitherto in use by round ones, and devised a simple means of expressing the duration of a note, instead of the complicated system of ligatures. Peignot, in his 'Diction. de la Bibliologie,' supp. p. 140, claims priority in these inventions for Granjon, also a printer; but Briard's characters are certainly better formed and easier to read. A facsimile of them may be seen in Schmidt's 'Ottaviano Petrucci.' The works of the composer Eleazar Genet, called 'Carpentras,' after his birthplace, were printed at Avignon in 1532 in Briard's characters. Jean Baptiste, a descendant of the celebrated printer, has distinguished himself as a violinist. He was born May 13, 1823, at Carpentras; gained the second prize at the Paris Conservatoire in 1843, and the first in 1844. His teachers were Clarel, Baillot, and Habeneck. [F. G.]

BRIDE OF DUNKERRON, THE, a dramatic cantata; the verse by Enoch; music by Henry Smart. Written for, and produced at, the Birmingham Festival Sept. 6, 1864. [G.]

BRIDE OF SONG, THE, operetta in one act; words by Henry Farnie; music by Jules Benedict. Produced at Covent Garden Dec. 3, 1864. [G.]

BRIDES OF VENICE, a grand opera in 2 acts; music by Jules Benedict. Produced at Drury Lane, Monday, April 22, 1844. [G.]

BRIDGE. The strings on the instruments of the violin tribe are stretched over a small piece of wood called the bridge, which transmits their vibrations to the body of the instrument. The shape and details of the bridge, as finally fixed upon by Stradivari, cannot be altered in any single respect without injury to the tone of the instrument.



If a plain piece of wood is substituted for the bridge, the instrument has absolutely no tone; by cutting out the feet the tone is made to appear to a certain extent, and it increases in proportion as the bridge assumes its normal shape. It is generally made of spotted maple. Its height, width, and thickness depend on the qualities of the individual instrument which it is to serve. As a rule its height must not be more than two-thirds the height of the Sound-post. The thickness is of the greatest importance, for if too thick, it will not readily transmit the vibrations of the strings. The left foot must stand exactly over the middle of the bass-bar, and both feet must be at an equal distance from the *f*-holes. [P. D.]

BRIDGETOWER, George Augustus Polgreen, a mulatto, son of an African father and an European mother, appears to have been born at Bisla in Poland 1779 or 1780, and to have made his first appearance in February 1790 at Drury Lane, where he played a violin solo between the parts of the 'Messiah.' This probably attracted the notice of the Prince of Wales, since on the 2nd June following he and Clement, a lad of about the same age, gave a concert under the patronage of H. R. H. In the same year he also played at the 'Professional Concerts.' Bridgetower became a pupil of Giornovichi and of Attwood, and was attached to the Prince's establishment at Brighton as a first violin-player. His name is found among the performers at the Haydn-Salomon Concerts of 1791, and at concerts of Barthelemon's in 92 and 94, where he played a concerto of Viotti's. At the Handel Commemoration of 1791, Bridgetower and Hummel sat on each side of Joah Bates at the organ, clad in scarlet coats, and pulled out the stops for him. He was known in London by the sobriquet of 'the Abyssinian Prince.' In 1802 he obtained permission to visit his mother at Dresden, where she was living with another son, a cello player. In Dresden he gave concerts on July 24, 1802, and March 18, 1803; and from thence went to Vienna, where his reputation preceded him, and where he played the sonata Op. 47—known as the 'Kreutzer Sonata'—with Beethoven, on the 17th or 24th May. After this he is heard of no more, but is believed to have died in England between 1840 and 1850, leaving a daughter who still lives in Italy.

Bridgetower has left a memorandum of the performance of the Sonata which, if it can be

believed, is interesting. He introduced an alteration of one passage which so pleased Beethoven that he jumped up from his seat, threw his arms round Bridgetower, and cried '*Noch einmal, mein lieber Bursch*'—'Once more, my dear fellow.'

Czerny has left on record that Bridgetower's gestures in playing were so extravagant and absurd that no one could help laughing.

The memorandum just mentioned is given by Thayer ('Beethoven,' ii. 229); and further details will be found at pp. 227–231 and 385–391. See also Pohl's 'Haydn in London,' pp. 18, 28, 38, etc.—Beethoven writes 'Brischdower.' [G.]

BRIEGEL, Wolfgang Karl, church composer, born 1626, originally organist at Stettin, and afterwards (see the title-page of his then published works) Music-Director to Prince Friedenstein in Gotha, and in 1660 Kapellmeister to the Duke of Saxe Gotha. In 1670 he was called to Darmstadt as Kapellmeister to the Landgrave of Darmstadt, where he remained till his death in 1710. Among the remains of Emanuel Bach was a portrait of Briegel, engraved by Nessenthaler; it represents a man of about sixty-five, of healthy and jovial aspect, and with no trace of the labour involved in so many serious compositions. Schneider (das Musik. Lied, iii. 155) says, that 'perceiving the fashion of solo songs like those of Ad. Krieger and the two Ahles to be on the wane, he returned to the composition of songs for several voices; he wrote, in fact, incessantly in all sorts of styles with much fluency but no originality, and with no adequate return for his labours.' His principal compositions consisted of sacred songs for several voices, mostly to his own words. One of his works alone, for 3 and 4 instruments (Erfurt, 1652), contains 10 Paduaner, 10 Gagliarden, 10 Ballette, and 10 Couranten. His one secular work, 'Musikalisches Tafel-Confect' (Frankfort, 1672), consists, according to its quaint title, of 'pleasant Conversations and Concertos.' His Hymn-book for Darmstadt appeared in 1687. His published works, twenty-five in number, begin with 'Geistliche Arien und Concerte' (Erfurt, 1672), and end with 'Letzter Schwanen-Gesang,' consisting of twenty Trauergesänge for four or five voices (Giessen, 1709).

Gerber (Lexicon, 1812) gives a catalogue of his published works according to dates from Darmstadt, employed by Fétis in his 'Biographie Universelle.' [C. F. P.]

BRIGHENTI, or BRIGHETTI, Mme. Maria (née Giorgi), a celebrated singer, born at Bologna 1792; first appeared at Bologna in 1814. She created the part of Rosina at the first performance of the 'Barbiere di Siviglia' (Rome, 1816); and for her Rossini wrote 'La Cenerentola.' She sang in the principal towns of Italy, and retired in 1836. Mme. Brighenti embodied her recollections of Rossini, whom she had known from childhood, in an interesting book 'Cenni . . . . sopra il Maestro Rossini' (Bologna, 1823). [M. C. C.]

BRIND, Richard, was brought up as a chorister in St. Paul's Cathedral. On the death in 1707 of Jeremiah Clark, organist of the cathedral, Brind was appointed his successor, and held the place until his death in 1718. He composed for occasions of thankgiving two anthems now wholly forgotten. [W. H. H.]

BRINDISI (Ital. *far brindisi*; Span. *brindar*, 'to drink one's health'), a drinking or toasting song. Well-known and popular examples are 'Il segreto' in 'Lucrecia Borgia,' and 'Libiamo' in the 'Traviata'—the latter written for chorus, with solos for soprano and tenor. [W. H. C.]

BRISTOL MADRIGAL SOCIETY. The establishment of this society in 1837 was one of the fruits of a lecture on Madrigals given at Bristol by Professor Edward Taylor. The society was limited to thirty members, who were to meet on alternate Wednesdays at the Montague Tavern, to sing such madrigals as had been previously agreed upon by the committee; the late Mr. J. D. Corfe, organist of the Cathedral, was the director, and among the first members was Mr. Pearsall, the eminent madrigal writer. At the first annual dinner in 1838 Sir John Rogers and Mr. Thomas Oliphant, president and secretary of the London Madrigal Society, were present. In the same year it was resolved to give a 'Ladies' Night,' and in 1839 the number of these open performances was increased, owing to the demand for tickets, while ultimately the 'Ladies' Night' took the place of the annual dinner. In Feb. 1841 the Ladies' Nights were suspended, but at the end of 1842 they were recommenced at the Victoria Rooms, with an audience of 1200, and have since been continued annually. The number of members has been increased to forty-two, and the meetings are still held at the Montague. The choir consists exclusively of male voices, the boys being selected from the cathedral choirs of Bristol, Oxford, Exeter, and other places. Mr. Corfe continued to direct the society till 1864, when he resigned, and was succeeded by Mr. D. Rootham, the present conductor. The open nights have always attracted a large number of eminent musicians, and among the frequent visitors in past years may be named Dr. C. Corfe, of Oxford; Sir G. J. Elvey and Dr. Stephen Elvey; the Rev. Sir Frederick Gore Ouseley, Bart.; Dr. Stainer, (then of Oxford); Mr. Amott, of Gloucester; Mr. Done, of Worcester; and Mr. Townshend Smith, of Hereford, who brought with them the most effective members of their respective choirs. During the period of Mr. Corfe's direction these gentlemen joined the choir of Bristol Cathedral at service on the day of the concert, a practice since discontinued. The music sung during the first twelve years of the society's existence was almost exclusively confined to madrigals, the exceptions being anthems by Tye and Creighton, and the works of Mr. Pearsall, but some of Mendelssohn's four-part songs were introduced at a concert in Jan. 1851, and have been frequently included since, with other choral works of the same class. The following was the programme at the society's first meeting on March 1,

1837:—'I will arise' (Creighton); 'Cynthia, thy song and chanting' (G. Croce); 'Flora gave me' (Wilbye); 'To shorten Winter's sadness' (Weelkes); 'In pride of May' (Morley); 'O that the learned poets' (O. Gibbons); 'All creatures now' (Benet); 'Hosanna' (Gibbons); 'April is in my Mistress' face' (Morley); 'So saith my fair' (L. Marenzio); 'Down in a flow'ry vale' (Festa); 'Soon as I careless stray'd' (Festa); 'The Waits' (Saville). In subsequent programmes we find the names of the great madrigal writers of England and Italy. A sacred work occasionally finds a place in the programmes, and the last number is always 'The Waits.' [C. M.]

BRITISH CONCERTS. When the Vocal Concerts were discontinued at the close of the year 1822 the British Concerts were established to supply their place, and, according to the prospectus, 'to meet the wishes of a numerous class of persons who are anxious to see native talent encouraged.' The programmes were to consist 'entirely of works of British composers, or of foreigners who have been naturalised and resident in these realms for at least ten years.' The managers of the concerts were the following members of the Concentores Society:—Messrs. Attwood, Bishop, Elliot, Goss, Hawes, Horsley, Jolly, Linley and Walmisley, and Sir G. Smart. Three concerts were given in 1823, under the immediate patronage of the King, including instrumental chamber music, vocal solos and glees. Among the new works given were string quartets by J. Calkin and G. Griffin, a quartet for piano and strings by Griffin, Horsley's 'Address to Hope' for double choir, and his glee 'The Crier,' Linley's glee 'Now the blue-fly's gone to bed,' Elliott's 'A choir of bright beauties,' Hawes's 'Love, like a bird,' Attwood's 'In this fair vale.' The instrumental performers were Mori, W. Griesbach, H. Smart, and Linley, and the chief vocalists Mrs. Salmon, Miss Stephens, and Messrs Vaughan, Sale, and Bellamy. The concerts took place in the ball-room of the Argyll Rooms, and a list of 200 subscribers was published, but the support accorded to the scheme was insufficient for the continuance of the concerts, and the season of 1823 was the first and last. [C. M.]

BRITISH ORCHESTRAL SOCIETY. This society was established in 1872 for the purpose of giving an annual series of concerts by British artists, the soloists, vocal and instrumental, together with the band of seventy-five performers, being drawn from the ranks of native musicians. The scheme of each concert includes a symphony, a concerto, two overtures, and vocal music; the programme being gone through without any break. Mr. George Mount is the conductor, and the band includes Messrs. Carrodus, Zerbini, Doyle, E. Howell, J. Howell, sen., as the leaders of the string department. While the performers have been exclusively English, the music has been drawn from composers of all nations, but several new works by native writers have been given for the first time, including Macfarren's overture to 'St. John the Baptist' (1873); J. F. Barnett's overture to Shakspere's 'Winter's Tale' (1873), written for the society; J. Hamilton Clarke's 'Saltarello' (1874); Alfred Holmes' overture to 'Inez de Castro' (1874); Gadsby's overture 'The Witches' Frolic' (1874); Wingham's Symphony in B flat (1875). The soloists at the concerts include the names of the most eminent English artists. The concerts are given at St. James's Hall, and Mr. Stanley Lucas is the secretary (1876). [C. M.]

BRITO, Estéban de, lived about 1625, musical director at the cathedrals of Badajos and Malaga, and composer of motets, etc. preserved in the King of Portugal's library.

BRITTON, Thomas, called the 'Musical Small-Coal Man,' was born at or near Higham Ferrers, Northamptonshire, about the year 1651. He was apprenticed in London to a coal-dealer, and afterwards commenced business in Aylesbury Street, Clerkenwell, as a dealer in 'small-coal' (charcoal?), which he carried through the streets on his back. He obtained an extensive knowledge of chemistry, of old books, chiefly on the occult sciences, and of both the theoretical and practical part of music. He established weekly concerts, and formed a sort of club for the practice of music. These concerts were held in a long narrow room over his shop, the entrance to which is described as being by a stair outside the house. Notwithstanding the humbleness of the attempt these gatherings are said to have been attractive and very genteel. The performers were Handel (who presided at the harpsichord), Pepusch, John Banister, Henry Needler, John Hughes (the poet), Philip Hart, Henry Symonds, Abel Whichello, Obadiah Shuttleworth, Woollaston (the painter), and many other professors and amateurs. The concerts were at first free to all comers; subsequently the visitors paid ten shillings a year each. Britton provided his guests with coffee at a penny a dish. The small-coal man was acknowledged by the Earls of Oxford, Pembroke, Sunderland, and Winchelsea (the great book-collectors of the day), who appreciated his conversation and book-learning. He had a hand in the formation of the celebrated Harleian Library; and the Somers tracts were entirely his collecting. His reception by these noblemen led many persons to imagine that Britton was not the character he seemed to be, and that his musical assemblies were only a cover for seditious purposes. Indeed he was severally suspected of being a magician, an atheist, a presbyterian, and a Jesuit. These conjectures were all ill-grounded. Britton was a plain, simple, honest man, perfectly inoffensive, and with tastes above his condition in life. His death was brought about by a ventriloquist, who so frightened him that he never recovered. He died Sept. 27, 1714, and was buried in St. James' Churchyard, Clerkenwell, his funeral being attended by the members of his musical club. [E. F. R.]

BROADWOOD (John Broadwood and Sons). The house which has borne this name and been identified with pianoforte-making in London from

the introduction of the instrument, was established by a harpsichord-maker, Burkhard Tschudi, a descendant of the Schwanden branch of the noble Swiss family of that name (Schweizerische Lexicon, art. 'Tschudi,' Zürich, 1795). In England he wrote his name Shudi, and established himself about the year 1732 at the house (afterwards No. 33) in Great Pulteney Street, Golden Square, the sign he adopted, before it was numbered, according to the custom of the time, being the 'Plume of Feathers.' Tschudi, originally a joiner, had been the pupil of Tabel, a Flemish harpsichord-maker settled in London, who had himself been taught in the famous house of Ruckers at Antwerp. Through merit and the recommendation of Handel, Tschudi was made harpsichord-maker to the royal family of England. A fine double harpsichord, made by him in 1740, was long preserved in Kew Palace, and is now in Windsor Castle. He was also patronised by Frederick the Great, two harpsichords made by Tschudi being still in the royal palace at Potsdam. Burney spoke of his tone being refined and delicate, and compared his instruments with those of his rival Kirkman, also a pupil of Tabel. Tschudi's only patent was taken out in 1769, for a Venetian swell to the harpsichord (see VENETIAN SWELL), probably the invention of his son-in-law and partner John Broadwood, the latter a journeyman cabinet-maker who came from Scotland to London, found employment at Tschudi's, married Tschudi's daughter, and was taken into partnership by his father-in-law, who retired in 1773, but as late as 1794 the joint names appear as the style of the firm in a Musical Directory. About 1770 the first grand pianoforte made in London had been constructed by a Dutchman, Americus Backers, with the assistance of John Broadwood and his apprentice Robert Stodart. Backers died about 1781, recommending his action to John Broadwood's care; and, allowing for some change in the proportion of parts, it is the same Messrs. Broadwood still use, known on the Continent as the English action. In 1783 John Broadwood took out a patent for a change in the construction of the square pianoforte, by which the wrest-plank holding the tuning-pins was removed from the right-hand side, as in the old clavichord, to the back of the instrument. He also introduced the division of the bridge on the soundboard of the grand piano. These improvements were so important that they were afterwards everywhere adopted. John Broadwood died in 1812. His sons, James Shudi and Thomas Broadwood did much to extend the business, the former having recognised claims as a progressive pianoforte-maker. The continued history of the house is so intimately connected with the modern development of the instrument that further reference to it must be sought under PIANOFORTE. The present head of the firm (1877) is Mr. Henry Fowler Broadwood. [A. J. H.]

BRODERIP, WILLIAM, organist of Wells Cathedral about the commencement of the 18th century, contributed some things towards the store of cathedral music. A service and an anthem with orchestral accompaniments by him are included in the manuscript collection of church music made by Dr. Tudway for the Earl of Oxford, and now in the British Museum. [W. H. H.]

BRONSART, HANS VON, pianist and composer, born at Berlin, 1830, educated at Dantzic and at Berlin University. Studied harmony and composition under Dehn, and the piano, first under Kullak, and (1854–57) under Liszt at Weimar. After several years devoted to concert tours, Bronsart (1860–62) conducted the Euterpe concerts at Leipsic; in 65 became Director of the Gesellschaft der Musik reunde at Berlin, and in 67 Intendant of the court theatre at Hanover, a post he still fills (1878). His chief works are a Pianoforte Trio in G minor, and a Pianoforte Concerto in F♯ minor—both much and successfully played by von Bülow, Sgambati, and others; Polonaise in C minor (Liszt's 'Das Klavier'); Frühlings-Fantaisie for orchestra, often performed; 'Christmarkt,' a Cantata for double choir and orchestra; Der Corsair (MS.), an opera, text from Byron; also an interesting pamphlet, 'Musikalische Pflichten.' In 1862 he married Ingeborg Starck, like himself a pupil of Liszt's. [See STARCK.] In England Bronsart is only known by his Pianoforte Concerto, which was played at the Crystal Palace Sept. 30, 1876, by Hartvigson. [E. D.]

BROS, JUAN, born at Tortosa 1776, died at Oviedo 1852, successively director at the cathedrals of Malaga, Leon, and Oviedo, and composer of much church music, still performed in the churches throughout Spain. Three Misereres written at Leon are cited as his best works. Specimens of his music are given by ESLAVA in the 'Lira Sacro-Hispano.' [M. C. C.]

BROSCHI, CARLO; DETTO FARINELLI. (See FARINELLI.)

BROSSARD, SEBASTIEN DE, author of the first musical dictionary, published under the title of 'Dictionnaire de musique contenant une explication des termes grecs et latins, italiens et français les plus usités dans la musique,' etc. (Paris, Ballard, 1703, folio). There were two later editions, the second at Paris in 8vo., and the third by Roger of Amsterdam. The work contained a catalogue of 900 authors on music. Brossard was born in 1660, and was a priest at Strassburg, and chapel-master to the cathedral from 1689 to 1698. In 1700 he was appointed grand chaplain and musical director of the cathedral at Meaux, where he died Aug. 10, 1730. Janowka, a Bohemian, brought out a musical dictionary two years before Brossard's, but it was in Latin, like all such works at that time. Brossard's book being in French brought musical subjects within the range of the general reading public, and thus rendered an important service to art. It is not without faults, but contains an enormous amount of information to have been amassed by one man. Brossard also wrote 'Lettre à M. Demotz sur sa nouvelle méthode d'écrire le plain-chant et la musique' (Ballard, 1729). As a composer

of church music he made his mark. He gave his valuable library to Louis XIV in consideration of an annuity of 1200 francs. His MSS. and notes for a universal history of music are preserved in the national library in Paris. [F. G.]

BROWNSMITH, John Leman, was born in Westminster in 1809, and received his musical education as a chorister of Westminster Abbey under George Ebenezer Williams and Thomas Greatorex. On quitting the choir he pursued the study of the organ, and in a short time became not only an excellent player but acquired so perfect a knowledge of the structure of the instrument as to be able to build a small chamber-organ for himself. In 1829, on the death of Benjamin Jacob, Brownsmith was appointed his successor as organist of St. John's church, Waterloo Road. In March 1838 he was appointed a lay vicar of Westminster Abbey. In October 1848 he succeeded William Miller as organist to the Sacred Harmonic Society, in which capacity he officiated at the Handel Festivals at the Crystal Palace in 1857, 1859, 1862, and 1865. In 1853 he resigned his appointment at St. John's on being chosen organist of the then newly-erected church of St. Gabriel, Pimlico. He died Sept. 14, 1866. [W. H. H.]

BRUCH, Max, one of the most eminent living German composers, was born at Cologne on Jan. 6, 1838. His father was in government employ, his mother came of a well-known and gifted musical family of the Lower Rhine. Herself a distinguished singer, she carefully watched the early development of her son's musical talents. He received his theoretical instruction from Professor Breidenstein at Bonn, and soon began to give extraordinary promise. In 1852 Bruch gained the scholarship of the Mozart foundation at Frankfort-on-Maine for four years, during which time he continued his studies under Hiller, Reinecke and Breuning at Cologne, at the same time making himself gradually known by his compositions. His further development was promoted by long visits to Leipsic, Munich, and other musical towns. His stay at Munich was of special importance through the personal acquaintance of the poet Geibel, whose 'Loreley,' written for Mendelssohn, Bruch had composed while at Cologne. He at length obtained the poet's consent for the performance of the opera, and proceeded to Mannheim, where it was first given, and where he occupied himself with studying the requirements of the stage. He then produced many of those works which have associated his name with the best of the present time. In 1865 he accepted the post of musical director of the Concert-Institution at Coblenz, and in 1867 became Kapellmeister to the Prince of Schwarzburg-Sondershausen. This post he resigned in 1870, since which time he has lived independently, first at Berlin and now at Bonn, devoting himself exclusively to composition. The first work with which he came before the public was an operetta, 'Scherz, List und Rache,' to Goethe's words; then followed various chamber compositions, a trio (op. 5), two string quartets (op. 9, 10), songs, and pianoforte works. For the present, however, Bruch has abandoned these branches, and devoted his whole strength to the larger forms of orchestral and choral music. His first step in this field was taken with the opera 'Loreley' (op. 16), already mentioned, which met with considerable success; but his most important and most successful work, and that which established his fame, was his 'Scenes from the Frithjof-Saga' (op. 23), for male voices and orchestra—a work of the freshest invention and consummate technique. Amongst his instrumental works the more important are two Violin Concertos, the first in G minor, and the second (1877) in D minor, as well as two Symphonies. His chief vocal works, with orchestra, are: 'Die Flucht der heiligen Familie' (op. 20), 'Römischer Triumpfgesang,' 'Römische Leichenfeier,' 'Salamis' (these last three for men's chorus), 'Schön Ellen,' 'Rorate Cœli,' 'Kyrie, Sanctus, and Benedictus,' 'Odysseus,' and various smaller works of the same kind. He also wrote a second opera, called 'Hermione' after Shakespeare's 'Winter's Tale,' but this had no success. Bruch's real field is concert music for chorus and orchestra; he is above all a master of melody, and of the effective treatment of the masses. These two sides of his artistic activity, so to speak, play into each other's hands, and have brought him deserved success. Bruch's melody is not drawn from the hidden depths of innermost feeling, but rather from the upper surface of his nature; yet it is true, unconstrained, natural, and excellent in structure, broad, impressive, and vocal. He thoroughly understands how to clothe his thoughts in the most favourable and effective forms. In the elaborate and complicated machinery of the modern orchestra and chorus he is thoroughly at home. While on the one hand we admit that the effect of his more important works is perhaps greatly dependent on the brilliant clothing of the musical ideas, we must on the other hand insist that this skilful use of external means is always accompanied by a keen artistic feeling for external harmony, with a delicate estimation of the proportionate effect of the separate parts in comparison to the whole. This artistic sense of proportion saves him from losing himself in that mere outward show which we sometimes find among the modern realistic school. [A. M.]

BRUMEL, Antoine, a Flemish musician, one of the most distinguished of Ockenheim's pupils. He flourished in the epoch (1480–1520) which may be distinguished as the period of Josquin des Prés. Nothing is known of his personal history, but his compositions have been handed down to us in sufficient number to prove the justice of his great reputation. There is a perfect copy of five of his masses, printed in one volume by Petrucci of Venice in 1503, preserved in the royal library at Berlin. There is also a collection of masses of various authors by the same printer, and containing one of Brumel's, in the British

Museum. There are besides many masses and motets in other editions of Petrucci's, and MSS. exist in the royal library at Munich as well as in the pontifical chapel. [J. R. S. B.]

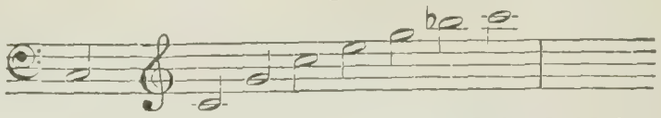
BRUNETTI, Gaetano, a violin-player and composer, was born at Pisa in 1753. He was a pupil first of his father, an able musician, and afterwards of the celebrated Nardini at Florence, whose style of playing and composing he adopted with considerable success. The greater part of his life he spent at Madrid, attached to the court of the Prince of Asturias, afterwards Charles IV. Here he came into close connection with Boccherini, then at the height of his fame as a performer and composer, and appears gradually to have superseded that artist in the favour of the court and the public. With the symphonies, serenades, and other instrumental works which he wrote for the King and the Duke of Alba he was eminently successful. They appear to be very much in the style of Boccherini; but on the whole inferior to the works of that master. Brunetti died at Madrid in 1808. His numerous compositions—published at Paris—consist of symphonies, serenades, sextets, quintets, and violin-duets. Over 200 works of his remain in MS. [P. D.]

BRUNI, Antoine-Barthelemy, a violinist and composer, born at Coni in Piedmont in 1759. He was a pupil of Pugnani, and lived from 1771 at Paris, first as orchestral player at the Italian Opera, and afterwards as conductor of the Opéra Comique. He wrote sixteen operas, some of which achieved considerable success, although now entirely forgotten.

For the violin he wrote four sets of sonatas, several concertos, ten quartets, and twenty-eight sets of violin duets, the latter well known to professors as useful pieces for teaching purposes, also a 'Méthode de Violon,' and a 'Méthode pour l'Alto-viola.' He died in 1823. [P. D.]

BRUNI, Signor, an Italian primo uomo who was singing at Florence in the winter of 1784. In 1793 he sang in London. He improved in voice and style, but was still weak, when compared with his predecessors. He distantly recalled Rubinelli. [J. M.]

BUGLE[1] (Eng. and Fr.; Germ. *Flügelhorn*, Ital. *Tromba*). A treble instrument of brass or copper, differing from the trumpet in having a shorter and more conical tube, with a less expanded bell. It is played with a cupped mouthpiece. In its original form the bugle is the signal horn for the infantry, as the trumpet is for the cavalry, and it is usually tuned in C, with an extra B♭ crook, or in E♭. Only five sounds are required for the various calls and signals. These are the intermediate open notes of the tube, from C below the treble stave to G above it. Eight sounds however can in all be obtained, by the addition of the B♭ and C above high G, and the octave of the lowest C, which though feeble and of poor tone is the real fundamental note. With these additions the entire compass is as follows:—



Two methods have been adopted for bridging over the gaps between the open notes of this instrument, viz. keys and valves. The key-bugle, called also the 'Kent bugle' and 'Regent's bugle,' which was extremely popular some forty years ago, has been entirely superseded by the valve system. No doubt the latter, as in the cornet and euphonium, preserves the whole length of tube for the higher notes, and thus gains power and fulness; but it is a question whether the keyed instrument does not produce more accurate intonation and a tenderer quality of tone. This however is a matter to which English bandmasters seem perfectly indifferent, although the Flügelhorn and the key-bugle are still to be heard with effect in the superb bands of Austria.

In the ordinary bugle valves are often added as an attachment, of which the bugle itself becomes the bell. [W. H. S.]

BÜLOW, Hans Guido von, born Jan. 8, 1830, at Dresden. The foremost pianist of that most advanced school of pianoforte playing, founded by Chopin and developed by Liszt. A first-rate conductor, and a musician whose technical attainments and complete knowledge of the art from its germs to its very latest development can be rivalled by few contemporaries and surpassed by none. As a pianist his repertoire comprehends the master works of all styles and schools, from the early Italians to the present day; it would in fact be difficult to mention a work of any importance by any composer for the pianoforte which he has not played in public, and by heart. His prodigious musical memory has enabled him also as a conductor to perform feats which have never before been attempted, and will in all likelihood not be imitated. The distinctive peculiarity of both his playing and conducting may be set down as a passionate intellectuality. One notices at every step that all details have been thought about and mastered down to the minutest particle; one feels that all effects have been analysed and calculated with the utmost subtlety, and yet the whole leaves an impression of warm spontaneity. This is the highest praise which can be awarded to an executant. It does not, perhaps, apply to all of Bülow's appearances in public, but it applies strictly to his performances at their best; and it is but bare justice to measure the achievements of a great artist as one measures a mountain chain, by the peaks rather than by the valleys. The analytical and reconstructive powers just emphasised render his editions of classical pianoforte works, such as those of Beethoven's sonatas, variations, and bagatelles, from op. 53 upwards, of Cramer's studies, of selections from Sebastian and Emanuel Bach, from Handel, Scarlatti, etc.—in which he has indicated the most refined phrasing and

[1] Mr. Tennyson has immortalised it by his Song in The Princess.

fingering, as well as the most minute nuances of tempo and expression, and has corrected presumable misprints and inaccuracies—unique and invaluable to the student.

In addition to these his admirable *partition de piano* of the most intricate score in existence, Wagner's 'Tristan und Isolde,' together with that of the overture to 'Die Meistersinger' and 'Eine Faust Ouverture,' as well as the arrangements of Weber's two concertos and the concertstück for pianoforte solo should be mentioned.

In early youth Von Bülow seems to have shown neither talent for music nor delight in it. Both gifts first made their appearance after a long illness, but then in a supreme degree. After his ninth year he was placed under Friedrich Wieck, the father of Clara Schumann, who laid the solid foundations for his future technical achievements. M. K. Eberwein was for two years subsequently his master in harmony and counterpoint. In 1848 he came to the university of Leipzig to commence the study of jurisprudence, his parents having always looked upon music as a mere pastime. At Leipzig he continued his studies in counterpoint under Hauptmann. In Oct. 1849 we find him a member of the university of Berlin, absorbed in the political movements of the time, and contributor to a democratic journal 'Die Abendpost.' In this paper he first began to announce and defend the musical doctrines of the new German school led by Liszt and Wagner. A performance of 'Lohengrin' at Weimar in 1850 under Liszt moved him so intensely that he threw over his career as a lawyer, went to Zürich and entrusted himself to the guidance of Wagner. In June 1851 he went to Weimar to study pianoforte playing under Liszt, and in 1853 made his first concert tour, playing at Vienna, Pesth, Dresden, Carlsruhe, Bremen, Hamburg, and Berlin. From 1855 to 1864 he occupied the post of principal master of pianoforte playing at the conservatorium of Professors Stern and A. B. Marx, at Berlin. Here we find him organising trio soirées, orchestral concerts, and pianoforte recitals, with programmes of the most varied character, though with a decided leaning towards the works of the new German school, writing articles for various political and musical papers, making journeys through Germany and the Netherlands, and Russia, and reaping laurels everywhere as player and conductor. In 1864 he was called to Munich as principal conductor at the royal opera and director of the Conservatorium. It was there that he succeeded in organising model performances of Wagner's 'Tristan und Isolde' and 'Die Meistersinger von Nürnberg.' In 1869 he left Munich, and has since been giving concerts in Italy, Germany, Russia, Poland, England, and America. Among his most important compositions the following have been published:—op. 20, 'Nirwana, Symphonisches Stimmungsbild'; op. 10, Music to Shakspeare's 'Julius Cæsar'; op. 16, Ballade for Orchestra, 'Des Sänger's Fluch'; op. 23, 'Vier Charakterstücke für Orchester, (1) Allegro risoluto, (2) Notturno, (3) Intermezzo guerriero, (4) Funerale.' Among his pianoforte pieces especial attention should be called to his recent op. 21, 'Il Carnovale di Milano.'

On Jan. 1, 1878, he was appointed Königlicher Hofkapellmeister at Hanover. [E.D.]

BUHL, Joseph David, born near Amboise 1781, trumpeter, son of a musician in the service of the Duc de Choiseul. He was successively a member of the band of the 'Garde Parisienne,' organised 1792, and of the Consuls' 'Grenadiers de la Garde.' He was also professor at the cavalry school of trumpeters at Versailles, from its foundation in 1805 to its abolition in 1811. In 1814 he was appointed by Louis XVIII conductor of the band of the Gardes du Corps, and received the Legion of Honour. In 1816 he became first trumpeter at the Opera, and at the Théatre Italien; but owing to an accident at the coronation of Charles X was compelled to relinquish both appointments in 1825. In 1823 Buhl introduced into France the slide-trumpet (à coulisse), invented by Haltenhoff of Hanau. He published a 'Method for Trumpet' (Paris, Janet), and was editor of the 'Ordonnance des Trompettes.' [M. C. C.]

BULL, John, Mus. Doc., was born in Somersetshire about 1563. He was educated in Queen Elizabeth's Chapel under William Blitheman, the celebrated organist. On Dec. 24, 1582 he was appointed organist of Hereford Cathedral and afterwards master of the children. In January 1585 he was admitted a member of the Chapel Royal, and in 1591 on the death of his master is said to have succeeded him as organist. But this is mere conjecture, as John Hewlett succeeded Blitheman in the place of a gentleman, and the office of organist as a separate appointment did not then exist. On July 9, 1586, he was admitted Mus. Bac. at Oxford, 'having practised in that faculty fourteen years,' and on July 7, 1592, was incorporated Mus. Doc. in the same University, having previously taken the degree at Cambridge. In 1596, upon the recommendation of Queen Elizabeth, Bull was the first appointed Music Professor in Gresham College, and, although unable to compose and read his lectures in Latin, according to the founder's original intention, such was his favour with the Queen and the public, that the executors of Sir Thomas Gresham, by the ordinances bearing date 1597, dispensed with his knowledge of the Latin language and ordered 'The solemn music lecture twice every week, in manner following, viz. the theoretique part for one half-hour, or thereabouts, and the practique, by concert of voice or instruments, for the rest of the hour, whereof the first lecture should be in the Latin tongue and the second in English; but because at this time Mr. Dr. Bull, who is recommended to the place by ths Queen's Most Excellent Majesty, being not able to speak Latin, his lectures are permitted to be altogether in English, so long as he shall continue in the place of music lecturer there.' In 1601 Bull went abroad for the recovery of his

health, and during his absence was permitted to substitute as his deputy, Thomas, son of William Byrd. He travelled incognito into France and Germany, and Antony à Wood tells a story of a feat performed by him at St. Omer's, where, to a composition originally in forty parts, he added forty more in a few hours. After the death of Elizabeth, Bull retained his post in the Chapel Royal, and his fame as an organist was widely spread. On Dec. 15, 1606, Bull was admitted into the freedom of the Merchant Taylors' Company by service, having been bound apprentice to Thomas, Earl of Sussex, who was free of the Company. On July 16, 1607, when James I and Prince Henry dined at Merchant Taylors' Hall, the royal guests were entertained with music, both vocal and instrumental. And while His Majesty was at table, according to Stowe, 'John Bull, Doctor of Musique, one of the organists of His Majesties Chappell-royall, and free of the Merchant-taylors, being in a citizen's gowne, cappe, and hood, played most excellent melodie upon a small payre of Organes, placed there for that purpose onley.' (*Chronicles*, edit. 1631, p. 891.) On Dec. 22, 1607, Bull obtained[1] from the Bishop of London a marriage licence for himself and 'Elizabeth Walter of the Strand, maiden, aged about 24, daughter of Walter, citizen of London, deceased, she attending upon the Rt. Hon the Lady Marchioness of Winchester.' They were to marry at 'Christ Church, London.' In the same month he resigned his professorship at Gresham College, which was tenable only so long as he remained unmarried. In 1611 he was in the service of Prince Henry, and his name stands first on the roll of the Prince's musicians, with a salary of £40 per annum. The old Cheque Book of the Chapel Royal records under date of 1613 that 'John Bull, Doctor of Musicke, went beyond the seas without license, and was admitted into the Archduke's service.' No valid reason can be assigned for his leaving the country, but it seems he had been preparing for the step some months previously. In the British Museum (Add. MSS. No. 6194), is preserved a letter from Dr. Bull to Sir M. Hicks, wishing his son's name to be inserted instead of his own in some patent dated April 26, 1612; and the same MS. contains an extract from Mr. Trumbull's letter to James I concerning the Archduke's receiving Dr. Bull, the king's organist, into his chapel without permission, dated May 30, 1614. The subsequent life of Dr. Bull has been hitherto simply conjecture, but the writer is fortunately enabled to clear up the latter part of it from a letter written by the Chevalier Leon de Burbure some few years back, in answer to certain inquiries. The Chevalier says, 'I do not know that the Cathedral of Antwerp ever possessed any MSS. of Dr. John Bull, but at all events there have remained no traces for a long time. The only facts relative to John Bull that I have discovered are, that he became organist of Notre Dame at Antwerp in 1617, in the place of Rumold Waelrent deceased; that in 1620 he lived in the house adjoining the church, on the side of the Place Verte, in which the concierge of the cathedral had lived; that he died on March 12 or 13, 1628, and was buried on the 15th of the same month in the cathedral where he had been organist.' Specimens of Bull's compositions for voices may be found in Barnard's and Boyce's collections and in Sir William Leighton's 'Teares or Lamentations of a Sorrowfull Soule,' 1614, fol. He joined Byrd and Gibbons in contributing to the Parthenia, a collection of pieces for the virginals, printed early in the 17th century, and a large number of his instrumental movements are extant in the volume in the Fitzwilliam Museum known as Queen Elizabeth's Virginal Book, and in other MSS. See a curious list in Ward's Lives of the Gresham Professors, pp. 203–8. To Bull has been attributed the composition of the popular tune, 'God save the King,' but the claim made on his behalf has met with but partial acceptance. [See GOD SAVE THE KING.] A portrait of Bull is preserved in the Music School at Oxford. It is painted on a board and represents him in the habit of a bachelor of music. On the left side of the head are the words, 'An. Ætatis svæ 26, 1589,' and on the right side an hour-glass, upon which is placed a human skull, with a bone across the mouth. Round the four sides of the frame is written the following homely distich:—

'The bull by force in field doth raigne:
But Bull by skill good will doth gayne.'

[E. F. R.]

BUNN, ALFRED, manager and dramatic author, was for a quarter of a century director, and during the greater part of that time lessee, of Drury Lane Theatre. Elliston gave him his first appointment as stage-manager of Drury Lane in 1823, when he was quite a young man; and he first obtained a certain celebrity as a manager by endeavouring some dozen years afterwards to establish an English Opera. 'The Maid of Artois,' and a few years later 'The Bohemian Girl,' 'The Daughter of St. Mark,' and other operas by Balfe, were produced at Drury Lane under Mr. Bunn's management; and for the first of these works Mme. Malibran was engaged at the then unprecedented rate of £125 a night. Mr. Bunn also brought out Mr. (now Sir Julius) Benedict's 'Brides of Venice' and Vincent Wallace's 'Maritana.' For most of these operas Mr. Bunn himself furnished the libretto, which however was in every case of French origin. He was the author or adapter of a good many dramas and farces, including 'The Minister and the Mercer,' a translation of Scribe's 'Bertrand et Raton,' which, on its first production, obtained remarkable success. Long before his career as manager had come to an end he published a volume of memoirs, under the title of 'The Stage.' [H. S. E.]

BUNTING, EDWARD, son of an English engineer and an Irish lady, born at Armagh in February 1773. He was educated as an organ and pianoforte player, and distinguished himself for his love of Irish music, of which he published three collections. The first, containing Irish airs 'never before published,' came out in 1796. A

[1] This fact has never before been noticed. I am indebted for it to Colonel J. L. Chester. [G.]

second, containing 75 additional airs (words by Campbell and others), and a dissertation on the Irish Harp, appeared in 1809. A third collection, containing upwards of 150 airs, of which more than 120 were then for the first time given to the public, was published in 1840. This last collection is remarkable for a dissertation of 100 pages upon the history and practice of music in Ireland. According to this dissertation 'the occasion which first confirmed him in his partiality for the airs of his native country, was the great meeting of the Harpers at Belfast in 1792. Before this time there had been several similar meetings at Granard, in the county of Longford, which had excited a surprising degree of interest in Irish music throughout that part of the country. The meeting at Belfast was however better attended than any that had yet taken place, and its effects were more permanent, for it kindled an enthusiasm throughout the north which burns bright in some warm and honest hearts to this day. All the best of the old class of Harpers—a race of men then nearly extinct, and now gone for ever—Dennis Hempson, Arthur O'Neill, Charles Fanning, and seven others, the least able of whom has not left his like behind, were present.' Aided by O'Neill and the other harpers, Bunting immediately began to form his first collection. He travelled into Derry, Tyrone, and Connaught, where, especially in the last, he obtained a great number of excellent airs. His first and second collections contain the best Irish airs, although in his third there are several very good ones, and some very curious. Among these last are the '*carinans* or dirges, and airs to which Ossianic and other old poems are sung,' and which the editor gives as 'very ancient'—many hundred years old. He afterwards endeavours to analyse the structure of Irish airs, and to point out their characteristics.

Bunting died at Belfast Dec. 21, 1843, and was interred at Mount Jerome. His death was absolutely unnoticed. 'He was of no party, and therefore honoured of none, and yet this unhonoured man was the preserver of his country's music.' (*Dub. Univ. Mag.*, Jan. 1847; *Private Sources.*) [E. F. R.]

BURDEN OR BURTHEN. Old songs and ballads frequently had a chorus or motto to each verse, which in the language of the time was called a Burden or Bob. One of the most ancient and most popular was 'Hey troly loly lo,' quoted in 'Piers Plowman,' 1362, and other early songs. It occurs after every line of a song of the time of Edward IV (Sloane MS. No. 1584); and in Isaac Walton's 'Compleat Angler' is the burden of 'O the sweet contentment the countryman doth find,'

'Heigh trollollie loe,
Heigh trollollie lee.'

The ancient 'Frogge Song' has the ridiculous burden—

'Farthing linkum laddium,
Fann—ho—fannyho,
Farthing glen.'

In the ballad of 'Sir Eglamore,' which was very popular in the 17th century, the burden is 'Fa la, lanky down dilly.' In Shakespeare's 'Tempest' we find—

'Foote it featly heere and there,
And sweet Sprites the burthen beare.'

The stage direction to which is 'Burthen dispersedly'; and the burthen follows—

'Harke, harke, bowgh-wough;
The watch-dogges barke
Bowgh-wough.'

The second song in the same play has 'Ding-dong' for the burden. In 'As You Like It' Celia says 'I would sing my song without a burthen, thou bring'st me out of tune.'

The ballad 'The Jolly Miller' has been a favourite from the 16th or 17th century, and was sent to Beethoven to harmonise on account of 'its merited popularity' by Thomson, who inserted it in his 'Scotch Songs,' 1824. In it we find the lines—

'This the burden of his song
For ever us'd to be,
I care for nobody, no, not I,
If nobody cares for me.'

It is probable that the burdens were accompanied by motion or dancing. [BALLAD.] In 'Much Ado about Nothing' Margaret says 'Claps into Light-a-love (that goes without a burden). Do you sing it and I'll dance it.' Burden also means the drone or bass of a bagpipe. [FAUX-BOURDON.] [W.H.C.]

BURGMÜLLER, NORBERT, composer; born at Düsseldorf, Feb. 8, 1810; son of the then music-Director there, who died in 1824 well known and honoured as one of the founders and conductors of the Lower Rhine festivals. Norbert very early showed extraordinary musical talent. After leaving his father he studied at Cassel under Spohr and Hauptmann. But a sickly constitution prevented his full development, and he died at Aix-la-Chapelle in 1836. He left much music behind him, of which two symphonies, an overture, and some other pieces were published by Kistner, all, notwithstanding their natural immaturity, manifesting great ability, lively imagination full of ideas, freshness of invention, and a strong feeling for classical 'form.' There is every reason to believe that, if his life had been spared, concentration and strength would have come with years, and that Burgmüller would have reached a high place in his art. Schumann valued him greatly: he begins a memorial notice of him by saying that since the early death of Schubert nothing more deplorable had happened than that of Burgmüller (Ges. Schriften, iii. 145). [A. M.]

BURLA, OR BURLESCA, a musical joke or playful composition; J. S. Bach's Partita 3, engraved with his own hand on copper, and published in 1727, contains a Burlesca as the fifth piece. Schumann has a Burla in op. 124. No. 12. [W. H. C.]

BURLETTA, a droll or facetious musical drama or farce, which derives its name from the

Italian verb *burlare*, 'to jest,' or 'to ridicule.' The burletta found its way from Italy through France to England. The most celebrated example produced in England was the BEGGAR'S OPERA in 1727, written by Gay, and adapted to the popular melodies of the day. In 1737 appeared 'The Dragon of Wantley,' by Henry Carey and Lampe, which succeeded so well that it was followed in 1738 by a second part or sequel, entitled 'Margery.' [W. H. C.]

BURNEY, CHARLES, Mus. Doc., was born at Shrewsbury April 7, 1726, and educated at the free school there. He was subsequently removed to the public school at Chester, where he commenced his musical studies under Mr. Baker, the organist of the Cathedral. When about fifteen years of age he returned to his native town, and for three years pursued the study of music, as a future profession, under his elder brother James Burney, organist of St. Mary's, Shrewsbury. He was next sent to London, and for three years studied under Dr. Arne. In 1749 he was elected organist of St. Dionis-Backchurch, Fenchurch-street, and in the winter of the same year engaged to take the harpsichord in the subscription concerts then recently established at the King's Arms in Cornhill. In the following year he composed the music of three dramas—Mallet's Alfred, Mendez's Robin Hood, and Queen Mab—for Drury-lane. Being threatened with consumption, however, he could not continue these exertions, and, in 1751, accepted the situation of organist of Lynn-Regis, Norfolk, where he remained for the succeeding nine years. In this retreat he formed the design, and laid the foundation of his future History of Music. In 1760, his health being completely restored, he returned to London, and again entered upon the duties of his profession.

Soon after his arrival in London, Burney published several concertos for the harpsichord which were much admired; and in 1766 he brought out at Drury-lane, with considerable success, both words and music of a piece entitled 'The Cunning Man,' founded upon, and adapted to the music of J. J. Rousseau's 'Devin du Village.' On June 23, 1769, the University of Oxford conferred upon him the degrees of Bachelor and Doctor of Music, on which occasion his exercise consisted of an anthem of considerable length, with overture, solos, recitatives and choruses, which continued long to be a favourite at the Oxford Music Meetings, and was several times performed in Germany under the direction of Emanuel Bach. In the meantime, neither the assiduous pursuit of his profession, nor his many other engagements had interrupted his collections for his History of Music. He had exhausted all the information that books could afford him, and was far from what he desired. The present state of music could only be ascertained by personal investigation and converse with the most celebrated musicians of foreign countries, as well as his own. He resolved to make the tour of Italy, France and Germany, and furnished with powerful letters of introduction from the Earl of Sandwich (a nobleman devoted to music) quitted London in June 1770. He spent several days in Paris, and then went by Lyons and Geneva (where he had an accidental interview with Voltaire), to Turin, Milan, Padua, Venice, Bologna, Florence, Rome, and Naples, consulting everywhere the libraries and the learned; hearing the best music, sacred and secular, and receiving the most cheerful and liberal assistance towards the accomplishment of his object. On his return to England, Dr. Burney published an account of his tour, in one volume, which was exceedingly well received, and deemed so good a model that Dr. Johnson professedly imitated it in his own Tour to the Hebrides, saying, 'I had that clever dog Burney's Musical Tour in my eye.' In July 1772, Dr. Burney again embarked for the continent to make the tour of Germany and the Netherlands, of which he published an account in two volumes. At Vienna he had the good fortune to make the intimate acquaintance of the celebrated poet Metastasio. Here he also found two of the greatest musicians of that age, Hasse and Gluck. From Vienna he proceeded through Prague, Dresden and Berlin, to Hamburg, and thence by Holland, to England, where he immediately devoted himself to arranging the mass of materials thus collected.

In 1773 Dr. Burney was elected an F. R. S.; and in 1776 the first volume of his General History of Music appeared in 4to. In the same year the complete work of Sir John Hawkins was published. Burney's subsequent volumes were published at unequal intervals, the fourth and last appearing in 1789. Between the two rival histories, the public decision was loud and immediate in favour of Dr. Burney. Time has modified this opinion, and brought the merits of each work to their fair and proper level—adjudging to Burney the palm of style, arrangement, and amusing narrative, and to Hawkins the credit of minuter accuracy and deeper research, more particularly in parts interesting to the antiquary and the literary world in general. Burney's first volume treats of the music and poetry of the ancient Greeks, the music of the Hebrews, Egyptians, etc. The second and third volumes comprise all that was then known of the biographies of the great musicians of the 15th, 16th, and 17th centuries. The fourth volume is perhaps less entitled to praise. Whole pages are given to long-forgotten and worthless Italian operas, whilst the great works of Handel and J. S. Bach remain unchronicled; the latter indeed is almost ignored.

When the extraordinary musical precocity of the infant Crotch first excited the attention of the musical profession and the scientific world, Burney drew up an account of the infant phenomenon, which was read at a meeting of the Royal Society in 1779, and published in the Philosophical Transactions. The commemoration of Handel in 1784 again called forth his literary talents; his account of these performances, published in 4to for the benefit of the musical fund, is well

known to every musical reader. Dr. Burney also wrote 'An Essay towards the History of Comets,' 1769; 'A Plan for a Music School,' 1774; and the 'Life and Letters of Metastasio,' 3 vols. 8vo, 1796. His last labour was on Rees' Cyclopedia, for which work he furnished all the musical articles, except those of a philosophical and mathematical kind. His remuneration for this was £1000, and as most of the matter was extracted without alteration from his History, the price was large.

During a long life Dr. Burney enjoyed the intimate acquaintance of almost every contemporary who was distinguished either in literature or the arts; with Johnson he was in habits of friendship; and it is known that soon after Johnson's death, he had serious thoughts of becoming his biographer. For many years Dr. Burney lived in St. Martin's Street, Leicester Square, in a house once the residence of Newton, and still standing; but about 1789, on being appointed organist of Chelsea College, he removed to a suite of apartments in that building, where he spent the last twenty-five years of his life in the enjoyment of independence, and of a family, each individual of which (thanks to their parents' early care and example) had attained high distinction in some walk of literature or science. 'In all the relations of private life,' says one of his biographers, 'his character was exemplary, and his happiness such as that character deserved and honoured. His manners were peculiarly easy, spirited and gentlemanlike; he possessed all the suavity of the Chesterfield school without its stiffness—all its graces, unalloyed by its laxity of moral principle.' At length, full of years, and rich in all that should accompany old age, he breathed his last on April 12, 1814, at Chelsea College. His remains were deposited, on the 20th of the same month, in the burial-ground of that institution, attended by his own family (of which he lived to see the fourth generation), the chief officers of the college, and many others of rank and talent.

His intelligent and expressive face has been preserved by Reynolds, in a fine portrait, engraved by Bartolozzi, and Barry has introduced him in his large picture at the Society of Arts.

As a composer Dr. Burney's principal works, in addition to those already mentioned, are 'Sonatas for two Violins and a Base,' two sets; 'Six Cornet Pieces with Introduction and Fugue for the Organ'; 'Twelve Canzonetti a due voci in canone, poesie dell' abate Metastasio'; 'Six Duets for German Flutes'; 'Six Concertos for Violin, etc. in eight parts'; 'Two Sonatas for Pianoforte, Violin and Violoncello'; and 'Six Harpsichord Lessons.' [E. F. R.]

BURROWES, John Freckleton, born in London, April 23, 1787, was a pupil of William Horsley. He first made himself known as a composer by an overture and several vocal pieces with orchestral accompaniments, and afterwards by an overture produced at the concerts of the Philharmonic Society, of which he was one of the original members. He soon however abandoned these pursuits for the less distinguished but more profitable one of composing and arranging for the pianoforte. Burrowes was the author of 'The Thorough Bass Primer' and 'The Pianoforte Primer,' both which have passed through many editions, and are still in request. He was also the composer of some ballads and many pianoforte pieces. For nearly forty years he held the situation of organist of St. James's Church, Piccadilly. He died March 31, 1852. [W. H. H.]

BURTON, Avery, a cathedral musician in the time of Henry VIII, some of whose compositions are still preserved in the Music School at Oxford. [W. H. H.]

BURTON, John, a native of Yorkshire, born 1730, was a pupil of John Keeble, the theorist. He became one of the first harpsichord players of his time, particularly as respects expression. He died in 1785. [W. H. H.]

BUSBY, Thomas, Mus. Doc., born in Westminster, 1755. At the age of fourteen he was articled to Battishill; he also studied languages, became a good classical scholar, and for several years was connected with the press as reporter. He was successively organist at St. Mary's, Newington, and St. Mary Woolnoth, Lombard Street. In 1799 he produced an oratorio called 'The Prophecy,' which met with considerable success. Encouraged by this he wrote an 'Ode to British Genius'; an 'Ode to St. Cecilia's Day' (by Pope); 'Comala' (from Ossian); and the oratorio of 'Britannia.' In 1801 he took his degree as Mus. Doc. at Cambridge, having previously enjoyed that of LL.D. He next composed the music to 'Joanna,' a five-act romance by Cumberland, and subsequently gained fame by his music to 'A Tale of Mystery,' and 'Rugantino, or the Bravo of Venice'—the first melodramatic music heard in this country. He died in April, 1838. Busby was a man of great industry, and, besides the works enumerated, wrote and published the following:—'The Day of Genius,' a satire, 1786; 'A Dictionary of Music,' 1786—a work which went through many editions, and is still in print; 'The Divine Harmonist,' 1788; 'Melodia Britannica,' 1790; 'The Monthly Musical Journal' (4 numbers), 1801; 'Lucretius,' translated from the Latin, 2 vols. 4to., 1813; 'A Grammar of Music,' 1818; 'A History of Music' (compiled from Burney and Hawkins), 2 vols. 8vo., 1819; 'Concert-Room and Orchestra Anecdotes,' 3 vols. 12mo., 1825; 'A Musical Manual, or Technical Directory,' 1828. (*Dict. of Living Authors*, 1816; Busby, *Hist. of Music*; Private Sources.) [E. F. R.]

BUSNOIS, a Belgian musician in the latter part of the 15th century, who with Ockenheim and a few others represent the Netherland school immediately preceding Josquin des Prés. The date and place of his birth are unknown, but he was without doubt educated and passed the greater part of his life in Belgium. In 1476 he was appointed one of the chapel singers of

Charles the Bold, Duke of Burgundy, and continued in that position till the death of that prince (Jan. 5, 1477), when he retired to a country life till his death about 1480.

Kiesewetter, in his 'Essay on the Music of the Netherlands,' has printed three four-part chansons from the 'Canti Cento Cinquanta' (Petrucci, Venice, 1503), which show a decided progress on the music of Dufay's period (1380–1450). Some masses of Busnois' are preserved in the library of the pontifical chapel, and other compositions, chiefly for the church, in a MS. in the royal library at Brussels. Many of his chansons are in a MS. brought to light of late years in the library at Dijon. [J. R. S. B.]

BUTLER, Thomas Hamly, son of John Butler, professor of music, was born in London in 1762. He received his early musical education as a chorister of the Chapel Royal under Dr. Nares. On the breaking of his voice he was sent to Italy to study composition under Piccini, where he remained three years. On his return to England he was engaged by Sheridan to compose for Drury Lane Theatre. Differences however arising, he quitted England at the expiration of his engagement and settled in Edinburgh, where he established himself as a teacher, and where he died in 1823. Butler composed the music for 'The Widow of Delphi,' a musical comedy by Richard Cumberland, 1780, besides many pieees for the pianoforte. [W. H. H.]

BUXTEHUDE, Dietrich, a celebrated organist and composer, born 1637 at Helsingör, Denmark, where his father Johann was organist of the Olai-church. The father died Jan. 22, 1674, in his 72nd year. It is not known whether the son received his thorough musical education from his father or not. In April 1668 he obtained the post of organist at the Marien-Kirche of Lübeck—one of the best and most lucrative in Germany—where his admirable playing and promising abilities excited much attention. Here his energy and skill at once found their proper field. Not content with discharging his duties at the organ, he conceived the idea of instituting great musical performances in connection with the church services, and in 1673 started the 'Abendmusiken,' or evening performances, on which Lübeck peculiarly prided itself. They took place annually, on the five Sundays before Christmas, beginning between four and five o'clock, after the afternoon service, and consisted of concerted pieces of sacred music for orchestra and chorus—the former improved and the latter formed by Buxtehude—and organ performances. In such efforts Buxtehude was well seconded by his fellow citizens. The musical evenings continued throughout the 18th century, and even into the 19th. Further particulars by them are given by Spitta in his 'Life of J. S. Bach' (i. 253, from Möller's 'Cimbria Litterata,' and Conrad von Höveln's 'Beglücktem und geschmücktem Lübeck'); Matheson also mentions them in his 'Volkommene Kapellmeister.' The best testimony to Buxtehude's greatness is contained in the fact of Sebastian Bach having made a journey of fifty miles on foot that he might become personally acquainted with the Lübeck concerts. In fact Buxtehude became the great musical centre for the North of Europe, and the young musicians flocked around him. Amongst these was Nicolas Bruhns, who excelled Buxtehude himself both in composition and in organ-playing.

Buxtehude ended his active and deservedly famous life May 9, 1707. His strength lay in his free organ compositions (i. e. pieces not founded on chorals), and generally in instrumental music, pure and simple, and not based on a poetical idea. These, though now antiquated, are remarkable as the earliest assertion of the principle of pure instrumental music, which was afterwards so fully developed by Bach. In treatment of chorales on the organ Buxtehude was not equal to the school of Pachelbel; but to judge him from one side only would be unfair. A list of his published works, corrected from Gerber, is given by Spitta ('J. S. Bach,' i. 258, note). These include the 'Abendmusiken' from 1678–87, and occasional pieces, many of them published at Lübeck during his lifetime.

Earlier instrumental compositions Spitta was not able to discover; Matheson also complained that of Buxtehude's clavier pieces, in which his principal strength lay, few if any existed. A collection of seven 'Claviersuiten' mentioned by Matheson (Volk. Kapellmeister, 130), 'in which the nature and character of the planets are agreeably expressed,' exists probably only in MS. In later times fourteen 'Choral-Bearbeitungen' were edited by Dehn (Peters). Commer ('Musica Sacra,' i. No. 8), G. W. Körner, Busby (Hist. of Music), and A. G. Ritter ('Kunst des Orgelspiels'), have also published separate pieces of his. [C. F. P.]

BYRD, William (or as his name is sometimes spelt, Byrde or Bird), is supposed to have been a son of Thomas Byrd, a gentleman of Edward the Sixth's Chapel. The precise date of his birth is unknown, but the fact of his having been senior chorister of St. Paul's Cathedral in 1554, would fix it at about 1538 (see a petition for the restoration of certain obits and benefactions which had been seized under the Act for the Suppression of Colleges and Hospitals, in Dugdale's *St. Paul's*, ed. Ellis). Wood tells us that he studied music under Thomas Tallis. In 1563 (according to the same authority) he was appointed Organist of Lincoln, which post he held till 1569. Upon the death of Robert Parsons, in that year, he succeeded him as Gentleman of the Chapel Royal. In 1575 he is styled 'Organist' (*Cantiones Sacrae*), but as no provision for that office then existed in the chapel, the title was only complimentary. Byrd is thought to have derived considerable pecuniary advantages from a patent granted to him and his master, Tallis, for the exclusive privilege of printing music and vending music paper (Ames, *Typ. Antiq.* 536).

Byrd's printed works (under this patent) are as follows:—(1) Cantiones quae ab argumento

sacrae vocantur, quinque et sex partium (jointly with Tallis), 1575; (2) Psalmes, Sonets and Songs of Sadnes and Pietie, made into musicke of five parts [1587]; (3) Songs of Sundrie Natures, some of Gravitie and others of Myrth (for 3, 4, 5 and 6 voices), 1589; (4) Liber Primus Sacrarum Cantionum quinque vocum, 1589; (5) Liber Secundus Sacrarum Cantionum, etc. 1591; (6) Gradualia, ac Cantiones Sacrae Lib. Primus (for 3, 4 and 5 voices), 1607; (7) Gradualia, etc. Lib. Secundus, 1610; (8) Psalmes, Songs and Sonnets (for 3, 4, 5 and 6 voices or instruments) 1611. In addition to these works, Byrd printed three masses (probably composed between the years 1553 and 1558), without date or the name of printer. He also contributed to the following works:—(1) Musica Transalpina, Madrigales translated, of foure, five and six parts,' 1588; (2) Watson's First Sett of Italian Madrigalls Englished, 1590; (3) Parthenia, or the Maiden-head of the first Musick that ever was printed for the Virginalls [1600]; (4) Leighton's Teares or Lamentacions of a Sorrowful Soule (a collection of part-songs, by the principal composers of the day), 1614. A large number of his virginal compositions are contained in the so-called 'Virginal Book of Queen Elizabeth,' in the Fitzwilliam Museum, Cambridge, and in Lady Nevill's 'Virginal Book,' in the possession of the Earl of Abergavenny. Besides the services and anthems printed in Barnard's 'Selected Church Musick,' 1641, and Boyce's 'Cathedral Music,' many others are to be found in MS. in the Aldrich, the Hawkins, and the Tudway Collections. A mass in D minor, edited by the writer, and Book I. of Cantiones Sacrae, edited by the late W. Horsley, were published by the Musical Antiquarian Society. The well-known canon, 'Non nobis Domine,' is traditionally said to be the composition of Byrd, but it is not found in any of his works. A poem in Blow's 'Amphion Anglicus,' 1700, speaks of 'Bird's Anthem in golden notes,' preserved in the Vatican, which may have some reference to the canon in question.

Byrd lived on terms of intimacy with the elder Ferrabosco, and more than once was his rival in trials of skill and ingenuity in Counterpoint. Morley (*Introd.* 1597), speaks of one of these 'virtuous contentions'; and Peacham, in his 'Compleat Gentleman' (ed. 1622, p. 100), says, 'for motets and musicke of pietie and devotion, as well for the honour of our nation as the merit of the man, I preferre above all other our *Phoenix*, Mr. William Byrd, whom in that kind, I know not whether any may equal.' In a letter from the Earl of Worcester to the Earl of Shrewsbury, September 19, 1602 (preserved among the Talbot Papers in the Heralds' College), we have an interesting passage respecting one of Byrd's part-songs. The writer says: 'We are frolic here in Court; much dancing in the Privy Chamber of country dances before the Queen's Majesty, who is exceedingly pleased therewith. Irish tunes are at this time most pleasing, but in winter, Lullaby, an old song of Mr. Bird's, will be more in request as I think.' The 'Lullaby Song' is printed in the author's 'Psalmes, Sonets and Songs of Sadnes and Pietie,' 1588.

From the Cheque Book of the Chapel Royal we learn that Byrd died July 4, 1623; and in the record of the event he is styled 'A Father of Musicke,' probably in allusion to his age and his length of service. If he was sixteen when his name appears as senior chorister of St. Paul's, he must have been eighty-five years old when he died. Thomas Tomkins (who was his scholar), in his 'Songs of 3, 4, 5 and 6 Parts,' 1622, speaks of his '*ancient* and much reverenced master.'

Byrd resided, at the end of the 16th century, in the parish of St. Helen, Bishopsgate. He was married, and had a family, as we learn from the registers of that church. One son, Thomas, was educated to the profession, for in 1601 he acted as substitute for Dr. John Bull as Gresham Professor.

Notwithstanding his conformity to the established religion, Byrd is supposed to have been at heart a Romanist. Some very curious particulars bearing upon this point have lately come to light. In a list of places frequented by certain recusants in and about London, under date 1581, is the following entry: 'Wyll'm Byred of the Chappele, at his house in p'rshe of Harlington, in com. Midds.' In another entry he is set down as a friend and abettor of those beyond the sea, and is said to be residing 'with Mr. Lister, over against St. Dunstan's, or at the Lord Padgette's house at Draighton.' In the 'Proceedings in the Archdeaconry of Essex,' May 11, 1605, 'William Birde, Gentleman of the King's Majestie's Chapell,' is 'presented' for 'popish practices,' but what was his sentence does not appear, as he was hiding at the time.

There is a portrait of William Byrd—an oval, in the same print with Tallis. It was engraved by Vandergucht for N. Haym's 'History of Music,' which never appeared. One impression only is known to exist. (*Life of Byrd*, Mus. Ant. Soc.; *Cheque-Book of Chapel Royal*, Camd. Soc.; Rimbault, *Bibl. Madrigaliana.*) [E. F. R.]

BABELL, William, the son of a bassoon-player, was born about 1690, and instructed in the elements of music by his father, and in composition by Dr. Pepusch. He was celebrated for his proficiency on the harpsichord, and was also a good performer on the violin. He was a member of the royal band, and for some years organist of All Hallows, Bread Street. Taking advantage of the rise and popularity of the opera in England, he was the first to arrange the favourite airs as lessons for the harpsichord. In this he was highly successful, and his arrangements of 'Pyrrhus and Demetrius,' 'Hydaspes,' 'Rinaldo,' etc., were standard works of their

class at the beginning of the last century. Babell's fame reached even to Germany, where some of his works were printed. He was the author of several 'Suits of the most celebrated Lessons, collected and fitted to the Harpsichord or Spinnet'; 'Twelve Solos for a Violin or Hautboy'; 'Twelve Solos for the German Flute or Hautboy'; 'Six Concertos for small Flutes and Violins,' and other works mentioned in old catalogues. He died at Canonbury Sept. 23, 1723, and was buried in the church of which he had been organist. (Hawkins, *Hist.*; *Private Sources.*) [E. F. R.]

BACON, Richard Mackenzie, born at Norwich, May 1, 1776, was a musical critic of great acumen, and wrote at a time when sensible musical criticism was an uncommon thing. His father was proprietor of the 'Norwich Mercury,' which he inherited from him, and bequeathed to his son. Richard began to write for this journal at seventeen, and its editorship was the standard occupation of his whole life. He is known to musical men as the projector, editor, and chief writer of the 'Quarterly Musical Magazine and Review,' which was the first journal devoted to music in England. The first number was issued in January, 1818, and it was for some time continued, as its name implies, quarterly, but the late numbers came out irregularly, the last (completing the 10th volume) appearing in 1826. He contributed musical notes to 'Colburn's Magazine,' and other periodicals. He issued proposals for an extensive musical dictionary, for which he is said to have collected the materials, but it was never printed. In 1828 he published 'The Elements of Vocal Science,' a work of considerable merit, the materials of which had previously appeared in the 'Musical Magazine.' He claims the merit of originating the Norwich Triennial Musical Festival, the first celebration of which was held in 1824. He was the author of a 'Life of Pitt,' a 'Life of the Earl of Suffolk,' and of numerous political pamphlets. He died at Norwich, Nov. 2, 1844. (*Imp. Dict. of Biog.*; *Private Sources.*) [E. F. R.]

BAINI, Giuseppe, commonly known as the Abbé Baini, was born at Rome Oct. 21, 1775. He was the nephew of Lorenzo Baini, a Venetian composer who had become Maestro di Capella at the Church of the Gesù. Giuseppe received his first musical instruction at the competent hands of his uncle, and completed his studies under the well-known Jannaconi, with whom he came to be on terms of very close friendship. Shrewd, enthusiastic, studious and devout, by the time of his entry into Holy Orders he was at once an erudite theologian, an expert musician, and an accomplished literary man. His powers of assimilation and criticism were equal to his capacity for learning; and his love for antiquity and the antique forms of art was as absorbing as his taste was keen and his judgment true. Further, nature had endowed him with a beautiful bass voice which he had carefully cultivated. With such qualifications his reception into the Pontifical choir was easy, and once a member of it, his succession to the Mastership was a certainty. As composer and Maestro di Capella he was alike an exponent and a representative of the old Roman school of the 16th century. He was indeed a cinque-cento priest of the higher order born out of due time. For him the sun of music had begun to set at the close of the one period which he loved and understood. None of his musical compositions have been published, but one of them at least is famous. His 'Miserere,' composed for the Holy Week by order of Pope Pius VII, is the only one out of the hundreds that have been produced in Rome which has taken its place permanently in the services of the Pontifical Chapel side by side with the two celebrated compositions of Allegri and Baj. His first contribution to the literature of music was a pamphlet evoked by the ignorance of the directors of the Accademia Napoleone in Lucca, who in the year 1806 bestowed their annual prize upon a motet for four choirs written by Marco Santucci, as though it were a production of a new order. Baini exposed their mistake, and cited a long list of similar pieces by Antonelli, Agostini, Benevoli, Abbatini, Beretta, and a host of other composers, dating from the 16th century downwards, and including one by his own master and friend Jannaconi. His second literary work was an essay on the identity of Musical and Poetic rhythm. It was written in obedience to a request of the Comte de St. Leu, brother to the Emperor Napoleon, and it takes the form of answers to no less than sixteen questions proposed to him by the illustrious amateur. The subject was one well calculated to display the solid learning and delicate analysis of Baini, but it may be doubted whether it is not to be honoured among those efforts in which abstruseness and mysticism are unalloyed by any trace of practical result. But the masterpiece of Baini, to which and for which he was alike led by temperament and fitted by power, is his great monograph on Palestrina ('Memorie Storico-critiche,' etc., Rome 1828, 2 vols. 4to.). A more complete and satisfactory piece of work it would be difficult to conceive. It is something more and something less than a biography. For the details of the life of Palestrina are somewhat scanty, although the account of his works is absolutely exhaustive. Still, the portrait of the man, the loveable husband, father, and friend, the conscientious worker, the devoted man of genius, the pure liver, and faithful Catholic, is full and finished. Moreover any lack of view into his family interior is more than compensated by the glimpses we get of cinque-cento life and society in Rome. To snatch these from the materials to which he had access, and to reproduce without intruding them, was a task absolutely congenial to the nature and genius of Baini, and he has performed it to perfection. But the book is as valuable to the musical historian as it is to the general reader. A hundred subsidiary notices of the composers of the Italian school from the days of Goudimel to the middle of the 17th century are sown like satellites around the central figure; and it is hardly too much to

say that in it we have a sketch of the rise and progress of Italian music from the deposition of the Flemings and the establishment of a national school to the close of the ecclesiastical era and the rise of opera.

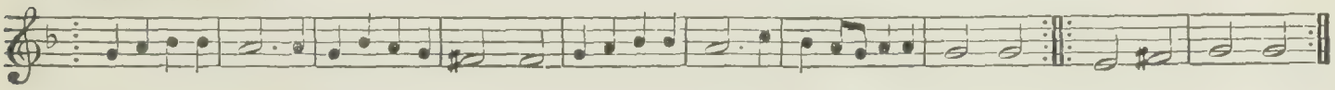
Baini thought to publish a complete edition of the works of the great master, whom, with a constantly recurring enthusiasm, he calls 'Il Principe della Musica.' But fate ordained that he should only live to reproduce the man; and he died before he had transcribed and published more than two volumes out of the vast mass of his compositions.

He was as devoted to his profession as he was to his art; and his death, which took place on May 21, 1844, in the 69th year of his age, was attributed to over fatigue arising from persistence in his duties as a confessing priest. [E. H. P.]

BATHE, WILLIAM, a learned Irishman, was born in Dublin in 1552. He entered into the order of the Jesuits, and leaving Ireland travelled extensively on the continent of Europe, and finally settled in Salamanca, being appointed professor of languages in the university of that city. He published there a philological work called 'Janua Linguarum.' Leaving Salamanca he came to London, where he published some religious treatises, and also 'A Brief Introduction to the true arte of Musicke,' 1584. On the title-page he styles himself 'Student at Oxenford.' It is dedicated to his uncle, Gerald Fitzgerald, Earl of Kildare. A second edition, under the title of 'A Briefe Introduction to the Skill of Song,' was printed by Thomas Este without date. (Hawkins, *Hist.*; *Biog. Brit.*; *Imp. Dict. of Biog.*). [E. F. R.]

BRANLE (p. 271). The music of many Branles, and other old dances, is given in Arbeau's 'Orchésographie' (Langres 1588), a copy of which is in the British Museum. We quote two:—

1. *Branle de la torche*



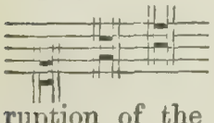
2. *Branle des Sabots*

C.

C. The keynote of the 'natural' scale, so called because it requires neither flats nor sharps in its signature. In German also it is C, C♯ being called Cis; but in Italian and French it is called Ut and Do, the former from the name given it by Guido d'Arezzo. [SCALE.]

It is the Ionic scale of the Church tones or modes, and in it were written 'Ein' feste Burg,' 'Gott der Vater,' 'Jesaia der Propheten,' 'Vom Himmel hoch,' and others of the earliest German chorales. In the 16th century it was much employed for dance tunes, and perhaps on that account was known as 'il modo lascivo' (Zarlino, in Hullah, 'Hist. of Mod. Music,' Lect. 3). In more modern times it has been rendered illustrious among other masterpieces by Gibbons's 'Hosanna,' the Jupiter and C minor Symphonies, and the Overture to Leonora. Schubert's great Symphony and Handel's 'Dead March in Saul' are written in C major.

The name of 'C clef' is given to all clefs when



thus written, the line on which the clef mark stands being middle C, and the clef mark itself a corruption of the letter C. Those shown in the example are the Soprano, Alto, and Tenor, but the C clef has been used on every line of the stave.

Horns and trumpets are made to play the scale of C, and are written in the score in that key; they transpose into the key of the piece by the addition of crooks. The drums used formerly to be given in the score in the key of C, with an indication, at the beginning of the movement, of the key in which they were to be tuned. But they are now usually printed as played.

As a sign of time C stands for common time, 4 crotchets in a bar; and ¢ for allabreve time, with 2 or 4 minims in a bar.

C.f. is occasionally used in church music, or in instruction books, as an abbreviation for *canto fermo*. [G.]

CABALETTA, also written CABBALETTA and CAVALETTA, originally CAVATINETTA, from CAVATINA, usually signifies the short final quick movement of an air. [W. H. C.]

CABEL, MARIE JOSEPHE, *née* DREULETTE, born at Liège Jan. 31, 1827. Showed at an early age a great talent for the piano. After the death of her father she became acquainted with Cabel, a teacher of singing, who discovered her fine voice, instructed, and finally married her. In 47 she went with her husband to Paris, and first appeared at the Chateau des Fleurs. On Meyerbeer's recommendation she studied for two

years in the Conservatoire, and in 29 came out at the Opéra Comique with great success. After this she divided her time between Brussels and Paris, and in 1854 appeared in the important and difficult part of Catherine in the 'Etoile du Nord,' expressly written for her by Meyerbeer. In 59 he wrote for her the part of Dinorah. In 60 she played the Figlia del Reggimento at Her Majesty's Theatre July 14, and appeared in the Shadow scene from Dinorah, July 28. In 61 she played at St. Petersburg, and soon after left the boards. Her voice was not large, but sympathetic and of extraordinary flexibility, and she was a very clever actress. [G.]

CABINET PIANO. An upright pianoforte about six feet high, much in vogue from soon after the date of its introduction early in this century to about 1840. A few years later the lower upright instruments, oblique, cottage, piccolo, etc., had quite superseded it. The name Cabinet Pianoforte appears for the first time in a patent secured by William Southwell in 1807 (patent No. 3029), but upright pianofortes with the strings descending nearly to the floor instead of only to the stand or legs as in the older Upright Grand, had been previously suggested by Isaac Hawkins in 1800 (patent No. 2446) and Thomas Lond in 1802 (patent No. 2591). The bold step of inverting the wrestplank or tuning-pin block, which in the Upright Grand was at the bottom near the keys, but in the Cabinet was at the top, appears to have been taken by Thomas Lond, as in his specification we find his wrestplank fixed diagonically in the sides of the case, the bass end near the top, 6 feet 3 inches high, to preserve length for the bass strings, the treble end lower 4 feet 3 inches from the bottom, leaving an angular space above which might be utilised for bookshelves. In Southwell's patent, which refers specially to the action and damper movement, the wrestplank is certainly elevated horizontally. James Shudi Broadwood, in some MS. notes dated 1838, since printed for private circulation, claims a part in the invention through having given a sketch for a vertical or cabinet pianoforte to William Southwell about 1804. He adds no particulars, but remarks that the new instrument when introduced was for a time unsuccessful, which is also stated from another source by Mr. A. N. Wornum (Address to Jurors, Paris Exhibition, 1867). The further history of this important invention, which includes the almost contemporaneous oblique and cottage pianofortes is referred to in PIANOFORTE, but it has a special interest from the upright piano of any height, oblique or vertically strung, having been invented and first produced in this country, independent of foreign suggestion or help. See also COTTAGE PIANO, OBLIQUE, and PICCOLO. [A. J. H.]

CACCINI, GIULIO, a native of Rome, known also as GIULIO ROMANO, born, according to the preface of his own 'Nuove Musiche,' in 1558 or 1560. He learned to sing and play the lute from Scipione della Palla, and in 1578 removed to Florence, where he remained till his death in 1640. Great as a singer he was still greater as a reformer in music. Though neither harmonist nor contrapuntist, it was he who, following the lead of V. Galilei, first gave countenance and importance to music for a single voice. The recitatives which he composed and sang to the accompaniment of the theorbo, amid the enthusiastic applause of the musical assemblies meeting at the houses of Bardi and Corsi in Florence, were a novelty of immense significance. They were the first attempt to make music dramatic, to use it as the expression of emotion. From such small beginnings he proceeded to detached scenes written by Bardi, and thence to higher flights. The pastoral drama of Dafne, written by Rinuccini and set to music by Caccini and Peri in 1594, and still more the 'Euridice, Tragedia per Musica,' of the same poet and the same musicians in 1600, were the beginnings of the modern opera. Other compositions of Caccini's were the 'Combattimento d'Apolline col Serpente,' 'Il ratto di Cefale' (with Peri), and 'Le nuove Musiche,' a collection of madrigals and canzone for a single voice. 'Euridice' has been published—but with the name of Peri alone attached to it—by Guidi (1863, 8vo.). Caccini's daughter FRANCESCA was celebrated both as a singer and composer.

CACHUCHA (Spanish). An Andalusian dance, introduced to the theatre by the celebrated Fanny Elssler in the ballet of 'Le diable boiteux,' the music of which is in 3–4 time, and closely resembles the BOLERO. The dance-tune was originally sung with a guitar accompaniment. Of the origin of the name nothing certain is known. [E. P.]

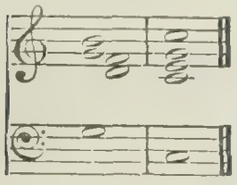
CADEAC, PIERRE, master of the choristers at Auch about the middle of the 16th century, church-composer of great merit in his day; composed masses and motets for the most part published in the following collections:—'Quintus liber Motettorum' (Lyons, 1543); 'Gardano's XII Missæ' (Venice, 1554); and 'Missarum Musicalium' (Paris, 1556). [M. C. C.]

CADENCE. Cadences or (as they are often called) Closes, are the devices which in music answer the purpose of stops in language. The effect is produced by the particular manner in which certain chords succeed one another, the order being generally such as to produce suspense or expectation first, and then to gratify it by a chord which is more satisfying to the ear. They are commonly divided into three kinds—the Perfect cadence, the Imperfect cadence, and the Interrupted cadence. Some writers specify a greater number, but this only tends to confusion and misconception. All that is requisite is to group the various kinds under names which mark their common effect. Thus every cadence which can be used satisfactorily to end a movement must of necessity be a Perfect cadence. Every cadence which is broken away from at the very moment when it seemed to promise a conclusion is obviously an Interrupted cadence; and every cadence which without producing the effect

of interruption leaves the mind unsatisfied and expecting something more should be called an Imperfect cadence. And this classification seems to include all the varieties. Every composer in writing feels that certain cadences are fitted for particular places in his work, and endeavours to give variety in his treatment of them. But it is unwise to give all these possible varieties definite titles, as what may answer the purpose of a full stop in one movement may only produce the effect of a semicolon in another, according to the calibre of the work.

The ideas at the root of the perfect cadence are two: first, that the key be emphatically defined; and secondly, that the expectation roused by the doubtful or discordant nature of one chord be absolutely satisfied by another.

The simplest and most perfect manner of obtaining these effects is the progression from dominant to tonic harmony, as in the example,

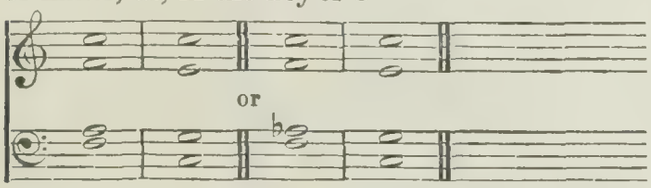


which is the type of all perfect cadences.

Here the key is strongly marked by the number of notes proper to it which are employed, and also, as Helmholtz has pointed out, 'by the distinct passage from the remotest parts of the scale to the centre of the system' of the key, since the dominant chord contains the notes which are most remote in their relation to the tonic. On the other hand, the tonic chord in its first position is the only chord sufficiently decisive to be used as a conclusion; and the dominant harmony must in any case be doubtful and inconclusive, even when concordant, and the effect is enhanced when, as in the example, a discord is made use of.

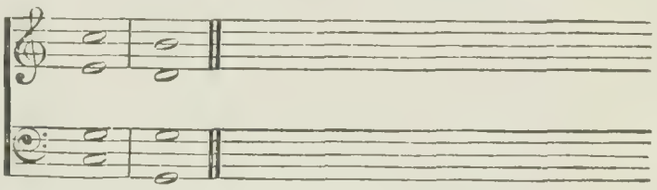
The common use of the major third in the tonic chord in the final cadences of pieces in a minor key is for the purpose above mentioned, of marking the key strongly, as the minor third is more obscure in character than the major third, and without the latter, especially in vocal music, the conclusion would not be so clear and incisive.

In old times, especially in church music, another very simple form of cadence was common; viz. that in which the penultimate chord is that of the sub-dominant or 4th of the key, either major or minor, as, in the key of C—



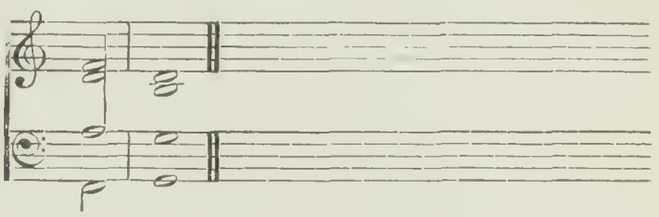
These two forms of the perfect cadence were distinguished as the Authentic and the Plagal, from the two main divisions of the ancient church modes. The latter is not so frequently used in modern music, except sometimes for variety, or to follow some particular turn of romance or sentiment which is expressed in the music.

The commonest form of Imperfect cadence is just a reversal of the dominant perfect cadence, so that the harmony of the dominant or 5th of the key is preceded by that of the tonic. In this case the effect will evidently not be conclusively satisfying, because a piece can only come to a complete stop on the harmony of the tonic. So, in the key of C, the cadence—



will leave the mind unsatisfied, though to a certain extent it produces the effect of a stop.

Another common form of imperfect cadence is that in which the harmony of the dominant is preceded by that of the supertonic, or 2nd note of the scale, direct or in inversion, thus—



as in Mozart's Quartet in G, No. 1—

and in Beethoven's Violin Sonata in G—

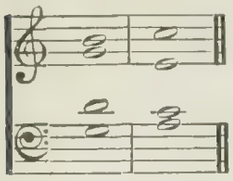
or the following from his Symphony in C minor—

When a complete strain or subject is divided into two parts the first half frequently ends with an imperfect cadence, by which the continuity of the passage is not affected, though the division is sufficiently marked.

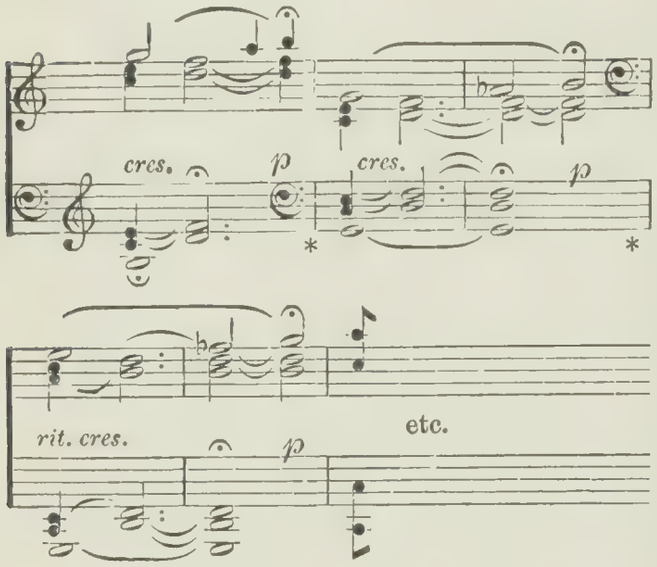
The imperfect cadence is also sometimes called a half close, which term has a good deal to recommend it as the fitter name of the two, both from its form and from the position it frequently occupies, as mentioned above.

The form of Interrupted cadence generally quoted as typical is that in which the chord of the dominant, instead of proceeding to the harmony of the tonic as the mind is led to

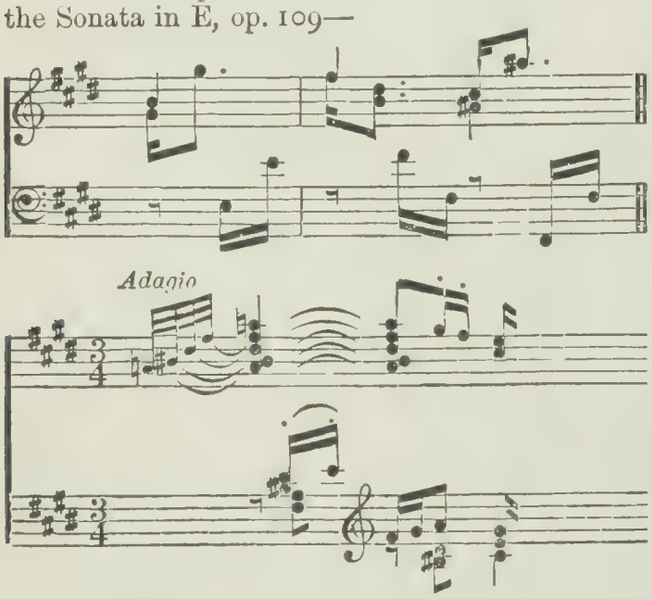
expect, is followed by the chord of the 6th of the key, or sub-mediant, thus—



But in point of fact this gives but a very small notion of what an interrupted cadence really is. For it can only be distinguished from an imperfect cadence with certainty by reference to the context. The latter is a definite stop occurring in the natural course of the music, and marking a period, though not in such a way as to enable the passage which it ends to be taken as complete in itself. But the former is an abrupt and irregular interruption of the natural flow of the music towards its anticipated termination in a perfect cadence, postponing that termination for a time or altogether avoiding it. Thus at the end of the first movement of the Sonata in C, op. 53, Beethoven keeps on postponing the perfect cadence in this manner—



In his later works an entire evasion of the cadence is frequent, as in the first movement of the Sonata in E, op. 109—



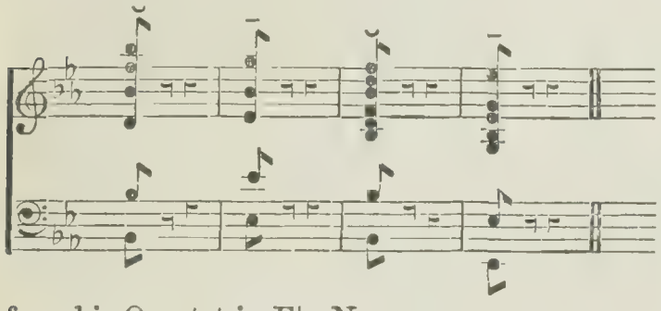
It is a common practice with writers of treatises on harmony to give a series of chords preparatory to the two final ones which are given above as the perfect cadence. This makes it look as though the treatises were meant to teach people to make music at so much a yard; for a man who really has something to say in music which he feels naturally is only hampered and worried with every extra direction of the kind, which tells him to put in so much that cannot possibly mean anything because it is everybody's property. A real musician only requires directions and general principles, which are capable of considerable expansion according to the power of his genius. The rule seems simply to be that, relative to the degree in which the cadence is final, the passage which immediately precedes it must mark the key in which it is made. The sense of the key in which any movement is written is of extreme importance for the comprehension of the music, especially in instrumental music, and such as depends much upon its form of construction. Hence a cadence of any finality must mark the key strongly. Subordinate cadences, such as occur in the course of the movement, especially apart from the broader divisions of the movement, need not be so marked; but if the final cadence of the whole movement, or that of an important subdivision of a movement, is simply a couple of chords or so immediately succeeding a passage in a foreign key, the sense of whereabouts is lost, and an entirely unsatisfactory effect produced by the indecisiveness of the conclusion.

The tendency of modern music has been to avoid full cadences in the course of a piece of music, and when they become necessary to vary them as much as possible. The former, because frequent cadences make a movement into a fragmentary series of continually recommencing passages, coming each time to a full stop and beginning again; the latter, because the mind has become so habituated to the form of the ordinary perfect cadence that in a movement of highly emotional character it comes rather like a platitude. Besides, though form is a great and often the principal element of beauty in a movement, to make it too obvious by the marked nature of the cadences destroys the interest and freshness of the work. Mozart marked the divisions of his movements very strongly, but in his day the forms of instrumental music were not by any means so familiar as they are now, and their being strongly marked was necessary for their due comprehension. Besides, in Mozart's day people had much more time to sit down and rest between one action and another than they seem to have now, and perfect cadences are exactly like sitting down and resting when one tune is over so as to be fresh for the next when it makes its appearance. And the analogy goes even further, for the movement in which one sits down least often and least completely is that which is most like one great action with a single principle at its basis rather than a series of somewhat disconnected motions, which are chiefly recommended by their mutual contrasts and relative proportions.

With regard to the position of the chords in the bar, the commonest position is that in which the final chord is on the first beat of the bar, or

the strongest beat of all when the bars are thrown into groups by the rapidity of the time of the movement. So that the cadence proceeds from a chord without emphasis to a chord with it, or in other words, from the unaccented to the accented part of the bar; as first—

from Mozart's Quartet in A, No. 5; or—



from his Quartet in Eb, No. 4.

The next commonest position is to find the final chord in the middle of a bar which is equally divisible into two halves, as on the third beat of a bar of four, and the fourth of a bar of six. Of both of these Mozart makes very frequent use—as in the first movement of the first Quartet, the slow movement of the Quartet in Bb, the Rondo for pianoforte in A, and the Variations in the Sonata in A. Very often he seems to use this position with a sense of its being weaker and less conclusive than that in which the last chord falls on the first beat of a bar, and hence as a kind of pseudo-imperfect cadence; as in the slow movement of the Quartet in D minor, No. 2, which begins thus—

Cadences are also, but far more rarely, found occupying reversed positions, as in polonaises, where the last chord of a cadence, owing to the peculiar rhythmic character of the movement, frequently falls on the last beat of a bar of three; as in Chopin's Polonaise in C♯ minor—

In Mozart's Rondeau en Polonaise, from the Sonata in D, the cadences fall on the second beat, as in

where the B and D are merely suspensions of the final chord of A—and in Beethoven's Quartet in A minor, op. 132, the last chord of the cadences in the movement 'Allegro ma non tanto,' falls on the second beat of a bar of three—

and in the slow movement of his Quartet in Bb, op. 130, at the end, the last chord falls on the last beat of a bar of four—

so that in point of fact the greatest authorities may be quoted to justify cadences in almost any position in the bar; but the last-mentioned instances are decidedly exceptional, and can only be justifiable when the movement in which they are used has some very marked peculiarities of rhythm or a very strong emotional character.

[C. H. H. P.]

CADENZA in its simplest acceptation is a flourish of indefinite form, introduced upon a bass note immediately preceding a close of some finality; that is, occupying the position of full stop either to an entire movement, or to an important section of one. The custom was most probably originated by singers, who seized the opportunity afforded by the chord of 6–4 on the dominant immediately preceding the final close of an aria or scena, to show off the flexibility, compass, and expressive powers of their voices to the highest advantage; so that the piece coming to an end immediately afterwards, the audience might have the impression of astonishment fresh in their minds to urge them to applause.

The idea thus originated spread widely to all kinds of music, and in course of time its character has changed considerably, though the flourish of which it is composed is still its

conspicuous feature. In instrumental music it fulfils a peculiar office, as it is frequently introduced where a pause in the more important matter of the movement is desirable, without breaking off or allowing the minds of the audience to wander. Thus it occurs at points where the enthusiasm of the movement has been worked to such a heat that it is necessary to pause a little before returning to the level of the natural ideas of the themes, as in Liszt's 'Rhapsodie Hongroise' in A, and Chopin's 'Notturnos' in F minor and C♯ minor. Chopin uses them frequently when the main business of the movement is over, in order to prevent the close, which follows immediately, being too abrupt. At other times it occurs as a connecting link between two movements, or between an introduction and the movement following it, where for certain reasons it is expedient to pause a while on some preparatory chord, and not to commence serious operations before the minds of the audience have settled to the proper level.

Specimens of this kind are common in the works of many great masters—e.g. Beethoven's Sonata in E♭ (op. 27, No. 1), Adagio; Sonata pathetique; Variations in F (op. 34); Brahms's Sonata in F♯ (op. 2, last movement); Mendelssohn's 'Lobgesang,' connecting the first movement with the second.

The greater cadenza, which is a development of the vocal flourish at the end of a vocal piece already spoken of, is that which it is customary to insert at the end of a movement of a concerto for a solo instrument. Like its vocal predecessors the cadenza usually starts from a pause on a chord of 6–4 on the dominant, preparatory to the final close of the movement, and its object is to show off the skill of the performer. Such cadenzas may occur either in the first or last movement, and even in both, as in Mozart's Concerto in D minor and in Beethoven's in G. With regard to their form there is absolutely no rule at all. They should contain manifold allusions to the chief themes of the movement, and to be successful should be either brilliant or very ingenious; containing variety of modulation, but rather avoiding progressions which have been predominant in the movement itself; and the more they have the character of abandonment to impulse the better they are. It was formerly customary to leave the cadenzas for improvisation, and certainly if the frenzy of inspiration could be trusted to come at the right moment, impromptu cadenzas would undoubtedly be most effective in the hands of real masters of the situation. Moreover, it is chiefly in the sense of their being the exposition of the player's special capacities that they are defensible, for as far as the composer is concerned the movement generally offers full opportunities for display of the powers of the executant.

Still custom is generally stronger than reason, and it does not seem likely that cadenzas will yet die out. And as the art of improvisation is for various reasons considerably on the wane it will probably become habitual for composers to write their own cadenzas in full, as Beethoven has done in the E♭ Concerto, and Schumann in his A minor Concerto.

Beethoven also wrote cadenzas for his other concertos and for Mozart's D minor; and these are published separately. Many famous musicians have supplied the like for classical concertos, Moscheles for Beethoven's, and Hummel for Mozart's.

The indication for a cadenza, when not written out in full, is a pause or fermata 𝄐 indicating its commencement, usually over a rest in the solo part, and over the last note in each of the orchestral parts; another pause over a shake in the solo part indicating its close. The example is taken from Beethoven's Concerto in C minor, pianoforte part. [C.H.H.P.]

CAECILIA, a German musical periodical, conducted by an association of scholars, art critics, and artists, started by Gottfried Weber in 1824, and published by Messrs. Schott. It appeared at irregular intervals, lasted till 1848, and forms a series of 27 volumes of 4 nos. each. Weber conducted it till his death, at the 20th vol., and was succeeded by Dehn, who continued editor till its discontinuance in consequence of the political troubles of 1848. By its opening prospectus Caecilia was intended to be not so much a regular periodical as a collection of original articles of permanent interest, and a medium for the exchange of views and opinions on art. It contains papers on the theory of music and acoustics, on history and æsthetics, reviews and notices of music and treatises on the art. The earlier numbers also contained tales and poems, and other light pieces. Amongst the theoretical articles of most value are those on the compensation of organ pipes (xi. 181–202) and on the production of aliquot tones in reed pipes and clarinets (xii. 1), both by W. Weber; on the voice (i. 81; compare iv. 157 and 229), by Gottfried Weber; an account of the experiments of Joh. Müller on the formation of the voice (xxi. 16), by Häser; on equal temperament (xxvi. 137), and on measurements of tones and of temperament (xxi. 117), both by Kiesewetter; and on the value of notes and the length of string necessary to produce them (xxiv. 91), by Krieger. Among the historical papers may be named those on the literature and history of music by Anton Schmid (xxi–xxvii)—chiefly notices of ancient MSS. in the Vienna library; also a paper by Aloys Fuchs on the musical collections of Vienna, interesting for its descriptions of MSS., especially those of the Gesellschaft der Musikfreunde (xxiii. 40); several communications by Dehn on the Bach MSS. in the Berlin library (xxii. 166, xxiii. 34, xxiv. 17); critical papers by Gottfried Weber on the authenticity of Mozart's 'Requiem' (iii. 205, iv. 257, v. 237, vi., viii. 128, ix., x., xiv. 147, xx. 279), written with unnecessary violence and personality, and since superseded by the publication of the ori-

ginal score. In addition to the authors named, articles were furnished by Rochlitz, Chladni, Fink, and von Drieberg, and the whole formed a valuable record of the progress of the historical and theoretical departments of music during a quarter of a century. The practical portion of the art was not so well represented. In fact the great movement begun by Mendelssohn, and carried on by Schumann, Chopin, and others, not only received no recognition, but was treated with a certain covert hostility, and with the constant obtrusion of an obsolete and exaggerated worship of Mozart. In the first volume the publication of a mass by the Abbé Vogler (died 1814) was hailed as an event, and reviewed with laborious care. In the list of publications of the year contained in the 27th volume scarcely any mention is made of the works of either of the composers named above; and the notices are confined almost entirely to salon music and instruction books, chiefly those issued by the publishers of the magazine. Mendelssohn's 'St. Paul' (produced 1834) is only cursorily mentioned, Chopin is rarely named, and Schumann not at all, though by the year 1848 he had composed many of his very greatest works. The earlier volumes of the Caecilia are of more value than the later ones in reference to practical music. [A. M.]

CAECILIAN SOCIETY. This society was instituted in 1785 by a few friends who met weekly at each other's houses for the practice of hymns and anthems, but subsequently, having some instrumentalists among them, they united for the performance of sacred works on a more extended scale, and especially of Handel's oratorios. In 1791 an organ was erected in the society's room in Friday-street, and after meeting at Plasterers' Hall, Painters' Hall, Coachmen's Hall, and the Paul's Head, they obtained the use of Albion Hall, London Wall, where they met until the dissolution of the society in 1861. Among the works performed were all Handel's oratorios and secular compositions, Haydn's 'Creation' and 'Seasons,' Mozart's and Haydn's masses and Mendelssohn's 'Elijah.' W. Russell, sometime organist to the Foundling, composed for the society, of which he was a member, 'The Redemption of Israel' and the 'Ode to Music,' the words of the latter being supplied by Mr. Vincent. John Nightingale, Russell's successor at the Foundling, who became organist to the society, also composed a work for performance by the members. For many years the society gave the only performances of the oratorios of Handel and Haydn which could be heard (except during Lent at the theatres of Covent Garden and Drury Lane), and its work may be said to have been taken up by the Sacred Harmonic Society, which was founded a few years before the dissolution of the older body. The first conductor of the Society was Mr. Vincent, an amateur, who filled the office for upwards of thirty years, when he was succeeded by Mr. Walker, whose place was taken by his own son Joseph Walker. Mr. Shoubridge was the last conductor. Among the earlier members were some professional musicians who afterwards became famous, and who when they had left its ranks frequently came to assist in its performances. The society was almost entirely self-supporting, and the tickets of admission to the concerts were given by the members to their friends. [C. M.]

CÆSAR, Julius, M.D., of an ancient family of Rochester, many of whom are interred in the cathedral there, was an amateur composer in the 17th century. Some catches by him appear in the collection entitled 'The Pleasant Musical Companion.' [W. H. H.]

CÆSAR, *alias* William Smegergill, was the composer of some songs published in 'Select Musicall Ayres and Dialogues, 1653, and other collections of the period. [W. H. H.]

CAFARO, Pasquale, otherwise CAFFARO, and also known by his name of endearment CAFFARELLI, was born at Naples in 1708. He was destined by his parents for a scientific career, but his bent towards music showed itself too strongly for contradiction, and he was entered at the Conservatorio della Pietà, at that time under the direction of Leonardo Leo. On the termination of his studies he became Maestro at the Chapel Royal of Naples, and in time Director of the Conservatorio as well. He died in 1787. Grace, purity of style, and poverty of invention were the characteristics of his work. The following are among his best known productions:—Oratorio per l'Invenzione della Croce; Naples 1747. Ipermnestra; Naples 1751. La Disfatta di Dario; 1756. Antigono; 1754. L'Incendia di Troia; Naples 1757. Cantata a tre voci per festeggiare il giorno natalizio di Sua Maestà; Naples 1764. Arianna e Teseo; 1766. Cantata a tre voci, etc., etc.; Naples 1766. Il Cresco à Turin; 1768. Giustizia placata; 1769. Cantata a più voci per la Translazione di sangue di S. Januario; Naples 1769. L'Olimpiade; Naples 1769. Antigono, reset to fresh music; 1770. Betulia liberata. Il Figluolo prodigo ravveduto. Oratorio on S. Antonio of Padua. Il Trionfo di Davidde, Oratorio. In addition to these there are in existence by Cafaro many pieces of church music, consisting of masses, psalms, motets, etc., of acknowledged merit. An 'Amen' for 5 voices by him is included in Novello's 'Fitzwilliam Music.' [E. H. P.]

CAFFARELLI, Gaetano Majorano, detto, was born at Bari, Naples, April 16, 1703. His father was a peasant, and for some time opposed his son's inclination for music at the expense of his ordinary tasks. Gaetano however, by his assiduous attendance at the musical services in a certain chapel, soon attracted the notice and favour of Cafaro or Caffaro (see above). This artist, recognising the genius of the boy, rescued him from the toil to which he was destined by his ignorant parents, sent him to Norcia to be prepared for the career of an *evirato*, according to the barbarous custom of those days; and, upon his return,

gave him in his own house elementary instruction in reading, writing, and music. When sent to study at Naples under Porpora, the grateful youth, as was not unusual, called himself Caffarelli, in remembrance of his first protector. It is of this extraordinary singer that the story is told that he was kept by old Porpora for five or six years to the uninterrupted and unvaried study of one page of exercises; and that, at the end of this time, he was dismissed with these words, 'Go, my son: I have nothing more to teach you. You are the greatest singer in Europe.' Whether Porpora's object in this system was to secure the perfect equality of the voice, which in his opinion could not be otherwise gained, or to humble the boy's pride, which was inordinate—whether the story be true or false, certain it is that, according to all competent authorities, the singers whom he sent forth into the world, Farinelli, Caffarelli, etc., were superior to any that preceded or followed them. His valedictory words, in any case, were ill calculated to check the pride and presumption which made Caffarelli, throughout a career of marvellous success, always ridiculous, always odious, and always a contrast to the modest Farinelli. In 1724 he made his début at Rome in a female character, as was usual for sopranists, when his beautiful voice, perfect method, and handsome face, procured him his first triumph. He now easily obtained engagements, and sang with similar success in the principal cities of Italy until 1728, when he returned to Rome. Here his success was more brilliant than before, and than that of any previous singer. He was courted by the highest society, and in one of his very numerous 'bonnes fortunes' he nearly lost his life. Owing to a sudden alarm, he had to escape by passing the night in an empty cistern in a garden, where he caught a severe cold, which kept him to his bed for a month. After this he went about everywhere protected by four bravos from the vengeance of the husband. He left Rome safe, however, in 1730; and, after singing in other places, arrived in London at the end of 1737. Here he made his first appearance at the King's Theatre on Jan. 7, 1738, in the principal character in Handel's 'Faramondo,' and in 'Serse' on April 15. He also sang the part of Jason in Pescetti's 'La Conquista del vello d'oro' in the same year. His name does not appear again; and it is said that during all his stay in London he was never in good health or voice. He does not appear to have fulfilled the expectation that his coming had created. He now returned to Italy, and passed through Turin, Genoa, Milan, Florence, and Venice, in a triumphal progress. At Turin, when the Prince of Savoy told Caffarelli, after praising him greatly, that the princess thought it hardly possible that any singer could please after Farinelli, 'To-night,' he replied, 'she shall hear two Farinellis!' What would have been thought of this answer by the lady who once exclaimed in delirious excitement 'One God, and one Farinelli!' At Naples he excited the wildest enthusiasm. While he was singing there he was told of the arrival of Gizziello, whom, as a possible rival, he was most anxious to hear and estimate for himself. He posted all the way to Rome, arrived in time for the opera, and took a back seat in the pit. After listening attentively to Gizziello's *aria di entrata* he could not master his emotion; but, rising from his seat, exclaimed 'Bravo, bravissimo, Gizziello! E Caffarelli chi te lo dice!' and fled precipitately from the theatre. Throwing himself into his carriage, he posted rapidly back to Naples, and found he had barely time to dress and appear at the opera, where his absence had already been remarked. In 1740 he returned to Venice, where he received a higher salary than any singer had received before,—800 sequins (=£385), and a benefit of 700 sequins (=£335), for a season of three months. He reappeared at Turin in 1746, and then at Florence and Milan. On the invitation of the Dauphine he went to Paris in 1750, and sang at several concerts, where he pleased as much as he astonished the critics. Louis XV sent him a present of a snuff-box; but Caffarelli, observing that it was plain, showed the messenger who brought it, one of the gentlemen of the court, a drawerfull of splendid boxes, and remarked that the worst of them was finer than the gift of the King of France. 'If,' said he, 'he had sent me his portrait in it!' 'That,' replied the gentleman, 'is only given to ambassadors.' 'Well,' was the reply, 'and all the ambassadors of the world would not make one Caffarelli!' This, when repeated, made the King laugh heartily; but the Dauphine sent for the singer, and, giving him a passport, said—'It is signed by the King himself,—for you a great honour; but lose no time in using it, for it is only good for ten days.' Caffarelli left France in dudgeon, saying he had not gained his expenses there. Stories about him are innumerable: Metastasio, in one of his letters, tells an amusing one, according to which the intervention of Tesi, the celebrated singer, alone saved him from a duel at Vienna, provoked by his arrogance and folly. At the age of sixty-five he was still singing; but he had made an enormous fortune, had purchased a dukedom, and built at Santo Dorato a palace, over the gate of which he inscribed, with his usual modesty, 'Amphion Thebas, ego domum.' A commentator added 'Ille cum, sine tu!' It will be inferred from the above that he was the rival of Farinelli, to whom by some he was preferred as a singer. He excelled in slow and pathetic airs, as well as in the bravura style; and was unapproached both in beauty of voice and in the perfection of his shake and chromatic scales. He is said to have been the first to introduce the latter embellishment in quick movements. He died in 1783, leaving his wealth and his dukedom to his nephew. [J. M.]

ÇA IRA. The earliest of French revolutionary songs, probably first heard on Oct. 5, 1789, when the Parisians marched to Versailles. The words were suggested to a street-singer called Ladré by General La Favette, who remembered

Franklin's favourite saying at each progress of the American insurrection. The burden of the song was then as follows :—

'Ah! ça ira, ça ira, ça ira!
Le peuple en ce jour sans cesse répète :
Ah! ça ira, ça ira, ça ira!
Malgré les mutins, tout réussira.'

At a later period the burden, though more ferocious, was hardly more metrical :—

'Ah! ça ira, ça ira, ça ira!
Les aristocrat' à la lanterne ;
Ah! ça ira, ça ira, ça ira!
Les aristocrat' on les pendra.'

The tune—the length and compass of which show that it was not composed for the song—was the production of a certain Bécour or Bécourt, a side-drum player at the Opera; and as a contredanse was originally very popular under the title of 'Carillon national.'

[G.C.]

CALAH, John, born 1758, was organist of Peterborough Cathedral in the latter part of the last century. He composed some cathedral music, still in use, and died Aug. 4, 1798. [W.H.H.]

CALANDO (Ital.), diminishing, i.e. in tone; equivalent to *diminuendo* or *decrescendo*, and often associated with *ritardando*. [G.]

CALASCIONE or COLASCIONE (Ital.; Fr. *Colachon*). The name of a fingerboard instrument of the lute kind belonging to Lower Italy. The calascione is strung with two catgut strings tuned a fifth apart. The body of it is like that of an ordinary lute, but it is relatively smaller towards the neck. Of all fingerboard instruments the calascione is most like the NFR (vocalised by different interpreters as nofre, nefru, or nefer) of the old Egyptian monuments; but it would be a bold hypothesis to derive the modern instrument from one used in such remote antiquity, the long-necked Egyptian lute having been depicted as early as the fourth dynasty—according to Herr Lepsius anterior to 3000 B.C. The strings of the calascione are touched with a plectrum, rarely by the fingers. The fingerboard has frets of ivory. About 1767 the brothers Cola were noted performers on it. [See Bandora.] [A.J.H.]

CALDARA, Antonio, was born at Venice in 1678, where he studied music under Legrenzi. He remained for many years a simple singer in the Ducal Chapel of S. Marco, but was in 1714 appointed Maestro di Cappella at Mantua. Thence in 1718 he went to Vienna, where the emperor Charles VI made him one of his vice-chapelmasters. In 1738 he returned to Venice, where he lived in retirement until his death in 1768. These are the dates in his career which are given by Fétis, and which he defends against Gerber and Antoine Schmidt, who say that he died at Vienna in 1736. He was a laborious composer both for the church and the stage. But his worth is hardly equal to his fecundity. A certain solemnity of manner in some measure redeems his church music; but his operas are essentially of that order which when once laid aside are laid aside for ever. He wrote no less than 69 operas and oratorios, and dramatic compositions in the nature of one or the other. The catalogue of his church music is equally lengthy, and includes a number of cantate on sacred subjects for one, two, and three voices, with elaborate orchestral accompaniments. [E.H.P.]

CALIFE DE BAGDAD. Opera in one act, words by Saint-Just, music by Boïeldieu; produced at the Opéra Comique Sept. 16, 1800, and still a favourite, after many hundred representations. [G.]

CALL, Leonard de, born in 1779; a guitar player and composer of harmonious and pretty part songs, which were greatly in fashion in Germany at the beginning of the century, and contributed much to the formation of the 'Männer Gesangvereine' in that country. Some pleasing specimens will be found in 'Orpheus.' De Call is also known for his instruction book for the guitar. He died at Vienna 1815. [G.]

CALL CHANGES. Ringers are said to be ringing call changes when the conductor calls to each man to tell him after which bell he is to ring, or when the men ring changes with the order in which they are to ring written out before them. When such changes are rung, each change is generally struck consecutively from ten to a hundred times. [C.A.W.T.]

CALLCOTT, John Wall, Mus. Doc., was born November 20, 1766, at Kensington, where his father carried on the business of a bricklayer and builder. Whilst a school-boy he had frequent opportunities of examining the organ at Kensington church, and having formed an acquaintance with the organist became a constant visitor to the organ-loft on Sundays. There he acquired his knowledge of the rudiments of music. His

intention was to follow the profession of surgery, but the sight of a severe operation so seriously affected his nerves that he abandoned it and turned his attention to music. In this pursuit his studies were prosecuted without the aid of a master. By frequent attendance at the Chapel-Royal and Westminster Abbey he became acquainted, in 1782, with Drs. Arnold and Cooke, and the elder Sale, from whom he derived much musical knowledge, although he did not receive any regular instruction. In 1783 he became deputy organist, under Reinhold, of St. George the Martyr, Queen Square, Bloomsbury, which post he held until 1785. In the latter year Dr. Cooke introduced him to the orchestra of the Academy of Ancient Music, and the associations he there formed gave him his first bias towards glee writing. In 1784 he had submitted a glee, 'O sovereign of the willing soul,' as a candidate for a prize at the Catch Club, which was not successful; but in 1785 he carried off three of the four prize medals given by the club by his catch 'O beauteous fair'; his canon 'Blessed is he'; and his glee 'Dull repining sons of care.' On July 4 in the same year he took the degree of Bachelor of Music at Oxford, setting as his exercise Dr. Joseph Warton's 'Ode to Fancy.' In 1786 he composed an ode for the Humane Society, and gained two prizes from the Catch Club for his catch 'On a summer's morning,' and his canon 'Bow down Thine ear.' The next year, determined (as he said) to show that if deficient in genius he was not wanting in industry, he sent in nearly 100 compositions as competitors for the prizes. Of this large number, however, two only succeeded in obtaining the coveted distinction, viz. the canon 'Thou shalt show me,' and the glee 'Whann Battayle smethynge'; whilst the members of the club, to prevent the recurrence of so troublesome and inconvenient an event, resolved that in future the number of pieces to be received from any one candidate should be limited to twelve, i.e. three of each kind—catch, canon, and serious and cheerful glees. In 1787 Callcott took an active part with Dr. Arnold and others in the formation of the Glee Club. In 1788, offended at the new regulation of the Catch Club limiting the number of compositions to be received from each candidate for prizes, he declined writing for it, but in the next year, changing his determination, he sent in the full number of pieces permitted, and succeeded in carrying off all the prizes, a circumstance unparalleled in the history of the club. The four compositions which achieved this feat were the catch 'Have you Sir John Hawkins' History?' the canon 'O that Thou would'st'; and the glees 'O thou, where'er, thie bones att rest,' and 'Go, idle boy.' In the same year he was chosen joint organist, with Charles S. Evans, of St. Paul's, Covent Garden, and four years later organist to the Asylum for Female Orphans, which he held till 1802. Although he now ranked as one of the ablest and most popular composers of the day he had but little skill in orchestral writing. He therefore availed himself of the opportunity afforded by the visit of Haydn to England in 1790 to take lessons in instrumental composition from that illustrious master. Whilst studying under Haydn, Callcott composed his fine song 'These as they change' for Bartleman. From 1790 to 1793 (after which the Catch Club ceased to offer prizes) he was awarded nine medals for his compositions; two in 1790 for the canon 'Call to remembrance,' and the glee 'O voi che sospirate'; three in 1791 for the catch 'Tom Metaphysician,' the canon 'I am well pleased,' and the glee 'Triumphant Love'; three in 1792 for the canon 'O Israel,' and the glees 'See, with ivy chaplet bound,' and 'Father of heroes,' and one in 1793 for the canon 'Christ being raised.' It was about this time that he began to study the works of the best theorists, and to feel the desire of appearing as a writer on the theory of music. Having acquired the MSS. of Dr. Boyce and his pupil, Marmaduke Overend, organist of Isleworth, he projected a musical dictionary, and made large collections for the work, of which in 1797 he issued a prospectus. On June 19, 1800, he proceeded Doctor of Music at Oxford, his exercise being a Latin anthem, 'Propter Sion non tacebo.' In 1801, upon the formation of a volunteer corps at Kensington, Callcott accepted a commission in it. Aided by a subscription he formed a band for the corps, for which he not only purchased the instruments and composed and arranged the music, but even instructed the performers. The compilation of his dictionary proceeding but slowly, and thinking the public had a right to expect some theoretical work from him, he employed himself in 1804 and 1805 in writing his Musical Grammar, which was published in 1806. In the latter year he wrote for Bartleman a scena upon the death of Lord Nelson, and was appointed to succeed Dr. Crotch as lecturer on music at the Royal Institution. His anxiety to distinguish himself in this new position, combined with the heavy labours of which he had so unsparingly imposed upon himself, and the daily drudgery of teaching, seriously impaired his health, and his mind suddenly gave way. For five years his life was a blank. During that period (in 1809) his professional friends gave a concert on his behalf, and so strong was the desire to show sympathy for him that it was found that the opera-house in the Haymarket was the only building large enough to contain the numbers who thronged to be present. After an interval of rather more than five years Dr. Callcott so far recovered as to lead his friends to hope that his health was completely restored, but their hopes were in vain. Two or three years passed and he was again afflicted with the most terrible calamity which can befal frail humanity. He lingered until May 15, 1821, when death terminated his sufferings.

Dr. Callcott's principal works were his very numerous glees and other pieces of vocal harmony, mostly published singly, but he left in manuscript many anthems, services, odes, etc. His fine

scena 'Angel of life' was written for Bartleman. His son-in-law, the late William Horsley, Mus. Bac., edited in 1824 a collection of his best glees, catches, and canons, in two folio volumes, with a memoir of the composer, and an analysis of his compositions. The work also contains a portrait of Callcott from a painting by his brother Augustus, afterwards Sir Augustus Callcott, R.A. Besides the above-named works Callcott was associated with Dr. Arnold in the selection, adaptation, and composition of the tunes for 'The Psalms of David for the use of Parish Churches' (1791). Dr. Callcott left a numerous family. His daughter, SOPHIA, became eminent as a teacher of the pianoforte, and his younger son, WILLIAM HUTCHINS CALLCOTT, has attained distinction as a composer and arranger. One of his songs, 'The last man,' met with remarkable success, and his anthem 'Give peace in our time, O Lord,' has been very generally admired. [W. H. H.]

CALLINET. See DAUBLAINE.

CALORI, ANGIOLA, was born at Milan 1732, and came to London in 1758. Here she appeared in 'Issipile,' by Cocchi. In 1759 she sang in 'Ciro riconosciuto,' by the same composer; and in his 'Erginda,' 1760. In the next season she performed the part of Eugenia in Galuppi's 'Filosofo di Campagna,' but her name does not occur here again after that. She had a soprano voice of great extent, a profound knowledge of music, and extraordinary rapidity of execution. In 1770 she was singing at Dresden with great success. She returned to her native country in 1774, and continued to sing at the various operas of Italy till 1783. She died about 1790. [J. M.]

CALVARY, the English version of Spohr's oratorio of 'Des Heilands letzte Stunden.' The translation was made by Mr Edward Taylor, and the first performance took place at the Norwich Festival of 1839 under Spohr's own direction. It was again performed, in his presence, under Costa's baton, by the Sacred Harmonic Society, at Exeter Hall, July 5, 1852. [G.]

CALVESI, SIGNOR, an Italian singer engaged, with his wife, in London during the seasons of 1787 and 1788. He sang the principal part in Paisiello's 'Re Teodoro,' and assisted in the same composer's 'Schiavi per amore,' and other operas by Cimarosa, Sarti, and Storace, in some of which his wife appeared with him. [J. M.]

CALVISIUS, SETH, musician, astronomer, and chronologer, born at Gorschleben in Thuringia, Feb. 21, 1556, of very poor parents. The name is a refinement of Kallwitz. His poverty interfered greatly with his education, but he contrived to attend the Magdeburg Gymnasium, and the Universities of Helmstedt and Leipsic, and to avail himself of every opportunity of musical instruction. In 1580 he was made music director at the Pauliner Church, Leipsic, in 82 Cantor at Schulpforte, and in 94 Cantor and Schulcollege at the St. Thomas-school, and music director at the St. Thomas church of Leipsic. For music he gave up much—for instance, the chair of mathematics at Wittenberg, offered him in 1611. He died in Leipsic on Nov. 24, 1615. His treatises are 'Melopeia . . .' (Erfurt, 1582), 'Compendium musicæ practicæ . . .' (Leipsic, 1594), 'Musicæ artis præcepta . . .' (Leipsic, 1612; ed. 3 of the 'Compendium'), 'Exercitationes musicæ duæ . . .' (Leipsic, 1600 and 1611). His music, original and edited, comprises 'Harmonia cantionum, a M. Luthero . . . compositarum' (Leipsic, 1596), 'Biciniorum libri duo . . .' (Do. 1590 and 1612), 'Teutsche Tricinia . . .' (Do. 1603), 'Der 150 Psalm für 12 Stimmen . . .' (Do. 1615), 'Der Psalter Davids . . .' (Do. 1617). Many motets and hymns are in MS. in the Library of the Thomas-school. [G.]

CAMACHO. See WEDDING OF CAMACHO.

CAMARGO, MIGUEL GOMEZ, born at Guadalajara about the middle of the 16th century, musical director at the Cathedral of Valladolid. Several of his compositions in MS. are in the library of the Escurial, and Eslava's 'Lira Sacra-Hispana' contains a beautiful hymn to St. Iago in the purest counterpoint. [M. C. C.]

CAMBERT, ROBERT—sometimes called LAMBERT—the originator of French opera, born at Paris 1628; was a pupil of Chambonnière's, organist of the church of S. Honoré, and (1666) Intendant of Music to Anne of Austria. The 'Euridice' of Peri and Caccini, performed at Florence in 1600, had set the musical world in a blaze, and the Abbé Perrin, after hearing that work, proposed to Cambert to compose a similar piece entitled 'La Pastorale.' This was performed for the first time, amid extraordinary applause, at the Chateau d'Issy, and was the first French opera. 'La Pastorale' was followed by 'Ariane,' 'Adonis,' and other pieces, and in 1669 Perrin obtained a patent securing the right to perform opera. For 32 years Cambert was associated with Perrin in the enterprise, and the result was the production of the operas of 'Pomone' (1671) and 'Les peines et les plaisirs de l'amour.' By Lully's intrigues Perrin lost the Académie, and Cambert took refuge in England, where he became first bandmaster to a regiment, and then master of the music to Charles II. He died here in 1677. Portions of 'Pomone' were printed, and the MS. of 'Les peines' is in the Bibliotheque Nationale. Lully's jealousy implies that Cambert was a formidable rival. [G.]

CAMBINI, GIOVANNI GUISEPPE, born at Leghorn, 1746, violinist and composer, studied under Padre Martini, at Bologna, between 1763 and 1766. In the latter year he produced an opera at Naples without success. Having formed an attachment for a girl from his native city, he was returning thither with her to be married when their vessel was captured by corsairs, and they were both sold as slaves in Barbary. Here a rich Venetian merchant bought Cambini and gave him his liberty. In 1770 he went to Paris,

and was introduced to Gossec, who performed some of his symphonies at the Concerts Spirituels. These works, though very slight, were written with the flowing melody characteristic of Italian music, and created a highly favourable impression. During the ensuing twenty years, Cambini produced an enormous mass of music; 60 symphonies, 144 string-quartets, concertos for every variety of instrument, an oratorio, 'Le sacrifice d'Abraham' (Concerts Spirituels, 1774), and 12 operas, of which Fétis gives a list. He was conductor at the Théâtre des Beaujolais (1788–1791), and of the Théâtre Louvois (1791–1794). In 1804 he wrote some articles in the Leipsic 'Allgem. Musik. Zeitung,' and in 1810 and 1811 was joint-editor of the 'Tablettes de Polymnie.' Towards the end of his life Cambini maintained himself by arranging popular airs and other like drudgery, but even this resource failed him, and his last ten years were spent in the hospital of the Bicêtre, where he died in 1825. His best works were his quartets. He excelled so much in playing that style of music, that Manfredi, Nardini, and Boccherini, the three most eminent quartet players of that epoch, each chose him to play the viola with them. Cambini wasted in dissipation abilities which might have placed him in the foremost rank of musicians; and so little was he troubled with a conscience as to undertake to write some quartets and quintets in the style of Boccherini, which were published by Pleyel, indiscriminately with genuine compositions of that master. [M. C. C.]

CAMBRIDGE. See Degree; Doctor; Professor.

CAMERA (Ital. 'chamber'). A sonata or concerto di camera was of secular character, and written for a room, and was so called to distinguish it from the sonata or concerto di chiesa, which was intended for performance in a church. [G.]

CAMIDGE, John, born about 1735, was, on the resignation of James Nares in 1756, appointed organist of the cathedral church of York, which he held until his death, April 25, 1803, a period of about forty-seven years. He published 'Six Easy Lessons for the Harpsichord.' His son Matthew was born in 1764, and received his early musical education in the Chapel Royal under Dr. Nares. On the death of his father in 1803 he was appointed his successor as organist of York. He published a Collection of Tunes adapted to Sandys' version of the Psalms (York, 1789), and 'A Method of Instruction in Musick by Questions and Answers.' He died Oct. 23, 1844, aged 80. His son John graduated at Cambridge as Bachelor of Music in 1812, and as Doctor in 1819. About 1828 he published a volume of Cathedral Music of his composition. He received the appointment of organist of York Cathedral on the death of his father in 1844, having for many years previously discharged the duty. The present organ of the cathedral, one of the largest in England, was constructed chiefly under his superintendence. Early in 1859 he resigned his appointment, and died Sept. 21 following.—The Camidges afford a singular example of three members of the same family (father, son, and grandson) holding successively the appointment of organist of the same cathedral for upwards of a century. [W. H. H.]

CAMPAGNOLI, Bartolomeo, a violinist of great repute, born Sept. 10, 1751, at Cento, near Bologna. He learned the violin from Dall' Ocha, a pupil of Lolli's, from Guastarobba, of the school of Tartini, and afterwards from Nardini. While in the orchestra of the Pergola at Florence he made the friendship of Cherubini. He led the opera bands at Florence and Rome alternately for some years, and in 1776 became Capellmeister to the Bishop of Freysing. After two years he entered the service of the Duke of Courland at Dresden. From 1783 to 86 he was travelling in north Europe; in 88 he revisited Italy. From 1797 to 1818 he was conductor at Leipsic. In 1801 he visited Paris, renewed his acquaintance with Cherubini, and heard R. Kreutzer. On Nov. 6, 1827, he died at Neustrelitz. His works comprise concertos, sonatas, duets, and smaller pieces for the violin and flute, and a violin-school. His daughters, Albertina and Granetta, were well known as singers. [P. D.]

CAMPANOLOGY (from *campana* and λογος), the art and mystery of Bells and Bell-ringing. See Bell, Change, Carillon, Chimes.

The following list of works on Campanology, published during the present century, is given in Rev. Woolmore Wigram's 'Change-ringing disentangled' (1871) as those most useful to ringers in general.

1. On the Bells themselves:—'Belfries and Ringers,' H. T. Ellacombe; 'Clocks and Bells,' E. B. Denison; 'Account of Church Bells,' W. C. Lukis.

2. On Change-ringing:—'Campanologia,' W. Shipway; 'Campanologia,' H. Hubbard; 'Change-ringing,' C. A. W. Troyte; 'Church Bells and Ringing,' W. T. Maunsell; 'Change-ringing,' W. Sottenshall. [G.]

CAMPBELL, Alexander, an organist in Edinburgh, edited and published, in 1792, a collection of twelve Scots songs, with an accompaniment for the violin, and later a similar collection with an accompaniment for the harp. [W. H. H.]

CAMPENHOUT, François van, born at Brussels 1780, died there 1848, began his career in the orchestra at the Théâtre de la Monnaie. Having developed a high tenor voice he appeared on the stage at the same theatre. During the ensuing thirty years he sang in the chief towns of Holland, Belgium, and France, and made his farewell appearance at Ghent in 1827. He composed several operas, 'Grotius' (Amsterdam, 1808); 'Le Passe-partout' (Lyons, 1815); 'L'heureux Mensonge,' and others unpublished, besides songs, choruses, and church music. His name, however, is chiefly associated with the Brabançonne, which he composed at the time

of the revolution in 1830, and has now become the national air of Belgium. [M. C. C.]

CAMPIOLI, Antonio Gualandi, detto, born in Germany, of Italian parents. He learnt to sing in Italy and returned to Germany, where his lovely contralto voice created a great sensation. He appeared first at Berlin in 1708. In 1720 he was engaged at Wolfenbüttel. Six years later he visited Hamburg; and, after travelling in Germany and Holland, returned to Dresden, where he sang in Hasse's 'Cleofida' in 1731. At the end of that year he appeared in London in Handel's 'Poro.' On Feb. 19, 1732, he sang in the new opera 'Sosarme,' and in revivals of 'Flavio' and 'Acis,' all by the same master. He passed the remainder of his life in Italy. [J. M.]

CAMPION or CAMPIAN, Thomas, M.D., a physician by profession, was a poet, dramatist, composer, and writer on music in the earlier part of the 17th century. In 1602 he published 'Observations on the Art of English Poesie,' and in 1607 wrote and invented a masque performed at Whitehall on Twelfth Night in honour of the marriage of Lord Hayes with the daughter of Lord Denny, for two of the songs in which he also furnished the music. In 1610 he produced 'Two Bookes of Ayres. 'The First contayning Divine and Morall Songs: 'The Second Light Conceits of Lovers. To be 'sung to the Lute and Viols, in two, three and 'foure Parts; or by one Voyce to an Instrument.' This was followed, in 1612, by 'The Third and 'Fourth Booke of Ayres. Composed by Thomas 'Campian so as they may be expressed by one 'Voyce with a Violl, Lute or Opharion,' the words as well as the music being of his production. In 1613 he wrote 'Songs of Mourning bewailing the untimely death of Prince Henry,' which were set to music by John Coprario; and also devised and wrote the entertainment given by Lord Knowles at Cawsome [Caversham] House, near Reading, to Queen Anne in her progress towards the Bath on April 27 and 28; the Masque presented in the Banqueting House at Whitehall on St. Stephen's night, 1613, on the marriage of the Earl of Somerset and Lady Frances Howard; the Masque of Flowers presented by the gentlemen of Gray's Inn in the same place on Twelfth Night, 1613, in honour of the same marriage; and the Lords' Masque presented in the Banqueting House on the marriage of Frederick, the Elector Palatine, with the Princess Elizabeth on Feb. 13, 1613, for one song in which he also composed the music. Some lines by Campion are prefixed to Alfonso Ferrabosco's Ayres, 1609, and others to Ravenscroft's 'Briefe Discourse of the true (but neglected) use of Charact'ring the Degrees by their Perfection, Imperfection, and Diminution in Measurable Musicke,' 1614. Campion's treatise, 'A New Way of making Fowre parts in Counter-point, by a most familiar and infallible Rule,' was first published without date, but probably about 1618; the second edition, with annotations by Christopher Sympson, was published in 1655 under the title of 'The Art of Setting or Composing of Musick in Parts by a most familiar and easie Rule'; and another edition called 'the last' appeared in 1664, with the word 'Setting' in the title changed to 'Descant.' The later editions were appended to the first eight or nine editions of John Playford's 'Introduction to the Skill of Musick.'

Dr. Campion died in 1619, and was buried on March 1 in that year in the church of St. Dunstan in the West, Fleet Street. [W. H. H.]

CAMPORESE, Violante, was born at Rome, 1785. She belonged to a good family, and had cultivated music only as an amateur; but, having married a gentleman of the noble family of Giustiniani, she found herself compelled by circumstances to practise it as a profession. She appeared at first only in concerts. Possessed as she was of a very good soprano voice and great facility of execution, she was already a talented singer, when she was engaged for the private concerts of Napoleon in Paris, where she so profited by the lessons of Crescentini as to become an admirable artist. Ebers, while in Paris in the autumn of 1816, was introduced to Mme. Camporese at the house of Paer, and gives a good account of her voice, style, and appearance. She possessed a fine-toned voice of more than two octaves, from C in alt. to A below; but her best notes were from C to F. She 'cultivated a pure, chaste, and expressive style, was a handsome and elegant woman of 31, with dark hair, eyes, and complexion, a tall, slender figure, a fine Roman countenance full of tragic dignity, and features rather strongly marked.' The purity and force of her singing, and the exquisite quality of her voice, were united to an execution refined, polished, and free from any effort at display. From Paris she went to Milan, where she sang at La Scala to crowded and enthusiastic houses. While there, she is said to have given up an evening engagement in order to visit a poor insane musician in the hospital, whom she soothed by singing to him. She was as kind and charitable as she was talented. In 1817 she was engaged for the King's Theatre in London, and made her début on Jan. 11, in Cimarosa's 'Penelope.' She was not accustomed to the stage, and was therefore at first nervous and embarrassed, and made little effect. A critic of the day said, 'Her intonation is generally good, and her science is indisputable. It is alike manifest in what she does and in what she declines. She never attempts in the way of ornament what she cannot perfectly execute. Catalani takes her hearers by storm; Camporese wins by more quiet, more regular, but not less certain approaches.' As Susanna in 'Le Nozze di Figaro,' she established her reputation, and this success was followed by another when she played Donna Anna in 'Don Giovanni.' In May she appeared as Agnese in Paer's opera of that name, taken from Mrs. Opie's 'Father and Daughter,' in which she delighted the critics by her pure and tasteful singing. Ambrogetti's acting, however, was so strongly and painfully dramatic, that the piece

gave more pain than pleasure, and was soon withdrawn. In July 'La Clemenza di Tito' was given, Camporese sustaining the principal part of Sesto. Lord Mount-Edgcumbe declares that she gave more effect to it than Braham or Tramezzani. She sang also at the Ancient Music and Philharmonic Concerts. Owing to a mistake, she was not re-engaged for the opera, and she consequently went to Milan. After singing there and at other places in Italy, she returned in 1821 to London, with an engagement for the season at a salary of £1550, with extra allowance for costumes, permission to sing at concerts, and her salary paid in advance. Meanwhile she was welcomed in all ranks of society, even the most exclusive. She sang, March 10, in 'La Gazza ladra,' with the greatest éclat; but, thinking she could succeed in comic parts still more than in tragic, she attempted Zerlina, but had the good sense not to repeat the experiment. In 1822 she was again engaged, and appeared in 'Le Nozze di Figaro' and 'Otello'; and she sang also at the concerts at the Argyll Rooms. She appeared again at the King's Theatre in 1823, bringing out at her benefit Rossini's 'Riccardo e Zoraide,' in which opera she took her leave Aug. 5. In 1824 she again returned; but her voice was worn, and she could not bear comparison with Malibran and Sontag, then in full force. She prudently retired to Rome; but we find her singing in Rossini's 'Aureliano' and other operas at Ancona, 1827. Two years later she came once more to London, and sang in concerts; but her voice was gone, and her performance was not successful. She had a public benefit concert, with guinea tickets, June 12. She was still living in 1860. [J. M.]

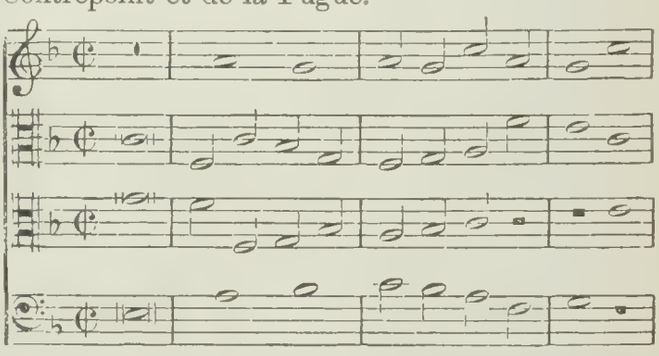
CANARIE. A now antiquated dance, deriving its name from the Canary Islands, whence it is said to have been introduced, in which the two partners danced alternately before each other with the gestures of savages (Littré). It was greatly in vogue at the time of Louis XIV. According to some authorities, however, it is of Spanish origin. It is a species of gigue, usually in 3–8 or 6–8 time, the distinctive peculiarity of which is that the first note of the bar is almost always dotted. In this respect it resembles the Loure, but differs from it in its tempo, the Canarie being moderately quick and the Loure somewhat slow. It always commences on the first beat of the bar, and consists of two short periods, each repeated. The following example, dating from the 17th century, is quoted from F. L. Schubert's 'Die Tanzmusik':—

A specimen may also be found, in 3–4 time by the way, in the second suite (or 'ordre,' to use the composer's own term) of the first book of Couperin's 'Pièces de Clavecin.' [E. P.]

CANCAN, a word applied by modern slang to a peculiar way of dancing at public balls, which became popular in Paris shortly after 1830, and has even been brought on the stage in operettas. It is neither a national dance nor a characteristic step; but a mere succession of extravagant jumps, with loose and obscene gestures, introduced into the usual figures of the quadrille. According to Francisque Michel it is called *cancan* either because the performers are imitating the walk of a goose (or rather a duck—*cane*), or because they quack like that animal. It is more probably from the Latin word *quamquam*, a fruitful subject of squabbles in the schools of the Middle Ages, and written indifferently 'cancan' and 'quanquan.' French people still employ the expression 'faire un grand cancan de quelque chose,' in order to say 'much ado about nothing.' [G. C.]

CANCRIZANS. This is a name given to canons by retrogression, on account of their *crab-like* motion—from the Latin word *cancer*, a crab. The German term is *krebsweis*. An example (from A. Andre's 'Lehrbuch der Tonsetzkunst') will best explain their construction.

Sometimes a canon is both cancrizans and by contrary motion—'Rétrograde-inverse,' of which we give an example from Fétis's 'Traité du Contrepoint et de la Fugue.'



Renversez le livre.

The book should be turned upside down to show the retrograde and inverse structure. [F.A.G.O.]

CANNABICH, CHRISTIAN, a violin-player, composer, and renowned orchestral conductor, was born at Mannheim in 1731. He was a pupil first of his father, a flute-player, and afterwards of Stamitz (see that name), the celebrated violinist at the head of the Mannheim orchestra. The Elector afterwards sent him to Italy, where he studied composition under Jomelli. In 1765 he was appointed leader, in 1775 conductor, of the orchestra at Mannheim; and in 1778 followed the Elector in the same capacity to Munich. He died in 1798 at Frankfort, while on a visit to his son.

Cannabich was a very good violinist and a fair composer, but all contemporary writers on musical matters lay most stress on his great skill as a leader and conductor. Mozart in many letters to his father praises the perfect ensemble in the orchestral performances at Mannheim, and speaks of Cannabich as the best conductor he ever met with. Burney, in his 'Tour through Germany,' is not less hearty in his praise, and Schubart, a German writer of considerable authority, reports upon the Mannheim orchestra in the flowery style of the period as follows: 'Here the *forte* is a thunder, the *crescendo* a cataract, the *diminuendo* a crystal streamlet babbling away into the far distance, the *piano* a breeze of spring.'

There can be no doubt that the performances at Mannheim under Cannabich enjoyed a special reputation for refinement and observance of *nuances*, somewhat like those of the Paris Conservatoire concerts at a later period. And although it has been suggested with much probability, that Cannabich had in this respect derived his experience from Italy, where his master Jomelli had introduced more refinement into orchestral playing, he must still be considered as one of the first and most successful promoters of that exact style of performance, which alone can do justice to the works of the great modern composers. He was also a successful teacher. Most of the violinists at Mannheim,—some of them artists of reputation,—were his pupils. That he was not only a fervent admirer of Mozart's genius, when it was by no means universally recognised, but also for many years a true and useful friend to the great master, is another point which secures him a lasting place in history, and in the hearts of all lovers of music.

He composed a number of operas, which however were not particularly successful. Some ballets and a considerable number of symphonies and quartets were much liked at the time, but appear to have been of little importance.

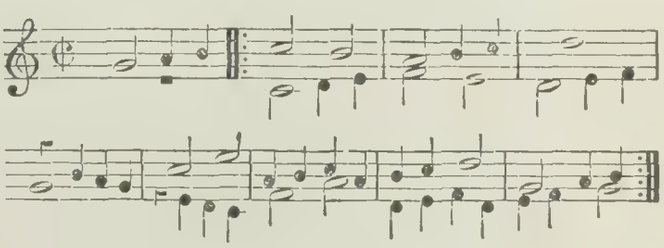
His son CARL, born at Mannheim in 1769, was also a good violinist and composer. After having for some time conducted the opera at Frankfort he succeeded his father in 1800 as conductor at Munich, and died there in 1806. His compositions are numerous but of no importance. Lists of the works of both father and son are given by Fétis. [P. D.]

CANNICIARI, DON POMPEO, a composer of the Roman school. The date of his birth seems to be unknown; but we know that he was appointed Maestro at S. Maria Maggiore in 1709, and that he retained that post until his death, which took place Dec. 29, 1744. He amassed a large musical library, and bequeathed it to the Basilica in the service of which his manhood had been passed. This collection, along with the other contents of S. Maria, has been dispersed, and much of it has probably been lost. In the Santini library there were various pieces by Canniciari:—Three masses for 4 and one for 5, six for 8 and four for 16 voices; four motets for 4 and ten for 8 voices; two Magnificats for 4 voices, with organ accompaniment; and an Ave Maria for 8 voices. He wrote music for two and for four choirs. An Ave Maria for 4 voices is given by Proske, 'Musica Divina,' ii. No. 10. [E. H. P.]

CANON. This is the strictest and most regular species of imitation. [See IMITATION.] It is practised in music for two, three, or more parts. The word is derived from the Greek *κανών*, a rule or standard. A canon, therefore, is a composition written strictly according to rule. The principle of a canon is that one voice begins a melody, which melody is imitated precisely, note for note, and (generally) interval for interval, by some other voice, either at the same or a different pitch, beginning a few beats later and thus as it were running after the leader. For this reason the parts have been sometimes respectively called 'Dux' and 'Comes,' or 'Antecedens' and 'Consequens.'

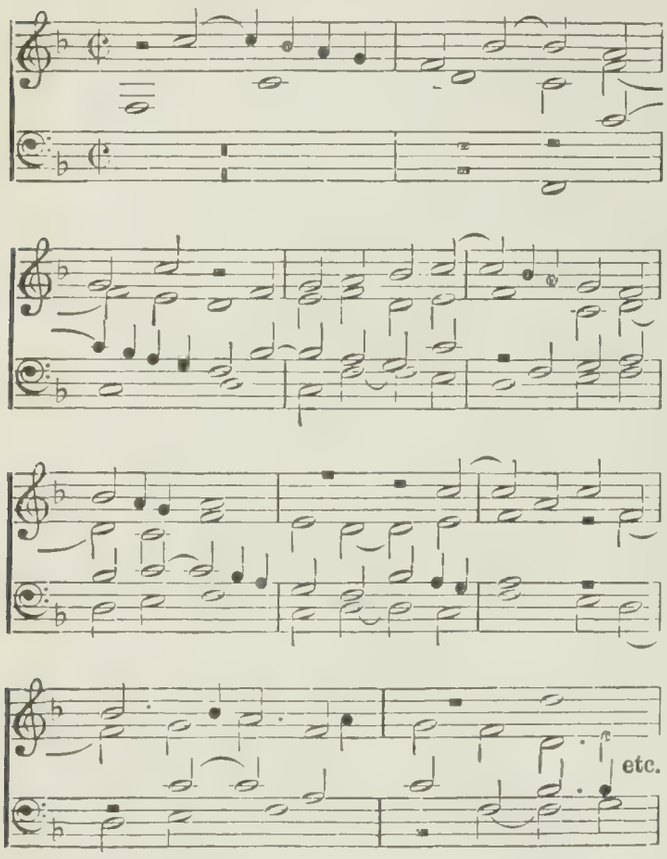
The following is a simple example of a canon 'two in one at the octave,' i.e. for two voices an octave apart, and both singing one and the same melody.

By means of a coda (or tail piece) this canon is brought to a conclusion. But many canons lead back to the beginning, and thus become 'circular' or 'infinite.' The following is a specimen of this kind, which is 'two in one at the fifth below,' or 'canon ad hypodiapente':—



Sometimes two or more canons are simultaneously woven into one composition. The

following, for instance (from Travers's Service, 1740), would be called a canon 'four in two.'



Byrd's 'Diliges Dominum,' for 8 voices, consists of 4 canons all sung together, each voice singing the melody of its fellow reversed.

Often in a quartet there may be a canon between two of the voices, while the other two are free; or three voices may be in canon and the fourth part free. We would quote as an example the admirable Gloria Patri to Gibbons's 'Nunc dimittis' in F, in which the treble and alto are in canon while the tenor and bass are free. Again, there are canons by inversion, diminution, augmentation, or 'per recte et retro,' cancrizans, &c. [See those headings.] A modern one of great ingenuity by Weber exists to the words 'Canons zu zwey sind nicht drey' (Jähns, No. 90).

The old writers often *indicated* canons by monograms, symbols, or other devices, instead of writing them out in full. Indeed they went so far as to write their indications in the form of a cross, a hand, or other shape, with enigmatical Latin inscriptions to indicate the solution. Such pieces were called 'enigmatical canons.' As compositions of this nature can only be regarded in the light of ingenious puzzles, bearing the same relation to music that a clever riddle does to poetry, it will be needless to give examples here,—let it suffice to refer to those which are to be found in Fétis's admirable 'Traité du Contrepoint et de la Fugue,' and in Marpurg's celebrated work on the same subjects.

The great masters were fond of the relaxation of these plays on notes. They occur often in Beethoven's letters, and the well-known Allegretto Scherzando of his 8th Symphony originated in a canon to be sung at Maelzel's table. Köchel's Catalogue of Mozart's works contains 23 canons; that of Weber by Jähns, 8; and an interesting collection will be found in the Appendix to Spohr's Autobiography. In Bach's '30 Variations' there are 9.

As popular examples of canons may be named Byrd's well-known 'Non nobis Domine,' which is a canon three in one, in the fourth and eighth below, and Tallis's 'Canon,' which is a hymn-tune (usually adapted to Ken's evening hymn) in which the treble and tenor are in canon while the alto and bass are free. The lover of cathedral music will find specimens of almost every variety of canon in the service by Purcell in B♭, which is a masterpiece of ingenuity and skill. Other good specimens will be found in the Collection of his Gloria Patris, published by V. Novello for the Purcell Club. On the tablet erected in the cloisters of Westminster Abbey to the memory of Dr. Benjamin Cooke, organist of Westminster Abbey at the close of the last century, there is engraved a canon, three in one, by *double* augmentation, which is one of the best extant specimens of that kind of composition. Another, by Andre, 4 in one, by *threefold* augmentation, is given in Ouseley's 'Counterpoint, Canon, and Fugue,' example 12.

Canons are often introduced into fugues as the closest species of 'stretto' [see FUGUE and STRETTO], and are to be found both in vocal and instrumental compositions. As specimens of the former we would refer, in addition to the references given above, to many of Handel's choruses, especially to one in Judas Maccabæus, 'To our great God,' which contains a canon by inversion; also to Sebastian Bach's magnificent cantata on the chorale 'Ein' feste Burg.' As specimens of instrumental canons we would refer to the first movement of Mozart's sonata for pianoforte and violin in E minor; or to the minuet of Haydn's symphony in the same key.

The word 'canon' is also applied, somewhat incorrectly, to a species of vocal composition called a ROUND. And thus we have duets, trios, and quartets 'a canone,' especially in the works of modern Italian composers, which are not really canons, but a much freer and less scientific kind of music. Good examples may be quoted in Beethoven's 'Mir ist' (Fidelio), Curschmann's 'Ti prego,' Cherubini's 'Perfida Clori,' and Rossini's 'Mi manca la voce.' [F.A.G.O.]

CANTATA. The idea of reviving the declamation of tragedies after the manner of the ancients led to the invention of recitative, which is attributed to Caccini and Giacomo Peri about 1600. It was at first confined to the opera, but the desire to adapt it to music for the chamber soon led to the invention of the Cantata, which in its earliest form was simply a musical recitation of a short drama or story in verse by one person, without action, accompanied in the simplest manner by a single instrument.

The first change was the introduction of an air, repeated at different points in the course of the

recited narrative; thus producing a primitive kind of rondo.

The cantata in this style was brought to great perfection by the Italians of the 17th century. The composer who produced the most perfect examples was Carissimi; apparently they are all for a single voice, or at most for two, with accompaniment of a single instrument—lute, cello, clavecin, etc. Shortly after his time the accompaniment took a much more elaborate form, and the violoncello parts to some of Alessandro Scarlatti's cantatas were so difficult that it was considered the mark of a very distinguished artist to be able to play them. Carissimi was the first to adopt this form of composition for church purposes. His cantatas, like those of his contemporaries, are only known by the first few words, so that it would answer no purpose to quote their names. One only is mentioned as having been written on a special occasion—the death of Mary Queen of Scots. Among his contemporaries the most famous cantata composers were Lotti, Astorga, Rossi, Marcello, Gasparini, and Alessandro Scarlatti, whose cantatas were extraordinarily numerous. One by Cesti, 'O cara liberta,' is said to have been especially famous. Specimens by most of these composers are quoted in Burney's History, and a collection of twenty-six by Carissimi was published in London at the end of the 18th century, apparently after Burney had finished his work. Twenty-six by Marcello for different voices with accompaniment of different instruments have also been published, and a great number for soprano and contralto with clavecin accompaniment.

At the beginning of the 18th century cantatas of more extended form and various movements were written by Domenico Scarlatti and by Pergolesi. The most famous was the 'Orfeo ed Euridice,' which the latter composed in his last illness. Handel also wrote cantatas after the same fashion, for single voices, both with accompaniments of strings and oboes, and with thorough bass for clavier, and many of these have been published. But they are not well known; and since his time this form of cantata has quite fallen into disuse, and has gradually changed into the concert-aria, of which Mozart has left many fine examples, and of which Beethoven's 'Ah, perfido!' and Mendelssohn's 'Infelice,' are well-known instances. The name Cantata is given to a composition by Mozart for three solo voices, chorus and orchestra in three movements, composed in or about 1783 (Köchel, No. 429).

The Church-Cantata is a much more extended kind of composition, and of these Handel also wrote some, mostly in his younger days, and at present little known (see Chrysander's Händel, i). The greatest and most valuable examples are the Kirchen-cantaten of Sebastian Bach. The number which he wrote is quite astonishing—a hundred have been published by the Bach-Gesellschaft alone, up to 1876, and more than as many more remain in MS. A list of the whole—232 in all—will be found in Miss Kay-Shuttleworth's sketch of his life. They are for four voices and full orchestra, and consist of from 4 to 7 movements—usually an opening chorus founded on a chorale-melody, recitatives, airs, and duets, and winding up with a chorale, often the same which is employed in the opening, in plain four-part harmony. Many of these, such as 'Christ lag in Todesbanden,' or 'Ein' feste Burg,' are marvels of contrapuntal skill, and others, such as 'Ich hatte viel Bekümmerniss,' are of great beauty and dignity. The supposition is that they were intended for use as anthems in the Sunday and Feast-day services. Mendelssohn adopted the same form in more than one of his early works, as in Op. 23, No. 1, and Op. 39, No. 3, which are written on chorales, and correspond closely with Bach's cantatas, though not so entitled.

In modern times the word Cantata is used to supply an obvious want. The idea as well as the use of 'Cantate di Camera' having quite gone out of fashion, the term is applied to choral works of some dimensions—either sacred and in the manner of an oratorio, but too short to be dignified with that title; or secular, as a lyric drama or story adapted to music, but not intended to be acted. Specimens of the former kind are very numerous. Of the latter we may mention Bennett's 'May Queen' and Brahms's 'Rinaldo.' [C.H.H.P.]

CANTATE DOMINO is the name by which the 98th Psalm is known in its place as an alternative to the Magnificat in the evening service of the Anglican church. The title is formed of the first words of the Vulgate version, according to the practice of the Anglican Psalter. The 17th canon of the council of Laodicea appointed lessons and psalms to be read alternately; and on this principle the 'Cantate' is to be considered as a 'responsory psalm' coming between the lessons. It has no history attached to it in the position it now occupies, as it was not used specially in the ancient church. It was not in the Prayer-Book of Cranmer, which was published in 1549, and consequently does not appear in Marbeck's 'Book of Common Praier Noted,' published in 1550. But it was introduced in the revision of 1552, probably to obviate the recurrence of the Magnificat when that canticle happened to be in the second lesson of the day.

It appears not to have been a favourite with musicians. Indeed the Magnificat is in every way preferable, as regards both the service and the opportunities the words seem to offer to the composer. 'Cantate Services' are therefore rare, and in the most famous collections of our church music there are very few of them. In Barnard there is not one; in Boyce only three, viz. two by Blow and one by Purcell; and in Arnold one by Aldrich and one by King. [C.H.H.P.]

CANTICLE is the name now generally given to certain hymns taken from the Bible, and sung in the services of the different churches of Christendom: such as the Benedictus, the Benedicite, the Magnificat, and the Nunc Dimittis. In the

Prayer-Book the word is used for the Benedicite only. The word is derived from the Latin *canticum*, the term applied in the Vulgate to the Song of Moses, the Song of Solomon, many of the psalms, etc., etc. In the Calendar of the Prayer-Book the Song of Solomon is entitled 'The Canticles,' but in common parlance the above is the meaning of the term. [C.H.H.P.]

CANTO (Lat. *Cantus*; Fr. *Chant*). With the Italians this word has a great variety of acceptations; e.g. music, instrumental as well as vocal; the *motif*, subject or leading idea, of a musical composition; the art and practice of singing; a section of a poem, etc., etc. Canto fermo or cantus firmus is the tune or melody of an ancient hymn on which a motet is founded, and which remains *firm* to its original shape while the parts around it are varying with the counterpoint. Technically canto is more generally understood to represent that part of a concerted piece to which the melody is assigned. With the old masters this was, as a rule, the TENOR; with the modern it is almost always the SOPRANO. Thence canto (voice as well as part) has become synonymous with soprano. The canto clef is the C clef on the first line— . [J.H.]

CANTO FERMO, OR CANTUS FIRMUS, the plain song—as distinguished from Canto figurato, the florid or figured song—is the simple unadorned melody of the ancient hymns and chants of the church. Such tunes are often employed by the great church composers of the Roman church as the basis of their compositions. Thus in Palestrina's masses 'Æterna Christi munera,' and 'Assumpta est Maria,' each movement begins with the first phrase of the hymn. His motet 'Beatus Laurentius' is still more completely founded on the canto fermo, since the tune is sung throughout the piece in the first tenor, while the other four parts are moving in counterpoint above and below it—a counterpoint more or less closely modelled on the tune. In such cases the tune is usually marked in the score as C. F. (canto fermo). Bach treats his choral-melodies in the same way (see his cantata 'Ein' feste Burg'; his organ 'Vorspiele' on 'Kyrie'; 'Christe'; 'Kyrie'; on 'Allein Gott'; 'Dies sind die heiligen'; 'Vater unser,' etc., etc.), and in so doing styles them 'canti fermi.' In English the term is often translated by 'Plain-chant.' [G.]

CANTORIS. One of the most prominent features of the singing in the services of the Christian churches is its antiphonal character; that is, the manner in which the singers on either side of the church answer one another in the chants or in passages of the music. In order to distinguish the sides from one another in English cathedrals the words *Decani* and *Cantoris* are used, the former being the side of the dean's stall on the south or right-hand side when facing the altar, and the latter that of the cantor or precentor on the north or left-hand side. [C. H. H. P.]

CANZONA (Ital.) The name of a particular variety of lyric poetry in the Italian style, and of Provençal origin, which closely resembled the madrigal. Musically, the term is applied (1) to the setting to music of the words of a canzona, whether for one or more voices, the only difference between the canzona and the madrigal being that the former was less strict in style. (2) The name was also given to an instrumental piece written in the style of a madrigal. An example of such a canzona, by Sebastian Bach, may be found in the fourth volume of Griepenkerl's edition of his organ works. (3) It appears to have been used as an equivalent for sonata for a piece of several movements; and also as a mark of time, in place of Allegro (Brossard). [E.P.]

CANZONET (in Italian *Canzonetta*) originally meant a smaller form of canzona. Morley in 1597 published 'Canzonets or little short songs to four voices; selected out of the best and approved Italian authors.' Afterwards the word was used for vocal soli of some length in more than one movement; nowadays it is applied to short songs, generally of a light and airy character. Haydn has left us some admirable canzonets, grave and gay; for example, 'She never told her love,' and 'My mother bids me bind my hair.' [W.H.C.]

CAPELLA (Ital. a chapel). Di capella, or à capella, mean in a church-like fashion, as distinguished from Di camera, or Di teatro, in the fashion of the chamber or the theatre. [CHAPELLE.] The same word in German, CAPELLE, means the private band of a court or church, or even a dance-orchestra, and CAPELLMEISTER the conductor of the same. [KAPELLE.] [G.]

CAPORALE, ANDREA, an Italian cello-player who arrived in London in 1735, and excited much attention. In 1740 he joined Handel's opera-band, and died in London in or about 1756. He was more famous for tone and expression than for execution. [G.]

CAPO TASTO (Ital., from *Capo*, head, and *tasto*, touch, or tie; Germ. *Capotaster*, sometimes *Capo d'astro*). In Italian the nut of a lute or guitar, but also the general name of a contrivance for shortening the vibratory lengths of strings, thus forming a second nut, expressed in French by 'barre,' to facilitate change of key. The construction of a capo tasto varies according to the stringing and shape of the neck of the instrument it is to be applied to, but it may be described as a narrow rail of hard wood, metal, or ivory, clothed with leather or cloth, and often fastened by a screw upon the fret from which it is intended to mark off the new length of the strings. There are other but less simple ways of attaching it. The technical advantage of using a capo tasto is that higher shifts can be more easily obtained; and the use of open strings, upon which the possibility of chords often depends, is facilitated in a higher compass than that natural to the instrument. How much transposition may be facilitated by it is thus shown by Herr Max Albert in Mendel's Lexicon.

Take a guitar the strings of which are tuned in real notes

the basis of sharp keys: with a capo tasto on the first semitone fret we have

the basis of flat keys, the fingering remaining the same. With bow instruments the capo tasto is no longer used, but it was formerly with those having frets as the viol da gamba. The use of the thumb as a bridge to the violoncello serves as a capo tasto, as also, in principle, the pedal action of the harp. [A.J.H.]

CAPRICCIETTO (Ital., dimin. of *capriccio*). A Capriccio, on a small scale, and of no great development. [E.P.]

CAPRICCIO (Ital.; Fr. *caprice*). (1) This name was originally given, according to Marpurg, to pieces written for the harpsichord in a fugued style, though not strict fugues. It was also sometimes applied to actual fugues, when written upon a lively subject; and the composition was consequently for the most part in quick notes. Examples of this kind of capriccio can be found in Handel's 'Third set of Lessons for the Harpsichord' (German Handel Society's edition, part 2), and in the second of Bach's 'Six Partitas.' Bach also uses the word as synonymous with 'fantasia,' i.e. a piece in a free form, in his 'Capriccio on the departure of a beloved brother.' (2) In the middle of the last century the term was applied to exercises for stringed instruments, such as would now be called 'études,' in which one definite figure was carried through the composition. (3) In the present day the word Caprice is usually employed, and the name is applied to a piece of music constructed either on original subjects, and frequently in a modified sonata- or rondo-form (as in Mendelssohn's 'Three Caprices,' op. 33, or Sterndale Bennett's Caprice in E), or to a brilliant transcription of one or more subjects by other composers. As an example of the latter kind may be named Heller's 'Caprice brillant sur la Truite de Schubert.' Although, as already mentioned, the sonata- or rondo-form is frequently adopted for the caprice, there is, as implied by the name, no limitation in this respect, the composer being at liberty to follow his inclinations. [E.P.]

CAPULETTI ED I MONTECCHI, I, an Italian opera in 3 acts, taken from Romeo and Juliet; libretto by Romani, music by Bellini, produced at Venice March 12, 1830, at Paris Jan. 10, 1833, and in London at the King's Theatre July 20, 1833. A fourth act was added by Vaccai, and is usually performed. [G.]

CARACCIO, Giovanni, was born at Bergamo about the middle of the 16th century. He was at first a singer in the private choir of the Elector of Bavaria. Having quitted this service he spent some years at Rome and at Venice, and then returned to his native place, where he was appointed Maestro at the cathedral. He held this post for twenty-three years, when he migrated to Santa Maria Maggiore at Rome, remaining there until his death in 1626. He was one of those fourteen composers of different nations who showed their appreciation of Palestrina's genius by dedicating to him a volume of Psalms to which each had contributed. [Palestrina.] His published works are:—Magnificat omnitonum, pars 1; Venice 1581. Magnificat omnitonum, pars 2; Venice 1582. Madrigali a 5 voci, lib. 1; Venice 1583. Musica a 5 voci da sonare; id. 1585. Dialogo à 7 voci nel, lib. 1, di Madrigali di Claudio da Correggio; Milan 1588. Madrigali a 5 voci, lib. 2; Venice 1589. Salmi di compieta con le antifone della Vergine, ed otto falsi bordoni a 5 voci; Venice 1591. Salmi a cinque per tutti i vesperi dell' anno, con alcuni hymni, mottetti, e falsi bordoni accommodati ancora a voci di donne; Venice 1593. Madrigali a 5 voci, lib. 4; Venice 1594. Salmi a cinque; Venice 1594. Madrigali a 5 voci, lib. 5; Venice 1597. Canzoni francesci a quattro; Venice 1597. Canzonette a tre; Venice 1598. Madrigali a 5 voci, lib. 6; Venice 1599. Messe per i defonti a quattro e cinque, con motetti; Milan 1611.

Bergameno has inserted some of Caraccio's work in his 'Parnassus musicus Ferdinandæus,' 2–5 vocum; Venice 1615. [E.H.P.]

CARADORI-ALLAN, Maria Caterina Rosalbina, *née* de Munck, was born in 1800 in the Casa Palatina at Milan. Her father, the Baron de Munck, was an Alsacian, and had been a colonel in the French army. Mlle. Munck's musical education was completed entirely by her mother, without assistance. Her father's death obliged her to avail herself of her gifts in order to support herself. Having attempted the stage in the course of a tour through France and part of Germany, she took her mother's family name of Caradori, and accepted an engagement in London in 1822. She made her début on Jan. 12 at the King's Theatre as Cherubino. 'It may be observed,' says Lord Mount-Edgcumbe, 'as an odd coincidence that Pasta, Vestris, and Caradori all have acted the Page in Le Nozze di Figaro, and none more successfully than the last, who by accident, not choice, made her début in that part; and it proved fortunate for her, as her charming manner of performing it laid the foundation of her subsequent favour.' She sang afterwards in 'La Clemenza di Tito,' 'Elisa e Claudio,' and 'Corradino,' as prima donna; and in 1824, as seconda donna, in 'Il Fanatico,' with Catalani. She continued engaged through 1823 and 24; and in the latter year took her benefit in 'Don Giovanni.' In 25 she sang the second part in 'L'Adelina' of Generali, with Mad. Ronzi de Begnis as prima donna, showing thereby her great good nature. The same year, she played Fatima in Rossini's 'Pietro l'eremita,'

and chose 'Così fan tutte' for her benefit; and at Velluti's début in 'Il crociato,' Mme. Caradori sang the first woman's part, distinguishing herself particularly in the duet 'Il tenero affetto' with the musico. In 1826, though still belonging to the company, she was removed for the purpose of introducing Bonini, who was better suited as a foil for Velluti; and Caradori, when she re-appeared in 'La Donna del Lago,' was received with joy by the public. She sang also in the 'Barbiere' and in 'Romeo e Giulietta;' and took her benefit in 'Le Nozze,' as Susanna.

Pasta having returned to London, and chosen Mayer's 'Medea' for her benefit, Caradori acted and sang most charmingly the tender and gentle part of Creusa. There is a good portrait of her in this character by J. Hayter, lithographed by Hullmandel. Her voice, though not very powerful, was exceedingly sweet and flexible, and her style almost faultless. She had much knowledge of music, and sang with great delicacy and expression. In a room she was perfect. Her appearance was interesting, her countenance very agreeable, and her manner modest and unassuming: she always pleased, though she never astonished, her audience. Her salary rose gradually from £300 in 1822 to £1200 in 27. In 34, happening to be again in England, she carried on the operas with tolerable success until the arrival of the expected prima donna, Giulia Grisi. But it was in concerts that she now achieved her greatest success, and first of all in the Festival in Westminster Abbey in this same year, in which she sang with her usual excellence, and was well heard, though it had been feared that her voice was not powerful enough for so large a space. Her 'With verdure clad' appeared to Lord Mount-Edgcumbe to be 'decidedly the best solo performance of the whole concert.' She took part also in the performance of the 'Mount of Olives,' 'in which it need not be said she sang well,' and gave equally well 'Rejoice greatly,' which, though a brilliant song, did not show her to the best advantage. During the carnival of 1830 she sang with success at Venice, but after 1835 she remained in England, singing at festivals and concerts. She sang the soprano part in 'Elijah' at Birmingham, Aug. 26, 1846, when Mendelssohn's judgment of her performance was not so favourable as Lord Mount-Edgcumbe's (Letters, Aug. 31). She died on Sunday, Oct. 15, 1865. [J.M.]

CARAFA, Michele, born at Naples Nov. 28, 1785; studied under Fazzi, Fenaroli, and Ruggi, and in Paris under Cherubini. His first opera was 'Il Fantasma.' So little however did Carafa feel his vocation that he entered the army, and became an officer in the bodyguard of Murat, then king of Naples. Like Henri Beyle (Stendhal) he made the campaign of Russia in 1812, and was decorated by Napoleon. After the Emperor's fall he left the army and embraced music as his profession. His first opera, 'Il vascello di occidente,' was produced at Naples in 1814, and was followed by a large number of others. 'Gabriele' (1818), 'Ifigenia,' 'Berenice,' etc., etc., were produced in Italy, but he was equally successful in Vienna and in Paris. In the latter city he made his début with 'Le Solitaire,' Aug. 17, 1822, which long remained extraordinarily popular. In 27 he took up his residence in Paris, and brought out 'La Violette,' 'La fiancée de Lammermoor,' 'Masaniello' (Dec. 27, 1827, evidently written in competition with Auber's 'Muette,' Feb. 29, 1828), 'La prison d'Edimbourg,' etc. These operas, and many others, were very popular, notwithstanding the immense counter attractions of Auber and Rossini. This they owe more to an easy flow of melody and natural unaffected instrumentation than to any original character, and in consequence they have now fallen into oblivion. As a composer for the pianoforte Carafa was almost equally the fashion, and at Cherubini's instance he was made Professor of Composition in the Conservatoire shortly after his arrival in Paris, a post which he was still filling in 1876. In 1837 he was elected a member of the Académie des beaux arts.

The 'Dictionnaire lyrique' of M. Felix Clement mentions no less than 35 of his operas. [G.]

CARDARELLI, Signora, a singer who performed the part of Marina in Sacchini's 'L'Isola d'amore' at the King's Theatre in 1776. [J.M.]

CARDON, Louis, a harpist of great repute, of Italian parentage, but born in Paris 1747. On the outbreak of the Revolution he migrated to Russia, where he died in 1805. His 'Art de jouer la harpe' was for long esteemed. His brother Pierre, born 1751 in Paris, was a singer and cello player. [M.C.C.]

CARDOSO, Manuel, a Spanish priest, born at Fronteira 1569; entered the Carmelite order at Lisbon 1588, and became its sub-prior and chapel-master, and a great favourite of King John IV. His works are exclusively for the church. Several are said to have been published, but only one is quoted, 'Livro . . . na Semana Santa,' Lisbon 1648. Two motets are given by Proske in the 'Musica Divina,' ii. Nos. 5 and 33. [M.C.C.]

CARESANA, Cristoforo, an Italian musician of note, born at Tarentum 1655, and settled in Naples in 1680. He published motets, hymns, and duetti da camera, and left many MSS. in the library at Naples. But his most famous work is his 'Solfeggi' (Naples, 1680), of which Choron published a new edition for use in the Conservatoire. [M.C.C.]

CARESTINI, Giovanni, one of the greatest of Italian singers, was born at Monte Filatrano, Ancona, about 1705. At the age of 12 he went to Milan, where he gained the protection of the Cusani family, in gratitude to whom he assumed the name of Cusanino. His voice, at first a powerful clear soprano, afterwards changed to the fullest, finest, and deepest contralto ever, perhaps, heard. His first appearance was at Rome 1721, in the female part of Costanza in Buononcini's 'Griselda.' In 1723 he sang at Prague, at the coronation of Charles VI as King

of Bohemia. The following year he was at Mantua, and in 1725 sang for the first time at Venice in the 'Seleuco' of Zuccari, and in 1726 with Farinelli and Paita. In 1728 and 30 he visited Rome, singing in Vinci's 'Alessandro nell' Indie' and 'Artaserse.' Owen Swiny, happening to be in Italy with Lord Boyne and Mr. Walpole, wrote to Colman from Bologna, on July 12, 1730, mentioning letters which he had received from Handel, and goes on to say: 'I find that Senesino or Carestini are desired at 1200 guineas each, if they are to be had. I am sure that Carestini is engaged at Milan, and has been so for many months past.' Senesino was engaged for London on this occasion; but three years later Handel was more fortunate, and Carestini made his début here on Dec. 4, 1733, in 'Cajus Fabricius,' a pasticcio; and his magnificent voice and style enabled Handel to withstand the opposition, headed by Farinelli, at the other house. In 34 he sang in 'Ariadne,' 'Pastor Fido,' 'Parnasso in Festa,' 'Otho,' 'Terpsichore,' 'Deborah,' and 'Athaliah'; and the next season in 'Ariodante' and 'Alcina.' In the cast of the latter his name is spelt Carestino, as it is also by Colman. In 'Alcina' occurs the beautiful song 'Verdi prati,' which he sent back to the composer as not suited to him. Handel on this became furious, ran to the house of the singer, and addressed to him the following harangue: 'You tog! don't I know petter as yourseluf vaat es pest for you to sing? If you vill not sing all de song vaat I give you, I will not pay you ein stiver' (Burney). In 1735 Carestini left England for Venice, and for twenty years after continued to enjoy the highest reputation on the continent, singing at Berlin in 1750, 54, and 55. In 55 he was engaged at St. Petersburg, where he remained till 58, when he quitted the stage, to retire to his native country and enjoy a well-earned repose. Shortly after, he died. He was held in the highest esteem by Handel, Hasse, and other composers, in whose works he had sung. Quantz says: 'he had one of the strongest and most beautiful contralto voices, which extended from D (in the F clef) to G above the treble clef. He was also extremely perfect in passages which he executed with the chest-voice, according to the principles of the school of Bernacchi, and after the manner of Farinelli: in his ornaments he was bold and felicitous. He was also a very good actor; and his person was tall, handsome, and commanding. There is a good mezzotint of him by J. Faber, engraved in 1735 from a picture by George Knapton, of which a fine impression is now rare. [J. M.]

CAREY, Henry, a reputed natural son of George Savile, Marquis of Halifax, was a popular composer and dramatist in the first half of the 18th century. His first music-master was a German named Olaus Westeinson Linnert, and he subsequently received instruction from Roseingrave and Geminiani. Although possessed of ready invention as a melodist, yet, his acquaintance with the science of his art being but limited, he had to gain a subsistence chiefly by teaching. In 1715 he wrote and composed the music for the farce of 'The Contrivances; or, More Ways than One,' which was produced at Drury Lane Theatre on August 9 in that year with much success. The character of Arethusa in this piece was long the probationary part for female singers before they ventured on parts of more importance. His next production was a farce called 'Hanging and Marriage; or, The Dead Man's Wedding,' performed March 15, 1722, at Lincoln's Inn Fields Theatre. In 28 he set to music the songs in Vanbrugh and Cibber's comedy 'The Provoked Husband.' He next wrote the operas of 'Amelia' (the music by Lampe), which was performed at the Haymarket Theatre in the summer of 1732, and 'Teraminta,' which was set to music by John Christopher Smith and produced at Lincoln's Inn Fields Theatre on Nov. 20, 1732. Each of these pieces was described as 'a New English Opera after the Italian manner.' On Dec. 2, 32, Carey produced at Drury Lane Theatre a ballad opera called 'Betty; or, The Country Bumpkins,' which met with a cold reception. In 33 he wrote and composed a musical entertainment called 'Cephalus and Procris,' which was produced at Drury Lane Theatre with a pantomime interlude entitled 'Harlequin Volgi.' On Feb. 22, 1734, he produced at the Haymarket Theatre 'The most Tragical Tragedy that ever was Tragedized by any Company of Tragedians, called, Chrononhotonthologos'; a highly humorous burlesque of the bombast and fustian prevalent among some of the dramatists of the day, and especially of their partiality for tautologous expressions. This he also described as his 'Tragedy of half an act.' In 1735 he produced a ballad-opera entitled 'A Wonder; or, the Honest Yorkshireman,' performed by the Covent Garden company at Lincoln's Inn Fields Theatre for one night only, July 11, 1735, but which, when transferred to the Haymarket and Goodman's Fields Theatres later in the same year under its second title, met with such success that it was soon adopted at the other theatres and long remained a stock piece. On Oct. 26, 1737, Carey's burlesque-opera 'The Dragon of Wantley,' a satire on the Italian opera of the day, the music by Lampe, was produced at Covent Garden Theatre with such signal success that it ran 67 nights during the season. In the next year the author and composer joined in the production of a sequel entitled 'Margery; or, A Worse Plague than the Dragon' (a title afterwards changed to 'The Dragoness'), which was produced at Covent Garden Theatre on Dec. 9, 1738. Although by no means deficient in merit, its success was but partial. In 39, on the breaking out of the war with Spain, Carey wrote and composed a musical interlude called 'Nancy; or, The Parting Lovers,' which was brought out at Drury Lane Theatre and was remarkably successful. It was revived at Covent Garden Theatre, with alterations in 1755 (on the prospect of a war) under the name of 'The Press Gang; or, Love in Low Life,' and frequently brought forward on similar

occasions under the title of 'True Blue.' In the latter part of his life Carey collected his principal dramatic pieces and published them in 1743 by subscription in a quarto volume.

In 1720 Carey published a small volume of his poems. This he afterwards enlarged and published by subscription in 29, with the addition of a poem called 'Namby Pamby' (a good-humoured satire on a poem written by Ambrose Phillips on the infant daughter of Lord Carteret), which received the commendations of Pope.

The songs and cantatas written and composed by Carey were very numerous. In 1732 he published 'Six Cantatas,' and in 1739-40, under the title of 'The Musical Century, in One hundred English Ballads on various subjects and occasions, adapted to several characters and incidents in Human Life, and calculated for innocent conversation, mirth and instruction,' issued two folio volumes of songs written and composed by himself, to the first of which his portrait is prefixed. A second edition appeared in 1740, and a third in 43. Of all his compositions, the most popular, and that which will transmit his name to posterity, is his ballad of 'Sally in our Alley,' one of the most striking and original melodies that ever emanated from the brain of a musician. The author's account of its origin is as follows:—'A shoemaker's prentice, making holiday with his sweetheart, treated her with a sight of Bedlam, the puppet shows, the flying chairs, and all the elegancies of Moorfields, from whence proceeding to the Farthing Pye House he gave her a collation of buns, cheese-cakes, gammon of bacon, stuffed beef and bottled ale, through all which scenes the author dodged them. Charmed with the simplicity of their courtship, he drew from what he had witnessed this little sketch of nature.' He adds, with pardonable pride, that Addison had more than once expressed his approbation of his production.

Carey died at his house in Great Warner Street, Clerkenwell, on Oct. 4, 1743. It has been generally said that 'he put a period to a life which had been led without reproach, at the advanced age of eighty, by suicide,' and the impulse to the act has been variously assigned to pecuniary embarrassment, domestic unhappiness, and the malevolence of some of his fellow professors. But the manner of his death seems doubtful. In the Daily Post of Oct. 5, 1743, we read 'Yesterday morning Mr. H. Carey, well known to the musical world for his droll compositions, got out of bed from his wife in perfect health and was soon after found dead. He has left six children behind him.' An advertisement in the same newspaper on Nov. 17, 43, announces a performance on that evening at Covent Garden Theatre 'For the Benefit of the Widow and Four small Children of the late Mr. Henry Carey,' in which the widow describes herself as 'left entirely destitute of any provision.' His age at the time of his death was probably much overstated. Sir John Hawkins thus estimates Carey's abilities:—'As a musician Carey seems to have been one of the first of the lowest rank; and as a poet the last of that class of which D'Urfey was the first, with this difference, that in all the songs and poems written by him on wine, love and such kind of subjects, he seems to have manifested an inviolable regard for decency and good manners.'

Carey's posthumous son, George Savile Carey, inherited much of his father's talent. He became an actor, but not succeeding he contrived by giving entertainments of singing, recitation, and imitations, to earn a precarious living for about forty years. In the latter part of his life he claimed for his father the composition of 'God save the King,' and the claim occupied much attention for some time. Indeed it is still as hotly debated as ever, and will probably never be satisfactorily decided. G. S. Carey's daughter, Anne, was the mother of Edmund Kean, the tragedian. [W.H.H.]

CARILLON is the name given to a set of bells so hung and arranged as to be capable of being played upon, either by manual action or by machinery, as a musical instrument, i.e. so as to give out a regularly composed melody in correct and unvarying time and rhythm, in contradistinction to the wild and irregular music produced by change-ringing on a peal of bells hung to swing in the more usual manner. [Bells.] A much larger number of bells are required to make a good carillon than are ever hung for an ordinary peal, which latter, owing to the difficulties of ringing and the space required for the bells to swing in, can scarcely exceed ten or at most twelve bells with advantage, whereas a carillon peal not infrequently includes as many as forty or more bells, the adequate performance of set tunes requiring not only a more extended range but the presence of the chromatic intervals of the scale, instead of the simple diatonic scale of the ordinary peal. The most radical distinction in the method of hanging and sounding a carillon as compared with a peal is that while in the latter the bells are slung to a wheel and axle, and are sounded by the stroke of the clapper inside on being swung round, in the carillon the bells are absolutely fixed on the frame, and are struck by a hammer on the outside. It is owing to this stationary position of the bell that so large a number of bells can be safely hung in a tower which would not accommodate half the number of swinging bells; and it is obvious that the precise moment of the stroke is much more under the control of the ringer when he has only to regulate the striking of the hammer than when he has to bring about this by causing the bell to swing: and it need hardly be mentioned that the system of striking on the outside of the bell is always employed when the latter is made use of for striking the hours upon in connection with a clock. In fact, the carillon system, when sounded mechanically (as in a majority of cases it is), may be regarded as an extension and multiplication of the stroke of the clock, with which it is generally connected, rather than as allied to bell-ringing properly

so-called. Occasionally, however, the ringing-bells are also used as part of the carillon, an apparatus being fitted up in the ringing chamber whereby the carillon and clock hammers can be simultaneously pulled off the bells before commencing the ringing of the peal.

The system of playing tunes on small bells, hung in a graduated order and struck by hand, is believed to be of some antiquity, as indicated by occasional illustrations of some such system in mediæval manuscripts; and it seems probable enough that so obvious a means of music-making in a simple form may be even older than any such records imply. But we first meet with carillon music in its greater form in the 15th century, when the steeples of the churches and hôtels-de-ville of Holland, Belgium, and North Germany made the country resound with the bell-music for which Belgium especially was famed during that and the three succeeding centuries. The Van den Gheyn family, of whom the most notable member, Mathias van den Gheyn, was born in 1721, were pre-eminent among the Belgian makers of carillons; Mathias himself having been also an organ-player and carillon-player. The family were of Mechlin, but migrated to Louvain, where the traditions of their manufacture are kept up by the firm of Aerschodt. Among the most celebrated and largest carillon-peals of the continent may be mentioned those of Antwerp (40 bells), Bruges (48 bells), Malines (44 bells), Ghent (48 bells), de Tournai (42 bells), de Boulers (39 bells), Louvain[1] (35 bells), etc. It is worth remark that this bell-music has had its special development in flat countries, where its loud and travelling sounds are heard with far more effect and at far greater distance than in hilly districts, where the sound is closed in, interrupted, and echoed back. Indeed, the instinctive feeling which has led to great sets of bells being placed in the towers of flat countries is analogous to the instinct which gave rise to the towers themselves. A flat landscape suggests the building of towers, which become far-seen landmarks. and connect one city with another; and what the towers were to the eye the bells were to the ear, sending greeting or warning from one city to another over a vast expanse of level landscape.

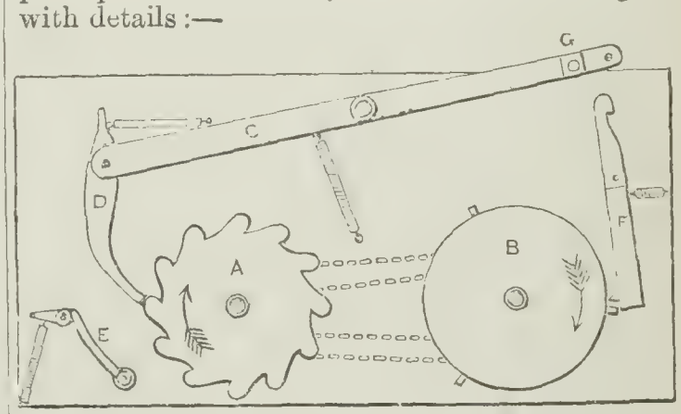
Carillon-playing in these cities of the Low Countries, however, was not always a mere piece of mechanism; it took rank as a branch of executive art in music, and required the culture of a musician to develop its resources. The Belgian and Dutch carillons were furnished with a keyboard, rough and uncouth enough indeed, but still such as enabled the carilloneur to perform pieces in two, or (by the aid of pedals and of the prolonged resonance of the bells) even in three parts. Compositions were written for or extemporised on them; and some of the 'morceaux fugués' for carillons by Mathias van den Gheyn have been collected and published (by Messrs. Schott & Co.). The bells which were intended thus to be played by hand were furnished with an inside clapper as well as the outside hammers, the clapper being connected by a wire with the keyboard below, and the hammer operated upon by the mechanical barrel, so that the same set of bells could be played either by machinery or by hand. The keyboard, though arranged on the same principle as the ordinary pianoforte keyboard, was a large affair with wooden keys, so far distant from one another as to admit of being struck with the fist without disturbing the keys on either side; for as the leverage of the key had to raise the weight of the clapper, which in the larger bells was considerable, and as the force of the sound depended also in great measure on the force with which the key was struck, it is obvious that mere finger work was out of the question. The keyboard in fact was analogous rather to the pedal board of an organ, and in some cases the largest bells actually were connected with pedal keys, so as to enable the player to strike a heavier blow than he could with his hands. It may easily be imagined that, on this system, carillon-playing was a matter of no small physical exertion, and required the performer to possess *mens sana in corpore sano* to have a chance of getting successfully through his task, for which he clothed himself generally in a suit of flannels alone, the hands being protected by thick gloves to prevent injury in striking the keys.

It was perhaps owing to these practical difficulties that the art of carillon-playing never seems to have been very extensively practised, and has now very much fallen into disuse. But the difficulty arising from the player having to contend with the weight of the clapper in sounding the bells was even more felt in the application of chiming machinery to the hammers which struck on the exterior of the bells. The chimes were sounded by means of a large barrel connected with and regulated by clockwork, by which it was periodically released, and driven round under the ordinary motive power of a weight, strong pins fixed on the barrel coming in contact, each at the proper moment, with levers which raised the hammers, and released them to fall upon the bell at the moment when the pin on the barrel quitted the lever. The barrel was 'pricked' for various tunes (generally seven or eight), a change being effected by shifting it slightly, on the principle familiar to every one in the 'musical-box' toy, which is in fact a carillon on a minute scale, playing on vibrating tongues instead of on bells. The application of this principle, on the large scale necessary for carillon-ringing, is fraught with difficulties, which the rude and unscientific system still prevalent on the continent (and clung to, apparently, with the same kind of conservatism which leads the North German organ-builders to ignore all the refinements of modern mechanism) quite failed to meet. As with the clavier-system, the difficulty really lies in the weight to be overcome in lifting the striking hammer. As the pins on the barrel had to take this whole weight, it was necessary

[1] The Louvain peal has been reproduced, or nearly so, in the carillon made by Gillet and Bland for Cattistock church in Dorsetshire.

that they should be very strong, and the barrel itself thus became so large, cumbrous, and expensive an affair as to add very much to the difficulties of fixing a large carillon-machine both in regard to cost and space. The time occupied in raising the hammer rendered any rapid repetition of a note impossible with a single hammer, especially with the larger bells; consequently a large proportion of the bells had to be furnished with two or more hammers to provide for this difficulty, the pins being arranged so as to sound two or three hammers successively on the same bell when the immediate repetition of a note was required. The method of sounding the note by the release of the lever from the pin did not conduce to precise accuracy in the time of sounding, but a much more serious interference with correct *tempo* arose from the fact that as some of the heavier hammers offered much greater resistance to the pins than others, while the barrel was driven by the same uniform weight, the progress of the tune was constantly retarded before the striking of the larger bells, producing the irregular or 'stuttering' effect which those who have listened to carillon chimes must have noticed.[1] The system is in fact mechanically so clumsy, and involves so much loss of time and power, that it is obvious that carillon-chimes, if worth doing at all, are worth doing better than this.

England has borrowed the idea of carillons only recently from the continent, but has the credit of inventing and perfecting the principle of mechanism which has surmounted all the above-named drawbacks of the Belgian carillon machinery. The part which English science and ingenuity has played in the matter is, in fact, exactly similar to that which it has taken in regard to organ-building. We borrowed from the Germans the idea of the grand instruments with full pedal organ which supplemented the 'box of whistles' of the old English builders, but our modern builders have applied to them mechanical refinements which have almost revolutionised organ-playing (not perhaps always in the right direction), and have placed at the disposal of the English organist facilities for variety of effect and brilliant execution such as his German brother in the art is scarcely cognisant of at all. In regard to the improvement in carillons it is only simple justice to say that, so far, its history is identified entirely with one firm, who perseveringly set themselves to accomplish the task of simplifying and perfecting the control of the bells on true mechanical principles. Messrs. Gillett and Bland, of Croydon, clock manufacturers, having turned their attention to the construction of carillons, aimed at getting rid of the main difficulty which is, as we have shown, at the bottom of all the defects of the old system, namely, the use of the same action both for lifting and letting go the hammers. The principle on which this improvement is effected is by the introduction of a revolving cam wheel beneath each lever, which, continually turning, raises the lever the moment the hammer has struck the bell, so that the latter is at once brought into position again for striking, and the action of the pins on the barrel, instead of being a lifting and letting-off action, is merely a letting-off, the whole of the lifting being done by the cam wheels. As in many other mechanical inventions, the simplicity of action which characterises the new carillon machinery was not attained at once. In the first attempts, of which the chiming machine at St. Patrick's Cathedral, Dublin, is an example, the barrel was still of an unwieldy size, though an attempt was made to compensate for this in some measure by a novelty of construction, the barrel consisting not of a solid cylinder but a series of double bars, between which the pins were fixed in such a manner, by screws, as to be readily capable of being loosened and shifted one way or the other, so as to be adjusted to a new set of tunes if desired. The first machine made on this system was put up at Boston, playing 28 tunes on 44 bells, but the connection between the letting-off and lifting action being much too complicated and circuitous, the inventors patented a further improvement which very much simplified the action, and the contact between the pins and the levers was brought to the front instead of the top of the barrel, so as to render the most important portion of the mechanism more easily accessible. These improvements were first introduced in the machine erected in Croydon church. There was still a weak point in the action; but it would be impossible to explain all the intermediate stages of improvement without the aid of a number of diagrams, and we must be content here with giving a description of the new carillon action in its most perfected form, as described in the following extract from the 'Engineer' of August 13, 1875, and which is rendered more intelligible by the accompanying diagram, representing in a simple manner the principle of the action, without encumbering it with details:—



'The diagram is supposed to show the gear for working one hammer. It must be multiplied in proportion to the number of hammers, but the parts are all repetitions of each other.

'The musical barrel B is set with pins in the usual way. A is a cam wheel of very peculiar construction, operating on a lever C by what is

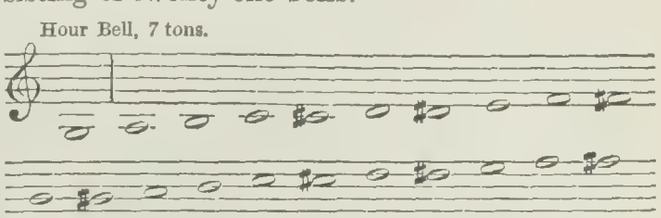
[1] To many listeners, no doubt, this irregularity, so far from detracting from the effect of this airy music, would seem rather pleasing from its old-fashioned sound and associations. This association, however, though it may be a reason for not interfering with old chimes, is no reason for repeating the same defects in new ones.

to all intents and purposes a new mechanical motion, the peculiarity of which is that, however fast the cam wheel revolves, the tripping of the lever is avoided. In all cases the outer end must be lifted to its full height before the swinging piece D quits the cam. The little spring roller E directs the tail D of the lever into the cam space, and when there it is prevented from coming out again by a very simple and elegant little device, which the inventors do not at present desire to be made public, by which certainty of action is secured. At the other end of the lever C is a trip lever F. This lever is pulled toward C by a spring, and whenever C is thrown up by the cam wheel, F seizes it and holds it up; but the wire to the bell-hammer in the tower above is secured to the eye G, so that when D is lifted, the eye G being pulled down, the hammer is lifted. The pins in the musical barrel B come against a step in F, and as they pass by they push F outwards and release C, which immediately drops, and with it the hammer, so that the instant the pin passes the step F a note is sounded. But the moment D drops it engages with A, which last revolves at a very high speed, and D is incontinently flung up again, and the hammer raised, and raised it remains until the next pin on B passes the step on F, and again a note is struck. It will be seen therefore that, if we may use the phrase, B has nothing to do but let off traps set continually by A, and so long as A sets the traps fast enough, B will let them off in correct time. But A revolves so fast and acts so powerfully that it makes nothing of even a 3 cwt. hammer, much less the little ones; and thus a facility of execution is obtained hitherto unknown in carillon machinery. We venture to think that our readers will agree with us that such a carillon machine as we illustrate is about as ingenious a combination of mechanism as is to be met with in the range of the arts.'

It will be seen that here we have a system in which all the direct work that the musical barrel has to do is merely to let off the triggers, so to speak, of the hammers, while the force necessary to raise them is so distributed and so much better applied than when the pins on the barrel had to perform this office, that the inequality of weight between the large and small hammers is not felt as a perturbing influence on the speed of working. One result of this is that the barrel is greatly reduced in dimensions; the pins being required only for such light work can be made much smaller, and require little or no leverage power in themselves; and consequently, while the old carillon barrels were sometimes eight or ten feet in diameter, that at Shoreditch is only ten inches diameter. A barrel of this size, besides taking up so much less room, can easily be taken out and exchanged for a fresh one, with a new set of tunes, when desired.

But the crowning advantage of the system of the letting-off barrel is that by this means music can be played on the bells by a keyboard like that of a pianoforte attached to the frame, with no more exertion than on the pianoforte itself. Thus the physical effort entailed by carillon-playing on the old continental system, which rendered it an art only to be attacked by a muscular person in rude health, is entirely a thing of the past, and there is no reason, so far as the difficulty of the task is concerned, why carillon-playing should not be as common, in connection with large churches and public buildings, as organ-playing. The new carillon for Manchester Town Hall, in construction at the time of writing these remarks, is to be furnished with such a keyboard, in addition to the mechanical arrangement for sounding the chimes. It may also be observed that the carillon system can be applied to produce mechanical change-ringing, by having a barrel pricked with changes, and thus the 'ringing for church' can be done automatically, in places where ringers capable of change-ringing are not to be found. This, however, can only be regarded as an inferior and meagre substitute for the grand effect produced by change-ringing with swinging bells; and many, perhaps, would even prefer round-ringing with the swung bells to mechanical change-ringing with fixed bells. The result however can be heard and judged of at Greenfield church, and at St. Mark's, Oldham, where this contrivance has been applied.

The bells composing a carillon peal are fixed to a frame, generally of oak, slightly pyramidal in shape, so that while the lower cross-beams bear upon the wall, the upper portion of the frame stands free; this is not so absolutely essential as in the case of bells hung to swing, where the swaying action is very violent when the peal is being rung; but still it is better to keep the vibration off the wall as much as possible. The large bells are hung at the bottom of the frame (in some of the continental towers they were hung low down, below the barrel and quite apart from the rest), and the smaller ones above. In arranging the scale of the bells it is seldom considered necessary to have the complete chromatic scale throughout; and in almost all the older carillons the lower portion of the scale was restricted to a few notes giving the tonic or dominant to the keys intended to be most used, the intermediate intervals being omitted on account of the great expense of the larger bells, and the amount of space which they occupied. The arrangement, in fact, is much the same as that which obtained on the pedal boards of old English organs, before what were at first called 'German pedals' (i. e. the complete scale) were introduced. This principle has mostly been more or less followed in the modern English peals. The following is the scale for Manchester Town Hall, consisting of twenty-one bells:—



Here the carillon scale is laid out for the keys of D and A principally, and the selection of G for

the hour bell appears out of keeping; but in fact the hour bell is never used in the carillon, and the quarter chimes are sounded on a selection from the carillon peal forming a scale in the key of C. The ten bells used for this purpose are also hung so as to swing and be rung by hand in the ordinary manner, the carillon action being lifted off for the purpose: so that Manchester in reality has two peals, the carillon peal as given above, rung mechanically, and the following scale—

formed of bells selected out of the carillon peal, rung by hand. There is also an automatic change-ringing barrel to operate upon these bells when desired. It may be mentioned that this is the first town-hall in England which has been fitted with a ringing peal. Carillons on the perfected principle above described have already, at the date of this article, been put up in the towers of Worcester Cathedral, of Bradford, Rochdale, and Reading Town Halls, in the churches of Leek, Oldham, Shoreditch, Holsworthy, Witney, St. Stephen's Hampstead, etc., all by the same Croydon firm before referred to.

How far manual carillon-playing may be carried, as a branch of music, with effect, it is difficult to say. The class of composition performed on such a medium can never be very elaborate or varied, and must probably have a specialty of character to suit the instrument (if one may call it so) and the circumstances and situation in which it is heard. It is possible that these considerations might suggest some novelty of style and effect, if the keyboard carillon comes more into use. The clangour and prolongation of the sound, however, which is one of the characteristic effects of a peal of bells, is inimical to anything like true musical definition; and the attempt to damp the bells after being struck would rob them of much of their peculiar wildness and grandeur. It would seem, therefore, that the carillon must always be an instrument for effect rather than for intricate musical design; though it would be very interesting to hear the experiment tried of executing more elaborated music on a carillon with a complete chromatic scale. It must always be remembered however, that carillons, like bells proper, are to be judged from a fair distance, and not at close quarters; their tones, calculated to be heard over a large tract of country, are necessarily somewhat harsh and jangling when too near.

What may be termed drawing-room carillons are also made, in which the sounds are produced by metal bowls like the bell of an ordinary timepiece, and played on by a pianoforte keyboard. These may perhaps produce some new musical effects in combination with such an instrument as the harmonium; but probably they will always be regarded as pretty toys rather than serious means of musical effect or expression. [H. H. S.]

CARIO, Johann Heinrich, born at Eckernforde in Holstein, 1736, was instructed by Emmanuel Bach, Telemann, and Schwenke, and became a great trumpet player. He is said to have invented a keyed trumpet which would play in every key, and to have executed a prelude in B♭ minor. He may therefore have been able to execute the trumpet parts in Sebastian Bach's music which are now unplayable. Cario was living in 1800. [G.]

CARISSIMI, Giacomo, was born at Marino near to Rome in 1604, according to Pitoni, whom both M. Fétis and the Abbé Alfieri follow upon this point; but at Padua in 1582, if Spiridione[1] be trusted for the place of his birth, and Mattheson for the date of it. His first professional post was that of Maestro at Assisi. This he held for some years. He then went to Rome, where he obtained the Mastership at the church of S. Apollinaris, attached to the German College. In this office he passed the remainder of his days, without, in all probability, ever having crossed the Papal frontier. He died in 1674. That he gained his taste and style, which were admirable, by long residence in Paris, and by writing for French audiences, is one of by no means the least foolish and perverse of the many foolish and perverse assertions of the Seigneur de Fréneuse.[2]

Carissimi has the reputation of having done more than any other Italian of his epoch towards the perfection of recitative. To him Kircher admits that he owes much that is valuable in his 'Musurgia' upon this branch of art. He was moreover, although not the actual inventor of the sacred cantata, at least its parent by adoption and development, and at his hands it received that elevation of form and accession of beauty which enabled it to supplant the madrigal, and give to sacred music those elements of pathos and dramatic force for which the rise of the opera had created a general appetite. A third contribution by Carissimi to the progress of his art was the lightness and variety of his accompaniments. He had less learning and more imagination and playfulness than his predecessors in the Roman school. But if his harmonies were less elaborate than theirs, his melodies were freer and more graceful, and his effects more dramatic. There was something essentially modern in his music, and he was the precursor and teacher of a large group of polished and pleasant artists, among whom Bassani, Cesti, Buononcini, and Alessandro Scarlatti were conspicuous. No less prolific than original, Carissimi left a great quantity of finished work behind him. Unhappily too little of it has been published, and too much of it was destroyed at the time of the suppression of the Jesuits, when the collections of S. Apollinaris and the Gesù were sold for waste paper. In the library of the Abbé Santini there were two printed collections of motetti by Carissimi for two, three, and four voices, which had been published at Rome in 1664 and 1667, and a Lauda Sion and

1 'Musica Romana D. D. Foggiæ, Carissimi, Gratiani, aliorumque.' (*Bamberg*, 1665.)

2 'Comparaison de la Musique Italienne et de la Musique Française,' 3me partie, p. 2020. (Brussels, 1704.)

a Nisi Dominus, both for eight voices, and both in manuscript. Baini says that in the archives of the Pontifical Chapel there is a mass by Carissimi for twelve voices, written on the famous Provençal melody 'L'homme armé.' This is believed to be the last occasion on which that favourite theme was ever employed. The National Library in Paris has a rich manuscript collection of the oratorios of Carissimi. The following is a list of their names:—'La Plainte des Damnés'; 'Histoire de Job'; 'Ezéchias'; 'Baltazar'; 'David et Jonathas'; 'Abraham et Isaac'; 'Jephte'; 'Le Jugement Dernier'; 'Le Mauvais Riche'; 'Jonas'. Chief among these ranks the Jephthah, of which Hawkins has said that 'for sweetness of melody, artful modulation, and original harmony, it is justly esteemed one of the finest efforts of musical skill and genius that the world knows of.' Handel thought it worth while to borrow his chorus in 'Samson,' 'Hear Jacob's God' from a famous movement in the 'Jephte' called 'Plorate filiæ Israel.' Croft has imitated his 'Gaudeamus,' and Aldrich adapted his motets to English words for anthems. Hawkins prints a remarkably graceful little duet of Carissimi, called 'Dite, o Cieli.' It was in emulation of this piece, upon hearing it overpraised by King Charles II, that Dr. Blow composed his celebrated 'Go, perjured man.' The library of the French Conservatoire is rich in the manuscripts of Carissimi, and there are some valuable volumes of his music in the British Museum. But the magnificent collection of his works made by Dr. Aldrich at Oxford throws all others into the shade, and forms one of the special ornaments of the library at Christ Church. A few of his pieces are in the Musica Romana of Spiridione, and a few more, disfigured by French words, in the collection of 'Airs serieux et à boire,' published by Ballard. There are some motets of his in Stevens's 'Sacred Music,' and Crotch has published one or two examples in his 'Selections of Music.' Five specimens are printed in the 'Fitzwilliam Music.' Jephte, Judicium Salomonis, Jonas, and Baltazar have been published by Chrysander (Schott); and Jonah by Henry Leslie (Lamborn Cock). Enough has now been said to indicate where those who are interested in this master may form acquaintance with his work; and it only remains to add that the 'Judgment of Solomon,' a cantata often attributed to him, was in all probability not his, but the production of his pupil Cesti. [E.H.P.]

CARLO, Geronimo, born at Reggio in the first half of the 16th century; author of a collection of five-part motets by eminent composers, Créquillon, Clemens non Papa, Ciera, etc., entitled 'Motetti del Labirinto,' 2 vols. (Venice, 1554 and 1555). [M.C.C.]

CARLTON, Rev. Richard, Mus. Bac., published in 1601 a collection of twenty-one 'Madrigals for five voyces,' the preface to which is dated from Norwich. He had in the same year contributed a madrigal, 'Calme was the aire,' to 'The Triumphes of Oriana.' Nothing is known of his biography. One of the same name was in 1612 presented to the rectory of Bawsby and Glosthorp, Norfolk. [W.H.H.]

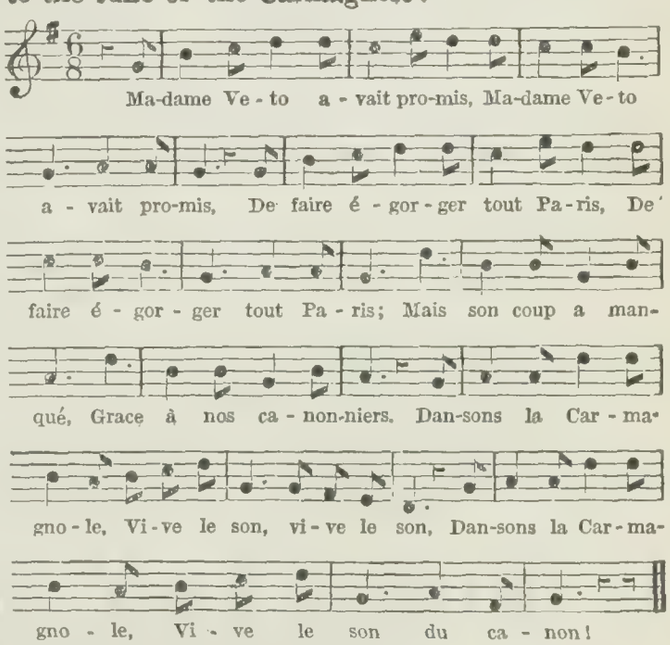
CARMAGNOLE. The French song called 'La Carmagnole' is a popular tune originating in Provence. Grétry (Mémoires, iii. 13) thought it was originally a sailor-song often heard in Marseilles; it is more probably a country roundelay or dance-tune, adapted to a patriotic military song which was written either at the end of August or early in September, 1792. The four stanzas of this national song are known to a very few historians only; we transcribe the first couplet:—

'Le canon vient de résonner:
Guerriers, soyez prêts à marcher,
Citoyens et soldats,
En volant aux combats,
Dansons la carmagnole:
Vive le son, vive le son,
Dansons la carmagnole,
Vive le son
Du canon!'

The unknown author of these lines was probably some brave soldier, whilst the bloody 'Carmagnole des Royalistes' may be attributed to the worst of demagogues. The original eight stanzas of the latter began as follows:—

'Oui, je suis sans culotte, moi,
En dépit des amis du roi.
Vive les Marseillois,
Les Bretons et nos lois!'

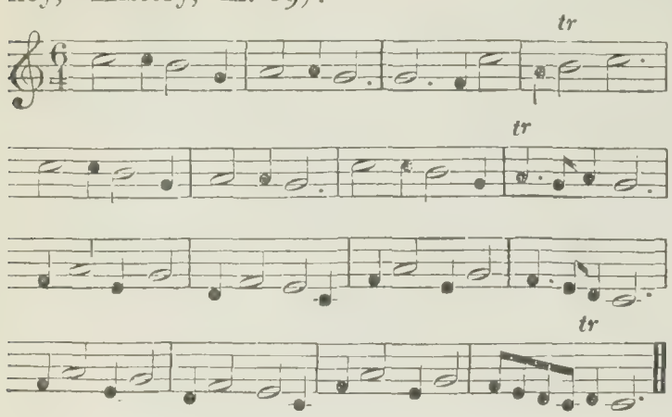
But this new song was soon enlarged, and when published by Frère it contained thirteen stanzas, the first of which ran in the following manner, to the tune of the Carmagnole:—



During the French Revolution a great many songs were adapted to this tune, which, in spite of its association with the *Terreur*, has often been introduced on the stage in vaudevilles or burlettas. [G.C.]

CARMAN'S WHISTLE, THE, an old English tune found in the Virginal books of Lady Nevill (1591) and Queen Elizabeth (1603–12), in both with harmony and variations by Byrd.

The following is the air as there given (see Burney, 'History,' iii. 89):—



In Chappell's 'Popular Music of the Olden Time' (p. 139) the tune is given to the words of 'The courteous carman and the amorous maid,' and is mentioned (p. 428) as suiting 'The country hostesses vindication.' [G.]

CARMIGNANI, Giovanna, sang in London in 1763, taking, among others, the principal serious part of Lavinia in 'La Cascina,' produced at the King's Theatre by J. C. Bach. Anna de Amicis sang in the same piece. [J. M.]

CARNABY, William, Mus. Doc., born in London in 1772, was a chorister of the Chapel-Royal under Dr. Nares and Dr. Ayrton. On leaving the choir he became organist at Eye, which he quitted for a similar appointment at Huntingdon. Whilst residing at the latter place he published 'Six Canzonets,' and also 'Six Songs,' which were favourably received. In 1805 he graduated at Cambridge as Bachelor of Music, and in 1808 proceeded to Doctor. In the interval he had settled in London, and on the opening of Hanover Chapel, Regent Street, in 1823, he was appointed its organist. His compositions, chiefly vocal, were numerous. They have been characterised as scientific, but deficient in taste. He died Nov. 13, 1839. [W. H. H.]

CARNAVAL DE VENISE. This popular air, which was heard by Paganini at Venice, when he visited the Queen of the Adriatic in 1816, 1824, and 1826, and which his magic bow has made a favourite tune all over the world, is the effusion of an unknown musician probably of the end of the last century. Several talented composers have embroidered it, and all pianists have played the brilliant variations and fantasias written upon it by Herz and Schulhoff. It has been even introduced on the lyric stage. Ambroise Thomas has composed very clever variations on the tune for the overture to his opera 'Le Carnaval de Venise,' and Victor Massé, in his 'Reine Topaze,' introduces an *air varié* upon it to the words

'Venise est tout en fêtes,
Car voici le carnaval.'

In England it was for long known to the words

'O come to me, I'll row thee o'er
Across yon peaceful sea.'

The air, as given by Paganini, is as follows:—

[G. C.]

CARNICER, Ramon, Spanish dramatic composer, born near Lerida in Catalonia 1789, died in Madrid 1855. In 1818 he was appointed conductor at the Italian Opera of Barcelona, and here he produced successfully his first opera 'Adela de Lusignano,' which was followed by several others. Between 1820 and 27 he visited Paris and London, and was favourably received in both. In 28 he was appointed conductor at the Theatre Royal in Madrid, for which he composed 'Elena e Malvino' (1829), and 'Colombo' (1831), generally considered his best work. He largely contributed to the foundation of a national opera. From 1830 to 54 he was professor of composition at the Madrid Conservatoire. Besides nine operas, he composed church music, symphonies, military marches, national hymns, and an infinity of songs. His music is original and rhythmical, though much impregnated with phrases from national airs. [M. C. C.]

CAROL, see Hymn.

CARON, Firmin, a composer of the 15th century, probably born about 1420. He is said by Tinctor to have been the scholar of Binchois or Dufay. The name is Flemish. Baini ('Palestrina') states that the Library of the Pope's Chapel possesses a MS. volume of masses by Caron, containing one on 'L'omme armé.' Caron also wrote secular songs, some of which were known to M. Fétis, who found them to surpass those of Ockenheim and Busnois in ease. One of them begins 'Helas! que pourra devenir.' [M. C. C.]

CAROSO, Marco Fabrice, of Sermoneta, in Italy; author of 'Il Ballerino ... con intavolatura di liuto, e il soprano della musica nella sonata di ciascun ballo' (Venice, 1581), valuable for the dance music which it contains. [M. C. C.]

CARPANI, Giuseppe, poet and writer on music, born Jan. 28, 1752, at Villalbese, in the district of Brianza. His father destined him for the law, he studied at Milan and Padua, and practised under the celebrated advocate Villata at Milan. But he soon gave up the law, entered the society of artists and literary men, and indulged his natural taste for art. He had already written more than one comedy and several opera-libretti for the Italian stage, among others 'Camilla,' composed by Paër. In consequence of some violent articles against the French Revolution in the 'Gazetta di Milano,' of which he was editor from 1792–96, he had to leave Milan when it was taken by the French.

Until the peace of Campo Formio in 1797 he lived at Vienna; after that date he became censor and director of the stage in Venice, but a malady of the eyes drove him back to Vienna, where the Emperor pensioned him till his death. He published a number of translations of French and German operas, and also wrote an oratorio on 'La passione di Gesù Christo,' which was set to music by Weigl, and performed in 1808, in the palace of Prince Lobkowitz, and in 1821 by the Gesellschaft der Musik-Freunde. He also translated the 'Creation' into Italian, and wrote a sonnet on the celebrated performance of that work, at which Haydn was present the year before his death. Carpani had the greatest esteem and affection for Haydn, which led to his publishing his well-known 'Haydine,' etc. (Milan, 1812, and a second enlarged edition at Padua, 1823). 'La Haydine' is a kind of æsthetical work, and a eulogy on Haydn's compositions, written with enthusiasm. It quickly found a translator in Beyle, the French writer, who published it as his own composition under the name of Bombet—'Lettres écrites de Vienne, etc., by Louis Alexandre César Bombet' (Paris, 1814). Carpani attacked this piracy in two spirited letters —'Lettere due, dell' Autore delle Haydine' (Vienna, 1815). Beyle was, nevertheless, audacious enough again to publish his work, this time under the alias of Stendahl, 'Vies de Haydn, Mozart, et Métastase,' etc. (Paris, 1817). In spite of Carpani's protestations, the first of the two appeared in English as 'Lives of Haydn and Mozart' (Murray, 1817; and Boston, U.S., 1839). Extracts of Carpani's original work, translated by D. Mondo, appeared at Niort in 1836, and in a complete form at Paris 1837, under the title 'Haydn, sa vie, ses ouvrages, et ses aventures, etc., par Joseph Carpani; traduction de Mondo.' Some clever but partial sketches of Rossini were published by Carpani in one volume as 'Le Rossiniane,' (Padua, 1824). This also was pirated anonymously by Beyle (Paris), and published by Mondo. In 1809 Carpani accompanied the Archduke John on his expedition to Italy. After the return of peace, he devoted himself to starting the 'Biblioteca Italiana.' He died in the smaller Liechtenstein Palace at Vienna, a bachelor of 73, on Jan. 22, 1825, from simple decay of nature. [C.F.P.]

CARPENTRAS, OR IL CARPENTRASSO, the sobriquet of Eliazar Genet, born at Carpentras, Vaucluse, before 1500. Being in priest's orders he became a member of the Pope's Chapel, and wrote some Magnificats and Lamentations, the latter of which induced Leo X to make him Bishop *in partibus* in 1518. About the same time he became the Pope's Chapel-master. He was much employed in negotiations by both Leo and Clement VII, and died after the year 1532 —the date of two out of four volumes of music which he published. Vol. 1 contains 5 masses, written on the most secular tunes—'A l'ombre d'un buissonet,' 'Encore irai-je jouer,' etc.; vol. 2, the Lamentations of Jeremiah; vol. 3 is Liber Hymnorum; vol. 4, Liber Magnificat. Carpentras' music enjoyed a great fame at the time, and was much published (see the list in Eétis). His Lamentations were so favourite as to keep those of Palestrina out of the Pope's Chapel for many years. M. Fétis had examined them, however, and finds them inferior not only to Palestrina but to Josquin des Près.

CARRODUS, JOHN TIPLADY, born at Keighley, Yorkshire, Jan. 20, 1836. His father was a zealous amateur, a violin player, and leader of the local Choral Society. The boy was destined to music from the first, and at 12 years of age was put into the able hands of Molique, whom he accompanied to Stuttgart, and with whom he remained till nearly 18. On his return to London he entered the orchestra of Covent Garden, and made his first appearance as a solo-player at a concert of the Musical Society of London, on April 22, 1863, since which time he has been frequently heard at the Philharmonic, the Crystal Palace, and other leading concerts, both metropolitan and provincial. He has published two Violin Solos and a Morceau de Salon. [G.]

CARTER, THOMAS, born in Dublin about 1735, at an early age displayed a capacity for music, and was sent, under the auspices of the Earl of Inchiquin, to Italy for study. He afterwards went to India and undertook the direction of the music at the Calcutta Theatre, but the climate proving injurious to his health, he returned to England and appeared as a dramatic composer. He furnished Drury Lane Theatre with music for 'The Rival Candidates' (1775), 'The Milesians' (1777), and the 'Fair American' (1782). In 1787 he became musical director of the Royalty Theatre, Goodman's Fields, then opened under the management of John Palmer, and produced there 'The Birth-day' and 'The Constant Maid,' besides songs and catches. In 1792 he composed the comic opera 'Just in Time,' for Covent Garden Theatre. He published many concertos and lessons for the pianoforte, but he is now best known as the composer of Bishop Percy's ballad, 'O Nanny, wilt thou gang wi' me?' and the naval song 'Stand to your guns.' Carter's life was passed in a constant succession of embarrassments, consequent upon his incorrigible carelessness and improvidence. He died Oct. 12, 1804. [W.H.H.]

CARTIER, JEAN BAPTISTE, a French violinist, born at Avignon in 1765; the son of a dancing-master. His first teacher on the violin was an Abbé Walrauf. In 1783 he went to Paris and continued his studies under Viotti. His progress must have been rapid, as he very soon, on Viotti's recommendation, obtained the post of accompanyist to Marie Antoinette, which he held up to the outbreak of the Revolution. In 1791 he entered the band of the opera as assistant-leader and solo-player. From 1804 he was a member of the Emperor Napoleon's private band under Paisiello and, after the Restoration, of the Royal band till 1830. He died at Paris in 1841. Cartier was a good violinist, and it was his great merit

to have revived the noble traditions of the old Italian school of violin-playing by publishing new editions of the works of Corelli, Tartini, Nardini and other great masters, which at that time were all but unknown in France. He thereby caused not only his own numerous pupils but all the young French violinists of his time to take up the study of these classical works for the violin. In his work 'L'art du violon' (Paris 1798 and 1801) Cartier gives a comprehensive selection from the violin music of the best Italian, French, and German masters, which is rightly regarded as a practical history of violin-literature in the 17th and 18th centuries.

It is much to be regretted that a history of violin-playing, which he wrote, has never been made public. His compositions are of no importance. He published Sonatas in the style of Lolli, Etudes, and Duos for violins. Fétis also mentions two Operas, two Symphonies and Violin-concertos, which have remained in MS. [P.D.]

CARTONI, a barytone engaged at the King's Theatre in 1822, at a salary of £700, on the recommendation of Camporese. For his musical education he was indebted entirely to his wife. He made his first appearance as the King in Pacini's 'Il Barone di Dolsheim,' and, although not possessed of first-rate talents, was a respectable performer. [J.M.]

CARULLI, Ferdinando, an eminent guitarist, born at Naples 1770, died in Paris 1841. Though self-taught he attained a perfection of execution hitherto unknown on the guitar, and on his arrival in Paris created a perfect furore. In the space of twelve years he published 300 compositions, including a 'Method' which passed through four editions. He was also the author of 'L'Harmonie appliquée à la Guitare' (Paris, 1825), a treatise on the art of accompanying, which was the first work of its kind. [M.C.C.]

CARUSO, Luigi, born at Naples 1754, died at Perugia 1822; son of a musician at Naples, studied under Nicolo Sala, composed in all sixty operas (for list see Fétis) of which the first was 'Il Barone di Trocchia' (Naples, 1773), and the last 'L'Avviso ai Maritati' (Rome, 1810). His 'Artaserse' was performed in London in 1774. He also composed four oratorios, four cantatas, and masses, etc., of a style more dramatic than ecclesiastical. He is said to have lived for some time in Paris and Germany, and to have been conductor at Palermo. He had a brother Emmanuele, also a musician. [M.C.C.]

CASALI, Giovanni Battista. Chapel-master of St. John Lateran in Rome from 1759 till his death 1792. An opera of his, 'Campaspe,' was produced at Venice 1740. Grétry was his pupil for two years in Rome, but Casali did not detect his talent, and sent him back with a letter of introduction in which he described the great opera writer as 'a nice fellow, but a thorough ass and ignoramus in music.' Casali's works comprise 4 masses, motets, magnificats, and many other pieces for the church. He wrote in a very pure style, though without much invention. A mass and 4 other pieces are given by Lück (Sammlung, 1859), and an 'O quam suavis,' a pretty melodious movement, by Novello, from Choron. [G.]

CASARINI, Signora, sometimes called CASARINA, an Italian soprano engaged in London for Handel's operas in 1748. She appeared in 'Alexander Balus' and 'Joshua.' [J.M.]

CASE, John, M.D., a native of Woodstock, was a chorister, first at New College and afterwards at Christ Church, Oxford. He subsequently became a fellow of St. John's College, which he vacated on marriage, when he established himself in Oxford as a lecturer to private pupils on philosophy, for which he enjoyed a high and deserved reputation. In 1586 he published 'The Praise of Musicke,' and in 1588 'Apologia Musices tam vocalis tam instrumentalis et mixtæ.' Thomas Watson wrote a song in his praise, which was set to music by William Byrd. He died Jan. 23, 1599–1600. [W.H.H.]

CASENTINI, Signora, a good singer in the comic style, appeared at the Pantheon in London in 1791, taking the principal part in Paisiello's 'Locanda,' and other operas. Lord Mount-Edgcumbe describes her as 'a pretty woman and genteel actress.' In 93 she had married Borghi, second violin at the opera, and was singing at the King's Theatre; but she was not in good health, and her voice was too weak for that house. Her later history is not known. [J.M.]

CASINI, Giovanni Maria, was a Florentine priest, and born towards the close of the 17th century. Fétis gives 1675 as the date of his birth, but it is not ascertained. He came to Rome early in life, but not before he had learnt the elements of counterpoint in his native town. At Rome he was successively the pupil of Matteo Simonelli and Bernardo Pasquini, under the last-named of whom he perfected himself as an organ player. The only post which he is known to have held was that of organist in the cathedral of Florence. He was simply a perverse man of talent who elected to join the ranks, and to add one or two more to the absurdities, of those musical reactionists who tried to stop the progress of the art in the 17th century. He followed in the wake of Doni Vicentino and Colonna in endeavouring to revive the three old Greek 'genera' of progression, viz. the diatonic, the chromatic, and the enharmonic. Fétis, indeed, says that, as several enthusiastic pedants of his class had done before him, he constructed a clavecin in which the notes represented by the black keys were subdivided, so as to obtain an exact equalisation of the semitones. Baini does not carry him this length, but only states him to have adopted the views of those who thus wasted their labour and ingenuity. In his account of Casini the last-named biographer tells us that the most celebrated of these instruments was one which he purchased himself from motives of patriotism to prevent such a curiosity being taken out of Italy. It was a cembalo, which had been constructed in 1606 at the ex-

pense of Camillo Gonzaga, Count of Novellara. It had four octaves, each divided into 31 notes, and as the highest of the treble was in octaves to the lowest of the bass, it had 125 keys in all, black and white. He bought with it a four-stringed instrument, noted to correspond with it, so that the two could easily be tuned in unison.

Casini's published works consist of—a volume of motets for 4 voices in the 'stile osservato,' intituled 'Johannis Mariae, Casini Majoris Ecclesiae Florentiae modulatoris, et sacerdotio proediti, Moduli quatuor vocibus : opus primum. Romae, apud Mascardum, 1706.' 'Responsori per la Settimana Santa, a 4 voci, op. 2, Florence, C. Bindi, 1706.' 'Motetti a 4 voci a Cappella, ibid. 1714.' 'Fantasies and Fugues for the Organ, Florence, 1714.' A motet of his is given by Proske in 'Musica Divina,' ii. No. 58. [E.H.P.]

CASSATION, perhaps implying 'farewell,' designates a piece of instrumental music of the last century, for the open air, in several movements, much like the SERENADE or DIVERTIMENTO. In Köchel's Mozart Catalogue there are three, Nos. 62, 63, 99, the two last of 7 movements each. [G.]

CASSEL, GUILLAUME, born at Lyons 1794, died at Brussels 1836; dramatic singer; studied first under Georges Jadin, and then at the Paris Conservatoire under Garat and Talma. He made his *début* at Amiens, and sang at various places previous to his appearance at the Opéra Comique in Paris, where he remained for three years. At the end of that time he quarrelled with Pixérécourt, the director, and retired to Belgium, where he settled for life. After a five years' engagement in Brussels he retired from the stage in 1832, and became a teacher. He trained many eminent pupils, including Madame Dorus-Gras. In 33 he was appointed professor of singing at the Brussels Conservatoire. His compositions were unimportant, but he was successful as a teacher. [M.C.C.]

CASTANETS. A pair of castanets (or castagnettes) consists of two small pieces of hard wood, shaped somewhat like the bowl of a spoon, or a scallop shell. These are hinged together by a cord, the ends of which pass over the thumb and first finger of the performer. The remaining fingers strike the two halves together, either in single strokes or in trills; the instrument emitting a deep hollow *click*, which, although not a musical note, is nevertheless not disagreeable to the ear. The performer has usually a pair in each hand. It is a Moorish and Spanish instrument, and is intended for accompanying dances. Its use by ballet-dancers is well known.

When required to be played in the orchestra, to accompany dance-music, it is best to attach a pair, half on each side, to a flat piece of hard wood, ending in a stick about eight inches long. By shaking this apparatus, the required effect is produced, without the necessity of fitting the castanets to the performer's fingers, who generally is playing some other instrument, and must suddenly take up the castanets to play a few bars.

The Spanish name is *Castañuela*, either because made sometimes from the wood of the chestnut-tree *castaño*) or from some fancied resemblance to the two halves into which the chestnut (*castaña*) naturally divides itself. [V. de P.]

CASTELLI, a seconda donna engaged at the King's Theatre in 1825, at a salary of £250. She sang the part of Alma in 'Il Crociato' with Velluti in 25 and 26; and, in the latter year, also that of Cherubino in 'Le Nozze.' She pleased the public, though far from equalling Caradori in that *rôle*. She was engaged again in 1828, since when her name does not occur. [J.M.]

CASTELLI, IGNAZ FRIEDRICH, born at Vienna 1781, died there 1854; German dramatist of great popularity, author of the librettos of Weigl's 'Schweizer Familie,' and Schubert's 'Verschwornen' or 'Häusliche Krieg,' and adaptor amongst others of Meyerbeer's 'Huguenots.' From 1811 held the post of 'Hoftheaterdichter' at the Kärnthnerthor theatre in Vienna. Founder, and from 1829 to 1840, sole editor of the 'Allgemeiner musikalischer Anzeiger.' He was a good amateur violinist, and was greatly esteemed and beloved. [M.C.C.]

CASTRO, JEAN DE, composer and lutist. In 1570 he was at Lyons, and in 1580 chapelmaster to the Prince of Juliers. He composed many sets of madrigals, odes, sonnets, and sacred songs (1569–1600). One collection, 'La Fleur des Chansons' (Louvain and Antwerp 1547) contains, besides compositions of his own, songs by Severin, Cornet, Noé Faignent, Cléreau, Créquillon, Jacotin, and Jannequin. For list see Fétis. [M.C.C.]

CASTRUCCI, PIETRO, pupil of Corelli, and distinguished violin player, born at Rome 1689. In 1715 he came to England with Lord Burlington and became leader of Handel's opera-band. He had a special reputation as performer on the VIOLETTA MARINA, an instrument of his own invention. In Handel's 'Orlando' is an air accompanied by two Violette marine with celli pizzicati, 'per gli Signori Castrucci' (see the MS.) meaning Pietro and his brother Prospero. In Handel's 'Sosarme' is also an air with Violetta marina obligato. In 1737 he was superseded at the opera by Festing—not by Clegg. To his undoubted talent Castrucci added an amount of charlatanism surprising in a pupil of Corelli's, though paralleled by other great players, Clement, Boucher, Ole Bull, &c. An instance of these is given by Burney (Hist. iv. 353 note). He died 1769 in great poverty. Castrucci is said to have been the original of Hogarth's 'Enraged musician'; but that is now known to be intended for Festing. [P.D.]

CATALANI, ANGELICA, born Oct. 1779 at Sinigaglia, where her father was a tradesman.

About the age of 12 she was sent to the convent of Santa Lucia at Gubbio, near Rome, where her beautiful voice soon became a great attraction. In its full freshness, according to Fétis and all other authorities, it must have been one of extraordinary purity, force, and compass, going as far as G in altissimo, with a sweet clear tone. This exquisite quality was allied to a marvellous truth and rapidity of execution. No singer has ever surpassed, or perhaps equalled, her in chromatic scales, whether in velocity or precision. On leaving the convent, into which she had been introduced by the Cardinal Onorati, and where the congregation could frequently not be prevented from openly applauding her splendid notes in the services, she found herself, owing to the sudden impoverishment of her parents, compelled to perform in public. Her musical education had been but ill cared for in the convent, where she passed three years; and she had contracted bad tricks of vocalisation, which she never entirely overcame, even after hearing such great models as Marchesi and Crescentini. One of her faults was that she could never execute certain passages without a very perceptible oscillation of the lower jaw, which made them, instead of being even and smooth, sound like a succession of staccato passages on the violin. In spite of this fault, which was indeed more within the criticism of connoisseurs than of the public generally, her voice was so full, powerful, and clear, her intonation so pure and true, and her instinctive execution of difficult and brilliant music so easy and unfaltering, that her singing had a charm which has scarcely ever been equalled, and her very first steps in a theatrical career were marked by the most extraordinary success. When she began, the favourite style was that of expressive and pathetic song, and in this she never produced the effect which she subsequently made in bravura. Thus at Paris she failed comparatively in a tender song of Piccini's, 'Se'l ciel mi divide,' though shortly after, she created the greatest enthusiasm by her 'Son regina,' by an air of Rode's with variations, *concerti* for the voice, and other pieces of the most florid execution. In 1795, at the age of 16, she obtained her first engagement at the Fenice at Venice, and made her début as Lodoiska in the opera of that name by Mayer. Her face, figure, and voice, assured her success, a success which grew day by day, and lasted for nearly thirty years. In the season of 1798, she sang at Leghorn with Crivelli, Marchesi, and Mrs. Billington; the year after, at La Pergola in Florence, in Nasolini's 'Monima e Mitridate'; and, in 1801, at Milan, in the 'Clitemnestra' of Zingarelli, and Nasolini's 'Baccanali.' In these early efforts her effect was not due to method or skill; it was her superb voice that carried all before her. From Milan she went to Florence, Trieste, Rome, and Naples, exciting everywhere the same astonishment and admiration.

Her reputation now reached the ears of the Prince Regent of Portugal, who engaged her, with Mme. Gafforini and Crescentini, to sing at the Italian Opera there, and she arrived about the end of the year 1804. Her salary was 24,000 cruzados (£3,000).

Some writers have said that she derived very great advantage from the instruction of Crescentini, which, indeed, seems more than likely; but Fétis, on the authority of Crescentini himself, contradicts this statement categorically, affirming that Crescentini told him that he had endeavoured to give her a little advice, which she had seemed incapable of understanding. It was here that she married Valabrègue, of the French embassy; but she never quitted her name of Catalani before the public. Her husband, a stupid, ignorant soldier, appears to have had no ideas beyond helping his talented wife to gain the utmost possible amount of money on every occasion, and spending it for her afterwards. From their marriage dates one of the worst of the many speculations that have been based on the capital of a grand voice and great personal charm. They went first to Madrid, and then to Paris, where she sang only in concerts, but where she gained even more fame than before.

On October 26, 1805, Mme. Catalani signed her first engagement (in the possession of the writer) with F. Goold and W. Taylor, manager and proprietors of the King's Theatre in the Haymarket, for the season from September 15, 1806, to August 1807, at a salary of £2,000 sterling, with 'a further sum of £100 sterling to defray the expenses of her journey to London,' and also 'one Benefit Night free of expence in the month of March, at which a new opera shall be performed.' Before crossing, however, she gave concerts at Madrid and Paris, by which she gained large sums of money, and created a deep impression; indeed, Napoleon offered her an engagement from which she had some difficulty in escaping, in order to fulfil that at the King's Theatre. At the moment of her arrival in London, Grassini and Mrs. Billington had just retired; and, as Lord Mount-Edgcumbe says, 'the great, the far-famed Catalani supplied the place of both, and for many years reigned alone, for she would bear no rival, nor any singer sufficiently good to divide the applause.' 'It is well known,' he continues, 'that her voice is of a most uncommon quality, and capable of exertions almost supernatural. Her throat seems endued (as has been remarked by medical men) with a power of expansion and muscular motion by no means usual, and when she throws out all her voice to the utmost, it has a volume and strength that are quite surprising; while its agility in divisions, running up and down the scale in semi-tones, and its compass in jumping over two octaves at once, are equally astonishing. It were to be wished,' says this connoisseur of the old school, 'that she was less lavish in the display of these wonderful powers, and sought to please more than to surprise; but her taste is vicious, her excessive love of ornament spoiling every simple air, and her greatest delight (indeed her chief merit) being in songs of a bold and spirited character, where much is left to her

discretion (or indiscretion), without being confined by the accompaniment, but in which she can indulge in *ad libitum* passages with a luxuriance and redundancy no other singer ever possessed, or if possessing ever practised, and which she carries to a fantastical excess.' The opinions of all good judges were nearly the same with the above; but the public was led completely away by her marvellous powers. She made her début Dec. 15, 1806, in the 'Semiramide' of Portogallo, composed for her expressly. She appeared also in 'Mitridate,' 'Elfrida,' and most unwillingly in 'La Clemenza di Tito,' for the strict time required in Mozart's music, and the importance of the accompaniments, were not suited to her style. She was, however, the singer who introduced to the English stage his 'Nozze di Figaro,' in which she played Susanna to admiration. In the 'Orazi' she performed the part of the first soprano, Curiazio, that of the first woman being filled by Ferlendis. In 'Didone' she caused the *rôle* of Enea to be sung by Madame Dussek, who was entirely unfitted for it; and, in another opera, she made Madame Dussek act the first woman's part, choosing for herself that of the *primo uomo*. Subsequently she assumed also the place of *prima buffa*, and succeeded equally well in that line; singing with greater simplicity and ease, she was by some preferred in comic opera. Her face and figure suited both styles; for her handsome countenance was capable of great varieties of expression. Her gains soon became enormous. She was the great attraction of Goold's management, and her engagements entailed on the theatre an expense surpassing anything before experienced. Mr. Waters, in a pamphlet which he published, gives the total amount received by her from the theatre in 1807, including benefits, at £5,000, and her total profits that year, with concerts, provincial tour, etc., at £16,700,—an immense sum to be received in such a period for the services of a single artist. That she sometimes found a difficulty in getting payment is not surprising, especially from such a manager as Taylor. Ebers relates that, on one occasion, she refused to sing unless a debt of £1,000 due to her was paid; and that he gave security for this, of which he had ultimately to pay every farthing. She received as much as 200 guineas for singing 'God save the King' and 'Rule Britannia,' and at a single festival £2,000. Had she practised the least economy she must have amassed a very great fortune; but this she did not do. It is said, for example, that the consumption of beer by her servants during a single year amounted to £103. More serious causes, however, contributed to dissipate these riches as fast as she gained them; for her husband was passionately addicted to gambling, and lost vast sums at play. She remained seven years in England, where she finally succeeded in becoming the only singer of eminence, and led in both lines; but one singer does not constitute an opera, though Valabrègue used to say 'Ma femme et quatre ou cinq poupées,—voilà tout ce qu'il faut.' Neither would her disposition endure the possibility of rivalry, nor the extravagance of her increasing demands allow any manager to engage other singers. She quitted the theatre at the end of the season of 1813, having first endeavoured (unsuccessfully) to purchase it, and so become sole proprietor, sole manager, and sole singer. After leaving this stage, she for many years never trod any other, except at Paris, where she obtained the management of the Italian opera, with a subvention of 160,000 francs; but the undertaking was not fortunate. On the return of Napoleon, in 1815, she left Paris, going first to Hamburg, and afterwards to Denmark and Sweden, and exciting everywhere the wildest admiration and enthusiasm. She returned to France, after the Restoration, by Holland and Belgium. On her arrival at Paris, she resumed the direction of the Théâtre Italien, and established the same ruinous system which had destroyed, for a time, opera in London. Every expense of scenery, orchestra, and chorus, was curtailed, and every singer of worth excluded, in order that the entire receipts might go, with the subvention, into the purse of Valabrègue. This was not all. To suit this state of things the operas were arranged in such a manner that little of the original but the name remained. The rest consisted of variations by Rode, and similar things, with the famous 'Son regina,' interpolated in place of the concerted pieces and songs which had been cut out. In May 1816 Catalani left her opera in the hands of managers, and went to Munich to give some concerts and representations. Thence she proceeded to Italy, and only returned to Paris in August 1817. In the next April she left her opera entirely, and resumed her wanderings. Having engaged Mme. Gail to accompany her, as Pucitta had done in London and Paris, she started for Vienna. No sooner had they arrived than she quarrelled with her companion, who returned to Paris. Catalani continued her tour alone, and it lasted nearly ten years. In 1824 she returned to London, performing a certain number of nights with no regular engagement. She reappeared in 'Il Nuovo Fanatico per la Musica,' an opera by Mayer, *arranged* for her. 'Her powers were undiminshed, her taste unimproved.' She next continued her wanderings on the continent. In 1826 an attempt was made by Ebers to engage her, but the terms proposed by her were so exorbitant that it was impossible to consider them seriously. Her voice was, however, no longer what it had been, especially in the highest part of her register. Though still beautiful, flexible, and strong, it was losing gradually a little of these qualities. In turn she visited Germany, Italy, and Paris once more, where she sang without success; then Poland, Russia, and the north of Germany again in 1827. About this time she sang for the last time at Berlin, and resolved to cease singing in public. But she revisited England once more in 1828, and sang at the York Festival. Lord Mount-Edgcumbe heard her the same year at Plymouth, and

describes her as having lost, perhaps, a little in voice, but gained more in expression: as electrifying an audience with her 'Rule Britannia;' and as still handsome, though somewhat stout. After a time, she retired to a villa which she had bought in the neighbourhood of Florence. On the stage, she is described as having always produced an unnatural impression, owing to an invincible nervousness, which made her exaggerate the effects she wished to create. She said herself, that it was as painful to her to sing in the theatre as it was delightful to perform at a concert. She never lost her simplicity and purity of manners, nor her piety, modesty, and generosity. Her charitable deeds were innumerable, and the amount of money earned by her in concerts for such purposes alone has been estimated at 2,000,000 francs. At her residence she founded a school of singing for young girls. Catalani died of cholera at Paris, June 12, 1849. [J. M.]

CATARINA CORNARO, the last of Donizetti's sixty-six operas, produced at Naples in the Carnival of 1844, and performed for the last time in 1845. [G.]

CATCH originally meant simply a round for three or more voices (unaccompanied), written out at length as one continuous melody, and not in score. The catch was for each succeeding singer to take up or catch his part in time; this is evident not only from the manner in which they were printed, but also from the simple and innocent character of the words of the oldest catches, from which it would be impossible to elicit any ingenious cross-reading. But in course of time a new element was introduced into catches, and words were selected so constructed that it was possible, either by mis-pronunciation or by the interweaving of the words and phrases given to the different voices, to produce the most ludicrous and comical effects. The singing of catches became an art, and was accompanied by gesture, the skill with which they were sung has become a tradition, and certainly many old specimens are so difficult that they must have required considerable labour and practice to sing them perfectly. The oldest published collections containing catches were—

1. 'Pammelia: Musicke's Miscellanie, or mixed varietie of Pleasant Roundelayes and delightful Catches of 3, 4, 5, 6, 7, 8, 9, 10 parts in one. None so ordinarie as musicall, none so musicall as not to all very pleasing and acceptable. 1609.'

2. 'Deuteromelia: or second part of Musicke's Melodie, or Melodious Musick of Pleasant Roundelaies. K. H. Mirth, or Freemen's songs, and such delightful catches. 1609.'

3. 'Melismata: Musicall Phansies fitting the court, citie and countrey Humours. 1611.'

Catches were most in vogue in the reign of the dissolute Charles II, and as much of the popular literature of that period was sullied by indecency and licentiousness it is not surprising that catches were contaminated with the prevailing and fashionable vice; the more than questionable character of the words to which many of the catches of that age were allied has sufficed to ensure the banishment of a large amount of clever and learned musical contrivance. In later times Dr. William Hayes, S. Webbe, and Dr. Callcott have excelled in the composition of catches: 'Would you know my Celia's charms' by Webbe is a well-known example; 'Ah, how, Sophia,' and 'Alas cry'd Damon' by Callcott are also tolerably well known, and still occasionally performed.

Dr. W. Hayes published several collections of catches, some with words by Dean Swift, and in his preface to the first set (1763) says, 'the Catch in music answers to the Epigram in poetry, where much is to be exprest within a very small compass, and unless the Turn is neat and well pointed, it is of little value.' [W. H. C.]

CATCH CLUB. This society, the full title of which was 'The Noblemen and Gentlemen's Catch Club,' was formed in 1761 for the encouragement of the composition and performance of canons, catches, and glees, and the first meeting took place in November of that year, when there were present the Earls of Eglinton, Sandwich, and March, Generals Rich and Barrington, the Hon. J. Ward, and Messrs. H. Meynell and R. Phelps. These gentlemen, with the Duke of Kingston, the Marquesses of Lorne and Granby, the Earls of Rochford, Orford, and Ashburnham, Viscounts Bolingbroke and Weymouth, Lord George Sutton, Colonels Parker, Windus, and Montgomery, Sir George Armytage, and Messrs. H. Penton, W. Gordon, and J. Harris, who joined in 1762, were the original members, and all subsequently enrolled were balloted for. Among distinguished persons afterwards admitted to the Club were George IV (elected when Prince of Wales in 1786), William IV (elected when Duke of Clarence in 1789), the Dukes of Cumberland (1786), York (1787), Cambridge (1807), and Sussex (1813). The professional members elected into the Society of the Catch Club included Beard, Battishill, Arne, Hayes, Atterbury, Paxton, S. Webbe, Piozzi, Knyvett, Stevens, Callcott, Danby, Greatorex, Bartleman, R. Cooke, Horsley, Goss, Walmisley, and Turle. In 1763 the Club offered its first prizes, one for two catches, a second for two canons, and a third for two glees, and they were awarded to Baildon, Marella, Dr. Hayes, and G. Berg. From its foundation to 1794 the prizes were competed for annually, and among the winners were Arne, Hayes, J. S. Smith, Danby, S. Webbe, Lord Mornington, Paxton, Atterbury, Dr. Cooke, R. Cooke, Dr. Alcock, Stevens, Spofforth, and Callcott. In 1787, in consequence of Dr. Callcott having submitted nearly 100 compositions in competition for the prizes, a resolution was passed that 'in future no composer should send in more than three compositions for one prize.' From 1794 to 1811 no prizes were offered, and after being awarded for two years they were again discontinued, until in 1821 they were once more revived, a gold cup taking the place of the medals. The rules of

the Club required the members to take the chair in turns at the dinners which were held at the Thatched House Tavern every Tuesday from February to June, except in Passion and Easter weeks. The successive secretaries of the Club were Warren (1761-94), S. Webbe (1794-1812), Sale (1812-28), R Leete (1828-36), Jas. Elliott (1836-52), O. Bradbury (1852-73), E. Land (1859-76). Webbe's glees 'Hail! Star of Brunswick' and 'The Mighty Conqueror' were composed specially for George IV, who invariably took his call and sang in his glee; and the late Duke of Cambridge attended to the last year of his life and rarely omitted his call, one of his favourite glees being Webbe's 'Glorious Apollo.' In 1861 the Club celebrated its centenary with much vigour, and to commemorate the event offered a silver goblet for the best four-part glee, which was awarded to Mr. W. H. Cummings for 'Song should breathe.' The present subscription is ten guineas each season, and the meetings are held fortnightly at Willis's Rooms from Easter to July. [C. M.]

CATEL, Charles Simon, born June 1773 at l'Aigle (Orne); began his studies very early under Sacchini, Gobert, and Gossec, in the 'Ecole royale de chant et de déclamation,' at Paris. [Conservatoire de Musique.] In 1787 he was made accompanist and 'professeur-adjoint' of the School, and in 1790 accompanist at the Opera. The same year he became chief, conjointly with Gossec, of the band of the Garde Nationale, for which he wrote a vast quantity of military music, which was adopted throughout the revolutionary army. His first work of public note was a 'De profundis' for the funeral of Gouvion in 1792. Another was a Hymn of Victory on the battle of Fleurus (June 26, 94), written for chorus with wind accompaniment only. On the formation of the Conservatoire in 95 Catel was made professor of harmony. He immediately began the compilation of his 'Traité d'harmonie,' which was published in 1802, and remained for many years the sole text-book of France. In 1810 he became one of the Inspectors of the Conservatoire, a post which he retained till the suspension of that institution in 1814. In 17 he was elected Member of the Institut, in the room of Monsigny, and in 24 Chevalier of the Legion of Honour. He died at Paris Nov. 29, 1830. Catel wrote largely for the stage—'Semiramis' (1802), 'L'Auberge de Bagnères' (1807), 'Les Bayadères' (1810), and other operas in 1808, 1814, 1817, and 1818. These have the merit of elegance and purity, but they were not successful; the public insisted on recognising Catel as a savant and a professor, and prejudged his works as 'learned music.' On one occasion Napoleon, who had a singular taste for soft and ineffective music, had the 'Bayadères' performed with all the instruments muted and every mark of expression suppressed—a very severe trial for any opera. Besides his theatrical and military music Catel wrote Symphonies for wind only, Hymns and Choral Pieces, Quintets and Quartets for strings and wind, Songs, Solfeggi, etc.; but it is by his Treatise on Harmony, by his great practical sense and ability, and by his character for goodness and probity that he will be known to posterity.

His treatise is founded on those of Kirnberger and Türk, and at once superseded the more artificial and complicated theories of Rameau, which had till that time reigned supreme in France. [G.C.]

CATELANI, Angelo, musician and writer on music, born at Guastalla March 30, 1811. He received his first instruction from the organist of the place, and afterwards at Modena from Giuseppe Asioli and M. Fusco. In 31 he entered the Conservatoire of Naples, then under Zingarelli, and became the special pupil of Donizetti and Crescentini. From 31 to 37 he was director of the theatre at Messina, and finally settled at Modena, where he was living a few years ago as keeper of the Este Library. Catelani is the author of three or four operas, as well as of a Requiem and other pieces of church music; but his claim to mention rests on his archæological works—Notice on P. Aron (1851); on N. Vincentino (1851); 'Epistolario di autori celebri in musica' (1852-4); 'Bibliografia di due stampe ignote di O. Petrucci da Fossombrone' (1856)—a treatise on the two first pieces of music printed from type; Della vita e delle opere di Orazio Vecchi (1858); Ditto di Claudio Merula da Correggio (1860); Ditto di Alessandro Stradella (Modena, Vincenzi, 1866). [G.]

CATENACCI, a seconda donna, appeared in 1784 at the King's Theatre in Anfossi's 'Issipile,' in 'Le due Gemelle' and the 'Demofoonte' of Bertoni. She was re-engaged in 1786, and sang with Mara and Rubinelli in the 'Virginia' of Tarchi, under the direction of Cherubini. [J. M.]

CATERS. The name given by change ringers to changes on nine bells. The word should probably be written *quaters*, as it is meant to denote the fact that *four* couples of bells change their places in the order of ringing. [C.A.W.T.]

CATHEDRAL MUSIC. Music composed for use in English Cathedral Service since the Reformation.

Just as the Reformed Liturgy was composed of prayers, versicles, responses, and other elements which, though in a different language, had formed the basis of the church services for centuries, so the music to which the new services were sung was not so much an innovation as an inheritance from earlier times: precedents can be found for the greater part of it in the pre-Reformation church music. The truth of this will appear if we compare the style of church music used in England at the end of the 15th and beginning of the 16th centuries with what was introduced about 1550 as an accompaniment to the reformed liturgy. Our inferences as to the music of the former date must be drawn chiefly from breviaries and antiphonaries with musical notes, from compositions for the church, such as masses and motets, and from treatises on music. We learn from these sources that the

psalms, canticles, versicles, responses, and creeds were sung invariably in plainsong, which signifies a certain specific mode of chanting in unison, guided by definite rules that can still be ascertained, and implying to a great extent the use of certain well-known melodies appropriated to particular parts of the service. Of this mode of chanting the Gregorian chants used at the present day are a regular form. [CHANT.] So far then as regards simple melody we are fairly well informed as to pre-Reformation church music. But there is less certainty as to the use of harmony. It is true that a rude style of part-singing, called 'organising,' had been known for centuries before the Reformation, and later on the development of counterpoint had resulted in the composition of masses and motets, of which we have specimens by English composers, e. g. Byrd, Taverner, Fayrfax, and Tye, dating from before the Reformation. But though these compositions show that harmony was recognised in English church music before 1550, it is difficult to show to what extent they were used, and whether they were regularly introduced in the way that anthems by various composers are now employed in cathedral service. Possibly at ferial times plainsong may have predominated, and at festal times harmonised compositions, chants, and canticles, as well as anthems, may have been used; though these would interfere with the plainsong, which invariably formed the 'subject' to which the parts were adapted.

Such was the general character of English church music as it was found by the reformers of the 16th century. We must now enquire in what way it was dealt with by them in the transition from the Romish to the reformed service, and in what form it appeared after the change had taken place. The two works which directly illustrate the mind of the English church as to the musical rendering of her reformed services are, (1) the Litany published by Cranmer with its musical notation; (2) the more important work containing the musical notation of the remainder of the then Common Prayer Book, edited by John Marbeck. Now both these works seem to show that the aim of the reformers was not to discard but to utilise the ancient plainsong, by adapting it to the translated services. In the first place the music of Cranmer's litany is a very ancient chant, almost identical with that appointed for the Rogation days in the Roman processional, and with that which occurs in the Salisbury ritual for the procession of peace: hence we see that it was from the oldest sources that Cranmer obtained the musical setting of the new litany in English. Secondly, the music of Marbeck's work consists of the old plainsong simplified and adapted to the new services. Mr. Dyce, in his 'Preface and Appendix to the Book of Common Prayer,' shows conclusively that Marbeck intended to follow the ancient Salisbury use (the great standard of English choral music) note for note, as far as the rules of plainsong would permit; and that where his notation varies from that of Salisbury, the variation is due to the difference between the English and Latin syllables, and as such is merely what the technical rules of plainsong would dictate.

It would appear then that as regards plainsong, the Reformation brought little or no change to our services; the ancient melodies were preserved intact, except where change was required to adapt them to the new liturgy.

As to compositions in harmony, these, as we saw above, had been undoubtedly introduced into the service to some extent before the Reformation, but were sung to Latin words. During the changing times of Henry VIII, Edward VI, Mary, and Elizabeth, when the form of church service was not yet settled, the great church composers wrote and arranged for whatever services were established at the time—for the Latin words of mattins, vespers, the little hours, and the mass, or for the English canticles of Morning and Evening Prayer, and for the English Communion Service, according as the Romish or Protestant liturgy was recognised. Sometimes, as in the case of Byrd's 'Ne irascaris, Domine,' and 'Bow thine ear, O Lord,' the same music was set to the two languages, or what had been written for the one was adapted to the other. And thus the change of ritual may be said to have affected compositions in harmony even less than it affected the mere melodic forms or plainsong.

Though a complete scheme for the musical service was set forth in Marbeck's book (except for the litany, which Cranmer had already supplied, and the Psalms, which no doubt Marbeck intended to be sung in the manner he indicated for the Canticles, viz. in the old plainsong); the canticles and other parts of the service were set very frequently in harmony, about the time when Marbeck's book appeared. All the church musicians whose harmonised compositions remain to us, from the time of Edward VI onwards, have set the canticles anthemwise as 'services'; and thus, even while Marbeck's was the only authorised musical-service book, a more perfect system was displayed alongside of it. Hearers could not fail to be struck by the superiority of harmonised canticles and services over the simple melodies sung in unison, of which Marbeck's book consists. Dr. Jebb considers that the latter work was only meant as an elementary and tentative one, and that it never became authoritative. However this may be, it was superseded by a work containing harmonized compositions, contributed by Tallis, Shepherd, Taverner, and some others. This was John Day's book, published in 1560, and entitled, 'Certaine Notes, set forth in foure and three partes, to be sung at the Morning, Communion, and Evening Praier, ... and unto them be added divers Godly praiers and psalmes in the like forme.'

The latter clause leads us to the consideration of the anthem, with reference to which Blunt (Introduction to the Book of Common Prayer) says as follows:—'It is difficult to ascertain the exact time when the practice of popular hymn

and metrical psalm singing established itself in connection with our revised ritual, though independently of its direct authority. Such singing was in use early in Elizabeth's reign, having doubtless been borrowed from the Protestants abroad. For the purpose of giving a quasi-official sanction to a custom which it would have been very unwise to repress, it was ordained by a royal injunction in the year 1559, that while there was to be a 'modest and distinct song so used in all parts of the common prayer, that the same might be understanded as if it were read without singing' (in other words, while the old traditional plainsong in its simplified form is to be employed throughout the whole service, yet) 'for the comforting of such as delight in music it may be permitted that in the beginning or at the end of the common prayer there may be sung an hymn or such like song, to the praise of Almighty God, in the best melody and music that may be devised, having respect that the sentence of the hymn may be understanded & perceived.'

This injunction gave legal authority to the setting of English words to be sung anthemwise. The first anthems written for the Reformed Church are full, i.e. sung in regular alternation by the whole choir; they resemble the motets of the Italian Church, which furnished models to the first English anthem-writers. 'Verse anthems', i.e. those in which certain passages, called verses, were sung in slower time, not by all the voices on one side but by a selected number, were introduced about 1670; though Dr. Jebb informs the writer that precedents for verse anthems existed in the pre-Reformation service.

As principal composers of cathedral music from the Reformation to the Rebellion we may select Tye, Tallis, Farrant, Shepherd, Taverner, Redford, Morley, Byrde, Bull, and Gibbons. The compositions of this period are more conspicuous for technical skill than for musical expression, and no difference can be traced between the secular and the sacred style. Dr. Jebb however maintains that the latter was at least national and peculiar to this country, and that the Church of England was not indebted to Palestrina; which statement he supports by urging the similarity of the style of Byrde and Tallis to that of Robert White, who was anterior to the great Italian composer.

Under the Commonwealth, music, except in the form of metrical psalmody, was expelled from English churches; it was restored in 1660 by Charles II, the effect of whose French tastes upon Cathedral music is thus described by Tudway (Burney's History, vol. iii. 443): 'His majesty was soon tired with the grave and solemn way which had been established by Bird and others, and ordered the composers of his chapel to add symphonies with instruments to their anthems; and established a select number of his private music to play the symphony and ritornellos which he had appointed. The old masters of music, Dr. Child, Dr. Gibbons, Mr. Low, etc., hardly knew how to comport themselves with these new fangled ways, but proceeded in their compositions according to the old style.' There was great difficulty during the first years of the Restoration in finding boys capable of singing in the choirs, since the art had been so much neglected during the Protectorate. Hawkins (History of Music, iv. 349) says on this point, 'Nay, to such streights were they driven, that for a twelvemonth after the Restoration the clergy were forced to supply the want of boys by cornets, and men who had feigned voices.'

It appears from a passage in the life of Archbishop Whitgift (Biographia Britannica, p. 4255), that cornets had been before introduced; for an allusion is made to the 'solemn music with the voices and organs, cornets and sackbuts'; and in Stow's Annals (864), we read that at the churching of the Queen after the birth of Mary daughter of James I, in the Royal Chapel, sundry anthems were sung with organ, cornets, sackbuts, and other instruments of music.' [See ANTHEM, 2nd period.]

'In about four or five years time' says Tudway, 'some of the forwardest and brightest children of the chapel, as Pelham Humphrey, John Blow, etc., began to be masters of a faculty in composing; this his majesty greatly encouraged, by indulging their youthful fancies. In a few years more, several others educated in the chapel, composed in this style; otherwise it was vain to please his majesty.' The peculiar influence here ascribed to Charles II may be traced in the works of Humphrey, Blow, Wise, and their contemporaries, in the too evident aim at effect, and the mannerisms and exaggerated ornaments which characterise them; even the great genius of Purcell did not escape the effect of Charles's fantastic tastes. Many of his finest anthems are disfigured by symphonies of such a kind as were evidently invented merely to gratify the king's desire for French mannerisms. But it was in the 18th century that the lowest musical standard prevailed in the service of the church. A florid sing-song melody, with a trivial accompaniment, was the type to which everything was sacrificed, and a rage set in for objectionable adaptations and arrangements. The works of Nares and Kent may be taken as specimens of this class, though one worthy exception should be noticed in Dr. Boyce.

Within the last 25 years choral communions have been introduced: they had been discarded at the Restoration, from which time up to 1840 the Communion Service was never set to music except in so far as parts of it, e. g. the Sanctus, and the Gloria, were arranged as anthems and introits. [E. H. D.]

CATHERINE GREY, an opera in 3 acts; libretto by Bunn; music by Balfe. Produced at Drury Lane May 27, 1837, the composer himself playing the Earl of Hertford. [G.]

CATLEY, ANNE, was born in 1745 in an alley near Tower Hill, of very humble parents, her father being a hackney coachman, and her

mother a washerwoman. Endowed with great personal beauty, a charming voice, and a natural talent for singing, she gained her living at the early age of 10 years by singing in the public houses in the neighbourhood, and also for the diversion of the officers quartered in the Tower. When about 15 years of age she was apprenticed by her father to William Bates for the purpose of receiving regular instruction in the art of singing, Catley binding himself in the penalty of £200 for her due fulfilment of the covenants in the indenture. She made rapid progress, and in the summer of 1762 made her first appearance in public at Vauxhall Gardens. On Oct. 8 in the same year she appeared at Covent Garden Theatre as the Pastoral Nymph in Dr. Dalton's alteration of Milton's 'Comus.' Early in 1763 she became acquainted with Sir Francis Blake Delaval, a young baronet, who prevailed on her to quit the house of Bates and reside with him. Desirous of obtaining a legal control over her, Delaval, in April 1763, induced Bates to consent to an arrangement for his pupil doing some act which would put an end to the apprenticeship, Delaval paying him the £200 penalty, and also the amount of an engagement he had entered into for her singing during the summer season at Marylebone Gardens. She was then colourably apprenticed to Delaval to be taught singing by him. Application being made to her father, who was then coachman to Barclay, the quaker, of Cheapside, for his concurrence, he consulted his master, who, shocked at the iniquity of the transaction, at once sent Catley to his attorney. A habeas corpus was obtained for Delaval to produce Anne Catley before the Court of King's Bench, where the affair being inquired into, the Court ordered that Delaval, Bates, and John Frayne, an attorney employed by Delaval, should be prosecuted for conspiracy, the Chief Justice, Lord Mansfield, denouncing their conduct in strongly indignant language. They were accordingly tried, convicted, and fined. In the summer of 1763 Anne Catley fulfilled her engagement at Marylebone Gardens, and shortly afterwards became a pupil of Macklin, the actor, who procured her an engagement at Dublin, where she became a great favourite. O'Keeffe, the dramatist, who became acquainted with her there, says, in his amusing 'Reminiscences,' 'She wore her hair plain over her forehead in an even line almost to her eyebrows. This set the fashion in Dublin, and the word was with all the ladies to have their hair *Catley-fied*.' He elsewhere observes, 'She was one of the most beautiful women I ever saw; the expression of her eyes and the smiles and dimples that played round her lips and cheeks enchanting. She was eccentric, but had an excellent heart.' In 1770 she returned to England, and reappeared at Covent Garden Theatre on Oct. 1 as Rosetta in 'Love in a Village.' After the season she was again engaged at Marylebone Gardens, where she appeared on July 30, 1771, and sang until the close of the season. On Feb. 6, 1773, O'Hara's burletta, 'The Golden Pippin,' was produced at Covent Garden Theatre. Miss Catley performed the part of Juno with a spirit and humour that excited the utmost applause, and was particularly admired for her singing of two of the songs, viz. 'Push about the jorum,'—the tune of which has been used for an almost endless number of comic songs,—and 'Where's the mortal can resist me?'—the tune of which, slightly varied, has long been associated with the Advent Hymn. Having amassed an independence Miss Catley retired from public life in 1784. She died Oct. 14, 1789, at the house of General Lascelles (to whom she was married), near Brentford. The public prints of the day eulogised her as a good mother, a chaste wife, and an accomplished woman. [W. H. H.]

CAURROY, François Eustache du, Sieur de St. Frémin, born at Gerberoy near Beauvais 1549, died in Paris 1609; canon of the Ste. Chapelle and prior of St. Aïoul de Provins; a composer of great merit in his day. He was appointed director of the King's band in 1569, and continued in office during the reigns of Charles IX, Henry III, and Henry IV. In 1599 the post of Surintendant de la Musique du Roi was created for him. He was buried in the Church des Grands Augustins. A monument (destroyed in the Revolution) was erected to his memory by his successor Nicolas Formé, with an epitaph by his friend Cardinal du Perron. Du Caurroy was called by his contemporaries 'Prince des professeurs de musique,' a title he shared with Orlando Lasso and Palestrina. His compositions include 'Missa pro defunctis,' performed at the funerals of the kings of France until the 18th century; one copy only exists at the Bibliothèque Nationale in Paris; 'Preces ecclesiasticæ' (Paris 1609), 'Precum ecclesiasticarum lib. 2' (Paris 1609), and, published by his grandnephew André Pitart, 'Fantaisies' in 3, 4. 5, and 6 parts (Paris 1610) and 'Mélanges de musique' (Paris 1610) from which Burney prints in his 3rd volume a Noël in four parts. Du Caurroy has been credited with the airs 'Charmante Gabrielle' and 'Vive Henri IV.' [M. C. C.]

CAUSTON, Thomas, was a gentleman of the Chapel Royal in the reigns of Edward VI, Mary, and Elizabeth. He contributed to the curious collection published by John Day, the eminent printer, in 1560, in separate parts, under the title of 'Certain Notes, set forth in four and three parts, to be sung at the Morning, Communion, and Evening Prayer'; he was also a contributor to the collection of psalm tunes published by Day in 1563 under the title of 'The whole Psalmes in foure parts, which may be sung to all musical instruments.' Some of his compositions are still extant. 'They are remarkable for purity of part writing and flowing melody, closely resembling the style of Orlando Gibbons, the great church composer of a later period.' Causton died Oct. 28, 1569. A 'Venite exultemus,' and a Communion service by him were reprinted by the Rev. Dr. Jebb some years since. [W. H. H.]

CAUVINI, an Italian singer, described by

Lord Mount-Edgcumbe as 'a very pretty woman and pleasing actress,' who appeared about 1812, in 'Così fan tutte.' Another singer of the same name, perhaps her husband, whom the same critic calls 'a very respectable tenor,' appeared with her in that opera, with Tramezzani and Naldi, all new to the English stage. They joined the party, including Morelli, Bertinotti, Collini, and the youthful Miss Stephens, which was driven by Catalani to secede to the Pantheon. Nothing further is known of the Cauvinis. [J. M.]

CAVAILLÉ, the name of several generations of distinguished organ builders in the south of France. The present eminent member of this family is ARISTIDE CAVAILLÉ-COL, born at Montpellier, 1811. The name of Col was that of his grandmother. In 1833 he went to Paris, to see what progress was being made in his art, but without the intention of establishing himself there. Hearing that there was to be a competition for the construction of a large organ for the royal church of St. Denis, he determined to send in a tender, although only two days remained for preparing it. When called up before the committee he gave them such interesting explanations of his plans that they decided to accept his tender. Barker's pneumatic lever was first used in this organ. He thus became established in Paris, built the fine organ of the Madeleine, and many others in the capital and in the provinces. [V. DE P.]

CAVACCIO, GIOVANNI, born at Bergamo about 1556, was for a time singer at the court of Munich, and after visiting Rome and Venice settled in his native town as maestro at the Cathedral. Thence after 23 years service he was called to be maestro at S. Maria Maggiore at Rome, where he remained till his death, Aug. 11, 1626. Cavaccio contributed to a collection of Psalms, dedicated in 1592 to Palestrina. His works are Magnificats, Psalms, Madrigals, etc., 1581–1611. (See list in Fétis). Some of his pieces are found in the 'Parnassus musicus' of Bergameno. [G.]

CAVALIERI, EMILIO DEL, was a Roman gentleman of good family and fine musical perceptions. He was born about the year 1550, and died some time at least before the end of the 16th century, for his most important work, 'La Rappresentazione di Anima e di Corpo,' was performed for the first time in 1600, and all the accounts of him agree in stating that it was never performed in his lifetime. He spent a great portion of his life at the court of Ferdinand dei Medicis, who appointed him to the quaintly-named office of 'Inspector-General of the Artists' at Florence. There he lived upon terms of intimacy with Giovanni Bardi of Vernio, Giulio Caccini, Vincenzo Galilei, Peri, Corsi, and Rinuccini, a group of accomplished artists and gentlemen, who were bent upon freeing music from the trammels of the 'stile osservato,' and bringing about some better result from the union of instruments, poetry, and the human voice than had up to their time been achieved.

Cavalieri, then, was one of the earliest projectors of instrumental accompaniment, and among the first to employ that early form of it which goes by the name of the Basso Continuo, with figures and signs attached to guide the different instruments in filling up the intermediate parts. Alessandro Guidotti, who published 'La Rappresentazione di Anima e di Corpo,' after the death of its author, thus explains the system of the 'Basso figurato':—'I numeri piccoli posti sopra le note del basso continuato per suonare, significano le consonanze e le dissonanze di tal numero, come il 3 terza, il 4 quarto, e così di mano in mano.' Cavalieri did not attempt to elaborate the accompaniment thus suggested; a great deal was still left to the players themselves, just as in the plain-song the underlying parts were filled in by what in England was known as 'descant,' and in Italy as 'Il Contrapunto della Mente.' Not the less, however, did the labours of Cavalieri and his contemporaries constitute at once a starting-point and a stride in art. He was also among the earliest employers of vocal ornaments, such as the gruppetto or groppolo, the monachina, the zimbalo, and perhaps the trillo. It may be questioned, however, whether the last-mentioned was the true 'shake'; that is to say, a rapid oscillation between two tones or semitones; or whether it was only a certain vibratory production of the voice, probably considered an elegance in early times, but now more fitly estimated as a fault common among bad singers, and known as the 'tremolo.' [SHAKE; TREMOLO.]

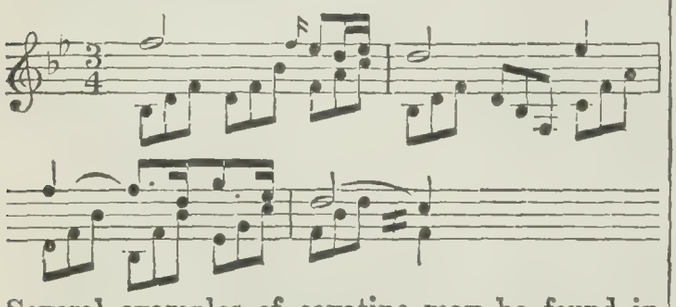
A dramatic tendency naturally arose out of the desire to make vocal and instrumental music subservient to the illustration of words, and it is not surprising therefore that Cavalieri should have produced musical dramas. Of these he composed four—Il Satiro, La disperazione di Fileno, Il giuoco della cieca, and La Rappresentazione, mentioned already. They were one and all of them arrangements of words provided by Laura Guidiccioni, an accomplished lady of the Lucchesini family. Of these works the last-named only has been edited, as stated above, by Guidotti of Bologna. [E. H. P.]

CAVALIERI, KATHARINA, dramatic singer, born at Währing, Vienna, 1761. At a very early age she was placed under Salieri by some wealthy connoisseurs who had heard her sing in church, and in 1775, when barely 14, was engaged at the Italian Opera. A year later the Emperor Joseph founded a German Opera, to which she was transferred. As Cavalieri never sang out of Vienna her name is almost unknown elsewhere, but Mozart's approval stamps her as an artist of the first rank. In one of his letters (1785) he says 'she was a singer of whom Germany might well be proud'; and it was for her he composed the part of Constance in the 'Entführung,' the soprano part in 'Davidde penitente,' that of 'Mad. Silberklang' in the 'Schauspiel-Director,' and the air 'Mi tradì' in 'Don Giovanni,' on its first representation at Vienna, May 7, 1788. Salieri

called her his favourite pupil, and wrote the principal parts of several operas for her. She sang in nearly all the oratorios produced by the Tonkünstler-Societät (now the Haydn-Verein), and maintained her popularity to the last, against many eminent singers. Her voice was of considerable compass, and she was a cultivated musician. She made up for her want of personal attractions by her fascinating manners. She was compelled from over-exertion to retire when in the prime of life (1793), and died June 30, 1801. [C. F. P.]

CAVALLI, Pietro Francesco, eminent composer of the 17th century, born at Crema, Venice, in 1599 or 1600. His real name was Caletti-Bruni, and he took that of Cavalli from his patron. In 1617 he became singer in the choir of St. Mark's under Monteverde; in 1640 organist of the second organ, in 65 organist of the first organ in that church; in 68 chapel-master, and on Jan. 14, 76, he died. Of his church-music nothing has been published beyond a Mass, Psalms, and Antiphons, for 2 to 12 voices (Venice, 1656), and Vespers for 8 voices (ib. 1675). Santini possessed a Requiem of his (sung at Cavalli's funeral) for 8 voices in MS. His operas were very numerous. He began to write for the theatre in 1637, and continued so to do for 32 years. There were then five theatres in Venice, and Cavalli was fully employed. Fétis gives a list—evidently incomplete—of 39 pieces. In 1660 he was called to Paris for the marriage of Louis XIV, and produced his opera of 'Xerse' in the Grand Gallery of the Louvre; to Paris again in 1662 for the Peace of the Pyrenees, when he brought out 'Ercole amante'; and to Innspruck for the fête on the reception of Queen Christina. His wife belonged to the Sozomeni family; he grew rich and enjoyed the esteem and affection of his fellow-citizens. He took the opera from the hands of Monteverde, and maintained it with much dramatic power and with a force of rhythm before unknown. An air by Cavalli and some fragments will be found in Burney's 'History,' vol. iv. [G.]

CAVATINA originally signified a short song, but has been frequently applied to a smooth melodious air, forming part of a grand scena or movement. Thus Mozart's noble scena 'Andromeda' commences with a recitative 'Ah, lo previdi!' followed by an Aria, Allegro, then more recitatives in several tempi, and lastly a Cavatina, Andantino:—



Several examples of cavatine may be found in Bellini's 'Sonnambula,' Meyerbeer's 'Ugonotti,' and other well-known operas. The word is sometimes used for a complete air or song, as in Gounod's 'Romeo'—'L'amour! oui son ardeur a troublé'; and in 'Faust'—'Salve dimora.' In the full score of Mendelssohn's 'St. Paul' 'Be thou faithful unto death' is called a cavatina, but in the vocal scores it is described as an aria. Beethoven has given this title to the second slow movement, *Adagio molto espressivo*, in his great Quartet in B♭ (op.130), one of the most touching and individual pieces to be found in all his works. It consists of a song in two strains in E flat and A flat, an episode in E flat minor (expressive of the deepest distress, and marked in the autograph *Beklemmt*—choked with grief), and a return to the original strain. [W. H. C.]

CAVENDISH, Michael, was the composer of a set of 'Ayres for four Voyces,' published in 1599. He contributed a madrigal—'Come, gentle swaines'—to 'The Triumphes of Oriana,' 1601, and was one of the ten composers who harmonised the tunes for 'The Whole Booke of Psalmes with their wonted Tunes as they are song in Churches composed into foure parts,' published in 1592 by Thomas Este. Nothing is known of his biography. [W. H. H.]

CAZZATI, Maurizio, born at Mantua about 1620, died there 1677, appointed in 1657 Chapel-master of San Petronio in Bologna. He resigned this post in 1674 on account of a violent quarrel with Aresti, organist of the same church, who had severely criticised the Kyrie in a mass of Cazzati's. His voluminous compositions (for list see Fétis) comprise masses, psalms, and motets, besides canzonets and airs. One of his motets 'Sunt breves mundi Rosæ' was printed in Ballard's collection for 1712, and other pieces in Profe's 'Geistlicher Concerten' (Leipsic 1641). [M. C. C.]

CECILIA, ST., Virgin and Martyr, was a young Roman lady of noble birth, who, being educated in the Christian faith, vowed to lead a celibate life and to devote herself to the service of religion. She was, however, compelled by her parents to marry Valerianus, a young Roman noble and a Pagan, with whom she prevailed so much as not only to induce him to respect her vow, but, with his brother, to embrace the Christian faith. Seized and brought before the Pagan authorities, and refusing to abjure their faith, they were condemned to death, the brothers being decapitated, and the virgin-wife placed in a dry bath with fire beneath, which failing to terminate her existence as rapidly as her persecutors desired, they sent an executioner to despatch her by severing her head from her body. These events occurred at Rome about 229, under Alexander Severus, according to most writers, although some state them to have happened in Sicily under Marcus Aurelius between 176 and 180. Her house at Rome, where she was put to death, was converted into a church, or a church was built over it, to which in 821 her remains, with those of her husband and brother and other martyrs were translated. This church was repaired and sumptuously embellished in 1599, and a monument of the saint erected.

St. Cecilia has long been regarded as the tutelary saint of music and musicians, but the period at which she was first so looked upon is involved in obscurity. There is a tradition that an angel by whom she was visited was attracted to earth by the charms of her singing, but when it originated is equally unknown. Early writers make no mention of her skill in music; even as late as 1594 a long Italian poem by Castelletti, entitled 'La Trionfatrice Cecilia, Vergine e Martire Romana,' was published at Florence, which does not allude to it. It is certain however that nearly a century before she had been considered as Music's patroness, for in 1502 a musical society was established in Louvain, the statutes of which were submitted to the magistrate for his sanction. The founders desired to place the new association under the patronage of 'St. Job,' but the magisstate decided that it should be put under the auspices of St. Cecilia.

For a very long time the custom of celebrating upon St. Cecilia's festival (Nov. 22) the praise of music by musical performances existed in various countries, and many associations were formed for the purpose. The earliest of such associations of which any notice has been found was established in 1571, at Evreux in Normandy, under the title of 'Le Puy de Musique.' A solemn celebration of vespers and complin took place in the cathedral on the vigil; high mass, vespers and complin were performed on the feast day, and a requiem mass for the souls of departed founders on the morrow. A banquet was given after mass on the feast day, and prizes were awarded for the best motets, part-songs, airs, and sonnets. The best composers of the day were competitors for these prizes, and amongst those who obtained them are found the names of Orlando de Lasso, Eustache du Caurroy, and Jacques Salmon.

It was a century later before any similar association was regularly established in England. In 1683 a body of persons known as 'The Musical Society,' held the first of a series of annual celebrations. Their practice was to attend Divine worship (usually at St. Bride's church), when a choral service and anthem with orchestral accompaniments (often composed expressly for the festival), were performed by an exceptionally large number of musicians, and a sermon, usually in defence of cathedral music, was preached. They then repaired to another place (commonly Stationers' Hall), where an ode in praise of music, written and composed expressly for the occasion, was performed, after which they sat down to an entertainment. These odes were written by Dryden (1687 and 1697), Shadwell, Congreve, D'Urfey, Hughes, and other less-known writers, and composed by Henry Purcell (1683 and 1692), Blow (1684, 1691, 1695, and 1700), Draghi, Eccles, Jeremiah Clarke, and others of lesser note. Purcell produced for 1694 his 'Te Deum and Jubilate in D,' and Blow his for 1695. These celebrations were kept uninterruptedly (with the exception of the years 1686, 1688, and 1689) until 1703, after which they were held only occasionally. Pope wrote his fine ode in 1708, but it was not set to music until 1730, and then in an altered and abbreviated form by Dr. Greene, as the exercise for his doctor's degree. It was first set in its original form about 1757 by William Walond, organist of Chichester cathedral, and at a much later period by Dr. Thomas Busby. In 1736 Handel reset Dryden's 'Alexander's Feast,' originally composed in 1697 by Jeremiah Clark, and in 1739 Dryden's first ode, originally set in 1687 by Draghi. Odes were composed at various periods by Drs. Pepusch and Boyce, by Festing, Samuel Wesley, and others.

About the same time that the London celebrations were established similar meetings were held at Oxford, for which odes were written by Addison, Yalden, and others, and set by Blow, Daniel Purcell, etc. These meetings were continued until 1708, and perhaps later. Other places followed the example, as Winchester, Gloucester, Devizes, and Salisbury. At the latter place, in 1748 (the time of holding it having previously been changed), the meeting was extended to two days, and gradually developed into the modern musical festival, oratorios being performed at the cathedral in the morning, and secular concerts at the Assembly Room in the evening.

There are some records of a musical celebration having taken place on St. Cecilia's day in Edinburgh in 1695, and in the early part of the 18th century several took place in St. Patrick's cathedral, Dublin.

In Paris some years since it was the custom to have a solemn mass performed in the fine church of St. Eustache on St. Cecilia's day, for the benefit of the Society of Artist Musicians. On these occasions a new mass, composed expressly by some eminent musician, was usually produced. Amongst those who wrote such masses were Adolph Adam, Niedermeyer (1849), Dietsch, Gounod (1855), and Ambroise Thomas (1857).

Musical celeb ations on St. Cecilia's day are recorded as having taken place at various periods in Italy, Germany, and elsewhere. Spohr composed a 'Hymn to St. Cecilia' for the Cecilian Society at Cassel in 1823, and Moritz Hauptmann another for the same society in the following year.

It only remains to allude to the fact of St. Cecilia having long been a favourite subject with poets and painters: from Chaucer to Barry Cornwall, from Raffaelle to Delaroche, her story has frequently been set forth in verse and on canvas. [W. H. H.]

CELESTINO, Eligio, a violin-player, born at Rome, 1739. Burney heard him in that city in 1770, and considered him the best Roman violinist of the period. In 1776 he began to travel, and settled in 1781 at Ludwigslust in Mecklenburg, as leader of the Ducal band, which post he retained till his death in 1812. When sixty years of age, Celestino came to England, and met with considerable success. In Preston's Catalogue (London, 1797), we find of his composition Six Sonatas for a Violin and Bass (op. 9), and three Duos à Violino e Violoncello (London, Clementi, 1798). [P. D.]

CELLO, a contraction of VIOLONCELLO.

CEMBAL D'AMORE translated is 'harpsichord of love,' but according to Adlung ('Musica Mechanica'), this instrument did not belong to the clavicembalo or harpsichord genus, but to that of the clavichord. The strings, he states, were as long again as in the ordinary clavichord, and the tangents which produced the tone from the strings, instead of touching them near to their left-hand terminations, made the impact exactly in the middle of their whole length between the bridges, of which there were two instead of one as in the clavichord, and two soundboards of unequal forms and dimensions. Both halves of the strings were thus set in vibration simultaneously, which necessitated the use of a different damping contrivance to the simple one of the clavichord. In the cembal d'amore the strings lay upon the damping cloth, instead of its being woven between them, and small wooden uprights supported it. The strings were therefore damped when at rest; when raised upwards by the tangents they were free to vibrate, and remained so as long as the keys were pressed down. The form of a cembal d'amore was that of an English spinet with the keyboard to the right hand of the player instead of the left, thus reversing the extension of the instrument laterally. Adlung attributed to it more tone than the ordinary clavichord, and more capability of *bebend* effect by the gently reiterated movement of the key. But too much pressure on the key would affect the intonation as in a clavichord. In estimating its dynamic power he places the cembal d'amore far behind the pianoforte, though beyond the clavichord. Mattheson (Critica Musica) refers to it and to a parallel between the Florentine (pianoforte) and Freiberg (cembal d'amore) in a bantering tone. Gottfried Silbermann of Freiberg (1683-1753) invented it, and Hähnel of Meissen attempted to improve it by adding a 'Celestine' register. Others, as Oppelmann and Hasse of Hamburg, made the instrument.

Through the even series of overtones being banished by the contact with the first, or node at the half length of the string, the quality of tone or *timbre* must have tended towards that of the clarinet. The Rev. J. R. Cotter, of Donoughmore Rectory, Cork, between the years 1840 and 1865 endeavoured to obtain this effect from a pianoforte which he had constructed in Messrs. Broadwoods' workshops, by making a 'striking place' at the middle of the vibrating length of string. In this, the Lyrachord, as he named it, the clarinet quality was a prominent characteristic. [A. J. H.]

CEMBALO or CIMBALO (Italian), a dulcimer, an old European name of which, with unimportant phonetic variations, was Cymbal. According to Mr. Carl Engel this ancient instrument is at the present day called *cymbaly* by the Poles, and *cymbalom* by the Magyars. The derivation of cembalo is from the Greek *κύμβη* (Latin *cymba*), a hollow vessel; and with the Greeks *κύμβαλα* were small cymbals, a larger form of this ringing instrument being well known in modern military bands. These cymbals and bells in the middle ages were regarded as closely allied, and rows of bells of different sizes, *tintinnabula* or *glockenspiel*, were also called *cymbala*. Virdung (1511) names *zymbeln* and *glocken* (cymbals and bells) together. It was most likely the bell-like tone of the wire strings struck by the hammers of the dulcimer that attracted to it the name of cymbal or cembalo. It is explained here, however, not only for the meaning dulcimer, but for the frequent use of the word 'cembalo' by composers who wrote figured basses, and its employment by them as an abbreviation of clavicembalo. The dulcimer, or cembalo, with keys added, became the clavicembalo. In course of time the first two syllables being, for convenience or from idleness in speaking or writing, dropped, 'cembalo' also was used to designate the keyed instrument, that is, the clavicembalo or harpsichord—just as cello in the present day frequently stands for violoncello. In the famous Passacaille of J S. Bach, 'cembalo' occurs where we should now write 'manual,' there being a separate pedal part. [See PEDAL.] But we know from Forkel that Bach used a double 'flügel' or clavicembalo, having two keyboards and obbligato pedals, as well as the organ with pedals. There is a story in the Decamerone of Boccaccio of one Dion, who being asked to sing, said he would if he had a cembalo. The early date of this quotation (1352-3) has led to much difference of opinion among musical authorities as to the instrument that was meant. Burney leans to a tambour de basque, a tambourine, which by some caprice had been designated, some time or other, cembalo. Dr. Rimbault (Pianoforte, p. 36) maintains that it was a small clavichord, but for this explanation the date is almost too early. The opinion of Fétis, that it was a dulcimer, is probably the true one. [HARPSICHORD.] [A. J. H.]

CENERENTOLA, LA, opera on the story of Cinderella, by Rossini, libretto by Feretti; produced at the Teatro Valle in Rome at the carnival, 1817, at the King's Theatre, London, (much mutilated), Jan. 8, 1820, and at the Théatre des Italiens, Paris, June 8, 1822. Its favourite numbers are 'Miei rampolli,' 'Un segreto d'importanza,' and 'Non piu mesta.'

'Cinderella . . . with the music by Rossini' was produced in English at Covent Garden, April 13, 1830; but it was a mere pasticcio, the music being made up from 'Cenerentola,' 'Armida,' 'Maometto,' and 'William Tell.' No better adaptation has yet been made. [G.]

CERONE, DOMENICO PIETRO, priest, born at Bergamo, 1566, migrated to Spain in 1592, and entered the chapel of Philip II. in 1593. In 1608 he left Spain for Naples, where he belonged to the Chapel Royal, and was living in 1613. His claim to mention is his treatise 'El Melopeo,' a folio volume, in Spanish, of 22 books and 1160 pages of small print (Naples, 1613), a work, according to the account of Fétis, valuable in some respects, but tedious, confused, and unequal to an astonishing degree. It is founded on the

system of Zarlino; indeed there is some reason to believe that it is a mere redaction of a work with the same title which Zarlino speaks of as having completed in MS., but which has totally disappeared. The whole edition of Cerone's work is said to have been lost at sea except 13 copies, one of which is in the Fétis library of the Bibliotheque Royale de Belgique, No. 5340. [G.]

CERTON, Pierre, a French musician of the first half of the 16th century; master of the choir at the Saint Chapelle, Paris; mentioned by Rabelais in the Nouveau prologue to the 2nd book of Pantagruel. A list of his works is given by Fétis. They include 31 Psalms (1546); another collection of the same (1552); 3 Masses (1558); 1 Mass (1558); 1 Requiem. A Magnificat of his is found in a collection of 8 (Canticum B. M. Virginis etc. 1559), and many of his motets are included in the collections of Attaignant (1533–49), Susato (Antwerp, 1543–50), Phalése (Louvain, 1558), and Cipriani (Venice, 1544). In the 'Collection of Ancient Church Music printed by the Motet Society' (1843), a piece by Certon is given for 2 trebles and tenor, to English words, which is very melodious and graceful, and with a marked character of its own. [G.]

CERVETTO. The name of two eminent violoncello players of the last century.

1. It was the sobriquet of Giacomo Bassevi, born in Italy 1682. He came to England and joined the orchestra of Drury Lane in 1728. The cello was not then known in England, but Cervetto, though his tone is said to have been coarse and his execution not remarkable, made it a popular instrument. Probably there was something genial and attractive in the personality of the man. He had a very large nose, and it was a favourite joke to call to him from the gallery, 'Play up, nosey'—an expression still heard in the theatres. That he was a man of humour is shewn by an anecdote given in the books. Garrick was playing a drunken man, and ended by throwing himself into a chair. At this moment, the house being quite still, Cervetto gave a long and loud yawn, on which Garrick started up, and coming to the footlights demanded furiously what he meant. 'I beg your pardon,' said Cervetto, 'but I always gape when I am particularly enjoying myself.' He became manager of Drury Lane, and died January 14, 1783, over 100, leaving £20,000 to his son.

2. James, who was born in London 1758 or 9. He made his first appearance when 11 years old at a concert at the Haymarket Theatre, when all the performers were children. Among them were Giardini (11), Gertrude Schmähling (9)—afterwards the celebrated Madame Mara, but then a violin player—and Miss Burney, sister of the authoress of 'Evelina.' (Pohl's 'Haydn in London,' 339.) Up to the death of his father he played at the professional concerts and other orchestras of the day, Crosdill being his only rival; but after that event he retired upon his fortune, and died Feb. 5, 1837, leaving a few unimportant pieces for his instrument behind him. [G.]

CESTI, Antonio, was an ecclesiastic, a native of Arezzo according to Baini, whom Fétis follows, but of Florence according to Adami. He was born about 1620, and in due course became a pupil of Carissimi. He was made a member of the papal choir on Jan. 1, 1660. Bertini says that he was subsequently Maestro di Cappella to the Emperor Ferdinand III.

The bent of Cesti's genius was towards the theatre, and he did much for the progress of the musical drama in Italy. Bertini says of him—'Contribui molto ai progressi del teatro drammatico in Italia, riformando la monotona salmodia che allova vi regnava, e transportando ed adattando al teatro le cantate inventate dal suo maestro per la chiesa.' That he owed much to his master Carissimi, as he did to his contemporary Cavalli, whose operas were then in vogue at Venice, cannot be doubted, but that he deserves to be dismissed as the plagiarist of either of them is untrue.

Allacci gives the following list of the operas of Cesti—L'Orontea; Cesare Amante; La Dori; Tito; La Schiava fortunata; Genserico: this last work he left incomplete at his death, and it was finished by Domenico Partenio. To these Fétis adds Argene, Argia, and Il Pomo d'Oro. Bertini and Gerber say that he set Guarini's 'Pastor Fido' to music, but the work is not known to exist. Dr. Burney has preserved a scene from 'L'Orontea' in his History of Music, and Hawkins has done the like by a pretty little duet for soprano and bass, called 'Cara e dolce è libertà.' The Abbé Santini had a collection of his chamber pieces, and the score of his Dori; some of his canzonets were published in London by Pignani in 1665; and there is a solitary sacred motet by him in the National Library at Paris. [E.H.P.]

CEVALLOS, Francisco, Spanish composer from 1535 to 1572, canon and musical director of the cathedral at Burgos. Among his compositions scattered throughout Spain, may be mentioned a fine mass in the church 'Del Pilar' at Saragossa, and a motet 'Inter vestibulum' in Eslava's Lira Sacra Hispaña. [M.C.C.]

CHACONNE (Ital. *Ciaccona*), an obsolete dance, probably of Spanish origin. At any rate the name is Spanish, *chacona*, from the Basque *chocuna*, 'pretty' (Littré). The chaconne was a dance usually in 3–4 time, of a moderately slow movement, which belonged to the class of variations, being, in fact, in the large majority of cases, actually a series of variations on a 'ground bass,' mostly eight bars in length. It closely resembles the Passacaglia, the only differences being that the tempo of the latter is somewhat slower, and that it begins upon the third beat of the bar, whereas the chaconne commences upon the first. Among the most celebrated examples are that in Bach's fourth sonata for violin solo, and the two (one with 21 the other

with 62 variations) in Handel's 'Suites de Pièces.' As a modern example of the chaconne (though not so entitled) may be instanced Beethoven's 'thirty-two variations in C minor on an original theme.' Gluck has also used this form, with some modifications, in the ballet music of his 'Iphigénie en Aulide.' In Couperin's 'Pièces pour le Clavecin,' edited by Brahms, is a chaconne in 2-4 time. [E. P.]

CHAIR ORGAN, a corruption of CHOIR ORGAN, in use in the last century, not impossibly arising from the fact that in cathedrals the choir organ often formed the back of the organist's seat.

CHALET, LE. A comic opera of three characters and in one act; the libretto by Scribe and Mélesville, the music by A. Adam—his most popular work. It was produced at Paris Sept. 25, 1834. [G.]

CHALUMEAU. Supposed to have been an old instrument of the clarinet or oboe type, now entirely disused. The name occurs in the scores of Gluck's operas.

The word is also used for the lowest register of the Clarinet. [CLARINET.] [W. H. S.]

CHAMBER MUSIC is the name applied to all that class of music which is specially fitted for performance in a room, as distinguished from concert music, or dramatic music, or ecclesiastical music, or such other kinds as require many performers and large spaces for large volumes of sound.

It was early recognised as a special department of the art, as we find Louis XIV with a 'Maître de la Musique de la Chambre du Roy,' and in Italy as early as the beginning of the 17th century Peri and Caccini and many other distinguished composers of that time and shortly after produced an abundance of 'Cantate da Camera' and 'Madrigali da Camera,' which were generally pieces for a single voice with accompaniment of a single instrument. These were probably the most important part of chamber music for some time, but they changed their character by degrees, and becoming more extensive, and more fitted for large numbers of performers, passed out of its domain. The name is now more generally applied to instrumental music, either for single instruments or solo instruments in combination; though it is still appropriate to songs, and vocal pieces for a few voices, alone or with a simple accompaniment.

The earliest forms of instrumental chamber music, as indeed of all instrumental music, were the dance tunes, and the collections of dance tunes which were called suites; and great quantities of these exist for various combinations of instruments, but most of those which are still well known are for 'clavier' alone. These were the forerunners of the sonata or 'sound piece,' which is the type of the greater part of modern instrumental music. This designation is now almost entirely restricted to works for pianoforte or pianoforte and one solo instrument, but the first sonatas were for combinations of various instruments, and especially for strings; and works of this kind exist by many of the great Italian masters, as by Corelli, and by our own Purcell, whose 'Golden Sonata' for two violins and bass was held in great repute. It is somewhat singular that the name should have been so restricted, as the works which we now know as trios, quartets, quintets, and like names designating the number of solo instruments for which they were written, are always in the same form with the pianoforte works which we call sonatas, and the legitimate descendants of the earlier combinations of instruments which went by the same name. Works of this description form a very considerable portion of modern music both in value and amount, almost all the greatest composers of the last hundred years having produced some, especially Haydn, Mozart, and Beethoven. The latter seemed in his later years to regard the quartet of strings as one of the most perfect means of expressing his deepest musical thoughts, and left some of the greatest treasures of all music in that form. In the present day the most popular form of instrumental music of this description seems to be the combination of pianoforte and strings, as duos, trios, quartets, etc., and of such works great quantities are constantly produced by many distinguished composers of Germany.

Chamber music offers such signal opportunities for the display of the finest qualities of great players that it has become a common practice to perform it in large concert rooms where great numbers of people can come together to hear it, so that the title threatens to become anomalous; but it so aptly describes the class of music which is at least most fitted for performance in a room that it is not likely to fall into disuse. [C.H.H.P.]

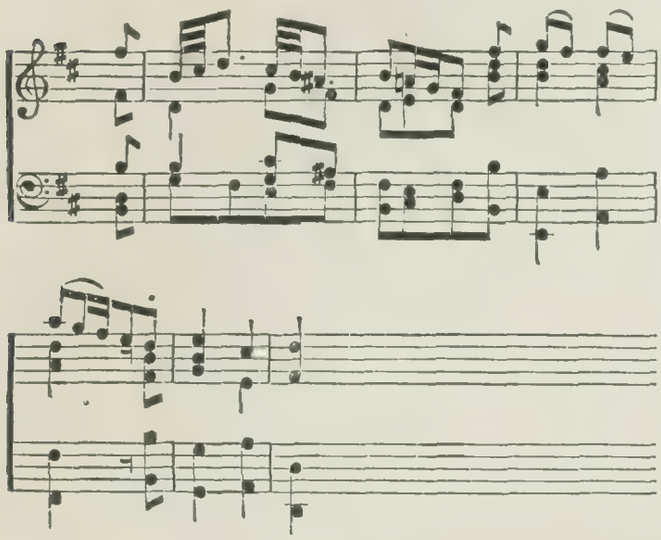
CHAMBONNIÈRES, JACQUES CHAMPION DE, son of Jacques and grandson of Antoine Champion, took the name of Chambonnières from his wife's estate near Brie, was first harpsichord player to Louis XIV. Le Gallois, in his 'Lettre à Mdlle. Regnault' (Paris 1680), says Chambonnières excelled every performer of his day in the roundness and softness of his touch. He formed the school of harpsichord players which preceded Rameau. Among other pupils he taught Anglebert, Le Bègue, and the earlier Couperins, of which celebrated family he introduced Louis to the court. Chambonnières published two volumes of harpsichord music (Paris 1670), of which the first is in the library of the Conservatoire and the second at the Bibliothèque Nationale. These pieces are elegant, original, and correctly harmonized. He died in or soon after 1670. [M. C. C.]

CHAMPION, ANTOINE, grandfather of Chambonnières, an eminent organist in the reign of Henri IV. A five-part mass of his and a book of organ pieces (in MS.) are in the Royal Library at Munich. His son Jacques was also a good organist in the reign of Louis XIII. [M. C. C.]

CHANGE. I. The word used as the short for change of key or MODULATION, under which

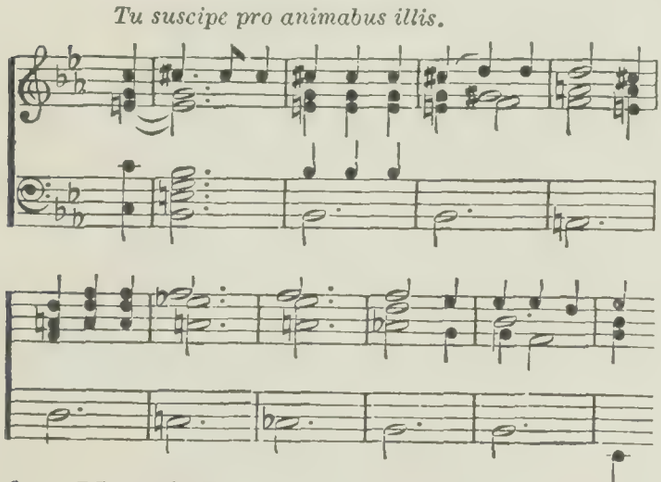
latter head a fuller account is given. Changes are commonly spoken of as of three kinds, representing three degrees of abruptness.

1. The Diatonic, which passes from one key to another, nearly related to it, by means of notes common to both, as—



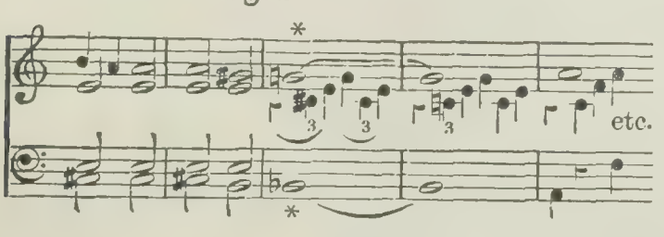
from Bach's Cantata, 'Freue dich, erlöste Schaar.'

2. The Chromatic, when accidentals appear which are not common to both keys, as—

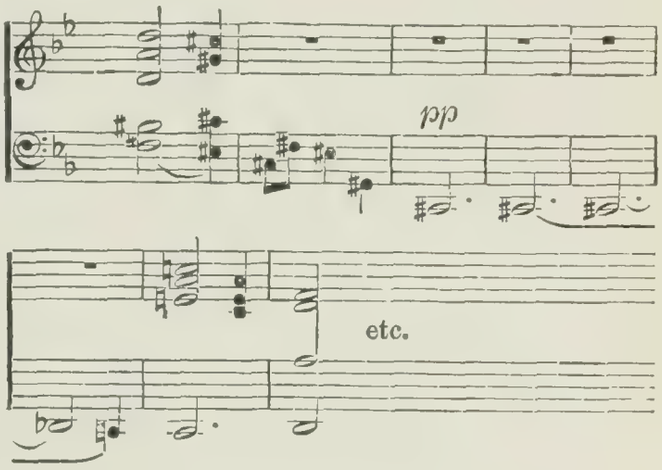


from Mozart's Requiem.

3. The Enharmonic, where advantage is taken of the fact that the same notes can be called by different names, which lead different ways, and consequently into unexpected keys. For instance, the dominant 7th can be translated into the chord of the augmented 6th, and by that means lead into very remote keys, and by the universal transformable power of the inversions of the minor 9th, we can pass from any one key to almost any other; e.g. in Beethoven's 'Leonore' Overture the transition from E major to F is thus managed—



the chord * being resolved as if it had been written B♭, D♭, G, and being approached as if it should be written A♯, C♯, G. Thus there is a double equivoque. The chord as it is approached seems to be an inversion of the minor 9th of the supertonic of E; it is then written as an inversion of the chord of the minor 9th of the dominant in the key of D, and resolved as an inversion of the minor 9th of the dominant of F. A more obvious instance to the uninitiated is the following—



from Chopin's Nocturne in G minor (op. 15), where he passes from C♯ major to F in this manner. [C.H.H.P.]

II. Change is the term applied to any order in which bells are struck other than the usual order in which rings of bells are arranged, viz. the diatonic scale—struck from the highest to the lowest bell; and CHANGE RINGING[1] is the continual production of such changes—without any repetition—from the time the bells leave the position of *rounds* (1 2 3 4 5 6) to the time they return to that position again. It is an interesting, and, to many, an engrossing art, and has been in practice in this country, it is supposed, for the last 250 years; during which time many persons of rank and education have practised it as an amusement, among the earliest of whom may be mentioned Lord Brereton, and Sir Cliff Clifton in about 1630. Change ringing, as has been said, is the constant production of changes without repetition from the time that the bells leave the position of rounds to the time that they return to that position again. It is a rule that every bell which can change its position should do so in order of striking at each successive blow, thus :—

1 2 3 4 5
2 1 4 3 5
2 4 1 5 3

It is the change ringers' and the composer's object to obtain with as musical a combination as may be, the whole of the changes to be produced on any given number of bells. It will be seen by examining the following figures that with this simple rule—that every bell which can must

[1] This work being a Dictionary of Music, a long description of the art would be out of place, and we must therefore refer the reader to the elementary book entitled 'Change Ringing' by Charles A. W. Troyte, Esq., of Huntsham, Devon (Masters, New Bond Street), and for the more advanced stages to the book of the same name by Mr. William Banister (Pollard, Exeter).

change places—only 10 changes can be produced on five bells

1 2 3 4 5	5 4 3 2 1
	5 3 4 1 2
2 1 4 3 5	3 5 1 4 2
2 4 1 5 3	3 1 5 2 4
4 2 5 1 3	1 3 2 5 4
4 5 2 3 1	1 2 3 4 5

It will also be observed that the bells work in regular order from being first bell to being last, striking two blows as first and two as last: this is called by ringers 'hunting up and down'—all the work from being first bell being called hunting 'up,' till she becomes the last striking bell, and the reverse being termed going 'down.' A bell can never be made to skip a place, she must always be rung in the next place to that in which she last struck. This being the rule, therefore, that bells must thus change places, and it having been shown that by simply doing so only 10 changes of the 120 on five bells (see Table) can be produced, it becomes necessary to alter the rule in the case of some of the bells, by making fresh ones; and these rules, being more or less intricate, comprise the methods by which peals or touches are produced. For the purposes of this work it will be enough to glance at one or two of those in most general use.

The *Grandsire* method is supposed to be the original one, and shall therefore be first noticed. Taking the rule above given as to plain 'hunting,' and which has been shown to produce ten changes only on five bells, it is by this method thus altered:—The bell that leads next before the treble only goes up into 3rd's place and then goes back to lead again; the bells in fourths and fifths places are by this thrown out of their work, as will be seen by the following diagram at the asterisk, and are said to dodge:—

1 2 3 4 5	5 1 4 2 3
2 1 3 5 4	1 5 2 4 3
2 3 1 4 5	1 2 5 3 4*
3 2 4 1 5	2 1 5 4 3
3 4 2 5 1	2 5 1 3 4
4 3 5 2 1	5 2 3 1 5
4 5 3 1 2	5 3 2 4 1
5 4 1 3 2†	

By following this rule again only 30 changes of the 120 can be produced, and now the services of the conductor have to be called in, who uses the terms 'Bob' or 'Single' to denote the changes in work shown in the following diagrams, taking up the work from the † in the foregoing one. We will in the first show the working of a Bob, in the second that of a Single,—these changes of course always taking place when the treble is leading:—

'Bob' 5 4 1 3 2	'Single' 5 4 1 3 2
5 1 4 2 3	5 1 4 2 3
1 5 4 3 2	1 5 4 3 2
1 4 5 2 3	1 5 4 2 3
4 1 5 3 2	5 1 4 3 2
4 5 1 2 3	5 4 1 2 3

It will be observed that all the bells, except the treble, are thrown out of their plain hunting work; the 4th and 5th remain below 3rd's place, and the 2nd and 3rd keep changing places: in change-ringing terms the 4th and 5th are said to 'make places,' and the 2nd and 3rd are said to make a 'double dodge.' It is by calling these bobs and singles at intervals previously settled on that the conductor is able to produce the whole 120 changes.

This method is much and generally practised on all numbers of bells from 5 to 12, its working being exactly the same on all, with the only difference that when the courses of the bells are altered by the rule, there are more bells to dodge, and the arrangements of bobs and singles become more complicated. It is, however, considered better suited to an uneven number of bells with a tenor covering,—such as would be ten bells when only the first nine were changing.

The *Stedman* method is another and favourite method among change-ringers. It derives its name from a Mr. Fabian Stedman by whom it was invented about the year 1640. It is on an entirely different principle to the Grandsire method, the foundation of it being that the three first bells go through the six changes of which they are capable (see Table of Changes) while the bells behind 'dodge'; at the end of each six changes one of these bells going up to take part in the dodging, and another coming down to take its place in the changes. It is an intricate method, and our space will not allow of a fuller explanation; it is carefully explained in Troyte's 'Change Ringing,' to which we have already referred.

Treble Bob. There are many variations of this which is usually performed on an even number of bells. It derives its name from the fact that, instead of the plain hunting course, the bells, and more especially the 'Treble,' have a dodging course. This will be seen by the following diagram, and for further explanation we must again refer to Troyte's 'Change Ringing.'

1 2 3 4 5 6	5 2 6 3 4 1
	2 5 3 6 1 4
2 1 3 4 6 5	2 3 5 1 6 4
1 2 4 3 5 6	3 2 1 5 4 6
2 1 4 3 6 5	3 2 5 1 6 4
2 4 1 6 3 5	2 3 1 5 4 6
4 2 6 1 5 3	2 1 3 4 5 6
4 2 1 6 3 5	1 2 3 4 6 5
2 4 6 1 5 3	2 1 4 3 5 6
2 6 4 5 1 3	1 2 4 3 6 5
6 2 5 4 3 1	1 4 2 6 3 5
6 2 4 5 1 3	4 1 2 6 5 3
2 6 5 4 3 1	1 4 6 2 3 5
2 5 6 3 4 1	4 1 6 2 5 3
5 2 3 6 1 4	4 6 1 5 2 3

The foregoing remarks we trust will explain the general meaning of the term 'Change Ringing' as used technically. The following Table shows the number of changes to be derived from any given number of bells up to 12 (the largest number ever rung in peal), the names given to such

changes, and the time generally allowed for ringing them :—

No. of Bells.	Name.	No. of Changes.	Years.	Days.	Hours.	Minutes.
3	. . . . .	6	. .	. .	. .	. .
4	Singles	24	. .	. .	. .	1
5	Doubles . . .	120	. .	. .	. .	5
6	Minor	720	. .	. .	. .	30
7	Triples	5,040	. .	. .	3	. .
8	Major	40,320	. .	1	4	. .
9	Caters (quaters)	362,880	. .	10	12	. .
10	Royal	3,628,800	. .	105	. .	. .
11	Cinques. . . .	39,916,800	3	60	. .	. .
12	Maximus . . .	479,001,600	37	355	. .	. .

[C. A. W. T.]

CHANOT, François, son of a violin-maker, was born in 1787 at Mirecourt in France. He entered the army as an engineer under the Empire, but quitted it after the Restoration. Returning to Mirecourt, he made special studies on the construction of the violin, and ultimately built one which deviated considerably in form from the accepted pattern. Believing that, in order to make every part of the instrument partake equally of the vibrations of the sound, the fibres of the wood should be preserved in their entire length, he considered the corners and curves of the outline as so many obstacles to the propagation of the waves of sound, and accordingly gave his violin a pear-shaped form, resembling that of the guitar. The belly he made quite flat, and left out the soundpost altogether, on the ground that it merely served to break the waves of sound, while in reality it transmits them from belly to back.

This violin (if one may still call it so), the only one Chanot ever made, he submitted to the authorities of the Institut de France. After having been examined by a committee of eminent men, both scientific and musical, and tried against instruments of Guarnerius and Stradivarius, it was pronounced not inferior in quality to the violins of these great makers. (Rapport de l'Institut, in the 'Moniteur,' Aug. 22, 1817). It is difficult to account for this decision, which experience quickly proved to be a complete delusion, as all instruments made after the new pattern turned out of indifferent quality. A brother of Chanot's, a violin-maker at Paris, for some time continued to make violins of this kind, but was soon obliged to give it up. This endeavour to improve upon the generally adopted pattern of the great Italian makers, resulted, like all similar attempts before and since, in complete failure. Chanot died in 1823. [P. D.]

CHANSON. The French *chanson*, derived from the Latin *cantio, cantionem*, is a little poem of which the stanzas or symmetrical divisions are called 'couplets.' Being intended for singing, the couplets are generally in a flowing rhythm, and written in an easy, natural, simple, yet lively style. As a rule, each couplet concludes with a repetition of one or two lines constituting the 'refrain'; but the refrain is sometimes separate, and precedes or follows the couplet, in which case it may be a distich or quatrain, or even a stanza, of different rhythm to the rest of the song. The history of the chanson would involve a review of the whole history of France, political, literary, and social. Suffice it to say here that all modern songs may be classed under four heads — the 'chanson historique'; the 'chanson de métier'; the 'chanson d'amour'; and the 'chanson bachique'; four divisions which may be traced in the ancient poets.

1. The historical songs may be subdivided into four classes, sacred, military, national, and satirical. The sacred songs include the 'cantique,' the 'noël,' or Christmas carol, the 'hymne,' and also the 'complainte,' or lament, and the 'chanson de solennités politiques,' composed to celebrate an accession to the throne, or other public event. The 'cantatas' performed on state occasions by other nations took their origin from these 'chansons de solennités.' The national songs of France are entirely modern. [See Vive Henri IV; Marseillaise; Départ Chant du, La Parisienne, &c.]

2. The 'chansons de métier,' like the 'chansons militaires,' were originally merely cries. (Kastner, 'Les Voix de Paris.') Of all the popular songs, these professional chansons are the fewest in number, and the least interesting both as regards words and music.

3. On the other hand, the 'chansons d'amour' are innumerable and well worth studying. In them the French poets exhausted all the resources of rhythm. The 'lai,' an elegiac song, accompanied by the rote, harp, or vielle (hurdy-gurdy); the 'virelai,' turning entirely on two rhymes; the 'descort,' in which the melody, and sometimes the idiom changed with each couplet; the 'aubade,' the 'chant royal,' the 'ballade,' the 'brunette,' the 'rondeau,' and the 'triolet,' are all forms of the 'chanson amoureuse,' which was the precursor of the modern 'romance.'

4. The 'chansons bachiques' are also remarkable for variety of rhythm, and many of them have all the ease and flexibility of the 'couplets de facture' of the best vaudeville writers. In some songs the words are more important, in others the music. Hence arose a distinction between the 'note' or air, and the 'chanson' or words. The old chansons have a very distinctive character; so much so that it is easy to infer the time and place of their origin from their rhythm and style. The popular melodies of a country where the inhabitants live at ease, and sing merely for amusement, have as a rule nothing in common with those of a people whose aim is to perpetuate the memory of the past. The songs too of those who live in the plains are monotonous and spiritless; whilst those of mountaineers are naturally picturesque, impressive, and even sublime. It is not only the influence

of climate which leaves its mark on the songs of a people; the spirit of the age has a great effect, as we may see if we remark how the chansons of France have drawn their inspiration mainly from two sources—church music, and the 'chansons de chasse.' Even in its songs, the influence of the two privileged classes, the clergy and the nobility, was felt by the people. Without pursuing this subject further, we will merely remark that the name 'chansons populaires' should be applied only to songs of which the author of both words and music is unknown.

It is also important to distinguish between the anonymous chanson, transmitted by tradition, and the 'chanson musicale,' by which last we mean songs that were noted down from the first, and composed with some attention to the rules of art. Such are those of the Châtelain de Coucy, composed at the end of the 12th century, and justly considered most curious and instructive relics in the history of music. (Michel et Perne, 'Chansons du Châtelain de Coucy,' Paris, 1830). Of a similar kind, and worthy of special mention, are the songs of Adam de la Halle, of which some are in three parts. (Coussemaker, 'Adam de la Halle,' Paris, 1872). True these first attempts at harmony are rude, and very different from the 'Inventions Musicales' of Clement Jannequin, and the songs for one or more voices by the great masters of the madrigal school; but the chanson of the middle ages was nevertheless the parent of the ariette in the early French operas-comique, and of the modern couplet; while the 'chanson musicale' in several parts is the foundation of choral music with or without accompaniment. By some of the great Flemish musicians the word chanson was extended to mean psalms and other sacred pieces. It is much to be regretted that the French, who are so rich in literary collections of songs, should have at present no anthology of 'chansons musicales' in notation, where might be seen not only 'Belle Erembor' and 'l'Enfant-Gérard,' anonymous compositions of the 12th century, but the best works of the troubadours Adenez, Charles d'Anjou, Blondel, Gace Brulés, Colin Muset, Thibault IV, Comte de Champagne, and of the Norman and Picard trouvères of the 13th, 14th, and 15th centuries. One great obstacle to such a work lies in the fact that the chansons of the 12th, 13th, and 14th centuries were so often altered in transcribing. It is however much to be hoped that some musician of taste and erudition will before long place within our reach the 'chansons d'amour,' and the 'chansons à boire,' which have been the delight of the French from the middle ages downwards.

The best works on the subject at present are:—'Histoire littéraire de la France,' vol. 23; 'Les Poëtes français' (Crépet, Paris, 4 vols.); Du Mersan's 'Chants et Chansons populaires de la France' (Paris, 1848, 3 vols.), with accompaniments by Colet, not in the style of the chansons; Coussemaker's 'Chants populaires des Flamands de France' (Ghent, 1856); Champfleury and Wekerlin's 'Chansons populaires des provinces de France' (Paris, 1860); Gagneur's 'Chansons populaires du Canada' (Quebec, 1865); Landelle's 'Chansons maritimes' (Paris, 1865); Nisard's 'Des Chansons populaires' (Paris, 1867). Capelle's 'La Clé du Caveau' (4th ed. Paris, 1872); and Verrimst's 'Rondes et Chansons populaires illustrées' (Paris, 1876). In the last two works the songs are not always correctly given. [G.C.]

CHANT. To chant is, generally, to sing; and, in a more limited sense, to sing certain words according to the style required by musical laws or ecclesiastical rule and custom; and what is thus performed is styled a Chant and Chanting, *Cantus firmus*, or *Canto fermo*. Practically, the word is now used for the short melodies sung to the psalms and canticles in the English Church. These are either 'single,' i.e. adapted to each single verse after the tradition of 16 centuries, or 'double,' i.e. adapted to a couple of verses, or even, according to a recent still greater innovation, 'quadruple,' ranging over four verses.

The qualifying terms *Gregorian*, *Anglican*, *Gallican*, *Parisian*, *Cologne*, etc., as applied to the chant, simply express the sources from which any particular chant has been derived.

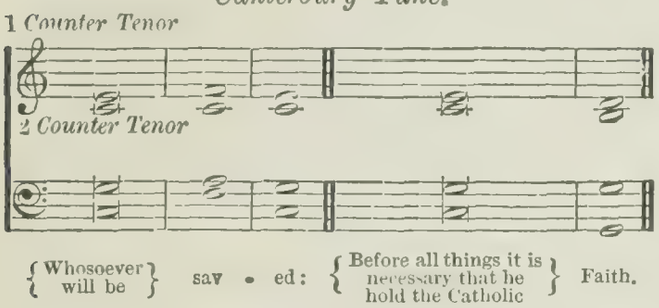
It is historically incorrect to regard the structure of ancient and modern chants as antagonistic each to the other. The famous 'Book of Common Praier noted,' of John Marbeck (1559), which contains the first adaptation of music to the services of the Reformed Anglican Church, is an adaptation of the ancient music of the Latin ritual, according to its then well-known rules, *mutatis mutandis* to the new English translations of the Missal and Breviary. The ancient Gregorian chants for the psalms and canticles were in use not only immediately after the Reformation, but far on into the 17th century; and although the Great Rebellion silenced the ancient liturgical service, with its traditional chant, yet in the fifth year after the Restoration (1664) the well-known work of the Rev. James Clifford, Minor Canon of S. Paul's, gives as the 'Common Tunes' for chanting the English Psalter, etc., correct versions of each of the eight Gregorian Tones for the Psalms, with one ending to each of the first seven, and both the usual endings to the eighth, together with a form of the Peregrine Tone similar to that given by Marbeck[1]. Clifford gives also three tones set to well-known harmonies, which have kept their footing as chants to the present day. The first two are arrangements of the 1st Gregorian Tone, 4th ending—the chant in Tallis's 'Cathedral Service' for the Venite—with the melody however not in the treble but (according to ancient custom) in the tenor. It is called by Clifford 'Mr. Adrian Batten's Tune'; the harmony is essentially the same as that of Tallis, but the treble takes his alto part, and the alto his tenor. The second, called 'Christ Church Tune' and set for 1st and 2nd altos, tenor, and bass, is also the same; except the third chord from the end—

[1] See Table of chants in 'Acc. harmonies to Brief Directory,' by Rev. T. Helmore. App. II. No. cxi.

Christ Church Tune.

Clifford's third specimen is quoted as 'Canterbury Tune,' and is that set to the Quicunque vult (Athanasian Creed) in Tallis's 'Cathedral Service'; but, as before, with harmonies differently arranged.

Canterbury Tune.



It has all the characteristics of the 8th Gregorian Tone, with just such variations as might be expected to occur from the lapse of time, and decay of the study of the ancient forms and rules of Church music.

The fourth of Clifford's examples is also a very good instance of the identity, in all essential characteristics, of the modern Anglican chant and the ancient Gregorian psalm tones. It is an adaptation of the 8th Tone, 1st ending—the tone being in the Tenor:—

The Imperial Tune.

The work published in 1661 by Edward Lowe, entitled 'Short Directions for the Performance of Cathedral Service' (2nd ed., 1664), also gives the whole of the tones, and nearly all their endings, according to the Roman Antiphonarium, and as Lowe had sung them before the Rebellion when a chorister at Salisbury. He also gives the harmonies quoted above as the 'Imperial' and 'Canterbury' tunes, and another harmony of the 8th Tone, short ending (Marbeck's 'Venite') with the plainsong in the bass.

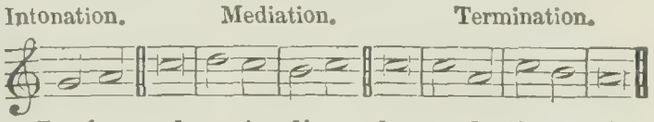
The 'Introduction to the Skill of Music,' by John Playford (born 1613), in its directions for the 'Order of Performing the Divine Service in Cathedrals and Collegiate Chapels' confirms the above statements. Playford gives seven specimens of psalm tones, one for each day of the week, with 'Canterbury' and the 'Imperial' tunes in 'four parts, proper for Choirs to sing the Psalms, Te Deum, Benedictus, or Jubilate, to the organ.'

The Rev. Canon Jebb, in the second volume of his 'Collection of Choral Uses of the Churches of England and Ireland' (Preface, p. 10), gives from the three writers quoted and from Morley's 'Introduction' (1597) a table of such old English chants as are evidently based upon or identical with the Gregorian psalm tones.

It is interesting to note also that in the earliest days of the Reformation on the Continent, books of music for the service of the Reformed Church were published, containing much that was founded directly upon the Gregorian plainsong; and it was chiefly through the rage for turning everything into metre that the chant proper fell into disuse among Protestant communities on the Continent. See the 'Neu Leipziger Gesangbuch' of Vopelius (Leipzig 1682).

The special work for the guidance of the clergy of the Roman Church, and all members of canonical choirs, in the plainsong which they have specially to chant, is called the *Directorium Chori*. The present Directorium corresponds to the famous work prepared by Guidetti (1582), with the aid of his master Palestrina. But as is the case in most matters of widespread traditional usance, differences are found between the books of present and past liturgical music, not simply in different countries and centuries, but in different dioceses of the same country and the same century. The York, Hereford, Bangor, and Lincoln 'uses' are named in our Prayer Book, as is also that of Salisbury, which obtained a foremost place of honour for the excellence of its church chant. Our own chants for the responses after the Creed, in the matins and vespers of English cathedrals, are the same to the present day with those found in the most ancient Sarum Antiphonary, and differ slightly from the Roman.

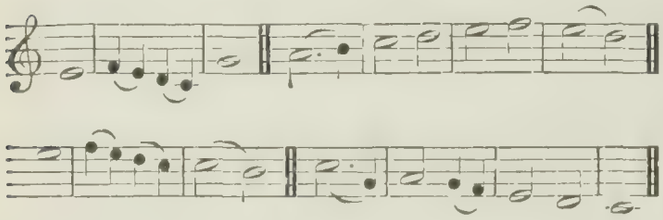
The psalm tone, or chant, in its original and complete form, consists of (1) An Intonation at the beginning, followed by a recitation on the dominant of its particular mode; (2) A Mediation, *a tempo*, closing with the middle of each verse; (3) Another recitation upon the dominant with a Termination completing the verse, as in the following—the Third Tone:—



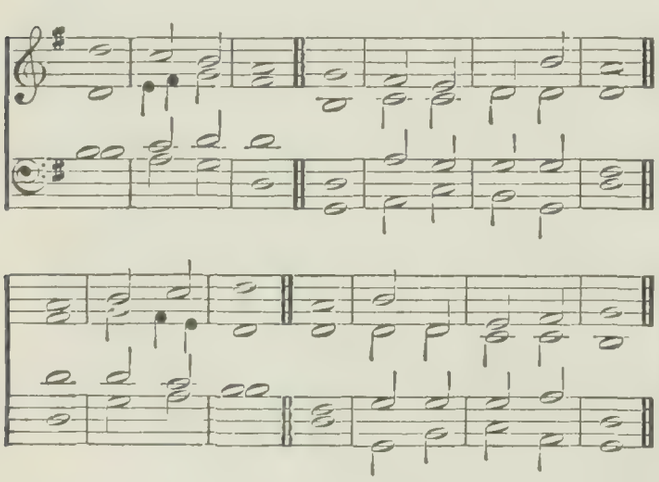
In the modern Anglican chants the Intonation has been discarded, and the chant consists of the Mediation and Termination only.

When the tune or phrase coincides with a single verse of the psalm or canticle it is styled a 'single chant,' as are all those hitherto cited. At the time of the Restoration, as already stated, the Gregorian chants were still commonly used, till lighter tastes in music and the lessened numbers of men in cathedral choirs led to the composition of new treble chants and a rage for variety. Some of these, which bear such names as Farrant, Blow, and Croft, are fine and appropriate compositions. But a different feeling

gradually arose as to the essential character of church music; double chants and pretty melodies with modern major or minor harmonies, came to be substituted for the single strains, the solemn and manly recitation tones, and the grand harmonies of the 16th century. The Georgian period teemed with flighty chants, single and double; many of which can hardly be called either reverential or beautiful—terms which no one can apply to the following (by Camidge,) still in frequent use, and by no means the worst that might be quoted:—



But however objectionable this practice may be regarded, it must be confessed that many very charming melodies have been produced on the lines of the modern double chant by modern composers of great eminence. The following by Dr. Crotch is remarkable for its grace and elegance, as well as for the severity of the contrapuntal rule to which the quondam Oxford professor has subjected himself in its construction (per recte et retro). Each of the four parts in the former half of the chant has its notes repeated backwards in the corresponding bars of the second half.



It remains to add a few remarks on the arrangement of the words in chanting.

That the principles of the old Latin chanting were adopted in setting the music to the new English liturgy and offices, is evident from every text-book of English chanting from Archbishop Cranmer's letter to Henry VIII and from Marbeck downwards, as long as any decent knowledge of the subject remained in English choirs. Little by little, however, the old rules were entirely neglected; generally speaking, neither the clergy nor the lay members of the English choirs knew anything more about chanting than the oral traditions of their own churches; thus things grew gradually worse and worse, till no rule or guide seemed left; choirmen and boys took their own course, and no consent nor unity of effect remained, so far as the recitation and division of the words were concerned.

On the revival of Church principles in 1830–1840 our own English documents of ecclesiastical chanting, and the pre-Reformation sources from which they were derived, began to be studied. Pickering and Rimbault each re-edited Marbeck. Dyce and Burns published an adaptation of his plainsong to the Prayer Book. Oakley and Redhead brought out the 'Laudes diurnæ' at the chapel in Margaret Street, London. Heathcote published the Oxford Psalter, 1845. Helmore's 'Psalter Noted' (1849-50) took up Marbeck's work, at the direction after the Venite—'and so with the Psalms as they be appointed'—and furnished an exact guide for chanting according to the editor's view of the requirements of the case. Moreton Shaw, Sargent, and J. B. Gray also published Gregorian Psalters.

Meantime the modern Anglican chant was being similarly cared for. Numerous books, beginning with that of Mr. Janes (1843), issued from the press, giving their editors' arrangement of the syllables and chant notes for the Psalter and Canticles. Among the most prominent of these may be mentioned Mr. Hullah's 'Psalms with Chants' (1844); Helmore's 'Psalter Noted' (1850); the Psalter of the S.P.C K. edited by Turle (1865); the 'English Psalter' (1865); the 'Psalter Accented' (1872); the 'Cathedral Psalter' (1875); the Psalters of Ouseley, Elvey, Gauntlett, Mercer, Doran and Nottingham, Heywood and Sargent. Among these various publications there reigned an entire discrepancy as to the mode of distributing the words. Beyond the division of the verse into two parts given in the Psalms and Canticles of the Prayer Book, no pointing or arrangement of the words to the notes of the chant has ever been put forward by authority in the Anglican Church, or even widely accepted. Each of the editors mentioned has therefore followed his own judgment, and the methods employed vary from the strictest syllabic arrangement to the freest attempt to make the musical accent and expression agree with those which would be given in reading—which is certainly the point to aim at in all arrangements of words for chanting, as far as consistent with fitness and common sense. It may be hoped that the increased attention given to this important subject, may lead to the use of those guide books only which best reconcile the demands of good reading and good singing. [T. H.]

CHANTERELLE, a French term for the upper or E string of the violin—that on which the melody is usually *sung*. [G.]

CHAPEAU CHINOIS. [Chinese Pavilion.]

CHAPELLE, originally the musicians of a chapel, and now extended to mean the choir or the orchestra, or both, of a church or chapel or other musical establishment, sacred or secular. The maitre de chapelle is the director of the music. In German the word Kapelle or Capelle is used more exclusively for the private orchestra

of a prince or other great personage, and the Kapell-meister is the conductor or director. Cappella pontificale is the term for the whole body of singers in the Pope's service, the cantatore cappellani, the cantatori apostolice, and the cantatori pontificale.

The word 'capella' is said to be derived from the *cape* of S. Martin, on which solemn oaths used to be taken. Thence it came to mean the building containing the cape, and thence the musicians, also the vestments, and the vessels of the building. [G.]

CHAPELS ROYAL. Bodies of clergy and lay-clerks who minister at the courts of Christian monarchs; and also the places in which they worship. There are several in England—viz., at St. James's Palace, Whitehall, and St. George's, Windsor, etc. From the 'Liber Niger Domus Regis' (1461), the earliest known record on the subject, we learn that in Edward IV's reign there was a well-established Chapel Royal, consisting of a dean; a confessor to the household; 24 chaplains and clerks variously qualified—by skill in descant, eloquence in reading, and ability in organ-playing; 2 epistlers, ex-chorister-boys; 8 children; a master of the grammar school; and a master of the children, or master of song.

The term Chapel Royal is now usually applied to that at St. James's Palace. The chapel is between the Colour Court and the Ambassadors' Court. The establishment consists of the Dean, the Lord High Almoner; the Clerk of the Closet, and 2 deputies; the sub-dean; 48 chaplains; 8 priests in ordinary, a master of the children; one lay composer; one lay organist and chapel-master or choir-master; 8 lay gentlemen and 10 boys; 1 sergeant of the vestry; 1 groom of ditto; and other attendants.

The service is a full choral one, at 10 a.m., 12 noon, and 5.30 p.m. on Sundays, and at 11 a.m. on feast-days. The boys are educated at the cost of the chapel, and as a rule sing there only. The chief musical posts of the establishment are at present held as follows:—Master of the Children, Rev. Thos. Helmore, one of the priests in ordinary; Composer, Sir John Goss; Organist and Choir-master, Mr. C. S. Jekyll.

The Chapel Royal at WHITEHALL (Banqueting House) is under the same chief officers as St. James's—but is now attended only once a year by the choir of that establishment in the special service of Maundy Thursday, on the afternoon of Thursday in Holy Week, when gifts called 'Benevolences' are distributed by the Lord High Almoner to certain poor people, as many in number as the sovereign is years old. The ceremony is a relic of a service which included washing the feet of the poor, of the same nature with that performed by the Pope on the same day. That part of it, however, as well as the distribution of fish and bread before the second lesson, has long been discontinued.

The following special anthems were formerly sung in the course of the service:—'Hide not thou thy face from us, O Lord' (Farrant), 'Prevent us, O Lord' (Byrd), 'Call to remembrance, O Lord' (Farrant), 'O praise the Lord all ye heathen' (Croft). They are now varied each year.

The Chapel Royal of the SAVOY (Strand) is a Chapel Royal in name only. The appointment of minister is in the gift of the Duchy of Lancaster, and the service is dependent on the taste or ability of the minister, as in any other ordinary chapel. [T.H.]

CHAPERONS BLANCS, LES. A comic opera in three acts; the libretto by Scribe, the music by Auber. Produced in Paris April 9, 1836. [G.]

CHAPPELL & CO. This musical firm commenced business in January 1812, at 124 New Bond Street, previously tenanted by Goulding, D'Almaine, & Co. The firm consisted of Samuel Chappell, John Baptist Cramer, and Francis Tatton Latour. At the expiration of seven years, J. B. Cramer retired, and Chappell & Co., requiring more space, removed to a nearly opposite house, 50 New Bond Street. Recent enlargements have increased the premises to three houses in Bond St., and the site of a former stable-yard as well as of large back gardens of three houses in George Street. The first partnership is noticeable for the establishment of the Philharmonic Society, all the business arrangements for which were made at No. 124. Mr. Chappell further lent his house for the meetings of the Directors, and refreshed the weary ones. J. B. Cramer was then at the zenith of his fame, and the spirit would sometimes move him to play until one, two, or three in the morning, to the great delight of his auditors. When the society had become firmly established, a silver teapot was presented to the lady of the house. At the end of the second term of partnership (1826), Latour withdrew, and carried on a separate business until 1830, when he sold it to his former partner. Samuel Chappell died Dec. 1834, and the business was then carried on for the widow by her sons,—William, the eldest, being 25 years old. Desiring to propagate a knowledge of the music of the Madrigalian era, William (in 1840) projected the Musical Antiquarian Society, which held its meetings and rehearsals at No. 50. He edited Dowland's songs for the Society, and also edited and published (1838–40) a 'Collection of National English Airs,' giving their pedigrees and the anecdotes connected with them, with an essay on minstrelsy in England. This was afterwards expanded into his 'Popular Music of the Olden Time' (2 vols. 1855–59). The business was greatly extended by Thomas Chappell, under a family arrangement by which his elder brother left, and bought the half of the business carried on under the name of Cramer & Co., with the late T. F. Beale as his partner. It was under Thos. Chappell's management that the great extension of the buildings took place, and he was the projector of the Monday Popular Concerts, and the Saturday Popular Concerts which sprang out of them, both of which have owed their success in

great measure to the management of S. Arthur Chappell, the younger brother. [MONDAY POPULAR CONCERTS.] A large concert-room had been much wanted at the west end of London, and St. James's Hall was projected and carried out mainly by the Chappells.

The pianoforte factory of Chappell and Co. is in Chalk Farm Road. The average of manufacture is from 25 to 30 pianos per week. [W.C.]

CHAPPINGTON, JOHN, built an organ in 1597 for Magdalen College, Oxford. [V. DE P.]

CHAPPLE, SAMUEL, was born at Crediton, in 1775. Whilst an infant he was deprived of sight by small-pox. At an early age he commenced the study of the violin, and when about fifteen was taught the pianoforte by a master named Eames, who had been a pupil of Thomas, a scholar of John Stanley—all blind men. In 1795 he was appointed organist of Ashburton, where he continued for upwards of forty years. He composed and published many anthems, songs, glees, and pianoforte sonatas. [W. H. H.]

CHARACTERISTIC. This term is sometimes applied to music which is designed as the expression of some special sentiment or circumstance. Thus in vocal music, if the melody is appropriate to the words, we may speak of the 'characteristic setting of the text.' In instrumental music, also, the word may be used where what is known as 'local colouring' is introduced; e.g. the 'Ranz des vaches' movement in Rossini's overture to 'Guillaume Tell' might be properly described as 'characteristic.' The term is also occasionally applied to programme music. Beethoven's sonata 'Adieu, Absence, and Return' is frequently entitled the 'Sonate Caracteristique,' though it does not appear that the title was given by the composer. He has, however, himself used it for the overture to Leonore, published as op. 138. (See Nottebohm's 'Them. Verzeichniss.') Spohr's 4th Symphony is entitled 'Die Weihe der Töne; charakteristisches Tongemälde,' &c. [E. P.]

CHARD, GEORGE WILLIAM, Mus. Doc., was born about 1765. He received his early musical education in the choir of St. Paul's under Robert Hudson, Mus. Bac. In 1787 he became lay clerk of Winchester Cathedral, and some years later was appointed organist of that church and of the adjacent college. In 1812 he took the degree of Doctor of Music at Cambridge. He composed some church music and other sacred pieces, some of which have been published, and some songs and glees; of the latter he published 'Twelve Glees, for three, four, and five voices.' He died May 23, 1849, aged 84. [W. H. H.]

CHARITY CHILDREN, MEETING AT ST. PAUL'S. A festival service attended by the children of the old charity schools of the metropolis, is held annually in June under the dome of St. Paul's Cathedral, the children taking a prominent part in the singing. The first of these festivals was held in 1704, on the Thursday in Whitsunweek, at St. Andrew's, Holborn; the second in 1705 at St. Sepulchre's, where the service took place until 1738, when it was held at Christ Church, Newgate St., and was continued there until 1801. In that year the children met at the cathedral, where the services have since been held, except in 1860 when the cathedral was under repair and the schools assembled on the Handel orchestra at the Crystal Palace. On April 23, 1789, the children met at St. Paul's, when George the Third went in state to return thanks for his restoration to health; and, earlier still, on July 7, 1713, at the thanksgiving for the Peace of Utrecht they were assembled in the streets. The effect of the music has been recorded by many eminent musicians, including Haydn, in whose memorandum book in the Conservatoire at Vienna there is a note on the service, quoting Jones's double chant (Pohl's 'Haydn in London,' 212), and Berlioz, who was present in 1851 ('Soirées de l'Orchestre,' No. 21). The number of the children varies, but is generally between 5000 and 6000; they are arranged in an amphitheatre constructed for the occasion under the dome. The service, which includes the Hallelujah Chorus, is accompanied by the organ, trumpets, and drums. Up to 1863 the 113th psalm had been sung before the sermon, but in that year Mendelssohn's 'Sleepers, wake' was substituted for it. In 1865 Sir John Goss wrote a unison setting of the 'Te Deum,' which took the place of Boyce in A, and in 1866 he wrote a 'Jubilate' in the same form. Among the conductors have been Mr. Bates, Mr. H. Buckland, and Mr. Shoubridge. [C. M.]

CHARLES THE SECOND. An English opera in two acts; the words by Desmond Ryan, the music by Macfarren. Produced at the Princess's Theatre Oct. 27, 1849. [G.]

CHASSE, À LA, a term applied to music which intentionally imitates hunting or contains horn passages suggesting it. Such are Méhul's overture to 'Le Jeune Henri,' the hunting choruses in 'The Seasons,' and in 'Der Freischütz.' But this does not excuse the French publisher who entitled Beethoven's overture in C (op. 115) 'La Chasse,' because of a passage for two horns in the introduction, or the German publisher who followed him in designating it 'Jagd-ouverture.' [G.]

CHATTERTON, JOHN BALSIR, eminent harpist, born at Norwich 1810, studied under Bochsa and Labarre; succeeded Bochsa as professor of the harp at the Royal Academy, and in 1844 was appointed harpist to the Queen. He retained both appointments till his death, which took place in London in 1871. Chatterton wrote much for the harp, chiefly operatic selections. [M. C. C.]

CHAULIEU, CHARLES, born in Paris 1788, died in London 1849, pianist; studied in the Conservatoire under Adam and Catel. In his earlier years he was a good teacher, but failed to keep pace with the progress of execution. In 1840 he settled in London. He arranged an immense quantity of opera airs for the pianoforte,

and composed sonatas, caprices, rondeaux, and a collection of studies called 'L'Indispensable' for the same instrument. He contributed well-written articles to 'Le Pianiste' a musical journal (Paris 1834 and 1835). [M. C. C.]

CHAUNTER. The highest pipe of the bagpipe, from which the 'chaunt' or melody is produced, as opposed to the drones, which each speak only to a single note. [BAGPIPE.] [W. H. S.]

CHECK (Fr. *L'Attrape, La Chaise*; Ital. *Ribatto* or *Paramartello*; Ger. *Fänger*), an important member in the action of a grand pianoforte, consisting of an upright of thick wire, bearing an almost spade-shaped head of leather or some light wood covered with leather. It is fixed in the back part of the key behind the hammer, and its duty is to catch the hammer when it falls a certain distance away from the string, and hold it until it is released by the finger of the player allowing the key to rise. In cottage pianofortes or pianinos that have check actions the check is placed before the hammer, and a stud projecting from the butt of the hammer comes in contact with the check. [PIANOFORTE.] [A. J. H.]

CHEESE, G. J., organist of Leominster in 1771, and subsequently organist and professor of the pianoforte in London, published 'Practical Rules for Playing and Teaching the Pianoforte and Organ.' [W. H. H.]

CHELARD, HIPPOLYTE ANDRÉ JEAN BAPTISTE, born Feb. 1, 1789, in Paris, son of a musician at the Grand Opéra, was destined for the musical profession from his childhood, and studied at the Conservatoire under R. Kreutzer for the violin, and Gossec, Méhul, and Cherubini for composition. Having won the 'Grand Prix' for composition he went to Italy, and studied church music under Baini and Zingarelli in Rome, and dramatic music under Paisiello and Fioravanti at Naples. He produced his first work, a comic opera, 'La casa da vendere,' at Naples in 1815. On his return to Paris he became a violinist at the Grand Opéra, and gave lessons, composing diligently at the same time. After infinite trouble his tragic opera of 'Macbeth' (libretto by Rouget de l'Isle) was produced at the Grand Opéra (June 29, 1827), but it was soon removed from the boards, and Chelard left Paris for Munich, where the success of 'Macbeth' was so decided, that the King of Bavaria made him his chapel-master. He returned to Paris, and remained there till the Revolution of 1830 drove him back to Munich to become widely known as a composer and leader. In 1831 he led the Thuringian Festival at Erfurt. In 1832 and 1833 he was in London conducting the German opera company, of which Schröder-Devrient, and Haitzinger were members.[1] In 1836 he was employed as theatre and concert director at Augsburg, and in 1840 succeeded Hummel as court Kapellmeister at Weimar. One of the events of this time was the arrival of Berlioz in 1843; and it is pleasant to remember that it was Chelard who urged the eccentric Frenchman to visit Mendelssohn at Leipsic, and 'made him blush' at the suggestion that his old friend would probably not be glad to see him. ('Voyage musicale,' Lettre 4.) He was succeeded by Liszt in 1852, but he continued to the close of his life at Weimar, and died in 1861. He composed several other operas, but none so successful as 'Macbeth.' 'Hermanns-Schlacht' (Munich, 1835) is a solid and carefully written work in the German style. His operas, though full of merit, and effective in their day, are no longer performed; the overture to 'Macbeth' alone is occasionally heard at concerts. While he clung to the style of French romantic opera, he strove somewhat ostentatiously to adopt that of the German school. But he wanted the power to enable him to weld these conflicting elements into a harmonious whole. [A. M.]

[1] Fétis says that Malibran sang in his 'Student' in 1834.

CHELL, WILLIAM, Mus. Bac., successively lay vicar, prebendary, and precentor of Hereford Cathedral, graduated in music at Oxford in 1524. He was author of two works, entitled 'Musicæ practicæ Compendium,' and 'de Proportionibus Musicis.' [W. H. H.]

CHERUBINI, MARIA LUIGI CARLO ZENOBI SALVATORE, born in Florence, Sept. 14, 1760, son of a musician at the Pergola theatre. His musical faculty was evident from the first. 'I began,' says he, in the Preface to his autograph Catalogue, 'to learn music at six, and composition at nine. The first from my father, the second from Bartolomeo and Alessandro Felici, and after their death from Bizzarri and J. Castrucci.' His first work was a Mass and Credo in D, for four voices and accompaniment, and by the time he was sixteen he had composed 3 Masses, 2 Dixits, a Magnificat, a Miserere, and a Te Deum, besides an Oratorio, 3 Cantatas, and other smaller works. In 1777 or 8 the Grand Duke, afterwards the Emperor Leopold II, granted him an allowance that he might study under Sarti at Bologna. Thither Cherubini went, and there he remained for four years, thoroughly acquiring the old Italian contrapuntal style, and gaining that proficiency in polyphonic writing in which no composer since his time has equalled him, unless it be Mendelssohn. The compositions given in the Catalogue[1] under 1778 and 9 are all Antiphons written on *Canti fermi, à la Palestrina*. With the early part of 1780, however, this stops. His first opera, 'Quinto Fabio,' was written during that summer and produced at Alessandria, and for the next fourteen years operas and dramatic music seem to have engaged almost his entire attention:—1782, 'Armida' (Florence), 'Adriano in Siria' (Leghorn), 'Il Messenzio' (Florence); 1783, 'Il Quinto Fabio' (Rome), 'Lo sposo di tre' (Venice); 1784, 'L' Idalide'

[1] The Catalogue referred to here and elsewhere in this article was compiled by Cherubini himself, with an interesting Preface, and published after his death by Bottée de Toulmon, under the title of 'Notice des manuscrits autographes de la musique composée par feu M. L. C. Z. S. Cherubini, etc., etc., Paris, chez les principaux Editeurs de musique,' 1843. It has been reprinted by Mr. Bellasis in his 'Memorials.'

(Florence), 'L' Alessandro nell' Indie' (Mantua). These operas must have made his name known all over Italy. In 1784 he was invited to London, and wrote 'La Finta Principessa' (1785), and 'Giulio Sabino' (1786), for the King's Theatre, but without success. He also made large additions to Paisiello's 'Marchese Tulipano,' and other operas then on the stage in London. He was much noticed by the Prince of Wales, and held the post of Composer to the King for one year. In July 1786 he left London for Paris, where he seems to have remained for the whole of the next year, very much fêted and liked. In the winter of 1787–8 he brought out his eleventh opera at Turin, 'Ifigenia in Aulide.' He then returned to Paris, which from that time became his home. His first opera in Paris was 'Demophon,' to Marmontel's libretto, Dec. 5, 1788. In this opera he broke loose from the light and trivial vein of the Neapolitan school, and laid the foundation of the grand style which he himself afterwards so fully developed. Meanwhile he was fully employed. Léonard, Marie Antoinette's coiffeur, had obtained permission to found an Italian Opera, and Cherubini received the entire musical direction of it. During the years 1789–92, he conducted the so-called 'Bouffons' at the Theatre de la Foire St. Germain, in operas of Anfossi, Paisiello, Cimarosa, and other Italians, besides writing a great number of separate pieces in the same style for insertion into these works. At the same time he was eagerly pushing on in the path opened by 'Demophon.' On the 18th of July, 1791, he brought out 'Lodoïska,' a decided step in advance. The effect produced by his new style, with its unusual harmonic combinations and instrumental effects, was both startling and brilliant, and took the composers of the day completely by surprise. 'Lodoïska' was followed by a series of operas in which he advanced still further. 'Koukourgi' (1793) remained in MS. to be afterwards adapted to 'Ali Baba'; but 'Elisa' (Dec. 13, 1794), 'Medée' (March 13, 97), 'L' Hôtellerie Portugaise' (July 25, 98), 'Les deux Journées' (Jan. 16, 1800), known in Germany as 'Der Wasserträger,' as well as a number of small one-act works, such as 'Anacréon' (1803), and 'Achille à Scyros,' both ballet-operas and both masterpieces, show how unceasing was his activity, and how much he must have pleased the opera-goers. But though successful with the public, his pecuniary position was anything but satisfactory. When the 'Conservatoire de Musique' was founded in 1795, he was appointed one of the three 'Inspecteurs des Études,' an appointment by no means commensurate with his genius and artistic position, chiefly no doubt because of Napoleon's dislike to him, a dislike which the Emperor took no pains to conceal. Cherubini's nature, at all times grave, not to say gloomy, became visibly depressed under these circumstances, and he began to lose all pleasure in his profession. In 1795 he married Madlle. Cécile Tourette, a step not likely to diminish his anxieties. He therefore willingly accepted an offer to write an opera for the Imperial Theatre at Vienna, where he arrived early in July 1805. Here he made acquaintance with Beethoven, whose deafness was not then so great as to be an obstacle to conversation, and the two were often together. Beethoven esteemed Cherubini above all the then living writers for the stage, and his vocal music was much influenced by him. What Cherubini thought of Beethoven's music is not so clear. He was present at the first performances of 'Fidelio,' but beyond his remarks that no one could tell what key the overture was in, and that Beethoven had not sufficiently studied writing for the voice, nothing is known. 'Il était toujours brusque,' was his one answer to enquiries as to Beethoven's personal characteristics. (See Schindler's 'Beethoven,' i. 118, also p. 184 of this Dictionary.)

The 'Wasserträger' was performed shortly after Cherubini's arrival, and 'Faniska' produced Feb. 25, 1806. But it was a poor time for operas in Vienna. The war between Austria and France broke out immediately after his arrival; Vienna was taken on Nov. 13, and Cherubini was soon called upon to organise and conduct Napoleon's *soirées* at Schönbrunn. But his main object at Vienna was frustrated, and he returned to France. His mind became so much embittered as to affect his health. Whilst living in retirement at the château of the Prince de Chimay, his friends entreated him to write some sacred music for the consecration of a church there; for a long time he refused, but at last set to work secretly, and surprised them with the Mass in F for three voices and orchestra (1809). With this work a new epoch opens. It is true that both in 1809 and 1810 we find one-act operas ('Pimmalione,' Nov. 30, 1809, 'Le Crescendo,' Sept. 1, 1810), that in 1813 he wrote the 'Abencérages,' and even so late as 1833 'Ali Baba,' but the fact remains that after 1809 sacred music was Cherubini's main occupation. Besides a number of smaller sacred pieces for one, two, three, or more voices, with orchestra, organ, or quartet, the Catalogue for the years 1816–25 contains the 'Messe Solennelle' in C (March 14, 1816), a 'Gloria' in B♭, a 'Credo' in D, the 'Messe des Morts' (Requiem) in C (all 1817); the 'Messe Solennelle' in E (1818); that in G, and a 'Kyrie' (both 1819); that in B♭ (Nov. 1821); a 'Kyrie' in C minor (Sept. 13, 1823); the Coronation Mass for 3 voices (April 29, 1825); and lastly the 'Requiem' in D for men's voices (Sept. 24, 1836).

During the hundred days Napoleon made him Chevalier of the Legion of Honour; and shortly after, under Louis XVIII, he was elected member of the 'Institut,' and in 1816 was appointed jointly with Lesueur 'musician and superintendant of the King's Chapel,' with a salary of 3,000 francs. Thus almost at once did honour, position, and income, all fall upon him. In 1822 he became Director of the Conservatoire, and the energy which he threw into his new work

is shown by the 'Solféges pour l'examen de l'École,' which fill the Catalogue during the next few years, and by the 'Cours de Contrepoint et de la Fugue,' which was published in 1835. Nor are these years barren in instrumental works. In 1815 the Philharmonic Society, then recently formed, offered him the sum of £200 for a symphony, an overture, and a vocal piece, and at their invitation he paid a second visit to London. He arrived in March; the Symphony (in D) was finished on April 24, and played on the 1st of May. It was afterwards (in 1829) scored as a quartet. The Overture was performed at the concert of the 3rd of April, and another MS. overture on May 29. In addition to these the Catalogue shows a Funeral March for full orchestra (March 1820); a march for 'Faniska' (May 15, 1831); six string quartets, viz. in Eb (1814), in C, from the Symphony, with a new Adagio (1829), in D (July 31, 1834), in E (Feb. 12, 1835), in F (June 28, 1836), in A minor (July 22, 1837); and a string quintet in E minor (Oct. 28, 1837). Cherubini died on the 15th of May, 1842, highly honoured and esteemed. In addition to the works above mentioned he wrote several operas in conjunction with other composers, such as 'Blanche de Provence' in 1821, to celebrate the baptism of the Duc de Bordeaux, with Boïeldieu, Paer, Berton, and Kreutzer; also a great number of canons for two, three, or more voices. The catalogue contains in all 305 numbers, some of them very voluminous, besides a supplementary list of thirty works omitted by Cherubini, as well as eighteen volumes (some of them of more than 400 pages) of music by various Italian writers, copied out by the great composer himself, a practice which he admits to have learned from his old master Sarti.

Cherubini's artistic career may be divided into three periods. The first, 1760–1791, when he was writing motets and masses à la Palestrina, and operas in the light Neapolitan vein, or may be called his Italian period. The second Operatic period opens with 'Lodoïska,' though the beginning of the change is apparent in 'Demophon' (1788) in the form of the concerted pieces, in the entrances of the chorus, and the expressive treatment of the orchestra. 'Lodoïska' however shows an advance both in inspiration and expression. 'Medée' and 'Les deux Journées' form the climax of the operatic period. In the former the sternness of the characters, the mythological background, and above all the passion of Medea herself, must have seized his imagination, and inspired him with those poignant, almost overpowering accents of grief, jealousy, and hatred in which 'Medée' abounds. But it is impossible not to feel that the interest rests mainly in Medea, that there is a monotony in the sentiment, and that the soliloquies are tedious; in a word that in spite of all its force and truth the opera will never command the wide appreciation which the music as music deserves. The 'Deux Journées' forms a strong contrast to 'Medée,' and is a brilliant example of Cherubini's versatility. Here the sphere of action is purely human, simple, even plebeian, and it is impossible not to admire the art with which Cherubini has laid aside his severe style and adapted himself to the minor forms of the arietta and *couplet*, which are in keeping with the idyllic situations. The finales and other large movements are more concise, and therefore more within the range of the general public, and there is an ease about the melodies, and a warmth of feeling, not to be found elsewhere in Cherubini. This period closes with the 'Abencérages' in 1813, for 'Ali Baba,' though completed in 1833, was largely founded on 'Koukourgi' (1793). The third period, that of his sacred compositions, dates properly speaking from his appointment to the Chapelle Royale in 1816, though it may be said to have begun with the Mass in F (1809), which is important as being the first sacred work of his mature life, though it is inferior to that in A, and especially to the Requiem in D minor. The three-part writing in the Mass in F seems scarcely in keeping with the broad outlines of the work, and the fugues are dry and formal. That in A, also for three voices, is concise, vocal, and eminently melodious. The Requiem in C minor is at once his greatest and most famous work. The Credo for eight voices *a capella* is an astonishing instance of command of counterpoint, and shows how thoroughly he had mastered the style of Palestrina, and how perfectly he could adapt it to his own individual thoughts. *Technique* apart, it ranks below his other great sacred works. It is probable that Cherubini intended it to be considered as a study, for only two numbers were published during his life-time, viz. the concluding fugue 'Et vitam,' and an elaborately developed 'Ricerca' in eight parts with one chief subject and three counter-subjects, in which all imaginable devices in counterpoint are employed.

In estimating Cherubini's rank as a musician, it must be remembered that though he lived so long in Paris, and did so much for the development of French opera, he cannot be classed among French composers. His pure idealism, which resisted the faintest concession to beauty of sound as such, and subjugated the whole apparatus of musical representation to the idea; the serious, not to say dry, character of his melody, his epic calmness—never overpowered by circumstances, and even in the most passionate moments never exceeding the bounds of artistic moderation—these characteristics were hardly likely to make him popular with the French, especially during the excitement of the Revolution. His dramatic style was attractive from the novelty of the combinations, the truth of the dramatic expression, the rich harmony, the peculiar modulations and brilliant instrumentation, much of which he had in common with Gluck. But his influence on French opera was only temporary. No sooner did Boieldieu appear with his sweet pathetic melodies and delicate harmonies, and Auber with his piquant elegant style, than the severer muse of Cherubini,

dwelling in a realm of purer thought, dropped its hold on the public. His closest tie with the French school arose from the external accident of his connection with the Conservatoire, where he had the formation of all the important French composers of the first half of the century. It was in Germany that his works have met with the most enduring appreciation. His church music, 'Medée,' and the 'Deux Journées,' still keep their hold on the German public. One of the first things Mendelssohn did after he felt himself safe in the saddle at Düsseldorf was to revive the latter opera, and to introduce the mass in C in the church. Six months later he brought forward one of the Requiems, and when he had to conduct the Cologne Festival in 1835 it is to Cherubini's MS. works that he turns for something new and good. A reference to the Index of the Leipzig Allgem. musikalische Zeitung will show how widely and frequently his works are performed in Germany. In England, too, the operas just named have been revived within the last few years, and the opera-overtures are stock pieces at all the best concerts. Cherubini forms the link between classic idealism and modern romanticism. His power of making the longest and most elaborate movements clear is very remarkable, especially when combined with the extraordinary facility of his part-writing; while his sense of form was almost as perfect as Mozart's, though he cannot compare with Mozart in the intensity of his melodic expression, or in the individuality with which Mozart stamped his characters. In the *technique* of composition, and in his artistic conception and interpretation, he shows a certain affinity to Beethoven, more especially in his Masses. His greatest gift was perhaps the power of exciting emotion. His style had a breadth and vigour free from mannerism and national peculiarities. It was in his sacred music that he was most free to develope his individuality, because he could combine the best points in his operas with masterly counterpoint. When we consider the then deplorable state of church music, it is difficult to exaggerate the importance of the change he wrought.

The latest and most complete work on Cherubini is the biography of Mr. Edward Bellasis, 'Cherubini: Memorials illustrative of his Life,' London, 1874; the preface to which contains a list of the principal authorities, including Cherubini's own Catalogue, of which the title has been already given in full. For personal traits and anecdotes—and in the case of Cherubini these are more than usually interesting and characteristic—the reader should consult the article in Fétis's 'Biographie universelle' and Berlioz's 'Memoirs,' also an article by Hiller, which appeared in 'Macmillan's Magazine,' July 1875, and afterwards in his 'Musikalisches und Persönliches,' 1876. His portrait by Ingres is in the gallery of the Luxemberg, Paris. He left one son and two daughters, the younger of whom was married to Hippolyte Rossellini of Florence. [A. M.]

CHEST-VOICE. That no voice is 'produced' throughout its extent, in precisely the same manner, is certain. The results of the different manners of vocal 'production'—three in number—are sometimes spoken of in England as 'chest-voice,' 'head-voice,' and 'falsetto.' The classification and terminology adopted by the French, viz. 'first, second, and third registers,' are however much to be preferred, since the causes of the variety of *timbre* they indicate, of which little is known, are left by them unassumed. The average compass of each vocal register is perhaps naturally an octave; but the facility with which the mode of production natural to one register can be extended to the sounds of another renders this uncertain. By 'chest-voice' is commonly understood the lowest sounds of a voice, and any others that can be produced in the same manner; in other words, the 'first register.' [J. H.]

CHEVAL DE BRONZE, LE. A comic opera on a Chinese subject, in three acts; words by Scribe, music by Auber. Produced at the Opéra Comique March 23, 1835. On Sept. 21, 1857, it was reproduced with additions in four acts at the Académie (Grand Opera).

As 'The Bronze Horse' it has been often played on the London boards since Jan. 5, 1836, when it was produced at Drury Lane. [G.]

CHEVALIER, played the violin and the quint, a kind of viol, in the private band of Henri IV and Louis XIII, and composed in whole or in part between the years 1587 and 1617 no less than 34 court ballets, according to a list drawn up by Michel Henry, one of Louis XIII's 24 violins, and now in the Bibliothéque at Paris. [M.C.C.]

CHEZY, Wilhelmine (or Helmine) Christine von, a literary lady of very eccentric life, *née* von Klencke 1783, at Berlin, married at 16, and divorced the next year; married again at 22, in Paris, to Antoine L. de Chézy, a well-known Orientalist, and was divorced again in 1810. She spent the rest of her life between Heidelberg, Berlin, Dresden, Vienna (1823–28), Munich and Paris, and died at Geneva, 1856. Her claim to notice here is her having written the play of 'Rosamunde,' for which Schubert composed his music, and the libretto of 'Euryanthe' for Weber. In neither case was the genius of the musician sufficient to save the piece from failure. See Hellborn's 'Schubert,' chap. xi; Max M. von Weber's 'Carl Maria von Weber' (1864), ii. 371, 517, 522, &c.; and her own 'Unvergessenes . . . an meinem Leben,' 1858. [G.]

CHIABRAN, Francesco (alias Chabran, or Chiabrano), a violin-player, was born in Piedmont about 1723. He was a nephew and pupil of the celebrated Somis. In 1747 he entered the royal band at Turin, and about the year 1751 appears to have gone to Paris, where his brilliant and lively style of playing created a considerable sensation. His compositions show that his character as a musician was somewhat superficial, and wanting in true artistic earnestness. The three sets of sonatas which he pub-

lished in 1756 and the following years are flimsy in construction and devoid of ideas, and appear to be intended merely to give the player an opportunity of displaying his proficiency in the execution of double stops, staccato passages, harmonics, and other technical difficulties. He occasionally indulges in realistic traits of descriptive music.

If we consider that Chiabran, through Somis, was indirectly a pupil of Corelli, his deterioration from the noble style of that great master is really astonishing, though not without parallel in the present day, when the traditions of the great Paris school of Rode, Kreutzer, and Viotti appear almost equally forgotten in France. [P. D.]

CHICKERING. Messrs. Chickering and Sons, pianoforte-makers of Boston and New York, U.S. They claim to be the earliest existing American house, and the first to have obtained any prominence. According to information supplied by Messrs. Chickering, the first pianoforte made in America was upon an English model, probably one of Broadwood's. It was made by Benjamin Crehorne, of Milton, U.S., before the year 1803. From that year the construction of American pianofortes was persistently carried on, but without any material development until a Scotchman named James Stewart, afterwards known in London through his connection with Messrs. Collard and Collard, gave an impetus to the American home-manufacture. Stewart induced Jonas Chickering to join him, but two years after, Stewart returned to Europe, when Chickering was left upon his own account. The year given as that of the actual establishment of the Chickering firm is 1823. Two years subsequent to this, Alpheus Babcock, who had served his time with Crehorne, contrived an iron frame for a square pianoforte, with the intention to compensate for changes of temperature affecting the strings, for which he took out a patent. Whether this was suggested by an improvement with the same object patented in London in 1820 by James Thom and William Allen, or was an independent idea is not known, but Babcock's plan met with no immediate success. However, this attempt at compensation laid the foundation of the modern equipoise to the tension in America as Allen's did in England. Jonas Chickering produced a square pianoforte with an iron frame complete, except the wrest-pin block, in 1837. From 1840 this principle was fostered by Messrs. Chickering, and applied to grand pianofortes as well as square, and has since been adopted, by other makers in America and Europe. For further particulars of the American construction, see PIANOFORTE and STEINWAY. [A. J. H.]

CHILCOT, THOMAS, was organist of the Abbey Church, Bath, from 1733 until late in the last century, and the first master of Thomas Linley, the composer. He produced 'Twelve English Songs, the words by Shakspeare and other celebrated poets;' two sets of harpsichord concertos, and other works. [W. H. H.]

CHILD, WILLIAM, Mus. Doc., was born at Bristol in 1606, and received his musical education as a chorister of the cathedral there under Elway Bevin, the organist. In 1631 he took the degree of Bachelor of Music at Oxford, and in 1632 was appointed one of the organists of St. George's Chapel, Windsor, in the room of Dr. John Mundy, and shortly afterwards one of the organists of the Chapel Royal. About 1660 he was appointed chanter of the Chapel Royal and one of the king's private musicians. On July 8, 1663, he proceeded Doctor of Music at Oxford, his exercise being an anthem which was performed in St. Mary's church on the 13th of the same month. He died at Windsor, March 23, 1697, in the 91st year of his age, and was interred in St. George's Chapel, where a tablet to his memory is placed. Dr. Child published in 1639, in separate parts, engraven on small oblong copper plates, a work entitled 'The first set of Psalms of iii voyces, fitt for private chapels, or other private meetings with a continual basse, either for the Organ or Theorbo, newly composed after the Italian way,' and consisting of twenty short anthems for two trebles and a bass, the words selected from the Psalms. This work was reprinted, with the same title, in 1650, and was again reproduced, from the same plates, in 1656, but with the title changed to 'Choise Musick to the Psalmes of David for Three Voices, with a Continuall Base either for the Organ or Theorbo.' His other published works consist of 'Divine Anthems and vocal compositions to several pieces of Poetry'; Catches in Hilton's 'Catch that Catch can,' 1652, and Playford's 'Musical Companion,' 1672; and some compositions in 'Court Ayres.' Several of his Church Services and Anthems are printed in the collections of Boyce and Arnold, in Smith's 'Musica Antiqua,' and elsewhere, and many more are extant in manuscript in the choir books of various cathedrals and the collection made by Dr. Tudway for Lord Oxford. His Service in D is a fine specimen of writing in the imitative style, with much pleasing melody, a feature which distinguishes Child's music generally. Dr. Child did a munificent act which ought not to be left unnoticed. His salary at Windsor having fallen greatly into arrear, he told the Dean and Chapter that if they would pay him the amount due to him he would repave the body of the choir of the chapel. The bait took, the arrears were discharged, and the Doctor fulfilled his promise. His generosity likewise manifested itself on other occasions. He gave £20 towards building the Town Hall at Windsor, and bequeathed £50 to the corporation to be applied in charitable purposes. A portrait of Dr. Child, painted in 1663, shortly after taking his doctor's degree, was presented by him to the Music School at Oxford. [W. H. H]

CHIMENTI, MARGARITA, DETTA LA DROGHIERINA, a distinguished singer, the origin of whose sobriquet is unknown. She was engaged in London in 1737, singing the part of *secondo uomo* in Handel's 'Faramondo.' She had arrived at

the end of 1736, for the 'London Daily Post' of Nov. 18 announces that 'Sg^a. Merighi, Sg^a. Chimenti, and la Francesina, had the honour to sing before Her Majesty, the Duke, and the Princesses at Kensington on Monday night, and met with a most gracious reception.' 'Faramondo' was only played five times. In 1738 Chimenti appeared as Atalanta in 'Serse,' which had no better fortune than Faramondo. She played also Absirto in 'La Conquista del Velo d'Oro' by Pescetti in the same year, after which her name is not found again. [J. M.]

CHIMING. A bell is said to be chimed when she is swung through the smallest part of a circle possible so as to make the clapper strike; or when a separate hammer is fixed apart from her and she is struck by it. There are many different machines in use by which one man can chime any number of bells: of these the best, perhaps, is that invented by the Rev. H. T. Ellacombe of Clyst St. George, Devon, which is put up by Messrs. Warner and Sons, Cripplegate, London. There are also such machines patented by nearly all good bell-founders.

The plan adopted in many towers of fastening the rope of the bell to the clapper for this purpose is a most dangerous practice and ought never to be allowed, many fine bells having been cracked in this way. Even if no actual damage is done the gear of the bell is twisted and strained by the misapplication of the rope. It is called 'Clocking' the bell. [C. A. W. T.]

CHINESE PAVILION, CHINESE CRESCENT, OR CHAPEAU CHINOIS. This consists of a pole, with several transverse brass plates of some crescent or fantastic form, and generally terminating at top with a conical pavilion or hat, whence its several names. On all these parts a number of very small bells are hung, which the performer causes to jingle, by shaking the instrument, held vertically, up and down. It is only used in military bands, and more for show than use. [V. DE P.]

CHIPP, EDMUND THOMAS, Mus. Doc. Cantab., eldest son of the late T. P. Chipp (well known as the player of the 'Tower drums'), born Christmas Day, 1823, educated in her Majesty's Chapel Royal, St. James's. Studied the violin under Nadaud and Tolbecque, and entered the Queen's private band in 1844. Became known as an organist of some repute, and in 47 succeeded Dr. Gauntlett at St. Olave's, a position he resigned on being elected organist to St. Mary-at-Hill, Eastcheap. On Mr. Best's retirement from the Panopticon, Mr. Chipp was chosen to succeed him as organist, and retained the appointment until the close of that institution. He was invited to become organist to Holy Trinity, Paddington, where he remained until his appointment as organist of the Ulster Hall, Belfast, in 62. In 66 he was appointed organist to the Kinnaird Hall. Dundee, and also to St. Paul's Church, Edinburgh In the following year the position of organist and Magister Choristarum to Ely Cathedral was offered him, a position which he still (1877) occupies.

The works produced by this composer are the Oratorio of 'Job'; 'Naomi, a Sacred Idyl'; a book of 24 sketches for the organ, and various minor works, songs, etc.

CHIROPLAST. An apparatus designed to facilitate the acquirement of a correct position of the hands on the pianoforte. It was the invention of J. B. Logier, and was patented in 1814.

It consisted of a wooden framework which extended the whole length of the keyboard, and was firmly attached to the same by means of screws. At the front of the keyboard, and therefore nearest the player, were two parallel rails, between which the hands were placed. The wrists could thus be neither raised nor lowered, but could only move from side to side. At a suitable elevation above the keys, and about six inches behind the parallel rails, was a brass rod extending the whole length of the framework, and carrying the so-called 'Finger Guides.' These were two brass frames, which could be moved along the rod to any part of the keyboard, each having five divisions, through which the thumb and four fingers were introduced. The divisions were formed of thin plates of metal, which exactly corresponded to the divisions between the keys of the instrument. They hung in a vertical position from the brass frames above mentioned to very nearly the level of the keys, and of course prevented the fingers from moving in any but a vertical direction.

To the top of each finger-guide was attached a stout brass wire with regulating screw, which pressing against the outside of the wrist, kept the hand in its proper position with regard to the arm. In addition, there was a board ruled with bass and treble staves, called the gamut board, to be placed on the music-desk, on which each note throughout the entire compass of the instrument was found written precisely above its corresponding key. This was believed to be of great service in teaching the names of the notes.

The chiroplast was designed to assist Logier in the instruction of his little daughter, seven years of age. He was then living in Ireland, and the result so fully answered his expectations that he determined to repair to Dublin (about 1814) and devote himself entirely to the propagation of his system. Here his success was so considerable, that he soon took the highest position as a pianoforte teacher.

His method included two novelties—the use of the chiroplast, and the plan of making several pupils, to the number of twelve or more, play *at the same time* on as many pianofortes. To this end he wrote a number of studies, which were published in his 'First Companion to the Royal Chiroplast,' and other works, in which several studies, of various degrees of difficulty, were capable of being played simultaneously. About this part of the method great diversity of opinion existed. Many critics could perceive nothing but evil in it. Spohr, however, in a letter written from London to the 'Allgemeine musikalische

Zeitung,' in 1820, expresses himself favourably upon it. He was present at an examination of Logier's pupils, and writes—'when a new study was begun in quick tempo, the less advanced pupils were unable to get in more than a note or two in each bar, but by degrees they conquered more and more of the difficulties, and in a shorter time than one could have believed possible the study went well.'

By the terms of his patent, Logier exercised the right of granting permission to other professors to make use of the chiroplast and his system, for which they paid high terms. In 1816 he succeeded in persuading so many professors of the excellences of his method, that chiroplast academies were established in the provinces, and Samuel Webbe, at that time in great vogue, commenced teaching the system in London.

So much success was not allowed to pass unchallenged, and hostile criticisms found expression in a number of pamphlets, some respectable, some merely abusive. Of these the principal were an article in the 'Quarterly Musical Magazine and Review,' i. 3; 'General Observations,' etc. (Edinburgh, R. Burdie, 1817); and 'Strictures on Mr. Logier's System . . .,' by H. de Monti (Glasgow, W. Turnbull).

Feeling that these publications were likely to injure him Logier determined to invite the members of the Philharmonic Society, and other musicians, to attend an examination of Webbe's pupils in London on Nov. 17, 1817. The results of this examination were published by him in a pamphlet entitled 'An Authentic Account, etc., by J. B. Logier' (London, Hunter, 1818).

This was answered in a new pamphlet, 'An exposition of the New System . . ., published by a Committee of Professors in London' (London, Budd and Calkin, 1818). The committee was chosen from among those who had attended the examination on Nov. 17, and consisted of 29 of the most distinguished musicians of the day—Sir George Smart, Drs. Carnaby, Crotch, and Smith, Messrs. Attwood, Ayrton, Beale, Burrows, François Cramer, Dance, Ferrari, Greatorex, Griffin, Hawes, William Horsley, Hullmandel, Knyvett, C. Knyvett, jun., Latour, Mazzinghi, Neate, Vincent Novello, Potter, Ries, Sherrington, Scheener, Walmisley, T. Welch, Williams.

Logier rejoined in a not very temperate tract—'A Refutation of the Fallacies and Misrepresentations,' etc.

For some time after this, pamphlets in abundance made their appearance. One of the most bitter was an article written by Kollmann, organist to the German Chapel, St. James's, to the 'Allgemeine musikalische Zeitung' in Nov. 1821, and published at the same time in English, in which the writer is candid enough to say that he believes the principal secret of Logier's system is to rob all other professors of their pupils.

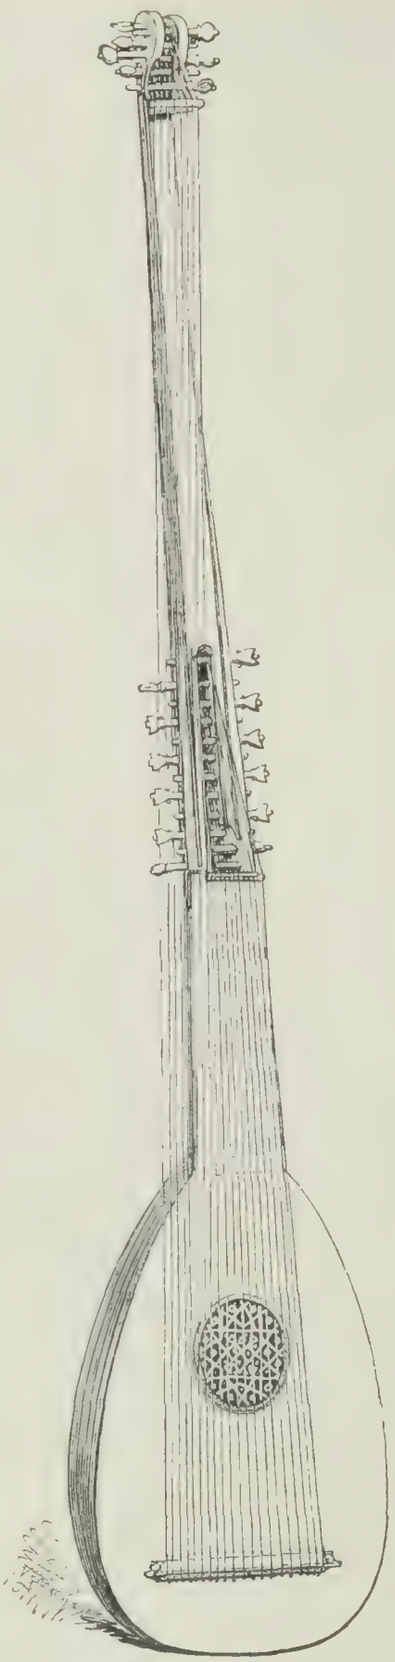
On the other side, Spohr, in the letter already quoted, says, 'There is no doubt that the chiroplast fulfils its purpose of inducing a good position of the hands and arms, and is of great service to Herr Logier, who has to look after thirty or forty children playing at once.' And in 1821 Franz Stoepel, who was sent to London by the Prussian government to examine into Logier's system, made so favourable a report that Logier was invited to Berlin, where in 1822 he established a chiroplast school, which was so successful that the King proposed to him to instruct twenty professors in his method, with the view of spreading it over the whole of Prussia. Logier accordingly remained three years in Berlin, visiting London at intervals. Meantime the chiroplast was introduced into many of the leading towns of Germany. In Paris, Zimmermann, professor of the pianoforte at the Conservatoire, had classes on the system, but in England it gradually died out, until it may be doubted if a single professor remains who employs the method, though the apparatus is still occasionally to be met with at sales of secondhand instruments.

The chief drawback to the chiroplast, apart from the risk of the hands falling into bad positions when the support was withdrawn, was the fact that the thumb could not be passed under the fingers, nor the fingers over the thumb, as in scale-playing. Kalkbrenner, who joined Logier in the establishment of a chiroplast class in 1818, perceived this, and in consequence adopted his so-called hand-guide, which consisted simply of the lower rail or wrist-support of the chiroplast, without the finger-guides, in which simplified form it is manufactured and sold at the present day (1877). By another modification the hand was placed in a sliding wooden mould, made to fit the palm, and secured by a small strap which passed over the back of the hand, thus allowing free movement of the hand along the keyboard, and of the thumb under the fingers.

That Logier's proceedings were not free from charlatanism may be inferred from the fact of the establishment in Dublin of a 'Chiroplast Club,' with a special button; and that his pretensions were extravagant may be gathered from his remark to Mazzinghi, that he 'considered himself an instrument, in the hands of Providence, for changing the whole system of musical instruction.' Still, the object in view was good, and the attention drawn to the subject cannot fail to have exercised a beneficial influence on pianoforte teaching. [F. T.]

CHITARRONE (Ital., augmentative of *Chitarra*). A theorbo, or double-necked lute of great length, with wire strings and two sets of tuning-pegs, the lower set having twelve, and the higher eight strings attached; the unusual extension in length affording greater development to the bass of the instrument. The Italian chitarra was not strung with catgut like the Spanish guitar, but with wire, like the German cither and the old English cithern. The chitarrone, as implied by the suffix, was a large chitarra. Like its cousin the archlute it was employed in Italy in the 16th century with the clavicembalo and other instruments to accompany the voice, forming a band, the nutty, slightly bitter *timbre* of which must

have been very sympathetic and agreeable. Lists of these earliest orchestras are extant, notably one that was got together for the performance of Monteverde's 'Orfeo' in 1607, in which appear two chitarroni. The very fine specimen of this interesting instrument here engraved is in the South Kensington Museum. The length of it is 5 feet 4 inches. It is inscribed inside 'Andrew Taus in Siena, 1621.' In the photographs published by the Liceo Comunale di Musica of Bologna, the applications of the names chitarrone and archlute — possibly by an oversight — are reversed. [ARCHLUTE, CITHER, LUTE, THEORBO.] [A.J.H.]



CHLADNI, ERNST FLORENS FRIEDRICH, who has been called the father of modern acoustics, was born at Wittemberg in 1756. His father was a stern educator, and his youth was consequently spent in close application to the study of a variety of subjects, of which geography seems to have been the chief, and music very subordinate, for he did not begin to study the latter consistently till he was 19. At the college of Grimma he studied law and medicine, apparently uncertain to which to apply himself. At Leipzig in 1782 he was made doctor of laws, but soon abandoned that position and the study of jurisprudence to apply himself exclusively to physical science. His attention was soon drawn to the imperfection of the knowledge of the laws of sound, and he determined to devote himself to their investigation. His first researches on the vibrations of round and square plates, bells, and rings, were published as early as 1787. It was in connection with these that he invented the beautiful and famous experiment for showing the modes of vibration of metal or glass plates, by scattering sand over the surface.

His researches extended over a considerable part of the domain of acoustics; embracing, besides those mentioned above, investigations on longitudinal vibrations, on the notes of pipes when filled with different gases; on the theory of consonance and dissonance; the acoustical properties of concert-rooms; and the distribution of musical instruments into classes. With short-sightedness characteristic at once of the greatest and least of mortals, he thought the noblest thing to do would be to invent some new instrument on a principle before unknown. To this object he himself said that he devoted more time, trouble and money, than to his great scientific researches. The result was first an instrument which he called Euphon, which consisted chiefly of small cylinders of glass of the thickness of a pen, which were set in vibration by the moistened finger. This he afterwards developed into an instrument which he called the Clavi-cylinder, and looked upon as the practical application of his discoveries, and the glory of his life. In form it was like a square pianoforte, and comprised four and a half octaves. The sound was produced by friction from a single glass cylinder connected with internal machinery, by which the differences of the notes were produced. Its advantages were said to be the power of prolonging sound and obtaining 'crescendo' and 'diminuendo' at pleasure. After 1802, when he published his 'Treatise on Acoustics,' he travelled in various parts of Europe taking his clavi-cylinder with him, and lecturing upon it and on acoustics. In Paris, in 1808, he was introduced to Napoleon by Laplace. The Emperor with characteristic appreciation of his importance gave him 6000 francs, and desired him to have his great work translated into French, for the benefit of the nation. This work he undertook himself, and in 1809 it was published with a short autobiography prefixed, and dedicated to Napoleon. After this he resumed his travels and lectures for some years. His labours in science, mostly but not exclusively devoted to acoustics, continued up to the year of his death, which happened suddenly of apoplexy in 1827.

The following is a list of his more important works in connection with acoustics, in the order of their appearance.

1. Entdeckungen über die Theorie des Klanges. 1787.
2. Ueber die Längentöne einer Saite. 1792.
3. Ueber die longitudinal Schwingungen der Saiten und Stücke. 1796.
4. Ueber drehende Schwingungen eines States.
5. Beiträge zur Beförderung eines bessern Vortrags des Klanglehre. 1797.
6. Ueber die Töne einer Pfeife in verschiedenen Gasarten.
7. Eine neue Art die Geschwindigkeit des Schwingungen bei einem jeden Töne durch den Angeschein zu bestimmen. 1800.
8. Ueber die Wahre Ursache des Consonirens und Dissonirens 1801 (?)
6. Nachricht von dem Clavicylinder. einen neugefundenen Instrumente. 1800 (?)
10. Zweite Nachricht von dem Clavicylinder, und einem neue Baue desselben. 1837 (?)
11. Die Akustik. Breitkopf und Härtel, 1802.
12. Neue Berträge zur Akustik. Ib. 1817.
13. Beiträge zur praktischen Akustik, etc. (with remarks on the construction of instruments). Ib. 1821.
14. Kurze Uebersicht der Schall- und Klang-gelehre, etc. Schott, 1827.

[C.H.H.P.]

CHOICE OF HERCULES, THE, a 'musical interlude' for solos and chorus; the words from Spenser's Polymetis; the music by Handel, partly adapted from his Alcestes. Autograph in Buckingham Palace—begun June 28, 1750, finished July 5, 1750; but last chorus added afterwards. Produced at Covent Garden, March 1, 1751. [G.]

CHOIR, often pronounced QUIRE. The part of the church east of the nave, in which the services are celebrated. The term is now almost restricted to cathedrals and abbey churches, 'chancel' being used for the same part of an ordinary church. 'Choir' is also used for the singers in churches of all kinds; and for the portions into which a chorus is divided when the composition is written for two, three, or any other number of 'choirs.' [G.]

CHOIR ORGAN. The name given to the small organ which, in cathedral and other churches, used to hang suspended in front and below the larger or Great Organ. It derived its name from its employment to accompany the vocal choir in the chief portions of the Choral Service except the parts marked 'Full,' and the 'Glorias,' which were usually supported by the 'Loud Organ' as it was sometimes called. The choir organ was generally of very sprightly tone however small it might be; one of three stops only not unfrequently consisting of the following combination—Stopped Diapason, Principal, Fifteenth.

Father Smith's choir organ at St. Paul's Cathedral (1694–7), the most complete he ever made, had the following eight stops:—Stopped Diapason (Wood), Principal, Flute (Metal), Gemshorn Twelfth, Fifteenth, Mixture III ranks, Cremona (through), Vox humana (through).

Since the development of the swell organ within the last 50 years, the choir organ has had to yield its position to its more attractive rival the 'second' manual, and now occupies the place of 'third.' It is nevertheless of so useful and convenient a nature, that it cannot be omitted without its absence being constantly felt. [CHAIR ORGAN.] [E. J. H.]
